SANʿA (Ar. Ṣanʿā), capital of *Yemen with 1.85 million inhabitants (2005 estimate), 100 km from the coast of the Red Sea, on a plateau on the western slope of Jabal (Mount) Nuqūm, at an elevation of 2,200 meters above sea level. Once a small town of not more than 50,000 souls, its speedy development took place after the republican revolution of 1962. For many centuries it has been the chief economic, political, and religious center of the Yemen Highlands. It is one of the oldest continuously inhabited cities, known since the pre-Islamic Sabean Kingdom. Most of the remains of that period have been destroyed through reuse of building material. The principal Sabean monument in Sanʿā was the Ghumdn Palace, probably situated north of al-Jāmiʿ al-Kabīr (the Grand Mosque), the earliest reference to which is at the beginning of the third century C.E. This palace, according to al-Hamdānī 20 stories high, was destroyed under the caliph 'Uthmān (644–56 C.E.). Sanʿā has a very distinct architecture and is considered one of the world's most beautiful cities. Hence, it is high on international organizations preservation list.

The tradition of the Jews of Yemen refers to Sanʿā as Resh Galūt, namely one of the first places in Yemen in which they settled when they left Jerusalem 40 years before the destruction of the First Temple (586 B.C.E.), responding to *Jeremiah's prophecies about destruction. According to that tradition, the Jews first settled in Barāsh, at that time a fortified town at the top of Jabal Nuqūm, about another 550 meters above the city. Eduard *Glaser, who visited the place in 1882, found there Jewish inscriptions dated to 589 C.E. Rabbi Joseph Qāfih visited the place in 1937 and found a few vestiges of a synagogue and two ritual baths. Later on the Jews went down the mount to Qaṣr (the Citadel of) Sanʿā, the most ancient and the higher part of the city, adjacent to the quarter of al-qaʿī, after which many Jewish families are called al-qaʿīī, to give evidence that indeed Jews lived for some time in the Qaṣr, which was known as Qaṣr Sām ibn Nuh, according to a Jewish-Muslim tradition that it was built by that biblical figure (i.e., Shem). Al-Rāz, a Yemenite Muslim chronographer, writes that in 991 there were 1040 houses in Sanʿā, 35 of them occupied by Jews.
We have some more solid information regarding the next move of the Sanāni Jews from Barāsh and the Qaṣr to their first neighborhood in the city between the walls, in the eastern quarter today known as al-Falayi. All sources attest that Jews were forcefully expelled from the heights of Jabal Nuqūm as part of anti-Jewish discriminatory and humiliating regulations. This did not take place immediately after the Muslim occupation of Yemen in 629, but many years later, probably under the rule of the Egyptian *Ayyubids (1173–1254). Al-Falayi was located at the eastern end of the city, not far from the Sā’īlah, the wādī dividing the city from north to south. The Jews first built their new houses south of the gate leading to the close town of Shu‘ūb, near the Wādī al-Marbakī. Rabbi Joseph Qāfīḥ informs us that, while he was visiting a Muslim scholar in al-Falayi in the early 1940s, the latter showed him that his house was originally a Jewish one, as attested by the roof of the living room built to be removed for the Feast of Tabernacles. The Jewish origin of many houses in the city and their typical structure was determined as well by the German anthropologist Carl Rathjens, who visited Yemen in the 1920s and the 1930s. It is not known how long the Jews lived in this place, but it seems that for a certain period they still kept their synagogue in the Qaṣr, as attested by remains of a Bible on which it was noted that it belonged to the Hanisat al-yahūd fi Hārat al- Qaṣr (the synagogue of the Jews in the neighborhood of al-Qaṣr) and dated to some years after the Jews were expelled from there by the Ayyubids.

For unknown reasons, and in an unknown year, the Jews had again to abandon their houses in the quarter of al-Falayi and to move westward and build new houses on both sides of the Sā’īlah. There they suffered from the occasionally drastic floods of the Sā’īlah. From different documents one may deduce that this happened between 1615 and 1662, but from a note in a manuscript (see below) we can determine that it happened already in 1457.

The spiritual center of the Jewish Sanani community was the central synagogue, kanisat al-‘ulāma’ or Midrash ha-Hakhamim (the Academy of the Scholars), which moved with the Jews from one place to another. It functioned as a Supreme Court of Appeal not only in regard to Jewish courts throughout Yemen, but in regard to the central Jewish court in San’a itself. From a note in a manuscript in the library of Leiden we learn that the old synagogue of San’a was destroyed in 1457 under the rule of Ahmad ʿAmir, the founder of the Dāhiri dynasty, and that the one located in the Sā’īlah was destroyed in 1679. This synagogue was later restored as a mosque – Masjid al-falaj (the Mosque of the Expulsion).

The destruction of the latter synagogue was part of the big tragic event of Galut *Mawza in which almost all the Jews of Yemen were expelled from their neighborhoods in cities, towns, and villages to the ancient small town in the west of Yemen, not far from the port town of *Mokha. That was a result of the Jewish messianic movement in 1667, when some Jews in Yemen, headed by a Slaymān Jamāl, a Jewish Sanani scholar, followed the messianic Shabbatean movement and tried to seize control of San’a from the Muslim governor in the Qaṣr. The Jews were aggressively punished and, after a legal-religious debate between Muslim scholars of Yemen, Imām al-Mutawakkil Ismā’īl (1644–1676) accepted the conclusion that the Jews had lost their right to live as *dhimmis (a protected community) under the Zaydi imamate and ordered his heir al-Mahdi Ahmad ibn al-Hasan (1676–1681) to expel all the Jews. When the expulsion edict was canceled in 1681, the Jews of San’a, like Jews in other localities throughout Yemen, were not allowed to return to their neighborhoods and houses within the walls and had to build for themselves meager new houses outside the city, close to the Muslim garden neighborhood of Bir al-Azah. This new Jewish neighborhood was called Qa’ al-Yahūd (the valley of the Jews), which for almost 140 years was completely exposed to assaults of the tribal warriors. Only in 1818 was Qa’ al-Yahūd annexed to the city by a protecting wall.

The houses in Qa’ al-Yahūd were small and poor, not more than two stories high in accordance with the humiliating anti-Jewish regulations, and the streets very narrow and unpleasant. During the years of chaos in the 19th century, most of the houses were abandoned by the Jews, who moved to the periphery. But following the Turkish occupation in 1872 the Jewish neighborhood was populated and, in 1876, a new neighborhood, al-Qaryah al-Jadīda, was built south of the old one. During the 1930s and the 1940s, under the rule of Imām Yahyā (1904–1948), Qa’ al-Yahūd became very crowded, with at least 10,000 people, by the influx of Jews who left their places in towns and villages on their way to the Land of Israel or to make a better living. But the aliyyah in the years 1949–1951 completely emptied the city of its Jews. Today nothing is left in San’a to recall its Jewish history.

[Yoṣef Tobi (2nd ed.)]

**SANANDAJ (Sinneh),** until 1935 main town in Iranian Kurdistan, N.W. of Hamadan. It was the center of Aramic-speaking Jewry in Persia, but little is known about it before the 17th century. It is listed as a Jewish community in the Judeo-Persian chronicles of *Babai ibn Lutf and Babai ibn Farhad*. The community was visited by disciples of the Shabbatean movement. The 19th-century traveler *David d’Beth Hillel* found there two small synagogues and 100 Jewish families, some of them rich merchants (engaged in commerce with Georgia) and artisans. At that time the nasi of the Jewish community was also treasurer of the governor of Sinneh. In 1903 the Alliance Israélite Universelle established a school there. At the time about 2,000 Jews lived in the town. The community dwindled considerably as a result of immigration to Israel after the 1979 revolution, and no Jews lived there in 2000.

[Walter Joseph Fischel / Amnon Netzer (2nd ed.)]
SAN ANTONIO, city in S. central Texas; 2005 population, 1,144,646; Jewish population, 12,000. As early as 1715, three years before the founding of the city, several courageous families from northern Mexico had settled on the banks of the San Antonio River. Among them were members of the Carvajal family, of Jewish descent. Two Jewish patriots of the Texan Army fought the Mexican troops in San Antonio in 1835—Surgeon Moses Albert Levy, and Edward Israel Johnson. With the advent of Texas statehood and the simultaneous immigration to Texas of Jews from Germany and Alsace-Lorraine, a permanent Jewish community in San Antonio was established around 1850. By 1855 Jews established their own cemetery. In 1856 they had organized the Hebrew Benevolent Society, reorganized in 1885 as the Montefiore Benevolent Society; and in 1870 the Ladies Hebrew Benevolent Society was formed. By 1874 there were enough Jews to found a formal congregation, Temple Beth-El (Reform), although Jews had been gathering for worship in private homes for years.

With the mass immigration of Central and East European Jews from the early 1880s into the 20th century, more Orthodox Jews reached San Antonio. These traditionalists founded their own cemetery in 1885, organized their own congregation, Agudas Achim, in 1889, and established a tal-mud torah in 1909. As Agudas Achim became Conservative, a third synagogue—Orthodox-Radfie Sholom-B’nai Israel, was created in 1908. Many organizations proliferated: the first B’nai Brith lodge was chartered in 1874; a chapter of the Zionist Organization of America was formed in 1904; a section of the National Council of Jewish Women began in 1907; and a chapter of Hadassah was organized in 1918.

In 1922 the San Antonio Jewish Social Service Federation (now the Jewish Federation of San Antonio) was created to coordinate the many community groups. During World War I the influx of Jewish military personnel in the South Texas area brought the need for extensive hospitality and services in San Antonio, a major military post. This tradition, supervised by the National Welfare Board, continued throughout the years and four wars.

In the last third of the 20th century, scores of northern Jews moved to the Sun Belt, and the Jewish population of San Antonio nearly doubled during this period. In 1985, emissaries of Chabad Lubavitch established a base in San Antonio. In 1989, a Reconstructionist congregation, Beth Am, was established, and in 2005, Temple Chai, a second Reform congregation was founded. Congregations and rabbis of all wings of Judaism have traditionally enjoyed unusually harmonious and productive relationships.

Jews have been cordially accepted in all phases of industrial, commercial, and professional life in San Antonio. However, social acceptance in its highest ranks was once limited, although today there are no barriers to such acceptance. None of the three predominately Jewish social clubs organized from 1887 onward survived. San Antonio Jews have not sought political office, by and large, but the community has produced leaders in every other phase of civic life: manufacturing, creation of department stores, agriculture, banking, and the professions.

Jews have distinguished themselves in the city’s philanthropic and cultural activities. Rabbi David Jacobson, together with the local Roman Catholic archbishop and the Episcopal bishop, is credited with the peaceful racial desegregation of San Antonio in the 1960s. Other prominent leaders have included: Alexander Joske, pioneer merchant and philanthropist; Dan and Anton Oppenheim, pioneer bankers, ranchers, and Confederate officers; Mayer and Sol Half, pioneer merchants and ranchers; Frederick Oppenheim and his wife, pioneer art collectors and museum benefactors; Max Reiter, founder of the San Antonio Symphony Orchestra; Rabbi Samuel Stahl, Helen Jacobson, Jocelyn Straus, Richard Goldsmith, Charles Martin Wender, and Michael Beldon, civic workers; Joe and Harry Freeman, agriculturalists and philanthropists; Sylvan Lang, leader in legal education; and Perry Kallison, agriculturalist and local radio personality.

SANBALLAT (Heb. סנבלת; Aram. סנבלת; Cowley, Aramaic, 30:29); Akk. Sin-uballit, “Sin has given life”), the name of three personalities who appear as governors of Samaria during the Persian period.

Sanballat I

Designated the Horonite, Sanballat I opposed Nehemiah’s efforts to rebuild the walls of Jerusalem (445 B.C.E.). The epithet is of uncertain reference, and scholars have related it to Lower or Upper Beth-Horon on the Samaritan border of Benjamin; to the village Huwwâra, 1 km. (½ mi.) south of Shechem; or to the Moabite town of Horônaim. The first location is not far from the plain of Ono where Sanballat proposed to meet Nehemiah (Neh. 6:2). The second is in the heart of Samarian territory. The third would imply a Transjordanian origin for Sanballat, parallel to that of Tobiah “the Ammonite servant” (Neh. 2:10, 19). Whatever his origin, Sanballat must have considered himself a worshiper of the God of Israel, for his sons bore the Hebrew theophoric names Delaiah (“The Lord has drawn up, delivered”) and Shelemiah (“The Lord has required”; Cowley, Aramaic, 30:29).

In the memoirs of Nehemiah, Sanballat appears both as “enemy” (Neh. 6:1, 16) and as allied by marriage to the family of the high priest (Neh. 13:28). Nehemiah describes his mission in rebuilding the wall of Jerusalem as proceeding through seven stages, each one punctuated by a futile attempt on the part of Sanballat and his allies to thwart the effort. To Sanballat and Tobiah, Nehemiah’s arrival from Susa (Shushan) to seek the welfare of Jerusalem was a bad omen (Neh. 2:10). When Sanballat, Tobiah, and Geshem the Arabian heard of his intention to rebuild the wall, they mocked and scorned and wondered whether Nehemiah was contemplating rebel-
lion. From Nehemiah’s complete rejection of their remarks it may be inferred that they had sought, and perhaps even held, some official position in the city (Neh. 2:19–20). As the work proceeded, mockery turned to disbelief and anger (Neh. 3:33–35), to the point where military steps were planned. These too were successfully blocked by Nehemiah (Neh. 4). When the wall was completed and all but the gateways fully repaired, they sought by various means to dispose of Nehemiah personally or to compromise his position within the nation. These efforts likewise failed, and Nehemiah’s “enemies” were forced to concede that his task was divinely supported (Neh. 6).

Even though the high priest Eliashib was aligned with Nehemiah in rebuilding the wall (Neh. 3:1), his grandson was married to Sanballat’s daughter during Nehemiah’s absence from Jerusalem. Upon his return Nehemiah expelled the priest from his presence (Neh. 13:28). A subsequent governor named Bagohi, however, joined with Sanballat’s son Delaiah (407 B.C.E.) in supporting the reconstruction of the Elephantine Jewish Temple, with the proviso that animal sacrifices not be offered there (Cowley, Aramaic, 32).

Sanballat II
Sanballat II is known as governor of Samaria in the early fourth century B.C.E. from an Aramaic papyrus and a clay sealing in Paleo-Hebrew discovered in Wadi Dāliya north of Jericho. Both inscriptions are of Sanballat II’s elder son, whose name is to be restored as either [Jesh]ua or [Jadd]ua. The latter, also a governor, was apparently succeeded by his brother Hananiah who, in turn, was succeeded by Sanballat III. The practice of papponymy (naming a child for its grandfather) was common in the Persian and Hellenistic periods.

Sanballat III
Appointed “satrap” of Samaria by Darius III, Sanballat III married his daughter Nikaso to Manasseh brother of Jaddua, high priest in Jerusalem. When Jaddua and the Jerusalem elders ordered Manasseh to dissolve the marriage or stay away from the altar, Sanballat offered him the high priesthood in a temple he would build on Mt. Gerizim. Meanwhile, Alexander the Great advanced into Palestine and Sanballat shifted his allegiance. He pressed Alexander for permission to build the new temple by arguing that, not only did Manasseh have the support of many Jews, but that it was to the conqueror’s interest to see the Jews divided. He also offered Alexander a contingent of 8,000 soldiers. The offer was accepted and the soldiers subsequently settled in Egypt. Permission to erect the temple was granted and Sanballat died shortly thereafter (Jos., Ant., 11:302–25, 340–45). This incident, recorded by Josephus, is absent from the Samaritan chronicles.

Sanbar (Sandberg), MOSHE (1926– ), Israeli economist.
Sanbar was born in Hungary, and was imprisoned in German concentration camps during World War II. He immigrated to Israel in 1948, and after studying economics, statistics, and sociology at the Hebrew University, served from 1951 to 1958 as project director and then deputy director of the Israel Institute of Applied Social Research. In 1958 he entered the civil service, serving in the Treasury successively as director of research, deputy director of state revenues, director of the budgets, and economic adviser. In 1968 he was appointed deputy chairman and from 1970 to 1971 chairman of the board of the Israel Development Bank Ltd. as well as chief economic adviser to the minister of finance (1969–71) and acting deputy minister of commerce and industry (1970–71).

In 1971 Sanbar succeeded David *Horowitz as governor of the Bank of Israel, holding the office until 1976. He represented Israel at the International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), and International Finance Corporation (IFC), and was appointed by the government as chairman of the Economic Development and Refugee Rehabilitation Trust. In later years he served as chairman of the Center of Organizations of Holocaust Survivors in Israel, an umbrella organization for 29 groups and 300,000 survivors founded in 1989.

Sanbar wrote numerous articles and research studies dealing with income policy, taxation, budget policy, and central banking. His book My Longest Year (Hebrew and English, 1966), for which he was awarded the Yad Vashem Prize in 1967, describes his experiences during the German occupation of Hungary.

Sanches, Francisco (1550/52–1623), philosopher and physician. He was born in either Braga, Portugal, or Tuy, Spain, to a Spanish New Christian family. His father, the prominent physician, Antonio Sanches, was probably from a Castilian Jewish family that included Gabriel *Sanchez, royal treasurer under Queen Isabella. Antonio and his family fled to Bordeaux around 1564, soon after the Inquisition was established in Galicia. Young Francisco apparently studied at the College de Guyenne (Montaigne, his distant cousin, also went there), in Rome and finally received his medical degree from Montpellier in 1574. He was refused a professorship there and moved to Toulouse, where he became professor of philosophy in 1585, and professor of medicine in 1612.

Sanches wrote on philosophical and medical subjects. His earliest writing is a letter to the mathematician, Father Clavius, in 1574–75, offering a skeptical criticism of the Platonic view of mathematics, and the impossibility of gaining any genuine knowledge of reality through mathematics. He wrote his most famous work, Quod nihil sequitur (published in 1581), presenting the best technical exposition of Renaissance philosophical skepticism, and offering the first statement of a limited empirical scientific method as the only positive way of proceeding if genuine knowledge is unattainable.
Sanches apparently coined the term “scientific method.” He also wrote against astrology and other forms of Renaissance pseudoscience.

Sanches has been considered by some the first modern philosopher. They have seen him as a precursor of Descartes, because of his thoroughgoing skepticism and his method of doubt, and as a precursor of Francis Bacon because of his emphasis on empirical study. However, Sanches’ skepticism is more complete than Descartes’. From an analysis of the human epistemological situation, Sanches concluded that nothing could be known about the nature or causes of reality. Human logic and science were unable to determine the real nature of things. Neither the Aristotelian nor the Platonic theories, he contended, were able to give us any genuine means of gaining knowledge. True science would give immediate, intuitive comprehension of the real features of an object. But only God could possess such knowledge. Our limitations, plus the nature of objects themselves, forever prevent us from gaining genuine knowledge. Since nothing can be known, he contended that we should instead do what we can, that is, carry on patient, careful empirical research, and cautiously judge and evaluate the data. This will not lead to knowledge, but to the best information available about the world.

Sanches saw modern science not as a new metaphysical approach to reality, but as a limited empirical way of proceeding when the quest for certainty has been abandoned. Any further information about the world can only be gained by faith. Sanches influenced the later skeptics, as well as some of the major philosophers in the 17th century. His skepticism led to a tradition of mitigated or constructive skepticism that flourished in the 17th century and has been revived in the modern positivistic and pragmatic interpretations of scientific knowledge.

Popkin, History of Scepticism from Erasmus to Descartes (1964), 38–43; incl. bibl.; J. de Carvalho, in: F. Sanches, Opera Philosophica (1955), vii–lix; M. Menéndez y Pelayo, Ensayos de Crítica Filosófica (1948), 174–201.

[Richard H. Popkin]

**SANCHEZ, ANTONIO NUÑES RIBEIRO** (1699–1783), Marrano physician. Born in Penamacor, Portugal, Sanchez fled to Holland to escape persecution and studied medicine at the University of Leiden. In 1731, on the recommendation of his teacher, the noted Professor Boerhaave, he became physician to Empress Anna Ivanovna of Russia and eventually to the czar and his family. A gifted physician, and a member of the Imperial Academy of Science, Sanchez is recorded in the *Memoirs of Empress Catherine II* as having cured her of a serious illness. However, in 1747, he was forced to leave St. Petersburg after Czarina Elizabeth Petrovna, an antissemite, discovered Sanchez’ Jewish origins. He then went to Paris and resumed his medical practice in the poorer sections of the city. In 1762, when Catherine II came to power, she granted him a life pension of 1,000 rubles annually in belated recognition of his faithful service to the royal court. Sanchez published *Dissertation sur l’origine de la maladie vénérienne* (Paris, 1750) and *De Cura Variolarum Vaporarii Ope apud Russos* (1768), which first informed European physicians of the medical value of Russian vapor baths.

**BIBLIOGRAPHY:** Biographisches Lexikon der hervorragenden Aerzte, 5 (1934), 4–5, incl. bibl.

**SÁNCHEZ, GABRIEL** (d. 1505), treasurer of the kingdom of Aragon under Ferdinand and Isabella. He was a member of a distinguished family of *Conversos*, which traced its origin to the Alazar (see *Eleazar*) family of Saragossa; his father, Pedro Sánchez, became converted to Christianity with the rest of his family at the beginning of the 15th century. In 1475 Gabriel Sánchez was appointed assistant to his brother Luis, who served as treasurer of Aragon, and whom he later succeeded. After the murder of the inquisitor Pedro de *Arbués* in 1485, Gabriel’s brothers Juan de Pedro, Alonso, and Guillén were accused of complicity, and grave charges were brought against Gabriel as well. The Inquisition, however, disregarded these accusations and his position was not affected. His brothers succeeded in fleeing from Aragon. With Luis de *Santangel*, Sánchez assisted Christopher *Columbus in collecting funds for his voyages, and Columbus sent him a letter in May 1493 from Portugal similar to that which he sent to Santangel, describing his first voyage.

After Gabriel’s death, his son Luis succeeded to his position, in which he served until his death in 1530, when it was transferred to his other son, GABRIEL. During the 16th century members of the Sánchez family married into several of the prominent families of Spanish aristocracy, such as the Gurrea and Mendoza families.

**SAND, LEONARD B.** (1928– ), U.S. judge. Sand, a native of the Bronx, NY, who graduated from New York University and Harvard Law School, was admitted to the bar in 1953 and soon became a partner in the law firm of Robinson, Silverman, Pearce, Aronsohn, Sand and Berman. An expert on tax law, he was appointed to be a judge in Federal District Court in Manhattan in 1978. Sand presided over several important cases but two stand out: a two-decade-long case involving a desegregation lawsuit against the public schools of Yonkers, a New York City suburb, and the conviction and imprisonment of four terrorists for conspiring with Osama bin Laden in the 1998 bombings of two American embassies in East Africa. The Yonkers case, over time, stood for several things: race, class, neighborhood, the American dream. The case, brought by the United States Justice Department in 1980, then joined by the National Association for the Advancement of Colored
People, charged that race determined location and quality of education in Yonkers. The plaintiffs stated that the reason the schools were segregated was because the housing of Yonkers was segregated. Sand heard the case himself, without a jury, at the request of both sides. The trial took up most of 1983 and 1984. There were 93 days of testimony from 84 witnesses, 140 depositions, and thousands of exhibits. By the end of the trial, it was clear that Yonkers was segregated. Sand had to decide why. He saw a 40-year pattern, fueled by Yonkers city officials who approved sites for housing. Sand ordered Yonkers to redraw its districts and to move some of its poor minority residents from the poor minority side of town into public housing, to be built just for them, in the white, middle-class side of town. His ruling was appealed but subsequently upheld. In 1986 Sand ordered a federal monitor to oversee the integration of the schools through a host of court-ordered measures still in effect 20 years later, including magnet programs and busing. In the terrorism case, a jury trial, prosecutors called 92 government witnesses and introduced more than 1,300 exhibits in a four-month process. The prosecutors said the conspiracy grew out of a Muslim organization that had centers in Afghanistan and other places, including Brooklyn. Some of the members of the Brooklyn circles were convicted in the bombing of the World Trade Center in 1993 and in a plot to blow up other New York City landmarks. Sand sentenced the four men to life in prison without any chance of parole.

[Stewart Kampel (2nd ed.)]

SANDAK

SANDALFON, name of one of the most exalted angels. Ezekiel 1:15 was interpreted in the Babylonian Talmud (Hag. 13b) as referring to an angel who stood on the earth with his head reaching up to the living creatures (the hayyot). This “wheel” is called Sandalfon, who is said to stand so far above his colleague, apparently “Metatron, that a journey between them would take 500 years. His place is behind the “Merkabah, the heavenly chariot, and he fashions crowns for his creator. According to the sources of the Merkabah literature, these crowns are made from Israel’s prayers, an idea widely repeated in Jewish literature. Sandalfon is also mentioned as one of the highest angels in the story of Moses’ ascension to heaven, and in the Midrash Komen he is called a mediator or “translator” between Israel and God, obviously because he transforms the words of prayer into mystical crowns on God’s head. The etymology of the name is explained, probably correctly, as syn- delphos (“confrère” or “colleague”), namely of Metatron. He is mentioned in many hymns, and conjurations regarding him and his mystery are found in Merkabah literature; one such is “The Mystery of Sandalfon” (Merkavah Shelemah, 1922, fol. la). Here he has the power to nullify hostile decrees against Israel. In later sources he is frequently defined as the angel set over birds, sar ha-ofot, particularly in the writings of the *Hasidei Ashkenaz and in the Zohar. Spanish kabbalists of the 13th century interpreted the name as a composition of two elements: sandal, meaning in the Talmud a still unformed embryo, and fon, understood as a formation of a face panim; these two elements therefore represent matter and form, brought together in Sandalfon. Many kabbalists declared that Sandalfon was an angelic transfiguration of the prophet Elijah, just as Metatron was described in earlier sources as the transfiguration of Enoch. Since the word sandal has the meaning “shoe,” Sandalfon was also thought of as the “shoe” of the Shekhinah, that is to say the angel on which the feet of the Shekhinah rested. Some kabbalists considered him the teacher of Moses. Later Kabbalah ascribed to him a special sphere of mystical being which was essentially more than a pure angelic host.

SAN DANIELE DEL FRIULI, small town in Udine province, Friuli, N.E. Italy. The presence of Jews is first confirmed in a document dating from 1523 which refers to the management of a bank entrusted to one Simon Nantu and, later, to his sons. There were also Jewish physicians living in San Daniele at least from 1549.

In 1600, two Luzzatto brothers, who had come from Venice, joined the bank; in 1623—1624 the bank passed to the Luzzatto family’s control alone. The Luzzattos managed the bank until 1714, when it was suppressed following the opening of a *Monte di Pieta. Meanwhile the community had grown. The Catholic reaction reached San Daniele in the early 17th century, the Jews being compelled to wear the “badge in 1626.
The 18th century was a period of expansion for the Jewish community, although the Venetian government closed the bank. Aside from the bank, the Jews were engaged in other professions, such as raising silkworms; agriculture (mainly beekeeping); handicrafts, such as goldsmiths; industry, such as the production of bricks; and trade in tobacco. The synagogue was erected between the years 1729 and 1731. In the same period, in 1735, the community purchased an area for the cemetery. The Luzzatto family dominated the life of San Daniele. An important figure was Letizia Luzzatto. San Daniele was the birthplace of the brothers Ephraim and Isaac. Luzzatto, both poets; the latter, who studied medicine at the University of Padua, was a successful physician. He wrote a book of poetry, Toledot Yizhak. He also satirized the local life in his parody, Mishnayot Sandaniel. In 1777 the Republic of Venice, on whom San Daniele was dependent, decreed the expulsion of the Jews from all places without a ghetto; San Daniele therefore had to be abandoned. It seems that the services of Isaac Luzzatto were so valued by the local population that the local authorities requested the Serenissima to exclude the latter from the decree of expulsion. Some of those expelled sought refuge in Gorizia, but the majority went to Trieste. Among the latter was Ezechia Luzzatto, father of Samuel David Luzzatto. In the first decades of the 20th century a small community was reestablished in San Daniele, but it was short-lived.

SANDBERG, WILLEM JACOB (1897–1984), Dutch museum curator and Righteous Among the Nations. Sandberg served as the curator of the Stedelijk (Municipal) Museum in Amsterdam, a position he held from 1938. During the occupation of the Netherlands by the Germans in World War II, Sandberg helped organize an artists’ resistance movement. Shocked by the persecution of the Jews, together with several friends he began forging identity cards. His training and expertise as a graphic designer was of help to him in this clandestine endeavor, as well as his contacts in the publishing world. When young Dutch men were called up for forced labor, Sandberg’s group produced numerous forged documents for people electing not to report for work in Germany. The Jewish Dorothea Hertz-Loeb was one of those who benefited from Sandberg’s aid, to whom, along with three members of her family, he supplied forged identity papers, which were produced in the basement of the museum. When the deportation of Jews began on a massive scale in the summer of 1942, the artists’ resistance group decided to blow up the Population Registration Office in Amsterdam. Sandberg participated in the planning of this operation, including the capture of the heavily guarded building and setting fire to the archives. The explosives to be used in this attack were temporarily stored in his home. After much preparation, the attack was carried out on March 27, 1943. Unfortunately, the Germans eventually got wind of the identity of the perpetrators of this attack and most were arrested, with 13 men condemned to death and executed in July 1943. Sandberg luckily escaped arrest. The night when his home was searched, he happened to be in the dunes near the North Sea, where the art treasures of Amsterdam had been hidden. His wife and son, however, were arrested and incarcerated for several months. Sandberg hid in the countryside for the remainder of the occupation, circulating letters to make people believe he had escaped to Switzerland. From his hideout, he sent reports on German troop movements. After the war, Sandberg served until 1963 as director of the Stedelijk Museum, which he turned into an internationally acclaimed museum of contemporary art. In 1964, he accepted the invitation to head the newly established Israel Museum in Jerusalem, a position he held until 1968. That year, Yad Vashem awarded him the title of Righteous Among the Nations.

[Sanderling, Kurt (1912– ), conductor. Sanderling was born in East Prussia and began his conducting career at the age of 18, as assistant conductor at the Berlin Staatsoper. Forced to leave Nazi Germany, he was subsequently engaged to conduct the Moscow Radio Orchestra. A guest performance with the Leningrad Philharmonic Orchestra led to his becoming, with Mravinsky, its director (1941–60). In 1960, he moved to East Berlin, where he became chief conductor of the Berlin Symphony Orchestra. Sanderling also directed the Dresden Staatskapelle Orchestra between 1964 and 1967, taking it on European tours.

[Sandberg, Bernard (1941– ), independent member of Congress (1991–). Sanders was born in Brooklyn, New York, the son of a paint salesman who immigrated to the U.S. as a young man. His mother raised her two sons in a small apartment, while his father earned a steady but limited income. Sanders’ family circumstances, in which money was often tight, strongly influenced his understanding of the financial difficulties that face many working class families. Sanders graduated from James Madison High School in Brooklyn and spent one year at Brooklyn College. He then transferred to the University of Chicago, where he graduated in 1964 and then bought land in Middlesex, Vermont.

In 1971 his interest in progressive politics took him to a meeting of the newly formed Liberty Union Party, a third-party alternative to the Democrats and the Republicans. He left that meeting as the party’s candidate for the U.S. Senate, and ended up with two percent of the vote. He ran three more
SANDGROUND, JACK HENRY

Born in Johannesburg, South Africa, he went to the U.S. in the early 1920s. Sandground’s research dealt with a wide variety of parasitic problems, especially those involved with the helminths.

His investigations of the worms included their biology and taxonomy, as well as problems concerned with immunity and chemotherapy. He served as a member of many scientific expeditions. Sandground carried out research on the nutrition of protozoa, immunology against poliomyelitis, and the detoxication of arsenicals and other drugs utilized in treating syphilis and various tropical diseases.

SAN DIEGO, combined city-county in S. California; county population 3 million (2005), Jewish population 89,000.

Jewish life in San Diego started in what is called Old Town, near the San Diego River and just below the hill on which the Spanish built the first California mission in 1769. The first Jew arrived at this remote frontier site in 1850, the same year the city received its charter. In this town of 800, there were, perhaps, 25 Jews until the 1860s. Most were very visible for their number, both as businessmen and civic leaders. When, in the 1870s, the center of town moved southeast, to its permanent location, on San Diego Bay, the Jewish population moved also. They set up stores and lived nearby; the first synagogues were in this downtown area. In the 1920s the reform congregation, Beth Israel, moved uptown to the west side of Balboa Park, and by the mid-20th century the Conservative and Orthodox congregations had moved uptown to the north and east sides of the park. The neighborhood of North Park became the center of Jewish life with a kosher butcher, bakery, a Jewish Community Center and the homes and businesses of many of the patrons. By the late 1970s the community had migrated primarily to the east, near San Diego State University, to the South in Chula Vista, and a little to the north. With the coming of the University of California San Diego to La Jolla in the late 1960s, the Jewish community began to move there as well. Prior to that, beginning in the 1940s, the residents of La Jolla had a restrictive covenant against Jews and other minorities in their property deeds, which was enforced by the real estate agents. At the beginning of the 21st century there was no Jewish area, and the population was very spread out. Jews congregate throughout San Diego County, from the Mexican border to the northern boundary, the Marine Base at Camp Pendleton. As a matter of fact, Jews even congregate at Camp Pendleton and south of the border in Tijuana.

Religious Life

Louis Rose, the first Jewish settler, arrived in 1850. A multi-
talented entrepreneur, he also held various prominent government positions. He was an early benefactor to the Jewish community, and two locations, Rose Canyon and Roseville are named for him. Rose was joined by Lewis Franklin who held the first recorded Jewish religious observance (Day of Atonement) in Southern California in his home soon after he arrived in 1851. Perhaps this was Franklin’s hobby, as he had held the first Jewish service in San Francisco in 1849. The Jewish population increased dramatically with the arrival of the Jewish population increasing to 2,000 and new congregations still in use.

In 1905, East European immigrants formed an orthodox congregation, Tifereth Israel Synagogue. When, in 1939, this congregation became Conservative, another Orthodox congregation was formed, Beth Jacob. These three congregations, which were led out of the war years by three influential rabbis – Reform, Morton J. Cohn (1946–61); Conservative, Monroe Levens (1948–74), and Orthodox, Baruch Stern (1947–77) – were the only ones until the 1950s, when the Jewish population increased to 6,000 and new congregations formed. By the beginning of the 21st century, there were over 30 congregations, including the three original ones, covering all the trends in Judaism, from Humanistic to Chabad.

Communal Life

As the Jewish community grew, so did the need for social and communal service. At the beginning, men and women took separate paths to this end.

Forty men, led by Marcus Schiller, formed the first Hebrew Benevolent Society of San Diego in 1871. Twenty-six signatories received the charter for the B’nai B’rith Eduard Lasker Lodge #370 in 1887, with Simon Levi as president. By mid-20th century there were seven men’s lodges, some named for prominent citizens such as Samuel I. Fox, Edward Breitbard, and Henry Weinberger. In 1929 Anna Shelley organized the Birdie Stodel B’nai B’rith Women’s Chapter which grew by mid-century into five chapters in the county. A.Z.A. Fraternity and B’nai B’rith Girls followed in 1930, and Hillel in 1947. In mid-century Zionist groups were also strong, but by the end of the century, most of the organizations, except for Hillel, were in decline.

In 1890, Mrs. Simon Levi organized the Ladies Hebrew Aid Society, with 20 members “to render relief to the sick and needy, to rehabilitate families and to aid the orphan and half-orphan.” This group joined with the Jolly Sewing Circle, Hebrew Sisterhood and Junior Charity League in 1918 to form the Federated Jewish Charities. In 1936, the Charities split into two: the Jewish Welfare Society, later to become Jewish Family Service, incorporated, and the United Jewish Fund, predecessor of the United Jewish Federation of San Diego, was formed. The Jolly 16, a women’s social and benevolent group, started a ten-bed San Diego Hebrew Home for the Aged which opened in 1944. A much larger facility opened in 1950, in partnership with the Jewish Community Center, and in 1989 the Hebrew Home expanded and moved to northern San Diego County. The first Jewish Community Center opened in 1946 in a storefront in North Park. Within six years a new building with a pool, gymnasium, classrooms and a library opened in the eastern part of the city, which served the community for almost 50 years. A larger facility opened in the La Jolla area in 1985 and was expanded in the late 1990s.

Mrs. Abraham Blochman started formal Jewish education for Beth Israel’s children in 1887. Education remained the purview of individual congregations until the 1960s, when the San Diego Hebrew Day School and the Bureau of Jewish Education were created. The Bureau became the independent Agency for Jewish Education in 1986. In 1979 the San Diego Jewish Academy began, and 20 years later it opened as a full-time school at a large campus in northern San Diego.

In 1970, with the Jewish population at 12,000, a Judaic studies program began at San Diego State University. Fifteen years later this program grew into the Lipinsky Institute for Judaic Studies, sponsored by arts patrons Bernard and Dorris Lipinsky. Lawrence Baron, the director of the Institute since 1988, holds the Nasatir Professorship in Modern Jewish History, named for Abraham P. Nasatir, an Orthodox Jew who was the first Jewish professor at the university (1928–1974). When he arrived, most of the students and faculty had never met a Jew before, but by the end of his tenure, Nasatir Hall...
had been named for him. University of California, San Diego, started its Judaic Studies program in 1977, with an emphasis on biblical scholarship, attracting some of the nation’s foremost scholars, such as David Noel Freedman, Richard Elliott Friedman, David Goodblatt, and Thomas Levy.

A group of women, under the direction of Irene Fine, began the Women’s Institute for Continuing Jewish Education in 1977. It pioneered the teaching of Torah, Talmud and Midrash by women. The San Diego Women’s Haggadah (1980), the first women’s text for a feminist seder, was followed by other publications which led the way for Jewish feminists.

With the Jewish population at 30,000 in 1980, a small group led by historian Henry Schwartz founded the Jewish Historical Society of San Diego. Its archive for local Jewish history was established in 1999 by Stanley and Laurel Schwartz in cooperation with the Lipinsky Institute. The archive’s opening in 2000 celebrated 150 years of San Diego Jewry.

The year 1914 saw the first weekly Jewish newspaper, The Southwest Jewish Press, which later became the San Diego Jewish Press Heritage, concluding its run in 2003. In 2005, there were two Jewish newspapers: the bi-weekly San Diego Jewish Times, formerly Israel Today, and the monthly San Diego Jewish Journal. Rabbi Aaron Gottesman brought the community a Jewish radio program called “Milch and Honey” during the 1980s.

Personalities

The following people are some of those who have made contributions which have had a lasting effect on the community and beyond.

French immigrant Abraham Blochman and his son Lucien started the Blochman Banking Company in 1893. By the late 20th century, it had become Security Pacific National Bank, one of the largest banks in California. The Blochman family took various leadership roles in the Jewish community and in civic and communal affairs. Lucien was a director of the Panama-California Exposition of 1915 which gave Balboa Park its Spanish architecture. He and his sister Mina Blochman Brust helped found the San Diego Chapter of the American Red Cross at the turn of the century, and Mina started the First Aid Program in 1919.

Abraham Klauber, who arrived in 1869, was an early merchant and San Diego booster whose descendants were prominent into the 21st century. Daughter Alice Klauber, an artist, directed the arts pavilion at the 1915 Exposition. A business partner of Abraham Klauber, Sigmund Steiner moved to Escondido in north San Diego County to open a store and became mayor (1894–1906). Under his leadership, the grape growing industry flourished with an annual Grape Day Festival and parade, one of the largest in Southern California. The festival at Grape Day Park was still celebrated at the beginning of the 21st century.

The five Levi brothers, two of whom had long lasting effects in San Diego county and were also business partners of Klauber, came to San Diego in the 1870s. Simon was a civic and religious leader who started the Simon Levi Company, wholesale grocery and liquor. Adolph, whose interests spread from the Pacific Ocean to the easternmost reaches of the county, was in the livery and ranching business. Also a civic and religious leader, his descendants carried on the family’s communal spirit into the 21st century.

Samuel I. Fox owned the Lion Clothing Store, which was located next to the Hog and Hominy Store operated by a Mr. Baer on what was known as the “Zoo Block.” From 1886 to his death in 1939, he was a civic, communal and religious leader who promoted the business community by helping to secure local control of the port and the water supply. In 1930 he was the first president of the San Diego Community Chest and was one of the organizers of the 1935 Exposition in Balboa Park which helped pull the city out of the depression.

Brothers Henry and Jacob Weinberger were communal and religious leaders. Jacob became the first federal judge in San Diego in 1946 and was the founding president of the United Jewish Fund (1936–45). The restored 1917 bankruptcy courthouse is named for him. Judge Edward Schwartz was appointed to the U.S. District Court by President Johnson in 1968, where he remained until his death in 2000. During his term he became chief justice, and in 1995 the U.S. Courthouse was named the Edward J. Schwartz Courthouse and Federal Building.

In the later part of the 20th century, several business people made their mark on the national scene and became local philanthropists. Sol Price, 1976 founder of the first national retail membership warehouse, The Price Club, along with his family, has funded much neighborhood redevelopment and university growth. Pioneering scientists, Irwin Jacobs and Andrew Viterbi, founded Linkabit, in 1968, a breakthrough company in the development of digital technology. In 1985 they went on to start Qualcomm, the cell phone industry giant. Both men, their families and their companies became major philanthropists, with the Jewish Community Center, synagogues, the San Diego Symphony, Qualcomm Stadium, theaters, public broadcasting and universities as some of the beneficiaries of their gifts.

Jews have participated in the arts with internationally renowned conductor, David Amos, who directs the Jewish Community Orchestra, and Ian Campbell, the San Diego Opera director since 1983. Under his direction the opera commissioned local composer Myron Fink to write the music for The Conquistador, the story of a family of secret Jews during the Inquisition in Mexico, which premiered in San Diego in 1997.

Robert Breitbard founded the San Diego Hall of Champions Sports Museum, in 1961. Located in Balboa Park and with Breitbard still its driving force at the beginning of the 21st century, it was the nation’s largest multi-sport museum. The Park is also host to the Museum of Photographic Arts, whose founding director, Arthur Ollman, has brought world class exhibitions to the museum since 1983 and into the 21st century.
Jack Gross started the first TV station in San Diego, KFMB, in 1949, and along with his son radio talk-show host and critic, Laurence Gross, Jews have maintained a long and steady presence on local TV news into the 21st century, with newscasters Marty Levine, Susan Taylor, and Gloria Penner.

In the national public sphere, former industrialist, Colonel Irving Salomon came to San Diego County after World War II. In 1953 President Eisenhower appointed him as a delegate to the United Nations General Assembly, for which he worked until his death in 1979. He and his wife Cecile, a classical pianist and composer of Jewish music, entertained notables at their ranch in Valley Center and were benefactors for cultural programs.

Real estate developer M. Larry Lawrence bought and restored the famous 1888 Hotel Del Coronado in 1963. His philanthropy helped create the new Jewish Community Center in 1985 which bears his family name. President Clinton made him ambassador to Switzerland (1994–96).

Jonas Salk, originator of the poliomyelitis vaccine, started the Salk Institute in La Jolla in 1963 and created a haven for world renowned research, while enabling architect Louis Kahn to design one of the world’s great buildings.

Though many Jews had served the city government as elected officials, the first Jewish mayor, Susan Golding, was elected in 1992, serving for two terms. Her father, Brage Golding, was president of San Diego State University from 1972 to 1977.

In 1993 two Jews were elected to congress, Robert Filner and Lynn Schenk. Schenk later became chief of staff for Governor Gray Davis, and Filner continued his tenure in congress into the 21st century. In 2000 Susan Davis was elected to congress. In 2005, two out of the five-person county congressional delegation were Jewish.

William Kolender, a career law enforcement professional, served as the chief of the San Diego Police Department for 13 years, beginning in 1975. After a short retirement, in 1995 he was elected sheriff of San Diego County, and he held the post into the 21st century. Together with Rabbi Aaron Gottesman, he started the San Diego Police Department Chaplaincy Program in 1968.

Former U.S. attorney, Alan Bersin, completed a tenure as superintendent of San Diego City Schools in 2005 and was appointed by Governor Arnold Schwarzenegger as secretary of education for California.

At the beginning of the 21st century, as California’s population swelled, so did the Jewish population, with newcomers from all parts of the U.S. and other countries such as South Africa, Iran, and especially from Latin and South America. Cousins of first generation eastern European Jewish immigrants, who came to the U.S. at the beginning of the 20th century, found themselves welcomed in Mexico and other Latin countries, and eventually, in San Diego. Proximity to Mexico provided a distinct flavor, as Jewish residents moved back and forth across the border for business, social activities and worship. The migratory inclination of the community was broadened by snowbirds in the winter, “zonies” (Arizonans), refugees from the desert heat, in the summer, a growing retirement community, and a large military presence. Many had strong ties to other places, which sometimes restrained their participation in local community life. Close-knit alliances formed, based on origins, either native or immigrant, as extended families were far away.

[Stan Schwartz and Laurel Schwartz (2nd ed.)]

SANDLER, ADAM RICHARD (1966– ), U.S. actor, screenwriter, musician. Sandler was born in Brooklyn, New York, but spent his childhood and teenage years in Manchester, N.H., where most of his family continued to reside. Sandler was discovered in a New York comedy club by Saturday Night Live (SNL) member Dennis Miller. He was a SNL cast member for five years, creating such notable characters as Opera Man, Canteen Boy, and Cajun Man. In 1996, his “Chanukah Song” became one of the most requested holiday songs on radio. Sandler appeared in over a dozen feature films, specializing in broad, physical comedy, from the early Coneheads (1993), to Billy Madison (1995) and Happy Gilmore (1996), on which he shared screenwriting credit, to the title roles in The Wedding Singer (1998), The Waterboy (1998), and Big Daddy (1999). He turned to dramatic roles with Punch-Drunk Love (2002) and in 2005 reprised the role of prison inmate/former pro quarterback Paul Crewe, originally played in 1974 by Burt Reynolds, in The Longest Yard. With Adam Sandler’s 8 Crazy Nights, Sandler created the first feature length animated Chanukah musical (2002). He also appeared in Anger Management with Jack Nicholson (2003), James Brooks’ Spanglish (2004), and 50 First Dates with Drew Barrymore (2004).

[Amy Handelsman (2nd ed.)]

SANDLER, BORIS (1950– ), Yiddish writer, journalist, broadcaster. Born in Beltsy (Moldova), Sandler graduated from the Kishinev Conservatory (1975) and was violinist in the Moldovian Symphony Orchestra. In 1983 he received an

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18 15
advanced degree in creative writing from the Gorky Literary Institute (Moscow). Having first attempted writing in Russian, Sandler soon realized that his native Yiddish was more suitable for his themes and style. Although no formal education in Yiddish existed in the Soviet Union after 1948, he was fortunate to find as a mentor the prominent Bessarabian Yiddish author Yekhiel "Shraybman. He debuted in the Moscow Yiddish monthly Sovetish Heymland (1981), whose editorial board he later joined (1986). He was president of the Yiddish Cultural Organization of Moldova, had a Yiddish program on Moldovan State Television, edited Undzer Kol, and wrote two film scripts about the fate of Bessarabian Jewry (1989–92). Immigrating to Israel (1992), he worked at The Hebrew University and edited the children's magazine Kind un Keyt. From 1998 he was editor-in-chief of the New York weekly Forverts. In addition to numerous stories, essays, and articles in periodicals, Sandler published several volumes of fiction: Treplekh aroyof tsu a Nese: Dertseyungen un Novelen ("Stairs up to a Miracle: Tales and Short Stories," 1986), Der Inyen Numer 5390 (fun di KGB Arkhim) ("Case No. 5390, from the KGB Archives," 1992), Der Alter Brunem: Dertseyungen, Miniatyurn, Roman ("The Old Well: Tales, Miniatures, Novel," 1994), Toyern ("Gates," 1997), and Ven der Goylem hot Farmakht di Oygn ("When the Golem Closed his Eyes," 2004). The major theme of Sandler's fiction is the past and present of Bessarabian Jews. His style remains close to the spoken idiom, but is also influenced by recent modes, such as magical realism.

[Michael Krutikov (2nd ed.)]

SANDLER, JACOB KOPPEL (d. 1931), composer and music director. Sandler was born in Biełozewko and as a child sang in the choir of Cantor Mordecai Minkovsky (the father of Pinhas "Minkowsky). He later became choral director for Cantor Samuel Polishuk. He married and went into business, but subsequently lost his money and in 1888 went to the United States. There he became choral director for several well-known cantors and, at the same time, directed Yiddish theater choirs, first as an assistant to Zelig Mogulescu and then as an independent composer and director. In 1889 Sandler produced Goldfaden's Dr. Almasad and in 1896 composed the music for Joseph Lattiner's operetta Kiddush ha-Shem or the Jewish Minicir. He also composed for M. Horowitz' operettas The Hero and Bracha or the Jewish King of Poland for a Night (1896). In the latter work the song "Eli, Eli" (generally spelled Eili, Eili) with text by Boris Tomashesfky, was featured, and, because of its tremendous effect, the operetta played for many weeks. It became one of the most popular Jewish compositions in the Western world and was performed and recorded by folk and opera singers, as well as cantors. Jossele "Rosenblatt maintained that before "Eili, Eili" appeared in this American operetta, it was heard in Europe as a folksong. He further alleged that the melody was also found among the compositions for selihot by a cantor of an earlier generation. The controversy has not been resolved. In any case, the appearance of "Eili, Eili" as an anonymous "folk song" in most of the recordings and printed versions (including the publications of the *Society for Jewish Folk Music) cannot be adduced as proof of a folk origin, since all of them postdate the operetta. Sandler served for a time as composer-director of the Arch Street Theatre in Philadelphia and then withdrew from the theater to appear as a synagogue choral director for the High Holy Days.

SANDMEL, SAMUEL (1911–1979), biblical scholar. Sandmel was born in Dayton, Ohio, and graduated from the University of Missouri in 1932 and from the Hebrew Union College in 1937, receiving his doctorate from Yale University in 1949. He served as Hillel Foundation rabbi in North Carolina from 1939 to 1942, and at Yale from 1946 to 1949. He was professor of Jewish Literature and Thought at Vanderbilt University from 1949 to 1952. In 1952 he was appointed professor of Bible and Hellenistic literature at the Hebrew Union College. Among the many honorary degrees bestowed upon him was the President's Fellowship, by Brown University. At the time of his death he was Helen A. Regenstein Professor of Religion of the Chicago Divinity School. He was also an editor of the Oxford Study Edition of the New English Bible. Sandmel was an internationally recognized authority on the relationship between Judaism and the New Testament.

[Heinz Hartman (2nd ed.)]

SANDOMIERZ (Rus. Sandomir; in Latin documents of the 12th century Sudomir; in early and Jewish sources Tsouzmir or Tszuzmir), town in Kielce province, central Poland. Jews settled there at the beginning of the 13th century, making that community one of the oldest in Poland. In 1367 representatives of the Jewish communities of Sandomierz, *Cracow, and *Lvov requested King *Casimir III (the Great) to confirm the privileges of Polish Jewry. Toward the end of the 13th century the townsmen of Sandomierz waged a stubborn struggle against the local Jewish merchants, who were sometimes compelled to move to other towns. In 1550 there were 40 Jews living in Sandomierz and paying state taxes. At the beginning of the 17th century there existed a street with 16 houses owned by Jews, and the old synagogue was built. During the war with Sweden (1655/56) most of the Jews of the town were slaughtered and the rest expelled. In 1658 (see *Poland-Lithuania) King John *Casimir permitted the Jews to return to Sandomierz and granted them the right to engage in commerce. This privilege
Holocaust Period

At the outbreak of World War II there were about 2,500 Jews living in Sandomierz. The German army entered on Sept. 15, 1939 and immediately organized pogroms, during which Jews were killed. In the first half of 1942, nearly two thousand Jews from the vicinity were expelled to Sandomierz, and the town's Jewish population grew to about 5,200. On Oct. 29, 1942, about 3,200 Jews were deported from Sandomierz to the *Belzec death camp. During deportations which took place in the summer and fall of 1942, thousands of Jews from the whole *Radom district fled into the forest, where they tried to survive in hiding and to organize guerilla units. On Nov. 10, 1942, the Germans published a decree on the establishment of four new ghettos in the region (Sandomierz, *Szydlowiec, *Radomsko, and Ujazd), where Jews were promised security if they left the forests. Thousands of Jews, unable to see the possibility of surviving in the forests during the winter, responded to the German appeal. About 6,000 Jews were concentrated in the ghetto of Sandomierz, which was liquidated on Jan. 10, 1943, when almost all its inmates were deported to the *Treblinka death camp. Only 700 Jews were left; of them 300 were deported to the forced-labor camp in *Skarżysko-Kamienna, and 400 were transferred to the forced-labor camp established in Sandomierz. This camp was liquidated in January 1944 and almost all the inmates were murdered. After the war the Jewish community of Sandomierz was not reconstituted.

SÁNDOR, PÁL (1860–1936), Hungarian statesman and economist. Born in Hódmezővásárhely, Sándor entered his father's grain business. An active member of the Budapest exchange, he also founded and chaired the Hungarian trade union. In 1912 he was appointed director of the Budapest municipal tramway company. Sándor began his political career as a member of the Budapest municipal council, delegated by the governing Liberal Party. He sat in parliament as a delegate of the same party from 1901 and was a member of the Liberal Party opposition under Horthy's regime. Somewhat defensively and apologetically, Sándor attacked the antisemitic policies of the government and its first discriminatory laws, the *numerus clausus, restricting higher education for Jewish youth. He was an extreme assimilationist and outspoken opponent of Zionism.

[Baruch Yaron]

SANDROW, EDWARD T. (1906–1975), U.S. Conservative rabbi and communal leader. Sandrow was born in Philadelphia and was ordained at the Jewish Theological Seminary of America (1933). His first rabbinical position was at the Ohavai Shalom synagogue in Portland, Oregon (1933–37). Sandrow then became rabbi at Temple Beth El in Cedarhurst, Long Island. He was a teaching fellow at New York University (1948–52). At the Jewish Theological Seminary he was visiting professor in homiletics (1954–56, 1962–63) and of pastoral psychiatry (1963 onwards). Sandrow’s interest in pastoral psychiatry is expressed in some of his articles. He contributed a chapter called “Conscience and Guilt: A Jewish View” to Simon Noveck’s (ed.), Judaism and Psychiatry (1956).

Sandrow was president of the Rabbinical Assembly of America (1960–62) and of the New York Board of Rabbis (1966–67). In the latter organization he served as chairman of the board of governors (1968–70). He was a member of the board of directors of the American Friends of the Hebrew University (1966–75), an alternate member of the board of governors of the Hebrew University in Jerusalem, and a member of the boards of directors of the Joint Distribution Committee, the Zionist Organization of America, and the National Jewish Welfare Board. He was also chairman of the commission on Jewish chaplaincy of the latter organization. From 1960 he...
served as chairman of the board of *Hadoar*. He was coauthor of *Young Faith*, a prayer book with music for children.

**SANDZER, HAYYIM BEN MENAHEM** (d. 1783), talmudist and kabbalist. Hayyim, who was born in Sandz but should not be confused with Hayyim *Halberstamm of Sandz*, became one of the great scholars of Brody. Aside from his great talmudic scholarship, he was considered one of the outstanding kabbalists of his time. In 1744 he was counted with Ezekiel *Landau and Moses Ostrer* among the kabbalists of the *Klaus* in Brody, the famous Galician kabbalistic center. It is related that Israel Ba'al Shem Tov said that Hayyim's soul was a spark of the soul of *Johanan b. Zakkai*, while Jacob, son of Ezekiel Landau, remarked in the preface to his father's *Noda bi-Yudah* that Hayyim was his father's teacher in Kabbalah. In 1752 he condemned Jonathan *Eybeschuetz*s amulets as Shabbatean. Although an outspoken adversary of the hasidic movement, he was highly respected in hasidic circles.

One of his responsa appears in *Noda bi-Yudah* and others in Israel *Lipschutz’s Or Yisrael*. Most of his novellae and responsa on the *Arba'ah Turim*, however, remained unpublished. Many years after his death Hayyim's commentary on *Avot, Nedarim ba-Kodesh*, was published (1862).

[Anthony Lincoln Lavine]

**SAN FRANCISCO BAY AREA**, including San Francisco, a combined city-county in N. California, and surrounding area. In 2001 the San Francisco city population was 776,733, with the Jewish population 49,500; an additional 160,000 Jews lived in the surrounding area.

Following the discovery of gold in Northern California in 1848, thousands of Jews were among the quarter of a million people making the long and arduous trip to one of the most remote regions on the continent. Although a few came overland, most of the Jewish pioneers chose the sea route: The four- or five-month long, 16,000-mile journey “around the Horn” often shortened by a land crossing of malarial swamps at Panama or Nicaragua.

Gold Rush San Francisco was engulfed by peoples from all over the world, and the town’s Jewish community was itself highly diverse. The majority was from the German-speaking lands of Central Europe, especially Bavaria and the Prussian province of Posen (seized from Poland in 1793). Others hailed from England or the French provinces of Alsace and Lorraine, and a few were Sephardim from the West Indies or the American South.

In the coarse mining towns of the Mother Lode, along the western foothills of the Sierras, Jews established businesses, burial societies, and synagogues. In the gateway boomtown that was San Francisco, rife with prostitution, gambling, and gunfights, about 30 Jews held High Holiday services in a wood-framed tent as early as 1849.

Despite the frequent fires, sandstorms, and epidemics that ravaged the fledgling city, a number of the pioneer Jews became immensely successful. Antisemitism was less salient than in many other parts of America, and Jews, rarely perceived as interlopers, were well represented among the early political leaders, judges, and sheriffs. Others distinguished themselves in business, amassing fortunes in dry goods, banking and utilities, real estate and insurance, mining and overseas commerce, tobacco and produce. In later generations the extensive philanthropy of these first families – Fleishhacker, Haas, Koshland, Stern, Steinhardt, Dinkelspiel, Zellerbach and others – made their names well-known in Northern California to Jew and non-Jew alike.

The most famous pioneer Jew is the Bavarian Levi Strauss, whose jeans have become one of the most recognizable symbols of America around the world. The brothers-in-law Louis Sloss and Lewis Gerstle headed the enormous Alaska Commercial Company, which for decades held a highly lucrative, federally granted concession for the territory’s sealskins. Another early arrival, the Westphalian engineer Adolph Sutro, designed and built a four-mile mining tunnel through the Comstock silver lode in Nevada. He invested the profits in San Francisco real estate, became one of the wealthiest men in the state, and was elected mayor in 1892, the first Jewish mayor of a major American city. At the end of the 19th century, Julius Kahn was elected to the House of Representatives from San Francisco and served 12 terms. Following his death in 1924, his wife, Florence Prag *Kahn*, was elected to his seat, the first Jewish woman in the U.S. Congress.

Many of the children of the pioneers, Bay Area Jewry’s second generation, distinguished themselves in the arts. David Belasco, an innovative playwright and producer, set designer and director, became one of the leading theatrical personalities in the country. Toby Rosenthal, a consummate portraitist and genre painter, was one of a half dozen gifted San Francisco Jewish painters who came of age in the late 19th century. A.L. Gump, as a purveyor and connoisseur of Far Eastern art, jewelry and furnishings, literally changed the taste of San Franciscans, even while an impenetrable social barrier existed between whites and Asians.

The religious expression of this frontier community was decidedly liberal, and the two earliest synagogues, Emanu-El and Sherith Israel, both formed in the first week of April 1851, came to embrace Reform Judaism, the former within a decade of its founding, the latter by the turn of the century. Soon after the Civil War, Emanu-El erected the magnificent Sutter Street Temple, its twin gothic towers a prominent feature of the young city’s skyline. In 1925, the congregation moved to the Lake Street location it currently occupies and built another architectural masterpiece, harmoniously blending Byzantine, Moorish, and Spanish mission styles. The domed sanctuary, influenced by the Hagia Sophia in Istanbul, is one of the most noted houses of worship on the West Coast. Sherith Israel constructed its grand synagogue, even more eclectic in style and filled with vivid stained-glass windows, in 1905. It withstood
the devastating earthquake and fire of the following year, unlike Emanu-El’s temple and most other buildings housing San Francisco’s Jewish institutions.

While San Francisco, with a Jewish population of almost 20,000, was the second largest Jewish community in the United States by 1880, Oakland, across the Bay, grew more slowly. But the city of fewer than a thousand Jews produced two extraordinary personalities: the maverick Reform rabbi Judah L. *Magnes, a passionate advocate for social justice in New York and founder and first president of The Hebrew University of Jerusalem, and the irreverent author and avant-garde art critic, Gertrude *Stein. Both attended the Sunday school of the First Hebrew Congregation, today’s Temple Sinai. Magnes and Stein lived most of their adult lives abroad, but, by their own admission, their path-breaking careers owed much to their exuberant formative years in the East Bay.

Jews could be found on both sides of the violent class conflict that gripped the Bay Area during the Progressive era and later in the Depression. They included the agrarian reformers David Lubin, his son Simon Lubin, and half-brother Harris Weinstock; the socialist Anna Strunsky; the suffragette Selina Solomons; and labor organizers such as Lou Goldblatt and Rose *Pesotta. At Sherith Israel, Rabbi Jacob Nieto and his successor, the young Jacob *Weinstein, spoke out forcefully on behalf of the disadvantaged. But corporate titans such as I.W. *Hellman, Jr., and the brothers Herbert and Mortimer Fleishhacker were mainstays of the conservative, anti-union forces in the Bay Area.

The turn of the century saw an influx of thousands of Yiddish-speaking immigrants, although for many decades they accounted for a relatively low proportion of the total Jewish population compared with other major American cities. In San Francisco, shanties of East European Jews sprang up in the South of Market area before it was destroyed in the 1906 earthquake and fire. Two newer neighborhoods took its place after the disaster: the outlying San Bruno Avenue quarter, and the more populous Fillmore-MacAllister district, a vibrant Jewish neighborhood in the heart of the city until well after World War II. The Fillmore produced one of the century’s greatest child prodigies, the violinist Yehudi *Menuhin, while another violinist destined for worldwide fame, Isaac *Stern, grew up in the nearby Richmond District. In Oakland, a colorful East European Jewish neighborhood arose in the aging Victorian houses west of Broadway, centered on the Orthodox Congregation Beth Jacob on Ninth and Castro Streets.

Most of the city’s Jewish immigrants left the ethnic enclaves by the 1940s for more mixed, middle class neighborhoods, such as the Richmond and Sunset Districts in San Francisco and the Grand Lake District in Oakland. Still, a thick social barrier remained between them and the German-Jewish elite, many of whom lived in exclusive Pacific Heights with commanding views of the Bay. The two groups differed on the proper response to the Holocaust and fought bitterly over the merits of Zionism. During World War II, Rabbi Irving Reichert of Emanu-El, along with key lay leaders of his congregation, founded the local chapter of the American Council for Judaism, dedicated to preventing the creation of a Jewish state; it soon became the strongest branch of the ACJ in the country. The forceful young Rabbi, Saul White, a Polish immigrant who served the Conservative synagogue Beth Sholom, which was comprised largely of East Europeans, countered Reichert.

After the birth of Israel in 1948, and American recognition, a community consensus was reached, and nearly all the pioneer families transferred their full support to the Jewish state. The eloquent, new rabbi at Emanu-El, Alvin Fine, advocated Zionism from the pulpit.

Fine and his close friend Benjamin Swig, owner of the historic Fairmont Hotel, helped shift the leadership of Bay Area Jewry into the mainstream of American Judaism. Swig was the son of a Lithuanian immigrant, but two descendants of pioneers were no less active in invigorating Jewish life: Walter Haas and Daniel Koshland, cousins, brothers-in-law and co-owners of Levi Strauss and Company. Meanwhile, thousands of young Jewish newcomers from the East and Midwest, and refugees from the Nazi terror, also infused the community with a new sense of pride and unity with world Jewry. In the 1970s and 1980s, the Bay Area Jewry was especially assertive in the rescue of Jews from Ethiopia and the Soviet Union. Today, many tens of thousands of Jews from the former Soviet Union live in the region, in San Francisco and on the Peninsula in particular, having been aided by the Jewish Community Federation and its agencies.

In the post-World War II period, the Bay Area continued to be a fertile field for audacious Jewish artists such as the “beat” poet Allen *Ginsberg, the comedian Lenny *Bruce, the sculptor Jacques Schnier, and the rock impresario (and Holocaust survivor) Bill *Graham.

The Jewish community became intertwined with both the counter-culture and gay rights movements, which took hold in the Bay Area beginning in the late 1960s. The House of Love and Prayer founded by Rabbi Shlomo *Carlebach, and later the Jewish Renewal Movement of New Age rabbi Zalman *Schachter-Shalomi, drew many spiritually minded young Jews disaffected with traditional synagogue services. Jewish mysticism and mediation have remained common features of Bay Area Jewish life, both within and outside synagogues.

In 1977, one of the first synagogues in the country formed expressly for homosexuals was founded in San Francisco, Congregation Sha’ar Zahav. The following year, a member of the Board of Supervisors, Harvey Milk, a New York-born Jew and the only openly gay officeholder in the country, was assassinated in City Hall (along with Mayor George Moscone) by former supervisor Dan White. The shocking tragedy energized many homosexuals, and since then there has been an increasing number of openly gay rabbis and lay leaders in the Bay Area. The general Jewish community has shown great sensitivity to the AIDS crisis since a pivotal, widely circulated Yom Kippur sermon on the issue was delivered at Emanu-El in 1985 by its senior rabbi, Robert Kirschner.
San Francisco’s and the East Bay’s Jewish Community Federations and their fast-growing endowment funds, as well as family foundations such as Koret, have tried to meet the rapidly increasing and changing needs of the diverse Bay Area Jewish community. By the mid-1980s the Jewish population numbered around 223,000, 4% of the entire Bay Area. In 2004, it was estimated to have doubled (as had the general population in the past two decades) as a result of huge suburban gains: Contra Costa County, Marin and Sonoma Counties, and the Peninsula. A particularly large and vibrant Jewish community, including many immigrants from the Former Soviet Union as well as Israelis, has emerged on the Southern end of the Peninsula, with the city of Palo Alto as its hub. With about 72,000 Jews, the South Peninsula (essentially Santa Clara County) has passed San Francisco and contains the largest Jewish population of any region in the Bay Area. A large percentage of the Bay Area Jewish community is intermarried; a recent demographic study revealed that about a quarter of those living in Jewish households is non-Jewish.

Jews are prominent in almost every phase of the region’s robust economic, cultural, and professional life. They are highly represented among the Nobel laureates of UC Berkeley and Stanford; they are leading corporate executives; they are on the cutting edge of bio-medical research and technological innovation in Silicon Valley. In 1992, two Bay Area Jewish women, Dianne Feinstein and Barbara Boxer were elected to the United States Senate, and they have both been twice reelected. Since 1995, Michael Tilson Thomas (grandson of the great Yiddish actor Boris Thomashevsky) has been the music director of the San Francisco Symphony, the third Jew to serve in that capacity.

Recent decades have witnessed a virtual renaissance in Jewish education. Illustrious scholars teach in Jewish studies programs at the Bay Area’s many institutions of higher learning – particularly Stanford (Steven Zipperstein and Arnold Eisen), UC Berkeley (Robert Alter and Daniel Boyarin), and nearby UC Davis (David Biale). The day school movement, moribund until the 1960s, has burgeoned in recent decades and in the early 2000s counts 13 schools in the area. Lehrhaus Judaica, a school for adult Jewish education, spans the entire Bay Area with its offerings. Public intellectuals such as Michael Lerner, founder and editor of the leftwing Tikkun magazine, have enlivened the debate in the Jewish community on Israel and other Jewish issues.

The recent growth of cultural and recreational centers has also been impressive. With the Judah L. Magnes Museum and the Contemporary Jewish Museum, A Traveling Jewish Theater, the Jewish Film Festival, and its myriad of new, well-equipped JCCHs and residences for seniors, the Bay Area has emerged as one of the most dynamic Jewish communities in North America.

Jewish Community News is a monthly newspaper devoted to local Jewish activity and national and international news of Jewish interest.

There is a Conservative synagogue in Montebello, Temple B’nai Emet, and in Pasadena, Congregation B’nai Torah. Pomona has a Reform synagogue, Temple Beth Israel, that houses a pre-school. Ontario features a Conservative synagogue, Temple Sholom. The Chabad of the Inland is located in Rancho Cucamonga. West Covina also has a Conservative congregation, Temple Ami Shalom, and Whittier has a Conservative synagogue, Temple Beth Shalom. The Reconstructionist Havurah in Whittier pioneered the use of Havurot within the congregation long before they became fashionable in other sections of the country, and they have now sustained themselves and continued for a generation. Congregation Shaarei Torah in Arcadia, a Conservative congregation, also houses a Jewish pre-school called B’nai Simcha. There is also a Reform temple, B’nai David, in Temple City. Temple Beth Israel of Highland Park and Eagle Rock is a Conservative congregation. Sinai Temple of Glendale, a Reform congregation, became affiliated with the San Gabriel-Pomona Valleys Federation. Adat Re’im in the Pomona Valley has just been constituted.

There are a string of hospitals along the foothills of the Valley including *City of Hope, which is now a non-sectarian hospital but well aware of its Jewish roots, and thus the area has attracted Jewish physicians and Jews in allied medical professions. Some parts of the Jewish community are old – at least by California standards – once rooted in the Jewish community of Los Angeles areas such as Monterey Park and Montebello. Others have developed in the post-war migration to California and in the string of Jewish communities throughout Southern California.

Some areas were settled by Jewish chicken farmers; there was an area of egg farming and chicken farming in the valley. Over time the land became more valuable than the farms, and several would-be farmers found themselves prosperous real estate developers.

Because of the vastly increasing cost of housing and the shortage of housing in the Los Angeles area, the Jewish community of Los Angeles is moving westward into the western outskirts of the San Fernando Valley and eastward into the Pomona Valley-San Bernardino area. As young families mature, one suspects that there will be a growing need for Jewish institutions, Jewish education, and synagogues to meet an expanding population.

[Michael Berenbaum (2nd ed.])

**SANGUINETTI, AZARIAH HAYYIM** (early 19th century), Italian preacher. A pupil of *Ishmael b. Abraham ha-Kohen, rabbi of Modena, Sanguinetti was the author of a book of homilies, *olah Hadashah* (Leghorn, 1838). The sermons, which make use of talmudic and midrashic sources, rely especially on the Commentaries of Nahmanides. Influenced by kabbalistic literature, Sanguinetti frequently quoted from the Zohar and used kabbalistic terms and symbols. Additional material was appended to the work in the supplement, “Evrei Olah,” which deals mainly with halakhah. The introduction to the book indicates that Sanguinetti succeeded his teacher as rabbi of Modena.

**SANHEDRIN.** Great Sanhedrin usually means the supreme political, religious, and judicial body in Palestine during the Roman period, both before and after the destruction of the Temple, until the abolishment of the patriarchy (c. 425 C.E.). The precise definition of the term Sanhedrin has engaged the attention of historians in the past century, owing to the apparent conflict between the Hellenistic and rabbinic sources as to its nature and functions. While in the Hellenistic sources, in Josephus and the Gospels, it appears as a political and judicial council headed by the ruler, the tannaic sources depict it chiefly as a legislative body dealing with religious matters, and in rare cases acting as a court – for instance, to try a false prophet or high priest.

The first historical mention of the Sanhedrin is in the statement of Josephus that in 57 B.C.E. “Gabinius divided the country into five synedria (Ant., 14:91) or synodoi (Wars, 1:170). Most scholars agree that the reference is to a purely political body, as the Romans did not interfere with the religious life of conquered people. Their objective was, as Schalit points out, the prevention of uprisings. The next report describes “Hyrcanus, as ethnarch of Judea, presiding over the Sanhedrin trying Herod, the strategus of the Galilee, for political murder (Ant., 14:168–70). Subsequently, when Herod became king, he had the Sanhedrin condemn Hyrcanus for plotting against him (Ant., 15:173), though according to another account, he did so himself without the Sanhedrin (15:176). Josephus’ next reference to a Sanhedrin is to one that consisted of Roman high officials, convened at the suggestion of Augustus in Syria, to try the sons of Herod for rebellion against their father (16:356ff.); according to Josephus (Wars, 1:357), this Sanhedrin consisted of Herod’s “own relatives and the provincial governors.” When the Sadducean high priest, Ananus, “convened the judges of the Sanhedrin” (Jos., Ant., 20:200) to condemn James, the brother of Jesus, his opponents, the Pharisees, took great pains to have him removed. Their plea before the Roman governor that Ananus “had no authority to convene the Sanhedrin without his consent” (20:202) was obviously a pretext. Ananus’ Sanhedrin was no doubt a Sadducean one, so that in removing Ananus shortly after this, Agrippa II pleased the Pharisees. On the other hand, the Sanhedrin convened by Agrippa II to permit the levitical singers to wear the priestly linen garments – apparently in accord with 11 Chronicles 5:12 – was a Pharisaic one (Arakh. 11a–b).

Josephus’ objection to this ruling (Ant., 20:216–18) represents the priestly-Sadducean view. Josephus received his commission as a supreme commander from the Sanhedrin (Life, 62), though he usually refers to it as the *koinon* (ibid., 190, 309) and describes it as the assembly of the leading people of Jerusalem (ibid., 28, see also Wars, 2:562).
The Gospels describe three trials before the Sanhedrin, all of them presided over by the high priest, but apparently in different locations. Jesus was tried on Passover night, or on the preceding night, in the palace of the high priest (Mark 14:53ff; John 18:3). His disciples, Peter and John Zebedee, were questioned at "eventide," "in Jerusalem" (Acts, 4:3–6). In the case of Paul, the chief priest "and all their Sanhedrin" were ordered to meet in the chief captain's quarters (Acts, 22:25–30). The tannaitic sources, however, depict the Great Sanhedrin as an assembly of sages permanently situated in the Chamber of Hewn Stone in the Temple, meeting daily, only during the daytime between the hours of the two daily sacrifices (approximately 7:30 a.m.–3:30 p.m.), and never at night, on the Sabbaths or festivals, or on their eves. It was the place "where the Law went forth to all Israel" (Sanh. 11:2; Tosef., Sanh. 7:1) and was the final authority on halakkah; the penalty of contravening its decisions on the part of a scholar — "zaken mamre — was death (Sanh. ibid.). Settling questions of priestly genealogy was also within the jurisdiction of the Great Sanhedrin (Mid. 5:4; Tosef., Sanh. loc. cit.). Actual cases are recorded of questions being sent "to the sages in the Chamber of Hewn Stone" (Eduy. 7:4) and of Rabban Gamaliel going to the Chamber and receiving a reply to a question which he put (P'ehah 2:6).

The competence of the Sanhedrin is listed in tannaitic literature. "A tribe, a false prophet, or the high priest may not be tried save by the court of seventy-one; they may not send forth the people to wage a battle of free choice save by the decision of the court of one and seventy; they may not add to the City [of Jerusalem], or the Courts of the Temple save by the decision of the court of seventy-one; they may not set up sanhedrins for the several tribes save by the decision of the court of one and seventy; and they may not proclaim [any city to be] an "Ir ha-Niddahat [cf. Deut. 13:13–19] save by the decision of one and seventy" (Sanh. 15). The Tosefta enumerates still other functions: "They may not burn the red heifer save according to the instructions of the court of 71; they may not declare one a zaken mamre save the court of 71; they may not set up a king or a high priest save by the decision of the court of 71" (Tos., Sanh. 3:4). Elsewhere the Mishnah rules that the rites of the water of ordeals (see *Sotah; Sot. 1:4) and the eglah arufah — i.e., the breaking of the heifer's neck in order to avenge the sin of an anonymous murder (cf. Deut. 21:1–9) — may be performed only under the supervision of the Great Bet Din in Jerusalem (Sot. 9:1).

Unlike Buechler (see bibl., pp. 56ff.) and Zeitlin (see bibl., pp. 70–71) who regard the tannaitic list of the functions of the Great Bet Din as merely ideal, Tchernowitz (see bibl., 242ff.) insists upon its practical reality. Thus, Simeon the Hasmonae was appointed high priest and "Prince of the people of God" (see *Asaramel) by the Great Assembly of priests and heads of the nation (1 Macc., 14:27ff.; cf. Tosef., Sanh. 3:4). Again, "Jonathan, after the war with Demetrius, returned and called the elders of the people together; and took counsel with them to raise the height of the walls of Jerusalem, and to raise a great mound between the citadel and the city" (ibid. 12:35–36), things which could only be done, according to the Mishnah, with the consent of the Great Court (Sanh. 1:5; Shevu. 2:2). Yet, in rebuilding the ruins of the city and its walls and carrying on defensive wars, Jonathan did not consult with the Assembly; neither did Simeon take counsel with regard to the fortifying of Judea (1 Macc., 13:33). These things did not require the consent of the Sanhedrin (Tchernowitz, op. cit., 243–7). Furthermore, the reference to "tribes," as Alon says, is to sections of the country; or else, the term "tribes," like "false prophet" may put into legal formulation practices current in the biblical period, as Z. Karl suggests.

Another aspect of the conflict between the sources is that, whereas the tannaitic documents represent the Sanhedrin as being composed of Pharisaic scholars, headed by the foremost men of the sect — the nasi and av bet din — the Hellenistic accounts usually make the high priest, or the king, the president of the body. Thus Samaia and Pollio (that is, probably, Shemaiah and Avtyalon, or Shammiai and Hillel) and Simeon b. Gamaliel, who are mentioned in Josephus, and Gamaliel 1, who is cited in the Book of Acts, are referred to in these books merely as prominent members of the Sanhedrin, though in the tannaitic documents they are represented as the presidents of that body. In the Book of Acts, moreover, the Sanhedrin is depicted as being "one part Sadducees and the other Pharisees" (Acts, 23:6).

The historians' answers may be classified into three groups. Some scholars maintain that there was a single Sanhedrin, the supreme political, religious and judicial body, but they differ among themselves as to the other aspects of the reconstruction. Schuerer, who dismisses the rabbinic sources, regards the high priest as the presiding officer. Hoffmann held the highest office to belong to the Pharisaic nasi, though the secular rulers often usurped the role. Jelski, following a middle course, divides the functions of the presidency between the high priest, upon whom he bestows the title nasi, and the Pharisaic av bet din. Similarly, G. Alon believes that the Sanhedrin was composed of Pharisees and Sadducees, each dominating it by turns. Chwolson thinks that the Great Sanhedrin of the rabbinic documents was nothing but a committee on religious law appointed by the Sanhedrin (so, too, Dubnow and Klausner). Common to all these theories is the erroneous assumption that there can be only one Sanhedrin in a city. In reality, a Sanhedrin can be the king's or ruler's council, a body of high officials; a congress of allies or confederates, a military war council, etc. (see Liddell-Scott, Greek-English Lexicon, s.v. συνέθριον).

Another group of scholars believes that there were in Jerusalem three small Sanhedrins, each of a different composition and task — priestly, Pharisaic, and aristocratic — each consisting of 23 members. A joint meeting of the three Sanhedrins, headed by a nasi and av bet din, constituted the Great Sanhedrin of 71 (Geiger, Derenbourg, etc.). This imaginary reconstruction flounders on the Tosefta (Hag. 2:9 and Sanh. 7:1) and the Jerusalem Talmud (Sanh. 1:7, 19c), according to which, contrary to the Babylonian Talmud (Sanh. 88b), the
small Sanhedrin consisted only of three. The third group of scholars is agreed that there were two supreme bodies in Jerusalem, a political and a religious, but disagree on almost everything. Buechler thinks that the religious body was properly called Bet Din ha-Gadol she-be-Lishkat ha-Gazit ("Great Bet Din in the Chamber of Hewn Stone"), and the application to it of the term Sanhedrin was a misnomer. Zeitlin points out that there is no evidence that the political Sanhedrin was called "Great," but his view that the division between the political and the religious authorities dates back to Simeon the Hasmonean is questionable. More likely the separation was the result of the fact that the political views of the religious Sanhedrin were not sought by Hycanus and Aristobulus, the sons of Salome, nor by Herod, nor by the high priests who were appointed by Romans.

The opponents of the theory of the double Sanhedrin base themselves mainly on three arguments: no proof exists that the nasi headed the Sanhedrin in the days of the Temple; the priests’ authority to “declare” the law is scripturally prescribed (Deut. 17:9), so that the high priest must have at least formally headed the religious Sanhedrin, as he did among the Qumran sect; and in Judaism there is no division between the religious and the secular. As against these arguments, it has been pointed out: the law concerning the assignment of one's property to the religious Sanhedrin when they were appointed by Romans

The Gumaah sanhedin is divided into 14 chapters, but then it

The Romans apparently withdrew their recognition of the Sanhedrin when they dissolved the patriarchate.

SANEDRIN (Heb. עֵדֶדֶנִים), fourth tractate in the Mishnah order of Nezikin. The sequence of the tractates within an order being as a rule determined by the size of the tractates, it should be remembered that the three Bavot originally constituted one large tractate of 30 chapters, to which Sanhedrin, together with “Makkot which was originally united with it, is second in size. “Sanhedrin, in the context of this tractate, means “court of justice,” referring to the great bet din, which comprised 71 ordained scholars, and the subordinate courts, composed of 23 judges, functioning in various towns. The general term bet din usually referred to minor courts of three members. In general, the tractate deals with the composition and power of the courts of different kinds and degrees, with legal procedure and criminal law.

Chapter 1 defines the various courts and their competence: i.e., the "courts of three" with monetary matters; that of 23 with criminal cases which may involve the death penalty; and that of 71 with exceptional cases, like trying a high priest or a whole city accused of idolatry. Chapter 2 deals with the privileges of the high priest and the king in general. Chapter 3 describes the setting up of ad hoc “courts of three,” rules concerning the qualification of judges and witnesses, and questions of judicial procedure. Chapter 4 discusses the differences between criminal and civil procedure, and Chapter 5 gives details on the way witnesses were examined. Chapter 6 gives information as to how the death penalty by stoning was carried out, and Chapter 7 enumerates the four modes of execution: stoning, burning, decapitation, and strangulation, but stoning having been discussed in the previous chapter, it proceeds with the details of the three other modes of execution. The subject of stoning is then taken up again, giving the crimes to which this mode of execution applies. Chapter 8 deals with the "stubborn and rebellious son" (Deut. 21:18–21). Chapter 9 discusses the crimes to which the penalties of burning and decapitation are applicable, and goes in detail into the various aspects of the crime of murder, especially the question of intent (premeditation). Some extraordinary modes of punishment are also discussed here. Chapter 10 opens with the well-known statement that “all Israel have a portion in the world to come,” implying that even criminals put to death by order of the court will be resurrected at the end of days, but then it goes on to list certain categories of sinners (specific kinds of heretics and idolaters) to whom the comfort of resurrection is denied. Chapter 11 deals with the crimes to which the penalty of strangulation applies, discussing the case of the "zaken mamre" ("rebellious teacher") and the false prophet, in particular. In the Babylonian Talmud this last chapter is placed tenth, while the mishnaic tenth becomes the concluding chapter. The rabbis go to great lengths (90b–92a) to prove that the belief in the resurrection of the dead was rooted in the Torah. There is Gemara to both Babylonian and Jerusalem Talmuds. In the Tosefta, this tractate is divided into 14 chapters.

Incorporated in the Mishnah Sanhedrin are ancient halakhah and even mishnayot from the time of the Second Temple. "The king can neither judge nor be judged" (2:4) is an early enactment dating from the time of Alexander "Yannai, and earlier still is the statement, "when [the king] sits in judg-
ment [the Torah scroll] shall be with him" (ibid). Mishnah 4:2, which deals with those who married into the priesthood, also belongs to the time when Jerusalem was at the height of its glory, and the whole order of the four capital cases certainly – by its very nature – dates from Temple times. Chapter 9:6 is connected apparently with the *Hasmonean era, and this is most certainly the case with regard to the Mishnah *"Kanna'im [zealots] fall upon one who has intercourse with an Aramean woman" (9:6). The well-known Mishnah at the beginning of chapter 10 is anti-Sadducean, and this testifies to its early origin. Naturally the views of *tannaim of a very much later period were incorporated in the final arrangement of the Mishnah. Recognizable and particularly conspicuous in *Sanhedrin are additions from the halakhic Midrashim, most of which are from the school of Akiva. Some of them belong to the school of R. Ishmael and were apparently added by R. Simeon b. Yohai, since many anonymous *mishnayot are in accordance with their view. The English translation of the tractate in the Soncino Talmud (1935) is by I. Shachter and H. Freedman.

[Arnost Zvi Ehrman]

**SANEDRIN, FRENCH,** Jewish assembly of 71 members convened in Paris during February–March 1807, at the request of Napoleon *"Bonaparte*. The object of this assembly was to convert the "secular" answers given by the Assembly of Jews religiously, by drafting them as precepts based on the Bible and *halakhah*. Previously, on Oct. 6, 1806, the Assembly of Jewish Notables sent a manifesto to the Jewish communities in Europe, inviting them – in vague terms – to participate in the activities for "revival" and "freedom" which Napoleon was preparing through the Sanhedrin for the benefit of the Jewish people. The response of European Jewry to this manifesto was exceedingly poor. The Sanhedrin was constituted of two-thirds rabbis and one-third laymen (some of the rabbis and all the laymen had been members of the Assembly of Jewish Notables), all from the French Empire and the "Kingdom of Italy." David *"Sinzheim of Strasbourg, one of the eminent halakhic authorities of the day, was appointed president. The nine regulations issued by the Sanhedrin were confirmed in eight solemn and magnificent sessions. The doctrinal preamble to the regulations states that the Jewish religion comprises both religious precepts which are eternal, and political precepts which had no further validity from the time Jewry ceased to be a nation.

The regulations stated that:

1. polygamy is prohibited among Jews; (2–3) the Jewish bill of divorce or religious marriage has no validity unless it has been preceded by a civil act, and mixed marriages are binding upon Jews civilly (but not religiously); (4–5–6) the Jews of every country must treat its citizens as their own brothers according to the universalist rules of moral conduct, and Jews who have become citizens of a state must regard that country as their fatherland; (7–8–9) Jews must engage in useful professions, and the taking of interest from both Jews and gentiles shall be subject to the laws of the country. At first sight, it would appear that the drafters of the regulations subordinated Jewish law to that of the state, but in reality they did not undermine halakhic principles. It was only in subsequent generations that the declaration of the "separation of the political from the religious in Judaism" became a matter of principle among certain Jewish circles which became assimilated in the modern state.

[Baruch Mevorah]

**SANIELEVICI, HENRIC** (1875–1951), Romanian literary critic and biologist. Born in Botoșani, Moldavia, Sanielevici pursued two entirely separate careers, one scientific and the other literary. His polemical gifts revealed themselves in the articles which he contributed – some under the pseudonym Hassan – to leading Romanian periodicals and newspapers. He held that literary works contained two types of phenomena: the sociological and the psychological. The former was to be clarified and coordinated on the basis of materialistic principles of history, the latter on what Sanielevici himself termed "differential psychology" and "the psycho-physiology of race." Sanielevici particularly opposed ultra-nationalistic tendencies in Romanian literary circles and from 1903 published critical essays and studies written in a vigorous and uncompromising spirit. The most important were collected in *Încercări critice* (1903), *Cercetări critice și filosofice* (1916), *Studii critice* (1920), and *Alte cercetări critice și filosofice* (1925).

Sanielevici's work as a biologist eventually led him to the issue of race. In *La vie des mammifères et des hommes fossiles déchiffrée à l'aide de l'anatomie* (1926), he examined and compared the organs of mastication and digestion in man and other mammals in order to explain the development of man and the ethnic diversity of mankind. Within a decade he had entered the fight against Nazi racial theories with his two-volume work *In slujba Satanei* (*"In the Service of the Devil*), 1930–35. Here he rejected the usual criteria of language and nation, and determined race solely according to anthropological type. He also endeavored to establish psychological constants that would explain national characteristics, thus setting forth a new theory of race and racial psychology. Though originally an advocate of Jewish assimilation, Sanielevici greatly modified his views after World War 1.

[Dora Litani-Littman]
SAN JOSE, city in California, 40 miles S. of San Francisco, with a Jewish population of 40,000 in 2005. San Jose was the first capital of California (1849–51). Ten men organized the Jewish community of San Jose in 1861 as the Bickur Cholim Society. By 1869 the membership, made up primarily of merchants, was 35 from San Jose and the vicinity. The Jewish population in 1880 was 265. Until 1953 Congregation Bickur Cholim, now Temple Emanu-El (after a fire in 1848), was the only synagogue. Although its ritual was Reform, separate services were conducted on the High Holidays to accommodate the Orthodox members.

Congregation Sinai, today conservative, was organized in 1953, while Conservative Congregation Beth David, Saratoga, began in 1962.

In the early 21st century there were over two dozen Jewish organizations in Santa Clara Valley, 16 being synagogues with their own religious schools. There were an additional four synagogues in Monterey County. Nearby there is also Beth Torah in Fremont (Alameda County) and various synagogues along the Peninsula, from Palo Alto to Burlingame, which have a working relationship with the San Francisco Jewish Federation, as does the Hillel at Stanford University. Hillel of Silicon Valley serves San Jose State and Francisco Jewish Federation, as does the Hillel at Stanford University. Hillel of Silicon Valley serves San Jose State and Francisco Jewish Federation, as does the Hillel at Stanford University.

In 2005 the Jewish Federation of Silicon Valley (the name changed from Jewish Federation of Greater San Jose in September, 2004) celebrated its 75th anniversary and later moved into the new Gloria and Ken Levy Family Campus on August 1, 2005. This facility houses the Tavneh Day School, Jewish Family Service, the Addison Penzak JCC and the San Jose Federation. Some additional key autonomous organizations include the JCRJ, Jewish Education Council, Jewish Community News, Jewish Community Preschool, the Jewish Community Chaplain Program, and three cemeteries. Also within the immediate vicinity are Jewish educational institutions from preschool through high school.

The presence of national defense contractors and scientific and engineering firms brought many highly educated Jews to the area beginning in 1950. This process has intensified during the high tech boom, which has influenced Jewish existence in Santa Clara Valley in all aspects of life, and many individuals established their own prosperous firms.

SAN MARINO, tiny independent republic near Rimini surrounded by Italian territory. Jewish loan-banks appeared there as early as 1369, one of them being managed by a woman. In 1442 some of the bankers were accused of conspiracy against the state, and the duke of Urbino intervened with the "regents" of the republic to prevent the Jews being further molested. The activities of Jewish moneylenders continued until the 17th century. Although in modern times any Jewish connection with San Marino was sporadic, the tiny republic obediently enacted racial laws in 1938, in imitation of Italy, against the dozen Jewish families who had drifted there in recent years; they were repealed on the fall of Mussolini in the summer of 1943. The consul general of Israel in Rome serves in the same capacity also in San Marino.

[Ariel Toaff]

SAN NICANDRO, small town near Bari, S. Italy. San Nicandro became noteworthy when 23 peasant families there adopted Judaism. About 1930 a winegrower, Danato Manduzio, inspired by a dream, began to preach the truth of the Mosaic law and the necessity of conversion to it. A self-educated man and a tenacious apostle of his new mystical beliefs, he and his followers finally adopted Judaism, despite the threats of the local clergy, the hostility of the Fascist authorities, and the dissuasion of the rabbinate in Rome, which feared that they, too, might suffer from the new anti-Jewish policy of the government. It is probable, however, that contact with members of the Jewish Brigade in the region (in Garagano and Foglia) in the 1940s and Zionist ideas reinforced the movement. The conversion of Manduzio and his followers was formally recognized in 1944. In 1948 Manduzio died. The following year the group moved to Israel where they joined the moshav “Almah in Upper Galilee. Not all of them, however, remained there and the group split up. In 1992 few of the remaining inhabitants were still adhering to Judaism and, according to a visitor to the area, it was mainly the women who continued to celebrate certain Jewish holidays in a private house that served as a synagogue (tempio). They tended to interpret biblical commandments rather literally, in a way that may be termed as “karaitization.” But although they still observed some kashrut laws, they had little contact with rabbinical authorities, did not circumcise their sons, and the men declared they could not refrain from working on the Sabbath. In the early 2000s the group was not recognized as Jewish by rabbinical authorities.

SANOK (called Sonik by the Jews), town in Rzeszow province, S.E. Poland. From 1772 to 1918 the town was under Austrian rule (central *Galicia). The remains of an ancient Jew-
ish cemetery in the vicinity testify to the existence of a Jewish settlement in the town in the second half of the 14th century, after Sanok had been annexed to Poland by King Casimir III. The names of some Jewish members appear in a list of the craftsmen's guild of the town in 1514. However, a Jewish community was organized only at the end of the 16th century and was subordinate to that of Lesko. In 1570, 17 of the 200 families residing in the town were Jewish. They earned their living as traders in wine and grain, and as furriers, tailors, and tanners. At the beginning of the 18th century, the Jewish settlement at Sanok grew, receiving privileges from King Augustus II (1720) and King Augustus III (1754). A synagogue was built in the 1720s. There were 467 poll-tax paying Jews in Sanok and its environs in 1765. During the 19th century local trade in lumber, timber, and cloth manufacture was concentrated in Jewish hands. At the end of the 19th century, the Jews of Sanok initiated the development of oil production in the area. From 1868 the representatives of the local Jewish community played an important part in municipal institutions. Under Austrian rule the Jewish population grew quickly: in 1800 it numbered about 1,850 (40% of the total population); in 1880, it numbered 2,129 (42%); and in 1910, 4,073 (38%). Hasidism became strong in the community toward the end of the 18th century and, up to the end of the 19th, concentrated around the kloyzn of the Hasidim of Belz, Bobob, Nowy Sacz, and Sadgora. At the beginning of the 20th century, Zionist organizations sprang up. The teacher Zvi Abt founded in 1909 a Hebrew school called Safah Berurah which had 77 pupils in 1911. From 1910 to 1914, the weekly Folksfraynd was published. In 1921, 4,067 Jews formed 42% of the total population of the town. Between the two world wars the Jews of Sanok occupied key positions in the town economy. From 1919 to 1921, Meir Shapira served as rabbi of Sanok. Among those born in the town was Ben Zion Katz.

[Arthur Cygielman]

Holocaust Period

The number of Jews in Sanok in 1939 was over 5,000. The Germans entered the city on Sept. 8, 1939, and in the first days of the occupation the synagogues were burned. A few hundred Jews were deported to the other side of the San River, which was under Soviet rule. In 1941 the Jews were concentrated in a ghetto, which contained about 8,000 people — including Jews from nearby townlets. There they were subjected to forced labor, including work in the stone quarries of Trepcza. On Sept. 10, 1942, most of the Jews of Sanok were deported to a concentration camp at Zaslav. Only a few succeeded in escaping. After the Germans concentrated Jews from the entire Sanok area in the Zaslav camp, 4,000 people were sent to the Belzec death camp. The sick and aged were shot in the nearby forests. In October 1942 two more transports were sent to Belzec. On Sept. 14, 1942, the Germans announced that those who had escaped would be allowed to return to the ghetto and live there. About 300 Jews returned to the ghetto; they were later executed or transported to concentration camps. A few hundred Sanok Jews survived the Holocaust, most of them having been in the Soviet Union during the war. Some Jews rescued from the Nazis were killed by antisemitic Polish bands.

[Aharon Weiss]

SAN REMO CONFERENCE, a conference of the Allies in World War I (Great Britain, France, and Italy), held in San Remo, Italy, in April 1920, which confirmed the pledge contained in the *Balfour Declaration concerning the establishment of a Jewish national home in Palestine. The conference was a continuation of a previous meeting between the Allies held in London in February 1920, where it was decided, among other things, to put Palestine under British Mandatory rule. The British delegation to San Remo was headed by Prime Minister David Lloyd George and Lord Curzon, who had replaced Lord Balfour as foreign minister in 1919. At both meetings the French expressed many reservations about the inclusion of the Balfour Declaration in the peace treaty, and it was only after the exertion of British pressure that they were gradually persuaded to agree to it. The San Remo Conference was attended by Chaim Weizmann, Nahum Sokolow, and Herbert Samuel, who presented a memorandum to the British delegation on the final settlement in the Eastern Mediterranean region. Lord Balfour was called in for consultations. The article concerning Palestine was debated on April 24, and the next day it was finally resolved to incorporate the Balfour Declaration in Britain’s mandate in Palestine. Thus Britain was made responsible “for putting into effect the declaration made on the 8th [sic.] November 1917 by the British Government and adopted by the other Allied Powers, in favor of the establishment in Palestine of a national home for the Jewish people; it being clearly understood that nothing should be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country.” The resolution was celebrated by mass demonstrations throughout the Jewish world.

[Getzel Kressel]

SANTA COLOMA DE QUERALT, town in Tarragona province, N.E. Spain. Santa Coloma de Queralt’s Jewish community was a typical small community in Catalonia. There were...
many such small communities which were hardly mentioned in the central archive of the Kingdom of Aragon, the Arxiu de la Corona d’Aragó. The information we have on the Jews of Santa Coloma comes from the most extensive notarial protocols kept today in the Archivi Històric Provincial de Taragona. In the 13th century 30 Jewish families were allowed to dwell in Santa Coloma, which was under the jurisdiction of the House of Queralt. Santa Coloma de Queralt was a village of 150 houses in the 14th century. The Jews engaged in agriculture, commerce, and crafts, and at the beginning of their settlement they already owned slaves. The richest Jews, constituting less than 10% of the local Jews, were moneylenders whose activities and transactions are fully recorded. The sources offer interesting details about Jewish life and important information about some of the leading members of the community. The notarial acts contain valuable information on the internal life of the Jews, on marriage contracts, education, social welfare, and communal organization. There were two synagogues, one in Carrer Major, called Scola de Judeus, and the other was the Beth Midrash in Carrer dels Jueus. The Jewish quarter was situated in the area today known as Carrer de los Quarteres. In the Baixada de la Presó, the Jews had their espitall, which served visitors and poor Jews. In 1528 the Jewish population numbered seven families, while by 1347 there were already 30 Jewish families. At some point in the 14th century the Jewish population reached a maximum of 100 families.

In the 1370s and 1380s a Jewish female physician, *Floreta Ca Noga, was known among the inhabitants of the town. She treated the queen in 1381 and was greatly esteemed by the royal court. In Santa Coloma lived the Jewish poet Aestruc Bonafeu. Culturally, the community must have been quite developed. Contracts with private teachers and the impressive library of Solomon Samuel Azcarell are good illustrations. The persecutions of 1391 affected the town, and there were subsequent problems connected with conversions, such as the case of an apostate who appeared before a government official in 1391 and accused his wife of refusing to convert and live with him as a Christian. In the records of the local notary additional cases are noted where Jewish women demanded conversion while the husbands remained faithful to Judaism. According to the records of the notary, the couples were separated by agreement. In spite of all this, the community continued to exist until after the *Tortosa Disputation, and it may have continued until the days of the expulsion.

[Haim Beinart /Yom Tov Assis (2nd ed.)]

**SANTA CRUZ**, coastal city in Northern California. The county had a population of 240,880 in 2001, including an estimated 6,000 Jews. Louis Schwartz, believed to be the first Jewish settler in Santa Cruz, in 1855 opened a general store with the Brownstone brothers. The Jewish community grew slowly; it initially was comprised of single men, but eventually women came and then families. The first observance of the Jewish New Year, under lay leadership, was in 1869, with meetings in community halls or in churches.

In 1877 Home of Peace Cemetery was consecrated on land that was donated to the Jewish community. Like many Jewish communities, Santa Cruz’ Jewish community’s first piece of property was a cemetery. A mutual aid society followed, when in 1887 a small group of Jewish families founded a Hebrew Benevolent Society in Santa Cruz. The first known synagogue building was acquired in the early 1930s. In 1954, the still small Jewish community built a modest synagogue on Bay Street, which was named Temple Beth El, incorporated as the Jewish Community Center of Santa Cruz, California, Inc. Rabbi Richard Litvak became the first full-time rabbi of Temple Beth El in 1977. The Temple moved to new facilities in Aptos in 1990.

In the last third of the 20th century and beyond, the Jewish community of Santa Cruz was directly linked to the University of California Santa Cruz with its many Jewish students and faculty. UC Santa Cruz boasts the largest percentage of Jewish students at any Northern California campus (approximately 20% of 15,000 students are Jews: 2,600 undergrads and 350 graduate students). UC Santa Cruz has a Jewish Studies program and a Jewish Studies Research Unit. Among its faculty is Murray Baumgarten, the editor of *Judaism*.

Active in Santa Cruz are three Jewish congregations and a Havurah. Temple Beth El is the oldest and remains a Reform Congregation. Chabad by the Sea is the Orthodox congregation. Congregation Kol Tefilah is Conservative and Hadesh Yamenu is the Havurah grouping.

The Hillel serves some 4,000 Jewish college students in the region, including UC Santa Cruz, Cabrillo College, and CSU Monterey Bay.

Social Justice is a local Jewish focus, much in keeping with the ethos of the university and the community. “Out in Our Faith” is a gay and lesbian, bi-sexual, and transvestite group. There is a local chapter of the Tikkun Community, COEJL: Coalition on the Environment and Jewish Life, Eco-Jew, and Mazon chapter.

The Jewish community of Santa Cruz sponsors an annual Jewish film festival and has published *The Santa Cruz Haggadah*.

[Michael Bernbaum (2nd ed.)]

**SANTA FE**, the first and one of the most important provinces in *Argentina*, opened for the agricultural settlement of immigrants; capital city of the province. 

**The Province**

Jewish population above five years of age, according to the 1960 census, was 14,152 out of a total of 1,865,537. In 2005 it was
estimated by the Va’ad ha-Kehilot (see *Argentina) at 2,400 families. Jewish agricultural settlement started in Santa Fe province around the towns of Vieja Monigotes and Moisés-ville in 1888 and 1889, respectively. Land owned in Santa Fe by the Jewish Colonization Association (ICA) included more than 147,000 hectares, mainly concentrated in Moisésville and the Montefiore colony near Ceres. Today the remaining Jewish settlers in Santa Fe deal more in cattle than in agriculture.

The disintegration of agricultural settlements brought about the creation of Jewish communities in many towns and villages in the province. A survey conducted in 1943 by ICA found 21,833 Jews in the province, of whom only 2,956 lived on the agricultural settlements; 17,442 lived in 11 cities and towns; and another 1,453 lived in 112 villages and hamlets. In the following years, because of increased migration from rural to urban areas, there was a sharp decline in the number of areas with Jewish population, as well as in the number of Jews in the rural areas generally. In 1964, 12 cities and towns had organized Jewish communities affiliated with the Vaad ha-Kehilot, the principal ones being *Rosario (in 2005 with some 1,600 families), Rafaela, Moisésville, Ceres, Palacios, San Cristóbal, and the capital city, Santa Fe.

The City
The first Jews to reach the city of Santa Fe were immigrants who arrived from Eastern Europe and Morocco in 1888–89. The first communal organization was the Sociedad Israelita Latina del Cementerio, established by Moroccan Jews in 1895. The Ashkenazi Sociedad Unión Israelita de Socorros was founded in 1906. In 1909 there were 547 Jews in the city, most of whom were small businessmen and laborers. By 1943 the Jewish community had increased to an estimated 4,000, of whom 3,600 were Ashkenazim and the rest Sephardim from Morocco, Turkey, and Syria. At that time the Ashkenazim maintained their own hevra kadisha which constituted the central communal institution, and over whose control a conflict ensued between the Zionist Sociedad Unión Israelita Sionista and the “progressive” (pro-Communist) Sociedad Cultural I.L. Peretz. Both groups, however, were subsidized by the hevra kadisha, conducted separate cultural activities, and maintained their own schools. In later years, the hevra kadisha became the Comunidad Israelita, with a membership of 742 families in 1969 that declined to 600 in 2005. In June 2005 the Comunidad Israelita, within the framework of the commemoration of its centenary, inaugurated a Jewish museum – Museo Judío de Santa Fe “Hinenu.” The community life of the Sephardim continued to center on the common cemetery. Despite the fact that the Sephardim had formed separate synagogues according to countries of origin, in the 1950s, they established a common congregation, Sociedad Hebrea Sefaradi de Socorros Mutuos.

In addition to several welfare and women’s organizations, three important financial bodies were established in Santa Fe: two credit cooperatives and a commercial cooperative founded by peddlers. In 1970 the Jewish institutions in Santa Fe comprised two Ashkenazi synagogues – one of them Conservative, one Sephardi synagogue, a shohet, a mikveh, the Club Israelita Macabi, and three Jewish credit institutions. The H.N. Bialik Jewish kindergarten and day school had in the 1970s an enrollment of 144 pupils. In the early 21st century there was also a Zionist youth movement, Macabi Zahir, connected with He-Halutz la-Merhav. The city’s branch of *Daia is the umbrella organization for all groups except the pro-Communists.

[Daniel Benito Rubinstein Novick]

SANTANGEL, LUIS DE (d. 1498), comptroller-general (*Escribano de Ración) to Ferdinand and Isabella of Spain. Born in Valencia, he was a descendant of a noble Converso family, the Chinillos of Calatayud. One of its members, Azarias Chinillo, became converted to Christianity at the time of the disputation of *Tortosa and adopted the name Luis de Santangel. This Santangel, the protégé of the Catholic monarchs, was the grandson of the first Luis de Santangel, after whom he was named. He began his career as a courtier, and served as a tax collector of the Royal Treasury, until in 1481 he was appointed comptroller-general, a position which he held until his death. He was succeeded by his brother JAIMÉ and his son FERNANDO. In 1486 he became acquainted with Christopher *Columbus and was greatly impressed by his projects. Santangel’s influence with the Catholic monarchs was decisive in gaining their acceptance of Columbus’ proposals. He lent 1,140,000 maravedis to finance the historic voyage which resulted in the discovery of the American continent. In recognition of this assistance, Columbus wrote his first letter on his impressions of the voyage to Santangel. Written on Feb. 18, 1493, it contains interesting descriptions of his findings. Santangel also used his influence at court to help Conversos caught in the meshes of the Inquisition. He assisted the Jews expelled from Spain in 1492 by contributing toward the hire of vessels to enable them to leave the country. He should not be confused with another Luis de Santangel, a member of the same family, who was accused of complicity in the assassination of the inquisitor Pedro de Arbués, and was burned at the stake.

SANTARÉM, city in central Portugal. An important Jewish community in the Middle Ages, Santaréim was the rabbinical seat for the district of Estremadura. On his capture of the city in 1140, Afonso Henriques, the first king of Portugal, is said to have founded a Jewish community and a synagogue there. The charter of Santarém and “Beya conferred by Afonso Henriques contained legislation against the Jews, stipulat-
ing among other things that, in litigation between Jews and Christians, only Christian witnesses would be accepted, and that Christians would not be accountable for offenses against Jews. Various Cortes held in Santarém issued discriminatory decrees against the Jews, that of 1461 decreeing that Jews should not wear silk, and of 1468 ordering all Jews to wear an identifying badge and to live within the Jewish quarter. Late in 1490, or early in 1491, the Jews of Santarém, furlsomely greeted the Spanish princess, eldest daughter of Queen Isabella, who had been betrothed to the Portuguese prince Affonso, and regaled her with gifts as she stopped in Santarém on the way from Évora. After the forced conversion of 1497, a substantial community of New *Christians lived in Santarém, suffering grievously from the devastating earthquake of Jan. 26, 1531, and its aftermath. Fanatical monks seized on the disaster to denounce the New Christians and their friends, calling the earthquake a divine punishment for the toleration of the New Christians. New Christians were attacked and expelled from their homes, and many were compelled to seek refuge in the mountains. The distinguished dramatist Gil Vicente took up the cudgels on their behalf, and his passionate pleas for sanity and moderation restored calm. There were further disorders against the New Christians of Santarém in 1630.

[Santob de Carrión]

SANTOB DE CARRIÓN (Shem Tov ben Isaac Ardui-
tiel; 13th–14th century), Hebrew and Spanish poet. Nothing is known of his life, except that he lived in Carrión de los Condes. Samuel Ibn Sasson, who lived in the same town, exchanged some poems with him between 1330 and 1340, although only those sent by Ibn Sasson are preserved. By that time, Santob was already “famous in the kingdom of Spain.” Santob was no longer young when he dedicated to Pedro I of Castile his Proverbios morales (known also as the Consejos y documentos al rey don Pedro), a series of poems on ethical and intellectual virtues and defects. The work itself was probably written between 1355 and 1360. This exists in five 15th-century manuscripts, one an aljamiado text (i.e., Spanish written in Hebrew characters), and another copy of one of them. Modern editions include 725 stanzas. The philosophical ideas in this first example of gnomic literature in Castilian are not highly original – the sources were probably Hebrew and Arabic ethical poetry – but the expression is concise and poetic. Its main themes are the golden mean in human conduct and the relativity of existence in this world. A thread of melancholic pessimism runs through the work, but it does not negate the didactic and moral elevation of the verses. Américo Castro described him as the first one who expressed in the Spanish language the bitterness of someone who considers himself worthy, even if society does not recognize him as such. He presented him as a “refined rationalist,” a “good Islamicized Hispano-Hebrew.” With a completely different perspective, C. Sánchez Albornoz saw in Santob a model of a perfectly Castilianized Jew.

Some of the passages of the book are among the most quoted ones in Spanish literature, such as the comparison of the proverbs written by a Jewish author with the rose born on the thornbush. Taking as a literary model the wisdom say-
ings of the Book of Proverbs, he addresses a moral message to his contemporaries, including traditional ideas and his own perspective. Santob gives a picture of the Jews of the epoch as “loyal to the law of the land, supportive of universalistic ethical and religious codes, actively engaged in commerce, skeptical of the world and perhaps increasingly of their own social ambience, and, in coded messages, longing for final deliv-
erance” (Perry).

The Proverbios enjoyed considerable popularity, both in Jewish and Christian circles. Its maxims were quoted by the kabbalist Abraham ibn Saba and by the Marquis of Santillana, who numbered Santob among the great “trovadores” of his country. Proverbios Morales was published several times, and a critical edition from a manuscript in the Hebrew charac-
ters of the 15th century was published by Ig. Gonzalez Llubera (1947); other, more recent editions are that of A. García Calvo (1974), S. Shepard (1986) T.A. Perry (1986) and P. Díaz-Mas and C. Mota (1998). The work has been the object of many commentaries and very different interpretations (Zemke, 1997, mentions more than 160 studies). Though other Jewish poets in Spain wrote poetry in Spanish, Santob de Carrión is the only one whose Spanish verses have survived. Although other Spanish works, such as the Danza de la Muerte, have been attributed to Santob, there is no basis for such attribution. The fact that a Jew wrote in Spanish was not seen with sympathy in the Jewish communities; Ibn Sasson recommended to Santob to abandon “their language” and to write in Hebrew, “the pure language, close to you.”

Santob’s Hebrew writings include a liturgical poem (the viddui gadol “Ribono shel olam, bi-re’otu behurotai”) which has been incorporated into the Sephardi ritual for the Day of Atonement. His bakkasah, “Yam Koheleet,” consists of 2,000 words, each beginning with the letter mem; it has not yet been conveniently published. Four pizmonim have also been attributed to him. His hymned narrative (maqamah-like) called Milhemet ha-Eit ve-ha-Misperayim (“The Struggle between the Pen and the Scissors,” 1345), contains a debate on the importance of pen and scissors as instruments of writing (DIVrei Hakhamim (Metz, 1649), 47a). A critical edition of this hymned prose was published by Y. Nini and M. Frucht-
man (1980). Santob also translated the poetic composition of Israel ha-Israeli, a disciple of Asher b. Jehiel, from Arabic into Hebrew, under the title Miztvot Zemanimyiot, and wrote an extensive introduction. This work, probably written in Soria, is still in manuscript.

SANŪ’, YÁQUB OR JAMES (known as Abu Nazzara; 1839–1912), Egyptian playwright; one of the first authors of plays in spoken Arabic, and one of the creators of satiric journalism in modern *Egypt*. He was born in Egypt and studied in Leghorn. He then returned to Egypt and earned his livelihood by giving private lessons. He began to write as a result of his interest in politics, a rare phenomenon among Egyptian Jews of that time. Sanū’ joined the ranks of a small group which was to be the nucleus of the Egyptian nationalist movement, and from 1858 began to write articles and, later, mordant plays against the government. For several years he presented plays in spoken Arabic, until this was prohibited in 1872. Thereafter he concentrated his literary and political efforts on publishing newspapers, of which he was printing editor and (from 1876) owner. In these, he mocked the khedive Ismā’il and incited his readers against his rule. In 1878 he was compelled to leave Egypt. He continued his journalistic activities in Paris and his periodicals were smuggled into Egypt, each time under a different title. After 1882 he directed his attacks against the British, who had occupied Egypt, and tried to enlist support against them in *France* and *Turkey*. His failure in this project was the cause of his retirement from political activity a few years before his death.

{[Jacob M. Landau]}

SÃO PAULO, the richest and most populated state in the United States of Brazil. Area: 248,209.426 km²; population (2000): 37,032,403; state capital: São Paulo, the largest and most important city in Brazil, population (2000): 10,434,252.

The Jewish population in the state in 2005 was estimated at 45,000, out of which 42,000 lived in the city of São Paulo and 3,000 in various towns in the hinterland of the state. Besides the capital, small Jewish communities are to be found in the following towns: Santos, Campinas, Santo André, São Caetano, and very small communities in Ribeirão Preto, Piracicaba, Taubaté, São Carlos, Sorocaba, and São José dos Campos.

The presence of Portuguese New Christians began with the colonization of Brazil, then inhabited by many groups of indigenous peoples. The city of São Paulo was founded in 1554 by Jesuit Catholic colonists. In the colonial period (1500–1822), thousands of New Christian Portuguese came to Brazil. During this period, there was a percentage of New Christians among the inhabitants of the southern “capitanias” (regions under Portuguese governors) and some rose to positions of local influence. Until the proclamation of independence in Brazil, in 1822, Catholicism was the official religion and there was no freedom regarding the practice of other religions.

Two years after Brazil declared its independence from Portugal (1822) it adopted its first constitution. Roman Catholicism remained the state religion, but the constitution proclaimed some tolerance of other religions. When Brazil became a republic (1889), the new constitution (1891) abolished all remnants of religious discrimination and ensured the civil rights of all citizens.

The city of São Paulo began its urban development in the 1860s due to the expansion of coffee plantations and immigration from Europe. Especially after the abolition of slavery (1888), until the 1940s, São Paulo City and the State welcomed a large influx of immigrants from several countries, a total of over 3,000,000 mainly from Italy, Japan, Spain, Portugal, Lebanon, and Syria, who came to work in coffee plantations. São Paulo has since then been an open city that has welcomed immigrants and foreigners, integrating them and assuming traits of each new culture. São Paulo also received Brazilian migrants from all over the country. The cultural and ethnic diversity is present in the history and identity of the city.

Contemporary Jewish presence in São Paulo started in the last quarter of the 19th century, when Jewish immigrants arrived from both Eastern and Central Europe, mainly from the Alsace-Lorraine region. It was not an organized and systematic immigration flow, but one which occurred rather on an individual basis. These first immigrants did not create a Jewish community.

It was only during World War I that a Jewish community began to be organized in the city of São Paulo, initially consisting of immigrants from Eastern Europe (most of them from Russia, Poland, Lithuania, Romania/Bessarabia, and Hungary). Restrictions on immigration to the U.S. and Canada in the 1920s made Brazil a feasible and interesting destination for East European Jewish immigrants. As a new metropolis, in the 1920s São Paulo attracted immigrants, offering freedom of religion and community association, economic, industrial, and commercial opportunities, as well as proper conditions for settlement and social betterment. São Paulo’s urbanization and economic expansion rates had a decisive impact on the integration and upward social mobility of sig-
significant numbers of immigrants. The city's population grew from 240,000 in 1890 to 580,000 in 1920, reaching approximately 2,000,000 in 1954.

By the 1920s, the Jews in São Paulo had already organized a complete network of institutions, such as schools, welfare entities, synagogues, a cemetery, a burial society, credit cooperatives, political movements, press, and social and sports clubs, which molded a dynamic and well-integrated Jewish-Brazilian community supported by organizations such as JCA, HIAS, and HICEM.

The first organizations to be founded were the Kahal Israel Synagogue (1912); Sociedade Beneficente das Damas Israelitas (Froien Farein, 1915); Sociedade Beneficente Amigos dos Pobres Ezra (1916); the Zionist movement Ahavat Zion (1916); the Knesset Israel Synagogue (1916); Gymnasio Hebraico-Brasileiro Renascença – the first Jewish-Brazilian school to teach the official curricula in São Paulo (1922); the Sociedade Cemitário (1923); the burial association Chevra Kadisha (1924); Macabi (1927); Sociedade Coopérativa de Crédito Popular do Bom Retiro (1928); Policlinica Linath Hatzedek (1929); B'nai Brith (1931); and Ginásio Talmud Torá (1932). A small talmud torah, inaugurated in 1916, functioned as a heder, but was only open for a short period of time.

Sephardi immigration from Lebanon, Syria, and cities in Erez Israel took place in the 1920s. The Sephardim organized the Comunidade Israélita Sefardim (1924) and founded three synagogues, Comunidade Sefardim de São Paulo (1929, later known as Sinagoga Israélita Brasileira do Rito Português and Sinagoga da Rua da Abolição) and two in the working class neighborhood of Mooca, in São Paulo – Sinagoga Israelita Brasileira (1930), linked to Jews originating from Sidon, and Sinagoga da União Israelita Paulista (1935).

After 1933, a growing number of immigrants arrived in São Paulo from Germany (and later on from Italy). In 1936 they founded the Congregação Israelita Paulista (CIP), Lar das Crianças (Children’s Home), and the scouting movement Avanhandava. CIP consisted of 2,000 member families, and became the largest Jewish center in town.

In the hinterland of the State of São Paulo, small communities were formed in several townships, such as São Caetano, Santo André, São José dos Campos, Mogi das Cruzes, Sorocaba, Jundiaí, Campinas, Ribeirão Preto, and Franca, particularly following the railroad trade routes that served the export of coffee, the main State and Brazilian export product up to the 1920s. In Santos, the harbor where immigrants disembarked, an important Jewish community also flourished.

The main neighborhood of the Jewish minority in São Paulo was the district of Bom Retiro, next to the “Luz” Railroad Station, terminal of the trains coming from Santos, and main route of the export coffee cargoes going to the Santos port. Jewish immigrants used to call Bom Retiro a “little shtetl” and economic activities were basically trade and clothing manufacturing, initially as clientelchik (peddlers), and later on as merchants, small manufacturers, and industrialists.

In the 1940s there were Jewish nuclei in several neighborhoods besides Bom Retiro, such as Bras, Cambuci, Lapa, Mooca, and Pinheiros, and each one of them supported a school, a synagogue, and a community center.

In 1915 the Sociedade Beneficente das Damas Israelitas was founded in São Paulo. From then on, women have organized and directed diverse organizations, thus creating a tradition of engagement in Jewish public life. Women were very active in social institutions and also created Lar das Crianças das Damas Israelitas (1939) and Organização Feminina de Assistência Social (Ofidas, 1940). Zionist women’s organizations were founded, such as wizo (1926) and Naamat Pioneiras (1948). As a matter of fact, many women assumed the direction of community organizations, including Federação Israelita do Estado de São Paulo in the 1990s.

In 1940, according to official numbers, the number of Jews in the State of São Paulo reached 20,379 and in 1950 the number was 26,443. In 1941 the Asylo dos Velhos (Old Age Home) was founded, later on called Lar Golda Meir, which currently bears the name Residencial Israelita Albert Einstein – Lar Golda Meir. Between 1936 and 1966, the Santatório Ezra – Ezra Hospital for Tuberculosis operated in São José dos Campos with 120 beds, also assisting non-Jews. In 1959 the Centro Israelita de Assistência ao Menor (Clam) for handicapped children was established. In São Paulo, Jewish female prostitutes (exploited from the late 19th century by the Tzvi Migdal women trafficking network, centered in Buenos Aires), founded the Sociedade Feminina Religiosa e Beneficente Israelita (1924–1968, in São Paulo). There were two specific cemeteries where the prostitutes were buried, in São Paulo and in the town of Cubatão, near Santos. The graves of the São Paulo cemetery, which was located in the Santana neighborhood, are now at the Butantã cemetery, one of the three Jewish cemeteries run by Chevra Kadisha. The Cubatão cemetery is preserved next to the city’s municipal cemetery. This chapter in its history carries a strong taboo among the members of the community, although it has been the subject of some literary and history works.

In the 1930s, having settled in a few cities and owing to their economic, social, and cultural public activities, the Jews became one of the “most visible” groups of immigrants, in the words of the historian Jeffrey H. Lesser. Thus, they came to be the object of local, national, and international gambling, “pawns of the powerful,” especially during the Vargas regime in Brazil, when a “Jewish question” was raised in the country.

Under the Getulio Vargas regime (1930–1945), the semifascist Estado-Novo (1937–1945), and during World War II, immigration restrictions (after 1937) and the activities of Ação Integralista Brasileira (a fascist party that existed from 1933 to 1938) generated an environment of nationalism and xenophobia.

Thousands of immigrants from Nazi-dominated Europe were barred, but, nevertheless, Jewish immigration continued individually by a variety of means, mainly through case by case
negotiations, but never organized through charitable national or international organizations.

Despite the dictatorship and the climate of nationalistic xenophobia, the Jewish organizations adjusted to the nationalist legislation and learned how to confront the restrictions (against all immigrants, not specifically antisemitic), thus allowing them to continue operating. The schools continued to teach Hebrew and Jewish culture, the synagogues maintained their religious services, radio programs played Jewish music, and innumerable organizations were established during this period, resulting in a very fertile period for the organizations and the unity of the Jewish community. The German Jews became most alarmed, especially after Brazil broke relations with Germany and Italy in August 1942, but their organizations went on as usual during the war years.

There are no records of any coercive closure of Jewish organizations in São Paulo, then the biggest Jewish community in the country, during the Estado-Novo regime and especially in the war years. The antisemitism present in governmental and intellectual circles, among diplomats and the elite, did not result in violent actions against the Jews living in São Paulo in particular or Brazil in general, or against those who managed to breach the immigration barriers. In São Paulo the community took part in campaigns in support of the war effort by Brazil, which followed a policy of alignment with the United States and the Allies. This included the sending of the Força Expedicionária Brasileira (FEB), with 30,000 soldiers, who fought in Italy in 1944 and 1945. With the restriction on imports and the naval blockade, there was important industrial and technical development in the great urban centers to supply goods which had previously been imported. This created new work opportunities for the inhabitants of the cities, among them the Jewish immigrants who had technical, commercial, and industrial abilities.

In the 1940s, intense debates about Zionism took place in São Paulo, particularly about the unified campaigns that led to the foundation of the Zionist-oriented Federação Israelita do Estado de São Paulo. Sectors of German Jews, organized within the cIP, did not initially join the Federation. Some very active Zionist youth movements were founded, such as Ha-Shomer ha-Za‘ir, Gordonia, Ihud, Dzor, Bnei Akiva, Netzach, Betar, scouting Avanhandava and, in the 1960s, Chazit Hanoar. Although with fewer members and a somewhat weaker ideological stand and Zionist pioneer goal, some of these organizations are still active in the early 21st century.

Leftist Jews were organized from the 1920s, when they ran a small school linked to the Bund. In 1954 the Instituto Cultural Israelita Brasileiro (known as “Casa do Povo”) was founded. Together with the Teatro de Arte Israelita Brasileiro (Taib) and Scholem Aleichem school, these organizations represented the left-wing Jews, many of them involved in the Communist Party. They gave public voice to Yiddish culture and language and managed an active press.

Until the 1950s, more than 13 synagogues and six schools were founded. The schools reflected the Jewish diversity in São Paulo, both regarding religion and politics. Renascença, H.N. Bialik, and I.L. Peretz were Hebraist and Zionists; Scholem Aleichem was Yiddishist and leftist, and Talmud Torá and Beit Chinuch were orthodox. As of the 1950s and 1960s, Yiddish, which had so far been the language of the Jewish minority, was replaced by Hebrew as the main language taught in schools.

In the early 21st century the Jews of São Paulo were politically represented by the Federação Israelita do Estado de São Paulo, founded in 1946 to coordinate efforts to assist postwar Jewish immigration. After World War II, a few thousand families from the Displaced Persons’ camps in Germany, and, in the 1950s, Jews from Egypt, Hungary, and Israel, settled in São Paulo, the last significant Jewish immigration to it.

In 1954, the Associação Brasileira A Hebraica was founded. With some 25,000 members, it became one of the most important sports and recreational clubs in São Paulo, and is the largest Jewish organization in Brazil. As of 1964 São Paulo was the seat of the Confederação Israelita do Brasil (Conib), founded in 1948 in Rio de Janeiro as the representative umbrella organization of the Jewish communities. The most accurate demographic and sociological survey of the Jews in São Paulo was carried out by the Federação Israelita de São Paulo in 1970 and published by the sociologist Henrique Rattner. In 1971, the Hospital Israelita Albert Einstein opened; it is regarded as one of the best private hospitals in Latin America.

In the 1969 census of the Jewish community, 28,498 people were counted in 9,086 families, with an average of 3.2 persons per family. Since the number of Jewish families is larger than that covered in the census and is about 14,000 families, the number of Jews in the capital, São Paulo, was approximately 45,000 in 1969.

In 1976, the União Brasileiro-Israelita do Bem-Estar Social – Unibes was founded, becoming the largest and most important Jewish welfare organization in São Paulo. Through several health insurance and other programs, it serves hundreds of persons within the Jewish community and the population in general.

In the Early 21st Century

Although it makes up less than 0.01 percent of the total population of the city, the Jewish community has a solid institutional network, a diverse and dynamic Jewish life, and the Jews play an important role in many different fields and activities, including the economy, the culture, the professions, the arts, and intellectual and cultural life, thus forming a minority whose participation and visibility in the city’s daily life very much surpasses its minuscule percentage of population. Their integration in public life is demonstrated by the presence of Jews in the city and state governments as well as in NGOs, universities and cultural and educational institutions, public services, courts of law, etc. In the 2003 municipal elections, the Jewish community did not vote together to elect a single Jewish city counselor, despite the various Jewish candidates belonging to several political parties.
In a number of cities of the State of São Paulo—Santos, Santo André, São Caetano and Campinas—there are synagogues and Jewish activities. But the Jewish life in the small towns of São Paulo State is declining, without any regular Jewish school.

All in all, there are approximately 100 organizations; 68 of them affiliated with the Federação Israelita do Estado de São Paulo. The Jewish community in São Paulo is organized around a well-structured institutional and community life, with the A Hebraica club, synagogues, and schools as social nuclei. Some events, such as the Festival de Cinema Judaico and the Festival Carmel of Jewish Folkloric Dance, are important cultural activities taking place in the city.

In the city there are four Jewish restaurants and many shops carrying food and religious products in the neighborhoods of Higienópolis and Bom Retiro, the nucleus of the community, although the Jewish population lives in many parts of the city. Since the 1960s, Sephardi Jews have also come to live in the neighborhood of Higienópolis and founded three new Sephardi synagogues. Currently, the Bom Retiro district has become a Korean immigrant commercial center that in many cases replaced Jewish businesses.

In spite of sporadic slogans painted on walls, occasional declarations or articles in small publications, and antisemitic and Nazi sites and some rare anti-Jewish publications, generally linked to anti-Israeli political campaigns, there are no antisemitic activities that distress or alter the routine of the Jewish community in São Paulo. Although there is strong concern regarding the security of the institutions of the community, especially following the terrorist attacks in Argentina against the Israeli Embassy (1992) and AMIA (1994), Jewish life in São Paulo is entirely free and public. Governmental authorities as well as the Federação Israelita, and organizations such as the B’nai B’rith, have always kept a vigilant attitude.

In São Paulo there is an active Christian-Jewish dialogue involving important authorities of both the Catholic and Protestant churches. CIP’s Rabbi Henry I. Sobel was an active participant in this dialogue as well as in ecumenical religious and political events, where various religious groups also participate and which have domestic and international resonance. He was also very active in the defense of human rights (even under the Brazilian military dictatorship that ruled the country from 1964 to 1979), thus becoming the most active and renowned Jewish representative both in the city and the nation as a whole.

During the 1990s, due to the sluggish economy, some strata of the Jewish middle class suffered partial impoverishment, which made it necessary to enhance the social assistance services. Unibles, Lar das Crianças ad CIP, Ciam, Ten Yard, Department de Voluntaries do Hospital Israelita Albert Einstein, Oficina Abrigada de Trabalho (OAT), Federação Israelita, plus a series of small initiatives, have assisted the Jewish community and concluded a series of agreements with the São Paulo city and state governments to assist the poor population of the city. The Jewish organizations are regarded as a paradigm of management and assistance, and have been awarded several renowned prizes in Brazil.

In 2004, there were in São Paulo 20 regular Jewish schools, including kindergartens, with approximately 4,000 students. However, the number of students in the Jewish schools has been declining.

There are 30 synagogues in the city, including liberal CIP and Comunidade Shalom, which had the first female Brazilian rabbi. The Beit Chabad movement has grown considerably and Bnei Akiva runs a synagogue.

São Paulo is home to significant publishing activity, the largest publisher being Editora Perspectiva, founded by Jaco Guinsburg, the most important Brazilian translator and publisher of Jewish classic texts and Yiddish and Hebrew literature. Also of note are the publishers Sefer and Mayanot. Moreover, there is in the city a Jewish bookstore, Sefer.

The experience of Jewish immigration to São Paulo has been described in the pages of authors such as Samuel Rawet, J. Guinsburg, Eliezer Levin, Alberto Mograbi, and Meir Kucinsky (who wrote in Yiddish, and was published in Israel and translated into Portuguese).

Within the University of São Paulo there is a graduate course on Hebrew Language and Culture as well as a Jewish Study Center, which offers master's degree and doctoral programs, plus free courses on Jewish and Yiddish cultures. Other universities in the city and the state, such as Universidade Estadual de Campinas, Pontifícia Universidade Católica, and Universidade Presbiteriana Mackenzie, also offer courses on Hebrew and Jewish culture.

The Arquivo Histórico Judaico Brasileiro, founded in 1976, gathers and centralizes documents on Jewish immigration to the city and the nation and functions as an important center for the preservation and dissemination of Jewish memories and history, maintaining the most significant Jewish library in the country, including a Yiddish section.

With no direct link to the Jewish community, the Lasar Segall Museum, sponsored by the Instituto do Patrimônio Histórico e Artístico Nacional (Iphan), hosts the collection of the artist Lasar “Segall, an exponent of Modernism in the arts.

The Jewish communications media include a series of magazines, journals, and bulletins, geared internally to the Jewish community. There are also three TV programs, the oldest and most important being Mosaico, considered the oldest Brazilian TV program in general (not specifically Jewish). Formerly, the Jewish community published a significant number of publications, such as Crônica Israelita, Revista Brasil-Israel, Resenha Judaica, Encontro, the Shalom magazine plus Yiddish publications. The Jewish press is declining and covers at most social activities.

Local organizations include the Organização Sionista Unificada, the Casa de Cultura de Israel, Centro de Cultura Judaica, Associação Janusz Korczak do Brazil, three different Yiddish language clubs, Fundo Comunitário, Keren Kayemet Leisrael, Sherith Hapleitá (Holocaust survivors Association),
Saperstein, Abraham M.

and Câmara Brasil-Israel de Comércio e Indústria. In 2004 the Consulate General of Israel was closed in São Paulo, although Israel is a central reference point for the self-identity of Jews in São Paulo.

[Roney Cytrynowicz (2nd ed.)]

Saperstein, Abraham M. (Abraham M.) (1902–1966), U.S. basketball entrepreneur; creator, promoter, and coach of the Harlem Globetrotters Basketball Team for 39 years; member of the Basketball Hall of Fame. Born in London, Saperstein came to Chicago at six with his nine brothers and sisters. He was active in basketball, baseball, track, and wrestling at Lake View High School, winning 15 letters. He then played semiprofessional baseball and basketball, earning $5 a night, and at age 24 took over the running of an all-black basketball team, the Savoy Big Five, named for Chicago’s Savoy Ballroom. Saperstein changed the team’s name to the Harlem Globetrotters, to indicate both a black team (Harlem), and a traveling or barnstorming team (Globetrotters). He placed his five players in a battered Model T Ford and took to the road. They played their first game on January 7, 1927, in Hinckley, Ill., before a crowd of 300 with a paycheck of $75. Saperstein, who stood five-foot-three, was the manager, coach, trainer, chauffeur, ball boy – and the team’s only substitute. The Globetrotters won 397 games and lost 32 in their first three seasons, but found it difficult locating opponents willing bow to their dominating play. Saperstein then conceived the idea of a comic, razzle-dazzle style, and the team soon became a sought-after attraction on the basketball barnstorming circuit, showing off a superb blend of clowning and basketball wizardry, of vaudeville and solid basketball skill. In 1940 the team won the World Basketball Championship against the Chicago Bruins, and won the International Cup in 1943 and 1944. Over the years, the Globetrotters developed into an international entertainment attraction, meeting popes and kings and playing in bullrings, on stages, and aboard aircraft carriers and in more than 100 countries on five continents, including drawing 75,000 for a game at the Olympic Stadium in Berlin in 1951. The Globetrotters are one of the most famous sports organizations in the world, with Saperstein being called the “Barnum of Basketball” and his team known as “America’s No. 1 Goodwill Ambassadors.” Indeed, their flashy brand of play and the patriotic red, white, and blue uniforms became the first basketball experience for many spectators in Mexico, Belgium, Portugal, Morocco, Singapore, and Colombia. In March 1961, Saperstein announced the formation of the American Basketball League. Saperstein served as commissioner, though the league only lasted a season and a half. He was elected to the Basketball Hall of Fame in 1970.

[Eli Wohlgerunter (2nd ed.)]

Saperstein, David N. (1947– ), U.S. rabbi. The longtime director of the Reform Jewish Movement’s Religious Action Center (RAC) in Washington, D.C., Saperstein was an influential leader in the so-called “Jewish lobby” in Washington for more than three decades. As J.J. Goldberg in his book Jewish Power observed: “[led] since 1974 by the savvy, charismatic Rabbi David Saperstein, the rac has become one of the most powerful Jewish bodies in Washington [second only to aipac].” The son of Long Island Reform Rabbi Harold I. Saperstein, Saperstein was ordained in 1973 by the Hebrew Union College-Jewish Institute of Religion in New York. He then served as assistant rabbi at New York City’s Temple Rodeph Sholom until Rabbi Maurice Eisenstadt, the president of the Union of American Hebrew Congregations (now the Union for Reform Judaism), and Albert Vorspan, the director of the Commission on Social Action of Reform Judaism, invited him to Washington, D.C., to direct the center.

As coordinator of the Reform Movement’s social action advocacy to Congress and the Executive branch, Saperstein became a leading spokesperson in Congressional hearings, the media, and Jewish community organizations, for the mostly liberal views of Reform Jewry. Under Saperstein’s tutelage, the center built a wide-reaching social action education program that trains nearly 3,000 Jewish adults, youth, rabbinic and lay leaders each year and which provides extensive legislative and programmatic materials used by Reform synagogues and other Jewish organizations.

Well-known as a skilled coalition builder, he headed several national religious coalitions, including Interfaith Impact, the Interfaith Coalition on Energy, and the Coalition to Preserve Religious Liberty. He served on the boards and executive committees of numerous national public interest organizations, including the NAACP, Common Cause, People for the American Way, the Leadership Conference on Civil Rights, and the National Religious Partnership for the Environment. Saperstein was also credited with helping to forge groundbreaking coalitions with religious right groups, leading to successful passage of legislation on issues including religious freedom, prison rape, human trafficking, and genocide in Sudan. Among the legislation passed through this coalition’s efforts was the International Religious Freedom Act of 1998, passed unanimously by Congress. This led, in 1999, to Saperstein being elected as the first chair of the U.S. Commission on International Religious Freedom.

For many years, Saperstein traveled widely, speaking in synagogues, federations, and universities, appearing on television news and talk shows as one of the leading exponents of Reform Judaism’s strong views on social justice issues. His
books, which have been used widely as sources for Jewish social action studies and activities, include *Jewish Dimensions of Social Justice: Tough Moral Choices of Our Time; Tough Choices: Jewish Perspectives on Social Justice; Preventing the Nuclear Holocaust: A Jewish Response; and Critical Issues Facing Reform Judaism* 1972.

An attorney with a specialty in church-state relations, Saperstein has taught seminars on both First Amendment Church-State Law and Jewish Law at Georgetown University Law School for more than 25 years, with articles published in legal periodicals, including the *Harvard Law Review*.

[Mark Pelavin (2nd ed.)]

**SAPERSTEIN, HAROLD I.** (1910–2001), a leading congregational rabbi of mid-20th century American Reform Judaism. As an undergraduate at Cornell, Saperstein was influenced by Rabbi Stephen S. *Wise to enter the Jewish Institute of Religion, from which he graduated in 1935. From 1933 (while still a student, replacing his ailing uncle Rabbi Adolph Lasker) until 1980, he served as the Rabbi of Temple Emanu-El of Lynbrook, Long Island. During his tenure, the Lynbrook synagogue grew from some seventy families to nearly one thousand.

As chaplain for the American Army from 1943 to 1946, he served in North Africa, Italy, France, Germany, and Belgium, reaching the rank of major. His report on the young Jews hidden by Father Joseph André of Namur, which appeared in *The New York Times*, was one of the first public reports of Gentiles saving Jews. In Worms, Germany, soon after the American forces entered, he recovered the priceless 13th-century illuminated Worms Mahzor from Dr. Friedrich M. Illert, a German archivist who had hidden it during the war, and facilitated its eventual transfer to the National Library in Jerusalem. (These endeavors were later described in *Rabbis in Uniform* by Louis Barish and *G.I. Jews* by Deborah Dash Moore.)

An inveterate traveler to far-flung Jewish communities, Saperstein attended the World Zionist Congress of 1939, visiting Jews in northern Poland and Palestine in the summer of 1939 (where he was injured by an Arab sniper), Russia, Poland, and Hungary in 1959, India, Ethiopia, and South Africa in 1967, and some 80 other countries on six continents. He served as the North American chair of the World Union for Progressive Judaism. A lifelong Zionist (as was his grandfather, Rabbi Hyman M. Lasker of Troy, New York), who served as chair of the Israel Committee of the Central Conference of American Rabbis, he and his wife Marcia helped pioneer youth and congregational trips to Israel, leading with the first Israel tour sponsored by the National Federation of Temple Youth in 1955.

Outspoken civil rights activists, during the summer of 1965 he and his wife did voter-registration work in Lowndes County, Alabama, with the Student Non-Violent Coordinating Committee.

During his term as president of the New York Board of Rabbis (1970–1972), he was a frequent public spokesman on behalf of Soviet Jewry, and he was on the cutting edge of the confrontation with the Jewish Defense League.

Despite these public roles, Saperstein thought of himself primarily as a congregational rabbi: as teacher, preacher, and counselor to three generations of Jews. After his formal retirement from Lynbrook he returned to full-time rabbinic service in New York City’s Central Synagogue and Rodeph Sholom Congregation, and in the West London Synagogue of British Jews. He and his wife Marcia also traveled on behalf of the Union of American Hebrew Congregations through various regions of the United States, visiting small synagogues to provide rabbinic services and training for their lay leaders.

[Mark Pelavin (2nd ed.)]

**SAPHIR, JACOB** (1822–1885), writer and traveler; born in Oshmainy in the province of *Vilna. Saphir’s father, who was the *shohet* of the townlet, belonged to the *Perushim* – the disciples of Elijah b. Solomon Zalman, the Gaon of Vilna. In 1832 his parents immigrated to Ereẓ Israel, settling at first in Safed. A year after their arrival his father died, and when the year of mourning was just ending, he lost his mother, too. In 1836 he fled to Jerusalem with many members of the *Perushim* community because of the pogroms which the Jewish population of Safed suffered at the time. Saphir was educated under the system of the disciples of the Gaon of Vilna, which prevailed in Jerusalem at the beginning of the Ashkenazi settlement there. In addition to his religious knowledge and a rhetorical mastery of the Hebrew language, Saphir also acquired a fundamental knowledge of spoken and literary Arabic, read the *Koran*, and was familiar with Latin script. He became a teacher at the *Jerusalem talmud torah* Eẓ Hayyim. He later became the scribe of the *hevrava kaddisha* of the Ashkenazim and of the *Perushim* community. As scribe of the community, it was his task to write poems in honor of important visitors, such as Moses *Montefiore when he visited Jerusalem in 1819. Saphir also wrote pamphlets and many articles, most of which were published in *Ha-Levanon*, edited by his son-in-law, R. Jehiel *Brill. Saphir was the son-in-law of R. Solomon Zalman Hacohen, one of the *Perushim* leaders in Jerusalem. In 1853 he wrote a promotional letter for Ereẓ Israel lemons, and another to R. Saul Zelig Hacohen dealing with the problem of Jerusalem’s *Yishuv Yashan*.

In 1857 he traveled to the Oriental countries as the emissary of the *Perushim* community, to raise funds for the construction of the great synagogue in the courtyard of the Hurvah of R. Judah Hasid and for the *talmud torah*. He at first intended to go to *Egypt and *Aden, and from there by sea to *India, and was among the first to see the treasures of the Fostat *Genizah, an account of which is found in his works. In Egypt he was defrauded of most of the money which was
intended for his journey to India, and his financial plight brought him to *Yemen. Endangering his life, he embarked on a small sailing craft for Jedda, the port of Mecca, and from there continued to Ḥodayda, the port of *San'a, the capital of Yemen (beginning of 1858). He first thought of proceeding to Aden in order to enter the interior of Yemen by the Ṭarīq al-Yaman ("Road of the South"), but lacking transport, he entered the interior by the road known as Ṭarīq al-Shām ("Road of the North").

After walking for three days along the desolate coastal plain (Ṭihāma) to the Ḥarāz mountains, Saphir met the first Yemenite Jews, and when he reached the nearby town of Jirwāh, he was deeply impressed by them and their way of life, which he mentioned in a letter to Jerusalem. From there he went on to Ḥajara, Muḍmar, Manākhah, and Yafid in the Ḥayma mountains. Near Yafid all his possessions, including his credentials as an emissary, were stolen from him. From Yafid he went to Qaryat al-Qedib in the vicinity of San’a, where the Jews advised him not to visit San’a because of the severe living conditions for the Jews which prevailed there during that period. In the meantime Saphir visited Shibam, where he celebrated Purim, and from there, by way of Kawkabān, he reached San’a, staying there during the whole of Passover. With San’a as his base, he visited Ṭamrān – spending Shavuot there – Ḥajah, and Kuhlan, which was the northernmost place that he reached. To the east of San’a, he visited Sa’wān and Tan’īm. He returned by the road upon which he had come – the eastern road to Ḥodayda – which he reached after a journey of eight months through the interior of Yemen. He stayed in Aden for more than a month and celebrated the Day of Atonement and Sukkot, sailing from there to India on Nov. 5, 1859. After traveling to India, Java, Australia, New Zealand, and Ceylon, Saphir once more returned to Aden, three years and four months later. On this occasion Saphir again thought of visiting the interior of Yemen, having become deeply attached to its Jews since his first visit; nonetheless, he refrained from doing this after hearing of the persecution of the Jews by the imām al-Mutawakkil. Saphir returned from Aden to Jerusalem by way of Jedda and Egypt (May 1865), after an absence of four years and ten months.

Upon his return to Jerusalem he recorded his travels in Even Sappir (2 vols., 1866, 1874, repr. 1969; condensed by A. Yaari and published as Sefer Massa’ Teiman (1944, 1951)). This work is outstanding for its penetrating observations and lively and fluent style. It contains valuable information on the lives of the Jews and their customs during the 19th century in the Oriental countries, particularly in Yemen. Saphir was the first to discover Yemenite Jewry in its greatness. Saphir's lifelike descriptions depict the innermost parts of the home, the village, the merchant on his business premises, the craftsman in his workshop, the elementary school teacher and his education, the synagogue and the ḥakham mōri. He also notes important details on their customs at circumcisions and marriages, and the version of the prayers for weekdays and festivals. He was the first to publish various Yemenite poems, and his details on the Hebrew pronunciation and syntax employed by Yemenite Jews are also of importance.

In 1869 Saphir was again sent to Egypt and the European countries, as emissary of the Bikkur Ḥolim hospital of Jerusalem, and he was once more the emissary of the above institution in 1873 when he went to *Russia. Upon his return to Jerusalem he continued to take an interest in Yemenite Jewry, and when he learned of the impostor who appeared as the pseudo-messiah Shukr *Kuhayl, he wrote an Iggeret Teiman ha-Shenit ("Second Epistle to Yemen") in which he warned the Jews of Yemen to beware of him (published Vilna 1873). In 1883–85 he lent his assistance to the publication of Hemdat ha-Yamim ("The Most Delightful of Days") of R. Shalom *Shabazi, the most prominent of the Yemenite poets, and wrote a foreword to it. Saphir also lived to witness the emigration from Yemen in 1882. In his last years Saphir devoted himself to the settlement of Petah Tikvah. In his letter to R. Judah *Alkalai, Saphir deals with the idea of natural ge’ulah (redemption). He also wrote a few poems in honor of Moses *Montefiore. A village in the Judean Hills was named Even Sappir in his honor.

[Yehiel Nahshon / Leah Bornstein-Makovetsky (2nd ed.)]

---

**SAPHIR, MORITZ (Moses) GOTTLIEB** (1795–1858), Austrian satirist and critic. Born into a Yiddish-speaking, Orthodox family in Lovasbereny, near Budapest, Saphir, the son of a merchant, attended the Pressburg (Bratislava) yeshivah, and later the more advanced yeshivah of Rabbi Samuel *Landau in Prague. He then studied literature at Pest, and his subsequent contact with the German language, literature and culture led him to abandon traditional Judaism. Saphir then began to write German verse and Yiddish comedies. In 1823 Adolf Baeverle, the founder-editor of the Wiener Theater-Zeitung, sought his collaboration, but Saphir's satirical and sensational articles were a source of scandal, and in 1825 he left Vienna for Berlin. There, too, he engaged in polemics with the literary elite and found it advisable to take refuge in Munich. From there Saphir was eventually expelled because of a satire on the Bavarian king and, for a brief time, he joined *Heine and *Boerne in Paris. In 1832 Saphir turned his back on liberalism and was baptized as a Lutheran. Five years later he founded his own periodical, Der Humorist, in Vienna. Saphir's biting wit, much feared in his time, was no longer directed against Metternich's reactionary policies, but rather against general human foibles and follies. His popularity and influence did not wane until after the Revolution of 1848. Saphir's works include humorous and satirical poems, essays, feuilletons, literary criticism, theater reviews, comedies, short stories, sketches, and short novels. His Humoristischer-Volkskalender (1850–66) had an unusually wide vogue and his Pariser Briefe...
ueber Leben, Kunst, Gesellschaft und Industrie (1855) was frequently reprinted. Saphir’s witticisms circulated throughout the German-speaking world, and his satirical sketches were recited by actors for several decades. In later years he referred to his Jewish origin as a birth deformity, corrected by a baptismal operation. Saphir’s collected works appeared from 1887 in 26 volumes. A collection of proverbs and sayings by Saphir — (Sprichwoerter und Redensarten im Biedermeier. Prosatexte, ed. W. Mieder) appeared in 1998.

[Sol Liptzin]

SAPHIRE, SAUL (1895–1974), Yiddish novelist. Born in Vilna and educated at the Lida yeshivah, he immigrated to the U.S. via Japan in 1916, settling in New York, where he devoted himself to teaching and journalism. For more than half a century, he enjoyed great popularity among Yiddish readers through his novels, serialized in the New York dailies Tageblat, Morgen-Zhurnal, and Forverts, and reprinted in other Yiddish organs. He is reputed to have written some 100 novels, of which more than 20 were published. His favored genre was the historical romance based on biblical and post-biblical figures, ranging from the Patriarchs, Joseph, Joshua, Deborah, Samson, Jephthah, Ruth, Saul, David, Solomon, and Esther, to the poets of Spain: Maimonides, Elijah the Gaon of Vilna, the Baal Shem Tov, and Solomon Maimon. Several of his novels were translated into English, such as Der Kalif fun Kordova (1927; The Caliph of Cordova, 1929), a romance of Moorish Spain during the Golden Age of ‘Abd al-Rahman 11; Tsivhn Roym un Yerusholayim (1929; A Challenge to Caesar, 1938), dealing with the Jewish revolt against Rome which ended in the destruction of the Second Temple. His novel on Columbus, Kolombus der Yid (1934), dealing with the expulsion of the Jews from Spain and the discovery of America, was translated into Hebrew, Kolumbus ha-Yehudi (1948). Saphire also co-authored with Donovan Fitzpatrick Navy Maverick (1963), a biography in English of the controversial American-Jewish naval officer Uriah Phillips Levy.

[Sol Liptzin / Jerold C. Frakes (2nd ed.)]

SAPIR, EDWARD (1884–1939), U.S. ethnographer, anthropologist, and linguist. Born in Lauenburg, Germany, Sapir, the son of an Orthodox rabbi, was taken to the U.S. in 1889. He was educated in New York and in Germany. He studied with Franz ‘Boas, and it was Boas’ work in anthropological linguistics that stimulated Sapir to adopt this branch of anthropology as his major professional interest. For 15 years Sapir was chief of the Geological Survey of Canada, engaging in field research, and he became an expert in American-Indian languages. He taught at the universities of Toronto and Chicago, and in 1931 he was appointed professor of anthropology and linguistics at Yale University. He was fascinated by problems of language and its connections with logic, thought, and the total culture of which it was a part. He applied his early training in Indo-European comparative linguistics to the grammars of unwritten languages and their relationships. He concentrated increasingly on linguistics and its establishment as an academic discipline. It was his deep conviction that culture did not completely pattern its communicants, that diverse life experience produced different individuals within the same culture, and that therefore there are as many cultures. He produced some valuable ethnographic studies, among others on the Tâkema and Nootka, and published such important essays in anthropological theory as Time Perspective in Aboriginal American Culture: A Study in Method (1916) and “Anthropology and Sociology” in: W.F. Ogburn and A. Goldweiser (eds.), The Social Sciences and their Interrelations (1927), 97–113. The shadow of Nazism concerned him deeply, and he lent the weight of his academic prestige and personal involvement to various Jewish defensive efforts. But his primary scholarly achievement was in linguistics where, together with Leonard “Bloomfield, he is to be regarded as a founder of formal descriptive linguistics based on a phonemic theory and distributional method that analyzes the sound and utterance, the morphemes of a language, following a pattern of their environmental distribution. Sapir established in his “Sound Patterns in Language” (Language, 1 (1925), 37–51) the principle of structural analysis as fundamental for both anthropology and linguistics. Sapir’s work as a researcher, teacher, and theorist has exerted a permanent influence on the study of language and has stimulated new work in sociolinguistics, ethnolinguistics, psycholinguistics, semantics, and semiotics. Sapir did not hesitate to evaluate his own culture. In 1924 in his essay “Culture, Genuine and Spurious” (in: American Journal of Sociology, 29 (1924), 401–29) he expressed his profound discontent with contemporary culture.

[Sapir, Eliahu]

SAPIR, ELIAHU (1869–1911), Ereẓ Israel pioneer and pedagogue; grandson of Jacob *Saphir. He was born in *Jerusalem and from 1889 taught Arabic and, later, Hebrew in the Petah Tikvah school. He was one of the first to teach Hebrew
through the medium of Hebrew and to take the students into the fields, in order to foster love for the Ereẓ Israel landscape. Being the only one in the vicinity to know both Arabic and the legal rules concerning taxes, lands, and inheritance, he gave free assistance not only to Petah Tikvah's settlement committee, but also to Arab neighbors, whose ignorance was exploited by the effendis. In addition, he started evening courses in Hebrew and Arabic in Petah Tikvah. After 11 years he became a clerk in the *Jewish Colonization Association (ICA), where he dealt with registration of land transactions, which was a very complicated task at the time. His greatest success was in setting the borders of and obtaining purchase certificates for the lands of *Sejera. In 1904 he began to work in the Anglo-Palestine Bank in Jaffa, and he was its vice director. He tried to teach people to make use of commercial credit rather than to rely on charity. He was one of the three Jews of Ottoman citizenship in whose name the lands of Tel Aviv were purchased.

He devoted much time to the study of geography. Kippert's German wall map of Palestine, re-edited in Hebrew by Sapir, was the only one used in schools and offices until 1930. His book, Ha-Areẓ, published in 1912, was for many years the only comprehensive historical and geographical lexicon of Palestine.

[Abraham J. Brawer]

His son, Joseph Sapir (1902–1972), public worker in Israel, was born in *Jaffa. In 1921 he participated in the defense of Petah Tikvah (to which his family had moved previously). He was a member of the agricultural committee there and founded the cooperative union Ha-Haklai. From 1928 he was active in the Farmers' *Federation of Israel, later becoming a member of its executive, as well as in the Pardes company (the largest cooperative company in Israel marketing citrus fruits), serving as its director in 1921–39. In 1940 he was elected on behalf of the General Zionists as mayor of Petah Tikvah, and he held this post until 1941. He was elected to the first and subsequent Knessets on behalf of the General Zionists and later on behalf of the Liberal Party. In 1952–55 (Second Knesset) he served as minister of transportation. With the establishment of the national coalition government on the eve of the Six-Day War he served as a minister without portfolio (1967–69), and from 1969 to 1970 as minister of commerce and industry. In 1968 he was elected chairman of the Liberal Party and was rotating chairman of the Gaḥal Party.

SAPIR, JOSEPH (1869–1935), Zionist leader. Born in *Kishinev, Sapir qualified as a doctor. A member of Hovevei Zion from his youth, he was one of the most prominent Zionists in Odessa, and he established a publishing house, Di Kopeke Bibliotek, which published Zionist literature in Yiddish and Russian. In 1903 he wrote a book for the general reader on the essence and history of Zionism, which was published in Russian and Hebrew and was an authoritative source for Zionist education. He edited a Russian-language Zionist weekly called Kadimah ("Forward," later Yevreyskai Mysl', 1907). After the 1917 Bolshevik revolution, Sapir was elected chairman of the South Russia Zionist Organization and was one of the leaders of the committee that aided victims of pogroms. He left Russia soon thereafter, spending several years in Bessarabia, and reached Palestine in 1925. Sapir was director of a department of the Bikkur Holim hospital in Jerusalem. He also engaged in painting and sculpture and published a book of articles and memoirs, Halutzei ha-Teḥiyyah (1930).

[Sapir, Joseph]
until 1970. In 1968–69 he served in the government as minister without portfolio. Following Eshkol’s sudden death in February 1969, Sapir was considered as a possible heir, but Meir was chosen by the Labor Party for the post. After the elections to the Seventh Knesset in 1969, he was once again appointed by Meir as minister of finance, and served again as minister of commerce and industry in 1970–72, after Gahal left the coalition.

Sapir was reappointed minister of finance in the short-lived government formed by Meir after the elections to the Eighth Knesset. Following her resignation in April, he declined to stand as a candidate for the premiership or to serve in the government formed by Yitzhak Rabin, whom he himself had nominated. In June 1974 Sapir was unanimously elected as chairman of the World Zionist Organization and the Jewish Agency, following the death of Louis Pincus.

Sapir was one of the few Labor leaders who was disturbed by Israel’s territorial expansion resulting from the Six-Day War, especially for economic reasons, and the social and demographic ramifications. He had reservations about Jewish settlement beyond the Green Line. He also acted to prevent the appointment of Ariel Sharon as chief of staff.

Sapir’s ideological rivals accused him of excessive pragmatism, and betrayal of the socialist ideals of his party. He had the image of a strong man, and the black notebook, in which he was accustomed to jot down notes, turned into a symbol. Nevertheless, there is no doubt that Sapir helped navigate the Israeli economy through stormy seas, and he was personally responsible for many of Israel’s economic achievements under Labor rule.

After his death in 1975 the development center named for Pinhas Sapir was opened at Tel Aviv University, to engage in research in economic, industrial, social, political, cultural and educational development.

[Susan Hattis Rolef (2nd ed.)]

**SAPIRO, AARON** (1884–1959), U.S. lawyer. Sapiro, born in San Francisco, California, spent most of his poverty-stricken childhood in an orphan asylum. He went on, however, to graduate from the University of Cincinnati, studied briefly for the rabbinate, and then received his law degree from the University of California. Sapiro’s legal practice emphasized labor law, men’s compensation, and, especially, farm cooperatives. He was the author of the California Industrial Accident laws and was chiefly responsible for the standard Cooperative Marketing Act in effect in over 40 states. In 1924 Sapiro was attacked by Henry Ford’s Dearborn Independent in a series of articles alleging a Jewish conspiracy to control U.S. agriculture. He brought a $1,000,000 damage suit against Ford, and when the case came to trial in 1927, Ford denied antisemitic intent, but settled out of court with Sapiro. The Ford-Sapiro case set the stage for the conclusion of the Dearborn Independent’s anti-Jewish campaign and for Ford’s public apology to the Jews.

**SAPIRSTEIN–STONE–WEISS FAMILY,** Cleveland, Ohio, business and philanthropic family. **JACOB J. SAPIRSTEIN** (1884–1987) emigrated from Poland to Cleveland, Ohio, in 1906 and began what would become the second largest greeting card company in the world, American Greetings Corporation, by selling postcards imported from Germany. Sons Irving and Morris worked with their father from a very young age. The company pioneered display stands for greeting cards and began designing and printing its own cards in 1936. In 1940 the sons changed their name to Stone, and in 1960 IRVING I. STONE (1909–2000) succeeded his father as president of the company. MORRY WEISS, married to a granddaughter of the family, joined the company in 1961 and became president in 1978. In 2003 great-grandson ZEV WEISS became chief executive officer of American Greetings.

The family has been a consistent supporter of Orthodox Jewish causes in Cleveland, the United States, and Israel, most notably the Hebrew Academy of Cleveland, the Telshe Yeshiva (Wickliffe, Ohio), Yeshiva University, and Telshe Stone in Israel. Several widely used ArtScroll publications bear the family names, including the Stone Chumash and Tanach and the Sapirstein Rashi. Morry Weiss is on the board of Yeshiva University and is a prime supporter of Edah. The family members’ philanthropic efforts have been associated with Orthodox Zionist and modern Orthodox causes, and they have been active participants in the larger Cleveland community, both Jewish and secular.

**SAPORTA** (or Sasporta), HANOKH (15th century), scholar. Originally from a noble family in Catalonia, Sarpota was rabbi in Adrianople after R. Isaac Zarefat. In addition to his Torah learning, he was also versed in the sciences. He apparently participated in an effort at that time made by the Rabbanites to reconcile the Karaites. Because of the Karaites’ theological weakness, the Rabbanites sought to introduce talmudic learning among them. This explains the presence of Karaites among his pupils. His principal pupil was Mordecai Comtino, and Saporta’s system of thought and learning can be traced in Comtino’s works.
BIBLIOGRAPHY: Gurland, in: Talpioth (1895), 8; Danon, in: JQR, 15 (1924/25), 309–10; Rosanes, Toogarmah, 1 (1930), 26, 47; Oba-diah, in: Sinai, 6 (1940), 76.

SAR, SAMUEL L. (Shmuel Leib; 1893–1962), educator. Sar was born on Shushan Purim in Ligmiany, in what is now Lithuania. The eldest of six boys, he began his education at the nearby yeshivah of Vidz, later moving on to Pon- evich (*Panevezys) yeshivah and a branch of Telz at Shaduva, where he studied for several years with Rabbi Joseph Bloch. After receiving semikhah, Sar was chosen by Rabbi Mayer Tzvi Jung to be trained as a rabbi for communities in the Austro-Hungarian empire and was sent to Vienna to pursue a rigorous program. He later followed Jung to London but ultimately chose to immigrate to the United States, arriving in Baltimore, Maryland, in 1914. His first job was as superintendent of a network of talmud torahs. Simultaneously, he began undergraduate studies at Johns Hopkins and Mount Vernon Collegiate Institute and entered law school at the University of Maryland.

In 1919 he was invited by Bernard *Revel to join the staff of the Rabbi Isaac Elchanan Theological Seminary (the forerunner of Yeshiva University) as a lecturer in Talmud and secretary of the administration. Following Revel’s death in 1940 and the accession of Dr. *Belkin to the presidency, Sar was appointed dean of men, a position that reflected his multiple tasks on behalf of the student body. In practice, he was the main address for the students and was considered the institution’s ultimate problem-solver, earning him the appellation “Mr. Yeshiva.”

Besides his devotion to Torah learning and Jewish education, Sar played a prominent role in Jewish communal affairs in the United States, especially in the post-Holocaust relief and rehabilitation efforts sponsored by American Jewry. In fall 1945, he was sent on behalf of the American Jewish Conference to Europe to visit the displaced persons camps in Germany and present a survey of the Jewish Holocaust survivors and recommendations on how best to provide for their immediate needs. Along with Major Alfred Fleischman and Hans Lamm, Sar served as liaison between the survivors and UNRRA as part of the efforts of American Jewry to assist the survivors.

In 1948, Sar returned to Europe, this time as director of the Central Orthodox Committee of the Joint Distribution Committee, which was established in 1947 to unify American Jewry’s efforts to care for the religious needs of the Orthodox survivors in Europe. A lifelong Religious Zionist, Sar was one of the leaders of the Mizrachi both in the United States and in world Jewish bodies. He served as acting president and chairman of the Vaad Hapoel of American Mizrachi and represented the movement in the Merkaz Olami (world center). He also played an important role in the creation of Bar-Ilan University in Israel with his good friend Pinchas Churgin. Sar’s son, Eli Sar, was director of medical services at Yeshiva College and Stern College for close to 50 years; his daughter, Esther Zuroff, was director of student services at Stern College for three decades; and his son-in-law, Rabbi Abraham Zuroff, was the supervisor of all four YU high schools and the principal of YUHSB for 30 years.

[Efraim Zuroff 2nd ed.]

SARACHEK, BERNARD (“Red”; 1912–2005), innovative U.S. basketball strategist, mentor to basketball greats, longtime Yeshiva College coach. Born in the Bronx, New York, Sarachek began his basketball career as a player at Stuyvesant High School. After playing for New York University, his first coaching job was as an assistant coach at his high school alma mater. He later moved on to a Workman’s Circle team which included legendary New York Knicks coach Red *Holzman and prominent NBA referee Norm Drucker. During World War II, he coached in the military at Pearl Harbor, where his Schofield Barracks team won an armed forces title. After the war, he began coaching professionally, initially with the Scranton Miners of the American Basketball League (one of the predecessors of the National Basketball Association), where he made history by breaking the league’s discriminatory practices by starting three Afro-Americans at the same time.

Sarachek achieved fame during his longtime tenure as basketball coach and athletic director at Yeshiva University. He began his career there in 1938 after he was approached by several students who sought to hire him privately to coach their team. Although plagued by the lack of a home court, no athletic scholarships, and the students’ extremely demanding double schedule of Jewish and secular studies which often ended late at night, he invariably managed to field respectable, well-coached teams (nicknamed the “Mighty Mites”) which enjoyed several winning seasons (the 1954–55 team went 16–2). In 39 seasons as coach at YU, his overall record was 202–263, which, given the limited talent available and the enormous problems facing the basketball program, was, to a large extent, a credit to Sarachek’s coaching skills.

Despite the fact that Sarachek coached in NCAA Division III (or its equivalent) for most of his career, and his teams did not achieve outstanding success on the court, his knowledge of the game and his innovative offensive and defensive strategies were legendary, and he mentored such outstanding coaches as Lou Carnesecca (St. John’s); Red Holzman (New York Knicks); and Jack Donohue (Power Memorial). He is credited with being among the first to emphasize the importance of movement on offense without the ball (going backdoor, “change of direction”) and he created new alignments of the zone defense as well as innovative in-bounds plays. After coaching at Yeshiva, he worked as a scout for the Nets (ABA).

While not religiously observant, Sarachek was known for his strong sense of Jewish identity and his profound recognition of the important role sports could play in fostering Jewish pride and combating assimilation. This also explains his deep loyalty to Yeshiva or, in his words, “Yeshiva is special. It’s a team for the Jewish people to be able to watch them play and be honored by them, to have pride. When you find
a Jewish athlete doing something, you feel proud. That's more important to me than anything else."

Sarachek is a member of the Jewish Sports Hall of Fame in Commack, New York; the New York City Hall of Fame; and the New York City Basketball Hall of Fame. In 1992, Yeshiva University named its annual high school invitational tournament the Red Sarachek Basketball Tournament.

[Efraim Zuroff (2nd ed.)]

SARACHEK, JOSEPH (1892–1953), U.S. Conservative rabbi and scholar. Sarachek, born in New York City, was ordained by the Jewish Theological Seminary of America in 1916. He occupied various pulpits in the New York area, served as chaplain for the New York City Department of Correction, and taught at Yeshiva University. He was president of the New York Board of Rabbis in 1941–42. Sarachek devoted himself principally to research in medieval Jewish literature. He wrote The Doctrine of the Messiah in Medieval Jewish Literature (1923), Faith and Reason: The Conflict Over the Rationalism of Maimonides (1935; 19702); and Don Isaac Abravanel (1938). These works are especially useful to students of the intellectual and religious history of medieval Jewry.

[Sefton D. Temkin]

SARAGOSSA (Sp. Zaragoza; Heb. סַרַּגָּסֶס), city in Aragon, N.E. Spain; capital of the former kingdom of Aragon. Jews were already living in Saragossa during the late Roman and Visigothic periods, for which, however, details are not available.

Muslim Period
There was an important Jewish community in Saragossa during the period of Muslim rule. In addition to commerce, Jews were well represented in various industries, particularly cloth and leather, tanning, and shoe making. The community was apparently influential, as the acceptance of certain Jewish practices by Saragossa Christians elicited a reaction on the part of the Mozarabic priest Evantius in the eighth century (Migne, Patrologia Latina, vol. 88, 719–22). It is also believed that *Bodo, the Frankish priest, converted to Judaism in 838 in Saragossa. Jews served as advisers in the court of the tolerant Tajib dynasty during the 11th century, among them, Abu Ishaq Jekuthiel b. Isaac of the wealthy *Ibn Hasan family, killed in 1039. A cultural and intellectual center in the 11th century, Saragossa was the residence of the philologist Jonah *Ibn Janah, the physician and philosopher Menahem ibn al-Fawal, the poets Levi b. Jacob *Ibn Altobban and Moses *Ibn Al-Takkana, the poet and linguist Joseph ibn Hisdai, the talmudist and da‘ayan *David b. Saadalshah, and the philosopher *Bahya b. Joseph ibn Paquda. E. Ashtor (see bibliography) estimates that the Jews constituted 6.3% of the total population of Saragossa (which was under 20,000) during the 11th century. Saragossa also had a Karaite community.

The Jewish Quarter
From the time of Muslim rule until the eve of the expulsion of the Jews from Spain in 1492, the Jewish quarter in Saragossa continued to be situated within the city walls of the Roman period, in the southeastern section. It was formerly larger than during the final years of the Jewish settlement in Saragossa. The juderia no longer exists. Its location was at the back of today’s Ramiro I hotel, between the Seminar of San Carlos and Magdalena Place. There was “the enclosed” juderia, and there was a second one, the new one, outside the Roman walls. The old Jewish quarter was surrounded by the Roman walls and an inner wall that separated it from the Christian districts. This quarter had six gates. It center was in today’s Santo Dominguito street, which led to the Gate of the Juderia. The fortress of the Jews, the slaughter-house, the Great Synagogue and the hospital were located there. In the fortress there was a prison for Jews and Muslims. As a result of the growth of the community, by the end of the 13th century a new Jewish quarter was established. This new quarter, situated to the south of the old one, between the Coso and San Miguel streets, has preserved its medieval features more or less. This quarter is known as Barrio Nuevo. The buildings of the community included a series of synagogues: the Great Synagogue (Mayor) in San Carlos place, the Small Synagogue (Menor), the Engravers’ Synagogue (which appears to have been known as the Bikkur Holim synagogue), the Synagogue of Cehán, the Synagogue of Bienvenist, and the Synagogue of Hervat Talmud Torah. The only Jewish building that has remained is that of the Jewish Baths, found in Coso, nos 132–136. The community representatives were accustomed to meet in the Aljafería fortress situated outside the city when they elected their leaders and officials. During the 14th century the king maintained a zoological garden in one of its wings, and the community was responsible for the feeding of the animals.

After the Christian Reconquest
When Saragossa was conquered by Alfonso I el Batallador in 1118, the Jews were granted various privileges. Alfonso had close relations with a Jew named Eleazar who lived in Saragossa and was employed in the service of the king. In the distribution of properties which followed the conquest, there is also mention of the alfaquim Benveniste and his family who received a vineyard in the outskirts of the city. When Alfonso VII of Castile occupied Saragossa for a short while (1134), he ratified the grants to the San Salvador Church in Saragossa previously made by Alfonso I of Aragon from the tithe and customs duties which were paid by the Moors and the Jews. In 1195 Alfonso II granted Maestre Josep Aben Filca, his brother Rabi Asser, and their heirs after them, an annual income of 300 sólidos which was to be paid to them from the customs duties received from the Jews of Saragossa.

Pedro II continued to grant further personal privileges: in 1212, he granted to the Jew Alazrazch, son of Abulfath Abyanlazar, the members of his household and his heirs, a series of rights on their property; he exempted them from the reproof section which formed part of the text of the Jewish oath, from the Jewish ban (herem), and from the community’s regulations. James I also adopted this policy of granting
privileges to the distinguished Jewish families of Saragossa and thus favored the members of the Alconstantini and de la Cavalleria families. Members of the Alconstantini family (Bahia and Solomon) accompanied him as interpreters when he set out on his campaign to conquer the Balearic Isles and Valencia. Members of these families, as well as of the Benveniste family, gave their support to the counter-ban issued in 1232 by the communities of Huesca, Monzón, Calatayud, and Lérida against Solomon b. Abraham of Montpellier and his colleagues because of their ban against those who studied the works of Maimonides and philosophy (see "Maimonidean Controversy").

One of the principal occupations of the Jews of Saragossa was garment making. The draperos held an important place in the community, coming directly after the personalities who had influence at court. Their shops were situated in the Jewish quarter and beyond, and they also employed Christians in spinning and weaving. They were followed in rank by craftsmen of every category: tailors, engravers, mantle-makers, furriers, goldsmiths, wool-cleaners, metal workers, blacksmiths, shoemakers, embroiderers, and cobblers, several of whom received special privileges in appreciation of their services to the crown. These craftsmen later organized their own benevolent societies. There were also landowners in the community who owned fields and vineyards outside the city, cultivated by daily workers and slaves. This occupational structure persisted until the expulsion.

The gap between the rich and the poor was very wide. The rich, including the frances who were exempt from contributing to the taxes paid by the community and were outside its jurisdiction, had full control of all communal affairs. The lower classes, composed of craftsmen, felt very oppressed. In 1263 they organized an opposition group called Kat ha-Ḥavurah (The People's Faction) and tried to obtain certain rights with the help of the king. This courageous act was the beginning of a social struggle that spread in the Kingdom of Aragon and caused constitutional reform in many communities. This did not always produce satisfactory results, and the members of the lower classes adopted a new method for ameliorating their position. They established many confraternities, havurot in Hebrew, which tried to resolve their social, economic, educational, and medical problems that the establishment failed to solve. The leading confraternities were the Rodfēi Zedek, Osei Hesed, Malbishe Arumim, Bikur Ḥolim, Shomrei Ḥolim, the confraternities of the craftsmen which included the shoemakers and the tanners, as well as religious groups that included Ashmōret ha-Boker, conffraria fr Cefarim, and Talmud Torah.

James I granted additional privileges to the community, including rights of judicial autonomy; the "oath could be taken according to Jewish law; lawsuits between Jews and Christians could take place before a judge of the same religion as the defendant; Jewish prisoners were set free for the Sabbath. The history of the community during his reign was marked by the internal struggle for power between the de la Cavalleria and Alconstantini families. Don Judah de la Cavalleria, the bailiff of the city, became involved in a dispute with Solomon Alconstantini. Don Judah remained in office until 1276 and died a short while later. Moses Alconstantini, the alfaqīm of Pedro III, was appointed in his place. Don Moses was, however, unable to hold his position in Saragossa, and in 1277 became bailiff of Valencia. During the time of Don Judah the first blood libel on Spanish soil was circulated in Saragossa (1250); the Jews were accused of the murder of a Christian child and the subsequent agitation reached a dangerous pitch. The community of Saragossa was among the largest in the kingdom, not of lesser size than those of Barcelona in Catalonia or Toledo in Castile, at times even surpassing them. The community administration, which was responsible to the crown for the payment of taxes, introduced internal systems of taxation. In addition to the direct tax, it levied an indirect tax on meat, wine, commercial transactions, loans, and real estate, a profit tax, a tax on dowries, and a tax on the daily wage of craftsmen (cf. Solomon b. Abraham Adret, Resp., pt. 5, nos. 279, 281).

In 1294 a rumor spread in Saragossa that some Jews had murdered a Christian child and extracted his heart and liver for magical purposes. The municipal authorities appointed an expert on magic to investigate the matter, while in the meantime the Jews succeeded in finding the "murdered" child in a neighboring city. King James II severely condemned the municipal authorities for the disaster which they had been about to bring upon the community.

In the tax regulations of 1331, the community sought to reorganize both the internal taxation system and the methods of collecting the tax for which it was responsible to the king. Particularly important were the taxes levied on commercial transactions, real estate, and moveable property, the sisa tax on meat and wine, and the methods of measuring and assessing which were introduced to prevent evasion. In 1333 Alfonso IV issued several edicts in favor of the community connected with the registration procedure for debts and pledges. Pedro IV also issued similar laws, but apparently the community administration, which also had the support of the government, did not succeed in overcoming the irregularities persisting in taxation, its assessment and collection. In 1335 the infante Pedro informed his father Alfonso IV of the degenerate condition of the community and the irregularities found in it. By then the community was almost ruined through the accumulation of debts and the loans which it was compelled to seek in order to pay the levies and fines which the state itself imposed with such frequency. In 1342, on the basis of a privilege granted by Pedro IV, the community of Saragossa proclaimed a herem upon anyone who obtained a tax exemption or accepted a position in the community as rabbi, shohet, scribe, albedin, or emissary with the assistance of a royal privilege.

The "Black Death struck a severe blow at the community of Saragossa. Hardly one-fifth of its members survived. On Oct. 27, 1348, King Pedro instructed the procurador-general of Aragon and the other royal officials in Saragossa not to compel the community to pay taxes until the plague ceased and new
arrangements for tax payment were agreed upon. Members of the de la Cavallería family, whose position had diminished after the death of Don Judah, once more gained the leadership in the community administration; subsequently they maintained their position until most of them converted to Christianity after the disputation of *Tortosa (see below).

The cultural and general progress of the community in the early 1360s was largely due to the de la Cavallería family. Don Vidal de la Cavallería, one of the kingdom's notables, leased the minting of gold coins in the kingdom in conjunction with a Christian of Saragossa, an agent of the king, and leased the taxes in collaboration with another Christian. He was versed in Jewish learning, and after his death in 1373 his wife Orovida continued to manage her husband's affairs. His brother, Solomon, was also active in the town and community. The most outstanding member of the family, however, was his son and the son-in-law of Vidal: Judah Benveniste de la Cavallería, who, from the late 1370s, was involved in many of the kingdom's affairs and carried on important commerce in Barcelona and other places. His house in Saragossa was a center of Hebrew culture and he signed state documents in Hebrew. Solomon and Benveniste maintained friendly relations with *Nissim b. Reuben Gerondi and apparently supported *Isaac b. Sheshet Perfet, who arrived in Saragossa in about 1372–73 and was active there for 13 years. The responses left by Isaac b. Sheshet yield much information on the way of life of the Jews of Saragossa.

In the relations between the king and the community of Saragossa there was no change in the attitude of the crown. In 1363 Pedro IV imposed a levy of 5,000 livres in Jaca currency toward the expenses of the war against Castile. From the 1370s the administration of the community was dominated by Solomon Abdarrabi, one of the leading *muqaddimūn. Apparently, the members of the de la Cavallería family had ceased to take an interest in communal affairs. In the early 1380s, complaints concerning the inefficient administration of the community were submitted to the king's treasurer. It was revealed that the debts of the community amounted to 200,000 sólidos, and the *muqaddimūn were accused of having exempted their relatives from taxes and granting them benefits.

It was only from 1386 that the community began to repay its debts, and R. Hasdai Crescas, who settled in Saragossa about that time, did much to liquidate the debts and improve the community's condition. In 1387 he was appointed supreme justice in the prosecution of informers throughout the kingdom. He became the leader of the Jews in the kingdom after the anti-Jewish persecutions of 1391.

Saragossa was spared from the persecutions of 1391 because of the presence of the king in the city, which he used as a summer residence. The king and queen did not leave the city until the end of October to punish the rioters. In April 1392, John I thanked the city leaders for protecting the community and encouraged them to maintain this policy.

Activities for the rehabilitation of the communities of the kingdom after the persecutions subsequently centered in Saragossa. Hasdai Crescas and Moses b. Samuel Abbas, who had moved from Tudela to Saragossa during the 1370s, devoted themselves to the welfare of their coreligionists. Following the massacres in the peninsula, Hasdai Crescas assumed the leadership of the communities and offered financial assistance to those who suffered in the massacres. Crescas made several journeys to Navarre, probably to suggest a haven to the Jews who had suffered from the persecutions. It may be that in this context we have to understand Crescas' famous letter to the community of Avignon.

In 1396, with the consent of the government, Hasdai Crescas instituted regulations for the community of Saragossa. They show a pronounced tendency to strengthen the authority of the *muqaddimūn and enable them to impose their decisions without undue delays. As early as 1399 the queen, however, found it necessary to accept the complaints of the community and change these regulations. According to the decisions of Hasdai Crescas, the treasurer was appointed from among the four *muqaddimūn, while the funds of the community were supervised by one of them, and could not pass from his keeping. The queen allocated an annual sum of 8,000 sólidos to defray outstanding debts, while Hasdai Crescas had set no limits to the amounts which could be collected. The queen clearly intended to minimize the authoritative tendencies of his regulations, while maintaining the community in an orderly state. Hasdai Crescas died in 1410, Benveniste de la Cavallería in 1411, but worthy successors of these two personalities were still available. The rabbinical position of Hasdai Crescas was taken over by *Merahiah b. Isaac ha-Levi (en Ferrer Saladin), who was assisted by *Mattathias ha-Yizhari and Moses Abbas, leaders of former days.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

Results of the Disputation of Tortosa

The community of Saragossa, like the other communities of the kingdom, underwent a difficult period at the time of the Disputation of *Tortosa in 1413–14. Its emissaries to the disputation were Zerahiah ha-Levi and Mattathias ha-Yizhari; they were accompanied by the interceder Don Vidal, the son of Don Benveniste de la Cavallería.

The consequences of the disputation of Tortosa affected the Saragossa community in the same way as it had the other communities in Spain. Some of its prominent members, including members of the de la Cavallería family, converted to Christianity, among them Benafos, who assumed the name of Fernando, and Vidal, who took the name of Gonzalo and received a position in the kingdom's administration. The conversion of Vidal had wide repercussions. His teacher, R. Solomon da Piera, also converted with him. Two poets of that generation, Solomon *Bonafed and Bonastruc Desmaestre, regarded his renunciation as marking the nation's decline. The government had already realized the undesirability of the Conversos, whose numbers were increasing, continuing to reside in the same quarter as the Jews. The Conversos, at first only a few in number, were requested to leave but re-
fused; a commission was finally set up to assess the value of their houses which the Jews of the quarter were ordered to pay to them. Many families were broken up. In 1415 the Jews of Saragossa faced a threat of further disorders; many attacks were made on them after Vicente *Ferrer had been preaching. Ferdinand ordered that measures be taken to assure their protection. During this period, the community of Saragossa numbered about 200 families. This was also its size at the time of the expulsion in 1492, although it received Jewish refugees throughout this century.

The community nevertheless underwent a lengthy period of decline because there were no notable leaders after the Tortosa disputation; its administration was concentrated in the hands of the craftsmen and simple folk who were incompetent to manage its affairs. Alfonso V was aware of the community's situation and in 1417 ordered the merino of Saragossa and Vidal de la Cavalleria to take over the accounts from the appointees, to introduce order into the administration's affairs, and to appoint community leaders, muqaddimūn, members of the council, treasurers, and a notary. Alfonso even authorized them to defend the community against the missionary sermons of apostates. He also ordered that the books of the Talmud which had been confiscated were to be returned to the Jews of Saragossa, as they had been returned to the other Jews of the kingdom (1419). Synagogues which had been confiscated were also to be restored. He authorized Jews to take leases from Christians. However, several monks, a Christian jurist, and several apostates were delegated to make a general examination of the books of the Jews. An event that occurred on the 17th of Shevat, 5420 (1420), was subsequently celebrated by the community as the "Purim of Saragossa." The Jews of the city were accused by an informer of carrying empty Torah cases at the reception being held in honor of the king; however, they were found to contain Torah scrolls and the Jews were thus spared punishment. A special scroll describing this miracle was also written.

Despite the efforts at rehabilitation and the support of the crown, the despair which had set in among the Jews continued and there were additional conversions. According to a cautious estimate, about 200 Jews yearly converted to Christianity between 1420 and 1430. To assist the community's recovery, associations were established for the support of the poor, for Torah study, etc. Endeavors to organize relief for the poor and the persecuted brought a certain revival in community life. Saragossa was outstanding for this activity until the expulsion.

In 1438 Alfonso ordered that the community was to be administered by three muqaddimūn, a council of nine members, and a treasurer. Throughout this period the community existed side by side with an active group of Conversos, some of whom had abandoned the Jewish faith of their own free will (see below).

In 1457 Alfonso granted the community of Saragossa a series of alleviations: he exempted it from payment of special taxes for ten years, granted a general amnesty, and guaranteed his protection against seizures by Church tribunals and against imprisonment or seizure by officers of the kingdom. The annual tax then amounted to 12,000 sólidos in Jaca currency, as it was in 1460 and in 1482.

When Ferdinand inherited the crown of Aragon in 1479, his policy toward the Jews of Castile was also applied in Aragon. In 1481 he wrote to the prior of the Cathedral of Saragossa and reproached him for having ordered the Jews to return to their quarter and authorizing them to close off the passages to the Christian streets. He also complained that even the prior had issued orders concerning the garb of the Jews and had forbidden several crafts upon the basis of a papal bull. Ferdinand explained that even a papal bull required the consent of the crown if it was to be applied. He ordered the Jews to wear a distinctive *badge and instructed the municipal officials to see that the crown's instructions concerning the Jews were carried out, and to assure their protection, which implied that the city was not to adopt an independent policy in the treatment of the Jews living there.

In 1486 the king granted the request of Torquemada and ordered the expulsion of the Jews from Saragossa and *Albarracín (see also below). After the issue of the edict, Ferdinand, however, wrote to Torquemada and suggested that an extension of six months be given. The edict was presumably not applied because notarial documents (such as testaments and the like) are extant from the year 1491, indicating that there was still a Jewish population in Saragossa, while the general decree of expulsion of the Jews was published there on April 29, 1492.

The Inquisition officials took upon themselves to supervise the preparations for the expulsion. They issued an order prohibiting the purchase of properties from Jews, but the Jews of Saragossa apparently did not heed this prohibition and proceeded with the transfer or sale of their properties. On June 28, the bailiff general convened the municipal leaders for an urgent discussion on the problem of the property of the Jews. It was agreed that a part of the community's debts would be covered by its property, but another part of the properties, especially those in personal possession, would finance the departure of the exiles. The Jewish quarter was transferred to the municipal council. A short while before the expulsion, the Abnarrabí family, whose ancestors had held important functions in the past administration of the community, converted to Christianity. Several members of the family assumed the name of Santa Fé (Joshua Abnarrabi became Juan de Santa Fé); Ishmael Abnarrabi, known as a merchant and banker active during the 1470s, also chose this alternative; so did Vidal Abnarrabi, a renowned physician in the town (as a Christian, he took the name of Alfonso de Eimeric). None of the members of this family was tried by the Inquisition, and they apparently became integrated within Christian society. During the whole of this period, Christian notaries were fully occupied with drawing up inventories of the properties of those who were about to leave; these lists give much information on the situation of the Jews of Saragossa during the last stage.
of the community’s existence. It is assumed that the Jews of Saragossa departed in the direction of the ports of the kingdom, but some of them presumably went to the kingdom of Navarre.

The Conversos in Saragossa

Although there were Jews in Saragossa who deliberately or willingly abandoned Judaism, many after their conversion continued to observe the Jewish precepts and were Jews in every respect. Several of the Conversos in Saragossa became renowned. In 1450 Pedro de la Cavallería completed his apologia for Christianity, Zelus christi contra Judaeos, Sarracenos et infideles, in Saragossa, in which he revealed a wide knowledge of Jewish affairs, while his familiarity with the Jewish community is striking. Even so, at trials held by the Inquisition during the 1480s, testimony was brought against him that he was accustomed to eat in Jewish houses, that he participated in the Grace after Meals, and that he had spoken scornfully of Christianity. It was he who brought to Castile the pearl necklace which Ferdinand had sent to his betrothed, Isabella.

At the beginning of May 1484, Torquemada appointed two inquisitors to the tribunal of Saragossa. The tribunal established its seat outside the city in the Aljafería fortress and, on May 10, the first *auto-da-fé took place and four Conversos were burned at the stake. It nevertheless appears that the tribunal proceeded rather slowly in its task. Leading Conversos of Saragossa were related to the local nobility (including the royal family) by marriage, and in general the Conversos in the city had close social and commercial relations with the Christian population. On Nov. 29, 1484, the Council of the Estates of Aragon, influenced by the Conversos who took part in the local and national administration, sent a delegation to the king and demanded that the new inquisition be abolished because it contradicted the laws of the country, and the appointment of inquisitors by Torquemada was in direct contradiction to the charters issued in the kingdom. The king declared to the emissaries of Aragon that the former inquisitors had neglected their duties and accepted bribery, but loyal Christians had no need to fear the Inquisition because it would not molest them. In practice, the government realized that in Saragossa a cautious policy should be adopted over the Converso problem.

On Sept. 14, 1485, an incident took place in Saragossa which had repercussions throughout Spain. On that day, the inquisitor Pedro de *Arbués was assassinated in the Cathedral of Saragossa while engrossed in his prayers. The Converso community, as well as the Jews, were threatened with total annihilation, but the municipal and royal officials suppressed the riots and began an energetic search for the culprits. In December 1485 the Inquisition tribunal resumed its activities and applied justice according to the strict letter of the law. From then onward, monthly autos-da-fé were held, and many Conversos were burned at the stake. Among those sentenced was Jaime de Montesa, a respected jurist who was the leading conspirator against Pedro de Arbués. With him was sentenced Juan de Pedro Sánchez, the brother of the royal treasurer Gabriel *Sánchez, who fled and was burned in effigy. Luis de *Santangel, the father-in-law of Gabriel Sánchez, who had been raised to knighthood in appreciation of his service, was also accused of complicity in the murder and of adherence to Judaism and burned at the stake. Francisco de Santa Fé, who acted as assessor to the governor of Aragon, the grandson of the well-known apostate Jerónimo de Santa Fé, committed suicide in the Inquisition jail; his body was burned and his ashes were thrown into the R. Ebro. Even Gabriel Sanchez and Alfonso de la Cavallería did not escape suspicion. On April 30, 1492, one day after the publication of the decree of expulsion in Saragossa, R. Levi b. Shem Tov, one of the community’s scholars, appeared before the investigators of heresy and testified that in 1490, upon the orders of the Inquisitor, he had called upon the members of the community, and cautioned them under the threat of the *herem to testify before the Inquisition all that was known to them on the Conversos who observed the Jewish precepts.

Just as the Inquisition sought to extirpate these important personalities, it did not spare the ordinary Conversos who adhered to their former faith and Jewish way of life. The trials of María López, the wife of Pedro de Santa Cruz, and of Francisco de Tarazona, which were held before the expulsion, provide a remarkable example of the lives led by Jews and Conversos. According to a list apparently drawn up during the 17th century, over 600 people were tried up to the beginning of the 16th century. Only a few of the dossiers of those who were sentenced, however, are extant. Most were lost when the last secretary of the Inquisition, Juan Antonio Llorente, transferred them to France at the time of the Peninsular War in the early 19th century; only a few of them have been preserved there.

[Haim Beinart]

SARAH (Sara), Heb. שָׂרָה, the first of the four matriarchs; wife of Abraham. Sarah is first mentioned in Genesis 11:29. Exceptionally, her genealogy is not given. According to Genesis 20:2, Sarah was Abraham’s half-sister, the daughter of his father, but not of his mother. It is difficult, however, to reconcile this information with Genesis 11:31, from a different documentary source, where Sarah is identified as Terah’s daughter-in-law. Immediately after Sarah’s introduction, mention is made of her infertility (Gen. 11:30). This fact serves to emphasize Abraham’s unquestioning faith and obedience to the Lord’s command that he leave his native land, predicated as it was on a promise of great progeny (12:1–4).

The first incident in which Sarah figures prominently is the account of her descent to Egypt along with Abraham during a famine in Canaan (12:10–20). Immediately before entering Egypt, Abraham becomes apprehensive lest Sarah’s striking beauty, which is especially noteworthy since she was 65 years old at the time (cf. 12:4; 17:17; Genesis Apocryphon, 20), inspire the Egyptians to kill him for the sake of acquiring her (Gen. 12:12). Thus, Abraham instructs his wife to claim that she is his sister in order to protect him. Sarah obeys Abraham’s wishes, and when her beauty is reported to the pharaoh by his courtiers, she is taken into the royal palace. Abraham is apparently generously rewarded for the hand of his “sister” (12:16). When, however, the royal household is afflicted with plagues, the pharaoh apparently realizes that Sarah is Abraham’s wife and that he is being punished for having intercourse with her. He forthwith returns her to Abraham, at the same time ordering them to leave his domain (12:17–20). The entire story foreshadows the plagues of Egypt and Israel’s successful departure from there as already seen in the Midrash (Gen. R. (ed. Theodor and Albeck), 385).

It was once thought that this unusual account and its parallel in Genesis 20:1–18 involving the same couple but another monarch, Abimelech of Gerar (cf. also 26:6–11), were illuminated by the “Nuzi documents, which, according to Speiser, attest to the existence in Hurrian society of a judicial status of wife-sistership, whereby a woman, in addition to becoming a man’s wife, was adopted by him as his sister and thereby merited higher social status and greater privileges than an ordinary wife. Speiser’s reading though was shown to be wrong (see *Genesis). Sarah’s prolonged barrenness prompted her to give her handmaid Hagar to Abraham in order that she might bear him a child in her mistress’ place (16:12). This unusual device, found only once again in the Bible (cf. Gen. 30:1–8), is also attested to in the Nuzi documents and elsewhere, where it is stipulated that if a wife is childless, she must provide her husband with a female slave as a concubine. Once Hagar had conceived, her arrogant attitude toward her mistress prompted Sarah to treat her so harshly that she finally fled, only to return in accordance with a divine order (16:4–9). Ultimately, however, after Sarah had given birth to Isaac, she saw to it that Hagar and her son were permanently expelled from Abraham’s household (Gen. 21; in Galatians ch. 4 Paul allegorizes this story so that it predicts the displacement of Judaism by Christianity). The extraordinary fact that Sarah would bear a child at 90 years of age was first announced by God to Abraham at the same time that both his and Sarah’s names were changed, the latter from Sarai (17:15–17). The promise of offspring was repeated when the angels visited their tent before the destruction of Sodom and Gomorrah (18:10). These promises were received with incredulity by the Patriarch and his wife (17:17; 18:12), who “laughed” when they heard the news, thus providing the basis for the name of the son, *Isaac.

Sarah died at the age of 127 in Kiriath-Arba, which, the text explains, is “now Hebron” (23:1–2). She was buried in the cave of *Machpelah, which was purchased by Abraham as a family grave from one of the local citizens, Ephron son of Zofar, in strict accordance with legal regulations for land purchase (23:3–20). Outside Genesis, Sarah is mentioned in the Bible only in Isaiah 51:2 as the progenitrix of the people of Israel.

The usual interpretation of the name Sarah is “princess” or “chieftainness,” although it may also be connected with the Akkadian *šarrat, one of the designations of the moon-goddess Ishtar. Some scholars have explained that Sarah’s original name, שָׂרָה, represents an early specialized feminine form, as is now known from Ugaritic, where the termination of feminine personal names is quite common. Others have pointed out that the name Sari may not be a doublet of Sarah, since the Greek translation has the expected doubling of the r in the case of Sarah (Sarra), Σάρρα, but not in the case of Sari. The latter has been connected with the Arabic word shura, “repeated flashing.”

[Myra J. Siff / S. David Sperling (2nd ed.)]

In the Aggadah

Sarah is identified with Ischah, the daughter of Abraham’s brother, Haran (Gen. 11:29), and thus Abraham’s niece. She was called Ischah because all gazed (sakkah, “to look”) at her beauty (Meg. 14a) which she retained throughout her journeys and even in her old age (Gen. R. 40:4). She was so beautiful that all other people were like monkeys by comparison (BB 58a). Even Abishag the Shunammite, whose beauty is extolled, never achieved half of Sarah’s attractiveness (Sanh.

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
Another interpretation for the name Iscah was that she possessed the gift of prophecy, which enabled her to discern (i.e., to look with the eyes of vision) by means of the Holy Spirit (Meg. 14a). She was one of the seven prophetesses and her prophetic gifts were superior even to those of Abraham (Ex. R. 5:1). While in Haran, Abraham converted the men and Sarah the women. The change of her name from the original Sarai (“a princess to her own people”) to Sarah denoted that henceforth she would be “a princess for all mankind” (Gen. R. 47:1). When Abraham journeyed to Egypt, he concealed her in a chest lest she be ravished by the Egyptians. Nonetheless, she was discovered by customs’ officials (Gen. R. 40:5). As a token of his love, Pharaoh gave the land of Goshen to her as a hereditary possession. For this reason the Israelites subsequently lived there (pârē, 36). Sarah prayed to God to deliver her from Pharaoh and an angel was sent to whip the king at her command (Gen. R. 412; cf. Genesis Apocryphon, ed. by N. Avigad and Y. Yadin (1956) p. 43 f.). It was a result of this sign of divine favor that Pharaoh gave her his daughter Hagar as a handmaid (Gen. R. 45:1). For details of the relationship between Sarah and Hagar, see Hagar, in the Aggadah.

Sarah should have reached Abraham's lifespan of 175, but 48 years were taken away because of her readiness to dispute with Abraham over Hagar’s misdeeds (Rom 16:18; Gen. R. 45:5). Sarah was originally barren, but a miracle was performed for her after her name was changed from Sarai and her youth was restored (Gen. R. 47:2). After she had given birth to Isaac, many people claimed that the Patriarch and his wife had adopted a foundling and were pretending that it was their own son. Abraham made a banquet on the day that Isaac was weaned, and Sarah invited many women. They all brought their infants with them, and Sarah suckled them all, thus convincing the guests that she was indeed the mother (BM 87a; Gen. R. 53:9). Others stated that Abimelech was the father, but it was disproved by Isaac's striking resemblance to his father (Gen. R. 53:6; BM 87a). Sarah's behavior toward Ishmael, whom she drove away from Abraham's roof, is justified on the grounds that she saw him commit idolatry, rape, and murder (Tosef., Sot. 6:6; Gen. R. 53:11). During her lifetime, the doors to her house were always hospitably open; her dough miraculously increased; a light burned from Friday evening to Friday evening; and a pillar of the divine cloud rested above her tent (Gen. R. 60:16). Her death was caused by the shock of learning about the ‘Akedah. According to one version, Satan appeared to her and told her that Abraham had actually slaughtered, or was about to slaughter, Isaac (Sefer ha-Yashar, Va-Yera; pârē 32). According to another text it was Isaac himself who returned and told her of the event (Lev. R. 20:2). The inhabitants of Hebron closed their places of business out of respect for her memory and as a reward did not die before they participated 38 years later in the obsequies of Abraham (Gen. R. 58:7; 62:3).

Sarah/Theodora and Ivan Alexander had a daughter named Tamar, who was married to Emperor Murad I (1360–89), ruler of the Ottoman Empire. A few generations later, knowledge of Tamar's origins gave rise to rumors of a Jewish woman in the sultan's harem and it was suggested that Mehmed II, son of Murad II, was born of a Jewish mother.

A few generations later, knowledge of Tamar’s origins gave rise to rumors of a Jewish woman in the sultan’s harem and it was suggested that Mehmed II, son of Murad II, was born of a Jewish mother.

[Emily Taitz (2nd ed.)]

**SARAJEVO (Serajevo; Turk. Bosna-Serai; Heb. בָּשָּׁנָה בָּשָּׂרָא),** city and capital of Bosnia-Herzegovina. The first Jews came to Sarajevo in the middle of the 16th century, spreading from there to smaller towns of Bosnia, e.g., “Travnik, Bugojno, Zenica, Tuzla, “Banja-Luka, and Mostar, capital of the twin province of Herzegovina. Although some earlier tombstones (in horizontal trunk form) were discovered in the Old Sephardi cemetery at Borak (western periphery of Sarajevo), the first documents attesting Jewish presence date from 1565.

Spanish refugees came from Salonika, but some of them may also have come directly by sea. Despite a different language (Ladino) and divergent customs, the newcomers were

**SARAJEVO**
quickly accepted as useful city dwellers; they were mostly artisans and some were merchants. Jews were known as the early pharmacists of the region, as well as hatchims (from the Arabic-Turkish Ḥakim, "doctor"). Muslim fanatics tried at first to prevent the settlement of Jews, forcing a few families to flee to Dubrovnik and Hungary. However, these were isolated cases which did not interfere with the good relations that developed between Muslims and Jews. There is evidence from the end of the 16th century in the so-called sijille (court records) that Jews appeared before the shari’a (Muslim religious tribunals) in civil cases.

A special Jewish quarter with a synagogue, near the main market of Sarajevo, was erected in 1577, authorization having been obtained from the pasha Siavush. Known to the population as tchfut-khan, the Jews themselves called it either mahalla judia (Jewish quarters) or cortijo (the communal yard). Later, as the community grew, Jews resided elsewhere as there were no legal restrictions. The first synagogue (constructed in 1581) was named, in the Spanish tradition, Il Cal grande, but it was destroyed by fire and restored or rebuilt several times.

Trade Activities
Jewish merchants used both main trade routes: from east to west (Sofia, Serbia, and Sarajevo to Dubrovnik, *Split, Zadar, and/or Venice and Trieste) and from south to north (i.e., Constantinople, Salonika via *Skoplje, Sjenica to Sarajevo, from where a lateral route went to Travnik, Kostajnica, Dalmatia, and Italy). Many Jews worked as blacksmiths, tailors, shoemakers, butchers, and joiners, and later as metal workers; they also operated the first sawmill and traded in iron, wood, and chemicals, in addition to articles such as textiles, furs, glass, and dyes. In Sarajevo, and in Bosnia as a whole, there were many indigent families and a Jewish proletariat.

The general situation of the Jews during the Ottoman era was good. They had their religious and juridical independence in all personal matters and civil cases, and broad autonomy in community affairs. The Ottoman authorities enforced rabbinical court sentences when they were requested to do so. However, the Jews had to pay the poll tax (kharaj) and were subject to various extortions and briberies. In the 17th century Ashkenazi families came to Sarajevo, fleeing European persecutions. They founded their own community, which had a separate existence until the Holocaust.

Historical Developments
During the siege and the Austrian conquest of Sarajevo by Prince Eugene of Savoy in 1679, Jews suffered along with the general population, the Jewish quarter, with its synagogue, being destroyed. About that time new settlers came from Rumelia, Bulgaria, and Serbia, as well as from Padua and Venice. The evolution of the community during the 18th century was generally undisturbed and was led by rabbis who organized a talmud torah and cared for the spiritual needs of the Jews, whose numbers reached 1,000 by 1800. During the first half of the 19th century further growth occurred, and official recognition of the community was granted by the Ottoman sultan. The rabbi of Sarajevo, Moses Pereira, was named by imperial firman Ḥakham bashi for Bosnia and Herzegovina in 1840. Some acts of ransom and discriminatory orders were decreed, but the various revolts against Ottoman rule and the influence of the European powers in Constantinople helped cause the Tanzimat (reforms) program of 1840 and 1856, assuring equality for non-Turks before the law. In the face of occasional defamation, Sarajevo Jewry had to make donations in kind or money. Nevertheless, they largely maintained their cultural and religious life without outside interference, taking on new crafts and professions, as well as adding copper, zinc, glass, and dyes to their exports. By the middle of the 19th century all doctors in Sarajevo and Bosnia were Jews.

The Austrian annexation of the city in 1878 brought a new wave of Ashkenazim, who were officials, experts, and entrepreneurs. The new masters immediately demanded 100,000 ducats from the Jewish community, which was paid in several installments. On the other hand, the Austrians introduced new industries and made capital investments which created new employment and trade opportunities, largely directed toward Vienna, Prague, and Budapest. The earlier rivals – Ragusans and Venetians – were replaced by local and foreign Serbs who gradually became dominant in foreign trade, thus limiting the field of Jewish traders or pushing them out. Some Jews consequently changed their vocation, thereby contributing to the developments and modernization of the country as pioneers in optics, watchmaking, fine mechanics, printing (the first printing press belonged to Daniel Kajon), etc. The Jewish community numbered about 10,000 persons by the end of the 19th century.

After World War I the Yugoslav era began, the Jews enjoying freedom and equal treatment; their diverse economic, religious, cultural, and artistic activities continued unhindered, even though the Jewish population of 14,000 represented less than 1% of the general population of Bosnia. In 1927–31 the Sephardi synagogue, the largest in the Balkans, was constructed, only to be desecrated and plundered by the Croatian Fascists and the Germans not more than ten years later, and after the war it became a theater hall. The old Sephardi synagogue became a Jewish museum.

Rabbis and Jewish Learning
The first rabbis known to have led their community in the 17th century were Zebulun, Mizraim Muchacho (earlier of Salonica), Samuel Baruch, Hayyim Shabbetai, Judah Lerma, and the famous R. Zevi Ashkenazi, who was from Ofen (Buda) and known as “Ḥakham Zevi.” The latter lived in Sarajevo from 1686 to 1697 and combated Nehemiah Hayon’s Shabbatean views. The protocols (pinkasim) were kept in Hebrew and a bet din was set up. Very few of the documents are extant. Among later rabbis the most prominent was R. David Pardo “Morenu,” author of the rabbinical commentaries: La-Mennazzeah le-David, Ḥasdei David, and Mizmor le-David, and responsa. He founded a rabbinical dynasty (an exceptional
phenomenon among Yugoslav Jewry), and his son Isaac and grandson Jacob succeeded him in office. Nineteenth century rabbis of note included Moses Danon; Moses Pereira, also known as Musa effendi; Meir Danon; Eliezer Shem Tov Papo; and Isaac Papo, a prolific author who wrote not only in Hebrew but also in Ladino (Bet Tefilah, Tikkan Moda’ah). The last rabbi under the Ottomans was Joseph Finzi, whose work Va-Yelakket Yosef was printed in Belgrade.

In 1928 a theological seminary was opened in Sarajevo by the federation of the Jewish communities, offering a secondary school education. The seminary’s first rector, Rabbi Moritz Levi, author of the first historical study on the Sephardim in Bosnia, died in the Holocaust. Another prominent teacher and translator from Hebrew to Serbo-Croat was Jacob Maestro, who was known as “Morenu.”

Jewish Life before the Holocaust
Apart from the religious field, Sarajevo Jewry had a wide range of social and cultural organizations and a thriving Jewish press. Among the institutions the senior was La Benevolencia, a mutual aid society founded in 1894; two bodies, Mela-cha and Geula, helped artisans and economic activities, and in 1901 a choir, Lyra-sociedad de cantar do los judios-espa-ñoles, was established. There was a Jewish worker’s union, La Mataįta. The first newspaper published in Sarajevo was La Alborada (Aurora), a literary weekly which appeared from 1898 to 1902. The weeklies Židovska Svijest, Jevrejska Tribuna, Nar-odna židovska svijest, and Jevrejski Glas, with a section printed in Ladino, were published during 1928–41. Several memorial volumes were also published.

Zionist organizations were active between the two world wars. The youth movement, Ha-Shomer ha-Za’ir, was well es-tablished and during the Holocaust provided, together with Mataįta, a considerable number of partisans, fighters, and leaders of the resistance movement. An organization with Sephardi separatist tendencies was linked to de Picciotto’s World Sephardi Union.

Jews in Literature and Arts
Isak (Isaac) Samokovlija (d. 1955), a forceful writer, lived in Sarajevo until his death. He vividly described Bosnian Jewish life, especially the problems of the porters, peddlers, beggars, and artisans. Daniel Ozmo, who did mostly woodcuts, Daniel Kabiljo-Danilus, and Yosif (Joseph) Levi-Monsino, all of whom perished during the Ustashi-Artuković era, were well-known painters. The illuminated Sarajevo Haggadah is kept in the National Museum of Sarajevo; it was acquired by the Museum (then, the Landesmuseum) in 1895 for 100 florins. Its origin, however, was in Spain and has nothing to do with Sarajevo (see *Haggadah).

Jews in Politics
The first European-educated physician in Bosnia, Isaac Sha-lom, better known as Isaac effendi, was the first (appointed) Jewish member of the provincial Majlis Idaret (assembly). His son Salomon “effendi” Shalom succeeded him. Javer (Xaver) “effendi” Baruch was elected as a deputy to the Ottoman parliament in 1876. During the Austrian and Yugoslav periods Jews generally abstained from active participation in politics. In the 1930s—when the economic situation deteriorated—a number of younger Jews turned to the illegal Communist Party, some of them gaining prominence in the party’s ranks during the subsequent struggle against the occupiers and quislings.

Holocaust and After
Between the two world wars Sarajevo was the third-largest Jewish center of Yugoslavia (after Zagreb and Belgrade). In 1935 there were 8,318 Jews; in 1941, 10,500.

The Germans arrived on April 15, 1941, and the following day wrecked the Sephardi synagogue, which was the largest in the Balkans. This was followed by requisitions, expropriations, execution of hostages for acts of sabotage, individual arrests, and mass deportations of Jews. Members of the Jewish community were deported between September and November 1941, mostly to Jasenovac, Loborgrad (women), and Djakovo. Extermination took place in these Ustashi (Croatian) concentration camps. Only a small number of Jews survived the first wave of killings and they were later dispatched to the Auschwitz gas chambers. A limited number of Jews survived either by joining partisan units or by reaching Italy. Several scores of army officers and soldiers mobilized by the Yugoslav army upon the German invasion spent the war years in German POW camps, protected by the Geneva Convention, and thus returned to Sarajevo after the Holocaust. In all, over 9,000 Jews were murdered by the Nazis.

After the Holocaust, the community was reconstituted, but most of the survivors chose to immigrate to Israel in the years 1948–49. Religious services were organized in the Ashkenazi synagogue (which had remained more or less intact) by R. Menahem Romano, and some social and cultural activities were renewed. A monument to “the fighters and martyrs” was erected in the Jewish cemetery at Kovačica, and a celebration of the 400th anniversary of the arrival of the Jews in Bosnia and Herzegovina was held in 1970, with participation of delegates from abroad, including the U.S. and Israel. On this occasion a memorial volume was published. In 1971 the community numbered 1,000.

During the Bosnian War (1992–1994) the old Jewish cemetery was badly damaged. Nine hundred Jews were evacuated in buses to Pirovac, to the former Yugoslav summer camp near Split, and 150 by air to Belgrade. In 2002 the centennial of the Ashkenazi synagogue was commemorated with a stamp issued by the government of Bosnia and Herzegovina. In 2004 there were 700 Jews living in Sarajevo, including some refugees who returned home.

SARASOHN, KASRIEL HERSCH (1835–1905), Yiddish and Hebrew newspaper publisher. Born in Suwalki province, Russia, he settled in New York in 1871, and in the following year founded a weekly paper, Di New Yorker Yidishe Tsaytung, which was unsuccessful. Two years later he founded the first American Yiddish weekly Di Yidishe Gazeten, which survived for more than half a century and paved the way for the first Yiddish daily in America, Yidisches Tageblatt. This traditionally-oriented daily exerted a great influence upon the immigrant generation at the turn of the century and attained a circulation of 70,000 copies. Its editors included the journalist John Paley, *Tashrak and G. *Bublick. Its influence declined after World War 1, and in 1928 it merged with the Morning-Journal. Sarasohn also founded a Hebrew weekly, Haivri, which he maintained from 1891 to 1898, despite annual deficits. In 1882 he organized a society for aiding Jewish immigrants, which in 1890 merged with the *Hebrew Immigrant Aid Society (HIAS).

SARASOTA, city on Florida’s west coast. It is a sophisticated arts community and beach resort, ringing Sarasota Bay and the Gulf of Mexico, and offering 35 miles of beaches. During the Civil War, Judah P. Benjamin served as Attorney General, Secretary of War and Secretary of State of the Confederacy and was known as the most prominent 19th century American Jew. Benjamin was President Jefferson Davis’ closest confidant and David Levy Yulee’s cousin. When General Robert E. Lee surrendered in 1865, Benjamin headed south to Ellenton, FL, and sheltered at the Gamble Mansion, near Sarasota. With this exception, there is no record of Jews in this area until the 20th century. With changes in transportation and the lure of cheap land for sale, a trickle of Jews began migrating to the Sarasota area. Marcus Weinkle left Russia in 1887, was a sheepherder in Palestine, then immigrated to the U.S. in 1890 to Moffit, Florida (east of Sarasota), where he ran a 2,000-acre lumber business. He brought a Torah with him and conducted services for Jews in the surrounding area. He kept kosher, married and had two children there; his daughter Charlotte became a winter resident of Sarasota decades later.

Simon Rosin came from Baltimore first to Ocala, FL, then settled in Arcadia in 1905, where he opened a store and later built an arcade, which housed the U.S. Post Office. He and his wife had one son, Aurel, in 1910. Aurel was a lawyer and cattle rancher, and he and his wife Elsie raised four sons in Arcadia, where they had over 4,000 acres for their cattle ranch. Elsie took the boys to Sarasota for religious school and bar mitzvah training; three sons remained in Sarasota.

The first Jew to permanently settle in Sarasota was Philip Levy, who fled the pogroms of Lithuania in 1905. Working for a pants manufacturing firm, he traveled to St. Petersburg, FL, in 1909, where he met and married Cecelia Tarapani. In 1913 Philip and Cecelia Levy settled in Sarasota and opened a womenswear store. They were the only Jews there until 1925. As others settled, the Levys conducted Sabbath and High Holiday services in their home. Joseph Idelson peddled dry goods; he and his wife Rose were attracted by the land boom and moved to Sarasota with their children in 1925. Idelson opened a general merchandise store, invested in banks and real estate, and was one of the founders of the Jewish Community Center (today’s Temple Beth Sholom) in 1928. The first synagogue in Sarasota was built on property donated by the city, and they had their first services for Yom Kippur just prior to the hurricane. The congregation acquired a site from the city in 1932 for a Jewish burial ground. After World War II a number of Jewish soldiers who had passed through Sarasota returned to settle. Growth was gradual. By 1950, the community had expanded to 75 families. In 1956 a “break-away” group of members of Temple Beth Sholom established a Reform congregation, Temple Emanu-El. The Jewish Community Council, the forerunner of the Sarasota-Manatee Federation, was founded in 1959; Sidney Adler was the first president.

Many of these pioneers were lovers of the arts and contributed to building Sarasota’s cultural infrastructure. The Van Wezel Performing Arts Hall that opened on Sarasota Bay in 1967 is named for Jews who left money for this purpose. The area began to attract Jewish writers, artists, and musicians. Author McKinley Kantor came to Sarasota around 1940; two of his books have a Florida setting: The Noises of their Wings (Everglades) and Beauty Beast (north Florida). Among other notable talents are Paul Wolfe, musical director and maestro, who served the West Coast Symphony for decades; Syd Solomon, a nationally acclaimed artist who came in 1946; Leo Rogers, a driving force to create the Sarasota Opera Association and the Sarasota Ballet of Florida; Hal Davis who was public relations manager for Benny Goodman and Columbia Records before moving to Sarasota, where, in 1980, he founded the Jazz Club of Sarasota; and Frank Eliscu, the designer of the Heisman Trophy (the highest honor in college football) and the glass panels above the doors of the Library of Congress, as well as works of sculpture for the Van Wezel, Ringling Museum of Art, Temple Emanu-El, and Temple Beth Sholom in Sarasota. Paul Rubenfeld, known to millions as Pee Wee Herman, came to Sarasota in 1960 as a child and graduated from Sarasota High School. Many Jews have contributed largely to the community in education and social services. Harry Sudakoff dedicated the Sudakoff Center at New College. Alex Schoenbaum, former All-American football player, started Shoney’s Big Boy restaurant chain. In 1974 Betty and Alex Schoenbaum began spending part of the year in Sarasota and became major supporters of civic and Jewish activities. In 1990 the Schoenbaums contributed funds to help open the City of Sarasota’s human services complex, which houses 19 social service agencies. Some Jews who have been involved politically are David Cohen, who served as mayor 1964–66 and played a major role in the establishment of the Florida West Coast Symphony and the Van Wezel Performing Arts Hall, and Lou Ann Rosengarten Palmer, who came to Sarasota in
1948 and was a performer with the Sailor Circus Show. She serves on the Sarasota City Commission where she sat as mayor in 1984 and 1988.

Jewish developers planted citrus groves and opened new residential districts. Jules and Jack Freeman came to Sarasota in 1953 and began planting citrus. From 1968 to 1971 they planted the “world’s largest orange grove,” which is three times the size of Manhattan, NYC, and has over three million citrus trees. National Geographic magazine published an aerial photo of the 27,000 acres and commented, “The grove was one of the distinguishing landmarks in Florida visible from space.” Charles Lavin, sensing the plight of many elderly on fixed incomes, bought the Mira Mar Hotel in Sarasota, the Manatee River Hotel in Bradenton, and the MacArthur Beach Hotel in Venice and turned them into retirement homes. Martin Paver sailed to Sarasota with his family from New York in 1949. He and his sons developed housing subdivisions for the “snowbirds” (residents 3–7 months of the year) migrating south.

In 1979 a group established Beth Israel, a Reform Congregation, on Longboat Key. Bradenton Conservative Jewish families organized as Temple Beth El in 1975. The Jewish Community Center of Venice began in 1983. In 1984 Jewish Family Services (JFS) was granted their charter. The JCC opened the first summer camp in 1989.

The Jewish community has matured in the past three decades and agencies and organizations grew as the sensitivity for local and worldwide Jewish needs was expanded. About 17,500 Jews live in Sarasota-Manatee (2005), consisting primarily of the cities of Sarasota, Longboat Key, Bradenton, and Venice. Most are from the mid-west and the Washington-Boston corridor and are closely bonded by the cultural and Jewish life of the community. The greatest growth has been in Bradenton, and there is a significant cluster of Jews in high-rise condominiums in Longboat Key. The area attracts primarily wealthy Jews of retirement age who are in good health. Only 1% of the adults were born in the area, 32% of households affiliate with a congregation, and 21% are “snowbirds.” Eighty-two percent of Jewish children (ages 6–12) are currently enrolled in formal Jewish education. The Federation’s agencies include a Jewish Retirement Complex (Kobernick House) and Flanzer Jewish Community Center, and they sponsor a monthly Jewish newspaper, The Chronicle. There are 10 congregations of every stripe, and branches representing almost every national and international Jewish organization.

(Some of the demographic analysis comes from Ira Sheskin’s 2001 Study for the Sarasota-Manatee Jewish Federation.)

Marcia Jo Zerivitz (2nd ed.)

SARATOV, capital of Saratov district, Russia; before the 1917 Revolution, capital of Saratov province on the west bank of the R. Volga. Until 1917 the province of Saratov was outside the bounds of the *Pale of Settlement. Shortly before the middle of the 19th century a small Jewish community was formed by Jewish soldiers stationed in Saratov. A few of these had families and even engaged in trade and crafts. By the middle of the century, there were 44 such Jewish soldiers stationed in the city. Besides these, a few Jews who were not in the army resided in Saratov, despite the restrictions. In the spring of 1853 this tiny community was projected into the forefront of Russian Jewish affairs when three Jews in Saratov, one of them an apostate, were involved in a “blood libel in which it was alleged that they had murdered two Christian children. This incident brought a renewal of the blood libel throughout Russia. When special investigators sent from St. Petersburg failed to prove the guilt of the Jews, the government appointed a legal investigation commission whose task it was not only to investigate the murders, but also to seek information about the “secret dogmas of Jewish religious extremism.” This commission, too, was unable to cast guilt upon the Jews. Though its findings were confirmed by the Senate, the State Council, in May 1860, concluded that guilt had been established, even if no motive for the murders could be shown. The three found guilty were sentenced to hard labor. During the course of the investigation a large number of Jewish books were confiscated. In December 1858 a commission of experts, including Daniel *Chwolson, was appointed to examine these books and indicate whether they contained evidence of the ritual use of Christian blood by Jews. The commission concluded that the works contained nothing to support the libel.

During the second half of the century Jews were permitted to live outside the Pale of Settlement in Saratov. By 1897 there were 1,460 Jews in Saratov (1.1% of the total population). The wave of pogroms of October 1905 reached Saratov, where a number of Jews were killed. During World War I many refugees from the battle zone found sanctuary in Saratov. From 1919 to 1921 a group of “He-Halutz members, calling themselves “Mishmar ha-Volga” (“The Volga Guard”), stayed in Saratov while preparing to settle in Erez Israel. In 1926 Saratov had a Jewish population of 6,717 (3.1%), and in 1939 there were 6,982 Jews in the district, most of them in the city. During WWII Saratov was not occupied by the Germans. The baking of mazzot was prohibited in 1959. In the late 1960s the Jewish population was estimated at 15,000. There was one synagogue. In 2002 around 3,500 Jews remained in the entire city. The city of Saratov had a full range of community services and a chief rabbi.

[Yehuda Slutsky]

SARAVAL, family of scholars. ABRAHAM BEN JUDAH LEIB, the most noted of them, lived in *Venice during the 16th century and wrote a commentary on Sefer ha-Ma’amadot. JACOB BEN LEIB lived in Cologne in the 16th century. His name is mentioned in the responsa Nahalat Yavok of Jacob b. Elhanan Heilbronn. Judah Leib Saraval (d. 1617) was rabbi in
Venice. NEHEMIAH BEN JUDAH LEIB (d. 1649), a rabbinic scholar in Venice, wrote a laudatory introduction to Joseph Solomon Delmedigo's Elim (Amsterdam, 1629). His name is mentioned approvingly in the responsa Mayim Rabbim of Raphael Meldola (1:11), and Devar Shemü`el of Samuel Aboba (no. 19). Solomon Hai ben Nehemiah was a Venetian scholar of the 17th century, whose name is mentioned approvingly in Devar Shemü`el of Samuel Aboba (p. 375), and in Piskei Re`canati ha-Aharonim (p. 24). Jacob Raphael b. Simhah Judah Saraval was rabbi in Mantua, author and poet. Leon Hai (1771–1851) lived in Trieste. He wrote Discorsi pronunciati all’apertura degli studi della comunità israelitica di Trieste (Trieste, 1811). He possessed a library containing many manuscripts and incunabula.

[SARAVAL, Jacob Raphael Ben Simhah Judah]

SARAVAL, JACOB RAPHAEL BEN SIMHAI JUDAH
(1707–1782), Italian rabbi, man of letters, and musician. Saraval was born in Venice. He was one of the rabbis of Venice who supported Jacob *Emden in his dispute with Jonathan *Eybeschutz. He communicated with the English scholar Kennicott on subjects of biblical philology. In 1752 he was appointed rabbi of Mantua and many of the documents in the communal archives bear his signature. During the 1760s and 1770s he traveled to Holland and England on behalf of his community. When the antisemitic lawyer Giovanni Battista Benedetti of Ferrara published his Dissertazione della Religione e del Giuramento degli Ebrei at the beginning of the 1770s, Saraval rejoined with Lettera apologetica (Mantua, 1775). He was also known as a preacher, poet, and composer of piyutim, and engaged in various branches of secular culture – arts, literature, and music – in which fields he wrote many works. In addition he translated from various languages. One of his translations, the libretto of Handel’s oratorio Esther (apparently done at the request of the Jews of England and Holland), is one of the first free verse translations from English to Hebrew without recourse to the traditional meters.

Among his translations from Hebrew to Italian are: Avot (Venice, 1729, with Simeon Calimani); Hovot ha-Levavot of *Bahya ibn Paquda (Avvertimenti all'Anima, Venice, 1806); and various piyutim from the Sephardi liturgy. He wrote the Kinot Sefedim (Mantua, 1776) to commemorate the earthquake in Mantua which claimed 65 Jewish victims. On returning from his travels in Holland and England, he wrote Viaggi in Olanda (Venice, 1807) on his Dutch journey.

[SARAVAL, Judah Leib]

SARAVAL, JUDAH LEIB
(d. 1617), Venetian rabbi. Saraval was a pupil of Samuel Judah *Katzenellenbogen and a member of the bet din of Ben Zion Sarfati, and after the latter’s death was appointed chief rabbi of Venice. Taking part in the well-known dispute about the Rovigo mikveh (see Moses *Porto-Rafa), he was one of those to permit its use. His decision on the subject is published in the Mashhิต Milhamot (Venice, 1606), as well as one prohibiting the playing of tennis on the Sabbath. He was in charge of, and the treasurer for, the monies collected in Italy for Ereẓ Israel. Some of his responsa were published in Nahalat Yaakov (Padua, 1623), a collection of responsa by his pupil, Jacob b. Elhanan Heilperin, and also in the works of his contemporaries. He was on friendly terms with Leone *Modena. He translated “Saadiah Gaon’s commentary to the Song of Songs (Nowydwor, 1777) from the original Arabic, the thorough knowledge of Arabic necessary for such a task being a rare accomplishment for a 17th-century Italian rabbi. Saraval died in Padua.

[SARDI, Samuel ben Isaac]

SARDI, SAMUEL BEN ISAAC
(1185/90–1255/56), Spanish halakhist. Sardi lived in Barcelona and was well-to-do. Among the deeds written in Barcelona during the years 1073–1328 and published by Millàs Vallicrosa are a number dated the beginning of the 13th century which are connected with the letting by Sardi of his lands and properties. Sardi was a pupil and colleague of Nahmanides and sent him many halakhic queries to which he obtained detailed responsa; some of them, included in the Sefer Ha-Terumot, also appear in the works of the Rishonim (see Asaf in bibl.). Sardi also corresponded with Nathan b. Meir of Triquetaille (Sefer ha-Terumot, gate 52) and began compiling his important work, Ha-Terumot, when he was 30 years old, finishing it in about 1225.

This work deals only with civil and commercial law and is, in fact, the first comprehensive code in Jewish law devoted solely to civil law. It had a considerable influence on Jewish law, chiefly through the Arba'ah Turim of *Jacob b. Asher which is often based on it in the section Hoshen Mishpat. In the introduction, and in the work itself, Sardi mentions another of his works, Sefer Ha-Zikhronot, which is not extant. Its scope is unknown, but from his references to it it appears to have consisted of talmudic novellae. Ha-Terumot was published in Salonica (1596, 1628), Prague (1608) and Venice (1643), the last with a valuable commentary by Azariah Figo, entitled Giddulei Terumah (2nd ed. Zolkiew 1709).

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18

SARDIS

Sardinia, Mediterranean island belonging to Italy. The first authentic information regarding Jews in Sardinia is that in 19 C.E. Emperor Tiberius deported 4,000 Jewish youths to the island because a Roman Jew had defrauded a proselyte named Fulvia, wife of the senator Saturninus. Jewish inscriptions of the classical period have been found in Sardinia, in particular at San Antioco. The situation of the Jews was presumably similar to that of Jews in the other parts of the Roman Empire but deteriorated with the triumph of Christianity. In 599 a newly baptized Jew named Peter burst into the synagogue at Cagliari on Easter Sunday with a mob at his heels and deposited his baptismal robe, together with a crucifix and an image of the Virgin, in front of the Ark. When the Jews appealed to Pope Gregory I, he ordered repARATION to be made. From the seventh century until 1326, when the island came under Aragonese rule, the situation of the Jews was generally good, although anti-Jewish riots occurred in Oristano and in the district of Arborea, which resulted in their expulsion from these localities. The Jewish settlement in Iglesias was prohibited temporarily after 1327.

The Jews continued to prosper during the first century of Aragonese rule and were even granted additional privileges, mainly in *Alghero; Sassari and *Cagliari also had sizable communities. Many Jews from Spain settled in Sardinia. Each community was headed by elected officers who had authority to decide in civil cases between Jews, and on minor claims between Jews and Christians. From 1430 conditions deteriorated. Except in Alghero, the Jews were obliged to wear a special *badge. They were forbidden to wear jewelry and allowed to wear only black shoes. Jews were prohibited from trading on Christian holidays and from employing Christians. No additional Jews were allowed to settle on the island. In 1485 the Jews were declared the property of the king and placed under the jurisdiction of a special royal officer. They were also forbidden to export any property or wares from the island. With the expulsion of the Jews from Spain and the Aragonese dominions in July 1492, the Jews were compelled to leave Sardinia. Many of the Sardinian exiles settled temporarily in the kingdom of Naples, others went to North Africa and to Turkey, especially Constantinople, where the surname Sardaigna is still common. Some, however, remained in Sardinia as converts to Christianity – notably the Caracasonna family, which for a while played a considerable role in Sardinian public life. A tribunal of the Inquisition was established in 1492 and remained sporadically active for some years.

From the close of the Middle Ages, no Jewish community of importance has existed in the island, and it was only in the 19th century that a few individual Jews settled here and there, generally on a temporary basis. By the Italian law regulating Jewish communal organization in 1931, Sardinia was included in the jurisdiction of the Rome community. Some historians consider that, during the tranquil period in the Middle Ages before Aragonese rule, considerable groups of Jews merged into the Christian population, instance the relatively small number of Jews found there in the 13th century. The absorption of the Jews into the general population is said to have left its mark on Sardinian life and institutions. Jewish elements may be found, according to some writers, in local folk customs, and in names of persons and places. However, such elements may be the result of the influence of other cultures which had a common source with Judaism or of chance resemblances.

SARDIS, capital of the ancient kingdom of Lydia some 60 miles (90 km.) from the west coast of Turkey. A world capital under the Mermnad dynasty (c. 680–547 B.C.E.) whose riches culminated under Croesus, Sardis was a Hellenistic royal capital (270–133 B.C.E.). Rebuilt after a devastating earthquake (17 C.E.), it was a prosperous Roman and Byzantine city until destroyed by Khosrau I of Persia in 616 C.E.

Sardis (Sfard in Lydian and Persian) is most probably the *Sepharad of Obadiah v. 20. If so, its Jewish community goes back to the time of the Persian Empire (547–334 B.C.E.). Although Sardis is not specifically mentioned, the historical situation makes it highly likely that some Jews were settled in the Lydian capital. After Antiochus I11 first destroyed, then refounded, Sardis (215–213 B.C.E.), his viceroy Zeuxis brought in Jewish settlers from Mesopotamia. A Roman decree cited by Josephus (Ant. 14:259–61) says that the Jewish community at Sardis had a place of assembly “from the beginning”; another decree makes it certain that there was a synagogue not later than the first century B.C.E. The size (probably several thousand in a city of c. 100,000) and the affluence of the Jewish community under the Roman rule have been made evident by the huge synagogue (over 130 yd. [120 m.] long and 20 yd. [18 m.] wide) discovered in 1962. Located on the main avenue of Sardis, behind a row of shops some of which were owned by Jews (Jacob, elder of the synagogue, Sabbatios, Samuel, Theoktistos), the structure formed part of the Roman gymnasion complex planned after 17 C.E. Perhaps the hall was originally intended as a Roman civil basilica but was turned over to the Jewish congregation, which changed and decorated the structure with elegant mosaics and marble revetments. It is conjectured that one of the few Hebrew inscriptions honors the emperor Lucius Verus, who visited Sardis in 166 C.E. Among the 80 inscriptions of the donors in Greek one antedates 212, and many with the family name Aurelius are of the

[Shlomoh Zalman Havlin]

[Menachem E. Artom]
third century C.E. The building was renovated around 400 C.E. and destroyed in 616.

This, the largest of early synagogues preserved, consists of an entrance colonnade on the east, a peristyle forecourt with a fountain in the form of a marble crater, a prayer hall of basilican plan with six pairs of strong piers, and an apse at the western end with three rows of benches presumably for the elders of the community. Fragments of 18 candelabras (menorot) of marble and bronze were found. At the eastern end of the hall, between three gates, are two small shrines. At the western end a mosaic with water of life and two peacocks adorned the apse; in the bay next to the apse was a large marble table flanked by two pairs of lions, perhaps alluding to the tribe of Judah. Another donor describes himself as “of the tribe of Leontii.” Traces of a light structure in the center of the hall may come from the “himah. A donor’s mosaic inscription nearby (of the renewal period) mentions a “priest and teacher of wisdom” (i.e., rabbi?). Behind (west of) the apse two rooms belonged at one time to the synagogue; one had water installations (for the mikveh), the other a painted inscription: “Blessing unto the People.” The prayer hall, splendidly revetted with marble, is estimated to have held up to a thousand people. The Jewish community apparently dispersed at the fall of the city in 616.

SARFATI (Zarefati, Sarfatti), name frequently given to Jews originating from France, e.g., abraham sarfati, who emigrated to Catalonia, author of Tamid ha-Shaḥar; Joseph ben Moses Sarfati, mathematician; and Isaiah ha-ŠaḥaR who emigrated to the East. The most important family often bearing the additional surname of Sarfati was the “Trabot or Trabotti family, who probably originated from Trévoux (France) and came to Italy in the second half of the 15th century. A Sarfati family were rabbis of Fez (Morocco) for several generations (16th–18th centuries).

Samuel Sarfati, called Gallo (d. c. 1519), a physician originating from Provence, settled in Rome in 1498. He represented the Jewish community at the coronation of Pope Julius II (1503) and a year later became the personal physician to the pope, who confirmed the privileges granted him by Pope Alexander VI, including permission to attend Christian patients, exemption from wearing the Jewish badge, and papal protection for him and his family. In 1515 he became physician of Giuliano de’ Medici. Samuel’s son Joseph, called Josiphon, Giosifante, or Giuseppe Gallo (d. 1527), was a physician, philosopher, poet, and mathematician. An accomplished linguist, he had a good knowledge of Hebrew, Aramaic, Arabic, Greek, and Latin. The pope extended to him the privileges that had been accorded to his father; these were confirmed by Pope Leo X and Pope Clement VII in 1524. Joseph translated into Hebrew the Spanish comedy Celestina. He survived remarkable adventures, assisted David Reubeni, and died as the result of his sufferings during the sack of Rome. Isaac Sarfati was physician to Pope Clement VII (1523–34), who reconfirmed his right to the family’s privileges. Samuel Sarfati (16th century) was a printer in Rome. Joseph Sarfati (16th century), a rabbi of Fez, converted to Christianity. Adopting the name of his godfather Pope Julius III (1550–55), Andrea del Monte, he became a violent anti-Jewish preacher. One of his sermons was heard by Michel de Montaigne. Sarfati was one of the instigators of the condemnation of the Talmud and its burning in Rome in 1553. Jacob ben Solomon Sarfati (14th century), a physician, was born in northern France. On the expulsion of the Jews, he moved to Avignon in the second half of the 14th century.

He was the author of Mishkenot Yāakov (extant in Ms.), a work divided into three books: Beit Yāakov, allegorical interpretations of some passages of the Pentateuch; Yeshuot Yāakov, a discourse on the plagues of Egypt; and Kehillat Yāakov, a theological exposition of the laws given on Mount Sinai. In a supplement, Evel Rabbati, he describes the deaths of his three sons who perished in the course of three months dur-

ing the plague of 1395. He also wrote a medical treatise on migraine.

[Renato Spiegel]

SARFATTI, GAD B. (1916– ), Hebrew scholar and linguist. Born in Pisa, Italy, he studied at the University of Florence (1933–37). He immigrated to Israel in 1939, joined kibbutz Ti-
rat Zevi (1940–47), and served in the Israeli army (1948–50). While Sarfatti received his academic training in mathematics in Italy, in Israel he studied Talmud in a yeshivah (1941–43), and Hebrew and linguistics at The Hebrew University of Jeru-
salem (1952–55). He also studied at the Laboratoire d’analyse lexicographique of the University of Besancon, France (1963). Sarfatti’s major fields of research are Medieval Hebrew and Hebrew seman-
tics. Teaching at Bar-Ilan University from 1962, he was appointed full professor in 1978, and emeritus in 1988. He was elected a member of the Hebrew Academy in 1970 and was named its vice president (1981–87). He was vis-
iting professor at various universities in Italy and the U.S. He was awarded the Israel Prize for linguistics in 2000. Among his major publications are Mathematical Terminology in He-

[Aharon Maman (2nd ed.)]

SARFATY, family of rabbinic scholars in *Fez, *Morocco. According to a family tradition, the Sarfatis are descendants of Rabbenu Tam. R. Solomon, rabbi in Majorca, is mentioned in the responsa of R. Isaac bar Sheshet. A branch of the family settled in Fez. ISAAC (d. c. 1600) was dayyan in Fez. Some of his commentaries on biblical verses are quoted by his son Vidal in his works. VIDAL HA-SARFATY (c. 1550–1620) was referred to as “senior” and described as hasid (“pious”). He was a disciple of R. Abraham Uziziel.

His commentaries are outstanding for their originality; he quotes the Zohar and appears to have been a kabbalist. Many of the works of Spanish rabbis are cited in his works. Sarfaty’s writings included: Derakh ha-Kodesh, a com-
nentary to the Sifra (1908); Megillat Sefarim, on Esther, Ruth, and Lamentations; and Ozar Neḥmad, on Psalms (both works were published in Amsterdam in 1718 under the title Zaf Devash); Imre Yosher (1874), a commentary on Midrash Rabbah; and notes on R. Elijah Mizrahi which were included in Samuel Sarfaty’s Nimmukei Shemu’el (Amsterdam, 1718).

ISAAC (d. c. 1660), Vidal’s son, was rabbi and nagid in Fez. The community backed him as nagid and appealed to the king to maintain him in this position. The king, however, ap-
pointed another in his place in 1650, nevertheless requesting that he remain in office. Isaac refused and was thereupon penal-
ized by the king. When he secretly fled to Tetuán, he was arrested and imprisoned until he paid a fine. He wrote in-
dexes to the Midreshei Halakhah and Midreshei Aggadah. He was his brother Abraham’s business partner. His son, VIDAL (1631–1703), was dayyan together with R. Saadia ibn Danan and R. Menahem Serero. He wrote decisions which have been lost. R. Jacob b. Zur was his son-in-law by a second marriage. His cousin, R. SAMUEL BEN ABRAHAM (1660–1713), was dayyan in Fez with R. Judah b. Atar. A sharp-witted talmudist and profound posek, he wrote Divrei Shemu’el (Amsterdam, 1699), novellae to the Talmud; Nimmukei Shemu’el (Amsterdam, 1718), a supercommentary on Rashi and Nahmanides to the Torah; Me’ulefet Sappirim, which was published with Nimmukei Shemu’el in 1718; and decisions which are extant in manuscript. His brother, R. AARON (1665–c. 1740), was dayyan in Salé. He was a disciple of R. Aaron ha-Sabuni who opposed the Shabbateans. He wrote Misgav ha-Immahot, which was included in the above-mentioned Zaf Devash. His cousin, R. ELIJAH BEN JOSEPH BEN ISAAC (1715–1805), was a disciple of R. Judah b. Atar. From 1770 he was the halakhic authority of the Maghreb. R. Jacob b. Zur was among the rabbis whom he ordained; he also educated many disciples. Intending to im-
migrate to Erez Israel during the famine of 1738, he acquired letters of recommendation from the rabbis of Tetuán. From 1790 to 1792 he resided in Sefrou. His son, R. ISRAEL JACOB (1740–c. 1826), was appointed rabbi and dayyan during his father’s lifetime. A leader of the community and a minister of the king, he greatly assisted the Jewish communites of Morocco. His brother, R. RAFAEL MENAHEM HA-SARFATY (d. 1843), was one of the king’s ministers and nagid.

R. VIDAL BEN SOLOMON BEN ISRAEL JACOB (1797–1856) was a rabbi, dayyan, and profound talmudist. A number of his decisions were published in the works of Moroccan Hakhamim. His son, R. ABNER ISRAEL (1827–1884), was rabbi and dayyan in Fez. Knowledgeable in philosophy and other sciences, he held disputations with Muslim scholars. A pietist and kabbalist, he was beloved by the masses, who continued to visit his tomb into the 20th century. He was also a bibliophile and a collector of books. He wrote legal decisions and responsa. His most im-
portant work is Yahas Fez, summaries of which have been published in Hebrew and French. His son, R. VIDAL (1862–1921), was rabbi in Fez from 1892. In 1919 he was appointed av bet din by the French Protectorate government. His son, R. ABNER ISRAEL (d. 1933), was appointed dayyan in Safi in 1932.

R. ZEMAH (1647–1717), of pious character, was one of the most prominent 17th-century Tunisian Hakhamim. After living in Damascus for many years, he immigrated to Erez Israel in 1656 and settled in Jerusalem. He was well known as a talmudist, and Azulai testifies in Shem ha-Ge’ulah that he was among the Gemara of the holy Midrash [yeshivah] Bet Ya’akov illuminated by his novellae. After Sarfatty’s death his disciples held various rabbinic positions in Tunis; they also published his novellae in their works.

[Haim Bentov]
SARGON II (Heb. וֹן ְּגסַר), king of Assyria and Babylonia, (722–705 B.C.E.), successor of Shalmaneser V, and father of Sennacherib. There are conflicting opinions among scholars as to whether or not he was a son of Tiglath-Pileser III. The circumstances which brought Sargon to the throne are obscure; he may well have been an usurper, or a descendant of a secondary line of the royal house. His name, identical with that of Sargon of Akkad and Sargon I of Assyria, means: “the legitimate king” (see Tadmor, in bibl.). The beginning of his reign was marked by domestic difficulties, which he solved by giving the Assyrians and the settlers of *Haran a charter freeing them from taxes and military service. In 720 Sargon marched against *Merodach-Baladan, who had ascended the Babylonian throne the previous year. Supported by the Elamites, who were the chief opponents in the battle, Mero- dach-Baladan met Sargon at Dēr and defeated, or at least stopped, him. Engaged on practically all fronts in fighting re- bellions – which he was able to suppress – Sargon could not take revenge against the Babylonian king until 710. This time his victory was complete. He entered Babylon, proclaiming himself king. Between 719 and 711 Sargon campaigned against the Medes, Mannai, and Ararat. In the “West” he completed the subjugation and conquest of Israel and Samarina, and, after quelling an Egyptian-sponsored revolt, rebuilt it and made it capital of his new province, Samerina. Sargon’s overall policy was the intermingling of the populations and the resources of the Near East under Assyrian leadership. For this purpose he went on to open the road to Egypt. In 716 he cleared and subjugated the western Sinai area and established an Assyrian kārum, a trade settlement, the purpose of this expedition being the opening up of Egyptian and Arabian trade to Assyria.

In approximately 713–712 Sargon conquered and organ- ized Ashdod (Isa. 20:1 alludes to the first steps of this cam- paign). Then, under the commander in chief the tartan, Azuri, the plotting king of Ashdod, was deposed. Ashdod was support- ed by Egypt and very likely by *Hezekiah king of Judah; but the latter changed his mind after the Assyrian conquest of *Azekah. Remains of a stele of Sargon were discovered in Ashdod.

Near the modern Khorsabad he built a new capital city, Dūr-Sharrukin (“Sargon’s fortress”). Sargon was killed in a campaign against the Cimmerians – newcomers in Urartu – and his encampment was sacked.

SARID (Heb. סרי).

(1) Town on the border of the territory of Zebulun (Josh. 19:10, 12). The original Hebrew form of the name was evidently Sadad; it appears as Sedud in the Septuagint, and scholars have accordingly located it at Tell Shaddad in the central Jezreel Valley. The pottery on the site dates from the Late Bronze to the Arabic periods, early Iron Age pottery being especially abundant.

[Michael Avi-Yonah]

(2) Kibbutz in northern Israel, in the Jezreel Valley, affiliated with Kibbutz Arzi ha-Shomer ha-Za‘ir. Sarid was founded in 1926 by pioneers from Czechoslovakia, Germany, and East European countries. In 1970 Sarid had 620 inhabitants and maintained a regional high school of Ha-Shomer ha-Za‘ir. In the mid-1990s the population was approximately 715, dropping to 611 in 1999. The kibbutz raised field crops and fruits, poultry, and dairy cattle and also had a grindstone factory.

SARID (Schneider), YOSSI (1940– ), Israeli journalist and politician, member of the Knesset since the Eighth Knesset in 1974. Born in Rehovot, he served in the artillery corps and as a military reporter. In the course of his studies at the Hebrew University in Jerusalem in 1961–64, he worked as a reporter and news editor for the Israel Broadcasting Authority. He received a B.A. in philosophy and literature in 1964. Until 1965 he served as the spokesman of *Mapai, and, after the elections to the Sixth Knesset in 1965, served as advisor to Prime Minister Levi *Eshkol. He received an M.A. in political science and sociology from the New School for Social Research in New York in 1969. After his return to Israel, he was close to Minis- ter of Finance Pinhas *Sapir.

In 1970–73 Sarid ran the section for academics in the Ministry of Labor. In the elections right after the Yom Kippur War at the end of 1973, he was first elected to the Knesset on the Alignment list. In the course of 1974, after a deadly terrorist attack on Kireyt Shemonah, he moved with his family to the northern town for three years, and, in addition to his position as a Member of Knesset, worked voluntarily as a teacher in one of the local high schools. Sarid was one of the staunch- est opponents of Operation Peace for Galilee in 1982, and as a result a rift opened between him and the Labor Party. When, after the elections to the Eleventh Knesset in 1984, the Labor Party decided to join a National Unity Government with the *Likud on the basis of rotation in the premiership, and agreed to Ariel *Sharon being given a ministerial position in the gov- ernment despite the conclusions of the Kahane Commission, and approved the continued financial and moral support of Jewish settlements in the West Bank and Gaza Strip, Sarid decided to leave the party, and joined the Civil Rights Move- ment, headed by Shulamit *Aloni. Free of the constraints of membership in a leading party, Sarid became famous for his outspokenness and cynical style, and assumed the role of the “hated left-winger” among right-wing circles. In 1985 Sarid became editor of Politika, a left-wing political journal, which he continued to edit for several years.

In 1992, as a member of *Meretz, Sarid was appointed minis- ter of the environment, and joined Minister for For- eign Affairs Shimon *Peres in peace talks after the signing of the Declaration of Principles with the Palestinians in 1993. When Aloni resigned from active politics prior to the elec-
tions to the Fourteenth Knesset in 1996, Sarid was elected as leader of the c.r.m. and of Meretz. In the government formed by Ehud *Barak after the elections to the Fifteenth Knesset, Sarid was appointed minister of education and culture, a position he held until June 2000, when he decided to take Meretz out of the government several months before the outbreak of the second Intifada, owing to his dissatisfaction with Barak’s attempts to pacify "Shas. In March 2000, Sarid was the first official Israeli who accepted an invitation by the Armenian Church in Jerusalem to participate in a memorial service for the genocide of the Armenians at the hands of the Turks in 1915, even though the official Israeli position was not to anger the Turkish government, which has never accepted responsibility for the event.

Following the major electoral defeat suffered by Meretz in the elections to the Sixteenth Knesset in 2003, when it lost four of its 10 seats, Sarid resigned from his position as leader of the party, but remained in the Knesset. In July 2004 he underwent brain surgery to remove a benign tumor.

In the Knesset, Sarid has served on the Foreign Affairs and Defense Committee, the House Committee, and the Education and Culture Committee.

[Susan Hattis Rolef (2nd ed.)]

**SARKIL,** "Khazar fortress, built on the Don with Byzantine help in 839 C.E. Sarkil’s purpose appears to have been to defend Khazaria from enemies approaching from the west – who these were is not specifically stated, but the Pechenegs, Magyars, and Russians have been suggested – and, more particularly, to control the Don-Volga portage. This was the route by which ninth-century Russian merchants (Ibn Khurradādhbih, Kitāb al-Masālik wa-l-Mamālik, 154) from the Black Sea reached the Volga; in the same century it was called the "Khazarian way." Sarkil is mentioned in the Long Version of the Reply of Joseph king of the *Khazars to *Hasdai ibn Shaprut. The name is explained as being from the Turkic (Chuvash) for “white house,” hence it has been identified with Bela Veza in the Russian Chronicle, and somewhat more doubtfully with the Arabic al-Bayḍa, “the white” (usually taken to mean ‘Atl). M.I. Artamonov fixes the site of Sarkil on the left bank of the lower Don near the village of Tsimlyanskaya, now covered by the waters of a reservoir. The remains on a neighboring site on the right bank of the Don are thought to be those of a forerunner of Sarkil, the name of which – corresponding to the material from which it was built (white limestone) – was transferred to the new fortress (the historic Sarkil was built of brick). Sarkil (Bela Veza) is said to have been destroyed in the great Russian attack upon Khazaria in 965.

[Douglas Morton Dunlop]

**SARMAD, MUHAMMAD SA’ID** (d. 1661), Persian poet. Born into a rabbinical family in Kashan in the early 17th century, Sarmad became a convert to *Islam, though he is always referred to in Persian and European sources as “Sarmad the Jew,” “the Hebrew pantheist,” or “the Jewish mystic.” Migrating to “India, he moved from Tatta to Hyderabad and in 1654 was in Delhi, capital of the Mogul empire, where he led the life of a dervish, a “naked fakir walking through the streets.” A popular composer of Sufic poetry, he collaborated with the author of the Dabistān, a comprehensive work in Persian on comparative religion. Material for the chapter on Judaism was supplied by Sarmad, who also edited a Persian translation of the Pentateuch of which six chapters of Genesis were included in the Dabistān. Sarmad’s association with the crown prince of the Mogul dynasty led to his downfall, and he was executed in Delhi. His Diwān, containing over 300 poems, was printed in 1897.

[Walter Joseph Fischel]

*"SARMIENTO, PEDRO* (c. 1400–1464), commander of the fortress (alcaide del alcázar) of Toledo, responsible for riots against the *Conversos in the town in 1449. Sarmiento came from a family of courtiers and served as chief confectioner (re-postero mayor) to John 11 of Castile (1406–54), who appointed him commander of the Toledo fortress in 1445. In 1449 he incited the population of the town to attack the Conversos holding public office there. The pretext for the revolt was a heavy tax imposed by the courtier Alvaro de Luna in the name of the king. As a first step, the rioters set fire to the house of a certain Alonso Cota, of Converso origin, one of the principal tax farmers. Sarmiento took over the powers of the local authorities and arrested all the prominent Conversos. After he had carried out a judicial investigation, and they had confessed their loyalty to Judaism under torture, he condemned them to be burned at the stake.

Sarmiento then published a regulation which laid down, on the strength of an imaginary royal privilege allegedly granted to Toledo by one of the former kings, that New Christians and their issue could not hold public office. It was the first instance of racial discrimination practiced in Castile against the Conversos. A memorandum by Sarmiento’s legal adviser, García de Mora, was attached to the regulation. It included severe accusations against the New Christians who, he alleged, were practicing Judaism and plotting against Christianity and the faithful. The disorders in Toledo spread as far as *Ciudad Real, where trials of Conversos were also held. Sarmiento’s actions were condemned by the king, who dismissed him from his position. Pope *Nicholas V issued a bull in which
he denounced the regulation. In the same year the bishop of Burgos, Alonso de Cartagena (the son of Solomon *ha-Levi who had adopted Christianity), wrote his Defensorium Unitatis Christiana, in which he sharply criticized the segregation between Old and New Christians introduced by Sarmiento. In 1452 Sarmiento was pardoned by the king and during the reign of his successor, Henry IV (1454–74), was reinstated in his court functions.

[Joseph Kaplan]

SARNA, EZEKIEL (1889–1969), rosh yeshivah in Israel. Born in Gorodok, Lithuania, Sarna was the son of Jacob Hayyim Sarna, the Maggid ("preacher") of Slonim and a close associate of Hayyim *Soloveitchik. At an early age Ezekiel was accepted in the famous yeshivah of Slobodka, Lithuania, where he became known as the illui ("child prodigy") of Gorodok. He was particularly influenced by the method of study and moral inspiration of the heads of the yeshivah – the Saba of Slobodka, Nathan Zevi *Finkel, and Moses Mordecai *Epstein. When World War I broke out, the Slobodka yeshivah was transferred from Kovno to Kremenchug in the Ukraine. In this period Sarna studied under *Israel Meir ha-Kohen (HaFetz-Hayyim). His marriage to Epstein’s daughter accorded Sarna, already distinguished by his talent and profound acumen, a special status. After the war the yeshivah returned to Slobodka, where Sarna was appointed a lecturer. Following the *Balfour Declaration, the third wave of aliyah got under way, and Epstein decided (1924) to transfer the Slobodka yeshivah to Erez Israel. For this purpose he sent Sarna to choose a site. Sarna selected Hebron, where he immediately became one of the heads of the yeshivah and was mainly responsible for its development. About a year later Finkel and Epstein joined the yeshivah. On the death of his father-in-law in 1927, Sarna was appointed rosh yeshivah, a position he held until his death. The yeshivah attracted students from all parts of the world and, at the time of its destruction in the pogrom of 1929, had 265 students. Sarna reestablished the yeshivah in Jerusalem as the Hebron Yeshivah. Under Sarna’s guidance it again flourished. His talmudic and musar discourses achieved a reputation in the yeshivah world, and Hebron Yeshivah developed into one of the largest and most important Torah centers in Israel, continuing the educational and musar methods of the great Lithuanian yeshivot. As a leader of the Vada ha-Yeshivot, Sarna was mainly preoccupied by his own and other yeshivot, but was also actively interested in national problems. He was a member of the Meozet Gedolei ha-Torah, the supreme religious institution of *Agudat Israel. He held independent views on political matters, both local and foreign, and on occasion addressed his opinions to the prime minister and members of the Israeli government, attempting by virtue of his personality to influence the political, social, and religious life of the state. He was instrumental in obtaining exemption from military service for yeshivah students. Sarna had a unique style in halakhah and musar, and published a number of books, including commentaries on *Judah Halevi’s Kuzari (1965), on the Orhot Hayyim by *Asher b. Jehiel (1957, 1962), and on Mesillat Yesharim (1957, 1965) by Moses Hayyim *Luzzatto. He left many manuscripts on halakhah and Jewish thought. Despite an illness in his last years, he undertook the establishment of the new yeshivah center, Kiryat Hhevron, in southern Jerusalem.

[Itzhak Goldshlag]

SARNA, JONATHAN DANIEL (1955– ), university professor, author, and scholar of American Jewish history. Born in Philadelphia and raised in New York and Boston, Sarna was the son of the renowned Bible scholar Nahum M. *Sarna and Helen Horowitz, a librarian. Sarna earned degrees from Boston Hebrew College and Brandeis University before matriculating to Yale University where he pursued graduate studies in American history, modern Jewish history, and American religious history. Upon receiving his Ph.D. in 1979, Sarna was awarded a postgraduate fellowship at Hebrew Union College-Jewish Institute of Religion (HUC-JIR) in Cincinnati, Ohio, by the pioneering American Jewish historian Jacob Rader *Marcus. The following year, he joined HUC-JIR’s faculty, and he quickly rose to the rank of professor. In 1990, Sarna became the Joseph H. and Belle R. Braun Professor of American Jewish History at Brandeis University.

Sarna’s keen interest in American Jewish history first emerged during his teenage years. He later theorized that his strong interest in the field may have come from the fact that he was the first member of his family born in the United States. He became convinced that by synthesizing American and Jewish history, he could gain a deeper understanding of his own world.

At Yale, Sarna’s historical philosophy took shape. He was influenced by many members of the university’s history faculty, including Sidney Ahlstrom, the distinguished scholar of American religion. Noting that many historians tended to categorize Jews in America as an ethnic group with little reference to their religious life, Sarna set out to place American Judaism within the larger historical context of religious life in America. His doctoral dissertation was a biographical study of Mordecai Manuel *Noah, one of the first American Jews to gain prominence in both the Jewish and the general community. Sarna used Noah’s life to exemplify a central theme in American Jewish history: the ongoing effort to be American and Jewish at the same time. The nature of this tension is summarized in the title of his first book, which grew out of his dissertation: Jacksonian Jew: The Two Worlds of Mordecai Noah (1981).

In his second major volume, JPS, A Cultural History of the Jewish Publication Society (1989), Sarna similarly examined the ways in which Jews have interacted with American culture. In his magnum opus, American Judaism (2004), a full-scale
interpretive history of Jewish religious life in America, Sarna broadly demonstrated how evolving trends in American religion as a whole have repeatedly influenced the historical development of Jewish religious life in America.

A prolific author, Sarna wrote, edited, or co-edited dozens of historical publications that have influenced the field of American Jewish history. His volume People Walk on Their Heads (1982) illuminates the complicated and difficult nature of Jewish immigrant life in New York. Sarna’s interest in the history of Jewish communities impelled him to publish several articles and books on this subject, including The Jews of Cincinnati (1989) and The Jews of Boston (1995). Many of Sarna’s monographs, such as his essay on the development of mixed seating in the American synagogue and his article on the role of great awakenings in American Judaism, have spurred American Jewish historians to explore new avenues of research.

Many of Sarna’s historical readers have become useful tools for the teaching of American Jewish history, such as The American Jewish Experience (1986, rev. ed. 1997); Religion and State in the American Jewish Experience (1997); Women and American Judaism: Historical Perspectives (2001); and Jews and the American Public Square (2002).

By the dawn of the 21st century, Sarna had become a senior scholar in the field. He served as chair of the Academic Advisory and Editorial Board of The Jacob Rader Marcus Center of the American Jewish Archives, where he also served as consulting scholar. He also became a consulting historian to the National Museum of American Jewish History in Philadelphia. In 2004–2005, Sarna was named chief historian for Celebrate 350, the Jewish community’s national organizing effort commemorating the 350th anniversary of Jewish life in America. He was also a consulting scholar to the congressionally recognized Commission for Commemorating 350 Years of American Jewish History.

Sarna’s deep knowledge of the field attracted many scholars and researchers to consult with him and, as a faculty advisor at both HUC-JIR and Brandeis University, he influenced a significant number of graduate students who went on to fill important research and teaching positions in the field.

Sarna is married to Rabbi Ruth Langer, a professor of Jewish Studies at Boston College.

[Gary P. Zola (2nd ed.)]

**Sarna, Nahum M.** (1923–2006), biblical scholar. Sarna was born in London into a family that was both traditionally observant and Zionist. After receiving an intensive elementary and secondary Jewish education, he attended Jews’ College, then part of the University of London, where he earned his B.A. (1944) and M.A. (1946), studying rabbinics, Bible and Semitic languages. From Jews’ College Sarna also received a Minister’s Diploma (1949), a degree that certified its holders as pulpit ministers rather than legal decisors (posekim). He moved briefly to postwar Israel (1949), but because conditions there were not favorable for serious study, Sarna came to Dropsie College in Philadelphia and completed his Ph.D. (1955) under Cyrus *Gordon. While pursuing his studies, and shortly thereafter, Sarna taught at Gratz College in Philadelphia (1951–57). Between 1957 and 1965 Sarna served at the Jewish Theological Seminary as librarian (1957–63) and as associate professor of Bible. Not receiving promotion at JTS, Sarna moved to Brandeis University as Golding Professor, and served in that chair from 1965 to 1985. Between 1966 and 1981 Sarna was a member of the committee that translated the last section of the Jewish Bible (Ketuvim, or Writings) for the Tanakh: The Holy Scriptures of the Jewish Publication Society (1982). Sarna successfully employed both ancient Near Eastern material and the traditional Jewish sources to illuminate the Bible. He also pioneered in “inner biblical interpretation,” showing how biblical writers often interpreted and interpreted each other. In a very active retirement, Sarna held visiting professorships and initiated and edited the JPS Torah Commentary, for which he wrote the volumes Genesis (1989), and Exodus (1991). Famed as a pedagogue and lecturer, Sarna was highly influential in training many of the current generation of Bible scholars. But Sarna wrote for intelligent laics as well. As Jeffrey Tigay observed, “No scholar has done as much as Sarna to educate English-speaking Jewry about the Bible,” as exemplified in Exploring Exodus (1986) and in Songs of the Heart: An Introduction to the Book of Psalms (1993), and the aforementioned JPS Torah volumes.

[S. David Sperling (2nd ed.)]

**Sarnoff, David** (1891–1971), U.S. electronics pioneer and executive. Sarnoff, who was born in Uzlian, Russia, was taken to the U.S. in 1900. A self-taught telegrapher who had joined the Marconi Telegraph Company of America in 1906 as an office boy, Sarnoff was the operator on duty who picked up and relayed the Titanic’s distress signal in 1912. When the Radio Corporation of America (RCA) formed in 1919, gained control of the Marconi Company, Sarnoff became RCA’s commercial manager (1919) and subsequently its president (1930). Foreseeing the enormous growth of the radio medium, and determined to prove the practicality of coast-to-coast broadcasting, he founded the National Broadcasting Company in 1926 as an RCA subsidiary. Later, he directed RCA’s efforts toward making television a practical working medium. He developed its potential as an inexpensive instrument providing entertainment and information for a mass audience. His subsequent decision to invest huge sums to develop color television was made in the face of determined opposition within the company. However, the success of color television vindicated his decision. Sarnoff’s abilities built RCA into the world’s largest electronic complex, doing approximately $2 billion business annually in the late 1960s, in fields ranging from radio and television to computers and earth-orbiting satellites, and employing approximately 100,000 persons in the U.S. and 43 foreign plants.
Active in Jewish affairs, Sarnoff was a member of the board of trustees of the Educational Alliance and the first honorary fellow of the Weizmann Institute of Science. He was associated with the Jewish Theological Seminary for over 25 years and served as a member of both its board of directors and its executive committee. Long active in the U.S. Army Reserve, he was appointed to the rank of brigadier general in 1944.

His son, Robert Sarnoff (1918–1997), who was born in New York City, served in the army during World War II. After a period as an executive with Cowles Publications (1945–48), he joined the National Broadcasting Company. Sarnoff subsequently served as that company’s president (1955–58) and board chairman (1958–66). In 1966 he was appointed president of RCA and in 1967, chief executive officer. He resigned in 1975. He was married to opera singer Anna Moffo.

**SARNY,** town in Rovno district, Ukraine. It may be assumed that the first Jews settled in Sarny in 1901, with the opening of the railroad station there. As Sarny was then a village, Jews had difficulty, under the czarist restrictions on their settlement in villages, in obtaining permission to live there. After Sarny acquired the status of a town in May 1903, its Jewish community developed rapidly. During the Civil War after the end of World War I, the Jews of Sarny did not suffer from the pogroms in Ukraine, and the community aided refugees and orphans from other places. Sarny’s economy was largely based on the lumber industry. In independent Poland, after Sarny was made the district capital in 1921, the city developed further. The Jewish population number 2,868 in 1921 (47% of the total), 3,414 (45%) in 1931, and 4,950 (45%) in 1937. A *Tarbut* school was founded in 1920–21, and an *ort* school in 1923–24. There were also a *talmud torah,* and several *hadarim.* At the outbreak of World War II, preparations were under way for opening a Hebrew high school. Until the early 1920s *zaddikim* of the *Karlin-Stolin* hasidic dynasty lived in Sarny, and later continued to visit it. [Shmuel Spector]

**Holocaust Period**

After the outbreak of World War II many refugees arrived in Sarny, and by 1941 the number of Jews there had risen to 7,000. During the Soviet occupation (1939–41) the Jewish institutions were disbanded. The 2,000 refugees from German-occupied western Poland were transferred to the Soviet interior. The Germans occupied Sarny on July 5, 1941, and immediately the Ukrainians staged a three-day pogrom. There began persecution of the Jews, indiscriminate murder, seizure of able-bodied people for forced labor, and extortion of large sums of money. On the Day of Atonement (Oct. 1, 1941) they rounded up the Jews in Sarny for a census and ordered them to wear the yellow badge, instead of a white band with a blue Star of David. A ghetto was established in April 1942, packed with 6,000 persons, 15 per room, and a few weeks later the Jewish community was forced to pay a “fine” of 250,000 rubles ($50,000). In June 1942, when information of mass murders reached Sarny, armed groups were organized there. They planned to set a fire and escape into the forest. But when the Germans came, the secretary of the Judenrat convinced the groups not to act. The Germans transferred the ghetto Jews to the “Poleska” camp, where about 15,000 Jews and 1,500 gypsies from near-by settlements were already concentrated. On Aug. 27–28, 1942, the Germans began to “liquidate” the community. A group headed by two Jews, Tendler and Josef Gendelman, cut the wire fence, ordered to set fire to the camp barracks, and called for a mass escape. Thousands tried to flee, many of them were shot, and only a few hundred reached the forests; there some of them joined the Soviet partisan units of Satanovski and Kaplan (both Jews).

Sarny was retaken by the Soviet army on Jan. 11, 1944. A handful of survivors returned from the Soviet interior, and about 20 Jewish partisans, some of whom had fought against the Ukrainian bands led by Stefan Bandera. The remnants of the Sarny community fenced in the local cemetery and restored the tombstones that had been used for pavements. In the late 1960s there were about 100 Jews in Sarny.

[Aharon Weiss / Shmuel Spector (2nd ed.)]

**SARPHATI, SAMUEL** (1813–1866), Dutch physician and social reformer. Sarphati was one of the progressive leaders of Amsterdam in the mid-19th century. At the start of his professional career he was employed part time by the Portuguese Jewish community as a physician for the poor. The social disarray he experienced made him engage in numerous social and economic development projects. He initiated the first municipal garbage-collecting service, and was involved in the building of an industrial bakery to provide quality bread for the masses as well as the establishment of the city’s first school of trade and commerce. Other endeavors saw public toilets situated throughout the city and the filling in of several polluted and foul-smelling inner-city canals. Sarphati stimulated urban expansion outside the ancient city walls. To facilitate financial investors he was instrumental in establishing the Netherlands Credit and Deposits Bank, a national mortgage bank and building society. Sarphati was also responsible for the founding of the “Paleis voor Volksvlijt,” a vast glass-and-steel industrial exhibition hall, and the grand Amstel Hotel to accommodate commercial entrepreneurs.

Sarphati was a co-founder of the Netherlands Pharmaceutical Society. He was a member of the North Holland Provincial Council and was decorated Knight of the Order of the Netherlands Lion. A street, a park, and a quay in Amsterdam are named after him.
**ŠARRĀF**

**BIBLIOGRAPHY:** S. Bottenheim, *Dr. Samuel Sarphati…* (1945); H. van der Kooy and J. de Leeuwe, *Sarphati, een biografie* (2001) [Henriette Boas / Daniel M. Metz (2nd ed.)]

**ŠARRĀF**, Arabic money changer, intendant, treasurer; *šarrāf bashi*, Arabic-Turkish chief money changer, chief banker. In Islamic countries Muslims were all but forbidden to work in gold and silver, not only as goldsmiths and silversmiths but also as *jahābidhā* (Persian; sing. *jāhābiḏ*), i.e., money changers, coin testers, and collectors of taxes and customs dues, who had to be capable of calculating the value of different kinds of coins in accordance with the percentage of precious metal they contained. An order by the caliph al-Muqtadir (908–932) restricted the employment of Jews and Christians in the government to physicians and *jahābidhā*. Arab sources report the presence of Jewish wholesale merchants, toll farmers, and bankers at the courts of the caliphs in *Baghdad*. A Jew, Yaʿqūb ibn Yusūf *Ibn Killis*, laid the foundation for a public tax collection system in *Egypt* during the reign of al-Muʿizz (969–975), the first Fāṭimid ruler of that country. *Ḥisdāi* ibn Shaprut was the chief customs collector and a physician in *Umayyad Spain* during the reign of Abd al-Rahmān III (912–961). These dignitaries indirectly influenced the attitude of the governments toward the Jews. The prominent Jacob *Ibn Jau*, a merchant and the official manufacturer and supplier of silk, was appointed tax collector and *nasi* of the Jews in *Spain* during the rule of al-*Maḥnūr* (977–991).

In the Ottoman Empire many Jews, Armenians, and Copts served as *šarrāf* at the courts of the provincial pashas and in the capital. Their positions as tax collectors, toll farmers, cashiers, and bankers, and their influence at court enabled them to act as the natural spokesmen for their communities. The Jewish representatives had titles such as *chelebi* (Turkish: gentleman), *bazırkān* (Persian: *bazārgān*, merchant), *muḫālīm* (Arabic: teacher). These titles were still in use in the early 19th century in *Istanbul*. The Armenian equivalent bore the title *amīra*. The *amīra*, the banker, and the financial advisers to the viziers and various ministers of the Ottoman government were the highest secular authorities in the Armenian community until regulations for the Armenian *millet* were finally drafted and approved in 1863.

A similar development occurred in *Iraq*. From the early 18th century, the Jewish *šarrāf bashi*, the chief banker and finance minister to the pasha or *waļī* of Baghdad, assumed the position and title of *nasi*. Until the middle of the 19th century the *šarrāf bashi* of Baghdad acted as *nasi* of the Baghdad community. His political importance sometimes was exaggerated and compared with that of the *exilarch under the *Abbasids*, e.g., in the report of the Jewish convert to Christianity and missionary J. *Wolf* (author of *Narrative of a Mission to Bokhara*, 1852), who was introduced to the *nasi* Saul Laniado in 1824. The first *nasi* in Baghdad was the *šarrāf bashi* Moses b. Mordecai *Shindookh*. One of the last to hold the office of *šarrāf bashi* in Baghdad was Ezra b. Joseph Gabbai. His brother Ezekiel attained the position of *šarrāf bashi* to the sultan Mahmūd II (1808–39). Court intrigues and interdenominational rivalry between Jews and Armenians sometimes made the position of *šarrāf bashi* a very dangerous one, and the tragic deaths of some are described in various sources.

In *Egypt* the appointment of Joseph *Cattau* as *šarrāf bashi* by the khedive Saʿīd (1824–1865) was not linked with any official function in the Jewish community. The development of tourism necessitated enforcing of controls over the money changers, and this became the main task of the *šarrāf bashi*. E.W. Lane (in *The Manners and Customs of the Modern Egyptians* (1968), 562) wrote: “Many of the Egyptian Jews are *šarrāfs* (or bankers and moneylenders), others are *seyrefees* (dialct: money changers), and are esteemed men of strict probity.” In 1872 a German traveler also stressed the role of the Jews in the banking (*šarrāf*) business: “They tend to be *šaraffen* (money changers) and then rise easily to a kind of banker, some indeed becoming great bankers” (M. Luetteke, *Aegyptens neue Zeit*, 1 (1873), 98). According to a Christian Arabic source (Ali Mubārak, *Al-Khiṭṭaṭ al-Jadida*, 12 (1305 A.H.), 95) in the middle of the 19th century, 21 out of 49 Jews in Suez were money changers.

[Ḥaim Zew Hirschberg]

**Jewish Banking (Middle East)**

With the growing involvement of Middle Eastern countries in the world economy during the second half of the 19th century, and the expansion of financial operations in these countries, Jewish banking families at the major commercial centers of the Ottoman Empire and Egypt reached the zenith of their economic power. Their influence on financial and economic developments was great. Among these families were the *Sassoons* (Baghdad-Bombay-London), the *Camondos* (Istanbul-Paris), and the *Menashes* (Alexandria-Vienna). The big banking families did not confine their activities to the financial sector. They were involved in foreign trade transactions and in commercial agriculture, transportation, and urban development projects. These big banker-entrepreneurs also made substantial contributions to Jewish community institutions. Their support of education was of particular significance. At times the Jewish bankers operated in fierce competition and at other times in cooperation with European banks and with other local big banking families (Greek, Armenian, and also Muslim). In the course of their activity during the last decades of the century, some of the Jewish banking families transferred their business headquarters to European capitals, especially London and Paris. The extreme changes in the political and economic conditions in the Middle East and Europe during the first half of the 20th century brought about the decline of these influential families. In some cases their assets were confiscated or nationalized, in others they were acquired by or merged with large economic concerns or multinational corporations.

[Gad Gilbar (2nd ed.)]

**BIBLIOGRAPHY:** Fischel, Islam; Ibn Daud, Tradition, 50–51 (Hebrew section), 69 (English section); H.Z. Hirschberg, in: A.J. Arberry (ed.), *Religion in the Middle East*, 1 (1969), 119–225; D.S. Sassoon,

SARRAUTE (Cherniak), NATHALIE (1900–1999), French novelist. Born in Ivanova-Vosnesensk, Russia, into an assimilated Jewish family, Nathalie Sarraute was taken to France at the age of two. She practiced as a lawyer until the Nazi occupation in 1940, when she joined the French underground. Her literary career began rather late. She had studied philology at the universities of Oxford and Berlin, and in 1938 published Tropismes (Eng. tr. 1967), a series of camées which constituted a criticism of language and a condemnation of subject matter as such in the novel. Her own first novel, however, did not appear until 1944. Entitled Portrait d’un inconnu, it attracted much attention, particularly that of Sartre. Nathalie Sarraute is recognized as one of the initiators of the modern school known as “le nouveau roman,” which counted Alain Robbe-Grillet and Michel Butor among its best-known younger members. Her novels Maréteau (1953; Eng. 1967), Le Planétarium (1959, 19682), and Les Fruits d’or (1963), do not relate any story or describe any events, and in fact represent the trend of the anti-novel. Their aim is to reveal a reality which is both beyond and beside the everyday, obvious reality of the traditional and existentialist novel. The author stated her views on the novel in a series of essays, L’Ere du souçon (1956; The Age of Suspicion, 1967). For a time she abandoned the novel and wrote two radio plays, Le Silence and Le Mensonge (published in one volume, 1967; but in Entre la vie et la mort (1968), using literary circles as a setting, she reverted to her basic form. Later novels included L’Usage de la parole (1980) and Tu ne t’aimes pas (1989). Her autobiography, Enfance, appeared in 1983. Nathalie Sarraute, a liberal leftist, eventually adopted an openly pro-Israel stand and paid a lengthy visit to the country in 1969.

SARREGUEMINES, town in the Moselle department, northeastern France. Jews have lived in Sarreguemines since the 13th century. Expelled in 1477, they reappeared at the latest in 1690 under the French occupation. One family was authorized to settle in the town in 1721, others in 1753, and still others in 1787. The synagogue, erected about 1769, was rebuilt in 1862, and again in 1959, after having been destroyed in 1940. The local rabbinate was established in 1791. Throughout the 19th and early 20th centuries, the Jewish community slowly grew. By 1939, it numbered approximately 395. It is estimated that about 89 of Sarreguemines’ Jews died during the Holocaust.

In 1971 the Jewish community numbered 250. In 2005, in an act of vandalism, over 60 of the Jewish cemetery’s 500 tombstones were toppled and smashed.

his wife, and a wife who was guilty of recalcitrant behavior toward her husband.

[Meir Havazelet]

SAR SHALOM BEN MOSES HA-LEVI (12th century), the last of the Egyptian geonim. Sar Shalom held office in Fostat from 1171 until at least 1195. He had followed his brother, the Gaon *Nethanel b. Moses ha-Levi, in the position. Before then, he had held the post of av bet din in the Yeshivah shel Erez Israel of Damascus, which, according to *Benjamin of Tudela, was headed by Sar Shalom's brother Azzariah. While acting as gaon, Sar Shalom signed himself rosh yeshivat Erez ha-Zevi, or rosh yeshivat Ge'on Yā'akov ("Head of the Yeshivah of the Glory of Jacob").

[Abraham David]

SARTABA (Alexandrium), fortress, probably built by Alexander *Yannai and named after him. According to Josephus, it was located near Coreae in the Jordan Valley (Ant., 14:49, 81). Situated on the top of a high mountain, it was exceptionally well supplied (Jos., Wars, 1:34). Here *Aristobulus II surrendered to Pompey in 63 B.C.E. It later served as a stronghold of the nationalistic opposition to Rome. Gabinus besieged *Alexander, the son of Aristobulus there (ibid., 11:61ff.), after which the fortress was demolished. Pheroras, Herod's brother, refortified it (Jos., Ant., 14:419; Wars, 1:308). Under Herod it served for the safekeeping of his wife Mariamne, who later buried his sons there after they had been executed on Herod's orders (Jos., Ant., 16:394; Wars, 1:531). It apparently also served for the burial of several other members of the Hasmonean dynasty. The place is not mentioned in accounts of the Jewish War against Rome. According to the Mishnah, it was one of the stations for the transmission of signals announcing the new moon and holidays from Jerusalem to Babylonia (RH 2:4; cf. Tosef., 2:2). Alexandria is identified with Qarn Sartaba, a dominating peak overlooking the Jordan Valley, S.E. of Nablus (1,244 ft. – c. 379 m. above sea level; 2,388 ft. – c. 728 m. above the Jordan Valley). The remains include walls of bossed masonry, the style typical of the Hasmonean period, a cistern, and traces of an aqueduct. Excavations at the fortress were conducted at the site by Y. Tsafrir and Y. Magen between 1981 and 1983, with the discovery of the remains of a monumental peristyle hall and other remains, including an inscribed ostraca mentioning a “Pinchas” and a “Levi.” The aqueduct leading to the site and other remains in the hinterland of the fortress were investigated by D. Amit.

[SARUG (Saruk), ISRAEL (fl. 1590–1610), Egyptian kabbalist. Sarug probably belonged to an Egyptian family of rabbinic scholars with kabbalistic leanings. A manuscript written in 1565 in "Cairo (British Museum 759) was copied for Isaac Sarug: Israel Sarug, whose signature as owner appears on the manuscript, was probably his son. Sarug may have known Isaac *Luria while the latter was in Egypt and have become acquainted then with some of his early teaching and kabbalistic behavior. Although he was not one of Luria’s pupils in Safed, he later claimed to have been one of his main disciples. He had access to some of the writings of Luria’s disciples (Hayyim *Vital, Moses *Jonah, *Joseph ibn Tabul) and from them constructed his own version of Luria’s doctrine, adding important speculations of his own. His whereabouts between 1570 and 1593 are unknown, but he must have spent some time during the 1580s in Safed. Between 1594 and 1600 he disseminated his version of Lurianic Kabbalah in Italy, founding a whole school of kabbalists who accepted his teaching as authentic. Among them were the most distinguished kabbalists of that time, such as Menahem Azariah *Fano, Isaac Fano, and *Aaron Berechiah b. Moses of Modena. Several manuscripts written between 1597 and 1604 contain summaries of his oral teachings and copies of writings which he had brought with him. According to Leone *Modena, Sarug’s teachings in Venice were strongly tinged with philosophic ideas; he also claimed that he could recognize the transmigrations of the souls of the people he met. After he left Italy, he taught Abraham *Herrera in Ragusa and spent some time in Salonika (before 1604). It seems improbable that Sarug is identical with the “famous Hasid” Israel Saruk who died in Safed in 1602, leaving his manuscripts with his daughter, who several years later became the wife of the immigrant kabbalist from Moravia, Shlimel (Solomon) Dresnitz. There is evidence that Sarug spent some time in Poland after 1600, but later legend put his stay earlier and made him the kabbalistic teacher of Solomon *Luria in Cracow.

Only four of Sarug’s works have been printed. The book Limmudei Azilut, published erroneously under the name of Hayyim Vital (1897), contains two of these: an exposition of Luria’s teachings on zimmun, which differs widely from all other known versions, and his commentary on the portion of the “Zohar called Sifra di-Zeni’uta. The book also contains a description of the world of Beriyah, the angelological realm next to the world of divine emanation, Azilut. His traditions concerning specific transmigrations of biblical and talmudic personalities were published in part under the name of Menahem Azariah Fano (Prague, 1688; with a commentary...}

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18 63
by J.M. Leiner, Lublin, 1907). Sarug's commentary on the three hymns for Sabbath composed by Luria was first published in Nowy Oleksniec in 1767. In all his writings Sarug refers to Luria as "the master" but never as "my master." Most of the first published presentations of Lurianic Kabbalah were according to Sarug's version, which exerted a profound influence, although it was attacked as inauthentic by "Hayyim b. Abraham ha-Kohen of Aleppo and other kabbalists.

[Sarúj]

SARÚJ (Suruc), small town near the southern border of "Turkey. Sarúj was a thriving town during the rule of the "Abbasid caliphs and in the crusader period. For many years a Jewish community existed in Sarúj, and its name appears among the communities of northern "Babylonia and "Syria to which the head of the "Baghdad academy, "Samuel b. Ali, addressed an iggeret ("circular letter") in 1197. A letter from the middle of the 12th century gives the name of a Jewish merchant from Sarúj who traveled to Sicily on business. Judah Al-Ḥarīzī, who visited the town at the beginning of the 13th century, reported on his meeting with R. Eleazar ha-Bavli (Abū Mansūr Ibn Abī Yāsīr), a wealthy and hospitable philanthropist, and noted that the Jewish community was small (Tahkemoni, ed. by A. Kaminka (1899), 367).

[Sarúj]

SÁRÚM, ABRAHAM (1878–1942), communal worker in Jerusalem. Born in *Yemen, Sátur emigrated to Palestine in 1893 and became head of the Yemenite community in Jerusalem. After the Yemenites left the Sephardi community in Jerusalem in 1907, he became secretary of the congregation's committee. From then until his death he devoted himself to the members of his community. In 1919 he was elected chairman of the community's committee in Jerusalem. He joined the "Mizrachi movement and was elected member of its central committee in 1919. He was a delegate to the first and second Asefat ha-Nivharim and a member of the Va’ad Le‘ummi for many years. During the riots on Passover 1921, he was an active member of the Haganah. He was one of the initiators and heads of the Association of Yemenites in Palestine, established in 1924.

[Sárum]

SASA (Heb. סָאסָא), kibbutz in Upper Galilee, near the Israel-Lebanese border, 2,550 ft. (850 m.) above sea level, affiliated with Kibbutz Arzi ha-Shomer ha-Za‘ir. A Jewish village existed on the site at least from the Roman period, attested to by tomb caves typical of the time of the "amoraim and by remnants of a synagogue. Ancient Jewish travelers visited the traditional tombs of rabbis Sisi, Levi b. Sisi, and Yose b. Sisi at this place. A fortress stood on the site at the time of Zahir al-Omar. In the "War of Independence, Israeli columns advancing from the west and east in Operation Hiram met near the village Saṣa‘, which was then abandoned by its Arab inhabitants (Oct.–Nov. 1948). In 1949 a kibbutz was established there by pioneers from North America who were joined by Israeli-born and other members. Sasa developed hill farming methods after arduous land reclamation. Its deciduous fruit orchards and beef cattle were suited to the cool, rainy climate (40 in. annual average). In addition, it also had field crops, dairy cattle and poultry, and operated factories for plastics and chemicals as well as a guest house. In the mid-1990s the population was approximately 425, dropping to 371 in 2002.

[Sasa]
tlers were 56 Lithuanian Jews who had lived in South Africa. Louis Vickar responded to an advertisement of the Canadian government offering 160 acres of virgin land for ten dollars. Edenbridge also had an active Jewish community. In the Sonnenfeld colony, which was aided in its founding (1906) by ICA, the villages of Oungre and Hoffer sprang up, the latter named after Moses Hoffer, the father of two brothers who were among the founders of the Sonnenfeld colony.

As was the case with others who settled in the west, many Jews did not succeed at farming, and left for the larger Jewish communities of western Canada. In addition to personal hardships, the great drought of the 1930s and the trend to mechanization and urbanization hastened the decline of Jewish farming. Of every 100 gainfully employed Jewish men in Saskatchewan in 1936, 11 were farmers and five were farm laborers. While the great majority of Jewish farmers in Canada in previous years were in Saskatchewan, since World War II the ICA devoted most of its efforts in Canada to Ontario, particularly the Niagara peninsula. The Jewish farm colonies are now mostly alive in memory alone. The Canadian government has placed the beautiful Beth Israel synagogue at Edenbridge on its national register of historic sites.

Regina, the capital of the province, had nine Jews in 1891, but the true beginnings of the present community would have to wait about 20 years. By the time of the 1911 census there were 130 residents. That year a shohet was hired, and services were held in his home. Two years later the members of the community erected a synagogue, Beth Jacob, with the lieutenant-governor of the province laying the cornerstone. In 1914 a building was rented to serve as a talmud torah, and 10 years later a building was erected to house it. In 1926 a central budgeting structure was created, and the Regina Federated Community was established. In 1951 the Beth Jacob Congregation built a new synagogue, with a new annex added four years later to house the school and the community center under one roof. At its height in 1931 there were just over 1,000 Jews. By 1951 the number had fallen to 740 and the 2001 census enumerated 720 Jews in Regina. In 2005 there were two synagogues in Regina. In addition to Beth Jacob, with its Conservative-style service, there was the Reform Temple Beth Tikvah, established in 1990. Because of the relatively high rate of interfaith marriages, some members of the community took the initiative to build a burial ground where Jewish and non-Jewish partners could lie next to each other, separated by a fence deemed halakhically acceptable. It opened in the summer of 2005.

The first known settlers of Saskatoon were William and Fanny Landa, who arrived in 1907 with their two children. The first minyan was on Rosh ha-Shanah in 1908. The members of the congregation Agudas Israel built a synagogue in 1912 and a new one was erected in 1919. In 1958 a Jewish community center was built that also served as a house of worship. Saskatoon had a Jewish mayor, Sydney Buckwold, for several terms. Agudas Israel became a Conservative congregation, and in March, 2000 Congregation Shir Chadash, also Conservative, was established. In 1911 the census counted 77 Jews. Since 1931 the number has hovered around 700 Jews, with as many as 793 Jews in 1961. The census of 2001 enumerated 700 Jews exactly, making it roughly the same size as Regina’s community.

In addition to the settlements in the farm colonies and in the large urban centers, Jews settled in many of the small towns of rural Saskatchewan in the interwar period. In their time, Jewish general stores, like Chinese cafes, were part of small-town Saskatchewan. In the 1931 census there was at least one Jew in almost 200 cities, towns, villages or hamlets in the province. Sometimes Jews constituted a remarkably high percentage of the total population. Thus, for 1931, the demographer Louis Rosenberg noted that the “urban centre with the largest percentage of Jews in its population is not Montreal, Toronto, or some larger Eastern city, but is the little village of Lipton in Saskatchewan, where the Jewish population of 53 formed 15.01% of its total population.”

In 2002, the Jewish community of Saskatchewan was unexpectedly thrust into the national spotlight. In December of that year, David Ahenakew, former president of both the Federation of Saskatchewan Indian Nations and the Chief of the Canada-wide Assembly of First Nations, gave an interview to the Saskatoon Star-Phoenix where he explained that the Holocaust was a way of getting over a “disease” and that without the Holocaust “Jews would have owned the goddamned world.” Ahenakew was arrested for willfully promoting hatred in June 2003, and was convicted in July 2005. Within days of the conviction, Ahenakew’s membership in the prestigious Order of Canada was revoked. As a result of this incident, there have been the attempts to create and strengthen relations between Jews and First Nations groups. The leaders of the organizations that Ahenakew had once dominated were quick to denounce his remarks. In 2003 leaders from the Aboriginal community went to the Yom ha-Shoah ceremonies in Saskatoon and attended a Friday night dinner, and members of the Jewish community participated in ceremonies led by First Nations groups. Canadian Jewish organizations have organized missions to Israel for aboriginal leaders, and have been conducting ongoing meetings.

The Jewish population of Saskatchewan, although quite diverse because of the relatively large rural presence of its past, has never been very large. In 1911 the census counted some 2,060 Jews. At its peak in 1931, there were only 5,047 recorded, and the numbers have been declining ever since. In 1951 there were 3,017, and over the next 10 years the numbers fell to 2,710. The 2001 census enumerated 2,090 Jews in the province. Although this downward trend seemed relentless, it was hoped that an improving economy in the province would attract more Jews in the coming years.

[Benjamin G. Kayfetz / Richard Menkis (2nd ed.)]
SASLAVSKY, LUIS SIMÓN (pseudonyms: Simón Fourcade and Hugo Espinelli; 1908–1995), Argentinean film director, author, and producer. Born in Rosario, Province of Santa Fé, Argentina, Saslavsky was drawn into the film world as a reporter for La Nación in Hollywood. He returned to Argentina and directed Crimen a las tres (1935), La Fuga (1937), and Nace un Amor (1938). He later sacrificed some of his intellectual quality to popular taste but continued to show some originality, as in Historia de una Noche (1941). Saslavsky was compelled to leave Argentina during the Perón government and lived in Europe for 15 years from 1948. He directed Coro na Negra in Spain in 1951 and other films in both Spain and France, including Les Louves (1957) and Première mai (1958). Returning to Argentina, he produced Las Ratas and Placeres conyugales (1963), La industria del matrimonio (1964), Veni conmigo (1972), and El Fausto críollo (1979).

SASOV (Pol. Sasów), town in Lwów district, Ukraine; within Poland until 1772, under Austrian rule until 1919, reverted to Poland until 1945. Founded in 1615, the town was granted autonomy by King Sigismund III, who also bestowed many privileges on its merchants and instituted market days. In 1726 the Jews of Sasov were granted a privilege by the owner of the town, Jacob Sobieski, son of King John III Sobieski. Accordingly all Jewish communal institutions were exempted from taxes, Jews were permitted to trade without hindrance and to deal in alcoholic liquor, and the amount of taxes the Jews had to pay was made equal to that paid by the other townsmen. In 1764 there were 223 Jews living in Sasov. Sasov was celebrated among Hasidim as the residence of Moses Leib of Sasov, also called Moses Leib of Brody (d. 1807). The community numbered 1,906 (58% of the total population) in 1880; 1,761 (52.1% of the total) in 1912; and 1,096 (35.4%) in 1921. Jews were occupied mainly with making candles and ornamental strips (atarot) for prayer-shawls, for the production of which Sasov was a world center. After World War I the Jews of Sasov suffered from unemployment. Their economic position deteriorated at the end of the 1920s and the beginning of the 1930s. Many starved and had to be helped by Jewish relief societies: Jewish communal life also suffered because of the poverty.

Holocaust Period
Before the outbreak of World War II there were about 1,500 Jews in Sasov. On Sept. 17, 1939, the Red Army entered the city, which was administered by Soviet authorities until the German–Soviet war. The Germans occupied the town on July 2, 1941; during the first two weeks they killed 22 leaders on the pretext of their being communists. Three Aktionen took place, the largest on July 15, 1942, when the Jews were deported to Belzec death camp. The remaining 400 Jews were deported on Nov. 25, 1942, to Zloczow (Zolochev) and shared the fate of that community. A forced-labor camp, established in March 1942, was liquidated in July 1943, when all its inmates were shot in the nearby woods. After the war the Jewish community of Sasov was not reconstituted.

SASPORTAS, JACOB (c. 1610–1698), rabbi, a fierce opponent of the Shabbatean movement. He was born and educated in Oran (North Africa) and became widely known for his talmudic erudition. After his appointment as rabbi of the Tlemçen community the neighboring communities also recognized his authority. However, when he was 37 years old he was dismissed by the government; he then proceeded to wander throughout Europe, visiting many communities in Germany, Italy, and England (he was offered the position of hakham of the Sephardi community in London in 1664 but left the next year because of the plague). His main ambition was the rabbinate of Amsterdam, but he did not achieve it until 1693, when he was 83 years old. Personal bitterness deriving from his lack of a congregation which could serve as a base for his activities colored his attitude in many disputes. He was a staunch defender of the rabbinate and the traditional halakha and throughout his life was involved in polemical disputes. Many of his responsa were collected in the book Ohel Ya’akov (Amsterdam, 1737), published by his son, Abraham.

Sasportas was largely known, however, for his collection of letters, Zizat Nolov Zevi, comprising his answers to various Shabbatean letters and pamphlets, as well as the original pamphlets themselves. The work therefore became one of the main sources for the study of the Shabbatean movement during the lifetime of Zevi. At the time of the dispute Sasportas lived in Hamburg, so that most of the material in his collection is mainly concerned with Western Europe and Italy, but he had some success in his efforts to obtain material from the East as well.

Arranged in chronological order, the work covers the years 1666–76. In the main it consists of letters received by Sasportas, his answers to them, some letters which he wrote on his own initiative, and some comments on the development of the Shabbatean movement. Nearly half of it concerns the year 1666, from the first announcements of the appearance of Shabbetai Zevi as Messiah until his conversion to Islam at the end of that year. The second part is dedicated to the events following the conversion, 1667–68, and describes the “failure” of the Shabbatean movement. The third part consists of letters written in 1668–69, and is mostly directed against the renewed Shabbatean propaganda, which tried to explain the conversion of the Messiah and to introduce new norms of behavior suitable for the period of messianic fulfillment. The last four pages deal with the period from 1673 to 1676, sketching some of the main events of these years.

Sasportas’ bitter denunciation of the Shabbatean movement, its prophet *Nathan of Gaza, and its believers (some of whom were his former friends), is based upon various ideological concepts. First was his adherence to the traditional conception of the messianic age; in great detail he pointed out the differences between what was happening at that time and the traditional ideas concerning the messianic era. He also saw the new movement as a revolution against established institutions and rabbinic norms, fearing that they might be set aside through the influence of Nathan of Gaza and other Shabbatean
thinkers who laid claim to the faith of the populace without any appeal to rabbinic tradition. His hatred was also based on his not unfounded suspicion that the new movement contained antinomian elements, revealed in some utterances of Nathan, in the “strange deeds” of Shabbetai Zevi, and in the behavior of their followers. He frequently compared the new movement with Christianity and feared that the Shabbateans would follow the ancient example.

Sasportas’ book is the fiercest attack upon Shabbateanism written during the early years of the movement. However, I. *Tishby* and R. Shatz have proved that the published work does not reflect his attitude during the period before Shabbetai Zevi’s apostasy. By comparing Sasportas’ original copies with the version prepared for publication, they demonstrated that in many instances he falsified his own letters, changing phrases and adding passages to show that his opposition was far more thorough and resolute from the beginning than it really was, and he glossed over his own hesitation and half-belief in Shabbetai Zevi during the months in which the movement reached its peak. The full version of *Zizat Novel Zevi* was first published by I. Tishby from the only complete manuscript in 1954. For a long time, however, it was known only in the shortened version (*Kizzur Zizat Novel Zevi*) printed in Amsterdam in 1737, by Jacob Emden in Altona in 1757, and lastly in Odessa in 1867.

[Joseph Dan]

**SASSO, SANDY EISENBERG** (1947– ), Reconstructionist rabbi and author. Sasso was born and raised in Melrose Park, Penn., a suburb of Philadelphia. She received bachelors’ and masters’ degrees from Temple University and attended the Reconstructionist Rabbinical College (RRC) in that city. In 1974 Sasso became the first woman to graduate from RRC and the second woman rabbi in the United States. She and her fellow rabbinical student, Dennis Sasso, married in 1970, becoming the first rabbinic couple in history.

From 1974 to 1977, Sasso served as rabbi of the Manhattan Reconstructionist Havurah in New York. In 1977 Sandy and Dennis Sasso jointly accepted positions as rabbis of Congregation Beth-El Zedeck in Indianapolis, a congregation with joint Conservative and Reconstructionist affiliation. She continued in that post in 2005. In 1996, Sasso received a Doctor of Ministry degree from Christian Theological Seminary in Indianapolis. She and her husband were the first rabbinic couple to serve a congregation affiliated with the Conservative movement, and she was the first rabbi to become a mother.

Sasso undertook local and national leadership of Jewish, interfaith, and community organizations. She served as president of the Indianapolis Board of Rabbis, the Reconstructionist Rabbinical Association (1989–91), and the Gleaners Food Bank. She lectured in religion and Judaism at Butler University and Christian Theological Seminary in Indianapolis.

As one of the first female rabbis, she explored the roles of women in Judaism and the rabbinate and offered new perspectives on lifecycle events. Her “B’rît B’not Yisrael” (Covenant for the Daughters of Israel), co-authored with her husband, Dennis Sasso, was among the first of new ceremonies for infant girls paralleling the *brit milah* (circumcision) ceremony for boys. Sasso wrote liturgical poetry on the life cycle and spoke widely on women in the rabbinate and gendered language in prayer.

In writings for both parents and children, Sasso offered liberal approaches to theology and Judaism, drawing on tradition and midrash. She authored a series of award-winning children’s books on religious and spiritual themes, including *God’s Paintbrush* (1992); *In God’s Name* (1994); *But God Remembered: Stories of Women from Creation to the Promised Land* (1995); and *Butterflies under Our Hats* (2006).

She received the 2004 Helen Keating Ott Award for Outstanding Contribution to Children’s Literature and the 2005 Sugarman Family Award for Jewish Children’s Literature. She co-authored, with Rabbi Jeffery Schein, *Kol Hanolar* (Voice of the Children; 2005), the Reconstructionist movement’s first children’s prayer book.

[Robert P. Tabak (2nd ed.)]

**SASSON, AARON BEN JOSEPH** (1550/5–1626), rabbinic scholar in the *Ottoman Empire. Aaron was educated in *Salonika, where he lived until 1600, and died in Constantinople. He was a pupil of Mordecai Matalon and a pupil and colleague of his father-in-law, Solomon II of the *Levi (Bet ha-Levi) dynasty. Aaron had charge of a yeshivah and disseminated Torah in Salonika and then in Constantinople. The circumstances under which he left Salonika with all his family are not clear, but seem to have been connected with the death of Solomon and the subsequent struggle that year to succeed him in the Evora community and its yeshivah. Aaron was active in teaching and the giving of halakhic rulings from c. 1585 until his death. Queries were addressed to him from many, often distant, places. His responsa, which he had already prepared for publication, were published in part after his death and show his keen mind and dialectical ability. He was a distinguished talmudist and halakhic authority. From the very beginning of his activity as a *posek*, the greatest *posekim* of Salonika turned to him for confirmation of their rulings. Aaron bases his rulings upon contemporary scholars – Joseph ibn *Lev, Samuel de Medina, and Solomon ha-Kohen – and debates sharply with early scholars as well as with the great scholars who closely preceded him, such as Elijah *Mizrahi, Joseph *Colon, and Joseph Caro. He was sometimes attacked for his attitude toward other scholars.

Aaron seems to have been even more important as a teacher than as a halakhic authority. He educated many students, many of whom were among the greatest scholars of the
Ottoman Empire in the first half of the 17th century, such as  
*Ḥayyim (b.) Shabbetai, Ḥayyim *Alfandari, Mordecai Kalai, 
and Shabbetai Jonah. His novellae on the Talmud (on Ketub-
bot, Ye’amat, Bava Kamma, Bava Mezi’a, and other isolated 
subjects), which remain in manuscript, mirror the learning in 
his yeshivah. He bases himself greatly upon the words of 
Joseph ibn Lev, debating them by use of pilpul and explain-
ing at length the Tosafot Gornish. In addition he wrote a work 
on Jacob b. Asher’s *AরbāḥaTor Tuirim and on Maimonides’ *Mish-
neh Torah, as well as a short work on the laws of agunah and 
other topics.

Aaron was connected by marriage with the families of 
the greatest scholars of Salonika. His sister was married to 
David ibn *Naḥmias, and his son was the brother-in-law of 
Meir b. Abraham di *Boton. His family was generally on close 
terms with the Levi dynasty, and after his departure from Sal-
onika, a correspondence ensued between the two families, 
part of which has been preserved. Aaron’s son Joseph saw 
to the publication of his father’s responsa Torah in (Ven-
ce, 1626) and served as rabbi in Venice. Joseph and Aaron’s 
grandson Aaron b. Isaac (b. 1629) were renowned talmud-
ists (see, e.g., the responsa of Joseph of Trani, EH no. 22; 
the responsa Penei Moshe, pt. 2, no. 105). A well-known dayyan 
named Joseph b. Moses Sasson of Salonika, who was ac-
tive from 1580 to 1600, appears to have been a member of 
the same family (see the responsa of Samuel de Medina, EH no. 
165; Torah Emet no. 2).

deronah, 2 (1888), 219–23, 340–3; Rosanes, Togarmah, 3 (1938), 55–56; 

[Sasson, Eliyahu]

SASSON, ELIYAHU (1902–1978), Israeli diplomat and ex-
pert on Arab affairs. Sasson was born in *Damascus, where, 
at the age of 18, he was the only Jewish member of the Arab 
Syrian National Committee and publicly greeted Feisal, the 
short-tenured king of *Syria, on behalf of the Damascus Jewish 
community. On Feisal’s personal initiative he edited for 
several months an Arab-language Jewish newspaper to foster 
understanding between the Jewish and the Arab peoples in 
the spirit of the *Weizmann-Feisal agreement. In 1920, after 
Feisal’s ousting from Syria by the French, Sasson settled in 
Palestine and soon became a recognized expert on Arab af-
airs, at first in various newspapers and later for the Zionist 
Executive, where he served from 1930 as head of its Arab de-
partment. On the Executive’s behalf he maintained for years 
contacts with Arab leaders and traveled widely throughout 
the Middle East. During World War II he was instrumental in 
spreading British anti-Nazi propaganda in the Arab countries, 
and in 1948 he directed the Arab broadcasts of the clandestine 
*Haganah radio station. On behalf of the nascent Israeli gov-
ernment he negotiated with King Abdullah of Transjordan and 
corresponded with the secretary general of the Arab League,

Azzam Pasha, and other Arab leaders. After World War II he was a member of most Zionist and Israeli delegations which 
negotiated the political future of Palestine or Israel-Arab 
relations: in 1946 in London, in 1947–48 at the United Na-
tions, in 1949 in the armistice talks with the Arab governments 
in Rhodes and at the abortive peace talks at Lausanne. In 1949 
he headed Israel’s office in Paris which maintained unpublish-
cited contacts with the Arabs. From 1950 to 1952 he was Israeli 
inister to *Turkey; afterward minister (and from 1957, am-
bassador) in Rome until 1960. While serving in 1961 as amb-
bassador in Berne, Switzerland, he was recalled to become a 
member of the Israeli government as minister of posts, becom-
ing minister of police in 1966 (until 1969). Sasson published 
many articles and political reminiscences in the Hebrew and 
Arab-language press in Israel, and remained a staunch sup-
porter of the idea that an Israel-Arab understanding is feasible 
and the enmity between Jews and Arabs a transient phe-
nomenon.

BIBLIOGRAPHY: Tidhar, 5 (1952), 2281–82.

[Benjamin Jaffe]

SASSOON, family of Jewish merchants, philanthropists, and 
men of letters, originally from *Baghdad; its members rose to 
great influence and affluence first in India and then in England 
and China. The founder of the family was SHEIKH SASSOON B. 
SALAH (1750–1830), who was the president (*nasi) of the Jewish 
community in Baghdad for almost 40 years and chief treasurer 
of the Ottoman pashas of Baghdad. Through the building of 
textile mills and factories in Bombay on a large scale, the Sas-
soons exerted tremendous power in the commercial arena, 
and the wide ramifications of their activities earned them the 
reputation of the merchant-princes of the Orient, “the Roth-
schilds of the East.” His son DAVID S. SASSOON (1792–1864), 
who had taken on the commercial activities of the family, es-
cape from the oppression and tyranny of Pasha Daud and 
flled in 1828 to *Bushire on the Persian Gulf, where he was 
joined by his father, who died there. David S. Sassoon moved 
with his large family in 1832 to *Bombay, where he established 
a business which assumed international scope. The philan-
thropic activities of David Sassoon and his eight sons greatly 
benefited Bombay as a whole, and the Jewish community in 
picular. In 1861 he built in Byculla, Bombay, the synagogue 
Magen David, and some of the most important cultural and 
civic institutions, including hospitals, orphanages, libraries, 
museums, schools, and charitable communal organizations 
owe their existence to Sassoon’s munificence and generosity. 
David Sassoon was instrumental in publishing the Judeo-Ara-
bic newspaper Doresh Tov le-Amno (1855–66) and supported 
allied scholars and scholarly publications. In Poona, where he had 
his summer residence, he built the David S. Sassoon Hospital, 
worthworthy for its nonsectarian character, an infirmary and 
leper asylum, and in 1865 the synagogue Ohel David, whose 
90-foot spire is a Poona landmark. His mausoleum, on which 
there is a long Hebrew inscription in both prose and poetry, 
is situated in the courtyard of the synagogue. His eldest son,
SIR ABDULLA (later Albert) SASSOON (1818–1896), was similarly prominent in commerce and philanthropy in Bombay. He established one of the first large-scale textile mills in Bombay, thus extending his father’s business to include industry as well as trade. In 1872–75 he constructed the first wharf on the west coast of India, the Sassoon Docks in Kolaba, which employed thousands of local workers and stimulated the Bombay government to build the larger Prince’s Dock. In addition to providing the initiative for establishing Bombay as a modern port city, he contributed a new building to the Elphinstone High School, maintained a Jewish school, the David Sassoon Benevolent Institution, and supplied university scholarships. In the mid-1870s Albert settled in London, where the family’s business interests were increasingly centered. In recognition of his role in the industrialization of India, he was made a baronet in 1890 and was on terms of personal friendship with the Prince of Wales, later Edward VII. But it was Albert’s brothers (by David’s second wife), REUBEN D. SASSOON (1835–1905) and ARTHUR SASSOON (1840–1912), who became particularly prominent in the court circle of Edward VII. Reuben, little concerned with the family’s business, was a favorite traveling companion of the Prince of Wales. Arthur, a man of learning who spoke Hebrew and knew the Bible well, was a highly praised host during the late Victorian and Edwardian age. His home in Brighton was the scene of lavish entertainments, at which Edward VII was a frequent guest. Participating neither in the firm nor in society was AARON SASSOON (1841–1907), whose life remains obscure. He left most of his fortune to be distributed to the poor, wherever David Sassoon and Company did business. Aaron’s twin brother, SOLOMON SASSOON (1841–1894), who remained in the Orient, was at an early age put in charge of the business interests in Shanghai and Hong Kong. The most capable businessman, after Albert, of all the brothers in the family enterprise, he controlled the company from 1877 to 1894. Solomon was a Hebraist and student of the Talmud, but his wife FLORA SASSOON (1859–1936), a great-granddaughter of the original David Sassoon, actually achieved renown as a Hebrew scholar and was often consulted on questions of Jewish law. After her husband’s death, Flora managed the firm in Bombay for some years and in 1901 settled in England, where she entertained scholars and public men in a grand style. Strictly Orthodox in her observance of Judaism, she included a shohet and a minyan in her entourage when traveling. In 1924, at Jews’ College, London, she delivered a learned discourse on the Talmud, and in 1930 she published an essay on Rashi in the Jewish Forum. Solomon and Flora’s son DAVID SOLOMON SASSOON (1880–1942), who continued their interest in things Jewish, became an outstanding Hebraist and bibliophile. His important collection of over 1,000 Hebrew and Samaritan manuscripts, including the Farhi Bible, written in 14th-century Provence, was cataloged in OHEL DAWID (2 vols., 1932). His independent publications included his pioneer edition of “Samuel ha-Nagid’s diwan from a manuscript in his own collection (1934) and his History of the Jews of Baghdad (1949).

SOLOMON DAVID SASSOON (1915–1985), son of David Solomon and Selina Sassoon, was ordained as a rabbi in 1936. He lived in Letchworth outside London until 1970, when he settled in Jerusalem. He inherited his father’s valuable collection of Hebrew manuscripts and increased the total collection to 1,350 items. He retained his father’s scholarly tastes and published Moshav Zekenim (1959), a commentary of the tsafrists on the Pentateuch from a manuscript in his collection; ‘Abraham b. Maimon’s commentary on Genesis and Exodus, from a Bodleian manuscript (1965); and an elegant facsimile edition of the Mishnah commentary of Maimonides (5 vols., 1956–66), with an introduction, from manuscripts in his collection and in Oxford, which are claimed to be autographs of Maimonides. He wrote a Critical Study of Electrical Stunning and the Jewish Method of Slaughter (1955) and The Spiritual Heritage of the Sephardim (1957).

Of the original eight brothers, SOSSOON DAVID SASSOON (1832–1867), the third eldest and the first to settle in England, was perhaps most active in Jewish communal life in England. In addition to advancing the company’s interests there, he was warden of his synagogue, member of the council of the Jews’ College, and examiner in Hebrew at the Jews’ Free School. His daughter, RACHEL SASSOON *BEER (1858–1927), was the editor of the Sunday Observer and the Sunday Times. On the death of the paterfamilias David Sassoon, Albert assumed the leadership of the company. ELIAS DAVID SASSOON (1820–1880), disliking his subordinate position, left the family business and founded in 1867 a separate and rival firm, E.D. Sassoon and Company. With interests in the Orient, Africa, Europe, and America, the new company prospered even more than the original one. Elias, following the policy of his father, provided his numerous Jewish employees with schools and synagogues even in the company’s remotest outposts. His son, SIR JACOB ELIAS SASSOON (1844–1916), expanded his father’s business enterprise in India by building a large textile company, which comprised six mills and the country’s first dye works. The company was instrumental in developing the cotton textile industry in western India, and in the peak year of 1916 the Jacob Sassoon Mill, India’s largest, employed 15,000 workers. In Bombay his philanthropic activities included building the Central College of Science, a general hospital, and the Knesseth Eliyahu synagogue. SIR EDWARD ALBERT SASSOON (1856–1912), the son of Albert Sassoon, married Aline Caroline de Rothschild. Edward Albert was the first Sassoon to choose politics as his profession. In 1899 he was elected to parliament as a member of the Conservative Party, and held this seat until his death. His son, SIR PHILIP SASSOON (1888–1939), won a seat in parliament as a Conservative in 1912 and remained a member until his death. During World War I he served as military secretary to Field Marshal Douglas Haig, commander in chief of the British armies in France. Although privately horrified by the war, he publicly denounced the pacifistic sentiments of his relative, the poet Siegfried Lorrainé “Sassoon. From 1924 to 1929, and from 1931 to 1937, Philip was undersecretary of state for air, in
which capacity he expressed his love of aviation and his belief in the importance of air power. In The Third Route (1929), he related the story of his 17,000-mile flying tour of British overseas air stations. Philip was also a connoisseur of art of high repute, in recognition of which he was appointed trustee of the National Gallery, the Wallace Collection, and the Tate Gallery, and he was able to display his taste in his last public office as first commissioner (minister) of works, responsible for royal palaces, parks, and ancient monuments. His sister, Sybil (1894–1989), married Lord Rocksavage, later Marquess of Cholmondeley, alternate hereditary Lord Great Chamberlain. She was a celebrated hostess and deputy director of the Women’s Royal Naval Service in World War II. His sister, Vidal Sassoon (1886–1967), English poet and novelist. The son of Alfred Ezra Sassoon, of the famous "Sassoon family, and his wife, the daughter of Thomas Thornycroft, a prominent gentile sculptor, Siegfried Sassoon was educated at Marlborough and Cambridge. He published some poetry for private circulation in 1906–12. He served as an infantry officer throughout World War I, was awarded the Military Cross, and was twice wounded. It was in the hospital in 1917 that he first met the poet Wilfred Owen, an aspect of whose style he helped to revolutionize in the last phase of the younger man’s life. After Owen’s tragic death at the very end of World War I, Sassoon did much to popularize his work. Sassoon’s own book of antiwar poems, The Old Huntsman, appeared in 1917. Others followed in quick succession: Counter-Attack in 1918 and War Poems and Picture Show in 1919. His attitude to World War II was to be a less pacifist one. After World War I he flirted with socialism, becoming literary editor of the Labour Daily Herald for a brief period in 1919. Sassoon’s two most important prose works were the semi-autobiographical novels, Memoirs of a Fox-Hunting Man (1928) and Memoirs of an Infantry Officer (1930). These, which form part of the trilogy, The Complete Memoirs of George Sherston (1936), are written in a more urbane and reflective vein than his poetry. Though it uses approximately traditional forms, Sassoon’s verse is filled with a direct, idiomatic language brutally descriptive of the horrors of war and the complicity of civilians. His other writings include Siegfried’s Journey (1916–20) (1945), a biography, Meredith (1948), and Collected Poems (1961).

In The Old Huntsman Sassoon had written: “Religion beats me. I’m amazed at folk/Drinking the gospels in and never scratching/Their heads for questions…” His ties with Judaism were certainly negligible; raised as an Anglican, he became a convert to Roman Catholicism in 1957. Sassoon’s Diaries, edited by Rupert Hart-Davis, were published in three volumes in 1983–85.

**BIBLIOGRAPHY:** G. Keynes, Bibliography of Siegfried Sassoon (1962); M. Thorpe, Siegfried Sassoon, a Critical Study (1966). ADD. BIBLIOGRAPHY: ODNB online.

**SASSOON, VIDAL** (1928– ), British hairdresser and anti-defamation philanthropist. No relation to the famous and wealthy British family of the same name, Vidal Sassoon was born to poverty in London’s East End, where he fought fascist thugs in the street and spent much of his childhood in an orphanage. At 14 he was apprenticed to a Jewish barber in the East End and, after World War II, became one of the leading hairdressers to London’s Society ladies in the West End. His
innovative hair styling made him famous, and he has been called “the father of modern hairdressing.” Sassoon founded a highly successful international chain of hairdressers and hair care products. He fought for Israel in the 1948 War of Independence and, in 1962, founded the Vidal Sassoon International Center for the Study of Antisemitism at The Hebrew University of Jerusalem, which is internationally known for funding research about and monitoring antisemitic activities.

[William D. Rubinstein (2nd ed.)]

SATAN (Heb. שָׂטָן). In the Bible, except perhaps for 1 Chronicles 21:1 (see below), Satan is not a proper name referring to a particular being and a demoniac one who is the antagonist or rival of God. In its original application, in fact, it is a common noun meaning an adversary who opposes and obstructs. It is applied to human adversaries in 1 Samuel 29:4; 11 Samuel 19:23; 1 Kings 5:18; 11:14, 23, 25, and its related verb is used of prosecution in a law court (Ps. 109:6) and the role of an antagonist in general [Ps. 38:20; 21]; 109:4, 20, 29). The angel who was sent to obstruct Balaam (Num. 22:32) was evidently chosen ad hoc, as a satan (le-satan), and perhaps the consorts lstr are rather to be read as the infinitive listen, “to oppose or obstruct.” There is nothing here to indicate that שָׂטָן (sitnah) was the permanent function of a particular angel. “The Satan” as the standing appellation of a particular angel first appears around 520 B.C.E. in Zechariah 3 and then in *Job 1–2. In 1 Chronicles 21:1, which has already been referred to, the article is disposed with, and “Satan” seems to be a real proper name. In Zechariah 3, the Satan acts as prosecutor in the celestial court; in Job 1–2, he questions Job’s integrity in the latter’s absence and suggests to the Lord that it be tested. He is clearly subordinate to God, a member of His suite (Heb. bene ha-ʾelohim), who is unable to act without His permission. Nowhere is he in any sense a rival of God. In 1 Chronicles 21:1, in which Satan is said to have incited David to take a census of Israel which resulted in the death of 70,000 Israelites (21:14), he has obviously been secondarily substituted because of doctrinal consideration for “the Lord,” who plays this part.

Post-Biblical
Satan is not prominent in the Apocrypha and Apocalypses, and, where mentioned, he is barely personalized but merely represents the forces of anti-God and of evil. Thus the Martyrodom of Isaiah (2:2) states that “Manasseh forsook the service of the God of his fathers and he served Satan and his angels and his powers.” In the Testament of Gad (4:7) the warning is given that “the spirit of hatred worketh together with Satan through hastiness of spirit.” Dan is told to “beware of Satan and his spirits” (6:1; cf. also 3:6 and 5:6; for other references see 1 En. 54:6; Assumption of Moses 10:1). The legend in the Talmud and Midrash that it was Satan who challenged God to put Abraham to the test of the Akedah (i.e., the sacrifice of Isaac; see below) appears in Jubilees (17:16) where, however, he is called “Mastema.

References in the tannaitic literature are even more sparse, and, with few exceptions, Satan similarly appears merely as the impersonal force of evil. Thus Tosefta Shabbat 17 (18):3 states: “If you see a wicked man setting out on a journey and you wish to go by the same route, anticipate your journey by three days or postpone it for three days, because Satan accompanies the wicked man.” The same trend is seen in the injunction “Open not your mouth to Satan” (Ber. 9a; see later), which, though given in the name of an amora, is stated “also to have been taught in the name of R. Yose.” R. Johanan’s statement of Satan persuading God about the Akedah is also given in the name of a tanna, Yose b. Zimra. The Sifre (to Deut. 218), making the rebellious son the inevitable consequence of the father succumbing to the beauty of a female captive mentioned in the previous passage, declares: “the father of this one lusted after a beautiful woman (captive) and thus brought Satan into his house.” R. Joshua states that the verse “the earth is given into the hands of the wicked” (Job 9:24) refers to Satan (18:16). The only personification of Satan found in tannaitic literature is the story of R. Meir spending three days to bring about a reconciliation between two invertebrate quarrelers, upon which Satan complained, “He has drawn me out of my home” (Git. 52a). Similarly, R. Akiva was tempted by Satan in the form of a woman, but Satan relented.

In the New Testament Satan emerges as the very personification of the spirit of evil, as an independent personality, the Antichrist. He is the author of all evil (Luke 10:19). In Revelation 12:9 there is the fullest description of him: “that old serpent called the devil and Satan which deceived the whole world. He was cast into the earth and his angels were cast out with him.” He is the personal tempter of Jesus (Matt. 4), and it is this New Testament conception of Satan which has entered into popular lore. The Jews who would not accept Jesus are referred to as “the synagogue of Satan” (Rev. 2:9, 3:9).

During the amoraic period, however, Satan became much more prominent in the Talmud and Midrash. An interesting example of the development of the idea of Satan in amoraic times can be seen by a comparison between the Sifre and the Midrash. The former, in its comment to Numbers 25:1, says “wherever ‘dwellings’ is mentioned Satan leaps in!” He is frequently referred to as “Samael, but the references which follow refer to the actual name Satan. He appears sometimes in the same impersonal guise as in the Apocrypha and among the tannaim. He is identified with the yezer ha- ra (the evil inclination in general) and with the angel of death (18:16), but in addition he emerges more and more as a distinct identity. The Satan of Job who challenges God to put Job to the test of suffering is made to play the same role with Abraham. He accuses Abraham that despite the boon of being granted a son in his old age, Abraham did not “have one turtle-dove or pigeon to sacrifice before this,” and Abraham is ordered to sacrifice Isaac to prove his obedience to God (Sanh. 89b). In this connection an almost sympathetic view is taken of
Satan. His purpose in challenging Job's piety is for a worthy purpose: that God should not forget the greater loyalty of Abraham (B 16a).

Although he appears as the tempter, he is much more to the fore as the accuser, and the phrase Satan mekaterig ("Satan the accuser"; Gen. R. 38:7; Tj, Ber. 1:1, Shab. 2:6) occurs with great frequency. The well-known phrase "open not thy mouth to Satan" is significant in this respect in its context. The Talmud states that when his dead lies before him a mourner should justify the divine judgment by saying: "Sovereign of the Universe, I have sinned before Thee and Thou hast not punished me a thousandth part." To this the objection was raised that he should not say so, since he thereby "gives an opening to Satan" (cf. Rema, YD 376:2).

Satan was responsible for all the sins in the Bible: for the fall of man (Pqere 131), for the people worshiping the golden calf by telling them that Moses would not return from Mount Sinai (Shab. 89a), and for David's sin with Bath-Sheba (Sanh. 107a). He is associated with the gentile nations in sneering at the Hukkim, those laws – such as "sha'atnez and the prohibition of the pig – for which no rational reason can be given, and thus weakening the religious loyalties of the Jews (Yoma 67b; for this tempting of the rabbis, see Kid. 81a–b). The purpose of the sounding of the shofar on Rosh Ha-Shanah is "in order to confuse Satan" (R 16b), but on the Day of Atonement he is completely powerless. This is hinted at in the fact that the numerical equivalent of Satan is 364, i.e., there is one day in the year on which he is powerless (Yoma 20a).

References to Satan in the liturgy are few and impersonal. The "Hashkivenu prayer of the evening service includes a plea to "remove from us the enemy, pestilence … and Satan" (the adversary), while the morning blessings preceding the Pesukei de-Zimra conclude with R. Judah ha-Nasi's prayer (Ber. 16b) to be spared from "the corrupting Satan." The "reshoot of the haazzan before Musaf on the High Holy Days includes the sentence "and rebuke the Satan that he accuse me not," and under the influence of the Kabbalah six biblical verses are recited before the sounding of the shofar, the initial letters of which form the acrostic kera Satan ("tear Satan"). During the Middle Ages the Church, basing itself on such passages in the New Testament as "Ye are of your father and the devil" (John 8:44), propounded the doctrine that the Jews were the "spawn of Satan," with many of his characteristics. As such they were less than human beings – sorcerers, magicians, and evil-doers – and this theory was a determining factor in the denial of rights to, and persecutions of, the Jews.

[SATANOV, ISAAC] SATANOV, town in Khmelnytsky district, Ukraine; until 1793 within Poland. A Jewish community was organized there in the second half of the 16th century, after Podolia was incorporated within the kingdom of Poland. The Jews of Satanov engaged in the import of goods from the east, leasing of estates and customs dues, manufacture of alcoholic beverages (see *Wine and Liquor Trade), and goldsmithery. The town and its Jewish community suffered periodically from the incursions of the Tatars and Cossacks, in particular from their combined attacks in 1651 and from the Cossacks in 1793. The magnificent synagogue in Satanov was built in the form of a fortress, so that Jews would be able to defend themselves in such attacks. During the 18th century Satanov was the leading community in Podolia. Its dayyanim held a trial of the *Frankists there in 1756. In 1765 there were 1,369 Jews paying the poll tax in Satanov. Until the incorporation of Satanov within Russia in 1793, the Jews there took part in the international commerce, traveling to the fairs of *Leipzig, *Breslau, and *Frankfurt.

The Hebrew writer and maskil Isaac Satanow lived in the town and was active there in the second half of the 18th century, as was Menahem Mendel (Lefin) *Levin (1749–1826), among the pioneers of the *Haskalah in Eastern Europe, and Alexander b. Zevi Margaliot (d. 1802), author of Teshevot ha-Re'em, who was rabbi of Satanov. From the end of the 18th century and during the 19th, Satanov was an important center of Hasidism. Until 1862 Jewish settlement there was restricted by the authorities, owing to the proximity of the town to the Austrian border. The Jewish population numbered 2,848 (64% of the total) in 1897. In 1919 the Jews in Satanov suffered from pogroms at the hands of the Ukrainian nationalists. Satanov probably had 2,359 Jews in 1926, then declining to 1,516 (40% of the total population). A rural Jewish council existed in the Soviet period. The Germans entered Satanov on July 6, 1941. On May 14, 1942, they locked 240 Jews in a cellar, letting them choke to death. Through 1942, 210 Jews were shot to death. Most of the 800 people officially murdered by the Germans were Jews.

[Shimshon Leib Kirshenboim / Shmuel Spector (2nd ed.)]

[SATANOW, ISAAC] SATANOW, ISAAC (1732–1804), Hebrew writer, born in Satanow, Podolia. Satanow settled in Berlin in 1771 or 1772, where he served as the director of the printing press of the Hhevrat Hinnukh Ne‘arim (“Society for the Education of the Youth”). Among the most prolific of the early Haskalah writers, he did not restrict himself to any particular literary field, but wrote in most of those genres used by the later Haskalah writers. Although an exponent of the Jewish enlightenment of 18th-century Berlin, he displayed an affinity for Jewish mysticism.
Between 1780 and 1784 he traveled several times to Galicia, where he was involved in printing the kabbalistic book *Ez Hayyim* (1785), attributed to R. Isaac Luria. Satanow demonstrated a wealth of knowledge of the Hebrew language, ranking as a model stylist throughout the Haskalah period. He ascribed several of his works to earlier writers, and consequently used fictitious names for the authors of the recommendations for his own books and of their forewords. His books include *Sefer ha-Shorashim or Hebraisches-Deutsches Lexicon*, one of his major works, which was a German-Hebrew dictionary and thesaurus in two parts; a number of books of liturgy, *Tefillah mi-Kol ha-Shanah al Pi Kelalei ha-Dikduk* (1785); *Haggadah shel Pesah* (1785); and *Selihot* (1785); as well as *Mishlei Asaf* and *Zemirot Asaf* (4 vols., 1780–1802), collections of proverbs in imitation of the Book of Proverbs. (Satanow adopted the pseudonym “Asaf” from the acrostic for “Itzik Satanow.”) In the last, his best-known work, the peak of his imitative ability is displayed, and, at the same time, the finest expression of his own sentiments and thoughts. The work, attributed to the biblical Asaph son of Berechiah, is written in the style of Proverbs and Psalms. In his *Zohar Taniana* (1783), *Nevu’at Yeled* (1793), and *Imrei Bina* (1784), he tried to build a bridge between the mystical world of Kabbalah and the rationalistic views of the Haskalah.

Satanow grappled with the problem of the use of biblical and post-biblical Hebrew. In his book *Iggeret Beit Tefillah* (1773), a work on prayers and liturgy, he classified every word that he explained as either “Hebrew” or “talmudic,” and proceeded to clarify this question at other opportunities as well. He may have been the first Hebrew writer who sought to break out of the strict framework of biblical style, although he himself was very adept in the biblical style called melizah. Hence he demanded that new words be coined; in *Iggeret Beit Tefillah* he claims that the vocabulary of biblical Hebrew had not preserved its great lexical range.

[Getzel Kressel; Noam Zadoff (2nd ed.)]

**SATANOWSKI, MARCOS**

(1893–1957), Argentine jurist. Born in Bahia Blanca, Satanowski graduated from the University of Buenos Aires in 1928 and was appointed professor of commercial law. In 1946, he was dismissed by the Perón regime but was reinstated in 1945 and held the chair until his death. He founded and was the first president of the Sociedad Hebraica Argentina. He published many books on legal and other subjects including *El actual Regimen Monetario Argentino* (1933) and *El Renovado Pueblo de Israel* (1954). In 1957 he was involved in a trial for the return of the newspaper *La Razón* to its former owner, Ricardo Peralta Ramos, from whom it was expropriated by Perón’s regime. He was murdered by three assailants, probably in a mission of the Secretaría de Informaciones del Estado – SIDE (National Intelligence Service), while working in his office.

**SATINSKY, SOL** (1900–1966), U.S. manufacturer and communal leader. Satinsky was born in Philadelphia. Entering the family business, Frankford Worsted Mills, in 1920, he became its president in 1930, renaming it Frankford Woolen Mills. He was also a partner in Satinsky Brothers Realty Co. Satinsky early became active in welfare and education projects.

He was president of the Jewish Family Service and United Hebrew Schools and helped to create the Federation of Jewish Agencies of Philadelphia, which he served in several capacities. He was also president of the Philadelphia Allied Jewish Appeal and chairman of the National Council of the Joint Distribution Committee. Strongly committed to Jewish scholarship, Satinsky served as chairman of the American Jewish History Center of the Jewish Theological Seminary, president of the Jewish Publication Society, and acting president of Dropsie College. Satinsky was active in the World Affairs Council of Philadelphia; among his other interests was a collection of Lincoln memorabilia which he donated to Cornell University.

[Glady Rosen]

**SATORALJAUJHELY** (in Yiddish popularly abridged to *Ujhele*), city in N.E. Hungary. Before World War I it was one of the main Jewish settlements in Hungary, excluding Subcarpathian Ruthenia and Transylvania. Jews first arrived there at the beginning of the 18th century, in connection with the nationalistic army of F. Rákóczi. An organized community was established in 1771. The first Jewish elementary school was founded in 1836; M. *Heilprin* was among its teachers. The first rabbi was S. Weil. He was succeeded by Moses *Teitelbaum* (1808–40), founder of the celebrated dynasty of zadikim. His grandson was compelled to leave the town as a result of the opposition to the Hasidim. Rabbinical office was then held by Jeremiah Loew (1854–73), who took part in the Hungarian General Jewish Congress of 1868–69. He endeavored to prevent a split within the community after the schism within Hungarian Jewry that followed the congress (see *Hungary*), but in 1886 his son Eleazar Loew (1873–86) founded a separate Orthodox community. After the separation of the Orthodox sector, the majority of the community remained *status quo ante.*

After the term of office of R. Kalman Weiss (1890–1910), a rabbi was not appointed until the arrival of S. Roth (1921–44), the last rabbi. A large synagogue was erected in 1888. The Orthodox community also built a large synagogue and established a higher yeshivah (1922–44). The Jewish population numbered 3,523 in 1869; 5,730 in 1910; 6,445 in 1920; and 4,160 in 1941. They were mainly occupied in commerce, but a number were in professions.
Holocaust and Contemporary Periods

The Jews in the city were affected by the anti-Jewish legislation, unemployment, and other difficulties that faced the rest of the Jews in Hungary in the interwar period. After the German invasion (March 19, 1944), about 4,000 Jews from Satoraljaujhely were confined in a ghetto, joined by another 11,000 from nearby villages, all crowded 20–25 to a room. All were deported to the death camp at *Auschwitz* between May 16 and June 3 in four transports. Only 555 survived. There were 204 Jews living in Satoraljaujhely in 1953.

[Baruch Yaron]

SATRAP (Heb. pl. סַרְפָּטִים, Aram. סַרְפָּטִן; Old Persian sāçapāvanā, “protector of the province”; Greek σατράπης), an official title during the Persian Empire of varying meaning. According to Herodotus (3:89–94) and contemporary inscriptive material, Darius I divided up his empire for administrative purposes into some 20 districts called satrapies. In the biblical passages where Persian officials are listed in descending order of importance, the satrap almost always comes first (Esth. 3:12; 8:9; Dan. 3:2–3; 27; Ezra 8:36; Esth. 9:3, a literary variation?). The one passage which defines the title, however, speaks of Darius the Mede appointing 120 satraps over his kingdom (Dan. 6:2). Such a division of the realm is reminiscent of the Esther narrative (Esth. 13; 8:9) where Ahasuerus (Xerxes, the successor of Darius), is said to have ruled over 127 provinces (Heb. medinot).

The flexibility of titles as they are translated from one language to another and transferred from official to literary sources may be seen by a comparison of three sources. The Old Persian Darius Behistun inscription calls Dashtari “satrap” of Bactria (3:13–14). The fragmentary Aramaic text apparently refers to him as “governor” (peḥah; Cowley, Aramaic, p. 252, line 18). Likewise, Tattenai, head of the Trans-Euphrates, apparently a satrapy, was called “governor” (Ezra 5:3, 6; 6:6, 13). Conversely, Greek historians occasionally used “satrap” to designate lower officials.

[Bezalel Porten]

The satrap possessed very extensive authority: he supervised the administration of the districts of his province, including the imposition of taxes. He had the right to mint coins in his name, except for gold coins, the minting of which was the prerogative of the emperor. He was the supreme judge and traveled throughout the province dispensing justice. He was responsible for security inside his province and supervised the highways. He also had an army which he recruited locally, but the garrisons in the citadels and the regular army were under the direct command of the emperor. The peḥah was subordinate to the satrap, who in turn was subject to the representative of the emperor, but satraps frequently conducted their own foreign policy. Sometimes more than one province was under the rule of one satrap. The office of satrap at times passed by inheritance, and there were dynasties of satraps which continued for many generations. As a result of the extensive authority bestowed upon the satrap, the Persian Empire in the course of time was a united country only in theory; in practice the forces of schism and disintegration prevailed more and more. From time to time, the great satraps rebelled, and it was only with difficulty that the emperors succeeded in overpowering them. Alexander the Great continued with the division of the country into satrapies; and it was continued by the Seleucids. The satrap of Transjordan held sway also over Samaria and Judea, and when there was a governor in Judea, he was subject to the authority of this satrap.

[Abraham Schalit]

SATU-MARE (Hung. Szatmárnémeti or Szatmár, also called Sakmér), city in Satu-Mare province, N.W. Romania; until World War I and between 1940 and 1944, part of Hungary. There is sporadic mention of the presence of Jews in or passing through Satu-Mare in the early 18th century. Permission was granted to the Jews to settle in the city because it was hoped by the more powerful local Hungarian landlords that they would bring economic prosperity, which they actually did for a period of centuries. Jews, too, became landlords or lessees. Some became involved in large-scale agriculture; many others contributed to the development of trade and industry; and still others were employed in Jewish workshops at low wages. There were 11 Jews in the town in 1734 and 19 in 1746. In 1841 several Jews obtained permits to settle in Satu-Mare permanently. A community was formally established in 1849, and a synagogue erected in 1857. Benjamin Zéev Mendelbaum became the first rabbi in 1849, officiating until his death in 1896. Through his influence the community defined itself as Orthodox in 1869 (see *Hungary*). In 1898 it split up and a *status quo ante community was established. A magnificent synagogue was erected in 1904. The Jewish population rose from 78 in 1850 to 3,427 (16% of the total population) in 1870, 7,194 (20% of the total population) in 1910, and 11,533 (21% of the total population) in 1930. There were then five large synagogues and about 20 smaller ones in the city. The first Jewish printing press was established in 1903.

From the end of the 19th century, there were conflicts among the supporters of Hasidism and the Mitnaggedim. From 1902 the status quo community was led by a Zionist rabbi, Dr. Samuel Sándor Jordán, who established the first Hebrew kindergarten in Hungary. The first Jewish schools were opened in 1866. Between 1940 and 1944 there was also a secondary school for boys and girls (four classes).

Jews took an active part in the development of industry and commerce in Satu-Mare, were prominent in the liberal
professions, and contributed to the local Hungarian press. Between the two world wars, branches of the Zionist movements were active in the community; a B’nai B’rith lodge was established, as well as a branch of the Jewish party and other institutions. The rabbis of the Orthodox community were Judah Gruenwald (until 1920) and Eliezer David Gruenwald. After his death in 1928, a bitter conflict followed within the Orthodox community over the election of a new rabbi. The struggle lasted six years and was concluded in 1934 by the victory of the supporters of Joel “Teitelbaum, whose domineering personality and uncompromising anti-Zionist stand influenced Orthodox Jewry in the whole of Transylvania.

Although the influence of Neologism was extremely weak in this region, many Jewish intellectuals were drawn to the Hungarian language and culture, becoming important figures in Hungarian society. Between the two world wars the influence of the fascist Iron Guard was felt. This was the reason why in 1940 the Jews received the Hungarian Horthyite troops with open arms. They were not aware of the changes post–World War I Hungary had undergone under Admiral Horthy’s rule. The first signs of what was to come manifested themselves shortly after the city was occupied by Hungary and “foreign” Jews were deported to Kamenets-Podolski, where they were murdered by Hungarian and German troops. In spring 1944 the rest of the Jews, some 20,000 including refugees, were first ghettoized and then deported to Auschwitz after the majority of men had been sent to forced labor battalions. Less than 15% survived the Holocaust and were able to make their way back to their homes.

After World War II some of the survivors returned from the camps, and about 500 Jews resettled there. They were joined by former residents and Jews from other localities, and by 1947 they numbered approximately 5,000. Subsequently many moved away or immigrated to Erez Israel, and by 1970 there remained some 500 Jews in Satu-Mare, with numbers later declining.

SATZ, LUDWIG (1891–1944), Yiddish comedian. Born in Lvov, Poland, Satz joined a troupe of Yiddish actors in 1910 and played in Gordin’s Got, Mensh und der Taivl. He appeared in Budapest and London and achieved Broadway success as Abe Potash in Potash and Perlmutter, 1913. He also acted with Jacob Adler and Maurice Schwartz, and in Boris Thomashefsky’s Yiddish venture on Broadway (1923–24). Later he toured Europe and South America.

SATZ, MARIO (1944– ), Argentine poet, author, and essayist. He was born in Coronel Pringles, Argentina. His extensive travels had significant influence on his writing. He lived in Israel for three years and from 1978 he lived in Barcelona, Spain. Satz is a prolific author of poetry, and narrative and nonfiction works that include books about Kabbalah and Jewish history.

His early poetry is intimately connected to the natural world. In volumes such as Los cuatro elementos (1964), Las frutas (1970), Canon de polen (1976), Los peces, los pájaros, las flores (1976), and Las redes cristalinas (1985) he examines the beauty and power of nature in practically all its earthly manifestations. He is also the author of a vast novelistic series titled Planetarium, which consists of five novels that comprise a textual solar system. The novels Sol (1976), Luna (1977), and Tierra (1978) form a trilogy in which the author utilizes the cities of Jerusalem and Cuzco, Peru, as sites for examining Latin American history and culture together with Jewish tradition. The subsequent novels, Marte (1980) and Mercurio (1990), do not continue the story of the trilogy though they are part of the Planetarium project.

His book Tres cuentos españoles (1988) takes on a much more focused perspective with the portrayal of multicultural 13th century Spain in which Christian, Muslim, and Jewish cultures existed and thrived side by side. His attention to detail and historical accuracy is remarkable. The novel Azahar (1996) continues with the same focus on Iberia, this time with a focus on religious-mystical traditions from Kabbalah to The Book of the Dead. The author’s nonfiction works reveal his interest in Jewish history and mysticism and are evidence of his capability for profound theological thinking. Representative texts in this vein include Poética de la Kábala (1985), Judaísmo: 4,000 años de cultura (1982), and El dador alegre: ensayos de Kábala (1997).

“SAUCKEL, FRITZ (Ernst Friedrich Christoph: 1894–1946), Nazi official. Born in Hassfurt to a family of minor officials, Sauckel worked in the merchant marines of Norway and Sweden prior to World War I. During World War I he was a prisoner of war. He joined the Nazi Party in 1921 and was appointed Gauleiter (“district leader”) of the Nazi Party in Thuringia in 1925 and its governor in 1933. On March 21, 1942, he was appointed by “Hitler plenipotentiary (Generallebewillmaechtigter) for labor recruitment, and thus he became the most notorious slave driver of Nazi Germany. His self-described task was to make maximum use of the slave labor for the “lowest conceivable expenditure.” Up to March 1, 1944, seven and a half million workers were brought on his orders to Germany from all over occupied Europe, of whom only 200,000 came voluntarily. Their working and living conditions were unbearable. Conditions among Jews were the worst. They were literally worked to death. In the fall of 1942 Sauckel, with the aid of the *RSHA, organized the drafting of Polish workers in order to replace Jews working in the armament industry, with the aid of deporting those Jews to concentration and death camps. He was convicted at the trial of major war criminals in Nuremberg and hanged on October 16, 1946.

SAUDI ARABIA, an authoritarian monarchy, whose legal system is based on a strict interpretation of Islamic law, known in the West as Wahhabism, after the spiritual leader of the original Saudi state, Muhammad ibn 'Abdul Wahhāb (1703–1792). Modern Saudi Arabia was established in 1932 by King Abdul Aziz ibn Abdul Rahman Al Saud (1880–1953), who waged a three-decade-long campaign to unify the kingdom and re-claim the sovereignty that was one ruled intermittently by his family in the 18th and 19th centuries. He was also known in the West by the name King Ibn Saud. Like the earlier Saudi states, the modern Saudi Kingdom was based on a political partnership between the Āl-Saud family and the Wahhabi clerics, whom the Saudis funded and empowered with control over Saudi ministries. Today Saudi Arabia's land area is 1,960,582 square kilometers. Its longest land boundaries are with *Yemen (1,458 km.), *Iraq (814 km.), and *Jordan (744 km). But it also shares borders with Oman, the United Arab Emirates, Qatar, and Kuwait. The Saudi Kingdom is made up of a number of regions including the Najd plateau, the birthplace of the Saudi royal family, the Hijaz, where the Muslim holy cities of Mecca and Medina, and the Eastern Province, where the Saudi oil fields are situated that contain 25 per cent of the world's proven petroleum reserves. Since 1953, Saudi Arabia has been ruled by the sons of Ibn Saud who were successively: Saud, Faisal, Khaled, and Fahd, and in 2005, King Abdullah, who was born in 1923, acceded to the throne.

To understand Saudi attitudes to the Jewish people and the Jewish state, Israel, it is necessary to examine Wahhabi doctrines towards the monotheistic faiths outside of *Islam. These were far harsher than those adopted under classical Islam, which defined Jews and Christians as ahl al-kitāb (people of the book) who were entitled to live their lives under their respective religious codes, albeit as second-class citizens, who had to pay special discriminatory taxes for non-Muslims, such as *jizya (poll tax) and *kharāj (land tax). In his main work, the Kitâb al-Tawhīd (The Book of Monotheism) Muhammad ibn 'Abdul Wahhāb described Jews and Christians as sorcerers who believed in devil worship. He challenged the assertion that both groups were truly monotheistic, charging that "the ways of the people of the book are condemned as those of the polytheists." Given that there was a negligible presence of either religious group in Central Arabia in the 18th century, these theoretical distinctions would only become relevant after the establishment of the modern Saudi state, when Wahhabi doctrines would influence Saudi attitudes to Israel as well as provide the ideological underpinnings for jihadi movements, like al-Qaeda.

Saudi Arabia was implacably opposed to the creation of the State of Israel. Several years after U.S. oil companies, led by Standard Oil of California, secured oil exploration rights in Saudi Arabia, King Ibn Saud addressed a series of letters to President Franklin Delano Roosevelt, stating his opposition to the creation of a Jewish state in British Palestine, and raised the subject yet again in his historic summit meeting with Roosevelt on the USS Quincy in Egypt's Great Bitter Lake. But Ibn Saud's primary concern after Israel's creation came from his Arab rivals – the Hashemite Kingdoms of Transjordan and Iraq – and their British sponsors. Ibn Saud was not prepared to sacrifice his relations with the U.S. and give up on American security guarantees against his potential rivals, despite Washington's backing of the partition of Palestine and its early recognition of the State of Israel. His son, King Faisal, launched an oil embargo against the U.S. during the 1973 Yom Kippur War, but quickly sought to repair his relations with Washington, and agreed to a U.S.-sponsored buildup of Saudi military capabilities against Soviet-backed Arab rivals, from F-15 fighter aircraft to AWACS planes.

Saudi Arabia sent its ambassador in Washington, Prince Bandar, to attend the 1991 Madrid peace conference with Israel, Syria, *Lebanon, and a Jordanian-Palestinian delegation. There was a slight incremental thaw in Israeli-Saudi contacts thereafter. Saudi Arabia attended the 1992 Moscow multilateral negotiations and the various working-groups that it had established. But after the 1993 Oslo Agreements, Saudi Arabia did not follow the examples of Qatar and Oman, which allowed Israel to open quasi-diplomatic trade offices in their capitals. Nor did the Saudis follow the model of Bahrain and UAE (Dubai) which allowed Israelis to attend multilateral conferences on their soil. Saudi Foreign Minister Saud Al-Faisal attended a 1996 counter-terrorism conference in Sharm al-Sheikh, Egypt, with Israeli Prime Minister Shimon *Peres, marking the outer reaches of Saudi readiness for open, high-level contacts. The Saudi religious establishment, represented by the Saudi Grand Mufti, Sheikh Abdul Aziz bin Baz, was not willing to condone the idea of permanent peace with Israel, but was only willing to concede the idea of a hudna with the Jewish state, which, he explained in a formal document, was only a temporary truce until the balance of power changes. During the 1990s, despite its demand for religious identification in its visa applications, Saudi Arabia hosted several American Jewish organizations, including the American Jewish Congress and the Anti-Defamation League.

After Yasser *Arafat's Fatah movement became the dominant component of the *Palestine Liberation Organization (PLO) in the late 1960s, Saudi Arabia became its largest financial backer. Yet after the PLO allied itself with Saddam Hussein in the 1991 Gulf War, Saudi Arabia increasingly began to provide financial assistance to Hamas, despite its direct involvement in suicide bombings against Israeli civilians, through large Wahhabi charities, such as al-Haramain, the Muslim World League's International Islamic Relief Organization, and the World Assembly for Muslim Youth. The 9/11 attacks by al-Qaeda on New York and Washington brought into focus the Saudi connection to the new escalation of global terrorism, since 15 out of the 19 hijackers were Saudi citizens. Moreover,
their overall commander, Osama bin Laden, was born and educated in Saudi Arabia and had worked with Saudi intelligence against the Soviet presence in Afghanistan. In 1998, he set up the "World Islamic Front Against Crusaders and Jews." He relied heavily on Wahhabi religious scholars, such as Sulaiman al-Ulwan or Hamud bin Uqla al-Shuairi, who justified his use of mass violence against the "infidels," which, from their doctrinal standpoint, included Christians and Jews. Both scholars justified suicide bombings against Israeli civilians on the website of Hamas. Other Saudi scholars, like Nasser bin Hamed al-Fahd and Ali al-Khudeir, put out religious opinions that dovetailed with al-Qaeda strategy, since they advocated the mass murder of infidels by means of weapons of mass destruction. After 2003, Israeli officials, like Defense Minister Shaul 'Mofaz, became openly concerned with al-Qaeda's penetration of the Saudi military, including the Saudi Air Force. Israel raised the possibility that Saudi F-15 fighter planes, deployed during the 2003 Iraq War at Tabuk Air Base near Elat, might be used by al-Qaeda suicide pilots for operations against Israeli buildings in Tel Aviv.

King Abdullah, in his capacity as crown prince, floated a new peace plan between Israel and the Arab world through New York Times columnist Thomas Friedman on February 17, 2002. The core of the plan was the idea of exchanging a "full Israeli withdrawal" from the territories Israel captured in the Six-Day War for "full normalization" of relations with Israel. But Abdullah retreated from this formula with the Arab peace initiative that was launched at the Beirut Arab summit on March 28, 2002, when he watered down his original proposal and suggested instead granting Israel "normal relations" – a Syrian diplomatic term that was less than full peace. Given Saudi sensitivities to Western penetration, it is unlikely that Abdullah was really proposing full normalization with tourism, business ties, and cultural exchanges. Behind the scenes of the Saudi peace plan was Adel al-Jubeir, Abdullah's foreign policy advisor, who had been dispatched to Washington to repackage Saudi Arabia's tarnished image in the U.S. after 9/11. It is probable that this was the context of the Saudi proposals.

[105] Dore Gold (2nd ed.)

SAUL (Heb. שָׁאָל; "asked, requested, lent [by the Lord"), the first king of Israel (c. 1029–1005 B.C.E.); son of Kish from the tribe of Benjamin (1 Sam. 9:1, 21). Saul's home was in Gibeath-(ibid. 10:26), i.e., Gibeath-Benjamin, also known as Gibeath-Shaual (ibid. 11:4), which he made his capital. After his death, his bones were buried in the tomb of his father, Kish, in Zela (11 Sam. 21:12:4; cf. Josh. 18:28). Zela would seem to be the name of a place close to Gibeath-Benjamin where the house of Saul had its lands. According to 1 Chronicles 8:29–30, Saul's family came from Gibeon.

In the days of "Samuel's leadership the Israelites became increasingly aware that the time had come to replace the rule of the "Judges by a central, permanent authority capable of freeing the people from the pressure of the surrounding nations, and, in particular, from the domination of the Philistines (1 Sam. 8:20; 9:16). The people therefore demanded of Samuel that he set a king over them, "to govern us like all the nations" (ibid. 8:5). The cycle of stories about the enthroning of Saul is made up of various divergent traditions. According to 1 Samuel 9:1–10: 16, Saul – "a handsome young man, and there was not a man more handsome among the people of Israel; from his shoulders and upward he was taller than all the people" – went out to look for his father's lost asses. Meanwhile the Lord revealed His will to Samuel. "Tomorrow about this time I will send to you a man from the land of Benjamin, and you shall anoint him to be a prince over my people" (9:16). Samuel carried out God's command and poured oil on Saul's head. Saul modestly expressed his amazement at being anointed ruler of Israel. On his way back to his home in Gibeah, he was suddenly seized with the spirit of the Lord and joined a group of prophets "and prophesied [i.e., went into an ecstatic trance] among them" (10:10). In 1 Samuel 10:17–27, in contrast, it is related that Samuel assembled the people at Mizpah and cast lots before them. The lot fell on Saul, who was acclaimed king, "and all the people shouted 'Long live the king!'" (10:24). In this tradition, too, Saul stands out as a man of modest and humble character who "hid himself among the baggage" (10:22). In chapter 11, again, it is recounted that Saul was proclaimed king in Gilgal after his defeat and rout of the "Ammonites, who were attempting to subject the inhabitants of Jabesh-Gilead, kinsmen of the tribe of Benjamin. In this story Saul appears as a charismatic leader of the same type as the Judges who had arisen to save Israel in time of trouble. His choice to lead the people was determined by his heroism on the battlefield. The interrelation of the above traditions is variously conceived by modern commentators. At all events, all the stories are agreed that Saul was chosen as king by God, and anointed by Samuel with the people's approval.

Most of Saul's years as king were spent in wars against the enemies of Israel. When Saul had taken the kingship over Israel, he fought against all its enemies on every side, against "Moab, against the Ammonites, against "Edom, against the kings of Zobah, and against the "Philistines" (14:47). In particular, "there was hard fighting against the Philistines all the days of Saul" (14:52). The signal for the start of the struggle with the Philistines was given when "Jonathan, Saul's son, struck down the Philistine governor in Gaba (i.e., Gibeah) in Benjamin (13:3). Saul mustered the Israelites at Gilgal, near Jericho, while the Philistines encamped at Michmas (13:15–16). From there troops of Philistine raiders made punitive attacks on Israel (13:17–18). Saul waited at Gilgal for Samuel to come and give the signal for the battle to begin. When Samuel failed to appear and the people were beginning to disperse, Saul of-
fered up the burnt-offering and moved out to engage the Philistines, advancing on Gibeah-Benjamin with six thousand men. Jonathan took the nearby Philistine garrison by surprise, and the panic-stricken Philistines fled westward through the valley of Aijalon to Philistia (14:31). In this war the Philistines were driven out of the hill country of Ephraim. This was only the beginning of a series of wars against the Philistines. One of the engagements which is described in detail in the Bible is the battle in the Valley of Elah in the territory of Judah (I Sam. 17), in which *David killed the Philistine giant *Goliath. When the Philistines saw their hero felled in single combat by the young David, they fled to their own country. The encounter in the Valley of Elah thus liberated the hill country of Judah from Philistine rule. For his conduct of the wars against the enemies of Israel, Saul did not rely solely on the national levies but also established a regular armed force led by trained commanders, such as his own son Jonathan and *Abner son of Ner (13:2–3; 14:50, 52). Of special historical importance was the war against *Amalek, since it was in this war that the breach between Samuel and Saul first appeared (I Sam. 15). Samuel ordered Saul to smite the Amalekites and destroy them utterly, leaving no survivors (cf. Ex. 17:16). Saul mustered the people at Telaim, which is apparently identical with Telem in the Negev (Josh. 15:24). The war was fought in the southern desert regions “from Havilah as far as Shur, which is east of Egypt.” The defeat of the Amalekites brought much needed relief to the people of Judah and Simeon, who had suffered greatly from the nomads’ incursions. By his wars against the raiders from the desert (cf. I Chron. 5:10) Saul won the loyal support of the Israelites living in the southern border regions of Erez Israel and Transjordan, since he was fighting to protect the territories on which they were settled. His kingdom then comprised the areas of Israelite settlement in Judah, Ephraim, Galilee, and also in Transjordan (as may be deduced from the extent of the kingdom of his son, Ish-Bosheth (II Sam. 2:8–9)). Saul did not try to extend his rule beyond the area of Israelite settlement; nor does he appear to have attacked the non-Israelite families living within that area – apart from the Gibeonites, whom he sought to destroy “in his zeal for the people of Israel and Judah” (II Sam. 21:1ff.), i.e., in order to convert his kingdom into a solid ethnic block uninterrupted by non-Israelite enclaves. Saul does not seem to have made far-reaching changes in the tribal organization of the Israelites, or to have taken any drastic measures to establish a centralized authority, with a royal court and an elaborate bureaucratic machinery. He was thus able to avoid friction with the tribal leaders who exercised their power within the framework of the local tribal institutions.

But Saul did not succeed in remaining on good terms with Samuel. The tangled relations between the two men reflect the difficulties of the transition from the old regime of the Judges to the new monarchical rule. According to one tradition, Samuel opposed the people’s demand for a king, since in his view the Lord was the King of Israel and the people’s demand was thus tantamount to a rejection of God (see *Gideon). When he was commanded by God to grant the people’s request, he demanded of both the people and the king absolute obedience to the Lord and to the prophet that spoke in His name (II Sam. 12:14–15; 15:22), regardless of political, military, or human considerations. This demand explains the deterioration of the relations between Samuel and Saul. The rift between them first appeared at the time of the engagement at Michmas (I Sam. 13), when Saul sacrificed the burnt-offering, instead of waiting patiently for Samuel to come and give the signal for the battle to commence. It may be that Samuel regarded Saul’s offering of the sacrifice as an encroachment upon his own priestly authority and as an attempt by Saul to arrogate ritual powers to the king. Samuel declared to Saul that his rule would be short-lived: “But now your kingdom shall not continue” (13:14). The rift between Samuel and Saul became final after Saul’s failure to comply with the order

given him to exterminate the Amalekites (15:34–35; 28:18).

The awareness that the Lord had rejected him gradually penetrated into Saul's mind in the course of his relations with David. As soon as David – who was now Saul's son-in-law – appeared at the court, Saul realized that he was the people's favorite (18:16). David's victories over the Philistines aroused Saul's envy (18:5–9, 12–16), and this envy turned into a blind hatred which drove Saul to try to kill David (18:20–29; 19:1, 4–7, 9–10). The rift between Saul and Samuel, David's growing popularity, and the suspicion that even those closest to him had traitorously joined David in a plot against him (20:30–31; 22:8) – R. Kittel suggested that there may have been a plot to depose him as mentally incompetent and to make Jonathan king in his stead – all undermined Saul's self-confidence and darkened his mind (16:14–23). His destiny now began to run its tragic course as he became more and more given to alternating fits of hatred and love, violence and depression, stubbornness and remorse. His morbid suspiciousness, his uncontrolled outbursts of passion, and his fear of David (18:15) frequently disturbed his mental balance, driving him to violent acts bordering on madness, such as hurling his spear at his son Jonathan (20:33), or killing the priests of Nob for – unless R. Kittel is right – unwittingly helping David (21:2ff.). David was compelled to flee from Saul's service into the Judean desert, where Saul tried to pursue him.

At the same time, Saul continued to bear the heavy burden of the prolonged war against the Philistines, who hoped to exploit the quarrel between Saul and David to reestablish their domination of the Israelites. When the Philistines mustered their forces in the Valley of Jezreel, Saul marched out with his army to meet them and camped near En-Harod at the foot of Mount Gilboa (28:4; 29:1). Greatly alarmed by the size and power of the Philistine army, he sought a sign from the Lord about the outcome of the impending battle, but "the Lord did not answer him, either by dreams, or by Urim, or by prophets" (28:6). In despair, he appealed to a medium to raise the spirit of the dead Samuel for him (she is commonly considered free from sin like "a one-year-old child" (Yoma 22b), and (5) the merits of his ancestors, particularly his grandfather Abiel, who was also named Ner ("candle") because he lit the streets after dark so that people might go to the houses of study (17, Shev. 3:10, 34d). He liberally endowed all poor brides (11 Sam. 1:24; Mishnat R. Eliezer, 186); and during his initial successful war with Nahash, Saul displayed his zeal for the scrupulous observance of the sacrificial ordinances by rebuking his warriors for eating the sacrificial meat before the blood was sprinkled on the altar (Zev. 120a). There is a marked tendency by the rabbis to show the first king of Israel in a favorable light even when the Scriptures deprecate his actions. Even his sin during the Amalekite conflict is explained by Saul's refusal to consider the women, children, and cattle as sinners and worthy of death (Yoma 22b). It is Doeg who induces Saul to spare the Amalek king, Agag. His argument was that the law prohibits the slaying of an animal and its young on the same day; how much less permissible is it to destroy at one time old and young, men and children (Mid. Sam. 18:99–100). Saul had no selfish interest in retaining the Amalekite booty since he was so wealthy that he took a military census by giving one of his own sheep to every one of his soldiers, distributing not less than two hundred thousand sheep (Yoma 22b). His final days were filled with regrets on account of his executing the priests at Nob, and his remorse secured pardon for him (Ber. 12b; Tanh. B., Lev. 45).

He was even more worthy than David. David had many wives and concubines while Saul had but one wife. David remained behind, fearing to lose his life in battle with Absalom, while Saul led his troops into his final battle. Saul led the life of a saint in his own house, observing even the priestly laws of purity. God rebuked David for composing a song on the downfall of Saul, stating, "Had you been Saul and he David, I would have annihilated many a David out of regard for him" (Mk 16b). David was also punished for having cut off the cor-
ner of Saul's mantle, for no amount of clothing would keep him warm (Ber. 62b). Finally, when a great famine fell upon the land during the reign of David, God told him that it had been inflicted because Saul's remains had not been buried with due honor. At that moment a heavenly voice resounded saying Saul "the elect of God" (Ber. 12b). The real reason for his loss of the monarchy was his misplaced meekness in not avenging himself against the "base fellows" who "despised him" (1 Sam. 10:27; Yoma 22b). Moreover, his family was of such immaculate nobility that his descendants might have become too arrogant (Yoma 22b). However, his persecution of David was unjustified and it greatly contrasted with the humility he previously displayed. In contrast to his hesitancy in accepting the monarchy, he now sought to slay David rather than surrender his throne (Arkh 20, 43). Once, when Saul and his men surrounded David, an angel appeared and summoned him home to repulse the raid of the Philistines upon the land. Saul only gave up the pursuit of David after a majority of his officers had so decided. Some still felt that the seizure of David was even more important than defeating the Philistines (Mid. Ps. 9:83; 18:138).

The witch of En-Dor realized that it was Saul who was summoning Samuel when he appeared upright before them. In necromancy the rule is that a spirit raised from the dead appears head downward and feet in the air, unless it is summoned by a king (Tanh. B., Lev. 82). Samuel told Saul that if he fled he would save himself; but if he would accept God's judgment and find his death in battle, his sins would be forgiven and he would join Samuel in afterlife (Lev. R. 26:7). After his death, God told the angels of his admiration for Saul's final courageous act in going into war "knowing that he will lose his life, yet he took his sons with him, and cheerfully accepted the punishment ordained" (Tanh. B., Lev. 82).

**In Islam**

The name Tālūt, which is given to Saul in the *Koran* (2:2:48), is an allusion to his exceptional height (cf. 1 Sam. 9:2; 10:23). The form of this name was probably influenced by that of Jālūt (given to *Goliath*) or tābūt (see below). After Mūsā's (i.e., Moses) death, the people of Israel requested of their prophet (his name is not mentioned, but see *Samuel*) that he appoint a king to rule them. However, when Tālūt was designated as king, the people of Israel refused to accept him. The prophet then gave them a sign, that the tābūt (Ethiopian tābōt; Aramaic tebūta; "the Holy Ark") would come to them and in it would be Sakina (Heb. shekhinah, "Divine Presence"). This would be the sign for believers (cf. Sot. 13a). When Tālūt went out to battle with his regiments, he passed by a stream, where he put his men to a trial. Only those who drew water with their hands were found worthy to pursue the campaign against the enemy (cf. the tale in Judg. 7:4–6). In that battle *David* defeated Goliath (Jālūt; Sura 2:247–252). *Muhammad* stops his narrative at this point. In post-Koranic literature the biblical name of Saul b. Kish is known to the commentators, and the descriptions from the Bible and the aggadah are added to the figure of Tālūt, in particular those concerning his attitude toward David and his attempts to kill him, as well as the meeting at En-Dor. Tālūt died in a holy war (*jihād*), after reigning for 40 years.

**In the Arts**

Unlike many other major figures of the Old Testament, Saul was accorded no particular significance in medieval Christian typology; and thus his first important appearance in the literature, art, and music of the West really dates from the Renaissance era. Among the earliest literary treatments of the subject were the Spanish dramatist Vasco Díaz Tanco's Tragedia de Amon y Saul (1552), which has not survived; La Coronazione del Re Saul, one of Giovan Maria Cecchi's realistic biblical plays of the same period; and an anonymous Italian work, La Representazione della distruttione di Saul... (Florence, 1559). In Germany, the Meistersinger Hans Sachs wrote a Tragedia Koenig Sauls (1557). From this time onward the complex and tragic character of Saul attracted countless writers. Two outstanding 16th-century dramas on the theme were written by the French Protestant Jean de la Taille: Saul le Furieux (1572) and La famine ou les Gabéonites (1573). Interest was maintained in the 17th century, beginning with Claude Billard's Saul (1610).

The subject lent itself to more varied treatment in the 18th century. In England, Tragedy of King Saul (London, 1703), a verse play in five acts rejected by the censor, has been attributed to both Joseph Trapp and Roger Boyle. French tragedies entitled Saul were written by the abbé Nadal (1705) and *Voltaire* (1763), the latter's work bearing a characteristic imprint of mockery. An outstanding 18th-century treatment of the subject was the Italian Vittorio Alfieri's tragedy, Saul (1782), which was later translated into English (1815) and, as Aharit Sha'ul, into Hebrew (by M.J. Lebensohn, 1870). An original Hebrew drama published in 1794 was Melukhat Sha'ul, ha-Melekh ha-Rishon al-Yeshurun (Vienna, 1794; often reprinted) by Joseph Tropowitz (= Joseph *Ha-Efrati c. 1770–1804). Saul appears as a tragic hero, torn by guilt, fear, and envy. From the era of Romanticism through the various movements of the 19th century, Saul continued to fascinate poets and dramatists. Lord Byron's "Saul" poems (in: Hebrew Melodies, 1815) include the scene in which the king meets the witch of En-Dor and another poem on the theme was written by Robert *Browning* (1845). There were two French tragedies – Alphonse de Lamartine's Saul (1818) and another of the same title by Alexandre Soumet (1822). There were also several tragedies in German, notably Karl Ferdinand Gutzkow's Koenig Saul (1839), Karl *Beck's* Saul (1841), and Friedrich Rueckert's Saul und David (1843). The Cuban writer Gertrudis Gómez de Avellaneda (Peregrina), who lived mostly in Spain, was the author of a powerful drama, Saül (1849), and in Romania Alexandru Macedonski and Cincinat Pavelescu wrote the tragedy, Saul (1893).

Literary exploitation of the subject has been heightened in the 20th century by the use of psychological motivation.
Works written before World War I include two poems by
Rainer Maria Rilke, "Saul unter den Propheten" and "Samuels
Erscheinung vor Saul." These were followed by dramas by the
Japanese Torahiko Khorii (1918), the Norwegian Jon Norstog
(Kong Saul, 1920), and the South African (Afrikaans) writer
W. Pienaar (1928). André Gide's Saul, a five-act drama writ-
ten in the 1890s but published nearly 30 years later in 1922,
portrays Saul as an old man consumed by the gratification of
his lusts. The ill-fated monarch also plays a central part in
the English writer D.H. Lawrence's play, David (1926), which
was originally entitled "Saul."

A large proportion of modern works on the subject have,
however, been written by Jews, and of these most are dra-
mas. Plays written before World War II include Max Donkh-
in's Russian Saul (1902), dramas by Lion *Feuchtwanger and
Karl *Wolfskehl (1905), Israel *Querido's Dutch tragedy, Saul
en David (1914), and Tsar Saul (1937), a drama in Russian by
Naum Isaakovich Shimkin. Postwar works include dramas by
Abel Jacob *Herzberg (Sauls dood, 1959) and Max Zweig
(1961), and Charles Israel's novel, Rizpah (1961). Some of the
most interesting dramatic treatments of the Saul theme have
been written in Hebrew and Yiddish. Among those in Yid-
ish are Shaul (1922) by Hirsh Brill of Kovno (1891–1925);
Der Melekh Shaul (1948), published in Poland by Israel Ash-
endorf; a dramatic sketch (in Lieder un Poemen, 1949) by the
Mexican Yiddish writer Nahum Pozner; and Leizer Treister's
Der Pastekh-Kenig ("The Shepherd King," 1955). In Hebrew,
there are poems by Tchernikowsky and dramas by M. Laze-
bnik (1932) and by Max *Brod and Shin *Shalom (Sha'ul Me-
lekh Yisrael, 1944), the latter taking the form of a Schicksal-
stragoedie (tragedy of fate).

Saul's noble son Jonathan has also inspired writers from
the 17th century onward. Two early Italian tragedies, both en-
titled Gionata, were published by Bartolommeo Torretoletti
Veronese (1624) and the Jesuit Saverio Bettinelli (1747); and a
"Tragedy of Jonathan" was one of the plays of the 16th-
century Spanish author Vasco Diaz Tanco which has been lost.
In the 20th century, treatments include "Yonatan," a poem based
on i Sam. 14:1–43, by the Hebrew poetess *Rachel; Arthur W.
Spaulding's novel, A Man of Valor (1908); and S.B. Rosner's
German drama, Jonatan und Tirzah (1912). Saul's daughter
Michal, who became David's wife, has also figured in literary
works of the 19th and 20th centuries. Hebrew treatments in-
clude J.L. *Gordon's epic Ahavat David u-Mikhail (1857) and
Aharon *Ashman's three-act drama, Mikhal Bat Shaul (1941;
Michal the Daughter of Saul, 1957); and there have also been
dramas by the Italian Adolfo Isia (Micol, 1898), the Yiddish
writer David *Pinski (Mikhhol, 1918), and the Dutch author
J.D. van Calcar (1937). Morris Raphael *Cohen published King
Saul's Daughter (1952), a biblical dialogue.

In art, scenes from the life of Saul are found in the third-
century wall paintings from the synagogue of Dura *Europos,
on the fourth-century door at St. Ambrogio, Milan, and in
a variety of Carolingian and medieval manuscript illumina-
tions. Representation of the subject during the Middle Ages
was almost entirely confined to illuminated manuscripts.
The main episodes to have been treated are Saul anointed
by Samuel (1 Sam. 10:1), David playing the harp before
Saul (1 Sam. 16:23), Saul casting a spear at David (1 Sam. 19:10),
David finding Saul in the cave (1 Sam. 24:4), and Saul visiting
the witch of En-Dor (1 Sam. 28:8). Although David playing
the harp before Saul was the subject of a copper engraving
by Lucas Van Leyden (1494–1533), it was mainly *Rembrandt
who depicted Saul with a degree of pathos and drama. There
is an early painting by Rembrandt in the Staedel Institute, Frank-
furt, and a later one in the Hague Museum. In the latter work
the angry king, moved to tears, hides his face behind a curtain
while David is absorbed in his music. There is a modern treat-
ment of the theme by the Dutch artist Jozef *Israëls. In recent
times, the lives of David and Saul were treated in a series of 41
liothraphs by the Austrian artist Oskar Kokoschka.

In Music
Earlier musical compositions on the theme include a choral
work by Heinrich Schuetz, Saul (for three choirs and instru-
ments); the second of Kuhnau's "Biblical Sonatas" (1700), Der
von David mittelst der Musik curierte Saul, for keyboard instru-
ment; and Bonononi's anthem for the funeral of the Duke
of Marlborough, When Saul was King over Israel (1722). Oc-
casionally Jonathan is the main figure, as in Caldara's orato-
rio, Gionata (1728; libretto by Zeno). Handel's oratorio, Saul
(text by Charles Jennens), was first performed at the King's
Theater, London, in January 1739 and the "Death March in
Saul" has entered the repertoire of standard funeral marches.
Another English work was Samuel Arnold's The Care of Saul
(oratorio, 1767). A. Salieri left an unfinished oratorio, Saulle;
and other works of the period were operas, oratorios, and
melodramas by Seyfried (1758), Rolle (1776), and a pastiche,
Saul, for which the music was "mixed" by Kalkbrenner and
Lachnith from works by Mozart, Haydn, Cimarosa, and Paisi-
ellò (Paris, 1803). At the same time, Gossec also composed an
oratorio, Saul. The Italian Jewish composer Michele *Bolaffi
composed a opera, Saul, which was not staged. Byron's three
poems on Saul (in Hebrew Melodies) were first set to music
by Isaac *Nathan. There were later settings by many others,
including Mousorgsky's King Saul (a translation by Kozlov
of Warriors and Chiefs), song with piano, later arranged for
orchestral accompaniment by Glazunov and for tenor or alto,
mixed choir, piano or orchestra, trumpet, and side drum by
Lazare *Saminsky (1929). Two other 19th-century composi-
tions were Rossini's oratorio, Saul (1834), and a successful
opera by Antonio Buzzi (1843). Among musical treatments
of the late 19th century were Ferdinand Hiller's oratorio, Saul
(1857); another by Hubert Parry, King Saul (1894); and Georges
Enesco's cantata, La vision de Saul (1896). Works of the 20th
century include Carl Nielsen's oratorio-like opera, Saul og
David (1902); Arthur Honegger's incidental music to André
Gide's Säül (1922); an orchestral work, Saul en David by Jo-
hann Wägenaar (1862–1941); and the opera Saul by Hermann
Reutter, with libretto after A. Lernet-Holenia (1928; revised

82
ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
1947). For Max Zweig's drama, Saul, in a Hebrew translation by J. Horowitz, performed by Habimah in 1949, the incidental music was written by Emanuel *Amiran. Three later compositions are The Lamentation of Saul by Norman dello Joio (1954) for baritone and orchestra, based on D.H. Lawrence's play, David; Josef *Tal's concert-opera, Saul at Endor (première at Ramat Gan, 1955); and Mario *Castelnuovo-Tedesco's opera, Saul (1960).

See also: *David in the Arts; *Samuel in the Arts.

SAUL BEN ANAN (c. 800), sectarian leader, son of *Anan b. David. He succeeded his father as head of the sect of Ananites about the end of the eighth century. In *Karaites, Saul is listed second in the hereditary line of Karaita "princes." Nothing is known of his activity, except for his reported interpretation of the Seventh Commandment in the sense that adultery covers all illicit intimacy. He remained in this princely office by his son *Josiah.

[Leon Nemoy]

SAULCY, LOUIS FELICIEN DE JOSEPH CAIGNART (1807–1880), French numismatist, Orientalist, and archaeologist. Saulcy was born in Lille, France. He traveled in Syria and Palestine in 1850–51, 1863, and 1869, discovering the Shihān Stele and recognizing that the mound of Jericho was the site of an ancient city. In 1863 he cleared the Tombs of the Kings in Jerusalem, mistaking them for the Tombs of the House of David. This was the first archaeological excavation in the Holy Land. Although his archaeological work is now considered somewhat slipshod and amateurish, Saulcy was of some importance as a numismatist: he was the first to catalogue the coins of Palestine, noting many which have since disappeared, and left after him an extensive coin collection.

His works include Numismatique des Croisades (1847); Recherches sur la numismatique judaïque (1854); Numismatique de la Terre Sainte (1874); Voyage autour de la Mer Morte (2 vols., 1853); Voyage en Terre Sainte (2 vols., 1865; including his account of the excavation of the Tombs of the Kings in vol. 1, 345–410; vol. 2, 188–9, 309–11); and Carnets de voyage en Orient, ed. by F. Bassan (1955).

[Michael Avi-Yonah]

SAVANNAH, city in Georgia, U.S., third oldest Jewish community in North America. A seaport, the city had a total population of 129,808, according to the 2004 U.S. Census estimates, of whom 3,500 were Jews in 2005.

On July 11, 1733, 41 Jews arrived aboard a ship chartered by London's Sephardi synagogue. Despite objections from London's Georgia trustees, the Jews won the legal right to settle and own property. Original settlers included Dr. Samuel Nunes, who rescued the colonists from an epidemic; his son-in-law Abraham de Lyon, who introduced viticulture; Abra-aminis, who became supplier for the militia of the founder of Georgia, James Edward Oglethorpe; and Benjamin Sheftall, interpreter for German Salzburger settlers. Sheftall and his son Levi kept the community's vital records from 1733 to 1809. In 1740, the Jewish population reached 100, but economic failure in Georgia, coupled with Spanish raids from Florida, gradually dispersed the community until only the Minis and Sheftall families remained.

Although ritual appurtenances had been brought from England, it was not until 1735 that Ashkenazim and Sephardim could agree to organize the congregation Mickve Israel, which conducted worship in a small hut. A ritual bath was opened in 1738. Oglethorpe granted the original settlers a cemetery, but when the town grew around it, Mordecai Sheftall, by deed of August 2, 1773, donated to Mickve Israel a portion of his farm when the town grew around it, Mordecai Sheftall, by deed of August 2, 1773, donated to Mickve Israel a portion of his farm plot for "the use of a burial ground and for erecting a synagogue." The cemetery was used until 1850. The remainder of the property was sold, and the proceeds were used in 1902 to build a school and social center, the Mordecai Sheftall Memorial, which was replaced in 1957. Fluctuation in population occasionally forced the abandonment of public worship. In 1790, Mickve Israel obtained a charter from the governor, but 30 years elapsed before Jacob de la Motta (1789–1845) prevailed upon his coreligionists to build a synagogue, which was dedicated in 1820 and consecrated the following year. In 1829, it burned down (though its Torah — brought to Savannah in 1733 — and ark were saved) and was replaced with a brick edifice that remained in use until 1878, when the present Gothic structure was dedicated. Mickve Israel preserved Sephardi traditions until 1903, when it joined the Reform movement. It is the oldest reform congregation in the United States, using an organ for services in 1820, having mixed seating in 1860, as well as having a mixed choir populated by both sexes and even non-Jews. In 2005, 300 families were members of the congregation.

Prussian-Polish immigrants of the 1850s organized what became the Orthodox Congregation B'ni B'rith Jacob. The
Eastern European immigration to the United States enlarged its membership. Organized under the leadership of Rabbi Jacob Rosenfeld after he was dismissed as rabbi at Mickve Israel over a dispute dealing with kashrut, the congregation built its first synagogue on the northeast corner of State and Montgomery Streets in 1866 and held services on Friday evenings and Saturday mornings. A flourishing membership prompted the community to build a new, larger synagogue with a Hebrew school on the same site in 1909; at its peak, the school boasted an enrollment of 200 students. The congregation built a third structure, in 1962, on Abercorn Street and held its first services there on Passover. In 2005, 425 families belonged to the congregation.

Congregation Agudath Achim, formed as an Orthodox group in 1901, was incorporated in 1903 and became Conservative in 1945 with the dedication of its third synagogue. The original congregation numbered 46 families; in 2005, it had 270 families. In the early 1980s, it formed a joint school with Mickve Israel, which was renamed in 1991 as the Shalom School, and in 2005 enrolled 100 students. Shalom School is a supplemental religious school that meets two weekday afternoons and on Sunday. The congregation celebrated its centennial year in 2003 and as part of that celebration, rededicated a Holocaust Torah from Kamenice, Czechoslovakia.

Established in 2002, the Hillel chapter at Savannah College of Art and Design had approximately 25 members in 2005.

The Savannah B’nai Brith was chartered in 1860. Savannah Jewry also developed many charitable societies: Hebrew Benevolent (1851); Ladies Hebrew Benevolent (1851); Harmony Club (1865); Orphan Aid (1880), affiliated with the B’nai B’rith Atlanta Orphanage; Hebra Gemiluth Hessed (1888); Young Woman’s Aid (1906); Women’s Circle (1908); Hadasah (1918). A Young Men’s Hebrew Association (1874) lasted several generations. These and other agencies came under the aegis of the Jewish Education Alliance (chartered 1912). Designed as an Americanizing center, the Alliance developed into a center of Jewish activities; it moved to larger premises in the 1950s. In 1990, the Alliance founded the Rambam Day School for students aged 2 through eighth grade; 2005 enrollment was 122 students. The Savannah Jewish Council, founded in 1943 and now known as the Savannah Jewish Federation, conducts the annual United Jewish Appeal campaign as well as social and educational programs.

The Savannah Jewish Archives are housed in the Georgia Historical Society in Savannah, Georgia. Established in 1994, they are administered by the Savannah Jewish Federation and are one of two Jewish archives in the state. The second is located in Atlanta.

Jews have always played an active role in all facets of Savannah life, with many holding public office. Most notable was Herman Myers (1847–1909), who served as mayor from 1895 to 1897 and from 1899 to 1907, and Kenneth Sadler, city council member (2003– ). Other notable community members include Kenneth Rubin, awarded the Distinguished Service Cross in the Vietnam War in 1967, and William Wexler, international president of B’nai Brith from 1965 to 1971.

[Malcolm H. Stern / David Weinstock (2nd ed.)]

SAVERNE (Ger. Zabern), town in the department of Bas-Rhin, in eastern France. The presence of Jews in Saverne is confirmed from at least 1334. The community suffered during the ’Armleder persecutions in 1338. At the time of the ’Black Death in 1349 there was only one Jewish family in Saverne, which was compelled to leave the town. By 1622 there were a few Jews again living in Saverne; in 1716, there were seven families and 21 in 1784. The community numbered over 300 persons at the close of the 19th century. It maintained a Jewish primary school (founded in 1857). A new synagogue was opened in 1898. Its population subsequently declined. During World War II, 30 Jews of Saverne died during deportation. The community numbered about 100 in 1970.

[Bernhard Blumenkranz]

SAVILLE, VICTOR (1897–1979), British film director and producer. Saville was born in Birmingham, the son of an Orthodox fine arts dealer, Gabriel Salberg. He was educated at King Edward v1 School in Birmingham and was wounded in World War I. From 1919 Saville was a partner with Michael Balcon, another leading film producer, in Victory Motion Pictures, and from the late 1920s was one of Britain’s leading filmmakers, producing or directing such movies as South Riding (1937), Goodbye Mr. Chips (1939), Dr. Jekyll and Mr. Hyde (1941), and Green Dolphin Street (1947). In the 1950s he changed direction, producing several of Mickey Spillane’s “hard-boiled” thrillers such as I, The Jury (1953). Saville’s wife, Phoebe, was the niece of the prominent British film distributor and producer Charles M. Woolf (1879–1942). His son, Sir John Woolf (1913–1999), was also a major British film producer, responsible for such works as Lawrence Olivier’s Shakespearean epic Henry V (1944) and, after the war, Moulin Rouge (1953), Richard III (1955), Room At the Top (1959), and the film version of the musical Oliver! (1968), which won six Oscars. Woolf was also the cofounder of Anglia Television and was responsible for the series Tales of the Unexpected (1979–89) and other drama productions. He was knighted in 1975.

[William D. Rubinstein (2nd ed.)]
SAVITT, RICHARD (Dick; 1927– ), U.S. tennis player, the only Jew ever to win Wimbledon. Pete Sampras excepted; member of the International Tennis Hall of Fame. Born in Bayonne, New Jersey, Savitt taught himself tennis as a 14-year-old, and reached the finals of the New Jersey Boys Championship in 1944. His family moved to El Paso, Texas, where Savitt was co-captain of his high school basketball team and became an all-Texas player. At the same time, he ranked eighth nationally among junior tennis players and was the 17th ranked amateur overall. Savitt joined the Navy in 1945 and played on its basketball team, completing his tour of duty the following year. Cornell University offered him a basketball scholarship, but Savitt decided, after injuries cut short his hoop career, to concentrate on tennis. In 1947, he was national ranked 26th, and two years later he moved up to 16th. In 1950, Savitt won the Eastern Intercollegiate, East Clay Court, and New York State tournaments, and without the benefit of coaching he reached the semifinals of the U.S. Championship at Forest Hills. He then won the Australian Open, defeating the three top Aussies – John Bromwich, Frank Sedgman, and Ken McGregor – and on July 6, 1951, Savitt won the All-England championship at Wimbledon, defeating McGregor 6–4, 6–4, 6–4. After the tournament, Savitt and Herb Flam were named to the U.S. Davis Cup team, the first time that Jewish players ever made the squad. But inexplicably – and despite his being clearly the best American player at that time, even making the cover of Time magazine on August 27, 1951 – Savitt was passed over for the Davis Cup final against the Australian team, a controversial decision that was discussed by sports writers all over the world. The following year, Savitt was so upset at being snubbed that he announced he would retire from competitive tennis following the 1952 U.S. National Indoor Championships, which he won. He returned to tennis on a part-time basis in 1956, and won the 1958 and 1961 U.S. National Indoor Championships, making him the first to win three times. In 1961, Savitt won the singles and doubles (with Mike Franks) gold medals at the Maccabiah Games, which began a lifetime commitment to Israeli tennis. In 1981, he and his son, Robert, won the U.S. father and son doubles title. Savitt was ranked six times in the U.S. Top Ten between 1950 and 1959 (No. 2 in 1951), and four times in the World Top Ten between 1951 and 1957 (No. 2 in 1951). He was elected to the International Tennis Hall of Fame in 1976.

Savora, Savoraim (Aram. סָבוֹרָא, סָבוֹרָא). Babylonian scholars between the “amoraim and the “geonim. Very little is known of this period, the principal sources being Sherira (Iggeret Sherira Ga’on, ed. by B.M. Lewin (1921), 67–71, 95–99), who drew upon early geonic archival material; Abraham ibn Daud (Ibn Daud, Tradition, 43–55); and some additional geonic fragments such as Seder Tannaim ve-Amoraim, etc. Traditionally, the amoraic phase ends with the death of Ravina (86a) in 499 C.E. According to Seder Tannaim ve-Amoraim (ed. by Grossberg, 105–11) and Sherira, the last of the savoraim were Gada (Gazai) and Simuna, who died in 540, while Ibn Daud extends the savoraic period for five generations, from Mar Joseph (502) until the death of Sheshna in 689. It would appear that the transition from one period to another was so gradual that only in retrospect could the geonom somewhat arbitrarily fix terminal dates to the savoraic period, and different reckonings were adduced. Sherira, Ibn Daud, and Seder Tannaim ve-Amoraim all give lists of savoraim, but the textual state of these lists is poor, and only a few major personalities can be definitely identified, e.g., Abba (Rava) Joseph (Yose), Aha b. Huna, Ahaib of Be-Hatim, Geviha of Argiza (Git. 7a), Mordecai, Pappias, Rabbah of Rov, and Samuel b. Abbahu (Rabbah; Ḥul. 59b).

The term savoraim, first found in geonic sources, and based on savora in the Jerusalem Talmud, Kiddushin 2, 63d (where it means a scholar competent to render decisions) implies those who give private subjective judgments rather than authoritative ones. According to Sherira, after Ravina there was no horaiḥ (independent decision based on interpretation of the Mishnah), but the savoraim “rendered decisions similar to horaiḥ, and gave explanations of all that had been left unsettled.” This implies that they added nothing essentially new to the Talmud, merely adding explanations which in some ways were similar to amoraic decisions and coming to practical conclusions on undecided issues (hence the savoraic terminology of ve-hilkhetu (“and the ruling is”), pashit (“he resolved it”), mistabra (“it is reasonable”), etc. Sherira adds that a number of savoraic decisions (of Ena and Simuna) and indeed complete arguments (e.g., Kid. 2a–3b) have been included in the Talmud. Analysis of these additions often demonstrates a close similarity in style and argumentation to that of the later amoraim, again underscoring the problem of pinpointing the moment of transition between the two periods.

According to (some versions of) Seder Tannaim va-Amoraim, the savoraim did no more than “merely determine the arrangement of the Talmud text in all its chapters.” Evidently, this represents but one (the earliest?) phase of savoraic activity, during which the redaction of the Talmud, begun in the late amoraic period, was completed. The savoraim completed the ordering of the Talmud, clarified certain unsettled halakhic decisions, introduced additional discussions and explanations of existing texts, and inserted brief technical guide phrases to facilitate study of the texts. Recent tendencies have been to increase the extent of their contribution to the Talmud, though this is still a subject of considerable controversy.

[Savoy (Fr. Savoie), formerly a county and then a duchy, reunited with France in 1866, includes the present departments]
of Savoie and Haute-Savoie in S.E. France. A Jewish inscription of 688 from *Narbonne, mentioning a Jew named Sapaudus, may be the first evidence of the presence of Jews in that region. Formal proofs of Jewish settlement in Savoy date only from the second half of the 13th century (the assertion that Jews were in Savoy after the expulsion from France in 1182 has no documentary basis, not even in Emek ha-Bakha of *Joseph ha-Kohen). Jews were to be found not only in Chambéry, but particularly in the following places (not including those that belonged to Savoy only temporarily): Aiguebelle, Montmélian, Rumilly, Yenne, Saint-Genix. Noteworthy is the place name “Lac des Juifs” near Chambéry. In almost all these places the Jews suffered bloody persecution in 1348 on the charge of spreading the “Black Death; even those who survived were robbed of all their goods.

The expulsion of the Jews from France in 1394 led to their emigrating into Savoy again. In 1417 the first investigation of Jewish books was entrusted to two converted Jews. Moreover, for many years the dukes had favored proselytizing activities, guaranteeing comfortable subsidies to new Christians. This was probably the persecution that Joseph ha-Kohen noted in 1394 and which he attributed to the preaching of Vicente “Ferrer; in fact, he notes having seen “a book of tattered appearance because it was one of those which the Jews, in those unhappy days, kept hidden at the bottom of wells until their torment was over.” There was a fresh investigation into Jewish books in 1426 (this time directed by the inquisitor Ponce Feugerons), which resulted in the Jews pledging to delete the prohibited passages he had listed. The statutes promulgated by Duke Amadeus in 1430 reflect this general hostility by forcing the Jews to reside in a separate quarter (“Judeazimus”) and wear a distinctive badge, and forbidding them to mingle with Christians on Christian festivals. There was another investigation of Jewish books in 1466, as well as of a series of other accusations – committing murders, practicing abortions, magic, and sorcery, and publicly insulting the duke. The investigation of books was again entrusted to a converted Jew, the physician Louis of Nice, a man whom the duke had favored for more than 20 years. Criminal proceedings were abandoned, however, despite numerous witnesses for the prosecution, when the Jews paid a very heavy fine.

From then on there is no further evidence of the presence of Jews in Savoy, except at Chambéry; it is therefore probable that their departure – voluntary or forced – resulted from these criminal proceedings. Joseph ha-Kohen dates the banishment of the Jews from Savoy to 1461. The existence of the Jewish community of Chambéry up to the beginning of the 16th century was recorded by the Jewish scholar Gershom *Soncino, who lived there at the time. There were a number of important Jewish doctors, some of them converts.

[Bernhard Blumenkranz]

**SAVAN**

**Bendery,** hasidic dynasty. MOSES ZEVI SAVAN (d. 1838), son of R. SIMEON SOLOMON, held rabbinical posts in Berdichev, Savran (in Podolia), and Tishlinitz. From boyhood he excluded from his life all activities that might distract him from his studies. Savran strongly opposed the hasidic followers of Nahman of *Bratslav, whom he denounced as “sinners,” and warned his followers not to intermarry with them. Azriel Dov, a disciple of Moses Zevi, collected the discourses of his master, which were published under the title *Likutei Shoshanim* (1872). His son SIMEON SOLOMON (d. 1848) and his grandson DAVID (d. 1913), son-in-law of Nahum of *Chernobybl, continued the dynasty. The second son of Simeon Solomon, ARYELE IBN OF BENDERY (d. 1854) founded a dynasty which produced four hasidic leaders, SIMEON SOLOMON (d. 1864), ISAAC (d. 1911), son-in-law of Joseph of Radzivillow, SIMEON SOLOMON (d. 1924), and JOSEPH (b. 1882).

**BIBLIOGRAPHY:** I. Berger, *Ezer Atarot* (1910), 82–84.

[Harry Rabinowicz]

**SAVYON** ( Heb. סַבְיוֹן), urban settlement, with municipal council status, in central Israel, south of Petah Tikvah. Founded on the initiative of immigrants from South Africa as a garden suburb, it had a population of 1,430 in 1968 and 2,470 in 2002, occupying an area of 1.1 sq. mi. (2.9 sq. km.). Savyon is an upper-middle-class community, with most residents commuting to work in Tel Aviv or elsewhere in the area. The settlement’s name is that of the *senecio* plant common in the region.

[Efraïm Orni / Shaked Gilboa (2nd ed.)]

**SAWICKI** (Reisler), JERZY (1908–1967), Polish lawyer who was a prosecuting counsel at the Polish War Crimes Tribunal and a member of the Polish delegation at the Nuremberg Trials. Born in Skole, Galicia, into an Orthodox Jewish family, Sawicki graduated and practiced as a lawyer. He went into hiding during the Nazi occupation. After the war he rapidly acquired distinction as a prosecutor in war crimes trials and other important cases. Subsequently he became professor of criminal law at Warsaw University and a member of several international institutions concerned with the reform of criminal law.

Sawicki was the author of numerous works on criminal law, genocide, and the trial of Nazi war criminals, including *Prawo norymberskie* (“The Nuremberg Judgment,” 1948), with T. Cyprian, and *Przed polskim prokuratororem* (“Before the Polish Prosecutor,” 1958). After 1945 he was a founder and an active member of the “Polish Friends of the Hebrew University.”

**SAXON, DAVID STEPHEN** (1920–2005), U.S. educator and physicist. Saxon was born in St. Paul, Minnesota. He attended
SAXONY (Ger. Sachsen), state in Germany, formerly an electorate and kingdom. Information about the first Jewish settlers in Saxony dates back to the tenth century. During the rule of the German emperor Otto I (936–973), Jews lived in the towns of "Magdeburg, "Halle, "Erfurt, and "Merseburg, among other places. Up to the end of the 12th century they were able to earn their living, primarily as merchants, without interference. In the 13th century, following persecutions during the Crusades and accusations of ritual murder (see "blood libel"), the position of the Jews deteriorated. According to the medieval German law code Sachsenspiegel (1220–1235; see "Germany"), Jews were not allowed to carry arms, build new synagogues, or keep Christian servants, nor could they hold any public office. They were not allowed to appear as witnesses or call Christian witnesses, and were thus entirely at the court's mercy. However, since the economic activities of the Jews were of interest to the margraves of Saxony, many of these restrictions were abolished as early as the middle of the 13th century and were replaced by more liberal regulations. Jews were allowed to have their tribunals and to be landowners. As may be gathered from the responsa literature and from the medieval chronicles, there was already a busy community life in those early days. The communities were collectively responsible to the authorities. A meeting at Erfurt in 1391 was attended by rabbis and community elders. Among famous talmudic scholars who resided in the communities of Saxony were "Asher b. Jehiel (the "Rosh") and "Isaac b. Moses of Vienna ("Or Zaru'a"). During the "Rindfleisch persecutions (1298), Jews in the southern cities of Saxony were affected. The large-scale persecutions and expulsions from German cities at the time of the "Black Death (1348–50) also affected the communities in Saxony.

Community life in most cities was renewed, but on a diminished scale. Moneylending had become the main occupation of the Jews, who were hard hit by the debt cancellations of Emperor Wenceslaus (1378–1400). The 15th century witnessed the expulsion of Jews from most of the cities – Erfurt (1458), Halle (1493), Aschersleben (1494), and Torgau (1432). The expulsions of "Meissen (1430), and of the 16th century from Merseburg (1514). "Zwickau, Plauen, and "Muehlhausen (1541–43) were more strictly enforced, due to the militant anti-Jewish spirit of the Protestant Reformation in Saxony. However, a few Jews were tolerated – such as Meister Baruch, the physician of the rulers Ernst (1464–85) and Albert II (1485–1500) – who, together with his two sons, received special permission to engage in moneylending. In the 16th century there were complaints about the economic activity of foreign Jews, who were mainly attracted by the Saxon silver mines. The government and the municipal authorities took steps to ensure that the presence of Jews at the Leipzig fairs should be temporary and limited to the duration of the fairs.

The first Jew to receive a "Schutzbrief (see "Schutzjuden" in Saxony was Behrend "Lehmann, the "Court Jew of Elector Frederick Augustus I (the Strong; 1694–1733); in 1710 Lehmann preferred to remain in "Halberstadt, while his cousin, Jonas Meyer, and his son settled as his agents in "Dresden, the capital. In 1723 they maintained households, numbering 30 and 40 respectively, to the annoyance of the burghers. The Jewish community of "Leipzig was founded in 1710 by Gerd Levi, court purveyor to the mint.

Frederick Augustus II (1733–63) in the year of his accession abolished the "Leibzoll for the Jews passing through Saxony on business. His prime minister, Heinrich von Bruehl, was very partial to court Jews fulfilling various economic functions (military contractors, purveyors to the mint, etc.). As Frederick Augustus was, like his father, king of Poland as well, many of the court Jews originated in Poland. The "Kaskele (Kaskele) family, court Jews, bankers, and financiers, originally from Poland, played a central economic role in Saxony in the late 18th and 19th centuries.

Frederick Augustus III (1768–1827), elector and first king of Saxony, promulgated a restrictive "Judenordnung (regulation concerning Jews) in 1772. Saxon Jewry thus remained numerically static throughout the following decades; an increase during the Napoleonic wars proved to be only temporary. The number of Jews in Dresden in 1800 (1,031) was halved by 1815. In 1832 there were 852 Jews in the kingdom, 712 in Dresden and 140 in Leipzig. The struggle for emancipation was led by Bernhard "Beer and W.T. "Krug. In 1834 Jews were allowed to learn trades and live outside Dresden proper, while Jewish affairs were placed under the supervision of the ministry of religion and education. Further slight improvements were effected in 1837 and 1838. In 1840 the Jewish "oath was amended, partially due to the urging of the "Landrabbiner Zacharias "Frankel (1836–1854). Full equality
was obtained during the 1848 Revolution, only to be repealed in 1851. It was not until 1868 and 1869 that Jews attained full legal equality. The number of Jews increased slowly from 1,022 in 1849 (0.03% of the total population) to 1,555 in 1861 and 3,346 in 1871 (0.13%). After emancipation their number leaped to 6,616 in 1880 (0.22%), 12,378 in 1900, and 17,587 in 1910 (0.53%). This increase, due in large part to immigration from Austria (Galicia) and Russia (Poland) and rapid industrialization in Saxony, had serious repercussions. Antisemites raised a cry against inundation by Ostjuden, while there was friction within the Jewish communities too. In 1925 there were 23,200 (0.46%, half the German average), with 5,120 in Leipzig, 5,120 in Dresden, and 2,796 in Chemnitz (*Karl-Marx-Stadt*). Rural communities were nonexistent. Anti-Jewish sentiment was expressed in anti-*shehitah laws and the exclusion of Jews from the civil service. The only Jew elected to the Landtag was Emil *Lehmann, leader of the Dresden community. In October 1938 thousands of Polish Jews were expelled; on November 9–10 the synagogues were burned down, and thousands more Jews emigrated after pogroms and arrests. The remainder were deported to concentration camps. After the war new communities arose in Leipzig, Dresden, and Karl-Marx-Stadt (renamed Chemnitz in 1990). In 1945 the three communities had 563 members. The membership declined continuously. They numbered 214 in 1969; 169 in 1976; and 106 in 1989. After 1990 the membership increased due to the immigration of Jews from the former Soviet Union. In 1992 the Association of Jewish Communities in Saxony was founded as an umbrella organization of the communities in Dresden, Leipzig, and Chemnitz. They numbered 232 in 1994 and 2,314 in 2004. The association employs a rabbi who officiates in the three communities.

[Reuven Michael / Larissa Daemmig (2nd ed.)]

**SCAASI, ARNOLD** (1931– ), U.S. fashion designer. Scasasi was born Arnold Isaacs in Montreal, Canada, the son of a local furrier. Although he never graduated from high school, he became a celebrated designer whose custom-made tailored suits and glamorous gowns were worn by movie stars, society matrons, and at least five U.S. first ladies. He changed his last name, but he never denied his heritage, often describing himself as “a Jewish kid from Montreal.” When he was still a teenager, the family moved to Melbourne, Australia, where Arnold fell under the spell of his aunt Ida Wynn, a prominent fundraiser for the Women’s International Zionist Organization, who was equally well known for her chic French wardrobe. His interest in fashion piqued, he returned to Montreal to study design, then moved to Paris and apprenticed to Paquin, a prestigious couture house. He came to New York City in 1953 and began working with Charles James, a brilliant but eccentric designer. Around that time, Isaacs was assigned to create dresses for a series of automobile ads. Someone suggested reversing the spelling of his last name for added glamour and Scasasi was born. As his reputation for bold colors and sculptural shapes spread, he landed a red evening coat on the cover of *Vogue* magazine in December 1955. The following May, he launched a wholesale collection. He won a Coty Fashion Award in 1958 and opened a custom-design business in 1962. His dresses turned up at glittering parties from Manhattan to Los Angeles. In 1969, Barbra *Streisand accepted her Oscar for *Funny Girl* wearing a Scasasi-designed shear pant-suit that created a sensation. Scaasi’s clients have included actress Elizabeth *Taylor, Lauren *Bacall, and Mary Tyler Moore, soprano Joan Sutherland, sculptor Louise *Nevelson, and social doyennes such as Brooke Astor. After already designing clothing for first ladies Mamie Eisenhower, Jacqueline Kennedy, and Lady Bird Johnson, he created a royal blue velvet and satin gown that Barbara Bush wore to her husband’s Inaugural Ball in 1989. It was later donated to the Smithsonian Institution and Mrs. Bush became one of Scasasi’s best clients. He has also designed clothes for her daughter-in-law Laura Bush, another first lady. In 1989, Scasasi introduced a women’s fragrance. Later, to broaden his reach, he stopped doing runway shows and embarked on a series of licensing ventures for products ranging from lower-price dresses to sunglasses.

With writer Bernadine Morris, he produced a book entitled *A Cut Above* in 1996, released to coincide with a retrospective of his work at the New-York Historical Society. In 1997, a decade after the Council of Fashion Designers of America honored him for “creative excellence,” he won the group’s Lifetime Achievement Award. It was presented by Barbara Bush. In 2001, a major exhibition of Scasasi’s work was mounted at Kent State University in Ohio, and the following year, a similar presentation was staged at the Fashion Institute of Technology in New York. A memoir, *Women I Have Dressed (and Undressed)*, was published in 2004.

[Michael S. Teitelbaum (2nd ed.)]

**SCALIGER, JOSEPH JUSTUS** (1540–1609). French scholar and philologist. Scaliger was the tenth child of Julius Caesar Scaliger (Giulio Cesare Della Scala, 1484–1558), who was an outstanding humanist, well known for his controversies with Erasmus and Rabelais. He became a Protestant in 1562, and ten years later fled the Massacre of St. Bartholomew, but returned
to France in 1574. From 1593 until his death he was a professor at the University of Leiden, where the prevailing liberal Calvinism was in harmony with his own views. Holding an unusually tolerant and enlightened attitude toward the Jews, he considered them the best teachers of Hebrew, particularly for students of rabbinic literature. Basing himself on the findings of Elijah *Levita*, he maintained that the Hebrew vowel points were of masoretic origin and that the Zohar was post-talmudic, a stand that was later challenged by Johannes *Buxtorf* (11). Scaliger’s library contained a manuscript translation of the Zohar by *Egidio da Viterbo.*

[Godfrey Edmond Silverman]

### SCANDINAVIAN LITERATURE

The literary culture of the Scandinavian countries dates back about one millennium, the Danish, Faroese, Icelandic, Norwegian, and Swedish languages having developed on separate paths from the original Germanic root from about the ninth century. With rare exceptions, biblical and other Hebraic influences did not make an appearance in works by Danish, Norwegian, and Swedish writers until the Renaissance, and the contribution of Jewish authors began only very much later, from about the middle of the 19th century.

#### Danish Literature

**Biblical and Hebraic influences.** Probably the earliest work of biblical inspiration written by a Dane was the *Hexaëmeron*, a 12-part, 8,000-line neo-Latin poem on the Creation by Anders Suneson (1164–1228), a Danish archbishop who studied in Oxford, Bologna, and Paris. It was not until the Lutheran Reformation in the early 16th century, however, that the impact of the Bible was felt on Danish language and literature. The first complete translation that has survived, the King Christian 11 Bible (1550), a literary monument, was continued of the 19t century.

#### The Image of the Jew.

Perhaps the first writer in Denmark to introduce contemporary Jewish characters in his works was Ludvig Holberg (1684–1754), a pioneer of modern Danish literature. Holberg lived at a time when few Jews resided in Copenhagen, but nevertheless he encountered them during his travels in Germany and Holland. The Jewish types in his comedies are mainly theatrical figures: moneylenders, peddlers, the “Jewish priest” (complete with long beard, caftan, and fur hat); their “Jewish” language was a conglomeration of Danish and German. Nevertheless, Holberg showed a more scientific interest in the Jews, publishing a sympathetic historical study, *Den jødiske historie* (1742). Holger Paulli (b. 1644), who was influenced by pietist expectations, believed in the Jewish return to the Holy Land as a condition for the second coming of Jesus. One of the Christian forerunners of Zionism, he published books calling on the European monarchs to conquer Palestine so that the Jews might regain it as their state. In his novel, *Rigsdaler sedlens Haendelsel* (“Events of a Dollar Note,” 1789–93), Peter Andreas Heiberg projects a mixed image of the Jew, some being only interested in making money; but in *Kina-Farere* (“The Chinese Clippers,” 1792) one Jew is honorable, his virtue promoting the play’s dénouement. The poet Jens Immanuel Baggesen visited the Frankfurt ghetto, and in *Labyrinthen* (“The Labyrinth,” 1792 ff.), a book of travel, he presents a sympathetic picture of Jewish misery in their cramped quarter. Baggesen also wrote a statement warmly supporting Christian Wilhelm von *Dohni’s book in favor of Jewish emancipation. In the early 19th century, Adam Gottlob Oehlenschläger, the “father of modern Danish literature,” describes in his fairy tale play *Aladdin* (1805) a Jew who covets gold and hates Christians; but his *Samson og Dalila* (“Midsommernight’s Play,” 1802) contains idyllic pictures of an old Jewish juggler and a Jewish boy in a market place.

The year 1813 was that of a notorious Jewish literary feud which began when a hack writer, Thomas Thaarup, translated Friedrich Buchholtz’ violently antisemitic German book, “Moses und Jesus.” The preface to this work claimed that “self-
ishness, indolence, and ferocity have been distinctive characteristics of the Jews from their very origin." Its publication gave rise to an uproar, and many writers and public figures in Denmark took sides in the controversy. Significant pleas in favor of the Jews came from poets of note such as Jens Baggesen and Steen Steensen Blicher, the latter maintaining that emancipation might restore dignity to the Jews. Blicher's short story "Jøderne på Hald" ("The Jews of the Mason Hald") portrays two sympathetic Jewish brothers named Lima and a young girl named Sulamith.

During the first half of the 19th century, the "Golden Age" of Danish literature, Jewish characters frequently appeared in Danish works. Thomasine Gyllembourg's short story Jaden ("The Jew," 1836) presents as its hero a "Nathan the Wise" similar to "Lessing's nobleminded Jew. Her son, Johan Ludvig Heiberg, wrote a successful comedy, Kong Solomon og Jørgen Hattemager ("King Solomon and George the Hatter," 1825), in which he wittily portrayed Solomon Goldkalb as a goodnatured, amusing character. Heiberg married a talented actress, Johanne Luise Pätges, whose mother was Jewish. Positive Jewish figures also appeared in the works of Hans Christian Andersen, the author of world-famous children's stories and fairy tales. In his novel Kun en Spillemand ("Only a Fiddler," 1837), the Jewess Naomi is the fiery, passionate heroine, and in Denjødiske Pige ("The Jewish Girl") Sarah remains loyal to her Jewish faith for the sake of her dead mother. Andersen also wrote a touching poem, "Rabbi Meyer." The "Wandering Jew" theme also attracted several Danish poets – Bernhard Severin Ingemann, Frederik Paludan-Müller (Ahaverus, 1854), and Jens Christian Hostrup. The liberal Christian author and scholar Nicolai Frederik Severin Grundtvig wrote some 1,500 religious poems and hymns, many biblical in tone, in which he stresses the importance to world history of "the Hebrew people."

By the beginning of the 20th century, the Danish Jew had acquired a large measure of "naturalization" in drama and fiction. Thus the brothers Carl Edvard and Georg Brandes appeared in Sven Lange's novel, De første kampe (1925), which was mainly concerned with the elder, Georg. A work of greater importance was Nobel prizewinner Henrik Pontoppidan's vast eight-volume novel Lykke-Per ("Lucky Peter," 1898–1904), which, with extraordinary detail and precision, conveyed the author's pessimistic view of contemporary Danish society through the Salomons, a middle-class Copenhagen family. This novel contains a moving description of the learned Aron Israel, whose "soul was as pure as his coat was dirty," and an admiring portrayal of Georg Brandes. Later, Jews also figured in works by Kaj Munk, Poul Borchsenius, Aage Bertelsen, and Sivert Gunst, whose Hr. Menachem og Hans Hus (1950) describes Jewish life in Copenhagen at the beginning of the 19th century. However, most of the 20th-century Danish literature dealing with Jewish themes was produced by Jewish authors.

THE JEWISH CONTRIBUTION. From the mid-19th century, Jews began to play an increasingly important role in Danish literary life. Among the pioneers were the converts Niccolai Abrahams and Henrik *Hertz; the Brandes brothers; and the novelist Meir Aron *Goldschmidt, who frequently returned to Jewish social themes. These were followed by the playwright and novelist Poul Levin; Henri *Nathansen, who also dealt with the problem of Jewish survival in an alien environment; and Louis Levy. During the first three decades of the 20th century, Simon Koch also gained some distinction as a writer of fiction with novels such as Digerteren (1907). Writers best known for their journalism included Herman Bing and Edvard Brandes, two of the three co-founders of the leading newspaper Politiken; Gottlieb Siesbye; Valdemar Koppel; and Peter Nansen, a grandson of Mendel Levin *Nathansen, editor of the Berlingske Tidende, all of whose descendants were, however, converts to Christianity.

The Nazi occupation of Denmark, the famous rescue operation across the Øresund conducted by the Danish resistance, and the deportation of most of the Jews who remained behind were events that left their mark on postwar Danish literature. They inspired a number of books by younger authors, such as Hanne Kaufmann and Ralph Oppenheim, and works by a Polish immigrant writer, Pinhas "Welner, which were translated into Yiddish and enjoyed considerable success in Danish editions.

Swedish Literature
BIBLICAL AND HEbraIC InfluENCES. In Sweden, as in other Christian lands, the Reformation inspired the first complete Swedish translation of the Old and New Testaments, which had previously been undertaken only in part, and from the Vulgate. The lead was taken by two Lutheran churchmen, Olaus Petri (1493–1552) and Laurentius Andreae (c. 1475–1552) who, having no knowledge of Hebrew, based their work on Martin "Luther's German version. With minor stylistic changes this Gustavus I ("Gustaf Vasa") Bible remained Sweden's authorized version until 1917, when a new translation received royal sanction. Olaus Petri was also the reputed author of an early play on an apocryphal theme, Tobiae Commedia (1550), the earliest known drama in Swedish to have survived. Another early 16th-century Reformation drama was the anonymous Holofernes och Judit. The portion of the Old Testament whose influence is most evident in Swedish culture is the Book of Psalms. Many hymns of the Swedish church are no more than paraphrases of Psalms, retaining much of the Bible's phraseology. The most important poetical work of biblical inspiration written in the 17th century was the epic Guds Werck och Hwila ("God's Work and Rest," 1725) by Bishop Haquin Spelgel, a gigantic composition using the Creation story as a basis and inspired by the French epic of Du Bartas. Two other biblical epics of the same era were Bibliske Werlden ("The Biblical World," ed. by J. Reenstierna, 1687) by Samuel Columbus, a series of biblical tales from the Creation to the Last Judgment; and Biblisk Quinnospegel ("The Biblical
Women’s Mirror”) by Olaf Kolmodin, a succession of monologues by famous women of the Bible. A very different use of the Bible was made by scholars of the patriotic “Gothic” trend, who set out to prove the antiquity and glory of Swedish history. This movement reached its peak in the Atlantis of Olaus Rudbeck, who adapted the stories of the Flood and the Tower of Babel to fit his assertions.

The 18th-century Enlightenment in Sweden brought with it a very subjective paraphrase of the Genesis and Eden story. Although his works did not influence the poetess Hedvig Scholander, who wrote biblical material in his construction of the spiritual world; one of his works, De cultu et amore Dei (1745), is a very subjective paraphrase of the Genesis and Eden story. Linnaeus (Carl von Linné), the architect of botanical systems and a keen-sighted traveler, was a believer in universal Divine retribution. He expounded his creed in Nemesis Divina, in which he elaborated the biblical doctrine that sons are punished for their father's sins, and even quoted a talmudic parable on the theme. Among those who had a sense for the sublime in biblical poetry the Orientalist Johan Adam Tingstädtus, who, in preparation for a complete new edition of the Bible, published translations from the original sources of some lyrical portions (Song of Songs, part of Psalms, etc.). Although his works did not influence the poetess Hedvig Charlotta Nordenflycht’s ode based on a passage from Exodus, he may well have inspired Johan Henric Kellgren’s Den nya skapelsen eller inbillningsens värld (“The New Creation, or the World of Imagination,” 1789), the first major romantic poem in Swedish. Of the later romantic poets, two were especially inspired by the Bible. Archbishop Johan Olof Wallin was the principal editor of Svenska psalmboken (1819) and its major contributor; his hymns won him the nickname of “The Northern Harp of David.” Erik Johan Stagnelius created a personal religious mythology from biblical, Platonic, gnostic, and Manichean elements, and was perhaps also influenced by Milton’s Paradise Lost, which by then had appeared in Swedish translation. He published a volume of lyrics, Lilja i Saron (“Lilies of Sharon,” 1821).

Toward the middle of the 19th century, the liberal author Abraham Viktor Rydberg wrote a pamphlet against Lutheran orthodoxy, Bibelns lära om Kristus (1862), which shows knowledge of the messianic ideas of the Second Temple period and a profound respect and love for the Scriptures, although he did not accept their sanctity. In his cantata for the Uppsala University Jubilee, the desert wanderings of the Israelites symbolize mankind’s striving. An amusing product of amateur Bible research may later be seen in a story about Moses, Jahves eld (“Jehovah’s Fire,” 1918) written by the skeptic Hjalmar Emil Fredrik Söderberg.

The works of the outstanding writer of the naturalist generation, August Strindberg, were steeped in the language of the Bible. He eagerly exploited the Bible to develop his favorite themes: the struggle between the sexes (the Fall, Samson and Delilah); Man’s struggle with God, (one part of his Legender (1888) is titled “Jacob Wrestles”); and the class struggle (his autobiographical Tjänstegivnans son (“The Bondwoman’s Son,” 1886), alludes to the story of Ishmael and Hagar). Toward the end of his life, Strindberg studied Hebrew and speculated about its origin and relationship to other languages. In the late 19th century, the new romantic trend was also attracted to the Old Testament. Gustaf Fröding wrote exquisite poems on biblical themes; others of a naively rustic type, ranging from the humorous to the sublime, were composed by Erik Axel Karlfelt and Selma Lagerlöf, who undertook a cruise to Egypt and Palestine and published Jerusalem (2 vols., 1901–02), a novel about a group of Swedish peasants, who, prompted by religious yearnings, emigrate to the Holy Land. Selma Lagerlöf’s work had been anticipated by Fredrika Bremer’s account of a visit to Palestine in about 1861.

From the early 20th century, fewer biblical themes appeared in Swedish literature and, on the whole, New Testament subjects were preferred. The works of the Nobel prizewinner Pär Fabian Lagerkvist exemplify, in various novels loosely connected with the Christian gospels (Barabbas, 1950; Sibyllan, 1956, Mariamne, 1967), the non-believer’s conflict with a faith he cannot share. However, the Book of Job was the inspiration for Karin Boye’s unfinished cantata, De sju dödssynderna (“The Seven Deadly Sins,” 1941), which deals with the problem of theodicy. The figure of Job also attracted the Finno-Swedish poet Rabbe Arnfinn Enckell, author of a poetic dialogue between Job and a star. An interesting work dealing with the same issues was Kains memoaren (Eng., Testament of Cain, 1967) by Lars Johan Victor Gyllensten, which displays a knowledge not only of the Bible, but also of some tales of midrashic origin. Another 20th-century work was Olov Hartmann’s modern miracle play, Profet och timmerman (“Prophet and Timber-Cutter,” 1954). Biblical themes come into strong focus in the works of artist Bo Beskow (1906–1989), who in his old age turned his attention from the canvas and instead clothed various biblical scenes in words rather than color. He published Och vattnet stod på jorden (“And the Waters Covered the Earth”) in 1978, followed in 1980 by Rösten är Jakobs (“The Voice of Jacob”) and Isbel in 1982. His last work, published in 1984, was Solmannen (“The Sun Man”), which was a story about Samson.

Marianne Fredriksson (1927– ) wrote several novels based on the stories of Genesis: Evas bok (“The Book of Eva”) in 1980, Kains bok (“The Book of Cain”) in 1981, and Noreas saga (“Norea’s Saga”) in 1986, all of them showing a remarkable gift for bringing biblical characters to life in contemporary
times. Fredriksson also wrote *Simon och ekarna* ("Simon and the Oaks") in 1985, a postwar story set in Göteborg, about an adopted Jewish boy who knows nothing about his origins.

**The image of the Jew.** In older Swedish literature, the figure of the Jew was entirely based on traditional Christian clichéd, as, for example, in *Passionstankar*, a poem about the Passion by Jacob Frese (1690–1729). The early Jewish settlers attracted scant notice in Sweden at the end of the 18th century, though an eloquent speech in parliament, favoring their admission, was made by pastor Anders Chydenius. The first important literary portrayal of a Jew occurs in *Drottningens jubelmonycke* ("The Queen’s Diadem," 1834) by Carl Jonas Love Almqvist, whose romantic novel includes a Jewish character of the traditionally negative type. A very different treatment was given to the Jewish family in Viktor Rydberg’s *Den siste attenaren* ("The Last Athenian," 1839), a historical novel set in the era of Julian the Apostate, which violently criticizes the traditional idealization of the early Christians. The characters in this work include a young Jewess who is seduced by a heathen, and a tolerant young rabbi who, by a curious anachronism, is said to be an expert in the Kabbalah. Rydberg was also continually fascinated by the wandering Jew, who appears in several of his poems (e.g., *Prometetus och Ahasverus*, 1877). Other Swedish authors who developed the same motif were Strindberg, Gustaf Fröding, Oscar Ivar *Levertin, Per Hallström* (*Ahasverus*, 1908), Bo Hjalmar Bergman, Sigfrid Lindström, Pär Lagerkvist, (Ahasverus död, 1960) and, especially, Gösta Oswald, whose *Christinalegender* ("Legends about Christina") also deals with this theme.

A literary interest in the Jews was reawakened in the 1880s under the impact of rising antisemitism in Germany and of the radical movements of the time. The Jew was seen either as the cynical, rootless radical or as the “herald of a new age.” The eminent Danish critic Georg Brandes became the prototype for both. In his play *John Ulfstjerna* (1907), Tor Harald Hedberg portrayed the revolutionary Jew as an intriguier; yet many Jewish intellectuals with more moderate and patriotic views scarcely accorded with this image. Strindberg, as always, was ambivalent, presenting totally contrasting pictures. In his novel *Röda rummet* ("The Red Room," 1879) and the pamphlet *Det nya riket* ("The New Kingdom," 1882) he wittily caricatured unsympathetic Jews; but elsewhere, as in the chronicle play *Gustav Vasa* (1899), he introduced a venerable Jewish patriarch from Lübeck, a complete anachronism in 16th-century Sweden. The playwright and novelist Hjalmar Frederik Elgérus (*The Legionaries*) by Per-Olov Enquist, which also deals with the negative Swedish policies toward Jewish refugees after the war.

Eyvind Johnson (1900–1976) is remarkable for being a non-Jewish Swede with deep and accurate insight into the tribulations faced by the decimated Jewish survivors of Hitler’s war of annihilation. His *Molnen over Metapontion* ("The Clouds over Metapontion," 1957) and *Favel, ensam* ("Favel All Alone," 1968) reflect acute understanding of the situation faced by the remnants of Jewish Europe.

Goat-Land"). It is a warm, humorously related story about two Jewish boys from Berlin who are sent by their Swedish mother to their grandfather in Sweden to escape the hardships in the aftermath of World War 1. Jan Gehlin (1922– ) served for many years as chair of the Swedish Authors’ Association. The son of famous artist Esther Henriques, and thus a scion of one of the oldest Jewish families in Scandinavia, Gehlin wrote two partly autobiographical novels, Enskilt områdè (“Private Property,” 1949) and Gränstrakter (“Borderlands,” 1953), to counter the evils of Nazism and persecution of Jews. Paul Andersson (1930–1976) published a collection of poems in 1956 entitled Judiska motiv (“Jewish Subjects”), the first Swede after Ragnar Josephson to publish verse on a Jewish theme. Per Ahlmark (1939– ), a former member of the Swedish Riksdag or Parliament, also led the Swedish Liberal Party for three years and served as Sweden’s deputy prime minister. Fired by a deep interest in Jewish subjects, he published his first collection of poems, Flykter (“Escapes”) in 1985. In 1991 he worked together with Lilian Edström on the publication of Yehuda Amichai’s Hebrew poems in Swedish, titled Bombens diameter (“The Bomb’s Diameter”), followed in 1993 by Det eviga hatet: Om nynazism, anti-semitism och Radio Islam (“The Eternal Hatred: On Neo-Nazism, Antisemitism and Radio Islam”). Following a host of publications during the 1990s, Per Ahlmark released Det är demokratin, dambom! (“It’s Democracy, Stupid!”) in 2004, a scathing criticism of the world’s indifference to the plight of the Iraqi people under Saddam Hussein and the lessons to be learned from not speaking out for democracy and freedom.

Viveka Heyman / Ilya Meyer (2nd ed.)

THE JEWISH CONTRIBUTION. Jews began to play an important part in Sweden’s literary life only from the last decades of the 19th century, although after the 1850s Rosa Warrens was active as a poetess and translator. The major creative author was Oskar Ivar Lervitin, some of whose verse and prose works dealt with themes of Jewish interest (Kung Salomo och Morolf, 1905). His contemporary, the popular novelist Sophie Elkan, accompanied Selma Lagerlöf on her tour of the Near East and published an account entitled Drömmen om Österlandet (“The Dream of the Eastern Land,” 1904). However, the major Jewish contribution was really in literary history and criticism, a field in which Johan Henrik Emil Schück, Karl Johan Warburg, and Martin Lam in all excelled. An important contribution was also made by members of the eminent Josephson family, headed by the painter Ernst Abraham Josephson who published some poems and who appears in a novel by Strindberg. The art historian Ragnar Josephson (1891–1966) was a successful dramatist and, in his early period, published Judiska dikter (1916; revised 1943), a collection of poems on Jewish themes. Together with Sweden’s chief rabbi Marcus Ehrenpreis, he also issued translations of modern Hebrew verse. His nephew, the actor Erland Josephson (1923– ), starred in plays by the refugee dramatist Peter Weiss, and wrote a variety of works, in some of which – notably his novel En Berättelse om herr Silberstein (“The Tale of Mr. Silberstein,” 1957) and the play Benjamín (1963) – the problem of antisemitism is analyzed. His preoccupation with this theme had been anticipated by his uncle, Ragnar Josephson, who, during the 1930s, published Den Dubbla Loyaliteten (“The Dual Loyalty”), a booklet describing the predicament of Swedish Jews who were eyewitnesses to the heartless policy of driving hapless Jewish refugees back to certain death in Nazi Germany.

A more authentic note was struck by Jewish authors who were not entirely Swedish by birth or upbringing. Chief Rabbi Ehrenpreis, who had once been prominent in modern Hebrew literature, later wrote books in Swedish on the intellectual history of the Jews, and also published some interesting autobiographical works. Zenia Larsson (1922– ), a Polish Jewess who survived the Holocaust and later reached Sweden, wrote three autobiographical novels, which describe the Lodz ghetto, her liberation from a Nazi concentration camp, and her first experiences in her adopted country. Her most famous works are Skuggor vid träbron (“Shadows by the Wooden Bridge,” 1961), Lång är gryningen (“The Long Dawn,” 1961), Livet till motes (“Accepting Life,” 1962), Åter till Babel (“A Return to Babel,” 1964), and Vägen hem (“The Return Home,” 1975). Other works on similar subjects were published by two other refugees who nevertheless retained their original links with German culture – the playwright Peter Weiss and the Nobel prize-winning poet Nelly Sachs. There are contemporary Swedish-born authors who also write in a similar vein, such as Susanne Gottfarb (1948– ), Kjell Grape (1939– ), and Peter Mosskin (1945– ), all of whom turn the spotlight inward and retrace their Jewish heritage, in some cases a heritage that was almost lost through the events of modern European history.

A new generation of Jewish writers has emerged in Sweden. Most, but not all, trace their roots in Sweden back three or four generations, yet their writings often strongly reflect the events of the first half of the last century. Tomas Böhm (1945– ) was born in Stockholm to parents who fled there from Austria. Among his many books are novels with a Jewish motif, such as Fjällturen (“A Trip in the Swedish Alps,” 1980) and Adamsäpplen och huvudvärk (“Adam’s Apples and Headaches,” 1993). Jonathan Freud (1943– ) lives in Israel, where he works as a guide, journalist, teacher, and lecturer. He writes books that link history with current events and is often critical of the poor standard of journalism and analysis practiced by reporters based in Jerusalem who, he feels, provide media coverage simply to justify their presence, remarkably devoid of historical reflection or factual basis. His first book, Från Jerusalem (“From Jerusalem”), was published in 1986 and was followed a year later by a short novel, Palestinsk oskuld (“Palestinian Innocence”). Judarnas Konung (“King of the Jews”), which dealt with King Herod, appeared in 1988, and in 1991 he published En judisk bosättare (“A Jewish Settler”).

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18 93
Anita Goldman (1953– ) is a journalist who lived for a while in Israel. She started her writing career with Allt genast ("Everything Right Now," 1978), followed by a number of novels with a feminist theme: Våra bibliska mödrar ("Our Biblical Mothers") and Den sista kvinnan från Ur ("The Last Woman of Ur"), both published in 1988. Stenarnas döttrar ("Daughters of the Stones") appeared in 1989. In 1994 she published Orden som brändes ("The Burning Words"), a novel about *Beryurah, represented in the Talmud as a woman of learning and wife of R. *Meir. Marianne Goldman (1951– ) is a dramatist whose works have appeared on stage, TV, and on the big screen. Together with Kerstin Klein-Persky, she wrote Kaos är granne med Finkelstein ("Chaos Lives Next Door to Finkelstein," 1990), and she also wrote the film script for Freud flyttar hemifrån ("Freud Moves Away from Home"). In her Dansa samba med mig ("Come Dance the Samba with Me," 1994) she took up several key issues affecting second-generation children – the children of Holocaust survivors.

Salomon Schulan (1947– ) focuses largely on Yiddish literature. He has translated the works of Abraham *Sutzkever, publishing his Grönt akvarium ("Green Aquarium," 1986). Garva med Goldstein ("Laugh with Goldstein," 1988) is a compilation of Jewish humor. His Natten läser stjärnor ("The Night Reads the Stars," 1990), and she also wrote the film script for Freud flyttar hemifrån ("Freud Moves Away from Home"). In her Dansa samba med mig ("Come Dance the Samba with Me," 1994) she took up several key issues affecting second-generation children – the children of Holocaust survivors.

Another writer with an immense impact who also recounts a dark past is Hedi Fried (1924– ). Born in Romania and brought to Sweden as a survivor of Hitler's death camps, she studied at university and graduated as a psychologist. However, it was only later that she finally decided to document her past, with the publication of her English-language memoir Fragments of Life (1990), translated later into Swedish as Skärvarv av ett liv. The sequel, Livet tillbaka ("Back to Life," 1995) deals with her personal road back to life in her new country, Sweden.

Nelly Sachs (1891–1970) was rescued and brought to Sweden through the good offices of Nobel Prize-winning Swedish authoress Selma Lagerlöf. She wrote poetry in German about the terrible fate of her people, and her work was translated into Swedish by a number of famous lyricists. In 1966 she shared the Nobel Prize in literature with Israeli author S.Y. *Agnon. Her play Eli. Ett Mysteriespel om Israelis lidande ("Eli: A Mystery Play about Israel's Suffering," 1966) has been rarer than might have been expected, even in comparison with Denmark and Sweden, perhaps as a result of Norway’s greater cultural isolation. In 1881, Karl Herschell, the first Jew in Bergen, wrote a book about the Pentateuch; and, in the 20th century, Haakon B. Mahr published the novel Jonas (1935) and Haldis Moren Vesaas included a poem about Esther in her verse collection Tung tids tale ("Talk of Hard Times," 1945). In general, biblical motifs characterize the description of contemporary Jewish figures in works by modern Norwegian writers.

**Norwegian Literature**

**Biblical Influences.** The first impact of the Bible on Norwegian culture has been traced to the Sjöorn, a medieval Icelandic paraphrase of parts of the Old Testament. However, after the Reformation, the Danish translation of the Bible held sway well into the 20th century. As elsewhere, biblical terms and phrases enriched the literary Danish (Riksmål) spoken in educated circles and the purer Norwegian (Landsmål) that only gained ground much later. Although biblical themes have appeared in the works of Norwegian writers, they have been rarer than might have been expected, even in comparison with Denmark and Sweden, perhaps as a result of Norway’s greater cultural isolation. In 1881, Karl Herschell, the first Jew in Bergen, wrote a book about the Pentateuch; and, in the 20th century, Haakon B. Mahr published the novel Jonas (1935) and Haldis Moren Vesaas included a poem about Esther in her verse collection Tung tids tale ("Talk of Hard Times," 1945). In general, biblical motifs characterize the description of contemporary Jewish figures in works by modern Norwegian writers.

**The Image of the Jew.** Even before Jews first settled in the country, they provided occasional stereotypes for Norwegian authors, beginning with Ludwig Holberg, born in Bergen, but who made his name in Denmark (see above). A Jewish moneylender appears in Aktierne eller de Rige (1788), a play by Claus Fasting, and in one of the early works of the poet Henrik Arnold Wergeland. One of the articles in the Norwegian Constitution of 1814 prohibited Jewish settlement, a decree which aroused the indignant opposition of several liberal writers, headed by Wergeland who, in his pamphlets and in verse collections such as the epic Jøden ("The Jew," 1842) and Jødiden ("The Jewess," 1844), was a tireless champion of the proscribed Jews, demanding that they be granted both permission to enter Norway and equal rights with the rest of the population. In this stand Wergeland had been anticipated by Andreas Munch (1811–1884), who wrote the poem Jøderne ("The Jews," 1836), and he was followed by the writers of two plays: Adolph Rosenkilde in En Jøde i Mandal ("A Jew in Mandal," 1849) and Christian Rasmus Hansson in Den første jøde ("The First Jew," 1852).

An amendment to the constitution, favoring Jewish admission, was passed in 1852. Later in the 19th century, the same sympathetic approach was displayed by Alexander Lange Kieland in his Menesker og dyr ("Men and Animals," 1891), which describes the Jews of Salonika, and in John Paulsen’s Jødiden ("The Jewess," 1892), a novel influenced by Wergeland, which deals with the problems of mixed marriage and conversion in Denmark, and which includes some characters...
who display the effects of political antisemitism in contemporary Germany. In his poem *Juleaften* ("Christmas Eve," 1842) Wergeland had portrayed a Jewish peddler in northern Sweden. By the beginning of the 20th century, some Jewish immigrants endeavored to make a living by peddling their wares at railroad and construction sites, at country fairs, and in fishing villages. Jews of this type are referred to by several novelists, notably Johan Bojer in *Den siste viking* (1921; "Last of the Vikings," 1921); Knut Hamsun in *Landstrykere* ("The Vagabonds," 1927); and Nils. A. Ytreberg in *Svarta Björn* ("The Black Bear," 1954). Hamsun had a pathological hatred of the British and Americans and, during World War II, became a prominent quisling. The Jewish peddler also appears in *Hebraeren sön* ("Son of the Hebrew," 1911), a work by Matti Aikio, a writer of Norwegian-Lapp origin. In his novel *A Jew*, abandoned by his Polish refugee parents, is raised by Christian foster parents in Finmark (northern Norway) and becomes an artist. He is an eyewitness to a Polish pogrom, and Aikio shows how he is torn between the conflicting Jewish and Christian traditions. The same kind of restlessness finally moves a Galician-born Danish Jew to emigrate to Erez Israel in "Efrain ben Ruben," one of the stories in Sigurd Christiansen's collection *Idyllen om Sander* ("The Idyll of Sander," 1928). During the 1930s, Helge Krok showed in her play *Underveis* ("En Route," 1931) how, despite radical views in politics and religion, one of her characters experiences a revival of ancestral Jewish feeling.

A number of Norwegian novels have dealt with the Nazi persecution of Norwegian Jewry and with the deportation of the Jews or their flight to Sweden, and often discuss more general aspects of the Jewish fate and of antisemitism. They include Axel Kielland's *Lev farlig* ("Live Dangerously," 1943); Aimee Sommerfelt's *Ung front* ("Young Front," 1945) and *Miriam* (1950; Eng. 1963); and Odd Bang-Hansen's *Ringer rundt brunnen* ("Rings around the Well," 1946). The last writer also raises the issue of Norwegian-Jewish relations in his *I denne natt* ("On this Night," 1947). The postwar problem of the Jewish refugee figures in the works of several other writers, including Jens Ingvald Bjøorneboe, who deals with the question in *Jonas* (1955) and who also describes former Wehrmacht soldiers on a holiday tour of Italy in his play *Fugleleskerne* ("The Bird Fanciers," 1966). Among those who dealt with Nazi treatment of the German Jews was Roland August Fangen, in his *En lysets Engel* ("An Angel of Light," 1945). A writer who frequently used Jewish themes was Ragnar Kvam, the author of several articles about Israel, including one about the *Exodus* affair of 1947 and the German camp to which the ship's unfortunate passengers were returned. This last subject also appears in Kvam's novel, *Alle vil hjem* ("Everyone Wants to Go Home," 1950), which depicts antisemitic agitation during the years of World War II, the Nazi deportations, and the unfriendly reception that awaited a survivor when he reached his village, all of which he believed precipitated Jewish immigration to Israel. The problem of antisemitism recurs in Kvam's later novel, *Den store stillheten* ("The Great Silence," 1946), and it also dominates *Kjærlighetsstien* ("The Path of Love," 1946), by Johan Borgen, who discussed the widespread phenomenon of antisemitism in newspaper articles. A Jewish artist, Miriam, makes several appearances in a trilogy by Borgen (*Lillelord, De mørke skogene*, *Vi har ham nu*, 1955–57) and a Jewish concentration camp survivor figures in another of his novels, *Blätting* ("The Blue Peak," 1964). Finn Alnaes also introduces a Jewish war victim in his *Koloss* (1963).

Jewish suffering in Norway during the Nazi occupation also inspired several poems of the postwar era. Such works were written by Inger Hagerup, in *Den Syvende natt* ("The Seventh Night," 1947); Halldis Moren Vesaas; Andreas Graven (jøden, 1943); and Olav Dalgard, in *Gjennom mørket* ("Through the Darkness," 1945). Other Norwegian poems on themes connected with the Holocaust were Leif S. Rode's *Barnemordet i Betlehem* ("The Massacre of the Infants in Bethlehem," 1945); Carl Frederik Prytz's *Ghetto* (1960), on the Warsaw Jewish revolt; and Georg Johannessen's *Jødsk partisansang* ("Jewish Partisan Song") from the collection *Nye dikt* ("New Poems," 1966). From 1945 poems about the Jewish plight were published in the Norwegian press, as were others on the State of Israel's battle for survival in May 1948. Though much discussed in Norway, Israel has mainly attracted more popular writers, such as the editor Victor Mogens, author of *Folket som ikke vil da* (1954), and Kare Holt, who wrote a tale for juveniles, *Rømlingen Oskar og Maria fra Hulesjøen* ("Oscar and Maria the Refugees of Lake Huleh," 1959). In 1982 Sigurd Senje published *Ekko fra Skriktjernen* 1942–47 ("Ecco from the Lake of Screams"), a documentary novel based on the "Feldman Case" of 1942–47). The Feldmans were a Jewish couple murdered by Norwegian border runners who were supposed to help them get to Sweden in 1942. The two border runners admitted to the murders in 1947 but were not convicted. This tragic episode was also made into a film. Many of the accounts about Jews in the Holocaust are documentary. Jahn Otto Johansen wrote *Det hendte også her* ("It Also Happened Here," 1984), an account of the Norwegian Holocaust. Per Ole Johansen wrote *Oss selv nærmest: Norge og jødene 1941–1943* ("Closest to Ourselves: Norway and the Jews 1941–43," 1984), an account of antisemitism in the Norwegian police and courts. Kristian Ottosen, a Norwegian historian, wrote an account of the deportation of Norwegian Jews during World War II: *I slik en natt* ("On a Night Such as This," 1994). Karoline Frogner, a Norwegian film producer and author, published the book and produced the film *Mørketid: kvinner møte med nazism* ("Time of Darkness: Women's Encounter with Nazism," 1995). There are interviews with several women who survived the Ravensbrueck concentration camp, among them four Jewish women. Ragnar Ulstein wrote *Jadar på flukt* ("Jews on the Run," 1995); Veibjorn Selbekk's *Jødehat på norskt: fra eidsvolls mennene til Boot boys* ("The Norwegian Hatred of Jews: From the Men at Eidsvoll to Boot Boys," 2001), was an account of Norwegian attitudes to the Jews through the ages. The internationally known Norwegian author Lars Saabye Christensen briefly describes a Jewish girl and her family as they are arrested in their home in Oslo in his epic novel *Halvbøren* ("The
Halbrother,” 2001), where he describes life in Oslo during and after the war through four generations.

In 2003 Einhart Lorentz published Veien mot Holocaust (“The Road to the Holocaust”), a chronological account of the stages that led to the mass deportations and murder of about six million Jews, and Espen Seby wrote Kathe, altid vært I Norge (“Kathe Always Stayed in Norway”), where he follows the fortunes of the 15-year-old Jewish schoolgirl Kathe Lasnik and her family, who were deported and murdered in Auschwitz in 1942.

THE JEWISH CONTRIBUTION. In a country with a Jewish community as small as that in Norway, the number of Jewish writers has naturally been small. Two authors who wrote books after World War II were Elsa Dickman, whose novel Korsveien (“The Crossroad,” 1945) first appeared in Sweden, and Eva Scheer, whose Vi bygger i sand (“We Build on Sand,” 1948) traces the history of a Jewish family from its settlement in Norway until the Nazi deportations. Israel provides the theme for two other books by Eva Scheer: Vi møttes i Jerusalem (“We Met in Jerusalem,” 1951) and Israel, døbbelt løftets land (“Israel, Land of the Twofold Covenant,” 1967). Another novelist, Torborg Nedreas, the great-granddaughter of Karl Herschell, portrays Jewish members of her family in Musikk fra en blå brønn (“Music from a Blue Well,” 1960); in the title story of her collection Bak skapet står øken (“Behind the Cupboard there is an Ax,” 1945) she touched on the subject of German antisemitism. An outstanding figure in Norway’s postwar cultural life, the refugee publisher and author Max *Tau promoted the translation and publication of works by several Israel writers and displayed his attachment to the Jewish heritage in his novels and autobiography. Øystein Wingaard Wolf (1958– ) is one of few Norwegian writers with a Jewish background to have published books in the 1980s. He has written several collections of poems and novels. Ingen kan forklare ordet “fred” (“No One Can Explain the Word ‘Peace’”), a journey through the East European world in words, music and photographs (1987), is a collection of poems and short stories from eastern Europe translated into Norwegian. The novel Dodi Ashers død (“The Death of Dodi Asher,” 1986) won a prize.

The author Mona Levin wrote the biography of her father, the Norwegian Jewish pianist Robert Levin: Med livet i hendene (“With Life in my Hands,” 1983).

SCEPTER (Heb. mehoqeq, matṭeh, shevet, sharvit), a staff symbolic of royal authority, originally conceived as power to strike down enemies (Ezek. 19:14; Ps. 110:2). Thus the Bible calls a king “scepter” (Gen. 49:10) or “scepter-bearer” (Amos 1:5, 8), while God, as king of kings, wields a scepter (Isa. 30:31). The Persian Ahasuerus extends a golden scepter to a persona grata (Esth. 4:11). Two main types of scepters are pictured in Near Eastern sculptures and reliefs:

(a) a long staff with an ornamental head (mainly in Egypt and Iran), and
(b) a short-handled battle mace (mainly in Assyria). The latter symbolizes royal military power (cf. Num. 24:17).

[Oskar Mendelsohn / Lynn C. Feinberg (2nd ed.)]

SCHAALMAN, HERMAN E. (1916– ), Reform rabbi. Schaalman was born in Munich, Germany, where his father – a veteran of World War I, having fought in the Battle of Verdun – was a professor of mathematics and physics and a cantor at an orphanage. His mother came from a rabbinic family. Herman was a graduate of the Maximillian Gymnasium (1935) and was but the second boy in the Liberal Gemeinde to read a rabbinical course. He studied privately and entered the Liehranstalt fuer die Wissenschat des Judentums in 1935, when German universities were closed to Jews. After World War II he was offered a scholarship to Hebrew Union College (1935–41) and was ordained in 1941. He studied at the University of Cincinnati, receiving both his
B.A. and his M.A. (1937). He was also awarded an honorary degree of doctor of divinity from Hebrew Union College–Jewish Institute of Religion in 1966.

He served as rabbi of Temple Judah in Cedar Rapids, Iowa (1941–49), taught at nearby Coe College and Cornell College, and became director of the Chicago Federation of the Union of American Hebrew Congregations between 1949 and 1951. Under his leadership the Olin-Sang Ruby Union Institute was established and he was its first director. Olin-Sang-Ruby is a camp and retreat center that serves children and adults in Oconomowoc, Wisconsin. Despite his desperate need for the $15,000 down payment for a $63,000 purchase, Schaalmans returned a $5,000 check he had received from a Chicago area gangster who had been affiliated with Al Capone and who ran a string of brothels. He received the funds elsewhere. As a regional director, he helped found four congregations in the Chicago area in the post-war boom. Schaalmans came to Emanuel Congregation of Chicago in 1955. In 2006 it had more than 900 families as members.

Schaalmans served on the board of directors of the Jewish Federation of Metropolitan Chicago. He served as chair of the Advisory Committee of the American Jewish Committee and was president of the Central Conference of American Rabbis (1981–83); he also served as chairman of the Ethics Committee, the Committee of Patrilineal Decent, and the Mixed Marriage Committee of the CCAR.

Schaalmans was active in Chicago civic and cultural activities and was an early pioneer in interfaith work. The Chicago Archdiocesan awarded him a Larueant in Ecumenicism in 1995.

He published articles primarily in the field of theology in various journals and was co-editor of a book, Preaching Biblical Texts. He continued to teach throughout his rabbinate. Schaalmans held the Jewish Chautauqua Society resident lectureship at the Garrett Evangelical Theological Seminary, Evanston, and the Chicago Theological Seminary.

In recognition of a career devoted to the service of others, he was cited as one of the outstanding foreign-born citizens of Chicago by the Immigrants' Service League. He was inducted into the Hall of Fame of the Jewish Community Centers.

Schaalmans was president of the Chicago Board of Rabbis and of the Jewish Council on Urban Affairs. He was a longtime member of the Education Committee of National Holocaust Council.

As he reached the much honored stage of four score years, the honors for the life he led started pouring in. In September 1999, the Jewish Federation of Metropolitan Chicago bestowed on him its award, the Julius Rosenwald Medallion. In June 2000, the Catholic Theological Union at Chicago conferred on him an honorary doctorate in ministry. In October 2000, the Chicago Theological Seminary selected Rabbi Schaalman to receive their prestigious Graham Taylor Award and announced the establishment of the Rabbi Herman E. Schaalman Chair in Jewish Studies in recognition of his enormous impact on theological students, pastors, rabbis, and academics through over 14 years of teaching in Jewish-Christian Studies. The Spertus Institute of Judaic Studies granted the rabbi an honorary doctorate in October 2001. In May 2002, Schaalman was the recipient of the highest award given by the state of Illinois, the Lincoln Medal.

In May 2004 he received an honorary doctorate from Garrett – Evangelical Theological Institute at Northwestern University in Evanston, Illinois.

In June 2004 he received the Luminary Senior Award from the City of Chicago and he was inducted into the 2004 Chicago Senior Citizens Hall of Fame.

In September 2004 the Chicago City Park District dedicated a park in the rabbi’s honor.

[Michael Berenbaum (2nd ed.)]
Joe Montana, Tom Seaver, Billy *Crystal, Dave DeBusschere, and others, a biography of Robert F. Kennedy, RFK, and co-authored .44 with Breslin, about Son of Sam serial killer David Berkowitz. Schaap's final book was the autobiographical Flashing Before My Eyes, in which he recounts humorous and poignant memories of a career spanning 50 years. Schaap won the Northeastern Award for Excellence in Broadcast Sports Journalism in 1986, the Women's Sports Foundation Award for Excellence in Covering Women's Sports in 1984, and was the 2002 winner of the Associated Press Sports Editors Red Smith Award. He was the first journalist inducted into the True Heroes of Sport Hall of Fame by the Northeastern University Center for Sport and Society.

[Elliot Wohlgeleiter (2nd ed.)]

SCHACH, FABIUS (1868–1930), one of the first members of the Zionist movement in Germany. Born in Wexna, Lithuania, Schach studied at yeshivot and went to Riga and then Berlin, where he studied at the university. There he made the acquaintance of Max *Bodenheimer, who brought him to Cologne as a Hebrew teacher (1893). Together with Bodenheimer and David Wollfsohn, he founded a Jewish national society that formed the nucleus of the German Zionist Federation. Schach participated in the First Zionist Congress and helped to draw up the *Basel Program. Afterward he fell out with Theodor *Herzl and his associates and spent the following years in Karlsruhe and Berlin. During World War I he worked in Hamburg as the editor of newspapers and journals, including those which opposed Zionism. During his Zionist period he was one of the foremost propagandists of the Zionist cause and a prolific writer, especially in German (but also in Hebrew) on Zionism, Judaism, and the Hebrew and Yiddish languages. Among his works is Volk-oder Salonjudentum (1893). His sister MIRIAM (1867–1956) was a pioneer of political Zionism in France. She left her home in Lithuania in 1879, completed her studies at the Sorbonne in Paris, and taught the liberal arts and languages at various high schools in France. She played an important role, together with Max *Nordau, Alexander *Marmorek, and Bernard *Lazar, in putting Zionist ideas across to the French. She also helped to found the French Zionist newspaper, L'Echo Sioniste (published from 1900). During the last years of her life, she lived in Haifa. A Hebrew version by K.A. Bertini of her memoirs of the beginnings of the Zionist movement in France, titled Asher Ittam Hithallakhti, was published in 1951.

SCHACH, LEONARD LAZARUS (1918–1996), theatrical director and producer. Schach was born in Cape Town and early on showed an interest in the theater by serving as president of the amateur University Dramatic Society in 1939–42. In 1947–48 he undertook a world survey of national subsidized theater on behalf of the South African Department of Adult Education, resulting in the establishment of the National Theater Organization in 1948.

From 1948 to 1964 he directed over 200 productions in South Africa, including those of his own professional theater company (the Cockpit Players, later Leonard Schach Productions), founded in 1951.

Schach emigrated in 1965 to Israel, where he was invited to join the Cameri Theater as “resident guest director.” In addition he directed for Habimah, the Haifa Municipal Theater, Zavit, Bimot, Giora Godick Productions, the Israel Philharmonic Orchestra and the Israel Chamber Ensemble Orchestra. He also directed plays and operas in England, the United States, Italy, and Belgium, and made the film Cry in the Wind in Greece.

Schach was the recipient of many awards, including the 1960 Cape Tercentenarian Award of Merit (1960), the Queen of England’s Coronation Medal for services to the English theater (1953), the Drama Critics of Brussels award (for After the Fall, 1966), Israel’s David’s Harp award for best director of the year (Birthday Party, 1968), and the Breytenbach award of South Africa for best director of the year for his production of Equus (1976). He has also been granted the Freedom of the City of Cape Town for his theatrical activity.

[Louis Isaac Rabinowitz]

SCHACHNOWITZ, SELIG (1874–1952), Orthodox journalist and writer. Of Lithuanian origin, Schachnowitz served as cantor of the Swiss-Jewish rural community of Endingen between 1901 and 1908. In 1908 he began his work as editor of the Israelit, Germany’s leading modern Orthodox newspaper, which appeared in Frankfurt am Main. He also taught at the Breuer yeshiva and was a prolific writer. In the main he depicted famous personalities in Jewish history, such as Don Abarbanel of Spain (1937), the leading figure at the time of the mass exodus (1492), Moses Schreiber of Pressburg (1933), Maimonides (1935), and the mystical rabbi Seckel Loew Wormser of Michelstadt (1912). He also wrote about Jewish folkways of Galicia (1910), the Khazars (1920), the Falashas (*Beta Israel) (1923), a proselyte to Judaism in Vilna (repr. 1943), retold the Bible, and wrote a sympathetic description of Erez Israel in 1932, thus attenuating the hard-line anti-Zionist approach of Agudat Israel. In 1938 he managed to receive an immigrant permit for Switzerland, where he visited the many Jewish refugees in the camps. He helped give them the steadfastness to endure the hardship of their life. In 1952 his death in Zurich was widely deplored. Some of his books were translated into Yiddish and English. His retelling of the Bible was reprinted by the Zentralrat der Juden in Deutschland (1970).

[Uri Kaufmann (2nd ed.)]

performed in a battered top hat and a tattered tuxedo with tails, wielding a catcher’s mitt that weighed 25 pounds. Schacht was born on the Lower East Side to Russian immigrants Ida, daughter of a rabbi, and Samuel, son of a prominent farmer and a skilled locksmith, who once made a set of iron doors for the White House for Teddy Roosevelt. Schacht was a pitcher for Commerce High School, but was expelled for accepting $4 to pitch a semi-pro game. He then started his career in 1910 playing for Walton in upstate New York. Schacht played for Cleveland in the outlawed Federal League, and in the International League for Newark and the Jersey City Giants, for whom he pitched to shutouts. Schacht was drafted into the army in World War I before making his Major League debut for the Washington Nationals on September 18, 1919, at the age of 26. At spring training the following year, he met Nick Al- trock, himself a baseball clown, and the two formed a clowning partnership, though they did not like each other and later in their partnership never spoke to each other. A sore arm curtailed Schacht’s career in less than two years, and he retired from playing with a record of 14–10 with a 4.48 ERA in 53 games. He continued as a coach and clown with Altrock, until Schacht left for Boston in 1934, and afterward he performed alone in an act that was part pantomime and part anecdotes. During rain delays he would plop down in a mud puddle with two bats, and pantomime rowing as if he were in a boat. He was also known for staging mock boxing and tennis matches on the field. Schacht performed at 25 World Series and 18 All-Star Games, and by his estimation entertained more than 70 million fans in his nearly five decades as an entertainer. During World War II, Schacht made three trips overseas with the USO, entertaining thousands of troops in Europe, Africa, and Asia. After the war, Schacht gave up touring and opened a restaurant on East 52nd St. in New York. He was the author of Clowning Through Baseball (1941); Al Schacht Dope Book: Diamond Facts, Figures And Fun (1944); G I Had Fun (1945); and My Own Particular Screwball (1955).

[Getzel Kressel]

[Yossi Goldenberg (2nd ed.)]

**SCHACHTER, CARL** (1932– ), U.S. music theorist; the most important practitioner of Schenkerian theory in his generation. Born in Chicago, Schachter studied piano and conducting in New York and focused on theory following his studies with Felix Salzer. Schachter was a professor in the Mannes School of Music, Queens College, the CUNY Graduate Center, and the Juilliard School of Music, and gave lectures and classes all over North America and Europe. Schachter’s profound understanding of theory is best seen in his illuminating commentary on Schenker’s Free Composition (Journal of Music Theory, 1981). He is best known for the textbooks which he coauthored: Counterpoint in Composition (with Felix Salzer, 1969) and Harmony and Voice Leading (with Edward Aldwell, 1978, 1989, 2003). Schachter developed a complementary tool to voice-leading graphs: durational graphs, which indicate the normalized time-span of each event (at a given level). His essays focus on analysis of 18th- and 19th-century music. His most important essays were collected in Unfoldings (1999).

[**SCHACHTER, HERSHEY** (1917– ), U.S. Orthodox. rabbi. Born in Brooklyn, New York, Schachter was ordained by the Rabbi Isaac Elchanan Theological Seminary in 1941. He served as rabbi of Agudath Shalom, Stamford, Conn., in 1940. During World War II, Schachter was a U.S. army chaplain and was the first Jewish chaplain to aid the survivors of Buchenwald. He arrived there on April 12, 1945, with General George Patton’s Third Army.

Going from one barracks to the next, he declared in Yiddish, “Sholom Alechein Yidden, ihr zent frei” (Hello Jews, you are free). He officiated at the first Friday night service after liberation and conducted a seder for the survivors. He established a bevara kadisha (burial society), and acquired a plot of land for a Jewish cemetery, organized a list of Jews in the camp and others who came through, set up a mail service and a package program.

After much discussion, he convinced the military to allow young people in Buchenwald to establish a kibbutz to prepare for life in Palestine. In this he worked with Chaplain Robert Marcus, another Orthodox rabbi. Marcus and Schachter each accompanied transports of Jewish children from Buchenwald to France.

He was appointed rabbi of the Mosholu Jewish Center, New York, in 1946. The neighborhood was amid a large and thriving Jewish community of the Bronx. At its peak more than 1,000 people crowded into the synagogue on the high holidays. His sermons were the topic of discussion. In 1956–57...
Schachter was religious adviser to Jews fleeing from Hungary. He served as president of the Religious Zionists of America and chairman of the Conference of Presidents of Major American Jewish organizations, the first Orthodox rabbi to hold that position. He was able to maintain unity despite vast differences of ideology and politics. One person who worked closely with him, Jerry Goodman of the National Conference on Soviet Jewry, said “he was aware of the power that he had but it never changed him. He never forgot his roots were in the Bronx. And despite his national leadership he stayed in the Bronx and served the Jewish people from that perch.”

As the neighborhood changed and Jews moved out, Rabbi Schachter stayed. By the mid 1990s the synagogue was almost empty even on the High Holidays. The synagogue closed in 2000, not because it lacked for funds – they could have easily be raised – but because there were no Jews. They had left for Riverdale, for Westchester, they were elsewhere.

Rabbi Schachter’s son, Jacob J. Schachter is a prominent Orthodox rabbi who for many years was the rabbi of the Jewish Center in Manhattan’s West Side, a thriving Jewish community.

[Jeanette Friedman (2nd ed.)]

SCHACHTER, JACOB J. (1950– ), U.S. Orthodox rabbi. Schachter was born into a prominent rabbinic family; his father was Rabbi Herschel Schachter who was among the first to enter Buchenwald after liberation and who served as rabbi of the Moshula Jewish Center and as chairman of the Conference of Presidents of Major American Jewish Organizations. Jacob Schachter graduated from Brooklyn College in 1973, summa cum laude and Phi Beta Kappa, winning the Abraham S. Goodhartz Award for Excellence in Judaic Studies. He was ordained at Mesivta Torah Vodaath that same year. He then went to Harvard, where he was a teaching fellow from 1978 to 1980 and from which he received his Ph.D. in Near Eastern Languages in 1981. He became rabbi of the Jewish Center in Manhattan, one of the most prestigious Orthodox congregations in the world, where Rabbis Norman Lamm and Leo Jung had served. Mordecai Kaplan had also been there in the early 20th century during the waning years of his service as an Orthodox rabbi. Under Schachter’s leadership, the synagogue grew from almost 200 to a prominent rabbinic family; his father was Rabbi Herschel Schachter who was among the first to enter Buchenwald after liberation and who served as rabbi of the Moshula Jewish Center and as chairman of the Conference of Presidents of Major American Jewish Organizations. Jacob Schachter graduated from Brooklyn College in 1973, summa cum laude and Phi Beta Kappa, winning the Abraham S. Goodhartz Award for Excellence in Judaic Studies. He was ordained at Mesivta Torah Vodaath that same year. He then went to Harvard, where he was a teaching fellow from 1978 to 1980 and from which he received his Ph.D. in Near Eastern Languages in 1981. He became rabbi of the Jewish Center in Manhattan, one of the most prestigious Orthodox congregations in the world, where Rabbis Norman Lamm and Leo Jung had served. Mordecai Kaplan had also been there in the early 20th century during the waning years of his service as an Orthodox rabbi. Under Schachter’s leadership, the synagogue grew from almost 200 to nearly 600 families – with close to 1,000 participants in services on Sabbath mornings. Among his other activities while at the Jewish Center, he directed Yeshiva University’s Torah u-Madda Project from 1986 to 1997, and was an adjunct assistant professor at the Stern College for Women at Yeshiva University from 1993 to 1999. In 1995, he was awarded the prestigious Daniel Jeremy Silver Fellowship from the department of Near Eastern languages and civilizations, Harvard University. He also served as a member of the faculties of The Wexner Heritage Foundation (from 1992) and The Wexner Foundation (from 1995). He was a member of the editorial boards of the magazines Tradition and Jewish Action, served on the board of governors of the Orthodox Union, and was the founding president of the Council of Orthodox Jewish Organizations of the Upper West Side (1994–2000).

Perhaps tired of the pulpit and seeking to move closer to academic life, he shocked many when he left the Jewish Center to become dean of the newly founded Rabbi Joseph B. Soloveitchik Institute in Boston in 2000. The institute is dedicated to perpetuating the teachings of Rabbi Soloveitchik as a force within the Orthodox community and as a model for all Jews. Guided by the integrity of halakhah, Jewish tradition, and meaningful engagement with general culture, the institute is intended to enhance Jewish study and actively develop Jewish leadership for the contemporary world.

He returned to New York in 2005 to become professor of Jewish History and Thought and Senior Scholar at the Center for the Jewish Future at Yeshiva University. His appointment was seen as a signal by the new president of Yeshiva University that he wanted to reinvigorate the college, and to stress the twin goals of Yeshiva University. As a university professor, Schachter was asked to develop multidisciplinary initiatives in various academic units of the university. The position of Senior Scholar enabled Schachter to play a prominent role in the new center’s development and to shape the Orthodox world for contemporary Orthodox Jews who are sophisticated, intelligent, and rooted professionally and culturally in the secular world while living traditional Jewish lives.

He took up the battle for a different type of synthesis within contemporary Orthodoxy. Writing in the student newspaper, Schachter said: “By ‘synthesis’ we must understand not a co-existence of equals but an integrated system of religious and secular ideas based on the eternal verities of our religion. We begin our career here with the basic postulates of Orthodox Judaism. Then, as we continue our studies, we fit the secular ideas into the religious pattern, thus broadening our understanding and enriching our religious life.”

As a scholar, Schachter was the founding editor of The Torah u-Madda Journal and editor of Reverence, Righteousness and Rahamanut: Essays in Memory of Rabbi Dr. Leo Jung (1992), Jewish Tradition and the Nontraditional Jew (1992), and the award-winning Judaism’s Encounter with Other Cultures: Rejection or Integration? (1997). He was also the co-editor of the Orthodox Union’s Siddur Nechamas Yisrael: The Complete Service for the Period of Bereavement (1995). He was the co-author, with fellow YU Professor Jeffrey Gurrock, of the award-winning A Modern Heretic and a Traditional Community: Mordecai M. Kaplan, Orthodox, and American Judaism, which traces Kaplan’s disillusionment with Orthodoxy while rabbi at the Jewish Center (1996), and author of close to 50 articles and reviews in Hebrew and English.

[Michael Berenbaum (2nd ed.)]

SCHACHTER-SHALOMI, ZALMAN (1924– ), U.S. rabbi and leader of the Jewish Renewal. Schachter-Shalomi was born in Zholkiew, Poland, and educated in Vienna, Austria, at the gymnasiurn Brit Bilu Agudah and Yeshiva Yeshod Ha-Torah. In 1938 he and his family fled to Antwerp, Belgium, to avoid...
Nazi capture, where he had his first contact with Chabad Ha-
sidim. In April 1940 his family was interned in a labor camp 
in Vichy, France. In September 1940 they were freed, and he 
moved to Marseilles, France. In 1947 he received rabbinical 
ordination from Central Yeshiva Tomchei T’nimim (Chabad) 
in Brooklyn, New York. In 1962 he and counterculture guru 
Timothy Leary experimented with LSD at the Vendanta Cen-
ter in Massachusetts. In 1968 he earned a DHL from Hebrew 
Union College in Cincinnati, Ohio. Beginning as a Chabad 
emissary in 1969, he founded B’nei Or (later the alliance for 
Jewish Renewal) and was promoted to full professor at the 
University of Manitoba in Saskatchewan, Canada, where he 
taught from 1969 to 1975, serving both as professor and Hil-
lel director. He taught at Temple University from 1975 to 1987 
and then at the Naropa Institute (later Naropa University) 
from 1995 to 2004.

Reb Zalman, as he became known, was a disciple of the 
sixth Lubavitcher Rebbe and served as one of the first emis-
saries of the seventh rebbe (Menachem Mendel *Schneersohn) 
in the late 1940s. Together with his colleague Rabbi Shlomo 
*Carlebach, Schachter-Shalomi revolutionized American 
Jewry by translating hasidic spirituality into a counter-cul-
tural language.

Dissatisfied with the insular nature of post-war  hasidic 
Judaism yet committed to the hasidic vision he gleaned from 
its texts, he left the formal community of Lubavitch yet trans-
formed hasidic outreach into a non-Orthodox post-halakhic 
Jewish pietyism that was at once universal, highly ritualistic, 
and unabashedly heterodox (some would say heretical). Kab-
balistic and hasidic Judaism served as the groundwork for his 
new Judaism that advocated absorbing other spiritual disci-
plines into itself to enhance a contemplative Judaism for a 
“new age.” He formulated what he called a paradigm shift, 
drawing from the medieval kabbalistic works of Sefer Tera-
nah and Sefer Ha-Peliah (and their Shabbatean and hasidic 
interpreters) that presented a model of changing cosmic eons, 
reflected in historical epochs each of which required a “new 
Torah.”

[Shaull Magid (2nd ed.)]

**SCHACHT PLAN**, Nazi plan to finance Jewish emigration 
from Germany, conceived in the wake of the *Kristallnacht 
by Hjalmar Schacht, minister of economics and president of 
the Reichsbank, and Hans Fishboeck, state secretary in the 
Reich Ministry of Finance. The plan was in consonance with 
two major goals of German policy prior to the ”Final Solu-
tion” – the forced emigration of Jews and the expropriation 
of their property. This plan was not the first suggestion of a 
policy of mutual interest, beneficial to both the German state 
and to a significantly lesser extent to the Jews – though the 
possibility of emigration was of inestimable value the longer 
the Nazis were in power. In 1933, the *Haavara agreement was 
struck, enabling Jews to leave Germany and go to Palestine 
with at least some assets. Under the Schacht plan, those Ger-
man Jews wishing to emigrate could not take their property 

with them, for it had been confiscated by the Reich authori-
ties, who compensated them with government bonds at the 
lowest interest. The planners tried to capitalize on the concern 
shown by foreign Jewish bodies and international refugee or-
ganizations and link the facility of transfer of Jewish assets to 
the promotion of German exports. They wanted foreign Jew-
ish bodies to raise a loan of RM 1,500,000 in foreign currency 
(then equivalent to $600,000) to enable the resettlement of 
emigrants. Other essentials of the plan called for placing 25% 
of the Jewish property in Germany and Austria in a trust fund. 
The assets were to be gradually converted into cash and trans-
ferred only if Germany’s foreign exchange would permit, or 
sooner in the form of “supplementary” exports. The remain-
ing 75% was to remain at Germany’s disposal to be used to 
maintain Jews before their emigration or those unable to 
emigrate. This fund was to finance the emigration of 150,000 
able-bodied Jews and 250,000 dependents in the course of 
three years. Schacht claimed that *Hitler and *Goering had 
assented to his plan. *Ribbentrop opposed it for personal and 
political reasons and did his best to frustrate it. To implement 
it, Schacht negotiated with George Rublee, the director of the 
Intergovernmental Committee of Refugees, who had formerly 
conceived his own plan for linking emigration to German 
exports, with the Reich as the debtor of the foreign loan, but 
greeted the emigrants being the debtors. Rublee’s committee 
planned to proceed through two committees, one on a gov-
ernmental level and the second of private individuals. Jewish 
leaders approached by Rublee opposed the second commit-
tee, to give the lie to the Nazi propaganda of a world Jewish 
financial body. They believed that the whole problem should 
be considered by governments exclusively. The experts of 
the governments concerned with Jewish immigration objected to 
making confiscated Jewish property the basis for increasing 
German exports. Rublee ran into further difficulty in finding 
governments that were ready to accept Jewish immigrants in 
great numbers. Schacht was dismissed at the beginning of 
1939, but the Nazis continued the negotiations. Rublee, who 
sincerely believed in the plan as a means to help the Jews, 
resigned because of the difficulties he encountered. The nego-
tiations between his successors and the Nazi government 
dragged on until their disruption with the outbreak of World 
War II, when emigration became impossible.

[Yehuda Reshef / Michael Berenbaum (2nd ed.)]

**SCHAECHTER, JOSEPH** (1901– ), educator and Hebrew 
writer. Born in Galicia, he was ordained for the rabbinate 
and studied at Vienna University. Schaechter immigrated to 
Erez Israel in 1938, and taught in secondary schools, first in 
Tel Aviv and then in Haifa. From 1951 he was the supervisor of 
secondary schools in Haifa. Disturbed by the gap between
Orthodoxy and secularism in Israel society, Schaechter tried to turn Israel non-Orthodox youth back to its Jewish heritage. He sought to achieve this by approaching the Bible and Talmud as a philosophy of life. Schaechter felt that modern man was uprooted and cynical in the technological world, because he had forgotten to invest life with meaning and to look within himself. This inner search was the heritage of Israel. In his Pirkei Hadarahkah ba-Tanakh (1960) he showed the failings of both the Orthodox and non-Orthodox education systems, the one teaching Bible as a book of mitzvot, the other as an archaeological guide book. Besides contributing to various literary periodicals, he wrote books on such varied topics as logic, science and faith, Talmud, and the prayer book.

His books include Mavo Kazar le-Logistikah (1937), Sintaksis (1944), Mi-Madda le-Emunah (1953), Mavo la-Talmud (1954), Mishnato shel A.D. Gordon (1957), Mavo la-Siddur (1958), Ozar ha-Talmud (1963), Mavo la-Tanakh (1968), and several works on education, including Limmudei ha-Yahadut ba-Ha-Am (1968), a summary of Schaechter’s teachings by his students.

[Getzel Kressel]

SCHAECHTER, MORDKHE (1927– ). Yiddish linguist, author, editor, and educator. Born in Cernauti, Romania (now Chernivtsi, Ukraine), Schaechter, who went to the U.S. in 1931, was a leading Yiddishist, both in promoting the maintenance of the language and in adapting it through language planning to modern life and technology. Coeditor of the Territorialist bimonthly Oysn Shovel, published by the Freeland League, he contributed to various other Yiddish publications, and collaborated with M. *Weinreich in the writing of Yidisher Ortografisher Vaygveyer (1961). Chief interviewer of The Language and Culture Atlas of Ashkenazic Jewry (1992–2000), he also wrote books and articles on Yiddish dialectology, toponymy, terminology, style, and grammar. His Elyokem Zunze's Verk (published by the YIVO Institute in 1964) has been acclaimed as the best critical edition of a Yiddish writer and his works. Schaechter participated in various institutions and foundations promoting the Yiddish language, and was instrumental in organizing some: he was a prime mover in the creation of the youth movement, Yugntruf – Youth for Yiddish (1965). From 1962 he taught Yiddish at the Jewish Teachers’ Seminary and, from 1968, at both Yeshiva University and Columbia University in New York.

[Leybl Kahn]

SCHAECHTER-GOTTESMAN, BELLA (1920– ), artist, Yiddish poet, and songwriter. Schaechter-Gottesman was born Beyle Schaechter in Vienna, the daughter of Lifshe Gottesman, and Benjamin Schaechter. The family moved to Cernauti, Romania (Czernowitz, now part of the Ukraine), when Beyle was 18 months old. She attended school where instruction was in Romanian, also learning French and Latin, spoke Yiddish at home, and German or Ukrainian around town. Home was full of music, as her mother knew a large folk song repertoire and had a wonderful voice. Years later, Lifshe Schaechter-Widman recorded songs in the United States and wrote a memoir, Dukhe gelebt a velt: Zikhroynes (1973).

In 1938, Beyle’s two years of study at the Vienna art school was cut short when Hitler invaded Austria. Using her Romanian passport, she returned to her family in Cernauti, only to spend the war years in her hometown under dire circumstances. In February 1941, she married Jonas Gottesman, a physician, with whom she ultimately had three children. They wound up in the Cernauti ghetto with the other Jews, but her husband arranged authorization for them to remain in the area, and thus they survived the war. After the war, Beyle and her family settled briefly in Vienna before coming to New York City in 1951.

Her outpouring of musical song started to see publication in the 1990s, with Zumerteg: Tsveatsik Zinglider (“Summer Days: Twenty Songs,” 1990) and Fil mayn feshliang! Kinderlider mit Musik (“Fly My Kite!” 1999); recordings of her songs also appeared: Zumerteg New Yiddish Songs (1991) and Af di Gasn Fun Shot (“On the Streets of the City,” 2003). Her bilingual children’s book Mame blume di Makhsheyfe (“Aunt Bluma, the Witch,” 2000) has been translated into numerous languages. She performed Yiddish folk songs on Bay Mayn Mames Shitable (“At My Mother’s House,” 2004). Schaechter-Gottesman was awarded the People’s Hall of Fame Award from the Museum of the City of New York (1998) and the Osher Tshushinsky Award from the Congress for Jewish Culture (1994).

With the rekindled interest in Yiddish culture and klezmer music during the 1970s and 1980s, Schaechter-Gottesman participated in popular cultural festivals and workshops such as the Yiddish Folk Arts Workshop (“Klezkamp”), Buffalo on the Roof, Klezkanada, Ashkenaz Festival, and Weimar Klezmerwochen, spreading the knowledge of her music.

[Judith S. Pinnolis (2nd ed.)]

“SCHAEFFER, CLAUDE F.A. (1898–1982), French archaeologist. He was curator of the French National Museums and...”
the Museum of Antiquities (1933); director of research of the Centre National de la Recherche Scientifique (1946); and professor of prehistory and national archaeology at the École du Louvre (1951) and at the College of France (1954). He directed a number of French archaeological missions in Italy, Turkey, Egypt, and especially at Ras Shamra in Syria and Enkomi-Alasia in Cyprus.

Schaeffer is principally remembered as the excavator of Ras Shamra (see *Ugarit), one of the most remarkable archaeological discoveries of the 20th century bearing directly upon the language and literature of the Hebrew Bible. He examined the importance of Ras Shamra for the understanding of the literature, archaeology, history, and theology of Israel and its surroundings.

The religion of Ras Shamra and the form and quality of Canaanite poetry are compared with the Bible in his 1936 Schweich Lectures of the British Academy, published in 1939 as The Cuneiform Texts of Ras Shamra-Ugarit. The authoritative reports directly covering the expeditions at Ras Shamra published under his direction include La… campagne de fouilles à Ras Shamra-Ugarit (17 vols., 1929–55); Ugaritica (4 vols., 1939–62), and Le Palais Royal d’Ugarit, containing the texts from the different literary archives of the royal palace at Ras Shamra (1955).

[Szvi Hermon / Ruth Beloff (2nd ed.)]

SCHAEFFER, HANS (1886–1967), German government official. Born in Breslau, Schaeffer began to practice law in 1912. He served with the German armed forces during World War I and, when demobilized early in 1919, was appointed to the German Ministry of Economic Affairs. At first engaged in drafting the economic provisions of the Weimar Constitution, he was promoted in 1923 to undersecretary and shifted to international economic affairs. German reparations became his principal field. In 1929, during the beginnings of the world economic depression, he joined the Ministry of Finance, where he became instrumental in overcoming the German banking crisis and relieving Germany of its war debt. In 1932 he left government service to become president of the *Ullstein publishing house, but in 1933 the Nazi government forced his dismissal. Subsequently he worked together with Allen Dulles and Jean Monnet on the liquidation of the Swedish Kreuger Match Combine, and in 1936 he became the Combine’s adviser and moved to Sweden, where he lived until his death. Schaeffer took an interest in Jewish affairs, particularly after Hitler’s rise to power. He participated in the formation of the *Reichsvertretung der deutschen Juden and was in contact with the Jewish representatives at the *Evian Conference. Schaeffer kept a diary which represents an important source for German economic history from the 1920s to the 1960s.

[Joachim O. Ronall]

SCHAEFER, STEPHEN (1911–1976), criminologist and sociologist. Born in Hungary, Schafer was professor of criminology at Budapest University (1947–51), chairman of the Hungarian prison commission, and president of the supervising board of delinquency. He left Hungary in 1956 and became a consultant to the British Home Office research unit. In 1961, Schafer immigrated to the U.S. and taught successively at the Florida State, Ohio, and Northeastern universities, and served as a consultant to the President’s Commission on Law Enforcement and Administration of Justice.

Schafer’s principal book in English was Restitution to Victims of Crime (1960), a problem on which he became a leading expert. Some of his other works, as a preeminent researcher in the field of victimology, include The Victim and His Criminal (1968), Theories in Criminology (1969), Juvenile Delinquency (1970), The Political Criminal: The Problem of Morality and Crime (1974), Social Problems in a Changing Society (1975), and Introduction to Criminology (1976).

[Szvi Hermon / Ruth Beloff (2nd ed.)]

SCHAFF, ADAM (1913– ), Polish philosopher of Jewish origin; the dominant figure in Marxist philosophy in Poland from the assumption of power by the Communist government in 1945. Born in Lvov, he studied in the Soviet Union. He returned to become professor of philosophy at the Warsaw University and director of the Institute of Philosophy at the Polish Academy of Science. At first of orthodox views he nevertheless engaged in active and mutually respectful debate and development with the eminent Polish school of logic and epistemology (Ajdukiewicz, Kotarbinski, Ingarden, among others), and later also with Marxists influenced by existentialist and other non-Marxist philosophical thought (the most important being Kolakowski).

Schaff wrote many works, from initial studies in the theory of truth to later works on semantics, on the nature of historical explanation, on the role of language in cognition, on ethics in private and in social life, and on the still uncompleted tasks of Marxist philosophy, for which his chief work is Marksyzm i jednostka ludzka (1965; Marxism and the Human Individual, 1970).

Other books appearing in English are Alienation as a Social Phenomenon, Language and Cognition, and History and Truth. Schaff had wide influence within the eastern European countries, and also among American and western European thinkers on sociological and philosophical matters, perhaps most practically through work with UNESCO. During the period of active pressure against Jews in Poland in 1968, Schaff’s official positions in the Polish university and academy hierarchy were greatly reduced in scope and authority, and he ceased to be a member of the Central Committee of the Communist Party of Poland. However, through all the upheavals in Poland he managed to maintain his status as an influential thinker.

[Robert S. Cohen]

SCHAFFHAUSEN, canton and its capital city in N. Switzerland. The earliest record of Jews in the canton is dated 1291. The Jews were burned there during the excesses of 1349, and
in 1401 all the Jews in the city were condemned to death and 30 were burned. The Jews were expelled from the canton in 1475. Individual Jews who visited the canton during the 16th to 18th centuries were refused the right of residence. Jews of nearby southern German rural communities (Gailingen, Randeck, Worblingen and Wangen) appeared on weekdays doing business as livestock traders and peddlers. In 1865 the laws restricting Jewish settlement were repealed, and by 1874 full emancipation was granted. However, few Jews settled there. A minyan existed in the 1920s.

Born in Chicago, Schakowsky, a citizen advocate, grassroots organizer, and elected public official, fought throughout her career for economic and social justice and improved quality of life for all; for an end to violence against women; and for a national investment in healthcare, public education, and housing needs.

She carried on the legacy of her predecessor, Sid Yates, representing a district that is incredibly diverse, stretching from the liberal lakefront through some of Chicago’s ethnic neighborhoods, encompassing Devon Avenue and extending to O’Hare International Airport. She picked up his mantle of leadership, especially regarding his support for Israel and the United States Holocaust Memorial Museum.

Schakowsky, who served on the House Democratic Leadership team as chief deputy whip, was a member of the Energy and Commerce Committee, where she was ranking member of the Subcommittee on Commerce, Trade, and Consumer Protection; she also served on the Subcommittee on Environment and Hazardous Materials and the Subcommittee on Oversight and Investigations.

Schakowsky won major legislative victories to increase federal assistance for abused women and children and to protect the rights of battered immigrant women, to reform election laws guaranteeing that no registered voter is turned away at the polls, to expand housing opportunities for low-income people, and to assist small business owners and farmers. Schakowsky worked in Congress to safeguard the rights of victims of identity theft and to protect consumers from predatory lenders. A champion for the nation’s seniors, Schakowsky was actively engaged in the campaign for seniors and persons with disabilities to access affordable prescription drugs. Schakowsky was also working to ensure that seniors receive quality home, hospice, and nursing care.

A graduate of the University of Illinois, Schakowsky was a longtime consumer rights advocate. She was responsible for a 1969 law requiring the printing of freshness dates on groceries. She was program director of Illinois Public Action, Illinois’ largest public interest group, from 1976 to 1985, where she fought for energy reform and stronger protection from toxic chemicals. She then moved to the Illinois State Council of Senior Citizens as executive director, where she organized across the state for lower cost prescription drugs and tax relief for seniors, financial protection for the spouses of nursing home residents, and other benefits for the elderly. She held that position from 1985 until 1990, when she was elected to the Illinois House of Representatives. She served there for four terms until elected to the U.S. House of Representatives in 1998.

[Uri Kaufmann (2nd ed.)]

SCHALIT, ABRAHAM CHAIM (1898–1979), historian. Born in Zolochev, Galicia, Schalit studied classics at Vienna University. He settled in Erez Israel in 1929 and worked in various posts. In 1950 he became a lecturer in Jewish history at The Hebrew University, Jerusalem, and professor in 1957. His most important work was Hordos ha-Melekh ("King Herod," 1960) for which he received the Israel Prize for Jewish Studies (1960). The book was translated in an enlarged form into German, Koenig Herodes (1969). Not only a comprehensive study of Herod, it is also a brilliant analysis of the structure of Roman rule in Palestine, a subject to which Schalit had previously devoted his Ha-Mishtar ha-Romi’ be-Erez Yisrael ("Roman Rule in Erez Israel," 1937). Schalit’s other important field of research was the writings of Josephus. In numerous articles he dealt with several aspects of the historian’s method and sources; he also wrote an introduction to, and translated into Hebrew, Josephus’ Antiquitates of the Jews (Books 1–10, 1947; 11–20, 1961), as well as a concordance of all names appearing in Josephus’ works, Namenwerterbuch zu Flavius Josephus (1968). Schalit was divisional editor of the Encyclopaedia Judaica for the Second Temple period.

[Isaiah Gafni]

SCHALIT, HEINRICH (1886–1973), composer. Schalit was born in Vienna and studied at the musical conservatory there. He settled in Munich, where he worked as music teacher and as organist at the Great Synagogue. In 1933 he left Germany and was appointed organist at the Great Synagogue in Rome. He later emigrated to the U.S., where he was organist for congregations in Providence, Rhode Island, and Denver, Colorado. Among his sacred compositions are his Friday Night Liturgy, his Hebrew Song of Praise, and his setting of Psalm 98. He also wrote orchestral, chamber, and piano music, as well as songs.

SCHALIT, ISIDOR (1871–1953), first secretary of the Zionist Office and one of Herzl’s first assistants. Born in Nowosolky, Ukraine, Schalit grew up in Vienna, where he qualified as a dentist. He was raised in an atmosphere of support for Hibbat
Zion, joined the student Zionist society *Kadimah in Vienna (1889), and was actively engaged in establishing a network of similar organizations in Austria. He was a member of the academic circle in Vienna that offered Herzl assistance on the publication of *Der Judenstaat. On Whit Sunday 1896 Herzl wrote in his diary:

Two fellows from the Kadimah, Schalit and Neuberger, called on me. They told me that a proposal was afoot to recruit a volunteer battalion of one or two thousand and to attempt a landing at Jaffa. Even if some might have to give up their lives in the attempt, Europe would start paying attention to the aspirations of the Jews. I advised them against this fine Garibaldian idea.

Herzl made Schalit a member of the editorial board of *Die Welt, but shortly afterward, at the outbreak of the Turko-Greek War (1897), Schalit set out at the head of a delegation of five medical student volunteers to provide first aid on the Turkish front, a venture which was intended to gain Turkish sympathy for Herzl’s proposals. Afterward Schalit was the main technical organizer of the First Zionist Congress at Basle (1897). He flew the Zionist flag from the Basle Casino and did it again at the 1937 Congress, which celebrated in Basle the 40th anniversary of the First Congress. He also signaled the opening of the First Congress by knocking with a hammer on the table of the chairman, an act which he performed at all subsequent Congresses — down to the first Congress in the State of Israel in 1951. After the First Congress he was appointed secretary of the Zionist Office, a post he filled during Herzl’s lifetime. With the transfer of the Zionist center to Cologne, after Herzl’s death, he was elected head of the Zionist Organization in Austria. From then on he was active in the Austrian and the World Zionist Organizations. In 1938 he settled in Palestine, where he published memoirs of the beginnings of political Zionism (in *Haolam, Davar, etc.).

**BIBLIOGRAPHY:** T. Herzl, Complete Diaries, 5 (1960), index; J. Levi, Isidor Schalit (Heb., 1951), Tidhar, 3 (1949), 1443–46. [Getzel Kressel]

**SCHALLY, ANDREW VICTOR** (1926– ), medical research worker and Nobel laureate. Schally was born in Wilno, Poland (now Vilnius, Lithuania), and became a U.S. citizen in 1962. At the outset of World War II, his father, a professional soldier, left his family to fight with the Allied forces. Schally survived the war in Romania and immigrated to the U.S. in 1945. He was educated at Bridge of Allan School in Scotland and received his B.Sc. in chemistry from London University. After a period at the Medical Research Council’s National Institute for Medical Research at Mill Hill, London (1950–52), he moved to Canada where he gained his Ph.D. in chemistry at McGill University under the supervision of Dr. M. Saffran (1952–57). He joined the department of physiology at Baylor University College of Medicine in Houston, Texas (1957–62). In 1962 he moved for the rest of his career to New Orleans as chief of the Endocrine and Polypeptide Laboratories at the Veterans Administration Hospital, where he became a senior medical investigator (1973), and a member of the faculty of medicine at Tulane University, where he became professor of medicine in 1967. Schally’s interest in medical research in general began at Mill Hill, and in endocrinology at McGill. He was early convinced that the hypothalamus in the brain produces hormones which regulate the pituitary gland, and indeed the production of hormones by the thyroid and adrenal glands, and also the hormones which control growth and reproductive capacity. His initially controversial ideas were vindicated by a long and laborious series of experiments necessary to isolate sufficient material with which to characterize hormones produced by the hypothalamus and to demonstrate their actions. His research established the central role of the brain in controlling the endocrine system through the pituitary gland. It has immense implications for devising new strategies for birth control and suppressing hormone-dependent cancers. Indeed he has been consistently motivated to find clinical applications for his discoveries. In later work he was especially interested in developing novel antitumor peptides. Schally worked with close colleagues for most of his career in New Orleans and collaborated with many scientists and clinicians worldwide, and especially with clinical endocrinologists in the U.K. By 2005 he was an author of 2,200 papers, and he continued to be scientifically productive. He was awarded the Nobel Prize in physiology or medicine jointly with Roger Guillemin and Rosalyn *Yalow (1977). His many other honors include membership of the U.S. National Academy of Sciences, the Gairdner Award (1974), and the Lasker Award in Basic Medical Science (1975). He married Dr. Ana Maria de Medeiros-Comaru (1976), a distinguished Brazilian endocrinologist and his collaborator before her death (2004). Schally had a lifelong passion for soccer and as a young man contemplated a career in this sport.

[Michael Denman (2nd ed.)]

**SCHAMA, SIMON** (1945– ), British-American historian. Schama was educated at Cambridge University, where he taught from 1966 to 1976. He subsequently taught at Oxford and then in the United States, where he became a professor at Harvard and, later, Columbia University. He wrote important works on Dutch history, such as *Patriots and Liberators: Revolution in the Netherlands, 1780–1813* (1977) and *An Embarrassment of Riches: An Interpretation of Dutch Culture in the Golden Age* (1987), as well as a bestselling account of the French Revolution, *Citizens: A Chronicle of the French Revolution* (1989). Schama also wrote widely on art, in such works as *Rembrandt’s Eyes* (1999), and was the art critic of *The New Yorker* magazine in 1995–98. He is probably best-known for the 16-part history of Britain he made for the *BBC*, which was watched by millions of viewers and became a bestselling three-volume work, *A History of Britain* (2000–3). Schama also wrote on Jewish history, *The Rothschilds and the Land of Israel* (1978).

[William D. Rubinstein (2nd ed.)]
SCHAMES, SAMSON (1898–1967), U.S. artist. Born in Frankfurt, Schames studied at the Staatsschule. He designed stage sets for several German theaters, and for the Jewish theater, which was founded in 1933. Although Schames had settled in Britain in 1938 to flee the Nazis, the British government interned him and other perceived potential German threats to national security in 1940 in Huyton Alien Internment Camp, near Liverpool. Other residents of the camp included Martin *Bloch and John *Heartfield. Here, Schames used debris, often grayed from bombardments, to fashion abstract collages and mosaics. In 1948 he immigrated to New York. He exhibited his work in a show in Germany in 1955. In 1989, Schames received a large posthumous exhibition at the Jewish Museum in Frankfurt. An expressionist, he endowed whatever he painted with explosive spontaneity displayed through stark, spiky strokes. He was a nephew of the Frankfurt gallery owner Ludwig Schames (1852–1922), who exhibited the Expressionists. His work has been exhibited internationally, in such institutions as the Bezalel National Museum, Jerusalem; the Leo Baek Institute, New York; and the Walker Art Gallery, Liverpool, among other places.

SCHANBERG, SYDNEY H. (1934– ), U.S. journalist. Born in Clinton, Massachusetts, Sydney Hillel Schanberg graduated from Harvard University. He joined the staff of The New York Times in the late 1950s and covered local news before becoming Albany bureau chief, where he covered the activities of Gov. Nelson A. Rockefeller and the New York State legislature. His first foreign assignment for the Times took him to India and Pakistan during the late 1960s and early 1970s, with side trips to cover the Vietnam War. But after the end of the war Schanberg heard about the American bombing of Cambodia, which President Richard M. Nixon and Secretary of State Henry A. Kissinger denied. In Cambodia, Schanberg covered the emergence of the Khmer Rouge, a secretive revolutionary group that conducted genocide against the Cambodian people, particularly the educated. Schanberg chose to stay in Cambodia in 1975 after the Americans were thrown out of the country, partly to report the story and partly to help his assistant, Dith Pran, and his family survive. Schanberg failed to save Pran, who managed to elude his captors for several years by working in rice fields, but Schanberg finally had to flee. His report of the mass murders committed by the Khmer Rouge for the purpose of cleansing Cambodia provided a chilling story of a death machine. Schanberg’s reports earned him the Pulitzer Prize in 1976. The dramatic story, told in the book The Death and Life of Dith Pran, and the reunion of Schanberg and Pran were made into a film, The Killing Fields, in 1984, that won three Academy Awards. Schanberg returned to the Times a year after the Pulitzer and shortly thereafter became metropolitan editor. But he was not an effective administrator and he was replaced, becoming a columnist. After a while, Schanberg became a columnist for New York Newsday, commenting on a wide variety of topics, including events in New York City. When that paper folded, Schanberg joined The Village Voice in New York, where he wrote the Press Clips column. He was a strong opponent of the Bush administration and its war in Iraq. He also took to task Senator John Kerry in 1993 for his alleged drive to normalize relations with Hanoi.

SCHANFARBER, TOBIAS (1862–1942), U.S. Reform rabbi. Born in Cleveland, the son of Aaron and Sarah (Newman), he graduated from the University of Cincinnati (B.A.) in 1885 and received rabbinic ordination at the Hebrew Union College in 1886. Following ordination Schanfarber officiated at Shomer Emunim Congregation in Toledo (1886–87), Congregation Achduth Vesholom in Ft. Wayne (1887–88), Har Sinai Congregation in Baltimore (1888–98), and Congregation Sh'arai Shomayim in Mobile (1899–1901), before spending the bulk of his career (1901–26) at Kehilath Anshe Mayr in Chicago. Upon his retirement he was named rabbi emeritus at K.A.M. During his tenure in Baltimore, from 1894 to 1898, he did post-graduate study in Semitics at Johns Hopkins University under Professor Paul Haupt. Schanfarber edited or co-edited numerous Jewish newspapers, including the Mobile Jewish Chronicle, Baltimore Jewish Comment, Chicago Israelite, Sentinel, and Reform Advocate. From 1907 to 1909 he served as corresponding secretary of the Central Conference of American Rabbis. Other organizational posts included being vice president of the Vigilance Association; a trustee of the Jewish People's Institute and the Michael Reese Hospital; and president (and later honorary life president) of the Chicago Rabbinical Association. Schanfarber was a member of the first generation of American trained rabbis and was a disciple of Isaac Mayer Wise (1819–1900). Early in his career Schanfarber supported a radical form of Reform Judaism, including advocating Sunday instead of Sabbath services. In later years he adopted a more moderate approach to observance while rejecting what he called “secularism”: i.e., removing God and Torah from Jewish life. He was called “a cultured gentleman, liberal in thought, though of great strength in his convictions, and a gifted orator on almost any subject which the public man is called upon to deal with.” In 1933 he received an honorary Doctor of Hebrew Laws from HUC.

SCHANKER, LOUIS (1903–1981), U.S. painter, printmaker, sculptor, and educator. Schanker’s early adulthood experiences were varied: as an adolescent he worked in a circus, on farms in both the U.S. and Canada, and on the Erie Railroad. Between 1919 and 1923, he studied part-time at Cooper Union. Until 1927, he attended classes at the Art School of the Edu-
cational Alliance and the Art Students League. Working in the WPA mural division, he created wall panels in 1924 for a Long Island hospital, and exhibited murals at the Hall of Medicine and Public Health at the 1939 World's Fair. In 1931–32, he traveled to and studied in Paris and Mallorca. Between 1940 and 1941, he created woodcuts for the WPA Arts Project. He founded the group "The Ten" in 1935 with Adolph Gottlieb, Ilya Bolotowsky, and Ben-Zion, among others, with which he exhibited until 1939. The Ten concerned itself more with formal and artistic problems than with political tribulations.

In 1936, Schanker assisted in the foundation of the American Abstract Artists group. The subjects of Schanker's art, including woodblock and linoleum prints and paintings, ranged among various subjects, especially sports, carnival, and religious subjects, such as St. George and the Dragon. His works of the late 1930s and 1940s, such as Aerial Act (1940), often featured graceful lines which coalesced into simple but expressive figures animated with flat, bright, areas of color. While the former composition owes much to Matisse and Miro, the monochromatic woodcut Forms in Action of the following year displays angular shapes, one perhaps dancing while another plays a keyboard or bass; this suggestion of speed and rhythm is indebted to the German and Austrian Expressionists, as well as to Japanese woodblock prints.

Schanker's work reveals the artist's careful study of a variety of his contemporaries working in both the United States and Europe: Wassily Kandinsky, Arshile Gorky, Picasso, Max Ernst, Paul Klee, and George Rouault, among many others. In the 1960s, Schanker introduced the motif of a circle into his compositions, often combining it with other simple forms, and animating the whole with vibrant color. During this period, he also produced many primitivist wood sculptures influenced by Constantin Brancusi. Critics note that these sculptures were not a departure from his previous printmaking, since Schanker worked on his woodblocks with the tools of both sculptor and carpenter. Schanker taught at the New School for Social Research between 1943 and 1960. Between 1949 and 1964, he taught at Bard College. He made his home in New York City, Stamford, Connecticut, and East Hampton, New York. His art has been widely exhibited: at the Buchholz Gallery (1943), the Puma Gallery (1943), the Guggenheim Museum (1954), the Victoria and Albert Museum (1954–55), the Associated American Artists (1978), and the New York Public Library (2003). Examples of his work are in the collections of the Art Institute of Chicago, the Brooklyn Museum, the Metropolitan Museum of Art, the National Gallery of Art, the Philadelphia Museum of Art, and the Smithsonian American Art Museum.

[Nancy Buchwald (2nd ed.)]

SCHANZER, CARLO (1865–1953), Italian politician. Born in Vienna, Schanzer became professor of constitutional law at the University of Rome. From 1912 to 1928 he was division chairman of the Consiglio di Stato – in Italy the main legal, administrative, and judiciary body. He was a member of Parliament and, from 1919, of the Senate. From 1906 to 1909, under the ministry of Giovanni Giolitti, Schanzer held the office of postmaster general, and he was minister of the treasury and finance in 1919 and foreign minister in 1922. From 1920 to 1924 Schanzer was the Italian representative to the League of Nations at Geneva. Between 1921 and 1922 he headed the Italian delegation to the Naval Conference in Washington, D.C., where Italy achieved naval equality with France. He died in Rome.

[Massimo Longo Adorno (2nd ed.)]

SCHAPIRA, ISAAC (1905–2003), South African anthropologist. Born in South Africa, Schapera taught at the London School of Economics as assistant in anthropology (1928–29), served as lecturer at the University of Witwatersrand, Johannesburg (1930), and at the University of Cape Town as senior lecturer and professor (1930–50). In 1950 he was appointed professor of anthropology at the London School of Economics. Schapera conducted several anthropological field expeditions to the Bechuanaland Protectorate between 1929 and 1950. He contributed to the discipline of applied anthropology by his study of labor migration in Bechuanaland – its causes and effects both positive and negative – and so served as a guide for colonial policy. From 1961 to 1963 he was president of the Royal Anthropological Institute.

He wrote Government and Politics in Tribal Societies (1956), Handbook of Tsswana Law and Custom (1938, 1955), Migrant Labour and Tribal Life (1947), and edited Bantu-Speaking Tribes of South Africa (1937), and David Livingstone's Letters and Journals.

[Ephraim Fischoff]

SCHAPIRA, DAVID (1907–1977), Argentine politician. He was born in Carlos Casares at one of the agricultural settlements established in the province of Buenos Aires, Argentina, by the Jewish Colonization Association (ICA), founded by Baron Maurice de *Hirsch. Schapira practiced medicine and also was very active in national political life in the Unión Cívica Radical del Pueblo party. In 1958 he was elected senator in the province of Buenos Aires, serving until 1962. He was chairman of the Senate Public Health Committee. From 1963 to 1967 Schapira sat in the National Chamber of Deputies until the military regime of General Ongania closed the parliament.

SCHAPIRA, HERMANN (Zvi Hirsch; 1840–1898), one of the first leaders of *Hibbat Zion and political Zionism, originator of the ideas of the *Jewish National Fund and The Hebrew University. Born in Erswilken, Lithuania, Schapira dis-
played outstanding talents from early childhood. He became the rabbi and rosh yeshivah in a Lithuanian townlet. In 1866 he moved to Kovno, where he began his scientific and linguistic studies, and thence to Berlin in 1867 in order to pursue them further. After a period of hardship, hunger, and scholarly exertions, he was accepted as a student in a crafts’ academy (Gewerbe Akademie), but was later obliged to return to Russia because of lack of means. He worked for a number of years as a clerk in commercial enterprises in Odessa and other cities to save money in order to return to his studies. The substantial sum he earned as a military supplier during the Russo-Turkish War (1877–78) finally made it possible for him to realize his ambition. Schapira went to Heidelberg, where he devoted himself to the study of mathematics and acquired academic notice by his achievements in this field. Among his publications was the mathematical work Mishnat ha-Middot in Hebrew (“The Study of Measurements”) and in German translation in 1880. In 1883 Schapira became university lecturer and in 1887 was appointed associate professor in higher mathematics.

After the pogroms in Russia in 1881, he had joined the Hibbat Zion movement, and published articles in Ha-Meliz in 1882 calling for the establishment of agricultural settlements in Erez Israel, and the founding of a university with departments for training rabbis and secular teachers, as well as teaching theoretical and practical sciences (mathematics, astronomy, etc., and chemistry, agriculture, and industrial crafts). The language of instruction would be German, but Hebrew would be taught as much as possible so that “in the course of time Hebrew might become a spoken language as well.” Schapira expressed his willingness to teach at this university and even contacted other Jewish scholars with this end in view. He was one of the founders of Hofvei Zion in Odessa, which became the center of all Hofvei Zion societies inside Russia and in other countries. In Heidelberg in 1884 he founded the Zion society for the settlement of Erez Israel. The failure of the Hibbat Zion movement to awaken a widespread Jewish national movement or to initiate large-scale settlement in Erez Israel caused Schapira to despair, and he withdrew from public and literary activities.

His status as a professor at Heidelberg University was insecure, and he felt isolated from his non-Jewish and even from his Jewish colleagues, the majority of whom were assimilated or even converted. His mathematical studies showed great talents but were unsystematically written and never fully completed. His economic circumstances were poor, and he was obliged to take on various other jobs to support himself, including watchmaking. After a period of doubt, Schapira embraced a religious philosophy and way of life. In Reuben Brainin’s periodical Mi-Mizrah u-mi-Maarav (“From East and West”) he published in 1894 two fragments from a book in which he tried to synthesize modern science with traditional Judaism. A group of Zionist students in Heidelberg roused Schapira to renewed activity. After initial hesitation he became an enthusiastic supporter of the new Zionist movement founded by Herzl. To the First Zionist Congress (1897) he brought two proposals: the first was the creation of a “general Jewish fund,” to which the whole of world Jewry, poor and rich, would contribute. Two-thirds of the fund would be assigned to purchasing land, and the remaining third would serve for the maintenance and cultivation of the land acquired. The land would not be sold but only leased for a period not exceeding 49 years. The second suggestion was the establishment of a Jewish university in Erez Israel. Schapira’s first proposal was accepted only by the Fifth Congress (1901), at which the Jewish National Fund was founded; his second proposal had to wait until the 11th Congress (1913).

Schapira devoted the last years of his life to the dissemination of the Zionist idea among German Jewry. He corresponded with Herzl and was active in the student group Safah Berurah in Heidelberg. In his last article, “Shalom,” published posthumously, he wished that “God will let him live to teach the sons of His people in the school of Torah, wisdom, and labor which would be built in the Holy Land.” His collected writings on Zionism, edited by B. Dinaburg (Dinur), were published in 1925. In 1953 his remains were re-interred on Mount Herzl in Jerusalem.

**Yehuda Slutsky**

**SCHAPIRA, NOAH** (1866–1931), Hebrew poet and labor leader in Erez Israel before the Second Aliyah. Born in Kishinev, Schapira was an active member of the Hibbat Zion movement there together with Meir Dizengoff. In 1890 he settled in Erez Israel, where he became an agricultural laborer first in Rehovot and later in Zikhron Ya’akov. He was the moving spirit behind the organization of Jewish workers that was founded at the end of the 19th century and remained in existence until the members of the Second Aliyah began to organize themselves. On behalf of this federation he negotiated both with employers and with Hovevei Zion leaders in Odessa, especially Ahad Ha-Am. He spent his last years in Tel Aviv. Schapira published articles on the affairs of the *yishuv* in the Hebrew press and was known especially for his poetry, which was, in effect, the first labor poetry to be written in Erez Israel. His song “Ya-Hai-Li-Li, Hah Amali” and his Hebrew translation of E. Zunser’s song “Ha-Maharesah” were popular favorites for two generations. He signed these songs with the pseudonym “Bar-Nash.”

**BIBLIOGRAPHY:** M. Ravina, “Ya-Hai-Li-Li, Hah Amali” u-Me’ahabero (1966).

**Getzel Kressel**

**SCHAPIRO, ISRAEL** (1882–1957), bibliographer, Orientalist, and librarian. Schapiro, born in Sejny, Poland, was the son of Toviyiah Pesah Schapiro (1845–1924), a Hebrew and Yiddish writer and educator in Russia and the U.S. Israel Schapiro studied at the Telsiai (Telz) Yeshivah, Strasbourg University, and the Hochschule (Lehranstalt) fuer die Wissenschaft
des Judentums, Berlin. From 1907 to 1910 he taught at the Jerusalem Teachers' Training College and from 1911 to 1913 in New York, where he also coedited the Hebrew weekly Ha-Deror. From 1913 to 1944 he headed the newly created Semitic division of the Library of Congress, Washington, D.C., which he built up into a collection of over 40,000 volumes, including incunabula and other rare editions, and lectured on Semitics at George Washington University (1916–27). In 1950 he settled in Israel. Schapiro wrote extensively on subjects of Jewish history and bibliography for the Hebrew and Yiddish press.

His published work includes Die haggadischen Elemente im erzaehlenden Teil des Korans (1907); “Bibliography of Hebrew Translations of English Works” (in: Studies in Jewish Bibliography in Memory of A.S. Freidus, 1929); Bibliography of Hebrew Translations of German Works (1934); and “Schiller und Goethe im Hebraischen” (in: Festschrift fuer A. Freimann zum 60. Geburtstag (1935)). He also edited his father's Mashal ha-Kadmoni (with biography, 1923) and Pitgamim shel Ḥakhamim (1927).

SCHAPIO, JACOB SALWYN (1879–1973), U.S. historian. Born in New York State, Schapiro taught history at City College, N.Y. from 1909 until his retirement in 1947, and rose to the rank of full professor (1922). Schapiro's principal interest was 19th-century European history, with emphasis on intellectual history.

His major works are Social Reform and the Reformation (1909); Condorcet and the Rise of Liberalism (1934); Liberalism and the Challenge of Fascism (1949); and World in Crisis (1950), an analysis of political and social movements in the 20th century. He is also author of Liberalism: Its Meaning and History (1958), Movements of Social Dissent in Modern Europe (1962), and Antiericalism (1967). His Modern and Contemporary European History (1918) was one of the first textbooks to treat history as the evolution of civilization, embracing social, economic, intellectual, and literary developments, and it had a marked influence on a generation of college students. Many revised editions have appeared.

[Oscar Isaiah Janowsky]

SCHAPIO, LEONARD (1908–1985), British political scientist. Schapiro was born in Glasgow but lived in Riga and Petrograd from 1915 to 1921. His father's family had been wealthy and influential figures in Latvia before the Revolution. In 1921 the family settled in London; Schapiro was educated at St. Paul's School and London University. He practiced as a barrister from 1932 until 1955. During World War II he worked as an intelligence monitor and, with his knowledge of many languages and his Russian background, was already regarded as one of Britain's greatest experts on the Soviet Union. Schapiro then taught at the London School of Economics and was professor of political science from 1963 to 1975. His many works on the Soviet Union include The Origins of Communist Autocracy (1955); The Communist Party of the Soviet Union (1960), generally regarded as the best Western work on this subject; Rationalism and Nationalism in Russian Nineteenth-Century Political Thought (1967); and a biography of Turgenev (1978). He was also chairman of the editorial board of the journal Soviet Jewish Affairs and did much to support Soviet Jewry.

[William D. Rubinstein (2nd ed.)]

SCHAPIO, MEYER (1904–1996), U.S. historian of art. Schapiro was born in Siauliai, Lithuania, but immigrated to the United States as a child of three. He was first introduced to art history at an evening class at the Hebrew Settlement House in Brownsville, taught by John Sloan. He graduated from Columbia University in 1924 with honors in art history and philosophy, receiving his doctorate in 1929. Schapiro taught in the department of art, history, and archaeology at Columbia from 1928 onwards, teaching at that institution as a University Professor from 1965 to 1975, when he was appointed professor emeritus. He was lecturer of fine arts at New York University from 1932 to 1936, the New School for Social Research from 1936 to 1952, London University from 1947 to 1957, the Hebrew University in 1961, Norton Professor of Fine Arts at Harvard from 1966 to 1967, Oxford University in 1968, and at the College of France in 1974. Schapiro was a Fellow of the American Academy of Arts and Sciences and of the American Philosophical Society, and was elected to the American Institute of Arts and Letters. Columbia University awarded him the Alexander Hamilton Medal for distinguished service in 1975. A professorship in Modern Art and Theory was created at Columbia in his name. He is acknowledged as one of the most distinguished American historians of art. A rigorous observer and theorist, he addressed the relationship among society, artist, and artwork, arguing that social and institutional forces mediated the actions of even the modern artist. In this way, his viewpoint differed from that of Clement Greenberg and Harold Rosenberg, two other Jewish intellectuals who contributed to the shape of modern art history in New York during this period. Schapiro was a masterful and gifted art historian of medieval art, Romanesque sculpture, and 19th and 20th century art, especially that of Cezanne, Courbet, Mondrian, and van Gogh. His friends and former students included Irving Howe, Willem de Kooning, Jacques Lipchitz, Robert Motherwell, and Barnett Newman. He also worked with Max Horkheimer and Herbert Marcuse when they moved the Frankfurt School from Germany to New York. The publisher George Baziller has published four volumes of Schapiro's work, beginning in 1977 with Selected Papers. Romanesque Art; the last volume Theory and Philosophy of Art was printed in 1994. He published his celebrated works Van Gogh in 1950, Cezanne in 1952, and Words and Pictures in 1973. He also contributed articles to The Nation and Partisan Review. Schapiro's research and writing continues to be instrumental to contemporary art historians, including Norman Bryson, T.J. Clark, and Linda Nochlin.

SCHAPPE, MORRIS U. (Moise ben Haim Shapshilevich: 1907–2004), historian and social activist. Born in Kamienets-Podolski, Ukraine, he immigrated to the U.S. with his parents in 1914. He received a B.A. from City College and an M.A. from Columbia University (1930). He began his academic career at the City University of New York, where he taught English from 1928 to 1941, when he lost his position in the anti-Communist purges of 1940–41. One of 40 faculty members who were dismissed for refusing to cooperate with the Rapp-Coudert Committee’s investigation of alleged subversive activities at the university, Schappes was incarcerated on the charge of perjury, having claimed under oath that he could name only three Communists at the school, two of whom were dead. When a colleague named some 50 names, Schappes was sentenced to 13 months in prison.

In 1946 he founded Jewish Life (since 1957, Jewish Currents), a socialist, pro-Israel but non-Zionist magazine concerned with literature, political and social commentary, of which he was the editor for four decades. The magazine, which had become an unofficial organ of the Communist Party, gradually broke its ties with the Soviet Union and moved more toward Israel, especially after the Six-Day War of 1967.

In 1981, the faculty senate of City College apologized for firing Schappes and his colleagues. In 1993 he was awarded the Torchbearer Award of the American Jewish Historical Society.

SCHARFSTEIN, ZEVI (1884–1972), U.S. Hebrew educator, journalist, and publisher. Born in the Ukraine, Scharfstein devoted himself to educational work from 1903. After directing a Hebrew school in Tarnow, Galicia (1900–14), he arrived in the United States in 1914 and two years later became instructor at the Teachers Institute of the Jewish Theological Seminary, where he eventually served as professor of Jewish education until his retirement in 1960.

A prodigious contributor to the Hebrew press, his column in the American Hebrew weekly Hadoar dealt with political and, especially, with literary events. From 1907 Scharfstein also published educational texts embracing Hebrew literature, Jewish education, Bible, and Hebrew language.

His historical works as a Jewish educator include Ha-Ḥeder be-Hayyei Ammumu (1943) and Toledot ha-Ḥinnukh be-Yisrael ba-Dorot ha-Aḥaronim (5 vols., 1960–66); and his autobiographical works comprise Arba’im Shanah ba-Ameri-kaḥ (1955–56). Among his contributions to Hebrew lexicography is Ḥazar ha-Rayonot ve-ha-Pīgamim (3 vols., 1966). From 1940 Scharfstein was editor of the educational periodical She-velei ha-Ḥinnukh.

SCHARY, DORE (Isidore; 1905–1980), U.S. film writer and producer. Born in Newark, New Jersey, Schary acquired a reputation as a screenwriter in Hollywood before he was 30. In 1941 he became an executive producer for Metro Goldwyn Mayer (MG M), where his policy of producing scripts with a social message led to such films as Boys Town (1938); Edi-son, the Man (1940); Joe Smith, American (1942); and Bataan (1943). He moved to Vanguard in 1943, and to RKO in 1947, the year in which his Crossfire put the issue of antisemitism on the screen for the first time in the United States. In 1947 Schary returned to MGM, of which he became chief production manager in 1951. Among the more than 300 pictures he produced there were such popular successes as Battleground (1949); The Asphalt Jungle (1950); King Solomon’s Mines (1950); Quo Vadis? (1951); Lili (1953); and Julius Caesar (1953). Schary was dismissed from his post in 1956 as part of a sweeping re-organization, but remained with MGM as a consultant for the next ten years. Turning to the stage, he wrote the Broadway hit Sunrise at Campobello (1958), which dealt with the early career of Franklin D. Roosevelt, and for which he won a Tony Award. He also wrote the successful musical The Unsinkable Molly Brown (1960).

Active politically in the liberal wing of the Democratic Party, Schary was also interested in Israel and Jewish affairs and served for many years as national chairman of the Anti-Defamation League of the B’nai Brith (1963–69). In 1948 he was given the Thomas Jefferson Award by the Council Against Intolerance in America. In 1970 he was appointed New York City’s first commissioner of cultural affairs. In 1982 the ADL established the annual Dore Schary Award, presented to student film and video productions on subjects that combat prejudice and promote human rights.

His autobiography, For Special Occasions, appeared in 1962. His final autobiography, Heyday, was published in 1979.

SCHATZ, BORIS (1867–1932), painter and sculptor; founder of the *Bezalel School of Art in Jerusalem. Schatz was born in

110

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
SCHAULSON BRODSKY, JORGE (1890–1921), Hebrew writer. Born in Russia, Schatz grew up in non-Jewish surroundings. He corresponded with *Trumpeldor regarding the establishment of a commune in Palestine and later immigrated there. Between 1918 and 1920, he was a soldier in the Jewish Legion and was killed in an Arab riot along with *Brenner. Under the influence of Brenner, who was his mentor and editor, he began to write in Hebrew during the last years of his life. He wrote two novellas, of which Be-Lo Niv (originally entitled Al Gevul ha-Demamah) was published during his lifetime, and Batyah, along with some poetry, appeared posthumously. Schatz was the first to depict the experiences of the individual in the kibbutz in fiction as well as in his letters and conversations. All these were collected by M. Poznansky in Al Gevul ha-Demamah (1929; 1967; 1990).

SCHATZ-ANIN, MAX (1885–1975), left-wing Socialist ideologist and author. Born in Friedrichstadt (Jaunjelgava), Latvia, Schatz-Anin studied law at St. Petersburg and joined the *Zionist Socialist Workers’ Party (territorialists). He was later arrested and deported abroad, where he contributed to the party press in Russia and Central Europe. Schatz-Anin graduated from Berne university after writing his doctoral thesis “Zur Nationalitaetenfrage” (1910). On the eve of the congress of the Socialist International in Copenhagen (1910), he published an essay on “The Jewish Proletariat in the Socialist International,” in which he demanded that nationalities be represented at the International. Returning to Russia in 1912, he settled in Riga as a lawyer. After the February Revolution in 1917, Schatz-Anin represented his party in the Petrograd Soviet and was a co-founder of the *United Jewish Socialist Workers’ Party, representing it in the executive committee of the Ukrainian Rada. Returning to Riga in 1919, he joined the illegal Communist party and founded the left-wing Yiddishist Kultur-Lige. Although he went blind (1928), he continued to deliver lectures and write and was appointed university professor when Latvia became a Soviet Republic.

His philosophical essays and historical works in Yiddish and Russian include Temporalism (1919), Sotsiale Opozitsye in Yidisher Geshikhte (“Social Opposition in Jewish History,” 1927), and Di Gezelshaftlikhe Bavegunen bay Yidn tsivshin der Ershter un Tsveyter Velt-Milkhome (1941).

SCHAULSON BRODSKY, JORGE (1954– ). Chilean politician. He was the son of Jacobo *Schaulson, politician and member of the Chilean Parliament. During the government of Pinochet, he studied law in the United States and graduated in 1980. Upon his return to Chile he began practicing...
law, maintaining offices in Santiago and in New York. He was one of the founders of the Pro Democracy Party (PPD) and in 2005 was its vice president. Schaulson was elected to Parliament in 1989 and reelected in 1993; he was president of the lower chamber. In 2004 he lost the election for the post of mayor of Santiago.

[Moshe Nes El (2nd ed.)]

SCHAULSON NUMHAUSER, JACBO (1917–1989), Chilean lawyer and politician. Born in Santiago, he graduated in law in 1941 and was president of the Juventud Radical (Youth of the Radical Party). He practiced law and became legal adviser to the governor of Santiago province. Schaulson Numhauser was made professor of civil law at the University of Santiago in 1953. As an active figure in the Chilean Radical Party, he sat in the Chamber of Deputies from 1949 to 1965. He was secretary and later vice president of the party, president of the Chamber of Deputies (1961–62), and a member of the Constitutional Tribunal. In 1950 he represented Chile at the United Nations. After his retirement he worked as a lawyer.

SCHAWLOW, ARTHUR L. (1921–1999), U.S. physicist and Nobel laureate. He was born in Mount Vernon, New York, to an immigrant father from Riga and a Canadian mother. When he was aged three, the family moved to Toronto, where he was educated at Vaughan Road Collegiate Institute. He won a scholarship enabling him to graduate in mathematics and physics from the University of Toronto (1941). During World War II he worked in radar development, before returning to the university to earn his Ph.D. (1951) in spectroscopy under the supervision of Malcolm Crawford. He was a postdoctoral research fellow in the physics department of Columbia University, New York, where he worked with Charles H. Townes, and then a physicist at the Bell Telephone Laboratories (1951–61), where he continued to collaborate with Townes. In 1961 he became professor of physics at Stanford University, where he was chairman of the department (1966–70), J.G. Jackson and C.J. Wood Professor of Physics from 1978, and subsequently emeritus professor. Schawlow’s main research interest was spectroscopy, and he and Townes conceived the idea for, and in 1957 built, the first laser (light amplification by stimulated emission of radiation). The practical applications of these discoveries are now common knowledge. Schawlow applied these theoretical and technical advances to his research in optics, superconductivity, and fundamental problems of atomic structure. He and Townes did not benefit personally from the patent won by the Bell Telephone Company. Schawlow and Townes won the 1981 Nobel Prize in physics, shared with Kai M. Siegbahn. His many honors included election to the American Academy of Arts and Sciences and the U.S. National Academy of Sciences, the Marconi International Fellowship (1977), and the U.S. National Medal of Science (1991). He was a distinguished teacher, and his book Microwave Spectroscopy (1955), coauthored by Townes, was a standard text. Schawlow married Townes’ sister Amelia, an outstanding musician, in 1951. She died in a road traffic accident in 1991. Their son Artie was autistic, and his parents organized the nonprofit California Vocations, a group home for autistic individuals, renamed the Arthur Schawlow Center in 1999. They also had two daughters. Schawlow was a clarinetist and jazz expert, with a legendary sense of humor manifest in his social and professional life.

[Michael Denman (2nd ed.)]

SCHAYES, ADOLPH (“Dolph” ; 1928– ), U.S. basketball player and coach, member of the NBA’s 25th and 50th Anniversary teams, and member of Basketball Hall of Fame. Schayes, a native New Yorker, was an All-American standout at New York University, where he won the Haggerty Award in his senior year. Initially taken by the New York Knick-erbockers in the 1948 draft, Schayes chose to join the recently formed Syracuse Nationals of the NBL. The 6’ 8” Schayes had an immediate impact, leading the Nats in scoring en route to a much improved 40–23 finish. The following year Schayes proved even more effective, as the Nats, now officially part of the NBA, finished on top of their conference, going 51–13. For the 1950–51 season, the NBA instituted All-Star games, and Schayes, being a consistent top-ten leader in all offensive categories and rebounds, was an NBA All-Star in each of his remaining 12 seasons as a full-time player for Syracuse; in six of those seasons he was First Team All-NBA. Over the course of his 15 seasons with the Nats, Schayes led the team to an overall 572 winning percentage and the 1955 NBA Championship. In 1963, the Nats moved to Philadelphia and became the 76ers, naming Schayes as player-coach. When Schayes ended his playing career in 1964, he was the NBA’s all-time leading scorer, with 19,247 points. His career scoring and 18.2 points-per-game average remain top-50 all-time records. Schayes is also one of the top free-throw shooters in NBA history, ranking 6th all-time in free throws made (6,979) and in the top-50 in lifetime free-throw shooting percentage (84.9%). He is also 16th in rebounds-per-game (12.1) and 23rd all-time in total rebounds (11,256). During his three-year stint as coach of the 76ers, Schayes enjoyed great success as well, guiding them in his third season to a 55–25 record, while being named NBA Coach of the Year in 1966. During the early 1970s, Schayes was supervisor of NBA Officials. In 1977, he coached the U.S. team to a gold medal at the Maccabiah Games, with his son, DANNY SCHAYES (1959– ), as the star player. Danny went on to play for Syracuse University and from there to a successful 18-year NBA career.

[Robert B. Klein (2nd ed.)]

SCHECHTER, ABRAHAM ISRAEL (1894–1936), rabbi and scholar. Schechter, who was born in Vizhnitsa, Bukovina, worked as a librarian in Switzerland, and then emigrated to the U.S. in 1922. From 1924 he taught at the Hebrew Theological College, Chicago, and later served as rabbi in Houston, Texas, and Providence, Rhode Island.
Among his published works are *Palaestina, seine Geschichte und Kultur* (1905, which had to be withdrawn after a court order for plagiarism); *Studies in Jewish Liturgy*, on the *Hibbur Berakhot* by Menahem b. Solomon (1930) which drew criticism from I. Davidson (1931), 213–31; 241–79; Schechter’s rejoinder, in: *QR*, 22 (1931–32), 147–52; and *Lectures on Jewish Liturgy* (1933). Schechter’s collection of Hebrew and Judaica was given to Texas University Library.

His wife Eva wrote *Symbols and Ceremonies of the Jewish Home* (1930).

**Schechter, Mathilde Roth** (1857–1924), founding president of the National Women’s League of the United Synagogue of America, now known as the *Women’s League for Conservative Judaism*. Born in Gutten tag, Germany, Mathilde Roth grew up in the Breslau Jewish orphans home. A gifted student, she attended the Breslau Teacher’s Seminary. In 1885, she went to England to study and to be a tutor in the home of Michael Friedlaender, principal of Jews College. In the library of that college she met the distinguished scholar Solomon *S* Schechter. They wed in 1887.

The Schechter home quickly became a center for Jewish intellectual life, largely thanks to Mathilde Schechter’s legendary hospitality. That tradition continued in her subsequent homes, in Cambridge, after Solomon Schechter was appointed lecturer at the university, and then, after 1902, in New York, when he became president of the Jewish Theological Seminary. In Cambridge, Mathilde Schechter gave birth to their three children, a son and two daughters. Even as she raised them, she edited the works of local scholars and engaged in other literary pursuits, including translating the German poet Heinrich *Heine*. Furthermore, she edited almost everything her famous husband wrote.

In the United States Mathilde Schechter complemented her husband’s establishment of Conservative Judaism by laying the foundations for its women’s organization in 1918. The National Women’s League of the United Synagogue of America subsequently grew to become one of the largest Jewish women’s organizations in the United States. Mathilde Schechter believed that the Women’s League could help women deepen religious life in their homes, synagogues, and wider communities. She persuaded the Women’s League to establish a Students’ House in New York City in 1918, which became a home away from home for Jewish students as well as for Jewish servicemen on leave. She also founded and taught at a Jewish vocational school for girls on the Lower East Side and was national chairwoman of education for Hadassah.

Mathilde Roth Schechter extended the domestic ideal of women caring for their home and family, which she lived to the fullest, to women’s caring for their synagogues and wider Jewish communities. She thus stands within a coterie of leaders of American Jewish women, who, in the early decades of the 20th century, laid out new avenues for women’s activism within Jewish life.

[1](Pamela S. Nadell (2nd ed.))

**Schechter, Solomon** (Shneur Zalman; 1847–1915), rabbinic scholar and president of the *Jewish Theological Seminary of America*. Schechter was born in Focsani, Romania. His father, a Chabad Hasid, was a ritual slaughterer (Ger. Schachchter). In his teens he studied with the rabbinic author Joseph Saul Nathanson in Lemberg. From about 1875 to 1879 he attended the Vienna *bet ha-midrash*. He acquired a lifelong devotion to scientific study of the tradition and developed the central notion of the community of Israel as decisive for Jewish living and thinking. He was to call it “Catholic Israel.” From 1879 he studied at the Berlin Hochschule fuer die Wissenschaft des Judentums and at the University of Berlin. When, in 1882, a fellow student at the Hochschule, Claude Goldsmid Montefiore, invited him to be his tutor in rabbinics in London, Schechter accepted. In England he rose to prominence as a rabbinic scholar and spokesperson for Jewish traditionalism. In 1890 he was appointed lecturer in talmudics and in 1892 reader in rabbinics at Cambridge University. In 1899 he also became professor of Hebrew at University College, London.

Schechter’s first substantial work was his edition of *Avot de-Rabbi Nathan* (1887). His fame rests on the scholarly recovery of the Cairo *Genizah*. It created a sensation in the world of scholarship, and in its wake Jewish history and the history of Mediterranean society have been rewritten. Over one hundred thousand manuscripts and manuscript fragments were brought to England and presented to Cambridge University by Schechter and Charles Taylor, the master of St. John’s College who had made Schechter’s trip possible. Together they published the newly discovered fragments of the Hebrew original of Ben *Sira* (*The Wisdom of Ben Sira*, 1899).

Late in 1901 Schechter accepted an invitation by a number of leading American Jews, notably his friend, Judge Mayer Sulzberger of Philadelphia, to assume the post of president of the Jewish Theological Seminary of America. He served in this capacity from 1902 until his death. He was able to attract a distinguished faculty, including Louis Ginzberg, Alexander Marx, Israel Friedlaender, Israel Davidson, and Mordecai M. Kaplan. The Seminary became one of the most important centers of Jewish learning and of Jewish intellectual and, indeed, national revival. Schechter’s *Studies in Judaism* (3 vols., 1896–1924), his *Some Aspects of Rabbinic Theology* (in book form, 1909; based on essays in the *Jewish Quarterly Review*, 1894–1896), and *Seminary Addresses and Other Papers* (1915) remain indispensable documents of American Jewish religious Conservatism. Steering a course between Orthodoxy and Reform, Schechter combined scholarliness and objectivity with
piety, and piety with a measure of flexibility and innovation in doctrine and practice. In 1913 Schechter was instrumental in founding the "United Synagogue of America" (his original designation read "Agudath Jeshurun – A Union for Promoting Traditional Judaism in America"), which became a major national institution of Conservative Judaism in the United States. In 1905 he acknowledged Zionism as "the great bulwark against assimilation." He felt close to religious and spiritual Zionism and in 1913 attended the 11th Zionist Congress in Vienna. Over the strenuous objections of Seminary board members Jacob H. Schiff and Louis Marshall, he opened the Seminary to Zionist activity. But he remained, essentially, a builder of religious Judaism in the American diaspora.

Schechter is considered the chief architect of Conservative Judaism in the United States. In his view, this version of Jewish religious life and thought was organically related to the Historical School, founded by Zunz, Frankel, and Graetz. Schechter defined the theological position of the school: "It is not the mere revealed Bible that is of first importance to the Jew but the Bible as it repeats itself in history, in other words, as it is interpreted by Tradition... Since then the interpretation of Scripture or the Secondary Meaning is mainly a product of changing historical influences, it follows that the center of authority is actually removed from the Bible and placed in some living body, which, by reason of its being in touch with the ideal aspirations and the religious needs of the age, is best able to determine the nature of the Secondary Meaning. This living body, however, is not represented by any section of the nation, or any corporate priesthood, or Rabbinhood, but by the collective conscience of Catholic Israel, as embodied in the Universal Synagogue" (Studies in Judaism, Series One, JPS, 1896, xvii–xviii).

Though a staunch traditionalist, Schechter admitted the possibility of change. However, he felt that changes should not be introduced arbitrarily or deliberately. Rather, "the norm as well as the sanction of Judaism is the practice actually in vogue. Its consecration is the consecration of general use – or, in other words, of Catholic Israel" (ibid., xix). Schechter insisted (ibid., 180ff.) Judaism must be understood as regulating not only our actions but also our thoughts: "It is true that every great religion is a 'concentration of many ideas and ideals' which make this religion able to adapt itself to various modes of thinking and living. But there must always be a point round which all these ideas concentrate themselves. This center is Dogma."

SCHIECHTER INSTITUTE OF JEWISH STUDIES, THE
(Machon Schechter L'madaey Hayahadut). The institute was founded in Jerusalem in 1984 as the Seminary of Judaic Studies (Bet Hamidrash Limmudei Hayahadut) to train Conservative rabbis for the Masorti Movement in Israel. It was viewed as the spiritual heir of the Breslau Rabbinical Seminary (1854–1939) and the Jewish Theological Seminary of America (JTS; 1887 ff.). It was founded by JTS under the leadership of Chancellor Gershon *Cohen and Vice Chancellor Simon *Greenberg, and by the Masorti (Conservative) Movement in Israel represented by Prof. Reuven *Hammer, who also served as its first dean (1984–1987). It met initially at the Schocken Institute, a JTS affiliate in Jerusalem, and the founders dreamed that it would eventually have 60 students.

The Seminary grew rapidly under the leadership of Prof. Lee *Levine, who served as dean and later president (1987–94) and rector (1994–96), as the Seminary moved first to the Māayanot building and then to Neve Schechter (1990), which had been a dormitory for JTS rabbinical students. The first class of four rabbinical students was ordained in July 1988, but Levine and his successors felt that it was not enough to ordain Israeli Conservative rabbis. They felt that the most effective way to bring Jewish education in general and Conservative Judaism in particular to Israel was by developing large educational programs for public school children and teachers and for new immigrants. Levine therefore founded the TALI Education Fund (1987) which funds and supervises the TALI school system in Israel, received permission from Israel's Council for Higher Education to grant an M.A. degree in Jewish Studies as a branch of JTS (1989), adopted Midreshet Yerushalayim, which became a program for Russian-speaking and Hungarian Jews (1990), and adopted the one year rabbinical programs of JTS, the *University of Judaism in Los Angeles, and the *Seminario Rabbinico in Buenos Aires (1990).

During Levine's tenure, the TALI Education Fund began to turn the TALI schools into a real school system: many schools were added, a syllabus for grades 1–9 was published, curricula were written, in-service training was developed,
and agreements were reached with the Ministry of Education. The M.A. program in Jewish Studies grew rapidly from five students in 1990–91 to over 200 in 1994, and Levine began to hire full-time faculty. Together with Prof. David Golinkin, the dean, he developed an innovative interdisciplinary M.A. program in Jewish studies for Israeli educators, with specializations such as informal education, family and community studies, and Jewish Women’s Studies as well as a D.H.L. program as a branch of its.

Midreshet Yerushalayim had been founded in the 1980s as a post-high school yeshivah-style program for Conservative Jews from North America. Transformed under the leadership of Levine and Shmuel Glick, it founded an outreach program for Russian-speaking immigrants in Israel and a TALI school system and Ramah Camps in the former Soviet Union, and it revived the moribund *Rabbinical Seminary in Budapest by adding a Pedagogium for teachers, which eventually became the University of Jewish Studies in Budapest.

During Rabbi Benjamin Segal’s tenure as president (1994–99), all of the Seminary’s programs continued to grow at a rapid rate and the institution was renamed the Schechter Institute of Jewish Studies in 1998, in honor of Prof. Solomon *Schechter, one of the main founders of Conservative Judaism in North America. Segal more than doubled the budget, adopted sound fiscal and administrative policies, began the accreditation process to turn Schechter into an Israeli institution of higher learning, and endowed the Liebhaber Prize for Religious Tolerance. He founded the Institute of Applied Halakhah together with Golinkin; its goal was to publish halakhic literature in different languages for the worldwide Conservative Movement. He also developed indigenous leadership by hiring three young graduates of Schechter – Alexander Even-Chen as dean of the Graduate School, Eitan Chikli as director of the TALI Education Fund, and Yair Paz as director of Midreshet Yerushalayim in Israel.

Prof. Alice Shalvi, who served as rector (1997–2000) and acting president (1999–2000), laid the groundwork for an M.A. track in Judaism and the Arts and a Center of Jewish Art which developed curricula for the TALI schools and websites. She founded The Center for Women and Jewish Law (1999) together with Golinkin, and helped launch Nashim: A Journal of Jewish Women’s Studies and Gender Issues (1998), which was co-published with Brandeis University and later with Indiana University Press. Shalvi also hired Gila Katz, who had founded the TALI day school in Czernowitz, as director of Midreshet Yerushalayim in Ukraine.

During Golinkin’s tenure (2000ff.), the four major Schechter programs became four separate amutot (non-profit organizations) as The Schechter Institute achieved accreditation as an Israeli institution of higher education (2005). Annual fundraising increased dramatically, while endowments and endowed chairs were raised for the first time. The Schechter Institute hired many tenure-track faculty and undertook an ambitious program of publishing academic and popular works in Hebrew, English, Russian, French, and Spanish. The TALI school system expanded rapidly after receiving official recognition from the Ministry of Education in 2003 and began to publish at least four new TALI textbooks per year. Midreshet Yerushalayim expanded to 46 branches in Israel and to 17 schools and camps in Ukraine.

By 2006, the Schechter Rabbinical Seminary had 60 students from Israel and abroad; the Schechter Institute of Jewish Studies graduate school had 450 students and 60 full and part-time faculty; the TALI Education Fund provided enriched Jewish education to 25,000 Israeli children in almost 140 TALI schools and pre-schools; and Midreshet Yerushalayim taught Jewish studies to thousands of Russian immigrants in Israel and to Jews in Ukraine and Hungary. Golinkin stated that his dream was to provide every Israeli and eastern European Jew with a Jewish education.

[David Golinkin (2nd ed.)]

**SCHECHTMAN, JOSEPH B.** (1891–1970), Zionist leader, authority on population movements, and author. Schechtman, who was born in Odessa, served in the all-Russian Jewish Congress convened in Petrograd (1917) and the Ukrainian National Assembly convened in Kiev (1918). After leaving Russia in 1921, he became coeditor and later managing editor of *Razsvyet* (1922–32), the organ of the Federation of Russian-Ukrainian Zionists, and subsequently the leading *Revisionist* weekly. Schechtman approved “Jabotinsky’s resignation from the Actions Committee of the World Zionist Organization in 1923, but disagreed with his concurrent resignation from the Zionist Organization itself. However, this partial support later became total when the two men took the lead in founding the World Union of Zionist Revisionists in Paris in 1925 which elected Jabotinsky its president. Schechtman, in common with Jabotinsky, became steadily disenchanted with the subsequent actions of the Zionist leaders. He opposed the proposed enlargement of the Jewish Agency (1929) to include a 50% proportion of non-Zionists, fearing that such a move would contribute to the dilution of, and possibly betray, the aims of political Zionism. However, he and the other Revi-
sionists were not averse to an Agency that would be elected by universal suffrage. In 1929 Schechtman became chief editor of Nayer Veg, a Yiddish-language Revisionist organ.

In 1935, the Revisionists left the Zionist Organization, established the New Zionist Organization in Vienna, and elected Jabotinsky its president. Schechtman continued his work in the Revisionist movement both in Europe and after going to the U.S. in 1941. From 1941 to 1943 he was a research fellow for the Institute of Jewish Affairs. He directed the Research Bureau on Population Movements (1943–44), and from 1944 to 1945 served as a consultant to the Office of Strategic Services (OSS) on population movements. Schechtman was subsequently a member of the World Zionist Organization’s Actions Committee; a member of the executive of the World Jewish Congress; and chairman of the World Party Council. At his death, he was president of the United Revisionists of America and chairman of the World Council of the Zionist Revision Movement.

Schechtman’s books include: a two-volume autobiography of Vladimir Jabotinsky, his best-known work, entitled Rebel and Statesman; The Early Years (1956), and Fighter and Prophet; the Last Years (1961); On Wings of Eagles (1961); The United States and the Jewish State Movement (1966); Star in Eclipse; Russian Jewry Revisited (1961); European Population Transfers, 1939–1945 (1946); and Postwar Population Transfers in Europe, 1945–1955 (1962).

SCHHECK, BARRY (1949– ), U.S. lawyer. Born in Queens, NY, and raised in Manhattan, Scheck, the son of a television producer and entertainers’ representative, graduated from Yale University. He was politically active in the “Dump Johnson” movement of the late 1960s before going to the University of California Boalt Hall School of Law in Berkeley, where he worked for the United Farm Workers Union. Scheck became a lawyer for the Legal Aid Society, New York City’s law firm for the poor, in the Bronx. There he met a fellow lawyer, Peter Neufeld, who would become his best friend. After three years with Legal Aid, Scheck joined the Benjamin N. Cardozo School of Law, where he and Neufeld in 1992 founded the Innocence Project, a nonprofit legal clinic that seeks the release of wrongly convicted individuals through DNA testing. The Innocence Project relies on students to handle case work under the supervision of a team of lawyers. The lawyers screen cases to determine whether postconviction testing of DNA, the genetic material found in all human cells, can yield conclusive proof of innocence. Although DNA testing of crime scene evidence had been used since the late 1980s, it was not until the end of the 20th century that significant advances in the technology made it possible to examine minute specimens. The Innocence Project, by the early years of the 21st century, had helped to exonerate more than 80 people and was working on hundreds of other cases. Scheck was the DNA expert on the team of lawyers defending O.J. Simpson, the former football star, who was found not guilty of murder in a celebrated trial in the 1990s. Scheck and Neufeld were partners with the late Johnnie Cochran in a small civil rights law firm in Manhattan. The firm represented Abner Louima, a Haitian immigrant who was allegedly sodomized by New York City police officers in 1997. In 2003 the Innocence Project spawned the Life After Exoneration Project, to help the wrongly convicted after they were out of prison. Scheck and Neufeld, with Jim Dwyer, were the authors of Actual Innocence (2000), which recounted the stories of some of the people they helped free. Inspired by the Innocence Project, about 30 similar organizations formed around the country at law schools, journalism schools, undergraduate college, and public defenders’ offices.

[Scheffler, Robert B. Klein (2nd ed.)]

SCHHECKER, JODY (1950– ), race car driver, winner of the 1979 Formula One World Drivers Championship. Scheckter was born in East London, South Africa, but at the age of 20 he moved to England, where he developed his racing skills. In 1972 Scheckter qualified for his first Formula One race at Watkins Glen, finishing in ninth place. The following year Scheckter won the Formula 5000 (5 liter max. engine), while gaining a reputation for his aggressive style. A major setback occurred several months later, when he spun out of control at the end of the first lap of the 1973 British Grand Prix, taking out seven other cars in the process. However, Scheckter got back on track in 1974, finishing in third place in the Formula One standings, a feat he would repeat in 1976, and better in 1977 with a second-place finish. After dropping to seventh place in 1978, Scheckter decided to switch driving teams for the fourth time in his career, this time going with Ferrari. The move proved to be decisive, as Scheckter managed three first-place finishes (the Belgian, Monegasque, and Italian Grand Prix) over the course of the 1979 season, en route to amassing 51 points and winning the Formula One Championship. The following year, Scheckter could not find his form, accumulating only two points, and subsequently decided to retire from auto racing. Not resting on his laurels, that same year Scheckter moved to America and immediately started a business in firearms training simulators, which he sold in 1996 for approximately $100 million. He then moved back to England and began buying up plots of land near Basingstoke, and then ran a “biodynamic farming” business on an estate of over 2,500 acres. One of Scheckter’s sons, Tomas, became a successful racing driver in his own right in the Indy Racing League, winning the 2005 Bombardier Learjet 500 and finishing fourth in the 2003 Indianapolis 500.

[Scheffler, Israel (1923– ), U.S. philosopher and educator. Scheffler was born in New York City. He received a B.A. and an M.A. in psychology from Brooklyn College, and an M.H.L. from the Jewish Theological Seminary of America. He received his Ph.D. in philosophy from the University of Pennsylvania. Scheffler began his professional career at Harvard in 1952 and became professor of education and philosophy in 1964. His The Language of Education (1960) was a pioneering
work in the field of linguistic analysis as applied to education. In his work, Scheffler attempted to apply philosophical methods to educational ideas. He developed the logical evaluation of assertion, namely the examination of ideas from the standpoint of clarity and the examination of arguments from the standpoint of validity. Philosophical analysis, of which Scheffler was a leading spokesman, stressed the clarification of basic notions and modes of argument rather than the synthesizing of available beliefs into some total outlook.

After he retired from teaching, he was named Victor S. Thomas Professor of Education and Philosophy, Emeritus, at Harvard University. In 2003 he became the scholar-in-residence at the Mandel Center for Studies in Jewish Education at Brandeis University.

[Ernest Schwarz / Ruth Beloff (2nd ed.)]

**SCHEFTELOWITZ, ISIDOR** (1876–1934), Orientalist and rabbi. Scheffelowitz was born in Sandersleben, duchy of Anhalt, Germany. He studied Sanskrit and Iranian philology and worked for a time at the British Museum and at the Bodleian Library in Oxford. During 1908–26 he served as rabbi and teacher of religion in Cologne. In 1919 he began teaching at the newly founded Cologne University, becoming professor in 1923. When the Nazis seized power, he emigrated to England and taught at Oxford University. Scheffelowitz made a considerable contribution to the study of Sanskrit and Iranian philology and history, as well as to that of comparative religion.

**SCHEIBER, ALEXANDER** (1913–1985), Hungarian rabbi and scholar. Scheiber was ordained at the Landesrabbinerschule in his native Budapest. After serving as rabbi in Dunaföldvár (1940–44), he became a professor at the Landesrabbinerschule in 1945 and its director in 1950. He also joined the faculty of the University of Szeged (1949), teaching Oriental folklore. Scheiber concentrated on the spiritual survival of the remnant of Hungarian Jewry during the postwar period.

Under his leadership the traditions of the rabbinical seminary were maintained, and it continued to graduate young rabbis who filled rabbinical positions in Hungary and abroad. He considered it his mission to explore the Hungarian Jewish past and perpetuate its memory, as well as to study and publish the contributions of great Hungarian-Jewish scholars, including W. Bacher, I. Loew, and B. Heller.

As a scholar, Scheiber’s fields of specialization were Jewish history – especially the history of Hungarian Jewry – literature, Jewish folklore, and art. Studying and evaluating the Kaufmann *genizah*, he discovered the Rabbinate prayer book mentioned by Kirksáni (*HUCa*, 22 (1949), 307–20), part of the chronicle of Obadiah (KS, 30 (1954), 93–98), and fragments of the *She’elot Attikut* (*HUCa*, 27 (1956), 291–303, and 36 (1965), 227–59). Together with D.S. Loewinger, Scheiber published a volume of texts (*Ginzee Kaufmann*, 1, 1949). In 1957 a facsimile edition of the Kaufman *Haggadah* was published. During several stays in England, mainly at Cambridge, he discovered many important *genizah* fragments.

His contributions to the history of Hungarian Jewry include *Corpus Inscriptionum Hungariae Judaicae* (Hung., 1960, with Ger. summary), on Jewish inscriptions found in Hungary, and *Hebraeische Kodexuberreste in ungarlandischen Einbandstafeln* (Hung., 1969, with Ger. summary). Together with Philipp Gruenwald he edited *Monumenta Hungariae Judaica* (vols. 5–7, 1959, and from vol. 8 by Scheiber only). He also wrote the history of Sopron’s (Oedenburg’s) synagogue, which dates back to the Middle Ages (REJ, 118 (1959/60), 79–93, and Hungarian (1963)). He also published studies in folklore. Scheiber edited the *Jubilee Volume in Honour of Prof. B. Heller* (1941) and *Semitic Studies in Memory of I. Loew* (1947). A complete bibliography of all Scheiber’s publications has been published (Budapest, 1976). He edited the *Encyclopaedia Judaica’s* department of the history of the Jews in Hungary.

[Jeno Zsoldos]
the Baron in the settlements and with the corruption which existed among the Baron's officials.

[Yehuda Slutsky]

**SCHEINDLIN, RAYMOND P.** (1940– ). U.S. Judaic literary scholar. Born in Philadelphia and educated at Gratz College, Philadelphia, The Hebrew University of Jerusalem, the University of Pennsylvania (B.A. 1961), Jewish Theological Seminary of America (JTSA) (M.H.L. 1963; rabbinical ordination, 1965), and Columbia University (Ph.D. 1971). Scheindlin taught at McGill University, Montreal (1969–72), Cornell University (1972–74), and the Jewish Theological Seminary, New York (from 1974). He was the director of the Shalom Spiegel Institute of Medieval Hebrew Poetry at the JTSA and was a visiting professor at New York and Columbia universities and a fellow of the University of Pennsylvania Center for Judaic Studies (1993), as well as a member of the Columbia Seminar in Islamic Studies and a senior fellow of the Oxford University Centre for Postgraduate Hebrew Studies. Scheindlin was a part-time rabbi of the Kane Street Synagogue, a Conservative congregation in Brooklyn (1979–82). He was a Guggenheim Fellow in 1988 and was chosen as a Cullman Fellow of the New York Public Library for 2005–06 for a work on Judah Halevi. Scheindlin was a member of a number of professional and scholarly organizations, including the Association for Jewish Studies, the Jewish Publication Society of America, and the Society of Judeo-Arabic Studies. In addition he was a member of the editorial boards of *Jewish Quarterly Review, Arabic and Middle Eastern Literatures, Medieval Iberia, Prooftexts*, and *Edebiyat*.

[Drew Silver (2nd ed.)]

**SCHEINERT, DAVID** (1916–1996), Belgian author. Born in Częstochowa, Poland, Scheinert was raised in Brussels, where he founded the *Revue juive de Belgique*. An aggressive style emphasized his sense of fellowship with the oppressed, whether Jews or non-Jews. Scheinert's works include the novels *L'apprentissage inutile* (1948), *Le coup d'état* (1950), and *Un silence provisoire* (1968); verse collections such as *Rêquiem au génievre* (1952), *Et la lumière chanta* (1954), and *Comme je respire* (1960); and literary essays, notably *Ecrivains belges devant la réalité* (1964).

**SCHEINFELD, SOLOMON ISAAC** (1860–1943), U.S. Orthodox rabbi, Hebraist, and author. Scheinfeld was born in Scaudvil, Lithuania. He was ordained by Rabbi Isaac Elhanan Spektor in 1890, immigrating to the United States the following year. After a year in Milwaukee (1892–93) and almost a decade in Louisville, Kentucky, Scheinfeld returned to Milwaukee's Beth Israel congregation in 1902, remaining there until his death. Acknowledged rabbincic head of Milwaukee's Orthodox community during his tenure, Scheinfeld exerted leadership in all areas—religious, educational, war relief, charity and welfare, and Zionism. His unorthodox views on the revision and reconstruction of the prayer book were expressed in *Ha-Shilo'ah* (1921).

His literary works include five volumes of moral and ethical reflections on Judaism: *Ha-Adam ba-Ma'aleh* (“The Superior Man,” 1931); *Olam ha-Sheker* (1936); *Divrei Hakhhamim* (1941); *Ziyyyunim be-Derekh ha-Hayyim* (“Way-marks in the Path of Life,” 2 vols., 1922–28). He also wrote articles in the Hebrew encyclopedia, *Ozar Yisrael*.

[Louis J. Swichkow]

**SCHELER, MAX FERDINAND** (1874–1928), German philosopher and sociologist. Scheler was born in Munich. His father came from an upper middle-class Protestant family and his mother from an Orthodox Jewish family that had lived in Franconia for centuries. Scheler himself converted to Roman Catholicism during World War I.

Scheler studied philosophy at the University of Jena; there his most prominent teacher was the idealist philosopher Rudolf Eucken, whose ideas overshadowed Scheler's early work. He also taught at Jena from 1902 to 1907, when he left to teach at the University of Munich. After moving to Munich Scheler turned to phenomenology, and his subsequent work reflected the influence of Edmund *Husserl and Franz Brentano*. In 1910 Scheler went to live in Berlin as an academically unattached writer and formed close friendships with Werner *Sombart* and Walther *Rathenau*. During World War I he became a fervent nationalist and defended the “German war” with passionate intensity. In 1919 he accepted a chair at the University of Cologne, where he developed his views in the sociology of knowledge and also reconsidered his reli-
gious views. As a result of the latter, he left the Roman Catholic Church and elaborated his own doctrine, which asserted a vitalistic pantheism.

Scheler was an eclectically thinking who wove many disparate strands of ideas into the texture of his own work. Moreover, he was always open to new ideas and was not afraid to contradict his own earlier ones. His major theological work, in which he attempted to fuse phenomenological approaches with Christian doctrine is *Vom Ewigen im Menschen* (1921; *On the Eternal in Man*, 1960). His work in social psychology began with *Ueber Ressentiment und moralisches Werturteil* (1912; *Ressentiment*, 1960) and was further extended in his Zur Phaenomenologie der Sympathiegefaechle (1913; *The Nature of Sympathy*, 1954). In his last work Scheler attempted detailed phenomenological descriptions of different feeling states emulating the Pascalian endeavor to outline a “logic of the heart.” He opposed his holistic psychology to the scientific and analytic psychological approach that prevailed in his day.

Scheler's major philosophical work, *Der Formalismus in der Ethik und die materiale Wertetithik* (2 vols., 1913–16, 1921), represents an attempt to build a new ethic of phenomenology in opposition to Kantian ethical formalism. His major contribution to the sociology of knowledge, *Die Wissensformen und die Gesellschaft* (1926), aims at a reconciliation of the Platonic doctrine of the immutability of the world of values with the relativist approach to values found in many modern doctrines. Scheler argues that, though men in different periods and different social strata elaborate widely different forms and standards of knowledge, this simply means that they all strive, each in historically and socially determined ways, to grasp particular aspects of the eternal and immutable sphere of value essences.

A restless spirit, Scheler had wide appeal, especially to the youth, in the hectic and unsettled days of the Weimar Republic. His work had a major influence on French existentialism and phenomenology after World War II. Only later did it become more widely known in England and America, where it attracted the attention not only of philosophers and sociologists but also of theologians. His writings were collected in *Gesammelte Werke* (10 vols., 1953–60).

[Lewis A. Coser]

“SCHELLENBERG, WALTER” (1910–1952) Nazi official. Born in Saarbrücken to minor German officials, Schellenberg studied medicine and law and graduated from the University of Bonn. He joined the Nazi Party in May 1933 and the home office of the SD in 1934. He worked on the consolidation of the SD and the security police, and became a trusted adviser of *Himmler* and *Heydrich* as deputy chief of the foreign intelligence service of the SD. In May 1941 he concluded an agreement with the German Army on the operation of the Einsatzgruppen (mobile killing units) in the Soviet Union. He was head of the united SS and Wehrmacht intelligence. As early as the summer of 1942, he foresaw the impending defeat of Germany and tried to persuade Himmler to seek a separate peace with the West, which necessitated saving certain Jewish lives as leverage for negotiations and even halting the “Final Solution” in order to gain some time. When the Abwehr was dismantled after the attempt in 1944 on Hitler’s life, Schellenberg became the head of the combined intelligence services of the SS and the Wehrmacht. His power was only surpassed by Himmler’s within the SS. He was tried in the American Zone trials at Nuremberg. He was acquitted on the crime of genocide but found guilty of complicity in the murder of Soviet Pows. Sentenced to six years, he was released in 1951 and moved to Switzerland, where he wrote his memoirs.

[Yehuda Reshef / Michael Berenbaum (2nd ed.)]

“SCHELLING, FRIEDRICH WILHELM JOSEPH” (1775–1854), German philosopher. Constantly moved by new insights beyond a position before having adequately stated it, Schelling is generally remembered only as a link between the philosophies of Johann Gottlieb *Fichte* and Georg Wilhelm Friedrich *Hegel*, a view doing justice neither to his profundity nor to his originality.

Schelling embraced absolute idealism (see *Philosophy, Jewish*) before Hegel, and *existentialism* before Søren Kierkegaard, who attended Schelling’s 1841 lectures. His main periods of thought were: philosophy of nature (1797–99), aesthetic idealism (about 1800), absolute idealism (1801–04), philosophy of freedom (about 1809), “positive philosophy of revelation” (after 1815; N. Hartmann’s periodization). Schelling believed that nature is an organism independent of experience. No lapse into pre-Kantian realism, this position drives Schelling beyond Fichte’s ethical into an aesthetic idealism. Fichte’s nature is non-self for the moral self; Schelling’s is pre-self prior to and independent of self, an “unconscious artist” becoming self-conscious in art and philosophy.

Schelling believed that realistic philosophy of nature and aesthetic idealism are to be viewed as finite standpoints, to be united in absolute idealism as an absolute standpoint is attained. “The Absolute” becomes problematical, however, as freedom and evil, asserting themselves against it, fall outside it. Gradually the gulf widens between “essence” and “existence,” and absolute idealism becomes a mere “negative” philosophy – an idealized system abstracted from existence – the preliminary to a new “positive” philosophy which leaps from the absolute to the existential standpoint, confronting existence and “narrating” the confrontations. Negative philosophy constructs the idea of God. Positive philosophy confronts God Himself in His historical revelations.

Although well-versed in Hebraic studies, Schelling had no room for or contact with Judaism prior to abandoning
absolute idealism. This is partly due to his romanticism and pantheism (ways of thought out of sympathy with Judaism), largely because his absolute idealism, unlike Hegel’s, tends to dissipate particularity in the Absolute, thus giving scant respect to history. Moreover, even when he deals with history, he divides it into pagan and Christian; Christ is “the peak and end of the world of the ancient gods,” the Jewish God presumably included, and, “empiricism” being excluded from speculative theology, any “seed of Christianity... in Judaism” is denied (Werke, 1 (1856), 292, 296, 303). In line with his turn toward existentialism, however, Schelling’s view of Judaism changed.

Christian “neglect” of the Hebrew Bible is “almost indecent,” for it is divinely revealed; e.g., the tetragrammaton – a name, not a concept – expresses the “divine substance” which is perfectly inexpressible, and as such referred to by Elohim (Werke, 2 (1856), 271–2). To the end Judaism remains, not “mythology,” which expresses man’s unredeemed condition, but the indispensable, revealed “ground” of the Christian revelation, Israel being its chosen bearer.

Jewish thinkers indebted to Schelling’s earlier thought include Solomon *Formstecher who, however, subordinates the aesthetic to the ethical and also rejects absolute thought as “sublimated... gnosticism” (Guttmann). Franz *Rosenzeig’s Stern der Erhoesung (1921) reflects close affinity with Schelling’s later thought, especially his Ages of the World.

BIBLIOGRAPHY: S. Formstecher, Religion des Geistes (1841); J. Guttmann, in: F.W.J. Schelling, Of Human Freedom (1936), introd. and notes; Guttmann, Philosophies, index. [Emil Ludwig Fackenheim]

SCHENECTADY, a formerly industrial city situated on the Mohawk River in east central New York State. Of its 61,821 inhabitants (2000) about 5,200 Jews live in the city and suburbs. Jews first settled in Schenectady in the 1840s when Louis Jacobs sold clothing there, and in 1848 Alexander Susholtz settled with his family. Jonathan Levi, a peddler, settled next and would later become one of the major business leaders in the community. Within five years enough Jewish families had moved into the city to begin a congregation, which initially met in the homes of its members. On October 20, 1856, the congregation incorporated as Shaaray Shomayim (later Gates of Heaven). At the same time, Mordecai *Myers, a former State Assemblyman, relocated from Kinderhook in 1848 and was elected mayor in 1851 and 1854. The Jewish community bought land for a cemetery and the first burial took place in 1857. The first religious school was established in 1863. Between 1892 and 1907, Gates of Heaven moved from an Orthodox congregation to Reform. Meanwhile, in the 1870s, Jews from the Russian Empire arrived in Schenectady, and Hungarian Jews moved into the city after 1890, attracted by work available at General Electric. As late as the 1950s at least 30% of employed Jews found work at GE. Jonathan Levi played an instrumental role in attracting the Edison Co., that became GE, to the city. The Jewish community would later become split between permanent residents and professionals who worked at GE before being relocated. In the 19th century Jews worked as peddlers, small businessmen, grocers, tailors, laborers, and craftsmen.

Russian Jews did not want to join the predominantly German Gates of Heaven, and organized the Orthodox Congregation Agudas (later Agudat) Achim in 1890. By the 1920s, second-generation Russian Jews decided to modernize the synagogue, and it officially became Conservative in 1927. Until 1927 Agudas Achim emerged as the leading Orthodox congregation. Ethnic differences led Hungarian Jews to split from Agudas Achim and to found the Orthodox, but Hungarian, Ohab Zedek in 1893. Another split in Agudas Achim led followers of Rabbi Solomon Hinden to organize Adath Israel in 1914. New immigrants formed a separate congregation, Ohab Sholom in 1894. By 1916 the most Orthodox members of the community created a separate congregation, B’nai Abraham. Over time all the Orthodox synagogues merged into one congregation, with the last merger taking place in 1955 when Ohab Zedek merged with Ohab Sholom B’nai Abraham to form Beth Israel, the current Orthodox congregation in Schenectady. The Jewish community numbered 3,000 in 1913 and reached 5,000 in 1918. Later figures by Jewish organizations listed 3,800 in 1943, 2,800 in 1950, 4,200 in 1970, 5,700 in 1984 and 5,200 in the mid-1990s. Prior to 1945, the Jewish community lived primarily within the city limits, but the suburbanization of Jewish residents and institutions mean that the most recent figures suggest that at least half the community lives in suburban towns like Niskayuna.

The diversity of Jewish organizations reached its peak between 1910 and 1930. The first organization not affiliated with a synagogue was the Ladies Benevolent Society formed in 1883. Other charitable institutions included the United Hebrew Charities in 1897, Hebrew Sick and Benevolent Society in 1909, and the Hebrew Sheltering and Aid Society in 1913. Another philanthropic association, Montefiore Society, appeared in the 1880s and reduced its peak of effectiveness in the 1890s. Women organized a chapter of the National Council of Jewish Women in March 1916. Jewish fraternal organizations included the Independent Order of Brith Abraham, started in 1900, Free Sons of Judah, 1905–16, Free Sons of Israel (around 1900), and B’nai B’rith, 1921. The first Zionist group, the Moriah Zionist Association began in 1913. By 1917 a chapter of the Socialist Labor Party (Poalei Zion) was started and, by 1919, a chapter of the Zionist Organization of America. Hadassah started a chapter in 1921. During World War I, local Jews contributed to Jewish war victims in Europe and Palestine and to the Palestine Restoration Fund after the war. Congressman George Lunn of Schenectady, the former Socialist mayor, introduced a resolution in Congress in support of a Jewish homeland in Palestine. In the 1920s and 1930s support for Zionism waned in Schenectady, except for a small dedicated group of men and women. Reform Jewish leaders opposed the idea until after World War II. Between 1945 and 1948, some local Jews in Schenectady, Albany, and Troy helped smuggle bandages, ammunition, and arms to Palestine to defend Jewish settlements, and the community held a mass meeting in May 1948 to cel-
erebrate the independence of Israel. In 1967 and 1973, the local community rallied to the embattled Jewish homeland.

Other major Jewish associations were the Workmen's Circle branch, in 1912 and within a year the Jewish Socialist branch formed. A community *talmud torah* was founded in 1911 and chartered in 1912, which became the United Hebrew Community in 1923. Two young people's groups, the Apollo Club and Young Macabees, social and athletic groups, merged in 1916 to form the YWHA, followed by the YWHA a year later. The Ys incorporated in 1921 and merged with the United Hebrew Community to form the Jewish Community Center in 1929. Following the movement of the Jewish population, the JCC, the primary non-congregational organization of the Jewish community, relocated to Niskayuna. The first Jewish self-defense organization was the Jewish Citizens Committee, which began as a protest against Polish pogroms and the Ukrainian massacres, but, due to criticism from local Polish immigrants, the citizens' committee organized in June 1919 to represent all of Schenectady's Jews. Despite its intentions the committee did not last, and in 1938 local Jews, responding to activities of the German-American Bund and antisemitism in Germany, created the Jewish Community Council which was later incorporated in 1948. Both the Anti-Defamation committee of the local B'nai Brith and the Jewish War Veterans, troubled by the rise in antisemitism, pushed for the creation of the Council. Before and after the war it helped resettle refugees and sent supplies to Jewish survivors in Europe and Palestine after World War II. By 2005, the local representation function had returned to the Jewish Community Center, while the Jewish Federation of Northeastern New York took over the responsibility for speaking for the Jewish communities of the Capital District, and pooling resources for activities that cut across local communities. As elsewhere in the country, synagogues and institutional buildings in downtown urban areas were sold as the Jewish residents moved to residential areas outside of the downtown area and to the suburbs. There is a Jewish Studies program at Union College in Schenectady that has added to the intellectual quality of the Jewish community.

[Harvey Strum (2nd ed.)]

**SCHENIRER, SARAH** (1883–1935), educational pioneer, founder of the *Beth Jacob school network. In Orthodox writings, Schenirer's life and work are described in the mythic, legendary terms usually reserved for renowned male rabbinic figures. Born to a hasidic family in Cracow, Schenirer received a formal education in Polish public schools until the age of 14, when she took up work as a seamstress to help support her family. In a short autobiographical sketch, she notes that from childhood she was drawn to Jewish learning and was of a pious temperament. As a young woman, she grew alarmed by the situation of her female contemporaries, exposed to the attractions of secular culture and with little Jewish knowledge to help preserve their identity. In Austrian-ruled Galicia, where Jews enjoyed equal rights from the late 1860s and compulsory public education existed, many rabbis and communal leaders had discussed the need for Jewish education for girls, but in the end it was the dedicated amateur, Sarah Schenirer, who made this a reality. By her own account, the impetus for her initiative came during her family's stay as refugees in Vienna after the outbreak of World War I. The evening lectures of Rabbi Dr. Flesch, a disciple of the Neo-Orthodox approach of Samson Raphael "Hirsch, inspired her to return to Poland and translate her ideas about education for girls into practice. Her first school, opened in Cracow in the fall of 1917, gave supplementary religion lessons to young girls after their studies in public school (this would be the nature of most of the later schools as well). By the time of Schenirer's death in 1935, the Beth Jacob school network in Poland had grown to 227 schools with over 27,000 pupils. Schenirer's disciples also would found schools in Austria, Czechoslovakia, Romania, Lithuania, Palestine, and the United States. Schenirer played a major role in the expansion of the network, traveling to dozens of towns throughout Poland and addressing meetings of parents and young girls, convincing them to set up local Beth Jacob schools. Schenirer was aided in her quest by the endorsement of leading rabbinic figures and by the adoption of Beth Jacob by the Agudat Israel movement. Agudah provided Beth Jacob with financial assistance, logistical guidance, and a literary forum, the Yiddish-language *Beys-Yankev Zhurnal*. Schenirer's personal dedication and charisma were supplemented by the organizational professionalism of Dr. Leo Deutschlander and by young, educated women he recruited from Germany to help staff summer training courses and, later on, the central teachers' seminary in Cracow founded by Schenirer. Schenirer cooperated with Deutschlander in the seminary's administration, and was instrumental in the founding of the Benot Agudat Yisrael youth movement for students and graduates of Beth Jacob. She composed curricular materials and wrote plays and articles on the holidays and moralistic themes. Her collected Yiddish writings (*Gezamelte Shriftn*) appeared in 1933 and later in Hebrew translation (see bibliography). Little is known about her personal life. Schenirer was evidently married for a very short time and divorced in her late twenties. Late in her short life she married Rabbi Yitzhak Landau, grandson of the Rebbe of Radomsk. She had no children of her own, but devoted her life to the hundreds of young women she taught and for whom she served as a model of feminine personal piety and learning.

SCHENK, FAYE L.

[Gershon Bacon (2nd ed.)]

SCHENK, FAYE L. (1909–1981), U.S. Zionist leader. Faye Schenk was born in Des Moines, Iowa, daughter of Rabbi H.H. Zeichik, a noted talmudic scholar. In 1933 she married Rabbi Max Schenk, later spiritual leader of Congregation Shaare Zedek in Brooklyn, New York in 1949. Schenk studied law as well as har-

monie with Bruckner in Vienna. After an early career as a composer, accompanist, editor, and critic (especially for the Wiener Wochenblatt), Schenker undertook more serious analytical and theoretical engagement. He developed new analytical procedures for the perception of musical structures. His most important achievements came to fruition in his last book, Der freie Satz (1935; Free Composition, 1979), the last book in the trilogy Neue musikalische Theorien und Phanta-
sien. According to his theory, structural harmonies, which are ultimately derived from the background structure (Ursatz) of an upper descending voice (Urlinie) against bass arpeggiation of the tonic, are prolonged or composed out (auskomponiert) by techniques based on strict counterpoint, such as linear pro-
egressions and neighbor motion. Schenker appreciated and analyzed mainly the works of a few great composers from Bach to Brahms. Though originally based only on the works of the 18th and 19th centuries, Schenker’s concepts have been applied to earlier and later music as well (cf. F. Salzer, Structural Hearing, 1952). Schenker’s writings include the trilogy, the first two volumes being Harmonielehre (1906; Harmony, 1954) and Kontrapunkt (2 vols., 1910 and 1922; Counterpoint, 1987), and more analytical books, among them Das Meisterwerk in der Musik (3 vols., 1925, 1926, 1930; The Masterwork in Music, 1994, 1996, 1997) and Der Tonwille (1921–24).

Schenker wrote Hasidic Dances, ultimately published as Syrian Dances; his books and diaries include occasional reference to Jewish matters.

[Roger Kamien / Yossi Goldenberg (2nd ed.)]

SCHENKEN, JOEL W. (1904–1985), U.S. theatrical producer and builder. Born in Manhattan, Schenken attended New York University and went into the real-estate business. But he also worked as an actor and co-wrote a play, This Our House, which folded after two performances on Broadway in 1935. He swore off the theater for years. In the construction field, he headed the Gregory-Roth-Schenker Construction Corporation and the Webb & Knapp Construction Corporation, building housing for veterans after World War II and then high-rise apartment houses and office buildings. He became prominent as a producer or co-producer of serious theater after he and Cheryl Crawford revived Sean O’Casey’s Shadow of a Gunman in a widely hailed Actors Studio production. His first commercial hit on Broadway, A Far Country (1961), was Henry Denker’s drama about Sigmund Freud. He then produced Seidman and Son (1965) with Sam Levene, and, in the same year, A Case of Libel, again by Denker and inspired by the book My Life in Court by Louis *Nizer. Schenken was a mainstay of the American Shakespeare Festival, serving as a trustee and executive producer. He also raised funds and served as an officer of the Jewish Theological Seminary of America and the building division of the United Jewish Appeal.

[Stewart Kampel (2nd ed.)]

SCHERESCHEWSKY, SAMUEL ISAAC JOSEPH (1831–1906), Episcopal bishop of China. Born of Jewish parentage at Taurugon (see *Taurage), Lithuania, Schereschesky went to America in 1854, where he became a Christian in 1855. In 1859 he went to China as a missionary, first in Shanghai and then in Beijing (Peking), where he lived for 13 years (1862–75), and in 1877 was appointed Episcopal bishop of China. Inspired by a visit of three *Kaifeng Jews to Beijing in March 1867, the missionaries induced Schereschesky to visit the Kai-
feng Jewish community in the middle of that year. He found some 200 or 300 Jewish families in Kaifeng, a fair proportion of them in good circumstances. They had entirely lost their religion, intermarried with the local population, and were scarcely distinguishable from them. After a stay of about 25 days he was driven out of the city by a mob. Schereschesky spoke 13 languages, among them Hebrew and Chinese. While in Beijing, he began to translate the Pentateuch from He-
brew into Mandarin Chinese. In 1881 he had a stroke, which semi-paralyzed his hands. Using two fingers, he completed
his work. His translation is still outstanding, and because of his physical handicap the work is known as the “Two Finger Bible.”

[Rudolf Loewenthal]

SCHERLAG, MARK (1878–1962), Austrian Zionist poet. Born in Chorostkow, Galicia, Scherlag studied law at the University of Vienna and supported himself as a bank clerk there. He joined the Zionist movement with the appearance of Theodor Herzl and developed personal ties with him. He contributed to the Zionist and general press and periodicals in German and Polish. Scherlag published lyric poems on Jewish subjects. He settled in Haifa in 1939, and, in the last years of his life, he recorded his memoirs of the early years of the Zionist movement.

His works include the following collections of poetry in German: **Einsamkeit** (1899), **Heimaterde. Judenlieder** (1922), **In der Fremde. Neue Judenlieder** (1919), and a selection of his poetry from 1900 to 1939 **Aus dem Leben** (n.d.).

[Getzel Kressel]

SCHERMAN, NOSSON (1935– ), U.S. rabbi, publisher of *ArtScroll. Scherman was born in Newark, NJ, where his parents owned a mom-and-pop grocery store, and he was a product of its public school system, studying in the afternoon at a local talmud torah. At the age of 10 he entered Yeshivah Torah Vodaath, where he remained through Beit Midrash.

In 1953, he was admitted to Beit Medrash Elyon, Torah Vodaath’s postgraduate division in Monsey, NY, where he studied for 11 years and was ordained. His primary teachers and influences throughout his adult life were Rabbi Yaakov *Kaminetsky and Rabbi Gedaliah Schorr, the rosh yeshivah of Torah Vodaath.

Scherman was a teacher and assistant Hebrew principal and general studies principal at Yeshivah Torah Temimah in Brooklyn for eight years, and then principal of Yeshivah Karlin-Stolin in Brooklyn for six. He was also head counselor of Camp Torah Vodaath from 1967 to 1969. From 1969 to 1990 he was editor of **Olomeinu/Our World**, the children’s magazine of Torah Umesorah.

In 1976, Rabbi Meier *Zlotowitz of ArtScroll asked Scherman to edit and contribute an introduction to the Book of Esther. Like Zlotowitz, Scherman gave up his career to develop the ArtScroll Series and its parent company, Mesorah Publications, with Zlotowitz and Sheah Brander.

Early on, Scherman became general editor and was best known as the author of the Overviews, the introductory essays that present the background and perspective of dozens of books of Scripture and liturgy. In 1984, he published his first major work, the translation and commentary of the *siddur*, which was followed by the Rosh Hashanah and Yom Kippur *mahzorim*. In 1993, he published the Stone Edition of the *Humash*, with translation and commentary.

His “translation” of the *siddur* is not quite a translation—for example, the erotic Hebrew of the Song of Songs is not rendered into English. Instead, the allegory to God and Israel is treated as the *peshat*. The *siddur* appears in two versions. The Rabbinical Council of America, the Centrist Orthodox Rabbinical Movement, has its version with the prayer for the State of Israel and a slightly different introduction.

The success of the ArtScroll/Mesorah series is undeniable. *ArtScroll is a fascinating combination of fervently Orthodox Judaism and an American aesthetic that wraps traditional Judaism in a visual idiom acceptable to the American sensibility. Zlotowitz’s sense of the visual impact of a book is an indispensable ingredient in its success. Despite what outsiders may think, even the rejectionist Orthodox community that does not embrace modern culture has, perhaps inadvertently, acculturated itself to the offerings and packaging of the American marketplace.*

ArtScroll publishes in English and in Hebrew and has brought its own unique styling to the Israeli and American marketplace. In the United States, it represents an important transition between Yiddish and English as the spoken language and the language of Jewish learning for fervently Orthodox Jews in America.

Modern Orthodox scholars have not been uncritical of ArtScroll’s success. Its historical studies are wrapped, not in Western scholarship, but in hagiography; it seems as if every fervently Orthodox leader or rabbi is without blemish. Others on the right criticize it for enabling and empowering English rather than Yiddish or Hebrew to be the language of contemporary learning.

The Schottenstein Talmud has allowed many who would have otherwise lacked the skill and talmudic virtuosity to participate in *daf yomi* (studying a page of Talmud a day) programs. It has offered those learning in yeshivah the “English” experience of the Beit Midrash and has far outpaced the more sophisticated and erudite commentary of Adin *Steinsaltz in popularity and use. Scherman’s main project in 2006 was the Rubin edition of the Prophets, of which the Books of Joshua, Judges, and Samuel have been published and the Book of Kings was due to go to press.

For several years Scherman was a columnist for the *Forward* and the *Jewish Week*, and taught Mishnah and the Holocaust in a telephone lecture series.

[Michael Berenbaum (2nd ed.)]

**SCHEREUER, EDMUND** (1847–1943), Canadian religious reformer and activist. Considered by many the “father of Reform Judaism in Canada,” Schueur was born in Beinnkastel in the Prussian Rhineland and received his education there and across the river in Metz, France. At the age of 17, he moved to Paris, attracted, according to some accounts, by the greater

...
freedom accorded to Jews in France. There he entered the jewelry export business, acting as agent for a Hamilton, Ontario, firm owned by his brother-in-law, Herman Levy. In Paris, Scheuer was still a Sabbath observer, although he joined the Alliance Israélite Universelle, the organization founded for the purpose, inter alia, of spreading French culture among Jews outside France.

When the Franco-Prussian War interrupted his business, Scheuer emigrated to Canada and joined his brother-in-law’s firm. Within months of his arrival in Hamilton in 1871, he was named treasurer of Anshe Sholom Synagogue, one of the very few synagogues in Canada where Jews of German origin predominated, and which was open to the Reform Movement which had swept over similar congregations in the United States. The next year Scheuer organized a Sabbath school, the first in Ontario, which he led until he moved to Toronto in 1886. From 1876 to 1886, he served as president of the congregation, which he nudged steadily in the direction of Reform. He also organized a chapter of the Alliance Israélite Universelle, the only one ever established in Canada. His activities in Hamilton illustrate two of Scheuer’s interrelated passions with regard to Jewish life: Jewish education and the acculturation of immigrants.

In Toronto, Scheuer joined Holy Blossom, the still traditional synagogue of the established, acculturating Jews; there, too, he became the most forceful advocate of “American” Reform. And there, too, he organized a Sabbath school, perhaps the first “modern” Jewish school in the city. He served the synagogue in a variety of offices, including, in 1896, treasurer of the building committee for the new temple on Bond Street. In 1939, when the move to suburban Forest Hill was made, Scheuer, the only surviving member of the earlier campaign, was made honorary chair of the building committee.

But Scheuer’s activities in Toronto ranged far beyond the temple’s precincts. He was one of the organizers of the Federation of Jewish Philanthropies and served as its first president from 1917 to 1921. This, too, was an “Americanizing” move, following the lead of communities in the United States which were amalgamating and professionalizing their charitable efforts in these years. Scheuer also led the Zionist Free School for Girls, which met at an Orthodox synagogue, and worked to counter the influence of missionaries and socialists among Jewish young people.

In Toronto, Scheuer pursued the goal of acculturation in several ways. As school principal, he shaped the curriculum to emphasize ethics rather than Jewish particularity. For 40 years, he served as president of the Toronto chapter of the Anglo-Jewish Association, the British equivalent of the Alliance Israélite Universelle and a more suitable vehicle for Jewish acculturation in English Canada. For decades, he served as a justice of the peace and, he belonged to the Empire and Canadian clubs and the Toronto Board of Trade. In the 1930s, as fascist and Nazi sympathizers grew in numbers in Canada, Scheuer typically urged fellow Jews “to remain calm.” Days before a violent riot in Toronto in 1933, he assured them that “Canadian laws – thank God – are just, our police excellent and well able to protect any class of citizens being molested by hoodlums.” He was proved wrong, as the police stood by and allowed the violence to proceed.

The rising tide of antisemitism in Canada in the 1930s caused Scheuer to alter course somewhat. He became active in the Canadian Jewish Congress reorganized in 1933 to fight antisemitism and served as an honorary vice president from 1934 to 1939. He ceased writing letters to newspapers in defense of Jews and Judaism, once a civic task to which he devoted much time and energy. Now he preferred “background” meetings with editors and publishers as less likely to inflame.

Scheuer’s life stretched almost a century from the liberal revolutions of 1848 through most of World War II, and it is no surprise that he had to adjust some of his early assumptions. But he remained to the end of his life both an advocate of modernization and acculturation in Jewish life and a dedicated and proud Jew. He could at the same time be “the father of Reform Judaism in Canada,” at a time when Reform was not popular among Canadian Jews, and still the “grand old man of [all of] Toronto Jewry.”

Scheuer, James H. (1920–2005), a 13-term liberal U.S. congressman from New York, part of the post-World War II generation of political reformers. The son of a prosperous New York investor, he was born in Manhattan and received his bachelor’s degree from Swarthmore College in 1942, a master’s degree from Harvard Business School in 1943, and a law degree from Columbia Law School in 1948. He contracted polio on his honeymoon and spent a year recuperating in Warm Springs, Georgia, where Franklin Delano Roosevelt had also undergone rehabilitation from adult polio. For the rest of his life, Scheuer walked with a cane.

A multimillionaire real estate developer and lawyer, Scheuer was president of the Renewal and Development Corporation of New York City before seeking elected office. He sponsored urban renewal projects and middle-income housing developments in cities including Washington, Cleveland, St. Louis, Sacramento, and San Francisco.

Scheuer made political waves in the 1964 election when he and another reform Democrat, Jonathan B. Bingham, ousted incumbent congressmen who were part of the Bronx political machine, James C. Healey and Charles A. Buckley.

It seemed as if, with each decade’s census and New York’s diminished population, Scheuer was forced to run in another district and to serve another constituency. He lost re-election in 1972 after serving four terms in the 21st Congressional District, in the Bronx, when redistricting forced him to run against another incumbent congressman. He moved to the 11th district in Queens, where he won the 1974 election and three more, and then, in 1982, finally the redistricted 8th District, which covered part of Queens and Nassau County, where he served his final five terms. He announced his retirement after the 1990 census forced another redistricting. In each district,
his agenda remained the same. He fought for the Environmental Protection Agency against Reagan administration attempts to dismantle it, and he fought the auto industry, which opposed his efforts to mandate safety belts and air bags. He was successful in both. Twice defeated for Congress, he kept coming back again and again. An urban and urbane man, he served as president of the National Alliance for Safer Cities (1972–73) and president of the National Housing Conference (1972–74).

An unapologetic, some would say an unrepentant, liberal, Scheuer believed in an activist role for government. His legislative agenda included Head Start for early education, environmental protection, and automotive safety.

He believed keenly in the right to privacy, which in American terms put him on the side of contraception and abortion, issues he believed were and should remain personal. In its obituary for Scheuer, the New York Times recalled that “He once had a hundred posters printed up that said, ‘Some- day the decision to have children will be between you, your spouse and your congressman.’ The photograph showed a couple sitting in their bed with Mr. Scheuer, dressed in a suit, sandwiched between them.”

After retirement from Congress he was appointed by President Clinton as United States director of the European Bank for Reconstruction and Development, founded to make loans to Eastern European and Asian countries and thus counter Communist influence. Together with his siblings and a family foundation established by his parents, he was deeply involved in support of Jewish philanthropies and development in Israel.

[Michael Berenbaum (2nd ed.)]

**SCHIBY, BARUCH** (1906–ca. 1976), author and journalist of Salonika. In 1927 Schiby founded the Zionist “Achdut” club in Salonika. When the Germans attacked Greece, he managed with friends to reach Athens in a small boat. As a student in Athens in World War II, he was involved in EAM resistance activities. In Athens, he received shelter from the Greek cabinet minister Prof. Niko Louvaris, whose contacts also helped him greatly in resistance activities. He was part of a special committee of Jews from this Communist political resistance movement who persuaded Rabbi Eli Barzilai of Athens not to hand over the community lists to the new German commander, Jorgen Stroop, and to flee the community for the mountains. He also wrote about the pro-German activities of Greek intellectuals for the Greek Academy, for which he received payment in order to survive during that difficult time. In late 1944, at the beginning of the Greek Civil War when England controlled the Greek government, he was arrested by the British and sent to the Al-Daba prison camp in Egypt, and was chosen to represent the prisoners. He returned to Salonika and became director of the Jewish community.

Known mainly for his quarterly Dhelfika tetradihia, Schiby was a prominent literary figure and a leading Zionist. His I flogomeni vatos (“The Burning Bush,” 1968) discussed the origins of the Jews and various aspects of Judaism. His book I Evrai (“The Jews”), published in 1971, depicted ancient Jewish history for his Greek countrymen. He wrote several articles on the history of the Jews of Salonika and the Samaritan presence in Salonika from late antiquity. In the 1960s, he developed relations with the Spanish Academy in its renewed contact with Sephardi philology, language, history, and culture. He also edited a bilingual Greek-Ladino Haggadah for Pessah.

[Rachel Dalven / Yitzchak Kerem (2nd ed.)]

**SCHICK, ABRAHAM BEN ARYEH LOEB** (19th century), Lithuanian rabbi and commentator on the Midrash. Schick lived in Slonim during the rabbinate of Isaac Shapira (called Eizel Harifi) but held no rabbinical post there. He devoted himself almost entirely to the study of Midrash and aggadah and published a number of commentaries on them.

These included Zera Avraham (1833), on the Midrash Proverbs; Meorei Esh (1834), with a preface and extensive introduction, on the Tanna de-Vei Elyahu; MaHaze ha-Shir (1840), on Song of Songs Rabbah; Eshed ha-NeHalim, in five parts (1843–45), on the Midrash Rabbah; Ein Avraham (1848), on Ibn Habib’s Ein Yaakov, and also dealing with the commentary to the aggadot of the Talmud by Samuel “Edels. Schick edited Ohel Yaakov, the parables to Genesis and Exodus of Jacob Krantz (the Dubner Maggid).

**BIBLIOGRAPHY:** Fuenn, Keneset, 67; Pinkas Slonim, 1 (1962), 63.

[Itzhak Alfassi]

**SCHICK, BARUCH BEN JACOB** (also known as Baruch Shklover, from the name of his birthplace, Shklov; 1740?–after 1812), rabbi, physician, and one of the pioneers of *Haskalah* of Eastern Europe. Schick was ordained as a rabbi in 1764 and subsequently served as dayyan in Minsk. In his youth he was already attracted to the Haskalah and general knowledge. His first scholarly work and his other works were lost in a conflagration. He traveled to London to study medicine and there joined the Freemasons. After qualifying as a doctor he moved to Berlin, where he became acquainted with the maskilim of the town, including Moses *Mendelssohn and Naphtali Herz *Wessely. In 1777 Schick published in Berlin Isaac *Israel’s astronomical work Yesod Olam from a defective manuscript in the possession of Hirschel b. Aryeh Lob *Levin, and that same year published his Ammudei Shamayim, a scientific commentary to Maimonides’ Hilkhot Kiddush ha-Hodesh, adding to it his Tiferet Adam, a popular work on anatomy. In 1778, on his way back to Minsk, he visited Vilna and was in the group associated with Elijah b. Solomon (the Gaon of Vilna), in whose name he published a statement on the need
for scientific knowledge for an understanding of the Torah. This strengthened Schick's standing in Jewish circles and influenced not only his contemporaries but also subsequent generations. He stated that the Gaon of Vilna advised him to translate scientific works into Hebrew in order to make their contents available to Jews. In the Hague in 1779, he published his Derekh Yesharim, on medicine and hygiene, and in 1780 he published from Latin a Hebrew translation of the first part of Euclid's geometry. In 1784 he was in Prague, where he published his Keneh ha-Middah, on geometry and trigonometry, which he translated from English (republished by him in Shklov in 1791, together with additional expositions to Maimonides' Hilkhot Kiddush ha-Ḥodesh). From Prague he returned to Minsk. After some time he settled in Shklov, and there he belonged to the maskilim whose needs were supplied by the wealthy Joshua Zeitlin of Ustye near Shklov. Toward the end of his life he lived in Slutz, where he served as dayyan and as court physician to Count Radziwill, and where he died. Among the manuscripts he left were a book of medical cures and the translation of the second part of Euclid. Schick devoted his energies to arousing his fellow Jews to the need for studying the arts and sciences. He regarded the neglect of the sciences as caused by the exile. He repeated the accusations of his predecessor, Israel Moses ha-Levi Zamorscz, against the fanatical rabbis and leaders who persecuted and condemned the maskilim. To restore science to its former place of honor, he pleaded for a revival of Hebrew, in which scientific works intended for his people should be written.

[Abraham David]

**SCHICK, BELA** (1877–1967), pediatrician. Born in Boglar, Hungary, Schick became an assistant at the Children's Clinic in Vienna and later associate professor of pediatrics at Vienna University. He left Austria for the U.S. and, in 1923, became pediatrician in chief at Mt. Sinai Hospital in New York, and in 1936 clinical professor of pediatrics at Columbia University. Schick was famous for his discovery of a skin test for determining susceptibility to diphtheria, known as the Schick test. This test enabled early diagnosis and treatment and thus made it possible to save thousands of lives. He also made important studies on scarlet fever, tuberculosis, and the nutrition of infants. He described a symptom for tuberculosis of the bronchial glands, known as the Schick sign. His publications include The Serum Diseases (with C. Piquet, 1905), Scarlet Fever (with Th. Escherich, 1912), and Diphtheria (1931).

**BIBLIOGRAPHY:** S.R. Kagan, Jewish Medicine (1952), 367.

[Suessmann Munter]

“SCHICK, CONRAD” (1822–1901), German resident of Jerusalem, missionary, architect, surveyor, archaeologist, and model-builder. Born in Bitz (near Abingon, Württemberg) Schick was educated as a locksmith-apprentice in Kornthal (near Stuttgart), where he was exposed to the religious atmosphere of pietistic Württemberg. In Basel, he joined Christian Friedrich Spittler’s “Pilgrims’ Mission” in St. Chrischona. In late summer of 1846 Schick arrived in Jerusalem as one of the first two missionaries sent by Spittler and established the “Bruderhaus” as their missionary center. He left Spittler in 1850 and joined the “London Society for Promoting Christianity among Jews” (London Jews’ Society – 118) as a carpentry teacher in the “House of Industry” educational institution in Jerusalem. In 1857 he became director of the school, serving until 1860. He was also responsible for all 118 assets in Jerusalem and its “house architect and builder.” He lived in Jerusalem for 55 years, until his death.

Schick was undoubtedly the most significant and influential scholar among the residents of Jerusalem in the second half of the 19th century, a devoted lover of the city, gifted with a unique “talent for Jerusalem,” which derived from his deep-rooted loyalty to the city, the Holy Land, and everything they represent to the devout Christian. In addition, he left his traces on the country’s landscape: the monumental buildings he planned and constructed in Jerusalem. Schick engaged in a variety of topics. He is mentioned in most of the research on 19th-century Jerusalem, European and German colonization and settlement in Palestine, the history of Palestine’s cartography and archaeology, 19th-century architecture in Jerusalem, and models and relief maps of the city and its monuments.

He took advantage of his ongoing presence, his familiarity with the city and the whole country, and his command of the local as well as European languages. He was involved in almost every study conducted in Jerusalem at the time. His importance reached its peak following the beginning of the organized study of Palestine, marked by the foundation of the PEF and, 12 years later, the German DPV. Schick was for both organizations the best “man in the field,” the ideal “research agent.” His reports and papers hold an unprecedented treasure of information concerning almost all periods in the history of Jerusalem as well as the present city. Modern researchers, in archaeology as well as history and historical geography, continue to make use of the data in Schick’s studies.

He reached his scientific position through diligent work, boundless inquisitiveness, a long process of independent study, and a deep feeling for the country and the city, their history and religious traditions. Schick was an autodidact, combining the describer and reporter, the surveyor, researcher and discoverer. In four decades of scientific work, he published two books, a number of guides to various sites in Jerusalem, and hundreds of articles, reports, maps, and drawings. He participated, in one way or another, in almost all the research conducted in Jerusalem during the last third of the 19th century.

His works concerning the Herodium (Frankenberg), Solomon’s Pools, the water aqueducts to Jerusalem, the Siloam inscription, and the subterranean cisterns of the Temple Mount are only some examples of his archaeological involve-
ment and achievements. He was involved in the planning, and sometimes also in the building, of Talitha Kumi, both “Jesus-Hilfe” hospitals for lepers, the LJS sanatorium and the Diaconesses’ hospital on Prophets Street, his own residence (“Tabor House”) and the “Mahanaim House,” the Jewish neighborhood Me’ah She’arim, the Ethiopian Church, and many other monumental buildings. In many of them, he cooperated with Theodor Sandel, an architect who belonged to the Temple Society.

Being one of the heads of the German community in Jerusalem, Schick participated in every local committee. He was a member of a long list of scientific societies. He was decorated by the Austrians and the Germans, and received the title of “royal building consultant” from the King of Württemberg and an honorary doctorate from the University of Tübingen.

[Haim Goren (2nd ed.)]

SCHICK, MOSES BEN JOSEPH (1807–1879), Hungarian rabbi and posek, also known as “Maharam Schick.” According to one tradition the name was chosen by the family following the law passed by the Austrian government making it obligatory for Jews to adopt surnames, and it was chosen as forming the initial letters of Shem Yisra’el Kadosh (“the Jewish name is sacred”). Schick was born in Brezove in the Neutra (Nitra) district of Slovakia. He was orphaned when a child, and at the age of 11 went to study at the yeshivah of his uncle Isaac Frankel in Frauenkirchen. After three years he proceeded to the yeshivah of Moses Sofer in Pressburg, where he remained for six years. Sofer recommended him as a suitable incumbent for the vacant post at Vergin near Pressburg, and he served there about 24 years. In 1861 he agreed to accept the rabbinate of Khust, where he established a yeshivah and remained until his death. Among his many pupils special mention may be made of Zussman Sofer of Paks, Zalman Spitzer of Vienna, and Wolf Sofer of Budapest, who are frequently mentioned in his responsa.

Schick fought against the Reform movement. Following the Braunschweig conference (1844) and the resolutions ad-
on the 613 precepts was originally larger, but when Joseph
*Babad’s *Minhat Hinnukh* (1869) was published first, Schick
was distressed, saying that the latter had anticipated half his
work, and as a result he abbreviated it. Also published were
aggadic novellae on *Avot* (Paks, 1890); *Maharam Schick*, on
the Pentateuch (Munkacz, 1905), and on *Hullin* (Satmar, undated);
and *Derasnot* (new edition 1968), including discourses given
by him during the years 1839–72. His son, Joseph, published
his father’s works (191 264) and wrote a short introduction to
the *Yoreh De’ah* section of the responsa. Schick’s son-in-law
was Jacob Prager (1818; EH 99, 136), whose novellae are
quoted at the beginning of Schick’s responsa to *Yoreh De’ah*.

[Yehoshua Horowitz]

**SCHICKARD, WILHELM** (Schickhard, Schickart, Guillel-
muSchick(h)ardus; 1592–1635), German *Hebraist, Orientalist,
mathematician, and astronomer. Born in Herrenberg,
Württemberg, Schickard initially studied theology and became
a Lutheran pastor; but he then began to devote his at-
tention to Oriental languages and the sciences. In 1619 he
was appointed professor of Hebrew at the University of Tuebingen,
where he broadened his knowledge of Semitics and published
several works displaying his profound erudition in Hebrew
and rabbinic studies. In 1631 Schickard was appointed to the
chair of astronomy at Tuebingen, after which he wrote many
scientific treatises, but also continued to lecture on Hebrew
until his death of the plague at the age of 43.

In the *Horologium Hebraeum* (Tuebingen, 1614), Schick-
ard provided a highly intensified course in the Hebrew lan-
guage, and the book was reprinted several times during the
following decades. In another work, *BeHinat ha-Perushim…
hoc est examinis commentationem rabbinicarum in Mosen
prodromus*… (ibid., 1621), he condemned the practical Kabb-
alah, and went so far as to berate Johann *Reuchlin for tak-
ing it seriously. Schickard, who corresponded with Johannes
Buxtorf, also published *Mishpat ha-Melekh: Jus regium He-
braeo-Latinum* (1625); the quaintly entitled *Purim, sive Bacchanalii
Judaearum* (1633); and *Eclogae sacrae Veteris Testamenti He-
braeo-Latinai* (1633), in Latin and Hebrew, which contained
extracts from the Bible, the Targum, and the Mishnah. His *Ar-
bor Derivations Hebraeae*, issued by his son, appeared posthu-
mously in 1698 and his *Nova et plenior Grammatica Hebraica*
in Tuebingen in 1731.

[Godfrey Edmond Silverman / Aya Elyada (2nd ed.)]

**SCHIDLOWSKY, LEON** (1931– ), Israeli composer. Born in
Santiago, Chile, Schidlowsky first studied piano and later har-
mony and composition at the National Conservatory of Music
in Santiago. He continued his studies in Germany (1952–55).
Returning to Chile, he was active in promoting contempo-
rary music and in 1967 became professor of composition at
the University of Chile. He emigrated to Israel in 1969 and
was appointed professor of composition at the Rubin Academy
of Music at Tel Aviv University. Schidlowsky was in charge
of musical education at the Hebrew Institute in Santiago, and
a number of his works dating from that time express the re-
cent suffering of the Jewish people – *Kristallnacht Symphony,
Lamentation, Memento, Kaddish*, and others. In Israel he wrote
*Babi Yar*, for piano, percussion, and strings (1970); *Serenate,*
for chamber orchestra (1970); and *Rabbi Akiva*, for soloists,
choir, and orchestra (1972). His work *Dadayamason*, a dra-
matic scene for voice, clarinet, alto saxophone, cello, piano,
and percussion, received a prize at the UNESCO International
Composer’s Rostrum (1976). He wrote in a variety of styles,
from atonality to aleatory and graphic compositions, and was
one of the most dedicated and consistent representatives of
the innovative avant-garde in Israel.

**SCHIFF, ADAM** (1960– ), U.S. lawyer, congressman. Schiff
represents California’s 29th Congressional District, including
the communities of Alhambra, Altadena, Burbank, Glendale,
Griffith Park, Monterey Park, Pasadena, San Gabriel, South
Pasadena, and Temple City. Born in Framingham, Massa-
chusetts, he is a graduate of Stanford (1982) and Harvard Law
School (1985). Schiff served with the U.S. Attorney’s Office in
Los Angeles for six years (1987–93), most notably prosecuting
the first FBI agent ever to be indicted for espionage. He ran for
the State Assembly three times and lost to James Rogan twice.
First elected to the State Senate in 1996, he was its youngest
member. He chaired its Judiciary Committee and the Joint
Committee on the Arts. He spearheaded legislative efforts to
ensure up-to-date textbooks in the classroom, overhaul
child support, and pass a patient’s bill of rights. He also taught
political science at a local community college.

In 2000 he ran for Congress, defeating incumbent James
Rogan, who had served on the House Judiciary Committee
and pushed the impeachment of President Bill Clinton. Much
of his initial support came from a backlash against Rogan.
At the time, it was the most expensive race in history and one of
the very few in which the impeachment was the issue. Hol-

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
lywood mogul David *Geffen raised millions of dollars to defeat Rogan.

Schiff was a member of the House Judiciary Committee and the House International Relations Committee. He continued his interest in education. He was a self-described moderate and joined the “Blue Dog Democrats.” He served on the Judiciary Subcommittee on Crime, Terrorism and Homeland Security and the Subcommittee on the Constitution. As congressman he introduced the Deadly Biological Agent Control Act to bolster the security at labs that stock agents such as anthrax, and the Sky Police Act to increase air security by training local police to serve as air marshals. He also introduced the Air Cargo Security Act to ensure that all air cargo on passenger planes be screened for explosives.

In March 2003, Schiff joined Reps. David Scott and Steve Israel in forming the Democratic Study Group on National Security in an effort to educate, inform, and develop policy on emerging national security issues. The group has hosted a wide range of speakers on topics such as international terrorism, defense, military transformation, shifting alliances, Iraq, homeland security, non-proliferation, Iran, Korea, the United Nations, and missile defense.

He also introduced the Rim of the Valley Corridor Study Act to enlist the National Park Service in protecting open space in Southern California. A member of the bipartisan House Education Caucus comprised of former educators, Congressman Schiff fought to expand opportunities for students. He introduced the Access to Higher Education Act to increase federal aid to students in public colleges, was instrumental in drafting legislation to create federal merit grants for students who excel in math and science, and cosponsored legislation to refocus national education policy on helping states and local school districts raise academic achievement levels. Schiff also supported federal assistance for class-size reduction, music and art education, and after-school programs.

[Michael Berenbaum (2nd ed.)]

**SCHIFF, ANDRÁS** (1953– ), pianist. Born in Budapest, he started piano lessons with Elisabeth Vadasz and made his debut at the age of nine. He continued his musical studies at the Franz Liszt Academy, and later in London with George Malcolm. After winning prizes at the Tchaikovsky Competition in Moscow (1974) and at the Leeds International Competition (1975), Schiff embarked upon an international career. He gained recognition for his insightful and intellectual interpretations of the music of Bach. Recitals and special cycles of Bach, Haydn, Mozart, Beethoven, Schubert, Chopin, Schumann, and Bartók formed an important part of his activities, and he moved easily between solo recitals, concertos, ensemble playing, and the use of singers (notably Peter Schreier) and instrumentalists. He increasingly conducted performances of concertos from the keyboard. Schiff was the founder and the artistic director from 1989 to 1998 of the annual Musiktage Mondsee. In 1999 he created his own chamber orchestra, the Cappella Andrea Barca. His Haydn festival in the Wigmore Hall won the Royal Philharmonic Society/Charles Heidsieck Award for the best concert series of 1988–89, and in 1989 he was awarded the Wiener Flötenuhr, the Mozart Prize of the City of Vienna. He was also awarded the Bartók Prize (1991); the Claudio Arrau Memorial Medal from the Robert Schumann Society (1994); the Kossuth Prize, the highest Hungarian honor (1996); and the Musikfest-Preis Bremen (for outstanding international artistic achievement) in 2003. In 2001 he became a British citizen. Among his publications are “Schubert's Piano Sonatas: Thoughts about Interpretation and Performance,” in *Schubert Studies* (1998), 191–208.

[Naama Ramot (2nd ed.)]

**SCHIFF, DAVID TEVELE** (d. 1792), rabbi of the Great Synagogue, London, from 1765 until his death. He was born in Frankfurt and served as maggid (“preacher”) in Vienna, head of the bet ha-midrash in Worms, and dayyan in Frankfurt. His rabbinate in London was marked by the continued growth of the Ashkenazi population (symbolized by the enlargement of the Great Synagogue in 1766), and by the progressive (though sometimes reluctant) recognition of the rabbi of the Great Synagogue as head of all English Ashkenazim. When the Hambro' Synagogue appointed Meshullam Zalman (Israel Solomon), grandson of Jacob *Emden, as their rabbi, most provincial Ashkenazim still recognized the authority of Schiff, but in *Portsmouth there was a bitter split on the issue*.

Schiff acted for the Great Synagogue in efforts to educate, inform, and develop policy on emerging national security issues. The group has hosted a wide range of speakers on topics such as international terrorism, defense, military transformation, shifting alliances, Iraq, homeland security, non-proliferation, Iran, Korea, the United Nations, and missile defense.

His rabbinate in London was marked by the continued growth of the Ashkenazi population (symbolized by the enlargement of the Great Synagogue in 1766), and by the progressive (though sometimes reluctant) recognition of the rabbi of the Great Synagogue as head of all English Ashkenazim. When the Hambro' Synagogue appointed Meshullam Zalman (Israel Solomon), grandson of Jacob *Emden, as their rabbi, most provincial Ashkenazim still recognized the authority of Schiff, but in *Portsmouth there was a bitter split on the issue*. After Meshullam Zalman left London in 1780, Schiff acted for the Hambro' Synagogue also and the rift ended. Overworked and underpaid, he tried unsuccessfully to obtain appointments at Rotterdam and Wuerzburg. Schiff’s responsa *Leshon Zahav* were published posthumously by his son (Offenbach, 1822). Several of his sermons are still extant, but his letters to Lord George *Gordon, refusing to receive him into the synagogue, have not been preserved.

[Vivian David Lipman]

**SCHIFF, DOROTHY** (1903–1989), U.S. newspaper publisher. Born in New York City, she was daughter of Jacob *Schiff. Early interest in civic affairs led her to join the Ellis Island Investigating Commission and the Women's Trade Union League of New York. She became a director of the Henry Street Settlement and of Mount Sinai Hospital, and in 1937 was appointed by Mayor Fiorello LaGuardia to the New York City Board of Child Welfare. Her association with the liberal *New York Post* began in 1939. In 1942 she became president and publisher,
and later editor in chief. She was the first woman newspaper publisher in New York. Under her direction, the paper grew in circulation and revenue. When, in the 1960s, many metropolitan newspapers in the U.S. were forced to suspend publication, the New York Post continued to thrive. Eventually it became the only evening newspaper in New York City. In 1976 she sold the Post to publisher Rupert Murdoch but remained a consultant to the paper until 1981. Schiff was married to publisher George Backer, newspaper editor Theodore O. Thackrey, and Zionist leader Rudolph *Sonneborn.

**BIBLIOGRAPHY:** Current Biography, 26 (Jan. 1965), 27–29.

[Lawrence H. Feigenbaum]

**SCHIFF, HUGO** (1834–1915), Italian organic chemist. Born in Frankfurt, Schiff was the brother of physiologist Moritz Schiff. He left Germany for political reasons. He was at University of Berne, Switzerland, and then joined his brother in Florence, where he was a professor at the Istituto di Studi Superiori (1863–66). He later worked in Pisa and the University of Turin (1876–79) and then returned to his professorship in Florence (1879). Compounds obtained from an aldehyde or a ketone and a primary amine are still known as "Schiff bases."

**SCHIFF, JACOB HENRY** (1847–1920), U.S. financier and philanthropist. Born in Frankfurt, Germany, he was the descendant of a distinguished rabbinical family (see *Schiff, Meir b. Jacob*). He received a thorough secular and religious education at the local school of the Israelitische Religionsgesellschaft, then followed his father, Moses, who was associated with the Rothschild banking firm, into that occupation. At the age of 18 Schiff immigrated to the United States, entered a brokerage firm in New York, and became a partner in Budge, Schiff and Co. In 1875 he married the daughter of Solomon Loeb, head of the banking firm of Kuhn, Loeb and Co., and entered that firm. Schiff’s remarkable financial abilities were recognized when he was named head of Kuhn, Loeb in 1885.

Schiff’s firm soon became one of the two most powerful private investment banking houses in the United States, participating actively in fostering the rapid industrialization of the U.S. economy during the late 19th and early 20th century. Such firms as Westinghouse Electric, U.S. Rubber, Armour, and American Telephone and Telegraph were financed to some extent through Kuhn, Loeb’s efforts. In addition, Schiff served as director or adviser of numerous banks, insurance companies, and other enterprises. His role in the consolidation and expansion of the American railroad network, the backbone of an industrialized society, was particularly influential. He gave his support to Edward H. Harriman in the reorganization of the Union Pacific Railroad and was a staunch associate of James J. Hill of the Great Northern Railway for many years. Huge sums were obtained by Kuhn, Loeb for the Pennsylvania, Baltimore and Ohio, and other railroad systems.

Schiff was prominently involved in floating loans to the government at home and to foreign nations, the most spectacular being a bond issue of $200,000,000 for Japan at the time of the Russo-Japanese War in 1904–05. Deeply angered by the antisemitic policies of the czarist regime in Russia, he was delighted to support the Japanese war effort. He consistently refused to participate in loans on behalf of Russia and used his influence to prevent other firms from underwriting Russian loans, while providing financial support for Russian Jewish “self-defense groups. Schiff carried this policy into World War I, relenting only after the fall of czarism in 1917. At that time, he undertook to support the Kerensky government with a substantial loan.

It was said of Schiff that “nothing Jewish was alien to his heart.” Personally devout, proud of his family and religious heritage, Schiff used his immense personal wealth and influence on behalf of his coreligionists everywhere. His widespread philanthropic activities and communal interests brought him recognition as the foremost figure of his time in American Jewry. Although affiliated with Temple Emanuel and the Reform movement in the United States, Schiff retained many of the Orthodox habits of his youth. He was especially active in the establishment and development of the Jewish Theological Seminary, viewing it as the fountainhead for a “reasonable Orthodoxy” attractive to the masses of newly arrived immigrants. Other institutions of Jewish learning, including Yeshivath Rabbi Isaac Elchanan (later Yeshiva College and University), as well as Hebrew Union College, received generous support from Schiff. Realizing the need for trained religious teachers, he provided funds for the establishment of Teachers’ Institutes at the Jewish Theological Seminary and Hebrew Union College. When the New York Kehillah was organized, Schiff made substantial contributions to its Bureau of Jewish Education and supported the Uptown Talmud Torah in New York and similar schools.

Schiff had a deep interest in Jewish literature and contributed generously to the Jewish Publication Society. He provided funds for a new English translation of the Bible by Jewish scholars and established a fund for the translation and publication of a series of Hebrew classics. His donations aided the publication of the *Jewish Encyclopedia*; the acquisition by the Library of Congress and the Jewish Theological Seminary Library of major collections of rare books and manuscripts; and the establishment of the Jewish Division of the New York Public Library. His philanthropies were accompanied in many cases by intense personal participation. For example, not only was he a major contributor to the Montefiore Hospital in New York, of which he was president for 35 years, but he managed to visit there almost weekly. There were few Jewish institutions in New York or elsewhere which did not benefit from Schiff’s attention and funds. Such agencies as the Hebrew Free Loan Society, Educational Alliance, Home for Aged and Infirm Hebrews, YMHA, United Hebrew Charities, Jewish Protectory and Aid Society, and Hebrew Technical School, were among those receiving his aid. He was a large-
scale contributor to the relief of victims of Russian pogroms (1903–05), to the American Jewish Relief Committee during World War I, and to postwar European Jewish relief. Schiff, who had access to American presidents, used his influence with them in urging U.S. support on behalf of Jews victimized in Eastern Europe. In 1906 he joined with other Jewish leaders in the formation of the American Jewish Committee and subsequently took a very active part in its efforts to protect the rights of Jews abroad and in the United States. Offended by Russia’s refusal to honor passports held by American Jews, Schiff was prominent in the successful campaign to abrogate the Russo-American Treaty of 1832. During World War I, Schiff and the established American Jewish leadership came under increasing fire from newer, Zionist-oriented Jewish groups. He had strongly opposed the Zionist movement, rejecting it as a secular, nationalistic perversion of the Jewish faith, incompatible with American citizenship. On the other hand, he did aid agricultural projects and the Haifa Technical Institute in Palestine. Recognizing changing world conditions, Schiff announced in 1917 his support of a cultural homeland in Palestine for the Jewish people.

Proud of his Americanism, Schiff contributed generously in time and money to a multitude of civic activities and philanthropies. He donated $1,000,000 to Barnard College; contributed funds to establish the Semitic Museum at Harvard University as well as large sums to other universities; and supported the Henry Street Settlement, the American Red Cross, Tuskegee Institute, and countless others. He served on the New York City Board of Education, was vice president of the Chamber of Commerce, and participated in several special mayoral commissions. Although linked by family and cultural ties to Germany, Schiff patriotically supported the American war effort when the United States entered World War I.

Morton Rosenstock

SCHIFF, MEIR BEN JACOB HA-KOHEN (known as the MAHaRaM; Morenu Ha-Rav Meir Schiff; 1605–1641), talmudist and rabbinic author. Born in Frankfurt, where his father was a member of the bet din and a communal leader, Schiff was, in his early youth, considered a scholar of unusual ability. While still a boy, he turned to “Meir of Lublin with halakhic problems. At the age of 17, he was appointed rabbi of the important community of Fulda, where he also headed a notable yeshivah. He wrote down the essence of his lectures, novelae, and comments, which extend over the whole Talmud, but most of it was destroyed by fire in 1711. There exists a tradition that he was appointed rabbi of Prague in 1641. However, if the statement of his grandson is to be trusted, namely, that he lived only 36 years, he must have died immediately after his appointment. The novellae Maharam Schiff were published in Homburg-vor-der Hoehe (on Bezah, Ket., BM, and Hul., in 1737, and on Shab., BK, BB, Sanh., and Zev., in 1741). They were much sought after by students and were regarded as essential for the study of Talmud. Many editions were published, and they were also incorporated in the standard editions of the Talmud. A new annotated edition of his novellae on Gittin was published by S. Schlesinger in 1963.

Schiff avoids the casuistic manner that was prevalent in the yeshivot in his time and strives to arrive at an understanding of the text as its stands. For this reason, he also opposed suggestions that the traditional readings were faulty. In writing of pilpul, he complains of “the ink that has been spilled and the pens broken to give pilpulistic interpretations to passages of the Talmud which I am able to explain according to this plain meaning.” His books are distinguished by brevity and clarity of language. He takes special care to stress that he does not wish to give halakhic decisions, referring the reader on each occasion to the relevant halakhic literature. At the end of each tractate he gives an exposition connecting the tractate concluded with the one about to be studied at the yeshivah. In consequence, it is possible to determine the exact dates and order in which he taught. His novellae bear witness to his intellectual integrity. On more than one occasion he writes “I was mistaken,” “There is no value in all I have written.” He was acquainted with the works of his contemporaries, such as Solomon b. Jehiel *Luria, Samuel *Edels, and Meir of Lublin, and more than once disparages their views, belittling and scotching them with such phrases as “this is fit for children,” “empty words,” “he extends himself over a few futile difficulties” because of the large interval between the writing and publication of his work, many errors crept in. Consequently many supercommentaries have been written, the most well known and the best being that of Mordecai Mardush of Poritsk, which is printed in the standard editions of the Talmud.

The many sermons appended to his books reveal that Schiff was a strong personality who did not hesitate to rebuke his community about those matters of which he disapproved. He accuses many of the communal leaders of desecrating the Sabbath, of not studying the Torah, of failing to support scholars, and of other offenses. His style in preaching does not differ from that of his contemporaries. Here he does permit himself the use of pilpul, although he eschewed it in the study of the Talmud. He also wrote on kabbalistic themes. The Schiff family of bankers are among his descendants.

Itzhak Alfassi

Minnesota (1971–72), Hebrew Union College-Jewish Institute of Religion, New York (1975–79, 1983, and 1986), and from 1972 at New York University, where he was named Edelman Professor and chairman and director of undergraduate studies of the Skirball Department of Hebrew and Judaic Studies. He was a visiting professor at Yale, Ben-Gurion, Duke, Johns Hopkins, Toronto, and other universities, and lectured widely at universities and other public forums. Schiffrin was the program director of NYU’s excavations at Tel Dor, in conjunction with The Hebrew University and the Israel Exploration Society (1980–83), and was a fellow of the Institute for Advanced Studies at The Hebrew University of Jerusalem (1989–90). He served on the editorial board of the journal Dead Sea Discoveries from 1994. He was a fellow of the Association for Jewish Studies, the American Academy for Jewish Research, the Society for Biblical Literature (Qumran Section), and the Dead Sea Scrolls Foundation, among other scholarly and professional associations. He was a member of the editorial board for the Oxford Dead Sea Scrolls publication project Discoveries in the Judean Desert from 1991 until its completion in 2002 and co-edited the Oxford Encyclopedia of the Dead Sea Scrolls (with J.C. VanderKam, 2000). He was one of the organizers, and a director, of the Friedberg Genizah Project (1999–2002). He was the recipient of numerous grants for his work on the Dead Sea Scrolls and the Cairo Genizah texts.

Schiffrin is a leading scholarly authority on early post-biblical Judaism, with a particular interest in the Dead Sea Scrolls. He is known not only to the scholarly community but to the general public, having been featured in several television documentaries on the Qumran discoveries. Schiffrin’s major work, Reclaiming the Dead Sea Scrolls (1994), argues that the Qumran community was founded by a schismatic Sadducean sect, rather than by a (proto-Christian) group of Essenes, and that not all the texts originated at Qumran. Among his other books are The Halakhah at Qumran (1975), Sectarian Law in the Dead Sea Scrolls: Courts, Testimony, and the Penal Code (1983), Who Was a Jew? Rabbinic and Halakhic Perspectives on the Jewish-Christian Schism (1985), From Text to Tradition: A History of Judaism in Second Temple and Rabbinic Times (with Michael Swartz, 1989), The Eschatological Community of the Dead Sea Scrolls: A Study of the Rule of the Congregation (1989), Hebrew and Aramaic Incantation Texts from the Cairo Genizah (1992), Halakhah, Halakhah U-Meshibiyyut bi-Megillot Midbar Yehudah (Law, Custom, and Messianism in the Dead Sea Scrolls, 1993), and Texts and Traditions: A Source Reader for the Study of Second Temple and Rabbinic Judaism (1998). He also edited a number of volumes of scholarly papers and essays and published many scholarly articles and reviews.

[Drew Silver (2nd ed.)]

**SCHIFRIN, LAŁO (Boris; 1932–)**, composer, pianist, and conductor of Argentinean birth. He studied music, piano, and harmony in Buenos Aires and later in the Paris Conservatoire (1950), guided by Koechlin and Messiaen. Returning home, he established himself as a composer, arranger, conductor, and pianist who was equally at ease in popular, jazz, and art-music circles. He founded Argentina’s first big band and later moved to New York (1958). There he played the piano in Dizzy Gillespie’s jazz quintet (1960–62) and recorded with other known jazz artists. From 1962 to the early 1980s Schiffrin concentrated on composition. He went to Hollywood (1964) and wrote numerous scores for both television and the cinema, including the memorable themes to Mission Impossible and Dirty Harry.

His works often involve jazz, funk, and disco elements, as well as a synthesis of contemporary art-music elements. Schiffrin wrote many vocal and instrumental works in other fields, including concertos, suites, an oratorio (The Rise and Fall of the Third Reich, 1967), ballets and symphonic pieces. Among his later commissions was Fantasy for Screenplay and Orchestra (2002–3). Schiffrin taught composition at UCLA (1968–71) but, from the 1980s onwards, concentrated on conducting, performing with leading orchestras such as the London Philharmonic and Symphony Orchestras, the Vienna SO, the Los Angeles Philharmonic, and the Israeli Philharmonic. He conducted several concerts of the “Three Tenors” and was appointed music director of the Glendale SO (1989–1995). During his illustrious career, Schiffrin received four Grammy Awards and six Oscar nominations. Among his other honors were BMI Lifetime Achievement Award (1988), Distinguished Artist Award (1998), and honorary doctorates. He was honored by the Israeli government for his “Contributions to World Understanding through Music” and by the SACEM and Cannes Film Festival in recognition of his significant contribution to music, film and culture.

[Naama Ramot (2nd ed.)]

**SCHILD, EDWIN** (1920–), rabbi and community leader. Schild was born in Koeln-Muelheim (Cologne), Germany, and spent his teenage years under Nazi restrictions and persecution. In 1938, while he was attending the Jewish Teacher’s Seminary in Wuerzburg, Schild survived Kristallnacht, only to be picked up by the Nazis and incarcerated in the Dachau concentration camp. He was released on condition that he emigrate. Early in 1939 Schild was able to arrange passage through the Netherlands to continue his studies at Yeshiva Torath Emeth in London, England, where he remained until May 1940. As the threat of a German invasion of the U.K. loomed and fears grew of covert Nazi agents, Schild was caught up in the mass internments of “enemy aliens.” He was one of more than 2,200 mostly Jewish German and Austrian refugees transferred to Canada and incarcerated in detention camps. Although Canadian authorities were soon aware that most of the internees were legitimate refugees, anti-Jewish sentiment within the government kept the refugees locked behind barbed wire. Schild was interned from July 1940 to
February 1942. He was able to continue his studies within the camps and, when released, completed his academic and rabbinical studies in Toronto.

The senior rabbi of Toronto’s Conservative Adath Israel Congregation from 1947 to 1989, Rabbi Schild, whose parents perished in the Shoah, devoted his career to promoting cross-cultural and interfaith relations. He chaired the Canadian Division of the Rabbinical Assembly of America and the Canada-Israel Committee, Ontario Region, and was an active board member of the Christian-Jewish Dialogue and honored with the Human Relations Award from the Canadian Council of Christians and Jews. In retirement he remained active as rabbi emeritus and embarked on yearly lecture tours of Germany, where he continued his interfaith efforts. In 2001 Rabbi Schild became a Member of the Order of Canada. He wrote The Very Narrow Bridge. A Memoir of an Uncertain Passage (2001).

[Paula Draper (2nd ed.)]

**SCHILD, PAUL FERDINAND** (1886–1940), Austrian psychiatrist and psychoanalyst. Schilder was born in Vienna and studied medicine. His involvement with philosophic problems brought him to psychiatry; the year of his graduation he published three papers on neuropathological subjects. In 1914 his study of symbolism in schizophrenia intensified his earlier interest in Freud’s work. Schilder combined concepts of the somatopsychic with Freud’s idea of body ego and thus arrived at his own formulation of the body image. Along with his increasing interest in psychological and psychoanalytic problems, Schilder retained his deep interest in neuropathology, especially in early perception. The interrelation of the organic and psychological was to characterize Schilder’s work for the rest of his life.

He published Selbstbewusstsein und Persönlichkeitsbewusstsein (1914), in which he applied the principles of Edmund “Husserl’s phenomenology to the psychiatric problem of depersonalization. After serving in World War I Schilder returned to Vienna to join the staff of Julius von Wagner-Jauregg’s psychiatric clinic. He was invited to become a member of the Vienna Psychoanalytic Society, and in 1920 he delivered his first paper, “Identification,” before the society. While at the clinic he wrote on the psychogenic aspects of organic conditions of the brain and published Seele und Leben (1923); Medizinische Psychologie (1923; Medical Psychology, 1953); and Entwurf zu einer Psychiatrie auf psychoanalytischer Grundlage (1925; Introduction to a Psychoanalytic Psychiatry, 1952).

In 1928 Schilder accepted the invitation of Adolf Meyer to go to the Johns Hopkins University Medical School. He was appointed clinical director of psychiatry at Bellevue Hospital and research professor of psychiatry at New York University College of Medicine in 1930. Schilder’s later publications include Brain and Personality (1951) and The Image and Appearance of the Human Body (1935). He continued his teaching and research with various coworkers, especially with Laurreta Bender, whom he married in 1937. He pioneered psychoanalytic group therapy and finally became interested in child psychology, in which field he was critical of many aspects of Freud’s conclusions.

**SCHILDKRAUT, RUDOLPH** (1862–1930), German actor; a star of the European and American theater. Born in Istanbul, Schildkraut grew up in Romania, and studied in Vienna. He subsequently acted in Vienna, Hamburg, and Berlin and won acclaim on the German stage with his portrayal of Shylock, which remained one of his great roles. Another of his notable characterizations was Jankel Shabshowitz in Shoel’s God of Vengeance (1918). For five years he played at the Deutsches Schauspielhaus and then at Max Reinhardt’s theater. Going for a few years to America in 1911, he appeared for a season in the Yiddish theater, after which he resumed playing in German and English. The Yiddish plays in which he starred ranged from Kreutzer Sonata, based on Tolstoy, to Shomer’s Eikele Mazik. Back in Germany, he performed in movies such as Der Shylock von Krakau (1913), Daemon und Mensch (1915), and Schlemihl (1915), in which he acted alongside his son, Joseph, in the latter’s debut. After the family immigrated to America, he appeared in films such as His People (1925), The King of Kings (1927), A Ship Comes In (1928), and Christina (1929).

His son, Joseph Schildkraut (1896–1964), grew up in Vienna, spent three years (1910–13) at the Academy of Dramatic Arts in New York during a tour his family made in America, but made his stage debut in Berlin under Max Reinhardt, in 1913. Returning to the United States he acted in Liliom (1921–23) and Peer Gynt (1923) for Theater Guild, then went to Hollywood and into a film career. He starred in many pictures and for a time managed the Hollywood Playhouse. Among his many roles, he appeared as Alfred Dreyfus in the movie The Life of Emile Zola (1937), for which he received the 1938 Academy Award for the Best Supporting Actor, and the heroine’s father in The Diary of Anne Frank (1959). Schildkraut was an actor of vivid personality and wide range. His autobiography, My Father and I, appeared in 1950.

[Joseph Leftwich / Noam Zadoff (2nd ed.)]

**SCHILLER, ARMAND** (1857–?), French journalist. Born near Paris, Schiller worked in his father’s printing house, studied law, and wrote for various papers. In 1879 he became general secretary of the editorial board of the daily Le Temps and held that position for many years. He was a professor at the Ecole du Journalisme, was made a member of the Legion of Honor in 1892, and elected syndic of the Association Professionelle des Journalistes in 1897.

*Schiller, Friedrich von* (1759–1805), German poet, playwright, and philosopher, whose works influenced Hebrew
literature and the “Haskalah. Schiller had only a few Jewish contacts, although he knew the writings of Moses Mendelssohn and had a high regard for Solomon Maimon. Schiller’s stage adaptation of 1801 popularized Lessing’s Nathan der Weise. In his own writings there are only a few allusions to Jews. Perhaps the most intriguing of these is Moritz Spiegelberg, a character in his early drama Die Rauhbaer (1781). Though not explicitly presented as a Jew, Spiegelberg occasionally lapses into a Judeo-German idiom, speaks of Judaising, and even refers to a project for the reestablishment of a Jewish state. In this portrayal Schiller may have had in mind the ideas diffused at the time in his native Wuerttemberg by followers of Jacob Frank. Although Ludwig Geiger and others denied that the character was a Jew, the Nazis inevitably presented him as one. During the 1920s, Erwin Piscator’s Berlin production of Die Rauhbaer presented Spiegelberg in the guise of Leon Trotsky.

There are echoes of biblical style in Schiller’s poems, as in the ode to joy, “An die Freude,” and in his dramas. While Schiller praised the “Hebrew nation” as important for “universal history” in his treatise Uber die Sendung Moses (1790), he also adopted the hostile Bible interpretation quoted by Voltaire, claiming that leprosy was the chief cause of the Exodus from Egypt.

Translations and imitations of Schiller’s poems and plays were published by maskilim in Galicia, and later in Russian Poland, notably by Abraham Ber Gottlober, Micah Joseph Lebensohn, Meir Halevi Letteris, and Solomon Judah Rapoport. Between 1817 and 1957 almost 60 Hebrew versions of works by Schiller were completed by more than 80 translators. They include Bialik’s translation of the drama Wilhelm Tell. Yiddish parodies of Schiller’s poems were extremely popular; Orthodox homes which banned other non-religious literature made an exception in the case of his works. German Jews, too, showed admiration for Schiller. “Heine, who parodied “An die Freude” in his “Prinzessin Sabbat,” praised Schiller as the poet of freedom and internationalism. Ludwig August Frankl and Leopold Kompert showed their admiration for him in establishing a Schiller Stiftung to propagate his works, and rabbis, including Samson Raphael Hirsch, eulogized him in their sermons. Jews stressed the poet’s quest for a physical and spiritual freedom untrammeled by nationalistic dogma, his belief in human equality influenced by Rousseau, and his idealism. They identified Schiller with Germany and Germany with Europe, seeing in Schiller’s writings the bridge to European culture.

SCHILLER (formerly Blankenstein), SOLOMON (1879–1925), Hebrew educator and Zionist writer. Born near Bialystok, Schiller moved to Lyov to avoid conscription. His pamphlet in Polish on Jewish nationality and his articles dealt with the ideological basis for Zionism. He participated in the First Zionist Congress in Basle (1897) and laid the foundations for a nationalist Hebrew education in Galicia. In 1910 Schiller emigrated to Erez Israel and settled in Jerusalem, where he was a teacher and later principal of the Jerusalem Teachers’ Gymnasium. His published articles were collected and edited by Rabbi Binyamin in Kitvet Shelomo Schiller (1927).

BIBLIOGRAPHY: D. Sadan, Goral ve-Hakharait, Mishnato Shelomo Schiller (1943), incl. bibl. p. 167–75. [Getzel Kressel]

SCHILLER-SZINESSY, SOLOMON MAYER (1820–1890), rabbi and scholar. Born in Altoten (Budapest), Schiller received a traditional rabbinic education, attending Hungarian and other institutions, notably the Lutheran College at Eperjes (Presov); he graduated from the University of Jena in 1845. At Eperjes Schiller was given a faculty appointment for Hebrew and also became the local rabbi, and the atmosphere of tolerance in the college influenced him permanently. He succeeded markedly in child education, and through his eloquence in the pulpit, he fostered Hungarian patriotism. His rabbinical teachers, who included Aaron Chorin, were moderates, but in 1845 he vigorously attacked in print the Reform resolutions of the Frankfurt Rabbinical Conference. During the Hungarian revolution, led by Kossuth (1848–49), Schiller added the Magyar “Szninessy” to his name and enlisted; he was wounded and captured but escaped from Temesvár via Trieste to England, where in 1851 he became rabbi of Manchester. While endeavoring to keep traditionalists and would-be reformers together, he became embroiled with the chief rabbi Nathan Adler by attempting to extend his ecclesiastical jurisdiction over northern England; he was then persuaded by the reformers to join their new dissident synagogue, although his personal practice and outlook remained strongly traditional throughout his life. Schiller resigned his rabbinical post in 1860 and moved to Cambridge. His bibliographical erudition earned him the appointment in 1866 as teacher (later reader) of talmudic and rabbinic literature at Cambridge University. He was the first professing Jew formally entrusted by Cambridge with the subject, and he taught and inspired a distinguished list of gentle rabbinical scholars, which included C. Taylor and W.H. Lowe. Schiller’s principal scholarly achievement was his prolix Catalogue of Hebrew Manuscripts Preserved in the Cambridge University Library, a portion of which was published in 1876. He edited Book One of David Kimhi’s commentary on the Psalms (1883) and Romanelli’s account of his Moroccan travels (Massa ba’Arav, 1885).

SCHILLINGER, JOSEPH (1895–1943), music theorist and composer. Born in Kharkov, Schillinger studied conducting and composition with Nicolai Tcherepnin, among others, at
the St. Petersburg Conservatory (1914–18). Until his emigration to New York in 1928, Schillinger pursued a career in the Ukraine as conductor and composer and helped organize the first jazz concert in Russia (1927). In New York, Schillinger continued to compose as well as teaching, but he is mainly remembered for his systematic theory of music composition, in which his mathematical training is evident. Schillinger believed in scientific methods as the basis of artistic creativity in all the arts (as described in The Mathematical Basis of the Arts, 1948). His most important book, The Schillinger System of Musical Composition (2 vols., 1941, 1946), attempts to explore all possible permutations of every musical parameter, showing them as geometrical forms. This modernist approach might be conceived as a predecessor of set theory, yet Schillinger’s actual theory is limited to rather conventional constraints. For example, he presented rhythmic permutations in conventional meters only (see also Encyclopedia of Rhythms (1966)), and focused on unusual syncopations. Schillinger’s private pupils include Jewish jazz composers George *Gershwin and Vernon Duke, as well as Oscar *Levant and Benny *Goodman, who were probably attracted by Schillinger’s approach to rhythmic devices. Among his compositions are First Airphonic Suite (orchestra, 1929), The People and the Prophet (ballet, 1933), and many songs and piano pieces.

[Yoav Goldberg (2nd ed.)]

SCHINDLER, ALEXANDER M. (1925–2000), U.S. Reform rabbi, president of Union of American Hebrew Congregations. Alex Schindler was one of the best-known and most admired Jewish leaders in America in the last quarter of the 20th Century. He was born in Munich, Germany, in 1925, the son of a Yiddish poet and a feisty Jewish businesswoman. The family fled Hitlerism and made its way to New York City and then to Lakewood, New Jersey, where they made their living as chicken farmers. He enrolled at CCNY at the age of 16 and enlisted in the army in World War II, joining the ski troopers and winning a Purple Heart and a Bronze Star for bravery in the battles of Italy. After the war, he decided to become a rabbi, graduating from the Hebrew Union College and then serving seven years as assistant rabbi of Temple Emanuel of Worcester, Massachusetts.

He was known as a bold and successful leader of Reform Judaism but also as the preeminent spokesman of the entire Jewish Community in support of the cause of Israel. In the wider American community, Schindler was a well-known advocate of civil rights, economic justice, and improved interfaith relations. Known as a passionate spokesman of Reform Judaism, Schindler managed to gain the respect and affection of leaders of all denominations, bridging the gulfs of denominational and institutional rivalries. An assertive liberal in both religion and politics, he formed lasting friendships and alliances with traditional and conservative Jews in Israel and in America. He was a warm man, whose word could be trusted and thus even those who opposed him on ideological grounds never personalized those differences. He enjoyed a deep personal friendship with the long-time leader of Agudath Israel in the United States Rabbi Moshe Sherer, though the two men could not have been further apart ideologically.

Reform Judaism is unique among American religious denominations in that the leader of the movement is the professional president of the congregational body rather than the head of a rabbinical school. As president of the Union of American Hebrew Congregations (now called Union for Reform Judaism), he significantly enlarged the membership of the Union and the scope of its program, lifting the Reform Jewish movement to the largest branch of American Judaism. As leader of the Union, he envisioned and brought into reality a Liberal Torah Commentary, the first such publication in America. He pioneered a revolutionary outreach program, in which congregations reach out to interfaith couples to make the non-Jewish partner comfortable and to encourage that partner to convert. He spearheaded a campaign of gender equality, transforming the American synagogue and the Reform rabbinate. He led a campaign for recognition of gay rights in the movement and in the rabbinate. He broke new and controversial ground – both within and outside the Reform movement – by championing the doctrine of patrilineal descent so that authentic Jewish identity would derive not only from a Jewish mother but equally from a Jewish father. Though differing with halakhah, the Reform position was in some ways more stringent than halakhah in that the identity was not automatic but had to be acknowledged and affirmed. He championed social justice, demanding economic justice for the weak and the poor even in the face of Reagan social cuts. He strengthened the work of the Religious Action Center in Washington and was a crucial part of efforts to establish a religious action center in Israel as well. He pushed for the creation of a Reform Zionism, leading to the creation of ARZA, the Reform Zionist association and a vital Reform Zionist movement. As an educator, he succeeded in gaining the approval of a pilot project for Reform Jewish day schools, which now includes seventeen full-time Reform day schools in the U.S. and Canada.

He became the best-known American Jewish leader of that era when he was elected chairman of the Presidents Conference of Major Jewish Organizations, the authoritative assembly of American Jewish leadership in support of Israel, during an especially tumultuous time. Becoming chairman in 1976, he was at his post when Menachem Begin was elected prime minister of Israel. Shattering the long-established partnership between Israel’s Labor governments and American Jewry, Begin’s election was a shock to American Jewry. Schindler, a lifelong liberal and dove, publicly embraced Begin, a man with whose views he disagreed, as the elected prime minister of Israel’s democracy, and demanded that the Jewish establishment give Begin a fair chance and not delegitimize him at the outset. This led to a deep per-
sonal friendship, in which Begin consulted with Schindler at many pivotal moments, including on the eve of Camp David and peace with Egypt, honored Schindler in Jerusalem, and brought him as his guest on official visits to Egypt and other countries. Despite this deep personal friendship, which endured until Begin’s death, Schindler did not refrain from advocating a two-state partition, condemning Israel’s invasion of Lebanon, and demanding equal respect for all branches of Judaism in Israeli life.

In all his life, Schindler prided himself on being, like his father before him, an ohev yisrael, a lover of the Jewish people. Although he lifted and strengthened the Reform Jewish movement, he took most pride in knitting together the fractious strands of Jewish life and Jewish unity.

[Albert Vorspan (2nd ed.)]

SCHINDLER, KURT (1882–1935), conductor, composer/arranger, and music editor. Born in Berlin, he studied at the piano conservatory with Friedrich Gernsheim and Carl Ansörg. He later studied musicology at the University of Berlin with Carl Stump and Max Friedländer. The latter introduced him to European folk music, while Gernsheim, in whose choral society he participated, instilled in him an interest in choral music. He made his official debut as composer at the Krefeld Music Festival (June 1902). As an opera conductor, he conducted the Stuttgart Opera (1902) and the Staatsstheater in Wuerzburg (1903), and he was assistant to Felix Mottl and Hermann Zumph at Munich and to Richard Strauss at the Berlin Opera (1904). Invited to join the conducting staff at the Metropolitan Opera, he immigrated to the United States in 1905. In 1909, he established the MacDowell Chorus, which, at Mahler’s suggestion, evolved into the Schola Cantorum of New York. Until Schindler’s resignation in 1926, the Schola ranked among the most outstanding choral societies in North America, whose programs combined master choral works, interspersed with novel arrangements of European folksongs, mainly Russian and Spanish. For two decades (1907–27), he served concurrently as music editor for the publishers G. Schirmer and Oliver Ditson. From 1912 to 1915 he served as choral director at Temple Emanuel. In 1926, at the point of physical and mental exhaustion, he sought refuge in Spain, where, from 1929 to 1933, he made three trips throughout northern Spain and Portugal which resulted in the posthumously published Folk Music and Poetry of Spain and Portugal (New York, 1941; Salamanca, 1991). In 1933, he established the first music department at Bennington College, Vermont, but resigned shortly thereafter due to failing health.

[Israel J. Katz (2nd ed.)]

“SCHINDLER, OSKAR (1908–1974), one of Israel’s *Righteous Among the Nations, made famous by Thomas Keneally’s novel and Steven *Spielberg’s 1993 film Schindler’s List. He was a Nazi and a war profiteer and yet essential to saving the lives of more than 1,000 Jews.

Schindler was born in Svitavy (Zwittau) in what after World War I became Czechoslovakia. In the mid-1930s Schindler joined Nazi Germany’s military counterintelligence agency, the Abwehr, as a spy. He was arrested by the Czechs in 1938 for spying and after his release as part of the 1938 Munich Accord, helped with the invasion of the rest of Czechoslovakia and Poland in 1939. After World War II began, Schindler moved to Cracow, Poland, where he took over a former Jewish enamelware factory, Emalia, with the idea of making as much money as he could. At the instigation of his Jewish factory manager, Abraham Bankier, Schindler began to hire more and more Jews. Over time, he gained a reputation for treating his Jews well and in the fall of 1943 met with Jewish Agency representatives in Budapest, who convinced Schindler to act as a go-between for them in Cracow. Over time, his motivations changed and he became determined to save his Jews. By this time, Schindler had transformed Emalia into a subcamp of the nearby Plaszow camp, commanded by the monstrous Amon Goeth. When ordered by Goeth to close Emalia in the summer of 1944, Schindler instead got permission to move 1,000 Jews and the armaments wing of Emalia to Bruennlitz near his hometown. Though Schindler had nothing physically to do with the writing of the famed Schindler’s List, there would have been no lists (one for men, one for women) without his Herculean efforts to transfer these Jewish workers. Between October 1944 and May 1945, another 98 Jews would be taken in by Schindler at Bruennlitz. During this period, he spent almost all of the money he had made in Cracow to save 1,098 Jews.

After the war, he and his wife, Emilie, who was with him at Bruennlitz, fled first to Bavaria and then to Argentina, the latter move with the help of a generous grant from the American Jewish Joint Distribution Committee. Successful and innovative in wartime, Schindler was never able to duplicate that success or even a measure of it in his postwar life. Schindler returned to Germany in 1957 to apply for reparations for his lost factories from the West German government and never returned to Argentina and Emilie.

He was nominated to be in the first group of Righteous Among the Nations in 1962 though this nomination was withdrawn because of charges that he had stolen property and harmed several Jews during the war. Schindler became particularly close to the large community of Schindler Jews in Israel during this period and spent some of the happiest moments of his life in Israel. After his death in Hildesheim, West Germany, in the fall of 1974, his body was transferred to Israel, where he was buried in the Latin Cemetery on Mt. Zion. He and Emilie were named Righteous Among the Nations by Yad Vashem in 1993.

SCHINDLER, RUDOLPH M. (1887–1953), U.S. architect. Born in Vienna, Schindler immigrated to America in 1913, and settled in Chicago. He worked in the office of Frank Lloyd Wright from 1916 to 1921. His Lovell House, Newport Beach (1926), represents a fusion of Wright's style with the international modern style as interpreted in Central Europe. After 1926 he worked with Richard *Neutra in Los Angeles. The buildings they produced were among the earliest examples of the international style in the U.S.

SCHINDLER, SOLOMON (1842–1915), U.S. Reform rabbi and social worker. Schindler, born in Neisser, Silesia, the son of an Orthodox rabbi, was sent to Breslau when he was 13 to train for the rabbinate. After two years he gave up his rabbinical studies, graduating from the gymnasium and eventually qualifying as a teacher. In 1868 he led a small congregation in Westphalia, but his views proved too liberal. A speech attacking Bismarck's conduct in relation to the Franco-Prussian War led to Schindler's departure from Germany, and he settled in the U.S. in 1871. At first he supported his family by peddling shoelaces, but after a short time became rabbi of the Adath Emuno Congregation, Hoboken, N.J. In 1874 Schindler was appointed rabbi of Congregation Adath Israel, Boston (Temple Israel). Until his time it had conformed to Orthodox practice, but under his leadership an organ, family pews, vernacular prayers, and eventually Sunday services were introduced. Schindler's sermons and lectures attracted wide attention in Boston. Influenced by Darwinism and Bible criticism, he adopted a radical and even assimilationist standpoint and was closely associated with Boston's advanced thinkers, particularly Minot J. Savage, a rebel against Christian Orthodoxy who eventually led the New York Community Church. From 1888 to 1894 Schindler was a member of the Boston School Board. Schindler's theological and political radicalism, and apparently his German background, proved unpalatable to his congregation, and he retired from the rabbinate in 1894, becoming superintendent first of the Federation of Jewish Charities and then of the Leopold Morse Home (1899). In a sermon entitled “Mistakes I Have Made” (1911) he withdrew from his earlier radicalism. Among Schindler's publications were *Messianic Expectations and Modern Judaism (1886), and *Dissolving Views in the History of Judaism (1888).

*Sefon D. Temkin

SCHIPER, IGNACY (Yizhak; 1884–1943), historian and public worker. Schiper was born in Tarnow, Galicia. From his youth he was a member of the Poalei Zion movement, and from 1922 of the General Zionists (*Al ha-Mishmar), holding various public positions in the parties and acting as their emissary. During 1922–27 he was a deputy in the Polish Sejm. After the establishment of the Institute of Jewish Sciences in Warsaw in 1928, he lectured on the history of Jewish economy. Schiper died in a German concentration camp near Lublin.

Although his academic education was essentially a legal one, Schiper took an interest in historical research throughout his life. Within the group of Jewish historians which emerged in Galicia in the early 20th century (*Balaban, *Schorr), Schiper distinguished himself in the history of economics and of popular culture (in Yiddish). Whether this was due to his social outlook or to his limited Hebrew education, he thought that the study of the spiritual history of the nation and its leaders had been exhausted; “the Sabbath-Jew with his extra soul” was already well known, and there arose a need, he felt, to become acquainted with the secular aspect of the nation's life. Schiper's first work, in the sphere of Jewish economics, was his original research on the beginnings of capitalism among the Jews of the Western world (*Anfuenge des Kapitalismus bei den abendländischen Juden im früheren Mittelalter, 1907), which was also translated into Russian and Yiddish. Schiper then turned his attention to research into Jewish economy in Poland, at first during the Middle Ages and then during the modern era also.

His principal works in this sphere are *Studya nad stosunkami gospodarczymi Żydów w Polsce podczas średniowiecza (1911, Tid. tr. 1926), and *Dzieje handlu żydowskiego na ziemiach polskich (1937). Of his studies on the history of culture, two of his works are of note: *Kultur-Geshikhte fun di Yidn in Poyln beyzn Mittalter (1926), which deals with the way of life of the Jews, and *Geshikhte fun der Yidishe Teater-Kunst un Drame: fun di Eltste Tsaytn bis 1750 (3 vols., 1927–28), which deals with theatrical art and drama. Schiper also occupied himself with other historical questions, such as Jewish autonomy in Poland, but he dealt mainly with Jewry's relationship to the external world, using primarily non-Jewish sources. A historian of great intuition and imagination, he promoted and enriched historical research on Polish Jewry, though he did not always trouble to establish his ideas on a firm historical footing.

[Israel Halpern]

SCHIRMANN, JEFIM (Hayyim; 1904–1981), scholar of medieval Hebrew poetry. Born in Kiev, Schirmann received a doctorate in Berlin for his thesis *Die hebraeische Übersetzung der Maqamen des Hariri (Frankfurt 1930). He was one of the first to undertake research in medieval Hebrew poetry at the Schocken Institute for Research (first in Berlin, then in Jerusalem). In 1937 he began teaching medieval Hebrew poetry at the Hebrew University of Jerusalem, and subsequently was appointed to the chair in this subject. From 1954 to 1969 he edited *Tarbiz, a quarterly for Jewish studies. He was a member of the Israel Academy of Sciences and Humanities and of the Academy of the Hebrew Language. In 1957 he was awarded the Israel Prize for Jewish Studies.
Schirmann’s research spans the entire range of medieval Hebrew poetry. He began his activities by investigating the Hebrew poetry of Spain, both as an independent area of research and also with reference to its links with Arabic literature. At the same time he studied Italian Hebrew poetry. He compiled two large and unique anthologies of the most important existing texts of (1) Hebrew poetry written in Italy between the ninth and 20th centuries, Mivhar ha-Shirah ha-Ivrit be-Italyah (Berlin, 1934); and (2) Hebrew poetry written in Spain and Provence from the 10th to the 15th centuries, Ha-Shirah ha-Ivrit bi-Sefarad u-vi-Provence (1961). Schirmann laid the foundations for modern research and critical evaluation of secular and sacred Hebrew poetry, as well as of the rhymed tales composed by the Jews of Spain and Italy.

Schirmann’s later researches were devoted primarily to early medieval Hebrew poetry. Of particular note is the essay “Hebrew Liturgical Poetry and Christian Hymnology” (TQ 49, 1953, pp. 123–161), Shirim Hadashim min ha-Genizah (“New Poems from the Genizah,” 1965), which contains, besides a large collection of unknown texts from different periods, a number of very important critical monographs on poets from various centers of Jewish life (Erez Israel, Babylonia, North Africa, and Spain), and his collected articles in Hebrew, Studies in the History of Hebrew Poetry and Drama (1979). His critical edition of the secular poetry of Solomon ibn Gabirol (1974), completing the work initiated by H. Brody, can be seen as one of his most mature contributions to the history of medieval Hebrew poetry.

Several years after Schirmann’s death, E. Fleischer published in two large volumes the important notes that he had left on the history of medieval Hebrew poetry with his own observations, updated bibliography, and commentaries: The History of Hebrew Poetry in Muslim Spain (1995) and The History of Hebrew Poetry in Christian Spain and Southern France (Heb., 1997).

Schirmann’s numerous publications and long teaching career led to the creation of a new attitude toward research in medieval Hebrew culture. His approach to the Hebrew intellectual creativity of the Middle Ages was within the wider context of general contemporary culture, and he emphasized its connection with other cultures and literary creativity.

**SCHISGAL, MURRAY** (1926– ), U.S. playwright. Schisgal was born in New York. His initial intention was to become a lawyer, and he did receive an L.L.B. from Brooklyn Law School in 1953. Schisgal’s first successful stage hit was the double bill The Typists and The Tiger (1963), which starred Eli Wallach and Anne Jackson. This was followed by his biggest hit comedy, Luv (1964), which was nominated for two Tony Awards—Best Play and Best Author. It was later made into a motion picture starring Jack Lemmon and Peter Falk (1967). Schisgal also wrote the play Jimmy Shine (1968), which starred Dustin Hoffman. Schisgal’s other Broadway plays included The Chinese and Dr. Fish (1970), An American Millionaire (1974), All over Town (1975), and Twice around the Park (1985). He also wrote the plays Ducks and Lovers (1972), Popkins (1984), and Oatmeal and Kisses (1990).

With Larry *Gilbert he co-wrote the screenplay for Tootsie (1982), for which they received an Oscar nomination. He also produced the films Boys and Girls (2000) and A Walk on the Moon (1999).

Schisgal was nominated for an Emmy award for his TV productions The Devil’s Arithmetic (1999) and A Separate Peace (2004). Schisgal’s novel Days and Nights of a French Horn Player was published in 1980.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

**SCHLAMME, MARTHA HAFTEL** (1922–1985), folk-art singer, pianist, and actress. Schlamme was born in Vienna, the only daughter of Meier and Gisa Braten Haftel, who were Orthodox Jews. She and her parents escaped the Nazis in 1938 through France to England, where her parents were interned by the English government on the Isle of Man. Martha chose to leave the Jewish school she attended and joined her parents there. At the camp she met Engel Lund, a singer from Iceland, who inspired her to become an international singer. Martha came to the U.S. in 1948, shortly after marrying Hans Schlamme.

Schlamme began her concert career in the Catskills, singing in Hebrew and Yiddish. Her venues soon included college campuses, concert halls, and nightclubs, as well as radio and television. By 1960, she had performed over a thousand concerts. A supreme interpreter of folk song, Schlamme concertized and recorded in 12 languages. She enthusiastically sang Jewish songs throughout her career. On the Vanguard, Folkways, Columbia, and MGM labels she produced 15 albums including Martha Schlamme Sings Israeli Folk Songs (1953); Martha Schlamme Sings Folk Songs of Many Lands (1958); and Martha Schlamme Sings Jewish Folk Songs (1957, and vol. 2, 1959).

Schlamme’s early enthusiasm for Kurt *Weill brought her considerable attention and fame. She performed Weill’s songs in Edinburgh at a venue called the Howff. This show grew and
eventually came to New York, playing for months. For over 20 years she included Weill’s music in her programs and produced the recordings The World of Kurt Weill in Song (1962), and A Kurt Weill Cabaret (1963). In 1965, she starred in a production of Weill’s Mahagonny at the Stratford Festival in Ontario and two years later sang at Ravinia Music Festival in A Kurt Weill Cabaret with Alvin Epstein. In 1985, she appeared with Epstein at the Israel Festival in Jerusalem.

Schlamme sang on Broadway, playing the role of Golde in Fiddler on the Roof in 1968, and that same year appearing in A Month of Sundays and Solitaire, Double Solitaire. Schlamme became a teacher of song and acting at the Circle in the Square Theater School in New York and H.B. Studio. She was also close to activists in leftist politics, giving numerous benefit concerts. She recorded German Folk Songs on the Folkways label with Pete Seeger. In the 1960s, after an annulment of her first marriage, she married Mark Lane, a Democratic politician. Martha Schlamme suffered a stroke onstage at the Chautauqua Festival at age 60 in front of a large audience and died in nearby Jamestown, New York.

[Judith S. Pinnolis (2nd ed.)]

**SCHLEIERMACHER, FRIEDRICH** (1766–1834), German theologian and preacher. The young Schleiermacher was an admirer of Henriette “Herz and frequented the salons of Berlin. He answered David “Friedlaender’s audacious Send- schreiben an Probst Teller (1799) by advocating that Jews, as individuals, be granted complete emancipation in order to save the Church from contamination by insincere converts seeking equality. In his Reden über die Religion (1799; On Religion, 1955), he contended that Judaism was a dead religion, the essence of which lay in God and His chosen people. This historical dialogue, however, had ceased abruptly with the fall of the Jewish state; thus Judaism was not a true religion but rather a political body. Equating revelation with religious experience, he placed the Old Testament in a very subordinate position in relation to the New. On the other hand Schleiermacher, a powerful preacher, exerted a decisive influence on the style of L. *Zunz and other Jewish preachers of the era. Occasionally he attended the synagogue to listen to the young preachers, making comments to them afterward.

**SCHLESINGER, family of Austrian *Court Jews. MARX (MORDECAI) SCHLESINGER, son of Moses Margulies (*Margelioth), was active as military purveyor to the Austrian court before the 1670 expulsion of Vienna Jews, as well as finan-

cier to the court and supplier of precious metals for the royal mint. A leader of the Vienna community, he participated in the negotiations for the return of the expellees and was murdered in 1683 in Klosterneuburg. His son, BENJAMIN WOLF (d. 1727), settled in Eisenstadt in 1679 and was a large-scale military and coin supplier, particularly in Hungary, where he served the noble Esterhazy family. His business activity was conducted, however, from Vienna.

Another son, ISRAEL, was an ancestor of the renowned *Eger family. MARX (MARKUS) SCHLESINGER (d. 1754) figured prominently in the numerous wars of the period as a large-scale military purveyor, as well as financier to the Austrian court in millions of florins. In 1731 he was nominated imperial court purveyor (Hoffaktor) by Emperor Charles VI; he was already purveyor to the courts of electoral Palatinate, electoral Mainz, and ducal Brunswick, as well as court jeweler and purveyor to Charles Alexander of Wuertemberg as of 1736. Although his forefathers had belonged to the *Oppenheimer and *Wertheimer circles, Marx was himself patron of Isaac *Leidesdorfer and L. *Gomperz. His far-flung activities eventually embroiled him in lawsuits with the government, and he died in extreme poverty, as did most of his children.

Pribram, Urgünstigen und Akten zur Geschichte der Juden in Wien (1918), index; B. Wachstein, Die Inschriften des alten Judenfriedhofs in Wien, 1 (1912), index; S. Stern, The Court Jew (1950), index.

**SCHLESINGER,** family of music publishers. ADOLF MARTIN SCHLESINGER (1768–1848) was born in Berlin, where in 1810 he founded the firm Schlesinger’sche Buch und Musikalienhandlung, which was one of Beethoven’s publishers. His greatest publication was Bach’s St. Matthew Passion (1829). His two sons were HEINRICH SCHLESINGER (1807–1879) and MORITZ (MAURICE) ADOLF SCHLESINGER (1799–1871). Heinrich maintained the Berlin firm, while in 1834 Moritz established a firm in Paris which published works by Mozart, Chopin, Berlioz, “Meyerbeer, and Donizetti, and the Gazette (later Revue) Musicale. The German firm passed into other hands in 1864, and the French one in 1846.

**SCHLESINGER, AKIVA JOSEPH** (1837–1922), one of the first visionaries of modern Zionism. Born in Pressburg, Schlesinger was a graduate of Hungarian yeshivot and a student of Kabbalah. He was one of the spokesmen of the extreme religious elements of the Hātam Sofer (see Moses *Sofer) school of thought, which advocated complete separation from the “enlightened” and “neologic” elements. In his book Lev Ivrî (“Hebrew Heart,” 1865), he sharply attacked the “meshananim” and “mityaddeshim” (“innovators” and “reformers”). In 1870 Schlesinger went to Erez Israel out of a conviction that the sole hope for religious Jewry lay in the establishment of a religious Jewish community in the Land of Israel. In 1873 he published the book Ḥevrat Maḥzirei Atarah le-Yoshnah or
Kolel ha-Ivrim ("The Society for the Restoration of Things to Their Former Glory" or "The Community of Hebraists"), in which he expounded his plan for the establishment of a worldwide association for the consolidation of religious Jewry. This association would set up a network of schools to educate the young generation in a religious spirit; its center would be in Jerusalem and its aim would be the establishment of a Jewish community living off the fruits of its own labor and in the spirit of the Torah. In his book Schlesinger expressed ideas similar to those which were later adapted by the Zionist movement (collection of contributions and tithes for the upbuilding of the country, renaissance of the Hebrew language, agricultural settlement, organization of self-defense, abolition of the barriers between communities and kcolelim and their amalgamation into one – Kolel ha-Ivrim). Schlesinger was the leader of a group of Jerusalemites who tried to change the *halukkah system and divert the funds to agricultural settlement. The halukkah trustees, who feared Schlesinger's ideas as a threat to their hegemony, boycotted and persecuted him, and he responded with harsh polemic. In 1878 Schlesinger was one of the founders of Petah Tikvah and, with the establishment of the new settlement, he called on religious Jewry to establish their own settlement movement to encompass truly religious Jews, without "heretical and outside elements."

[Yehuda Slutskey]

**SCHLESINGER, BENJAMIN** (1876–1932). U.S. trade union leader and journalist. Born in Krakai, Lithuania, Schlesinger immigrated to Chicago in 1891, working in a sweatshop as a sewing-machine operator. At the end of the 1890s he moved to New York City. In 1903 Schlesinger was elected president of the infant International Ladies' Garment Workers' Union (ILGWU), but within a year a coalition of more conservative trade unionists defeated his bid for reelection. He then managed the New York Cloakmakers' Joint Board of the ILGWU but left in 1907 to become managing editor of New York's *Jewish Daily Forward*. During his seven years with the Yiddish daily, Schlesinger maintained his interest in the ILGWU, influenced union affairs, and prepared himself to return to union office at a more opportune time.

From 1910 to 1914, the radical socialist New York cloakmakers clashed with the more conservative and moderate leaders on the ILGWU's general executive board. The cloakmakers were defeated, but at the 1914 ILGWU convention they succeeded in removing the officeholders and elected Schlesinger president. Though committed to class warfare, he attempted to persuade socialists to abide by contractual agreements with employers. During the 1916 strike in the cloak trade, Schlesinger commanded the loyalty of both union radicals and conservatives, made himself acceptable to employers as a negotiator, and gained the support of local reformers and city officials. With the help of New York City's reform mayor, John Purroy Mitchell, he wrung from the cloak manufacturers an exceptionally favorable agreement, which relieved the union from resorting to independent arbitration and placed greater power in the hands of the trade unionists themselves.

From 1914 to 1923 Schlesinger guided the ILGWU with firmness and perception, until it became one of the largest and most progressive trade unions in the nation. But in 1923, worn down by years of poor health and depressed by the intra-union struggle between communists and anti-communists, Schlesinger resigned and returned to serve the *Forward*. In 1928, with the anti-communists in control, the ILGWU, its treasury depleted and its ranks decimated, turned to Schlesinger. He strove to revive internal unity, but the task, aggravated by the advent of the Depression, proved too much for him. He died shortly after his reelection in 1932.

[Melvyn Dubofsky]

**SCHLESINGER, FRANK** (1871–1943). U.S. astronomer and pioneer in stellar photography. Born in New York, Schlesinger obtained his doctorate with a thesis on a new type of measurement of a star cluster. He then began to develop his original methods for the determination of stellar parallaxes by means of celestial photography, revolutionizing the subject. In 1905 he was appointed director of the Allegheny Observatory, where he worked on the orbits of spectroscopic binary stars, devising simple methods of reducing spectrograms, and designing a new, sensitive measuring machine. In 1914 he started his ambitious plan of a large-scale parallax program. Within six years the first 365 star distances were determined, parallaxes with an average probable error of less than one hundredth of a second of arc. In 1920 he became director of the Yale University Observatory, and in 1925 he set up a South African station at Johannesburg with a 26-inch telescope of 36 feet focal length. The importance of these "trigonometric parallaxes" lies in the fact that they are the basis of the present distance scale of the universe. With their help, all spectroscopic and other distance determinations are eventually calibrated. In 1940 Schlesinger published his first "Bright Star Catalogue," giving all the essential data for all stars brighter than 6.5 visual magnitude. He did outstanding work on stellar proper motions and star positions obtained with wide-angle cameras, and a long series of these "Zone Catalogues" was published in the Yale Observatory Transactions. Schlesinger was a leading figure in the formation of the International Astronomical Union. He was its president from 1932 to 1935, and many other academic honors were awarded to him.

[Arthur Beer]

**SCHLESINGER, GEORG** (1874–1949), German engineer. Born in Berlin, Schlesinger became professor of industrial sci-
ence at Berlin’s Technische Hochschule in 1904, one of the few Jews to hold such a position. A pioneer of industrial psychology, he created the department of psychotechnics. He wrote Psychotechnik und Betriebswissenschaft (1919) and edited the journal Werkstatt-Technik. He also designed modern factories, especially textile works. Dismissed from the Hochschule in 1933, Schlesinger went to Brussels University (1934–39), then to England, where he directed production engineering research at Loughborough College, Leicestershire.

SCHLESINGER, GUILLERMO (1903–1971), rabbi of the Congregación Israelita de la República Argentina. Born in St. Gallen, Switzerland, son and grandson of rabbis, he graduated from the Theological Seminary of Breslau (then Germany), in 1934 and received a Ph.D. in public economy from the University of Zurich in 1936. He immigrated to Argentina in 1937 and assumed the rabbinical chair of the Congregación Israelita in Buenos Aires. In 1939–1956 he was also the director of the Cursos Religiosos Israelitas (Jewish Religious Courses) of this congregation, which sustained a wide network of Jewish complementary schools, especially in the provinces and some in Buenos Aires. For many decades Rabbi Schlesinger was considered a semi-official chief rabbi of the community, especially among non-Jewish society, but not within Jewish society. In 1956 he participated in the establishment of the Latin American Fraternity of Synagogues. In 1961 Rabbi Schlesinger received an honorary doctorate from the Jewish Theological Seminary of America.

[Effraim Zadoff (2nd ed.)]

SCHLESINGER, ISIDORE WILLIAM (1877–1949), South African financier and entrepreneur. The son of an Austrian-Jewish immigrant in the United States, he went to South Africa in 1894. He built up an extensive financial and industrial empire in a relatively short time, beginning his career in Johannesburg as an insurance agent. In a few years he had established his own insurance and banking companies. In real estate he helped to develop a number of townships in Johannesburg and other cities. In 1914 he opened a chain of theaters and cinemas and for a long time held a virtual monopoly in those fields. He formed the first film production company in South Africa and, at his studios in Johannesburg, made the first regular South African newsreels and the earliest full-length films. He also established a broadcasting service, which was eventually taken over by the state to become the South African Broadcasting Corporation. His citrus-growing estate at Zebedelia (Transvaal) became one of the biggest in the world. He regarded this as his crowning achievement and, at his own wish, was buried there. His interests extended to Rhodesia, Portuguese East Africa, and Tanganyika, and he owned music halls in England. He played little part in public life but headed the Keren Hayesod campaign when Chaim Weizmann visited South Africa in 1932.

He was succeeded as head of the Schlesinger Organization by his only son, JOHN SAMUEL SCHLESINGER (1923–).

BIBLIOGRAPHY: A.P. Cartwright, South Africa’s Hall of Fame (1960).

[Louis Hotz]

SCHLESINGER, JOE (1928– ), Canadian journalist, broadcaster. Schlesinger was born in Vienna and raised in Bratislava, Czechoslovakia. On June 30, 1939, only 11 years old, he and his younger brother, Ernie, escaped the Nazis, being among 664 children removed to England by young British stockbroker Nicholas Winton. Schlesinger spent the war years in a boarding school run by the Czech government-in-exile. At the end of the war, the brothers returned to Czechoslovakia in a futile search for their parents. Following a bout of tuberculosis, Schlesinger began work in Prague as a translator for the Associated Press but, escaping the Communist takeover of Czechoslovakia, in 1950 he made his way to Canada.

Schlesinger began his journalism career as editor of the campus newspaper while studying economics at the University of British Columbia. From 1955 to 1962 he was a reporter for the Vancouver Province, Toronto Star, and United Press International, and then for the Herald Tribune in Paris until 1966. He found reporting foreign news a calling, “...interpreting it, clarifying it, demystifying it, and making it interesting and relevant.”

Schlesinger returned to Canada to begin a more than 40-year career in television at the Canadian Broadcasting Corporation (CBC). He held several key CBC posts, including executive producer of National News, head of TV News, chief political correspondent, and, notably, foreign correspondent. Schlesinger covered major events around the world, including the Arab-Israeli conflict, often from the heart of the action. Twice a refugee from Czechoslovakia, he returned to Prague to witness the Velvet Revolution that overthrew the Communist regime. “It was,” Schlesinger recalled, “one of the great moments of my life. I was able to return, and watch that ‘era,’ that tyranny – the last of it – vanish. It was a kind of a personal vindication.”

After retiring from the CBC news service in 1994, Schlesinger continued to produce and host documentaries, and he remains senior correspondent of CBC’s flagship news program, CBC News: The National. His journalism was honored by three Gemini Awards and the John Drainie Award for distinguished contribution to broadcasting. He holds several honorary doctorates, and in 1993 he was named to the Order of Canada. He wrote Time Zones: A Journalist in the World (1990).

[Paula Draper (2nd ed.)]

SCHLESINGER, JOHN (1926–2003), English director. Schlesinger was born in London. Educated at Oxford, he toured in repertory until 1959 and then directed BBC-TV films. His first feature film was A Kind of Loving (1962), followed by Billy LIAR (1963), Darling (Oscar nomination for Best Picture and Best Director, 1965), Far from the Madding Crowd (1967), Midnight Cowboy (Academy Award winner for Best Picture and Best Director, 1969), Sunday, Bloody Sunday (1971), The
Day of the Locust (1975), Marathon Man (1976), Yanks (1979), The Falcon and the Snowman (1985), Madame Sousatzka (1988), The Innocent (1993), and Cold Comfort Farm (1995). Schlesinger directed several plays, including Timon of Athens for the Royal Shakespeare Company. He was one of the most important British filmmakers of the post-1960 period.

[Jonathan Licht]

**Schlesinger, Karl** (1889–1938), Austrian financier and economist. He introduced methods of mathematical analysis and the calculation by probability of the movements of money and capital. Born in Budapest, Schlesinger lived in Vienna where he was a wealthy board member of many industrial and financial corporations. He was one of the few non-academic economists of reputation who were members of the Vienna Economic Society. Most of his views were expounded among friends during spirited sessions in Viennese coffeehouses. Schlesinger took his own life when the Germans entered Vienna in 1938.

His writings include *Theorie der Geld- und Kreditwirtschaft* (1914); *Veränderungen des Geldwertes im Kriege* (1916); *Über die Produktionsgleichungen der oekonomischen Wertlehre* (1931).

[Joachim O. Ronall]

**Schleswig-Holstein**, state of Germany. In the 17th century Danish kings, rulers of the dual duchies of Schleswig and Holstein, invited Sephardi merchants to settle there, and communities were founded in *Glueckstadt*, Rendsburg, Friedrichstadt, and *Altona*, which became the seat of the rabbinate and the leading community. While the other communities gradually declined economically, Altona prospered and attracted German Jews, who were permitted to settle in these cities and enjoyed special privileges despite the opposition of the Sephardim.

On March 29, 1814, the Jews in Denmark were granted emancipation, but this was abolished at the Congress of Vienna by a decision which applied to the lands of the German Confederation. Jewish equality was championed by S.L. *Steinheim* and G. *Riesser*. It was advocated in a series of petitions to the conservative provincial estates and favored by King Christian VIII. Equality was temporarily obtained during the 1848–49 revolution, proclaimed by the parliament of the revolutionary duchies in which Jews participated; during the revolution Jews first settled in *Kiel*. On July 14, 1863, a law granting complete emancipation was enacted. A year later the duchies were detached from Denmark and passed to Prussia in 1866. The Jewish population numbered 3,674 in 1835 (2,014 in Altona; 876 in Glueckstadt; 292 in Rendsburg; and 373 in Friedrichstadt, where they were 17% of the population). The figures were about 6,000 in 1925, with 5,000 in Altona, 600 in the new community of Kiel, and the remainder divided among the other dwindling communities; Altona was incorporated into Hamburg in 1937.

Rudolf Katz (d. 1961) was minister of justice of the state of Schleswig-Holstein in 1960, when there were 107 Jews in Kiel.

**Schlettstadt, Samuel ben Aaron** (second half of the 14th century), Alsatian rabbi and rosh yeshivah. Samuel took his name from Schlettstadt, the town where he was apparently born. *Joseph (Joselmann) b. Gershom of Rosheim* (in *Sefer ha-Mikneh*, written in 1546, publ. 1970) describes him as “a pious man, head of the exile,” but biographical details about him are scant; however there is some information about a calumny in Strasbourg in which Schlettstadt was involved and which was the cause of his wandering to various countries. The affair is recounted in two sources: by Joseph of Rosheim (*ibid.*, 71), and in the documents of excommunication published by N. *Coronel* in *Hamishah Kunteresim* (1864), 107ff. Two Jews from Strasbourg were involved in a conspiracy with the knights of Andlau who were in the vicinity of the city. After Samuel issued an unheeded warning to the conspirators, the citizens approached him to pass judgment on them, and he sentenced them to death. The sentence was carried out on one of the informers, but his companion fled to the knights and apostasized. When the knights discovered that the informer had been put to death, they went to war against the men of Strasbourg, and Samuel was compelled to flee the city. He escaped, concealing himself in the fortress of Hohenlansberg near Strasbourg, and lived there together with the students of his yeshivah for a number of years (1370–76). It seems likely that some of the members of the community had a hand in the incitement against Samuel, who waited in vain for the community leaders to take the steps that would enable him to return (it seems that it was necessary to appease the knights of Andlau with money).

In 1376 Samuel left his hiding place and traveled to the East. On his way he passed through several communities in Germany, where he received letters from various rabbis (including *Meir b. Baruch ha-Levi of Vienna*) referring to him in complimentary terms and calling for action on his behalf. After 1381 he arrived in Babylonia, where he obtained a deed of excommunication from the *nesi’im* David (b. Hodaiah?) and Jedidiah (b. Jesse?), apparently directed against those individuals in Strasbourg who were involved in the affair. It laid upon the members of the community the duty of doing everything necessary to enable Samuel to return to Strasbourg and compensate him for his suffering and losses. From Babylonia he proceeded to Jerusalem, where he obtained two documents (published by Coronel) signed by various scholars (among them immigrants from Italy and Germany) supporting the excommunication by the *nesi’im*. As proved by H. Frankel (*Ha-Mikneh*, introd. 17), Joseph of Rosheim relied on this deed in his account of the incident, although there are certain variations between his description of the affair and that retailed in
the deed. Equipped with these documents, Samuel made his way back and reached Regensburg. The people of Strasbourg made their peace with him. When he reached the Rhine, the students of the yeshivah came to meet him, accompanied by Samuel's son Abraham, whose boat capsized; he was drowned in the river before his father's eyes. There is a theory that Samuel met his death in the expulsion and massacre of the Jews of Strasbourg in the years 1380–88.

Samuel's best-known work is his *Ha-Mordekhai ha-Katan* (so called by Israel *Bruna in his responsa, Stettin 1860 ed., nos. 163, 170, 181a, 194 p. 722, 207, 244), also referred to as *Ha-Mordekhai ha-Kazgar* (Israel Isserlein, *Terumat ha-Deshen*, pesakim no. 192; Jacob Weil, responsa no. 88), and *Kizzur Mordekhai* (Azulai, Sh-G s.v.). As its title indicates, it is an abridgment of the *Mordekhai* by *Mordecai b. Hillel* (in the Rhenish version). This work is mentioned by Jacob *Moelln (Responsa (Hanau 1610 ed.) no. 87 and 174), and in Minhagim, Halikhot Sukkah* (Warsaw, 1874 ed., 52a) it is referred to as the "Mordecai [sic]" compiled by Samuel Schlettstade" and by Jacob *Landau in his Agur. From the extensive use made of it, it would appear that it had an independent value. The work has not yet been published, though many manuscripts of it are known. The work was compiled in 1376 (according to information in Ms. Parma, De Rossi no. 397, written in 1391), while Samuel was in the fortress of Hohenlandsberg. The date (1391) given in an Oxford manuscript (Neubauer, Cat., no. 672) is not, as Neubauer thought, the date of composition, but of the copying.

Samuel added notes containing rulings and additions from the work of various posekim to the *Mordekhai* which appear as an appendix in the printed editions (since the 1559 edition of Riva di Trento). These notes were written in the margins of the Rhenish version of the *Mordekhai* and included additions which are apparently extracts from the Austrian version (see Kohn, bibl.). Samuel's authorship of these notes, which was established by Zunz (HB 9 (1869), 135), is clear from the notes to the *Mordekhai*, *Gittin* 456: "And I Samuel the unworthy," and *Yevamot* 111: "And see there in *Ha-Mordekhai ha-Katan* which I compiled"; it is possible, however, that not all the notes were compiled by him. The question of the authorship of the minor halakhot (z'izit, mezuza, Sefer Torah, and tefillin) in the *Mordekhai* is not yet clear. H.J.D. Azulai pointed out that Mordecai b. Hillel was not their author and that they did not occur in the *Mordekhai*. Zunz's conclusion that the author is Samuel because they are found in *Ha-Mordekhai ha-Katan* is not reliable, because, although it is certain that the minor halakhot found their way into the *Mordekhai* from it, it is not indisputable that Samuel was the author. An inscription in the Oxford manuscript (Neubauer, Cat., no. 672) of *Ha-Mordekhai ha-Katan* seems to indicate that Samuel was the author. It states: "The Alfasi and the *Mordekhai* did not compile works on the minor [tractates]. In consequence I, the unworthy, have done so...", so too in the inscription on another such manuscript (Oxford 673). Nevertheless, the notes on the minor halakot are certainly by Samuel and they contain allusions to his notes on the *Mordekhai* (no. 968) and vice versa (*Mordekhai Haggahah* Shab. 456, end of ch. 2). Jacob Weil (Responsa, 147) mentions a responsum written by Samuel.

Samuel's grandson, Abraham's son, compiled a work called *Shem ha-Gedolah*, containing biographical and bibliographical information (published by I. Benjacob in the collection *Devarim Attikim*, 2 (1846), 7–10).

[Sholom Zelman Havlin]

**SCHLIEFER, SOLOMON** (1889–1957), rabbi of the Great Synagogue in Moscow. Schliefer was born in Aleksandrovka, Ukraine, where his father, Jehiel Mikhail Schliefer, officiated as rabbi. In the yeshivah of Lida he was a disciple of the founder of *Mizzachi*, Rabbi Isaac Jacob *Reines (Respousa no. 88)*, and, after being ordained as rabbi, he married Reines' granddaughter. After his father's death Schliefer became rabbi of Aleksandrovka, where his wife and son died of starvation during the civil war after the 1917 Revolution and his mother and brothers were murdered by Ukrainian nationalists. For a time during the early stages of the Soviet regime, Schliefer made his living as an accountant, but in 1922 he settled in Moscow and became secretary of the Great Synagogue congregation. Eventually he was appointed rabbi and chairman of the congregation and was very skillful in steering his way between the obligatory contacts with the Soviet authorities and his devotion to Judaism, to the congregation, and to the many Jewish refugees who fled to Moscow during World War II from various parts of the country.

Though careful not to serve as a tool of the official propaganda line on Jewish matters, Schliefer could not avoid signing a statement of several prominent Soviet Jews against the "aggression" of Israel during the Sinai Campaign, published in *Izvestiya* (Nov. 29, 1956). At that time he also received permission from the authorities to print – for the first time under the Soviet regime – a Jewish prayer book (3,000 copies). It consisted of photostated pages from pre-revolutionary prayer books, from which any reference to wars and victories (as, e.g., in the Hanukkah benedictions) were omitted. Schliefer called it *Sidur ha-Shalom* ("Peace Prayer Book," instead of the customary *Sidur ha-Shalem,* "complete prayer book"). He also printed for members of his congregation a Jewish calendar for the year 5717. Shortly before his death he opened and headed, with official authorization, the only legal yeshivah in the U.S.S.R., under the name Kol Yaakov, which was located in the synagogue building. Under his successor, Rabbi Judah Leib *Lewin, a small number of ritual slaughterers were trained"
there, many of them from the Georgian Soviet republic. His son Moses (by his second wife), who served as an officer in the Soviet army, was killed at the front in 1943.

**SCHLOESSINGER, MAX** (1877–1944), scholar and Zionist worker. Schloessinger, born in Heidelberg, was educated at the Universities of Berlin and Vienna, at the Israeliitische Lehranstalt Vienna, and at the Berlin Hochschule fuer die Wissenschaft des Judentums. In 1903 he moved to New York as office editor of the *Jewish Encyclopedia*. The following year he was appointed librarian and instructor at Hebrew Union College, Cincinnati, but resigned in 1907 following a dispute over Zionism. Returning to Germany, he began a successful import-export business. Shortly after the outbreak of World War I he moved to Holland for business reasons, and then settled in Palestine.

Schloessinger was active in Zionist work in Holland, serving as director of the Jewish National Fund. His friendship with J.L. *Magnes when both were students in Berlin led him to a close identification with the work of the Hebrew University. Schloessinger served as a member of the university’s board of governors from its inception, and at various times acted as deputy to Magnes in the office of chancellor. In recognition of his contributions to the study of Islamic Jewish literature, Schloessinger was made a fellow of the University of Oriental Studies. Owing to ill health, he moved to New York in 1939.

[Melvyn Dubofsky]

**SCHMELKES, ISAAC JUDAH** (1875–1908), rabbi of Przemysl. Although he was ordained rabbi in his youth and considered an outstanding talmudist, he at first refused to accept rabbinic office and engaged in business. When his business failed, however, he was appointed in 1893 rabbi of Przemysl, but the appointment was not officially recognized by the government. In 1898 he was appointed rabbi of Kolomyya, but his experiences there were difficult. In 1904 he returned to Przemysl and this time was recognized as chief rabbi. He was one of the few rabbis in Poland who officially joined the Zionist movement, and he played an active role in Zionist congresses. Schmelkes distinguished himself by his activities in the difficult period through which Galician Jewry passed during World War I. When he was expelled from Przemysl during the war, he refused to leave until the last Jews had departed. For a time he stayed in Vienna, returning to Przemysl in 1917. One of his sons, Moses, died in Siberia. Schmelkes had great influence both in hasidic circles and among the maskilim.

Most of his works in manuscript were lost, and only a small section of his novellae and sermons entitled *Imrei Reshesh* (Piotrkow, 1931) was published. Supplements to them – *Maseoret ha-Shas* (Talmud cross-references) – arranged by him were preserved; some of them were published by J.L. Maimon (see bibliography).

[Itzhak Alfassi]

**SCHMELKES, ISAAC JUDAH** (1828–1906), talmudic scholar of Galicia. Schmelkes was born in Lemberg and was the son of Mayer Samuel Schmelkes, claiming descent from Eleazar b. Samuel Schmelkes *Rokeaḥ* (see introduction to *Beit Yizḥak*, *Orat HaYyim*, Przemysl, 1875). A pupil of Joseph Saul ha-Levi *Nathanson, head of the local bet din*, he was hailed in his youth as a brilliant talmudic student. He served as head of the *bet din* in a number of towns before being appointed in Lemberg, where he remained until his death. His *Beit Yizḥak* (6 vols., 1875–1908), on the four parts of the Shulḥan Arukh, was widely acclaimed. His opinion on halakhic questions was sought by many prominent contemporary scholars.

H.D. Modlinger]

SCHMERLING, LOUIS (1912–1991), U.S. organic chemist, born in Milwaukee. Schmerling spent his working career with Universal Oil Products Company and did research in the field of hydrocarbon chemistry. He took out over 200 patents relating to catalysts, petroleum conversion, petrochemicals, insecticides, and flameproofing intermediates.

*SCHMID, ANTON VON* (1765–1855), Christian publisher of Hebrew books in Vienna and patron of Hebrew literature. Apprenticed to the court printer Kurzbeck, Schmid was sent to the Oriental academy to study Hebrew. In accord with the policy of Joseph II to eliminate foreign competition in Hebrew publishing, he was sent to Lvov (Lemberg) to learn typesetting. Schmid showed efficiency and rapidly rose to be manager of the Hebrew department. Thereafter, he established himself as an independent publisher of Hebrew books, greatly benefiting from an 1800 ordinance prohibiting the import of Hebrew books by Jews who were themselves excluded from the publishing business. His books, which gained a deservedly high reputation, were bought in the Jewish centers of Galicia and Hungary, as well as abroad. Schmid later began publishing books in other Oriental languages and in 1823 was ennobled. He published the standard works, the Babylonian Talmud and Shulhan Arukh, as well as halakhic works and Jewish philosophy.

He employed Jewish typesetters and proofreaders, mainly from Galicia, who were granted special residence permits in Vienna. Among them were many luminaries of Haskalah literature: Salomon *Loewensohn*, Samson *Bloch*, Samuel *Romanelli*, Judah Leib ben Zeev, Meir Obernik, and others. In 1820 Schmid encouraged Shalom ha-Cohen to publish the first volume of a yearbook, *Bikkurei ha-Ittim* ("First Fruit of the Times"), an important element in the development of the Haskalah movement in Austria. Schmid was also the first to print *Kerem Hemed*, the most important scholarly journal of the time. He donated a collection of all the Hebrew books he had published to the Vienna Jewish community (1814), which became the nucleus of the communal library. The firm was continued by his son Franz, who eventually sold it to the father of Isidor *Bush.

[Henry Wasserman]

SCHMIDT, JOSEPH (1904–1942), singer. Schmidt was born in Davideni, Bukovina. During World War I his family settled in Czernowitz, where he began singing in the synagogue choir and soon embarked on concert appearances. Parallel with these he became cantor in Czernowitz, and later at the Leopoldstadt Synagogue in Vienna and at the Adas Yisroel Synagogue in Berlin. Despite the extraordinary brilliance of his lyrical tenor voice, a stage career proved almost impossible, since Schmidt was only 4 feet 10 inches tall. His impresarios found the means of overcoming this difficulty by building his career on radio concerts, recordings, and operetta films in which his stature was raised by adroit camera work. Schmidt became one of the major European stars in the field of operetta and light music, and his recordings were bestsellers of the period. He also appeared successfully in England, the United States, France, and Belgium, and visited Palestine in 1934. In 1940 he was saved from arrest by gentle friends during the German invasion of Belgium and brought through France to Switzerland. Interned in a refugee camp ("Aufangs-Lager") in Gyrenbad, he contracted a serious throat ailment but was refused special treatment and admission into the regional hospital. He subsequently died in the camp. The quasi-autobiographical film *Ein Lied geht um die Welt*, in which he had starred, was reissued with scant success in 1952.

[Bathja Bayer]

SCHMIDT, SAMUEL MYER (1883–1965), newspaper editor, medical director, and representative of the Va’ad Hatzalah. Schmidt was born in Kovno, Russia (later Kaunas, Lithuania). His family came to Boston in 1896; Schmidt, one of six children, attended public school for a year, then worked at a variety of odd jobs to help him support the family. In 1899, he was offered a job in a rubber factory. There, he lost his right arm in a grinding accident but was determined not to be defeated by his disability. After trying a number of businesses, he prepared himself to enter MIT in 1907. He majored in biology and public health and graduated in 1911. While in school he volunteered in settlement houses in Boston, teaching Americanization classes to new immigrants. In 1913 Schmidt was appointed as an industrial health inspector and also director of the Boston Evening Center, carrying on his settlement work. Through an acquaintance with Boris *Bogen*, (a national social work leader), he came to Cincinnati for one year to serve as superintendent of the Jewish Settlement. He returned to Boston, but
the following year, joined the Joint Distribution Committee's (JDC) Zionist Medical Unit in Palestine, assigned especially to the problems of sanitation, cholera, and malaria. In 1919, he returned to the U.S., then accepted the call of the JDC and went to Poland as a member of the first relief unit. From 1921 to 1923, he served as medical director for Poland.

In 1926, he returned to Cincinnati to help organize the Wider Scope Program (later, Hillel). Schmidt published a manual on Jews and Jewish history for students. That same year he decided to establish a newspaper; the Every Friday was to serve as "a mirror of Jewish life in Cincinnati," reflecting the whole spectrum of Jewish life and opinion in the city. The paper underwent its vicissitudes with financial problems during the Depression, and competition with another Jewish paper which sought to undermine its circulation, but Schmidt persevered, and the paper continued weekly publication for almost 40 years.

In 1939 an editorial by Schmidt about the uprooting of Talmudic academies in Eastern Europe caught the attention of Rabbi Eliezer *Silver, head of the Union of Orthodox Rabbis and the Orthodox leader of the Cincinnati community. Silver prevailed on Schmidt to go to Lithuania as a representative of the Vád Hatzalah, to bring rescue and relief to the rabbis and students of the Eastern European yeshivot who had gathered in Vilna. So honored by this commission and impressed with the piety and purity of the rabbis he met, Schmidt determined to become a "whole Jew" and undertake a serious program of study and practice when he returned to Cincinnati.

When the war ended, Schmidt returned once more to Europe to give comfort and sustenance to the survivors of the Holocaust in the displaced persons camps. He described his reaction to these encounters in articles he sent home to the Every Friday. His readers back home were thus made intensely aware of the tragedy of the European Jews.

Samuel Schmidt collapsed and died in the presence of 500 friends and family members, at his own testimonial dinner in Cincinnati.

[Nancy Klein (2nd ed.)]

**SCHMIEDL, ADOLF ABRAHAM** (1821–1914), Austrian rabbi and scholar. Born at Prossnitz (Prostevoy), Moravia, Schmiedl served as rabbi in Gewitsch, Moravia (1846–49); then as Landesrabbiner at Teschen, Silesia (to 1852) and later at Bielitz (Bielsko), Prossnitz, and Vienna.

Among his published works are Studien ueber juedische, insbesondere juedisch-arabische Religionsphilosophie (1886), Saadia Alfaajumi und die negativen Vorzuge seiner Religionsphilosophie (1870), and Die Lehre vom Kampf ums Recht im Verhaeltniss zum Judentum und dem altesten Christentum (1875). He also published two volumes of homilies on the Pentateuch (Sansinim, 1859, 1885) and Lekah Tov (Dutch translation, 1866).

**SCHMOLKA, MARIE** (1890–1940), Czech leader of the Jewish women's movement and social worker. Marie Schmolka (née Eisner), who was born in Prague, became associated with the Czech democratic movement and alienated herself from Judaism. After the death of her husband, a lawyer in Prague, she toured the Near East, and her visit to Palestine reawakened her attachment to Judaism. Upon her return to Prague, she joined the Zionist Organization, the wizo, and the Jewish Party, of which she soon was one of the central figures. In the early 1930s she was the moving spirit in the establishment of the relief committee for the Jews of *Subcarpathian Ruthenia*. In 1933 she was the initiator and director of the committee assisting Jewish refugees from Germany and later became the director of *HICEM*. She subsequently took the central role in the relief campaign for Nazi victims, both Jews and non-Jews, and acted as the chairman of the coordinating committee of all the refugee organizations. She often attended the conferences of international committees in Geneva, Paris, London, and *Evian*, as well as Jewish conferences dedicated to social and national causes. Her struggle on behalf of Jewish refugees who were stranded in no-man's-land (the narrow strip between the 1939 German and Czechoslovak borders) attracted worldwide attention. When Hannah *Steiner, the president of the Czech wizo,* was arrested on the day after the German occupation of Prague in March 1939, Marie Schmolka presented herself to the Gestapo and declared that she was responsible for all the activities of the relief committee. She was arrested and imprisoned for about two months in the notorious Pankrác prison. After her release, she resumed her work. In August 1939 she was authorized by the Nazi authorities to travel to Paris and London for negotiations to accelerate Jewish emigration from the Protectorate of Bohemia-Moravia. When World War II broke out, she established herself in London, where she was active on behalf of the Czechoslovak Jewish refugees and exiles. There she died suddenly, in March 1940, and was eulogized by Jan *Masaryk*.

[Chaim Yachil]

**SCHNABEL, ARTUR** (1882–1951), pianist and teacher. A prodigy, born in Lipnik, Moravia, Schnabel studied in Vienna with Leschetizky and from 1925 taught at the Hochschule fuer Musik in Berlin. He appeared as a soloist in the cities of Europe and on U.S. tours and also became widely known as a chamber-music player, especially with the violinist, Carl Flesch. When the Nazis came to power he settled in Switzerland and held, at Lake Como, master classes that acquired international fame. During World War II he lived in the U.S. Schnabel was a noted interpreter of Mozart, Schubert, and Brahms, and his readings of Beethoven were considered the most authoritative of his time. His playing was intellectual and contemplative rather than emotional. He was also a composer in a modernistic, atonal style, his compositions including a symphony, a piano concerto, orchestral and chamber music,
SCHNEERSOHN, ISAAC

and songs. He edited Beethoven’s piano sonatas with an unprecedentedly detailed commentary, and also the Beethoven piano-violin sonatas jointly with Flesch. He wrote Reflections on Music (1933), Music and the Line of Most Resistance (1942), and My Life and Music (1961).

SCHNAILTACH, village in Bavaria, Germany. Although a Jew is first mentioned in 1498 at a trial in Schnaittach, some Jews presumably settled there long before that date. In 1505 an organized community is documented which by 1529 maintained a rabbi, a synagogue, and a cemetery (the oldest Jewish tombstone is from 1423). Six to 12 families resided there in the 16th century. During the Thirty Years’ War (1618–48) Schnaittach suffered frequent pillage. A number of 18th-century *Court Jews came from Schnaittach, among them Seligman Loew and Anschel Levi. In 1747 there were 49 tax-paying families. A new cemetery was opened in 1833, and the ancient synagogue was restored in 1858 and again in 1932. The Orthodox community reached its peak in 1837, numbering 262 (17.6% of the population) and then declined to 175 in 1867; 53 in 1900; and only 42 in 1933. On Nov. 10, 1938, during Kristallnacht, the synagogue was desecrated (scrolls and other sacred objects were rescued by some SA men), but its historical value saved it from arson. By January 1939 the community no longer existed. The community has continued to maintain three cemeteries, although there were no Jews residing in the village in 1971. From 1985 to 1996 the building complex of the former synagogue, the ritual bath, and the rabbi’s and cantor’s house were restored. Since then, it has housed a remarkable exhibition on rural Jewish life in south Germany, presented by the Jewish Museum of Franconia (which has sites in Fuerth and Schnaittach).

[Sarissa Daemmig (2nd ed.)]

SCHNAPPER, BER (1906–?), Yiddish poet. Born near Lemberg, the son of a poor cobbler, he was associated with the Galician Neo-Romantics whose center was Lemberg. His first book of lyrics Opshoym ("Scum," 1927) was influenced by his townsmen, the poet M.L. *Halperin. In gray images and pessimistic tones, it depicted the small, decaying villages with their crooked streets and crumbling houses. In his last lyric collections, Mayn Shtot ("My City," 1932), Maysh un Lid ("Story and Poem," 1934), and Bloe Verte ("Blue Words," 1937), the mood was more nostalgic. "Lid tsu shtekn" ("Song to a Cane"), written on the eve of World War II, when Polish hooligans were attacking Jews with their canes, is an expression of the Jewish people’s protest to heaven that a tree branch designed by God to blossom was being transformed by man into a club with which to split skulls. New poems continued to appear in journals into 1940. It is not clear when and where he died.

SCHNEEBERGER, HENRY WILLIAM (1848–1916), U.S. rabbi. Born in New York City, Schneebeger obtained his B.A. and M.A. degrees from Columbia College. After receiving his rabbinical degree in 1871 from Rabbi Israel Hildesheimer in Berlin, he returned to New York in 1872 to become rabbi of Congregation Poel Zedek and one of the first native-born rabbis in the U.S. From 1876 until his death he served at Congregation Chizuk Amuno in Baltimore. He was active in local Hebrew education, the American Jewish Committee, and the Union of Orthodox Jewish Congregations of the United States and Canada. In addition he helped found the Jewish Theological Seminary in 1886 and translated the Book of Ezekiel for the Jewish Publication Society Bible translation (1917). He was the author of The Life and Works of Rabbi Yehuda Hanusi (1870) and contributed articles to the Jewish Messenger and the American Hebrew.

[Israel M. Goldman]

SCHNEERSOHN, family of hasidic leaders; descendants of the *zaddik Shneuer Zalman of Lyady, the founder of Chabad Hasidism (popularly known as *Lubavitch). (See Chart: Schneersohn Family). For details see *Shneuer Zalman of Lyady.

SCHNEERSOHN, ISAAC (1879–1969), communal leader in Russia; founder of the *Centre de Documentation Juive Contemporaine (CDJC) in France. Born in Kamenets-Podolski, Russia, of the *Schneersohn hasidic family of Lubavitch rabbis, he completed his studies in 1905, and became *kazynny ravin, first in Gorodnya and then in Chernigov. He was instrumental in the founding of several mutual aid organizations, cooperatives for Jewish artisans, and old-age homes. He also contributed to the improvement of the Jewish school system. In Russia, Schneersohn was a member of the moderate liberal Russian party, the Constitutional Democrats (“Cadets”). From 1916 to 1918 he was a member of the town council, later deputy mayor, of Ryazan. Schneersohn arrived in France in 1920 where he became an industrialist but pursued his Jewish social work as well. During World War II, as a refugee in southern France, he founded the Centre de Documentation Juive Contemporaine (CDJC) with the underground movement in Grenoble (1943). He became its founding chairman and presided over it until his death. After the liberation of France, the CDJC became a vital institute for the research of
By 1969, it had published 42 historical volumes, all of which are prefaced by Schneersohn. In 1952, Schneersohn launched the idea of a memorial to the unknown Jewish martyr. Despite many obstacles, this memorial was inaugurated in Paris on Oct. 30, 1956. Schneersohn’s memoirs on the Russian period of his life were published in 1967 in Yiddish, under the title Lebn un Kamf fun Yidn in Tsarishn Rusland 1905–1917, Zikhroynes.

[Leon Czertok]

SCHNEERSOHN, MENACHEM MENDEL (1902–1994), hasidic rabbi, head of the Chabad-Lubavitch movement and a central figure in the world of Torah, Hasidism, and Kabbalah. Schneersohn was the seventh generation, in direct male descent of *Shneur Zalman of Lyady, the founder of the movement and the dynasty.

Schneersohn’s main teacher in Jewish studies was his father, R. Levi Isaac Schneersohn, who was rabb认知y of Yekaterinod 1936–1966 in southern Russia, while his mother Hannah, the daughter of R. Meir Solomon Yanovsky, rabbi of Nikolaev, took care of his general education which included Russian, French, and mathematics. In 1924 he became engaged to his relative Hayyah Mushka, daughter of R. Joseph Isaac Schneersohn, then leader of Chabad.

Following the intervention of various governments, his future father-in-law was permitted to leave Soviet Russia in 1926, together with all the immediate members of his family, but Menachem Mendel was refused permission. As a result of strenuous efforts by his future father-in-law, however, he was enabled to come to Warsaw in 1929, where the marriage took place. It was already hinted at the wedding that R. Joseph Isaac, who had no sons, had designated Menachem Mendel as his successor, and after the marriage he began to instruct him for his future role, especially in the manuscripts of the previous Chabad leaders, only a few of which had been revealed to the followers of the movement.

Menachem Mendel also continued with his secular studies and in 1936 came to Paris, where he studied philosophy at the Sorbonne and graduated in electrical engineering, after which he returned to Warsaw. In 1940 R. Joseph Isaac succeeded in escaping from war-torn Warsaw, and after an adventurous journey arrived in New York. There he immediately took steps to rescue his son-in-law, who finally arrived in New York in 1941, where he obtained a position as an electrical engineer in the United States Navy.

In 1944 his father-in-law appointed him to head the Kehat Publishing House which began to publish the basic books of the Chabad doctrine. Menachem Mendel embellished the books with a wealth of quotations, explanations, and comments which revealed his comprehensive knowledge, partic-
ularly in the field of Kabbalah and Ḥasidism. In 1946 he was appointed head of the Merkos l’Inyonei Chinuch of the Ḥabad movement and, under his direction, there were established throughout the world yeshivot and schools, both for boys and girls, in the spirit of Chabad Ḥasidism.

Immediately after the death of his father-in-law (Jan. 28, 1950 – Shevat 10, 5710) R. Menachem Mendel was appointed his successor. From then on he devoted himself to the development of the Kabbalist philosophy of Chabad Ḥasidism and energetically applied himself to spreading Jewish knowledge throughout the world. From his small office at 770 Eastern Parkway, Brooklyn, he exercised control over hundreds of educational institutions, and to his headquarters there streamed pilgrimages of his admirers and those who sought answers to problems affecting the Jewish world, the State of Israel, or the world of religion as a whole, particularly in the sphere of religious mysticism. The "Rebbe," as he was universally known, laid down clear directives on all subjects.

R. Menachem Mendel displayed an ambivalent attitude towards the State of Israel; on the one hand he supported the doctrine of the right to the whole of the historic territory of the Land of Israel and forcefully objected to the surrender of any part of it, and on the other hand he vigorously criticized the way of life in Israel and negated the system of education prevailing there and even designated the State as part of the Diaspora (galut). Nor did he encourage his followers to go to "aliyah. He waged a constant battle on the question "Who is a Jew?" forcefully insisting that only a person converted according to halakhah can be recognized as such. In the sphere of religious observance he demanded the wholehearted and meticulous observance of halakhah as well as of all customs sanctified by Jewish tradition. His followers are obliged to devote themselves to "spreading the fountains outside" by demonstrating both on the highways and public places in the large cities, as well as in small and neglected centers, in such details as the donning of phylacteries, the kindling of Sabbath lights, pronouncing the benediction over the lulav, the sounding of the shofar, the eating of matzah shemurah, etc. These activities are organized as "military operations," with a fleet of vehicles which are known as "mitzvah tanks." From the Merkos l’Inyonei Chinuch there emerge streams of books, pamphlets and journals, designed for all age groups, in Hebrew, Yiddish, English, French, Russian, Arabic, German, and Turkish.

The "Rebbe" did not venture abroad and did not visit Israel. A modern, up-to-date communications center was installed at his headquarters, and from it all his talks were broadcast to over 30 communities throughout the world. R. Menachem Mendel rigorously denied the validity of scientific theories on the eternity of the world and published articles in which he denied that in fossils or even in archaeological artifacts there is any evidence to support it. He also adamantly opposed interfaith discussions or compromises in Jewish practice, but maintained that every Jew has to be attracted through love and affection towards observance of Judaism.

Although never declaring himself to be the Messiah, the fact that the Rebbe was unequivocally of the opinion that these were messianic times led many in Lubavitch to imagine that the Rebbe himself was the Messiah. By 1990, a cult of personality swelled around the Rebbe. Sidewalk vendors sold postcards, hasidic tracts, and every conceivable souvenir imprinted with the Rebbe’s face. Some Hasidim took the dollars the Rebbe was in the habit of handing out and laminated the Rebbe’s face over George Washington’s. The messianic excitement was strongest in Crown Heights and Kefar Ḥabad. By distinct contrast, the Rebbe’s thousands of emissaries outside Crown Heights almost unanimously tried to distance themselves from the messianism and downplayed its significance.

In 1993, Schneersohn suffered a stroke that left him speechless and increasingly isolated from his Hasidim, with rare appearances limited to his wheelchair being perched on a balcony above the synagogue in 770 Eastern Parkway. When he was sighted, his Hasidim below the balcony would often erupt into messianic song, and imagined that the speechless Rebbe nodded his head in approval. There were occasional attempts by some Ḥasidim to get the Rebbe to “reveal himself.” But one of the Rebbe’s closest aides in his secretariat, Rabbi Yehuda Krinsky, always insisted that the Rebbe, while deeply committed to the messianic idea, never encouraged or wanted the speculation that he was the presumptive Messiah.

Schneersohn’s death punctured the messianic balloon, though it is estimated that about a quarter of the hard-core believers in Crown Heights and Kefar Ḥabad continued to maintain that Schneersohn might yet be the Messiah, despite his death, a belief that became a lightning rod for criticism from the rest of the Jewish community, including fierce criticism from the Rebbe’s emissaries as well.

After the Rebbe’s death, the focal point for many of Schneersohn’s followers became his grave in Queens, known as the “Ohel,” where the Rebbe shared an open-roofed mausoleum in the Lubavitch plot in Old Montifiore Cemetery with his predecessor and father-in-law.

In an atmosphere that evokes the Western Wall, pilgrims to the grave come around the clock to recite Psalms, light candles, and bring letters requesting the Rebbe’s intercession in Heaven. Chabad supporters purchased several private homes in the Cambria Heights section of Queens, just yards from Schneersohn’s resting place, for a visitors center, a meditation area, study halls, and offices for support staff. Requests for the Rebbe’s blessings continue to be sent every day by e-mails or faxes from around the world. On anniversaries special to Chabad, or on the eve of Jewish holidays, the visitors number well into the thousands.

[Jonathan Mark (2nd ed.)]

SCHNEIDER, ALAN (Abram Leopoldovich Schneider; 1917–1984), U.S. theatrical director. Born in Kharkov, Russia, Schneider taught drama at Catholic University, Washington, D.C. He staged Saroyan’s Jim Dandy in 1941, and works by Shakespeare, Molière, Chekhov, and Wilder before becoming
artistic director of the Arena Stage in Washington. He produced Waiting for Godot in 1956 and, after meeting Edward Albee in 1960, he directed all of Albee's plays, including Who's Afraid of Virginia Woolf? (1962), for which he won a Tony Award. He also directed plays by Harold Pinter. Schneider was nominated for four other Tonys for Best Director: The Ballad of a Sad Café (1964); Tiny Alice (1965); A Delicate Balance (1967); and You Know I Can't Hear You When the Water's Running (1968).

Schneider wrote Theatre Profiles (1982) and Entrances: An American Director's Journey, which was published in 1986.

**ADD. BIBLIOGRAPHY:** H. Maurice, (ed.), No Author Better Served: The Correspondence of Samuel Beckett and Alan Schneider (1998).

**SCHNEIDER, ALEXANDER** (1908–1993), violinist. Born in Vilna, Schneider became leader of the Frankfurt Symphony Orchestra. Immigrating to the United States in 1933, he joined the Budapest Quartet as second violinist until 1944, and again from 1957, and formed several other chamber music ensembles. Together with the cellist Pablo Casals, he established the annual festivals held at Prades in the Pyrenees from 1950 onward and in Puerto Rico from 1957. He conducted at these festivals and also visited Israel for the summer music festivals.

**SCHNEIDER, IRVING** (1917– ), U.S. real estate owner, philanthropist. Schneider graduated from the City College of New York in 1939 and spent all his professional career in real estate. For 50 years, Schneider was with Helmsley-Spear, rising to executive vice president and longtime partner of Harry Helmsley, the real estate magnate, in New York City. When Helmsley died in 1997, Schneider and Alvin Schwartz, who was married to Dorothy Spear, became co-chairman of the firm, which had its heyday in the 1960s and 1970s. But in the early years of the 21st century, the firm still managed 86 buildings, including the Empire State Building. Schneider, with Schwartz and Helmsley, owned a great deal of property in Manhattan’s garment district and numerous office buildings. In May 1996 Helmsley-Spear was managing about 28 million square feet in 107 buildings in New York. After her husband’s death, Leona Helmsley, who succeeded him, agreed to sell Helmsley-Spear to Schneider and Schwartz, ending a lawsuit they had brought against her, charging that she had tried to strip the company of assets, lowering its potential value to them. Helmsley-Spear’s interests included stakes in the Helmsley Park Lane Hotel, the St. Moritz, the Starrett-Lehigh Building, and the Lincoln Building. Schneider and his wife were noted for their philanthropic support of two medical facilities for children, the Schneider Children’s Medical Center of Israel in Petah Tikvah, the most advanced pediatric hospital in the Middle East, and the Schneider Children’s Medical Center of Israel in Petah Tikvah, the most advanced pediatric hospital in the Middle East, and the Schneider Children’s Hospital in New Hyde Park, N.Y. Schneider was vice chairman of the Association for a Better New York, vice president of the Realty Foundation of New York, an honorary trustee of the City College Fund, a life trustee of the UJA-Federation of New York, a member of the United Hospital Fund’s President’s Council and a board member of Tel Aviv University. He was a member of the board of governors of the Jewish Agency, a trustee of the Health Insurance Plan and vice chairman of National UJA. In 2004 Schneider gave $15 million to Brandeis University for its Heller School for Social Policy and Management to provide space for the Schneider Institute for Health Policy to expand its education and research agenda.

[Stewart Kampel (2nd ed.)]

**SCHNEIDER, MATHIEU** (1969– ), U.S. hockey player, two-time NHL All-Star, U.S. Olympic team and Team U.S.A. member. Born in Manhattan and raised in New Jersey, Schneider was introduced to hockey at a young age by his father, who was an amateur hockey player and coach. A talented defender with solid offensive skills, Schneider was drafted by the Montreal Canadiens out of high school in the third round of the 1987 draft. After two seasons training in the Ontario Hockey League and being named an OHL First Team All-Star in both 1988 and 1989, Schneider was ready for service in the NHL, quickly becoming one of the Canadiens’ top-scoring defensemen and a key component of their 1993 Stanley Cup team.

Over the course of his 18-year career with six different teams through 2006, Schneider proved to be one of the most durable hockey players, and is only the eleventh American-born defenseman in NHL history to play in over 1,000 games. On November 26, 2005, Schneider registered a hat trick, becoming the first Detroit defenseman to accomplish the feat in 20 years. His skills on the ice have earned him a number of honors, including being named an All-Star in 1996 and 2003, a member of the U.S. Olympic team in 1998 and 2006, a member of Team U.S.A. in 1996 and 2004, and an alternate captain of the N.Y. Islanders in 1996 and the L.A. Kings in 2001–3.

[Robert B. Klein (2nd ed.)]

**SCHNEIDER, MORDECAI BEZALEL** (1865–1941), Hebrew grammarian. Schneider was born in Livno close to Shavil, Lithuania. In addition to his comprehensive knowledge of Bible, Talmud, and Hebrew grammar, he also acquired a broad knowledge of classical literature and engaged in research in the Latin and Greek languages. His main occupation was in the sphere of Hebrew language. From an early age he maintained himself by teaching and from 1896 lived in Vilna, where for many decades he was a leading figure in Zionist activity and education. He began to publish from 1888 (in Ha-Zefiroth) articles on educational topics, and in 1889 he published in Vilna an educational book, Beit ha-Sefer, which later appeared in several parts and numerous editions. As a result of this occupation he began linguistic research.

At first he published critical studies of many known grammar books in the periodicals Ha-Shiloaḥ, Ha-Tekufah, Ha-Zefiroth, Ha-Zeman, Tarbut, Haolam and Ha-Yom, and then commenced to publish his magnum opus in which he summarized his life’s work in research into the language – Torat ha-Lashon ha-Ivrit be-Hitpatteḥutah ha-Historit me-
Reshitah ad ha-Zeman ha-Aharon (vol. 1, pt. 1, historical section, 1923, 1928; pt. 2, Torat ha-Kol (phonetics), 1924; pt. 3, Torat ha-Tavnit (morphology), first half 1924, second half 1925; vol. 2, Torat Shimmush ha-Lashon (syntax), pts. 1 and 2, 1939–40; pt. 3 was not published). He edited the periodicals Li-Shelchet ha-Yom (1919), Mehkerei Lashon (1920), and Zeremim (1932).

He continued working on his book in the ghetto of Vilna during World War I. He was killed in Puran.

SCHNEIDERMAN, HARRY (1885–1975), U.S. editor and organization executive. Born in Saven, Poland, he was taken to the U.S. in 1890. From 1909 until his retirement in 1949 he was a member of the staff of the American Jewish Committee and functioned as its chief administrative officer from 1914 to 1928. He also undertook important editorial work, notably as editor of the American Jewish Year Book from 1920 to 1948.

In addition to editing numerous periodicals and reference works, he also compiled The Jews in Nazi Germany (1933, 1935?) and was coeditor of the Contemporary Jewish Record (1938–45), and chairman of the editorial board of Who’s Who in World Jewry (1955, 1965?). Schneiderman was a founder and officer of the Jewish Book Council of America.

[Harry J. Alderman]

SCHNEIDERMAN, ROSE (1882–1972), U.S. labor union organizer and executive, sister of Harry Schneiderman. She was born in Saven, Poland, and taken to New York City in 1890. She soon went to work in a store, and later in a factory, and in 1903 she helped to organize the United Cloth, Hat, Cap and Millinery Workers Union. In 1904 she became its secretary and a member of its national executive board. She also helped organize the White Goods Workers Union and was in charge of its general strike in 1913. From 1914 to 1917 she was a general organizer of the International Ladies Garment Workers Union. Schneiderman was a delegate to the First National Working Women’s Congress in Washington in 1918, to the Peace Conference in Paris in 1919, and to the International Congress in Vienna in 1923. Deeply involved in Farm Labor politics, she was that party’s candidate for the U.S. Senate from New York in 1920. Schneiderman was president of the Women’s Trade Union League from 1918 until her retirement in 1949, serving as labor adviser to several national labor and government agencies. She wrote (with Lucy Goldthwaite) All for One (1967), an account of her work in the labor movement.

SCHNITZLER, MORITZ TOBIAS (1861–1941), physician and early Zionist. Born in Bucharest, from 1886 Schnirer lived in Vienna, where he qualified as a doctor in 1887. In 1882 he was among the founders of the *Kadimah society, the first nucleus of the Zionist movement in Austria. He joined *Herzl upon the latter’s first appearance and assisted in preparations for the First Zionist Congress, the introduction of the *shekel, and the founding of the *Jewish National Fund. He was also the moving spirit behind the drawing up of the first constitution of the Zionist movement. Schnirer accompanied Herzl on his trip to Ereẓ Israel to meet Kaiser William II (1898) and was a member of the Zionist Executive until the Fourth Zionist Congress. The lecture he delivered at the First Congress formulated what was to remain the basic policy of political Zionism on settlement in Ereẓ Israel for many years, i.e., that settlement activities should not be continued until the Zionist movement received a charter for that purpose. Disagreement with Herzl and the demands of his medical practice prevented Schnirer from continuing to play an active role in the movement, although he remained in close contact with the Zionist Organization. He had a very large practice, and his medical textbooks (among others Encyklopaedie der praktischen Medizin (1906–09) and Taschenbuch der Therapie... (1925) ran into many editions. He also served as the editor of professional journals in German and French for several decades. He committed suicide together with his wife during World War II. Schnirer’s reminiscences of his Kadimah days were published by N. Sokolow in Hibbat Zion (1935).

SCHNITZKE, ALFRED (1934–1998), composer. The son of a German Jewish father and a German mother, Schnitzke was born in Soviet Russia. His first music studies between 1946 and 1948 were connected primarily with Vienna, where his father was working after World War II. He then absorbed the Austrian–German culture that marked him for the rest of his life. However, he was also educated in Russia. He studied in 1949–53 at the Choirmaster Department of the October Revolution Musical College, Moscow, now the Schnittke Institute; and in 1953–58 he studied composition at the Moscow Conservatory. After having taught instrumentation at the Moscow Conservatory (1962–72), he became a freelance composer and between 1962 and 1984 wrote 66 film scores as well as concert and theater works. His early compositions, like the oratorio Nagasaki (1938), were influenced by the Russian tradition of 19th century music. In the 1960s Schnittke himself studied the Western music of the 20th century that was formerly forbidden in the U.S.S.R. but at that time already tolerated. A great sensation of the 1970s was the 1974 premiere of his First Symphony, a polystylistic work following the traditions of Mahler and Berio in a highly individual way. The symphony was banned immediately after the first performance and remained so until Gorbachev came to power (1985). Being always uncommitted to the official Soviet ideology, Schnittke
expressed his Christian religious beliefs in many of his works, including the Second Symphony (1979), which followed the Ordinary of the Roman Catholic Mass. In his Fourth Symphony (1983), Schnittke strove, in his own words, "to find the general in the dissimilar," while using melodic elements from Russian Orthodox, Gregorian, Protestant Lutheran, and synagogue chant and combining them in the final section of the work. From 1990 he lived in Hamburg (Germany), where he taught composition at the Hochschule fuer Musik und Theater. He was the recipient of several honors, including the Russian State Prize (twice, 1986 and 1995) and awards from Austria, Germany, and Japan.

[Julia Kreinin (2nd ed.)]

SCHNITZER, ADOLF (1889–1989), Swiss jurist. Born and educated in Berlin, Schnitzer left Germany in 1933. After World War II he was a professor of German law at Geneva University and a consultant on international law. He was an authority on private international law and published numerous books and articles including *Handbuch des Internationalen Privatrechts* (1958).

SCHNITZER, SHMUEL (1918–1999), Israeli journalist. Born in The Hague, Schnitzer immigrated to Palestine in 1939. He entered journalism first at *Yedioth Aharonoth*, but left it for *Maariv* in 1948 in the so-called “putsch” led by Dr. Azriel *Carlebach*. With their sharp analysis, their polemics attracted a loyal readership. He was appointed editor of *Maariv* in 1980, but his term was marked by a sharp, continuing drop in *Maariv’s* circulation, and in 1985 he was replaced as editor by Iddo Dissentchik but continued to write his column until the day he died. In 1997 the Israel Prize committee canceled its decision to award Schnitzer the prize for journalism after the Press Council ruled that a column Schnitzer had written in 1994 about Ethiopian Jews, which accused the Israeli government of permitting the *aliyah* of “thousands of apostates carrying dangerous diseases,” was racist.

[Yoel Cohen (2nd ed.)]

SCHNITZLER, ARTHUR (1862–1911), Austrian playwright and author. Schnitzler’s father, Professor Johann Schnitzler (1835–1933), was an eminent Viennese throat specialist. Since his patients included dramatic and operatic stars, young Schnitzler was in constant contact with theatrical life and began writing plays while still a youth. After qualifying as a physician at the University of Vienna, he edited the medical journal *Internationale klinische Rundschau* (1887–94). His own professional articles dealt mainly with psychotherapy, and his friend Sigmund *Freud* later paid tribute to his poetic intuition.

In 1893 Schnitzler published a collection of seven short plays titled *Anatol* after the central character, an elegant philanderer. The book had a prologue in verse by Hugo von *Hofmannsthal*. His first full-length play, *Das Maerchen* (1984), was a failure, but *Liebelei*, produced in 1895 at the Viennese Burgtheater, proved so successful that Schnitzler decided to devote himself almost entirely to writing. *Reigen* (1900), a series of interconnected dialogues satirizing conventional love affairs, gave rise to a lawsuit in Berlin. (Years later Max Ophuels produced *Liebelei* as a comedy and, after World War II, turned *Reigen* into the internationally successful film, *La Ronde*.)

As Schnitzler grew older, the inconstant bachelor and the single girl ceased to occupy the center of his attention, and he became increasingly interested in relations between husband and wife. In many of his works, especially in the full-length plays *Der einsame Weg* (1904), *Zwischenspiel* (1906), *Der Ruf des Lebens* (1906), and *Das weite Land* (1911), he explored with growing sensitivity the problems of married life. In groping for a satisfactory substitute for the traditional marital relationship and for a morality better adapted to 20th-century psychology, he pursued various, amoral bypaths, but ultimately came to reject all moral systems, old and new alike. In the years before World War I his plays were among those most often performed on the German and Austrian stage. He was also writing some of the novellas which were always a favorite genre and included *Lieutenant Gusli* (1901), *Casanovas Heimfahrt* (1918), and *Fraulein Else* (1924).

In 1912 Schnitzler dramatized a problem of medical ethics in *Professor Bernhardi*. In this play a physician, who regards it as his duty to relieve the final hours of a dying man, prevents a Catholic priest from administering the last rites, fearing that this might subject his patient to unnecessary suffering. Since the physician is a Jew, he becomes a target for antisemitic attacks. Here, as in the novel *Der Weg ins Freie* (1908), Schnitzler expressed his views on the place of the Jew in modern life. He held that antisemitism was the natural outcome of the Jews’ historical position as a minority group in every land, and that no amount of Jewish or Christian sentimentality would eradicate anti-Jewish prejudice. He had a positive outlook on the issue of Jewish survival and derided those Jews who hid their origin. He prophesied that, as the liberals and Pan-Germans had betrayed them, so would the politicians of the left. Schnitzler accepted neither Zionism nor assimilation as a solution, believing that each individual had to make his own adjustment. For himself, he preferred to continue the struggle against his enemies in Vienna, where he felt himself at home.

[Sol Liptzin]
SCHOCKEN, family active in book publishing, Jewish culture, and newspaper publishing in Israel. The family dynasty was headed by Salman *Schocken (1877–1959), Zionist, art and book collector, and publisher. Born at Margonin, province of Posen (now in Poland), in 1901 Schocken, together with his brother Simon, founded the I. Schocken Soehne at Zwickau, which developed into a prosperous chain of 19 department stores. Passionately interested in Judaism, he used his fortune to collect rare books and manuscripts, and Jewish works of art. In 1929 he founded the Research Institute for Medieval Hebrew Poetry in Berlin, which edited hitherto unknown medieval Hebrew manuscripts that Schocken had acquired.

The Schocken Press
In 1931 Schocken Verlag was established, becoming an important avenue for the publication of Jewish literature in Germany, with the express aim of educating an assimilating community about its Jewish heritage. One of its first authors was S.Y. *Agnon, who was patronized by Salman Schocken from the first stages of his literary career. In 1934 Schocken himself moved from Berlin to Jerusalem, transferring both the Institute for Medieval Jewish Poetry and his library and art collections there. In addition to the works of S.Y. Agnon and Franz *Kafka, to which Schocken possessed the world rights, the press published more than 200 books in Germany, including the works of Martin *Buber, Franz *Rosenzweig, Baruch *Kurtzweill, Leo *Baeck, Hermann *Cohen, and Gershom *Scholem. Schocken was active in Zionist affairs first in Germany and later in Palestine, in the Jewish National Fund, and on The Hebrew University's Executive Council. In 1940 he moved to the United States, and years later moved to Switzerland, where he died. After his death, the Institute for Hebrew Poetry and his library and collections in Jerusalem became the *Schocken Institute for Jewish Research of the *Jewish Theological Seminary of America.

Following its closure by the Nazis in 1938, the Schocken Press was re-established in Tel Aviv. After Salman Schocken's departure for the United States with most of his children, the Schocken Press in Tel Aviv was managed by his son Gershon Schocken "GUSTAV" (1912–1990) until 1970. Gershon, who had studied economics at Heidelberg University and the London School of Economics, continued the press's orientation toward high-quality Jewish and Hebrew literature, including the works of Nathan *Alterman, Saul *Tchernichowsky, and Uri Zevi *Greenberg. In 1962 Dan *Miron, a professor of literature (who was married to Yael, the daughter of Gershon's brother Gideon Schocken, himself an IDF army general), was appointed editor of the Schocken Press, and brought Yehuda Amichai's works to the publishing house. But Gershon's involvement in the Schocken Press took second place to his main work as editor in chief of the *Haaretz newspaper, and his seat in the Knesset in 1955–59 for the Progressive Party. In 1972 Gershon's daughter, Raheli Edelman (1942– ), a graduate in literature and economics, took over the press. The middle-sized publishing house became eclectic and financially sounder. Edelman branched out to include translations of foreign literature, selective non-fiction (including Shabbetai Tsevat's biography of David Ben-Gurion), educational texts, and children's books. Contemporary Israeli literature was shunted aside. She was chairperson of the Book Publishers' Association of Israel in 1983–94.

In 1945, five years after his arrival in New York, Salman Schocken opened the Schocken Press in New York. It became a focus for German Jewish émigrés like Hannah *Arendt and Nahum *Glazer, who became the press's editor in chief. After Salman Schocken's death, his son Theodore and son-in-law Herzl Rome took over the press with varying degrees of financial success. Among its Jewish authors were Nahum *Sarna, Cecil *Roth, Simon *Wiesenthal, Harold *Kushner, Lucy *Davidowitz, and Aharon *Appelfeld. The press, which became structurally independent of the Tel Aviv-based Schocken Press, expanded from its focus on Jewish books into such fields as educational publishing, women's studies, history, literary criticism, and the Montessori books as well as cook books, particularly as mainstream U.S. publishers began to discover the Jewish book market. In 1987 the press was bought by Random House, but it remained as a separate imprint, structurally tied to Pantheon Books.

Haaretz
Gershom Schocken was most remembered as the publisher and editor for 51 years of the *Haaretz newspaper which grew to become an independent quality daily. The financially ailing newspaper had been purchased by his father in 1935. Gershon continued the intellectual tradition which had characterized the paper under Moshe Gluecksohn's editorship. He succeeded in stabilizing the paper financially, ending Gluecksohn's practice of accepting financial support from Zionist institutions.

Notwithstanding the need for socio-economic justice in the young state, *Haaretz under Schocken's editorship favored free enterprise, criticizing the excesses of collective socialism which characterized the first 30 years of statehood. After the 1967 war, concerned at the demographic threat which the annexation of the West Bank and Gaza posed to the Jewish character of the state, *Haaretz advocated giving up most of the territories. In supporting the creation of the Jewish state, Gershon Schocken had sought to imbue it with the humanistic values that had influenced him in his youth in Germany. In the 1950s *Haaretz questioned unlimited Jewish *aliyah from North Africa, favoring a more selective policy. While cherishing Jewish culture, he opposed theocratic excesses, favoring a separation of state and religion, and Jewish pluralism.

Influenced by the European tradition of quality journalism, Gershon Schocken assiduously adhered to the separation of fact and comment, with the newspaper comprising two independent sections, news and opinion. However, this distinction was blurred somewhat later in the 1980s and 1990s, as *Haaretz, like other newspapers, sought to carve out a place for itself in an age when television and radio had become the chief providers of breaking news, leaving the newspaper to con-
centrate on analysis and background. While the newspaper's editorial board reflected a spectrum of liberal and left-wing secular views, Schoken would use his veto as editor-in-chief to determine the line when there were differences of opinion. Socially reclusive, he also distanced himself from political leaders, with the noted exception of Chaim Weizmann. In the 1940 and 1950s his relations with Ben-Gurion were tense. Haaretz, regarded by many as a maverick publication, championed the rule of law and human rights and the exposure of official corruption. Yet the paper was a member of the Editor's Committee – in effect a mechanism enabling Israeli officialdom to win the cooperation of the media on sensitive defense and diplomatic matters – and at times Schocken even served as its chairman. In 1991 Ariel Sharon unsuccessfully sued the paper and its reporter Uzi Benziman after it accused him of deceiving Prime Minister Menachem Begin during the 1982 Lebanon war when he was defense minister.

The arts and literature had a respected place in the newspaper, with a weekly Friday literature supplement from 1963, as well as another, more popular mid-week version introduced in 1995. Schocken himself wrote some poetic works under the pseudonym of Robert Pozen. He had attempted unsuccessfully between 1938 and 1942 and in 1948–49 to found evening newspapers – Ha-Sha'ah and Yom-Yom. Haaretz branched out to the local newspapers market with the creation of local newspapers in Jerusalem (Kol ha-Ir) and Tel Aviv (Ha-Ir) in 1979 and 1980, respectively, successfully tapping local advertising potential. Untypical of local journalism, which was inclined towards sensationalism, editorial content in the Schocken chain of 14 local newspapers was quality upmarket.

From the late 1980s, the newspaper's heavy style was spruced up with the arrival, as deputy editor (and after Gershon Schocken's death, editor), of Hanoeh Marmori, a graphic artist who introduced modern design and oversaw the expansion of the newspaper's size.

Gershon's son, Amos Schocken (1944– ), a graduate in economics from The Hebrew University and business management from Harvard University, had been appointed by his father as the Haaretz chain's managing director. He began a daily newspaper, Hadashot, in 1983, in an attempt to compete with the two major dailies, Yedioth Aharonoth and Maariv. Featuring many photos and headlines, the newspaper was decidedly anti-establishment. In 1984 the paper was closed briefly by the military censor, after it broke censorship regulations and printed a photo of an apprehended terrorist. In the so-called No. 300 bus affair, who was later killed. Hadashot failed to carve out an audience for itself and, facing heavy losses, folded in 1992. With Gershon's death, Amos became Haaretz publisher. At the turn of the century, Haaretz's editorial board was split over the Palestinian intifada, with the paper's heavy style was spruced up with the arrival, as deputy editor (and after Gershon Schocken's death, editor), of Hanoeh Marmori, a graphic artist who introduced modern design and oversaw the expansion of the newspaper's size.

[Yoel Cohen (2nd ed.)]

SCHOCKEN, SALMAN (1877–1959), Zionist, art and book collector, and publisher. Born at Margonin, province of Pozen (now in Poland), in 1901 Schocken, together with his brother Simon, founded the concern of I. Schocken Soehne at Zwickau, which developed into a prosperous chain of 19 department stores. Passionately interested in Judaism, as well as in all aspects of the mind, he used his fortune to collect rare books and manuscripts and became a Maecenas of general and Hebrew literature. He was patron and publisher of S.Y. Agnon from the first stages of his literary activity. In 1929 he founded the Research Institute for Medieval Hebrew Poetry (under the direction of Hayyim Brody) in Berlin, transferred to Jerusalem in 1934; it was concerned with editing hitherto unknown medieval Hebrew manuscripts which Schocken had acquired. In the early years of the Nazi rule Schocken Verlag, Berlin (1931–38), as a Jewish concern, was entitled to publish Jewish authors. Later Schocken established publishing houses in Tel Aviv (Hebrew) and New York (English). In 1934 Schocken moved from Berlin to Jerusalem and transferred his library and collections there, but went on to the United States in 1940.

From 1912 to 1945 he was very active in Zionist affairs. He was a director of the Jewish National Fund and a member of other public bodies. From 1934 to 1945 he was chairman of the Executive Council (administration) of The Hebrew University. After his death, the Institute for Hebrew Poetry and his library and collection in Jerusalem became the Schocken Institute for Jewish Research of the Jewish Theological Seminary of America. In 1954 a Festschrift, Alei Ayin, was published in his honor, containing contributions on biblical and post-biblical Hebrew literature and belles lettres by a circle of his friends, including Martin Buber, Gershom Scholem, and S.Y. Agnon.

His son, Gershon (1912–1990; see previous entry), was the owner and chief editor of the leading morning daily Haaretz (from 1939). He was director of the family publish-
ing house in Israel and was a Knesset member representing the Liberal party (1955–59).

**SCHOCHEN INSTITUTE**, scholarly institute in Jerusalem which houses the Schocken Library and the Research Institute for Medieval Hebrew Poetry. The Schocken Library was started in Germany at the beginning of the 20th century by Salman *Schocken and grew into one of the largest and most important collections of early Hebraica in the world. In 1934 the library was moved to Jerusalem, to a building especially constructed for its purposes by Eric *Mendelsohn. The collection includes 60,000 volumes, among them several thousand first and early editions and incunabula (books printed before 1501; the incunabula are held at the Jewish National and University Library).

Starting in the early 1930s, the Research Institute for Hebrew Poetry collected photographs of poetic *Genizah* fragments from the major libraries of the world. Under the direction of H. *Brody, with A.M. *Habermann, J. *Schirmann and M. *Zulay, the Institute issued publications in the field of medieval Hebrew poetry, and seven volumes of studies (Yediot ha-Makhan le-Heker ha-Shirah ha-Ivrit, 1–7 (1933–58)). Of special note are M. Zulay's edition of the *piyyutim* of *Yannai (1938); H. Brody's edition of Moses *Ibn Ezra's Diwan (2 vols., 1935–42); A.M. Habermann's edition of the *piyyutim of *Simeon b. Isaac (1938); and J. Schirmann's anthology of Italian Hebrew poetry, *Mivhar ha-Shirah ha-Ivrit be-Italyah* (1934).

In 1961 the Schocken Institute became associated with the *Jewish Theological Seminary of America. In 1964 E.S. Rosenthal became research director of the Institute, and its activities were gradually enlarged. An institute for Talmud studies whose composition creates or suggests illusory movement. In due course Schoeffer incorporated transparent materials in his work, so that the interplay with solid metals, which in turn dissected space rather than encasing or occupying it, resulted in a greater lightness and diversity of rhythms. One of his most successful essays is the 52-meter-tall "luminodynamic" tower in Bouverie Park, Liège, which incorporates rectangular and highly polished rotating elements to reflect light as well as sound. This tower relates to further theories of "Luminodynamism" and "Chronodynamism"; the first involves polished reflective surfaces and the second synchronized sound effects. Schoeffer made a number of public tower-sculptures to illustrate these theories. Audiovisual experiments occupied him in later years, in particular the "Musiscope," whereby he "played" a keyboard which both makes sounds and projects color formations on a screen. He also produced a series of brilliant mobile sculptures, usually in transparent plastics, which rotate electrically and reflect light.

[Charles Samuel Spencer]

**SCHOEFFER, NICOLAS** (1912–1992), sculptor and painter. Schoeffer was born in Kalosca, Hungary, and after studying at the Academy of Fine Arts, Budapest, he continued at the Ecole des Beaux-Arts, Paris. From 1935 he lived permanently in Paris. He was one of the leading contemporary exponents of kinetic art. While his origins lie in sculpture, his earliest important influence was the abstract painting of Mondrian. Based on the theory of Cubism, Mondrian's work narrowed artistic expression and experience to the interplay of squares and right angles and the intensity of a few primary colors. Schoeffer concentrated entirely on the right angle, from which he developed a theory of "Spatiodynamism." In a lecture at the Sorbonne in 1954, he defined this theory as "the constructive and dynamic integration of space in a plastic work." In practice, the art objects based on this theory are metal constructions whose composition creates or suggests illusory movement. In due course Schoeffer incorporated transparent materials in his work, so that the interplay with solid metals, which in turn dissected space rather than encasing or occupying it, resulted in a greater lightness and diversity of rhythms. One of his most successful essays is the 52-meter-tall "luminodynamic" tower in Bouverie Park, Liège, which incorporates rectangular and highly polished rotating elements to reflect light as well as sound. This tower relates to further theories of "Luminodynamism" and "Chronodynamism"; the first involves polished reflective surfaces and the second synchronized sound effects. Schoeffer made a number of public tower-sculptures to illustrate these theories. Audiovisual experiments occupied him in later years, in particular the "Musiscope," whereby he "played" a keyboard which both makes sounds and projects color formations on a screen. He also produced a series of brilliant mobile sculptures, usually in transparent plastics, which rotate electrically and reflect light.

**SCHOEFLERN, ALEXANDER JULIUS WILHELM** (1892–1985). German organic chemist. From 1927 to 1934 he was professor of organic chemistry at the Berlin-Charlottenburg Polytechnicum. Forced to leave Germany, he spent three years in the department of Medical Chemistry of the University of Edinburgh, Scotland, and then was professor of chemistry at the University of Cairo until 1957 and director of its chemical institute. Returning to Berlin, he was made professor emeritus at the Polytechnicum in 1958.

**SCHOENBERG, ARNOLD** (1874–1951), composer, teacher, and theorist; discoverer of the “method of composition with twelve tones related to one another” as he himself described it. Born to an Orthodox family in Vienna, Schoenberg became converted to Christianity in 1898 under the influence of Gustav *Mahler. He returned to Judaism, however, on July 24, 1933, at a formal religious ceremony in Paris, at which one of the witnesses was Marc *Chagall. Schoenberg was extremely active on behalf of German refugees during the Nazi period. He was a devoted Zionist and in 1951 accepted an in-
vitation to head the Rubin Academy for Music established in Jerusalem, but his state of health prevented him from taking up the appointment.

In music he was self-taught, except for several months of instruction from his friend, the composer Alexander Zemlinsky (1872–1942), who eventually became his brother-in-law. The deepest creative influences in his early years were Brahms and Wagner, as can be seen in his early string quartet in D major (1897), his string sextet Verklaerte Nacht (1899), and his gigantic cantata Gurrelieder (1900–11).

Schoenberg became increasingly free in his treatment of dissonance until his work transcended tonality. His piano piece Opus 11, no. 1 (1909) is the first composition to dispense completely with "tonal" means of organization. There followed a series of compositions in which extreme emotionalism was counterbalanced by extreme brevity. Sometimes, as in Erwartung (1909) and Pierrot Lunaire (1912), a text helps to provide that unity which "classical" tonal means could no longer furnish. Schoenberg was continually seeking new means of tonal organization. After much experimentation he told Josef Ruler in July 1921: "Today I have discovered something which will assure the supremacy of German music for the next hundred years." It was the method of composition with twelve tones ("dodecaphony"). In this method, a basic row containing the twelve notes of the chromatic scale, in an order predetermined by the composer, serves as the foundation for an entire composition. Schoenberg found this method invaluable for securing unity. He used it for the rest of his life, with occasional returns to tonality, as in the suite for strings in G major (1934).

It was many years before Schoenberg won full acceptance as a composer, but in 1925 he was appointed director of a master school for musical composition at the Prussian Academy of Arts in Berlin. This position was taken from him on "racial" grounds in September 1933, and he responded with a formal return to the Jewish faith, which he had abandoned in his youth. A month later he emigrated to America. During this period he also wrote four of his theoretical books: Models for Beginners in Composition (1943), Structural Functions of Harmony (1954), Preliminary Exercises in Counterpoint (1963), and Fundamentals of Musical Composition (1967). His Style and Idea appeared in 1950 and his Letters, edited by E. Stein, in 1964. His Jewish loyalties, the Holocaust, and the establishment of the State of Israel are strongly reflected in his musical works, in works such as Der Biblische Weg, and the cantatas Dreimal Tausend Jahre and Israel Lives Again. The texts of these works were written by Schoenberg himself, with the exception of that of Dreimal Tausend Jahre, which was written by Rabbi Dagobert Runes. Three of his great works with religious themes, the cantata Die Jakobsleiter, the opera Moses and Aaron, and the cycle of Modern Psalms, were unfinished at his death on July 13, 1951. Moses and Aaron, however, has been highly successful in its two-act form, and this dramatic confrontation of priest and prophet may well stand as Schoenberg's strongest work.

Schoenberg's influence on the music of the 20th century was immense. After World War II his technique of composition was studied intensively both in Europe and United States, after the ban on it during Nazi rule. At the same time, some of the postwar avant-garde composers who considered Schoenberg not consistent enough when using his own technique preferred to lean on the work of his famous pupil Webern, who was more strict in following the rules of dodecaphony. However, despite all the debates about Schoenberg's method, he is now considered a brilliant innovative mind and one of the classics of 20th century music.

[Schoene Lotte](http://www.jewishencyclopedia.com/articles/6877-lotte-schoene)

Schoene was born in Vienna, where she studied, making her debut at the Volksoper there in 1912. In 1917 she was engaged at the Vienna Imperial Opera, and sang there until 1925, after which year she moved to Berlin. She also sang regularly at the Salzburg Festival from 1922 to 1934, her pure lyric soprano in Mozart roles winning great admiration. She settled in Paris in 1933, and made appearances at the Opéra and Opéra-Comique, but on the outbreak of World War II she went into hiding in the French Alps. In 1945, Schoene resumed her career as a concert singer, but retired in 1953 to teach singing in Paris.

[Schoenerer](http://www.jewishencyclopedia.com/articles/6586-schoenerer)

Schoenerer, Geog von (1842–1921), Austrian anti-Semitic politician. Schoenerer, the son of a railway entrepreneur and nobleman, was elected to parliament (Reichsrat) in 1873 after making a name for himself as an energetic estate owner who improved the economic and social lot of the peasants. There he joined the left-wing, radical–democrat nationalists and repeatedly shocked the house with his outspoken anti-clericalism, anti-Hapsburg views, and demagoguery. In 1878 he began to air opinions about the allegedly harmful Jewish plutocracy and its domination of the press, but his opposition to the admission of Jewish refugees from Russian pogroms in 1882 was unsuccessful. He was supported by Heinrich *Fried-
jung and Victor Adler, who helped him draft the popular 11-point Linz program (which combined Prussian-oriented nationalism, social reform, and semi-socialistic measures). Schoenerer added a twelfth point in 1885: “In order to realize these reforms, the removal of Jewish influence from all fields of public life is indispensable.” Despite his continuing popularity, Schoenerer was never able to forge a stable party organization and was constantly causing rifts in his ranks. On March 8, 1888, after a drinking bout, he led an assault on the offices of the Neues Wiener Tageblatt, which he considered Jewish-owned, for prematurely announcing the decease of Emperor William I of Germany. Despite the support of K. *Lueger and others, he was stripped of his title, deprived of his seat for five years, and imprisoned. He returned to parliament in 1897 with five supporters, and in 1901 his party obtained 21 seats. However, his party soon disintegrated and Austrian antisemites came to prefer Lueger’s clerical and pro-Hapsburg “Christian Social Party.

Schoenerer’s ambitions were thwarted by his own intrasigence, self-glorification, and despotism, manner, which left him isolated politically. His long-term significance for the rise of Nazism was decisive. He turned to racism, proclaiming Karl Eugen “Duehring and other racists, and helped spread the ‘Voelkish Weltanschauung’ Successful in enlisting the support of various and often conflicting social strata, he gained main adherents from the small-town lower-middle class and was extremely popular with the Burschenschaften (see ‘Students’ Associations, German), who formed his bodyguard, uniting these elements with his vulgar slogan: What the Jew believes is irrelevant, the piggish mess lies in the race. (“Was der Jude glaubt, ist einerlei. In der Rasse liegt die Schweineerei”).

He was much admired by the Nazis, who, immediately after the Anschluss, named a street in the Jewish section of Vienna for him; they also promoted Eduard Pichl’s study on him and held a memorial exhibition in Vienna. Schoenerer has importance for historians because he was the first to exploit antisemitism in changing the direction of foreign policy and disrupting the internal structure of the state, techniques later closely copied by Nazism.

[Henry Wasserman / Evelyn Adunka (2nd ed.)]

**SCHOENFELD, JOSEPH** (1884–1935), Hungarian Zionist and editor of Hungarian/Zionist periodicals. He was among the founders of Maccabea, the Zionist students’ society in Budapest, which was founded on Herzl’s initiative in 1903 and prepared Hungarian-speaking Zionist leaders for Hungary, Slovakia, Transylvania, and North Yugoslavia. From 1912 to 1914, and then from 1927 to 1935, he was the editor of the organ of the Hungarian Zionist Federation Zsidó Szemle (“Jewish Review”). His articles defended the Zionist movement against opposition, especially by the Jewish weekly Egyenlőség (“Equality”), which enjoyed the support of the Budapest Neo-log community and advanced an assimilationist line.

Schoenfeld fought for the reunification of Hungarian Jewry, which had split into opposing groups – Orthodox and Neolog – in 1871. He was a gifted orator, employing humor and sarcasm in his speeches. He translated Herzl’s Der Judenstaat into Hungarian in 1919, and published Vissza a Gettóba (“Return to the Ghetto,” 1919) and Harcban a Zsidóságért (“In the Battle for Israel,” 1928), both of which contain a selection of his articles on Jewish problems and Zionism in Hungary and in general.

**BIBLIOGRAPHY:** H.Z. Zehavi, Me-ha-Hatan Sofer ve-ad Herzl (1965), 325–6. [Jekutiel-Zwi Zehawi]

**SCHOENHACK, JOSEPH** (1812–1870), Hebrew writer and lexicographer. Born in Tiktin, Poland, he wrote one of the first works on natural science in Hebrew – Toledot ha-Arez, in three volumes (Toledot ha-Hayyim (1841, with commendatory prefaces by rabbis and maskilim), Toledot ha-Zemaḥim, and Toledot ha-Muzakim (both 1859), treating, respectively, zoology, botany, and mineralogy. The books were schematically presented – the names of the animals, plants, and minerals appeared in Hebrew with a German translation (in Hebrew letters); the text was augmented by many footnotes that examined the names of species mentioned in the Bible and in talmudic literature. He used a German name only when no Hebrew name was available. With the help of Schoenhack, Mendele Mokher Seforim determined the names of animals in his book Toledot ha-Teva.

Schoenhack also compiled a dictionary, Ha-Mashbir ha-Hadosh, for the language of the Targum, the Talmud, and the Midrash (1859) based on the Arukh by *Nathan of Rome, but he noted the origin of each word and translated it into German (in Hebrew letters). In 1869 he added to Ha-Mashbir a book called Sefer ha-Milla'im, in which he added words not printed in the Arukh.

**BIBLIOGRAPHY:** Klausner, Sifrut, 4 (1954), 133; Ha-Maggid, 49 (1870), 388. [Yehuda Slutsky]

**SCHOENHEIMER, RUDOLF** (1898–1941), German biochemist. Born in Berlin, Schoenheimer worked in the Institutes of Pathology of the universities of Berlin (1922–23) and Leipzig (1923–25). He was a leader in the Blau-Weiss Zionist Youth Movement. In 1926 he became professor of pathological chemistry at the University of Freiburg. With the advent of the Nazi regime, he went to America, as professor of biological chemistry at Columbia University (1933–41). His career ended in suicide during World War II.

Using stable isotopes (particularly deuterium and nitrogen-15) as tracers, he followed the metabolism of cholesterol
and of fats through the mammalian body, and his findings led to marked changes in the views then held on metabolism.

[Samuel Aaron Miller]

SCHOEPS, HANS JOACHIM (1909–1980), professor and scholar of religious history. Schoeps, who was born in Berlin, emigrated to Sweden in 1938, returning to Germany after World War II. In 1947 he began teaching religious and intellectual history at the University of Erlangen and was appointed professor in 1950. From 1947 he edited Zeitschrift für Religions-und Geistesgeschichte. While his interests have ranged over a wide field, his writings have dealt mainly with earliest Christianity. Schoeps’ relationship to the Jewish community has been a clouded one. Beginning with his early publications in the 1930s, Schoeps, a prolific writer, adopted a radical dialectical Jewish theology which excluded all nomistic as well as national-cultural elements, bringing Judaism very close to Christianity but stopping short of baptism. His speculative theological position, influenced by the writings of the 19th-century Jewish philosopher Solomon Ludwig *Steinheim, was, he wrote, acceptable neither to liberals nor Orthodox. More significant, however, was his espousal of an extreme German nationalism, which led, in the decisive year of 1933, to the conviction that it was possible for the “German Jews,” as distinguished from the Eastern European Jews then in Germany and the Zionists, to come to terms with the National Socialists.

Among his books are Theologie und Geschichte des Judentums (1949); Aus frühchristlicher Zeit (1950); and Paul (Ger. 1959; Eng. 1961). The Jewish Christian Argument (1965) is a useful description of the view of Christianity in the writings of Jewish authors. In 1956 he published his autobiography, Die letzten dreissig Jahre. In it he noted with regret his failure to recognize the true face of Nazism (his own parents died in concentration camps). Of Judaism itself he wrote of a hope for something completely new that in confrontation with the death of the six million might yet emerge.

[Lou H. Silberman]

SCHOLEM (Shalom), GERSHOM GERHARD (1898–1982), the most important scholar of Jewish mysticism and a towering figure in Jewish intellectual life. Born to an assimilated family in Berlin, he was attracted in his youth to Judaism and Zionism and studied major Hebrew Jewish texts and Kabbalah by himself. After completing a Ph.D. thesis in 1923 on Sefer ha- Bahir, he arrived in Israel, and taught at the Hebrew University, becoming the first professor to devote all his studies and teaching to the topic of Jewish mysticism. His achievement in surveying all the major stages and writings belonging to this topic is staggering. In the difficult times of the 1920s and 1930s, he traveled to all the major European libraries and systematically studied all the available manuscripts. In 1939 he delivered a series of lectures in New York, which became the first comprehensive analysis of the historical and phenomenological aspects of the entire range of Jewish mysticism: Major Trends in Jewish Mysticism, which is also his most influential and widely read book. One of the chapters of this book, dealing with the Heikhalot literature, was complemented by a collection of studies printed in New York, under the title Jewish Gnosticism, Merkabah Mysticism, and the Talmudic Tradition.

Building upon his perusal of manuscripts, he published from the mid-1920s a series of articles in Hebrew in which he identified many anonymous manuscripts, and from 1948, a series of analyses about the beginning of Kabbalah. In its most elaborated form, it appeared in English posthumously as Origins of the Kabbalah, translated by A. Arkush and edited by R.Z.J. Werblowsky.

Alongside those studies he identified, published, and analyzed in detail the main documents pertinent to Shabbateanism, and in 1957, he published in Hebrew the most important synthesis of the historical and religious aspects of the Shabbatean movement in the lifetime of *Shabbetai Zevi. Sixteen years later, Princeton University Press produced an enlarged English version of this book, Sabbatai Sevi, the Mystical Messiah, translated by R.Z.J. Werblowsky.

From 1948, Scholem was a permanent participant in the Eranos encounters in Ascona, Switzerland, where he lectured and interacted with the major scholars of religion of his generation, such as Carl G. Jung, Mircea Eliade, and Henry Corbin. The lectures he delivered there in German were printed in the volumes of Eranos Jahrbuch and collected in two German volumes, translated into English by R. Manheim as On the Kabbalah and Its Symbolism (1969) and On the Mystical Shape of the Godhead (1991), and into Hebrew by Joseph ben Shlomo as Pirke Ysod be-Havanat ha-Kabbalah u-Semalcha (1976). These studies represent the most important articulations of Scholem’s phenomenology of Kabbalah, treating seminal matters in Jewish mysticism. In 1972 he formulated his last summary of his understanding of Kabbalah in the various entries he contributed to Encyclopedia Judaica, which were collected in the volume Kabbalah (1974).

The main themes that represent his thought are the emergence of Kabbalah in Europe in mid-12th century as the result of a synthesis between Gnostic and Neoplatonic elements; the rise of messianic interest among the kabbalists after the expulsion of the Jews from Spain; the reaction to the trauma of the expulsion in the theories of the Safed kabbalists, especially the Lurianic one; the spread of this type of messianic Kabbalah among wider audiences, which prepared the way for the emergence of the Shabbatean movement, and last but not least, the assumption that the wide influence of the Shabbatean movement had an impact on the emergence of three main religious developments since the 18th century: Hasidism, Enlightenment, and Reform. Scholem was especially interested in Messianism and dedicated much of his energy to writing.
SCHOLEM, WERNER (1895–1940), communist politician and lawyer. Scholem was the third son of the Berlin printer Arthur Scholem and his wife, Betty, and the elder brother of Gerhard (Gershom) *Scholem. After a short involvement with Zionism, Scholem became a member of the Socialist Party at the age of 18. Being attached to the leftist and pacificist wing of the SPD, he refused to volunteer for service in World War 1. In 1915 he was drafted and was wounded a year later. In 1917, while taking part in an anti-war demonstration in uniform, he was arrested and accused of high treason, yet was released after a few months. Scholem moved to Hannover and married a comrade from the workers’ movement, Emmy Wielchel. After the foundation of the USPD (Independent Social Demo-

cratic Party of Germany) he became editor of the Party’s paper, Volksblatt, in Halle/Saale. In 1921 he became the youngest member of the Preussischer Landtag and was appointed to the editorial board of the Rote Fahne. He was elected to the Reichstag in 1924 and became a leading figure of the KPD (Communist Party of Germany). In 1926 he was expelled from the Communist Party as a prominent protagonist of the so-called “ultra-left” anti-Stalinist opposition. Scholem turned away from politics and resumed his law studies, which he finished in 1931. After the Nazis came to power, Werner and Emmy Scholem were immediately imprisoned, but soon released. In April they were arrested again, this time by the Gestapo, and accused of high treason. With the help of a friend, Emmy was released and managed to escape with the couple’s two daughters to London in 1934. In 1935 Scholem was interned in the concentration camp Torgau, and was transferred to Dachau in 1937. On July 17, 1940, Werner Scholem was murdered in the Buchenwald concentration camp.

[Mirjam Triendl (2nd ed.)]

SCHOLES, MYRON S. (1941– ), economist, financier, and educator; joint winner of the 1997 Nobel Prize for economics. Born in Timmins, Ont., Scholes earned his B.A. in economics in 1962 at McMaster University in Hamilton, Ont., where he had lived since the age of 10. He completed his M.B.A. in 1964 and Ph.D. in 1969 at the University of Chicago. While working on his dissertation, he took a position in 1968 as assistant professor in finance at the Sloan School of Management at Massachusetts Institute of Technology (MIT). In 1973 Scholes returned to the University of Chicago as an associate professor (later promoted to professor) in the Graduate School of Business; a decade later, in 1983, he joined the finance and law faculty at Stanford University’s Graduate School of Business and Law School and attained his current status of emeritus in 1996.

Scholes grew up surrounded by family who were involved in business; in particular, his mother directed him toward the field and even assisted him with his first investment account as a teenager. After his mother’s death when he was 16, he remained mindful of her vision for his future throughout his academic years. During his graduate studies he developed a passion and dedication for research.

In his 30-plus years of teaching, Scholes wrote a vast collection of articles on economic and finance topics in various business periodicals. However, none were more revolutionary than his and Fischer Black’s 1973 “The Pricing of Options and Corporate Liabilities” in the Journal of Political Economy, which introduced their equation on stock options pricing. Later that year Robert Merton’s similar research culminated in his paper “The Theory of Rational Option Pricing” (in the Bell Journal of Economics), and the three collaborated to prove...
their theory in the live market with their 1976 mutual fund, Money Market/Options Investment, Inc. The successful results caused a dramatic eruption of “derivatives” markets, and its usage has not only endured but also led to Scholes and Merton's selection as co-recipients of the 1997 Nobel Prize in economics. (Black had passed away in 1995.)

Among Scholes' many professional affiliations were managing partner at Oak Hill Capital Management, chairman of Oak Hill Platinum Partners, and the American Finance Association's president in 1990, as well as serving on the board of directors of several corporations. In 1993 Scholes and Merton were two founders of the Greenwich, Conn.-based Long-Term Capital Management (LTCM), a hedge fund that he left not long after its downfall in 1998 (but prior to its liquidation in 2000). He holds honorary doctoral degrees from the University of Paris-Dauphine (1989), McMaster University (1990), and Belgium’s Katholieke Universiteit Leuven (1998). In 1991 he co-wrote with Mark A. Wolfson the book *Taxes and Business Strategies: A Planning Approach* (updated second edition, 2001).

[Schomberg, English family. Meyer Loew Schomberg (1690–1761), born in Fetzburg, Germany, was one of the first Jews to be accepted at a German university, receiving a degree in medicine from the University of Giessen (1710). He subsequently settled in London, and became a member of the Royal College of Physicians (1722) and a Fellow of the Royal Society (1726). Appointed physician to the Great Synagogue, he built up a fashionable clientele. He wrote *Eumnat Omen* in 1746, criticizing the English Jewish community for its mean outlook and defending his own unorthodox way of life. His sons ceased to be identified with Judaism. Isaac Schomberg (1714–1780), the eldest, became (after some initial difficulties) censor of the College of Physicians. His twin, Raphael of Ralph Schomberg (1714–1792), was a notary public as well as a physician. He tried his hand at literature and published volumes of poetry and plays which were of poor quality. Henry Schomberg (c. 1715–1755) rose to the rank of lieutenant colonel in the army. Meyer’s youngest son, Sir Alexander Schomberg (1720–1804), commanded the ship which covered Wolfe’s landing at Quebec in 1759 during the British conquest of Canada. He served as the model for Hogarth’s painting *A Naval Officer* and was knighted in 1777. He was the father of Admiral Sir Alexander Wilmot Schomberg (1774–1850), naval writer, and probably of Isaac Schomberg (1753–1813), commissioner and deputy comptroller of the navy (1808–13) and editor of *Naval Chronology* (1802). Members of the family continued to be prominent in British life, particularly in the navy and army, until recently. However, they had no Jewish associations. This family was unrelated to another family of British Schombergs, the Dukes of Schomberg and their descendants, who were gentiles from Germany. They were also prominent in British public life and military affairs in the 18th and 19th centuries.

**Schon, Frank, Baron** (1912–1995), British industrialist. Schon was born in Vienna and educated at the universities of Prague and Vienna, where he studied law. After settling in England, he founded in West Cumberland the chemical manufacturing firm of Marchon Products in 1939 and Solway Chemicals in 1943; he was chairman and managing director of both until 1967. In 1956 Marchon Products became part of Albright and Wilson, of which Schon was a director from 1958 to 1972; he was a director of Blue Circle Industries (formerly Portland Cement) from 1967 to 1982. Schon took a prominent part in the public and cultural life of the north of England, serving on the council and court of Durham University and Newcastle University. He was chairman of the Cumberland Development Council from 1964 to 1968. From 1969 to 1979 he was chairman of the National Research Development Corporation, a public agency concerned with the promotion of inventions in the national interest. He was knighted in 1966 and created a life peer in 1976.

**Schonfeld, Victor** (1880–1930), English rabbi and educator. Schonfeld was born in Hungary. He served as rabbi of the Montefiore Society in Vienna until 1909, when he went to the North London Beth Hamidrash, which became the Adath Yisrael Synagogue in 1911. In 1920 Schonfeld took up an invitation to become head of the Mizrahi schools in Ereẓ Israel; dissatisfied with conditions, he returned to his former post two years later. In 1927 he founded the Union of Orthodox Hebrew Congregations in England, and in 1929 he established the Jewish Secondary Schools Movement. Schonfeld was an outstanding preacher and teacher, wielding great influence beyond the confines of his congregation, partly through the youth society, Ben Zakkai, which he founded. Apart from publishing a number of textbooks for religious schools, a volume of his sermons and essays was published posthumously by his son Solomon (*Judaism as Life’s Purpose*, 1930; a shorter edition *Life’s Purpose*, 1956).

Solomon Schonfeld (1912–1984) was born in London and succeeded his father in 1933 as rabbi of the Adath Yisrael Synagogue, resigning from this post after 25 years’ service; he also took over as presiding rabbi of the Union of Orthodox Hebrew Congregations. Schonfeld became principal of the Jewish Secondary Schools Movement, which he successfully expanded after World War II. Together with his father-in-law, Chief Rabbi Joseph *Hertz*, he set up the Chief
Rabbi's Emergency Council, which in 1938–39 brought rabbis and other religious personnel to England from Central Europe and provided them with positions. Through the same organization he saved, both before and after the war – from Poland in particular – many hundreds of children. He was critical of the methods of the Refugee Children’s Movement in England, which in his opinion failed to assure their religious upbringing.

Among Schonfeld's publications are Jewish Religious Education (1943), a handbook with syllabi for teachers and parents; the Universal Bible (1955), pentateuchal texts with translation and notes; and Message to Jewry (1959), addresses and articles.

**SCHONFIELD, HUGH JOSEPH** (1901–1988), British writer and New Testament scholar. Born in London, he entered publishing in 1932, when he produced A New Hebrew Typography in which he devised a lower case alphabet for the printing of Hebrew. He first made his name as a biographer with Richard Burton: Explorer (1936) and Ferdinand de Lesseps (1937). He also published various historical works such as This Man Was Right: Woodrow Wilson Speaks Again (1943) and The Suez Canal in World Affairs (1952; revised ed. 1969).

Schonfeld, however, owed his main reputation to a long series of works, often controversial, in which he dealt with primitive Christianity, whose Jewish roots he first emphasized in Besorat Mattai: An Old Hebrew Text of St. Matthew’s Gospel (1927) and According to the Hebrews: A New Translation of the Toldoth Jesu ... (1937). In his History of Jewish Christianity from the First to the Twentieth Century (1936), Schonfeld endeavored to revive the cause of the first-century Ebionite or “Nazarene” Church of Jerusalem, long silenced by the triumphant Gentile Church, and proclaimed the establishment of a “Jewish Christian independent religious communion” of Jews who believed in the messiahship of Jesus but remained separate from any Church denomination. To varying extents, the same approach characterizes Jesus: A Biography (1939), The Jew of Tarsus: An Unorthodox Portrait of Paul (1946), Saints Against Caesar: The Rise and Reactions of the First Christian Community (1948), and Those Incredible Christians: A New Look at the Early Church (1968).

A noted lecturer and broadcaster, Schonfeld continued his research in The Authentic New Testament (1955), an original translation from the Greek, together with an introduction and notes relating the text to rabbinic sources, which became a bestseller. In this, as in other of his later works – such as Judaism and World Order (1943); The Song of Songs (1960), translated from the Hebrew with notes and an introduction; and A Popular Dictionary of Judaism (1962) – Schonfeld stressed his Jewish identity and apparently retreated from his earlier wholehearted advocacy of Judeo-Christianity. He also wrote Secrets of the Dead Sea Scrolls (1956); A History of Biblical Literature (1962); The Passover Plot (1965), a reappraisal of the messianic initiative of Jesus; and The Politics of God (1970). The Pentecost Revolution (1974), an account of the “Jesus Party” up to the outbreak of the Jewish War against the Romans in 66 C.E., is a sequel to The Passover Plot. Schonfeld was one of the most popular and controversial writers on early Christianity in modern Britain.

[Gabriel Sivan]

**SCHOOLMAN, BERTHA S.** (1897–1974), U.S. Zionist leader. Bertha Schoolman, who was born in New York City, studied at Hunter College and at the Teachers Institute of the Jewish Theological Seminary. From 1919 to 1923 she taught at the Central Jewish Institute, and from 1922 to 1946 she was a director of children's summer camping. Her Zionist activity brought her appointments to the national board of Hadassah in 1935 and the World Zionist Actions Committee from 1937. During over 30 years of Hadassah work, Bertha Schoolman held national offices, including secretary (1940–41), vice president (1941–43), and national chairman of Youth Aliyah (1956–60).

Her husband, ALBERT SCHOOLMAN (1894–1980), educator, was born in Lithuania. He headed the Central Jewish Institute of New York, the first American Jewish community center with an educational focus. In 1919 Schoolman established the Cezwin Camps, the first system of Jewish educational camps in the United States, with which he remained actively associated. Schoolman was president of the National Council for Jewish Education and a founder of the American Association for Jewish Education. Schoolman's educational philosophy was rooted in the Reconstructionist view of Judaism.

[Leon H. Spotts]

**SCHOR, ALEXANDER SENDER BEN EPHRAIM ZALMAN** (d. 1737), talmudist. Schor, who was probably born in Lvov, married the daughter of Mordecai b. Leibush of Zolkiew, president of the “Council of Four Lands. For a time Schor was rabbi of Hovno, Belz district, but in 1704 he resigned, not wishing to bear the responsibility of the rabbinate, and went to live in Zolkiew, where he remained for the rest of his life, earning his living as a distiller. In 1733 Schor published Simlah Hadashah, a digest of the laws of ritual slaughter – shehitah and tereft – with an extensive commentary entitled Tevuot Shor. An appendix named Bekhor Shor contains novellae on both the halakhah and aggadah to tractate Hullin and other tractates. The Tevuot Shor attained great popularity. It has been republished at least 17 times and came to be regarded as the authoritative work on the subject. Schor generally assumes a stringent interpretation of the relevant laws. In practice, a knowledge of Tevuot Shor was regarded as a prerequisite for a shohet before he was granted a kabbalah, a permit to practice shehitah. The name of the book became almost a concept: of an expert in the laws of shehitah it was said that “he is an expert in the Tevuot Shor.”

Commentaries were written on it, the most important being Levushet Serah of D.S. Eybeschuetz (Mogilev, 1812) and the Tikkunet ha-Zevah of Isaiah Borochowitz (1883).
BIBLIOGRAPHY: H.D. Friedberg, Toledot Mishpahat Schor (1901), 15–19; S. Buber, Kiryah Nigevah (1903), 13–14; Ch. Tcherenowitz, Toledot ha-Posekim, 3 (1947), 258–60.

[Itzhak Alfassi]

SCHOR, EPHRAIM SOLOMON (The Elder) BEN NAPHTALI HIRSCH (d. 1633), Polish rabbinical scholar. He was the son-in-law of Saul *Wahl, and legend has it that Saul Wahl married off his young daughter hurriedly to Schorr despite the disparity in age to forestall the desire of the king to marry her (Gedullat Sha‘ul, ed. by H. Edelman (1854), 4a–b); there is no historical basis for the legend. Schorr belonged to a Moravian family. From 1613 to 1624 he was rabbi of Grodno, then Szczebrzeszyn and Brest-Litovsk, and finally Lublin. In 1618 he was one of the rabbis who signed a takkanah of the *Council of Four Lands. The esteem in which he was held can be gauged from the fact that his haskamah (“approbation”) to the Ikkarim of Joseph *Albo with the commentary Ez Shatul (Venice, 1618) appears before that of Meir of *Lublin. Schorr’s fame rests on his Toviot Shor (Lublin, 1615–16), a digest of the Beit Yosef to the Turim in which he adds and comments upon the sources of the Tur of Jacob b. Asher, which are not given in Beit Yosef (Lublin, 1605/6). His responsa and decisions are frequently quoted by his contemporaries. In order to distinguish him from his relative, Alexander *Schor, who also wrote a work under the same title, it is occasionally referred to as “The Elder Toviot Shor.” His son Jacob, the author of Beit Yaakov (Venice, 1693), novellae to Sanhedrin, was, like his father, rabbi of Brest-Litovsk.

[Itzhak Alfassi]

SCHOR, ILYA (1904–1961), U.S. metalsmith, painter, and printmaker. Born in Zloczoq, Poland, Schor was the son of a Hasidic painter. Before attending the Academy of Fine Arts in Warsaw, he worked as an apprentice to an engraver and goldsmith. He continued his studies in Paris before coming to New York in 1941. Schor achieved a reputation as a worker in metal. His jewelry and ritual objects, such as kiddush cups and Torah crowns, are filled with delicate, detailed, and intricate design. He did a great deal of work for ritual use in synagogues, such as doors for the ark of Temple Beth-El, Great Neck, New York. With artists such as Percival Goodman, Seymour Lipton, Ben Shahn, and Milton Horne, Schor contributed work which reflected the post-World War II Jewish community’s renewed interest in the synagogue as both a spiritual and cultural gathering place: original and handcrafted ritual objects, sculpture, painting, and windows emphasized the importance of the synagogue in Jewish community life. Schor’s work was reminiscent of pre-Emancipation Jewish craftsmen. His oils and some of the books he illustrated with woodcuts depicted life in the small Jewish communities of his boyhood. His woodcut Fiddler, composed of simple, flat shapes with a minimum of detail, recalls a figure of the Eastern European shtetl. He illustrated The Sabbath: Its Meaning for Modern Man by Abraham Heschel (1951), The Earth Is the Lord’s: The Inner World of the Jew in Eastern Europe, also by Heschel. Rather than working in the Abstract Expressionist style of his peers, Schor always remained a narrative, figurative artist who referred to traditional Jewish religious or cultural subject matter, making art in a manner which combined both folk and modernist sensibilities.

[Nancy Buchwald (2nd ed.)]

SCHORR, ABRAHAM HAYYIM BEN NAPHTALI ZEVI HIRSCH (d. 1632), Galician rabbi. It has been assumed that Schorr was of German origin since his father signed himself “Hirsch of Alsace,” and Moses *Isserles in a responsa (no. 95) wrote to him urging him to remain as a rabbi in Germany. Schorr himself, however, served as rabbi in Galicia, in Satanov, Belz, and possibly Kremenets. His main work was Torat Hayyim, novellae on Bava Kamma, Bava Mezia, and Bava Batra (1624), and on Eruvin, Sanhedrin, Shavuot, Avo-dah Zarah, Hullin, and Pesaḥim (1634), both published together in Prague in 1692. The work was based on the courses which he gave in his yeshivah and was widely used. The main purpose of the work was to establish the halakhah between Rashi and the Tosafists when they differed, but it also contains aggadic material.

His Zon Kodashim on the order Kodashim, which he wrote together with his friend R. Mordecai Asher of Brzezany, was published posthumously by Schorr’s grandson, Hayyim b. Ozer of Hildesheim. He is mentioned in the responsa of Benjamin Aaron *Slonik (no. 88) and by Joseph Solomon *Delmedigo in his Elim (Odessa ed. 1864, 93–95). According to tradition, Schorr died in Belz and was buried in Lemberg.

SCHORR, BARUCH (1823–1904), cantor and composer. Schorr was born in Lemberg to a hasidic family; his musical abilities were recognized early and he served as a meshorer (“singer”) with well-known cantors. He officiated in various small communities before becoming cantor in Lemberg in 1859. A pious Jew, he was at the same time interested in European culture and musical techniques. He applied these techniques in his compositions, which, however, are firmly based on traditional motifs (especially in the ahavah rabba “shtayer”). Thus his compositions are noteworthy for their ease of rendition and depth of feeling. Schorr composed an opera, Samson, which was performed in 1890 in Lemberg’s Jewish
theater. After the performance he was led onto the stage by the prima donna, in order to receive the audience’s ovation. This behavior was considered unseemly by the synagogue authorities, who suspended Schorr from office for four Sabbaths. Offended, he left for the U.S., where he stayed for five years until a delegation was sent from Lemberg to recall him to his post. He remained there until his death, which occurred while he was officiating on the last day of Passover. Schorr also wrote commentaries on the Pentateuch and Ecclesiastes. All six of his sons became cantors, and one of them, Israel, published his father’s compositions in Neginot Baruch Schorr (1906). Many of these melodies are actually the work of the younger Schorr, who also rearranged some of his father’s harmonies. Another relative named Israel Schorr (1886–1935) was also a celebrated cantor in Europe and the U.S. He was the composer of Scherene Yibbeneh Beit ha-Mikdash, one of the best-loved cantorial compositions of modern times.

**SCHORR, DANIEL** (1916– ), U.S. journalist. Schorr was born in New York City, the son of Russian immigrants. He began his journalistic career at 12 when he came upon a woman who had jumped or fallen from the roof of his Bronx apartment building. After calling the police, Schorr phoned the Bronx Home News and was paid $5 for the tip. In a career of more than six decades, Schorr earned many awards for journalistic excellence, including three Emmys, and decorations from European heads of state. He was also honored by civil liberties groups and professional organizations for his defense of the First Amendment. After serving in Army Intelligence during World War II, Schorr began writing from Western Europe for The Christian Science Monitor and later the New York Times, witnessing postwar reconstruction, the Marshall Plan, and the creation of the NATO alliance. In 1953 his vivid coverage of a disastrous flood that broke the dikes of the Netherlands brought him to the attention of Edward R. Murrow of the Columbia Broadcasting System. Schorr joined CBS News as its diplomatic correspondent in Washington. In 1955, with the post-Stalin thaw in the Soviet Union, he received accreditation to open a CBS bureau in Moscow. His two-and-a-half year assignment culminated in the first exclusive television interview with a Soviet leader, Nikita S. Khrushchev, filmed in his Kremlin office in 1957 for CBS’s Face the Nation. Schorr’s repeated defiance of Soviet censorship, however, eventually landed him in trouble with the KGB, the secret police, and, after a brief arrest on trumped-up charges, he was barred from the Soviet Union at the end of 1957. For the next two years, Schorr reported from Washington and the United Nations, covering Khrushchev’s tumultuous tour of the United States in 1959, interviewing Fidel Castro in Cuba, and traveling with President Dwight D. Eisenhower to South America, Asia, and Europe. In 1960 Schorr was assigned to Bonn as CBS bureau chief for Germany and Eastern Europe and covered the Berlin crisis and the building of the Berlin Wall. In 1972, while being assigned to Washington, Schorr began a full-time assignment for CBS as its chief correspondent on the Watergate break-in story. Schorr’s exclusive reports and on-the-scene coverage of the Senate Watergate hearings earned him three Emmys. He unexpectedly found himself a part of his own story when the hearings turned up a Nixon “enemies list” with his name on it and evidence that the president had ordered that the Federal Bureau of Investigation investigate him. This “abuse of a Federal agency” was one count in the Bill of Impeachment on which Nixon would have been tried had he not resigned in August 1974. That fall, Schorr again became part of his own story. When the House of Representatives voted to suppress the final report of its intelligence investigating committee, Schorr arranged for publication of the advance copy he had obtained. This led to his suspension by CBS and an investigation by the House Ethics Committee, in which Schorr was threatened with jail for contempt of Congress if he did not disclose his source. At a public hearing he refused on First Amendment grounds. The committee voted 6 to 5 against a contempt citation. Schorr resigned from CBS and wrote his account of his stormy experience in a book, Clearing the Air. In 1979 Schorr was hired by Ted Turner to help create the Cable News Network, and he served in Washington as senior correspondent until 1985. Subsequently Schorr worked primarily for National Public Radio as senior news analyst, working effectively as he approached 90. In 2002 Schorr was elected to the American Academy of Arts and Sciences. He was the author of Stay Tuned: A Life in Journalism (2001) and Forgive Us Our Press Passes (1998). [Stewart Kampel (2nd ed.)]

**SCHORR, FRIEDRICH** (1888–1953), bass-baritone. Born in Nagyvarad, Hungary, Schorr sang at Graz, Prague, and Cologne, and at the Berlin State Opera (1923–31). In 1938 he emigrated to the United States and sang at the Metropolitan Opera. One of the foremost Wagnerian singers of his time, he excelled as an interpreter of the roles of Hans Sachs and Wotan and often appeared at the Wagner Festivals in Bayreuth.

**SCHORR, JOSHUA HESCHEL** (commonly known as Osias Schorr; 1818–1895), scholar, editor, and second-generation Galician Haskalah leader. Born in Brody, Galicia, to a prominent and affluent family, Schorr became a successful merchant, but devoted much of his time to Jewish scholarship. In his youth he was befriended (through correspondence) by Samuel David *Luzzatto and later financed the publication of a number of Luzzatto’s works. In the 1850s Luzzatto broke with Schorr because of the latter’s radicalism. Schorr’s initial writings were translated from their original Hebrew and published in German Jewish periodicals. The earliest articles centered on social and literary themes and appeared in Lud-
wig *Philipson’s Die Allgemeine Zeitung des Judenthums. His first major article appeared in *Jost’s Israelitische Annalen, and constituted an early attempt to formulate a theoretical basis for reforming Jewish law without denying the principle of authority. In the early 1840s he frequently contributed to Zion, a Hebrew periodical which appeared in Germany. Schorr’s major writings, however, were published in *He-Halutz, a yearbook which he edited and which appeared intermittently between 1851 and 1882. Intended as the literary organ of a small group of radical maskilim who advocated social and religious reforms, He-Halutz became devoted almost entirely to scholarly articles after publication of Volume 5 in 1860. Subsequent to the publication of Volume 6 in 1861, the periodical was written exclusively by Schorr. During the years 1879–84 Schorr again became involved in the struggle between Galician maskilim and adherents of Orthodoxy, against whom he published many satirical verses in Ivri Anokhi, a Hebrew periodical issued in Brody. He corresponded with the leading Jewish scholars of his day, including Abraham Geiger, Abraham Krochal, Leon-

pold Zunz, Marcus Jost, and Moritz Steinschneider, as well as Bernard Felsenthal, a prominent American Reform rabbi. Schorr’s writings advocating religious and social reforms were of two kinds: first, satirical diatribes attacking the alleged ignorance and obscurantism of the Orthodox, and often influenced by the style of his friend, Isaac “Erter; and, second, scholarly polemics seeking to demonstrate that talmudic and rabbinical laws are products of a specific time and are, therefore, without absolute authority. In the polemical articles his technique was to point out errors and contradictions in talmudic and later halakhic literature, and he did not limit his critical approach to post-biblical texts. Schorr was one of the earliest Hebrew scholars to apply critical methods to the Bible, including the Torah itself, which aroused the wrath of his Orthodox opponents. To the Jewish masses of Eastern Europe he became the very symbol of heresy and, as such, appears as a quasi-fictional character in the works of S.Y. *Agnon. Influencing an entire generation of East European maskilim – Moses Leib *Lilienblum and Judah Leib *Gordon, for example, acknowledged their debt to him – Schorr also had some effect on a number of American Reform rabbis. Toward the end of the 19th century he became an eccentric recluse. He left his valuable library of manuscripts and early prints and a substantial estate to the Viennese Rabbinical Seminary.

[Ezra Spicehandler]

SCHORR, MOSES (Mojżesz; 1874–1941), Polish rabbi and scholar. Schorr, born in Przemyśl, Galicia, studied at the Juedisch-theologische Lehranstalt and the University of Vienna. In 1899 he became lecturer in Jewish religious subjects at the Jewish Teachers’ Seminary in Lemberg, where he also engaged in wider educational and social work. In 1904 he was appointed lecturer and in 1915 professor of Semitic languages and history of the ancient Orient at Lemberg University, a chair which he later held in Warsaw. He was called there in 1923 to succeed S. *Posanski as preacher at the moderately Reform Tłomacka Street synagogue, in which capacity he was also a member of the Warsaw rabbinical council. Schorr was one of the founders in 1928 of the Institute for Jewish Studies, which was the rabbinical seminary of Poland; he served there as lecturer in Bible and Hebrew, and for some years as rector. A member of the Polish Academy of Sciences, from 1935 to 1938 he was a member of the Polish Senate, defending the precarious rights of Polish Jewry against mounting official and unofficial antsemitism. When Germany invaded Poland in September 1939, he fled eastward, but was arrested by the Russians, who moved on Poland from the east. Trans- 

ported from prison to prison, he ended up in Uzbekistan, where he died.

Among Schorr’s many scholarly works, the first treated Joseph *Nasi’s correspondence with King Sigismund Augustus of Poland (in MGWJ, 41 (1897), 169–77, 228–37). In 1899 he published Organizacja Żydów w Polsce… aż do r. 1772, a history of Polish Jewry’s legal status and inner organization from its beginnings to 1772, which became basic to all further research in this field. This was followed by Żydzi w Przemysku do końca XVII wieku (“The Jews of Przemyśl to the End of the 18th Century,” 1903), and a critical edition (1909) of the privileges granted to the Jews of Cracow by King Stanislaus Augustus in 1765. From Jewish history in Poland Schorr turned to Semitic studies, in particular ancient Babylonian and Assyrian law, becoming one of the leading scholars in this field and making it accessible to legal scholars unfamiliar with cuneiform script. Between 1907 and 1910 he published 184 legal documents with their transcription, translation, and a commentary under the title Altbabylonische Rechtsurkunden… (3 vols.). His Urkunden des altbabylonischen Zivil und Prozessrechts (1913) has remained an important reference book. A jubilee volume in Hebrew and Polish was published in 1935, on the occasion of his 60th birthday, as well as a memorial volume in Hebrew, Kovez Madda’i le-Zekher M. Schorr (1945).

SCHORR, NAPHTALI MENDEL (1807–1883), pioneer Galician Hebrew journalist and short-story writer; brother of Joshua Heschel *Schorr.

His publications include a periodical entitled Ha-Zir (1858), a collection of short stories Har ha-Mor (1855–77), a Hebrew translation of Brahmanische Weisheit (“Indian parables”) under the title Masat Nefesh (1867), and a new edition of Behinat ha-

Olam by *Jedaiah ha-Penini with his own commentary (1885). His contributions to newspapers and periodicals were usually signed I.L.R. (Heb. ה.ד), the last letters of his names.

SCHORSCH, GUSTAV (1918–1945), Czech actor and producer. One of the founders of the avant-garde theater "n 99" in Prague, he also worked at the Czech National Theater. After the German occupation in 1939 he was deported to the *Theresienstadt concentration camp. While there, he organized lectures and play readings, and in secret classes and rehearsals conducted at night, under the most difficult conditions, formed a group of actors who gave highly accomplished theatrical performances. Those of the group who survived played an important part in Czech postwar theater life. Schorsch's work came to an end in the autumn of 1944, when he was transferred to *Auschwitz. In January 1945 he was killed by the Nazis.

SCHORSCH, ISMAR (1935– ), Jewish historian and sixth chancellor of the *Jewish Theological Seminary. Born in Germany, Schorsch was three when his family came to the United States in December 1938, a month after Kristallnacht. He grew up in Pottstown, Pennsylvania, where his father, Rabbi Emil Schorsch, served as a congregational rabbi. Schorsch was educated at Urnisus College and later at JTS, where he was ordained in 1962. At Columbia University he studied under Salo W. Baron and Fritz Stern and earned his doctorate in Jewish history in 1969. After serving as a U.S. Army chaplain, he joined the faculty of JTS, rose to the rank of provost during the tenure of his mentor, Gerson D. Cohen, and was appointed chancellor upon Cohen's retirement in 1986. Schorsch has announced his intention to retire from that post in 2006 and to return to full-time teaching and scholarship.

As an historian, Schorsch has published many works on aspects of modern German-Jewish history. Stressing that Jews are historical actors, not merely victims of persecution, he analyzed the response of German Jewry to antisemitism in the pre-World War I period. The main focus of his scholarship was the intellectual history of modern Jews, especially the German-Jewish *Wissenschaft des Judentums movement. He studied the rise of historical thinking as a source of authority within modern Judaism and delineated both reformist and conservative tendencies within that new trend. Schorsch assumed the presidency of the Leo Baeck Institute, a research institute devoted to German-Jewish history, in 1985.

Having become chancellor of JTS in the midst of an epo- chal debate over the impact of feminism on Conservative Judaism, Schorsch identified himself as a "militant centrist." He quickly completed the process of opening JTS professional schools to qualified women candidates by bringing the Cantorial School into line with the Rabbinical School, which had begun admitting women late in Cohen's tenure. Under his leadership, JTS expanded its training program for Jewish educators into a Graduate School of Jewish Education. Schorsch also oversaw the growth of the seminary's Jerusalem campus. He has promoted collaborative initiatives with other institutions, notably the 1991 Project Judaica program, which has brought JTS-trained scholars to the Russian State University for the Humanities in Moscow to help revive Jewish learning in Russia. Near the end of his tenure in 2005, JTS had grown significantly, with an enrollment of 700 students in its various programs. With the percentage of American Jews self-identifying as Conservative dropping in recent years, Schorsch has acknowledged that strengthening the center of the Jewish religious spectrum remains a priority for his successor and his movement in the future.

As a spokesperson for Conservative Judaism, Schorsch addressed both his denominational constituency and a broader audience. In October 2005, he completed a twelve-year cycle of weekly Torah commentaries, through which he engaged Conservative Jewry more directly than any of his predecessors. He has been a frequent and outspoken critic of the Israeli Chief Rabbi, charging it with intransigence and disregard of the broader Jewish community. In national affairs, he has brought Jewish perspectives to contemporary political debates over environmentalism, health care, welfare reform, and separation of church and state.

SCHOTTLAENDER, BENDET (Benedict Schott; 1763–1846), German educator and reformer. Schottlaender, who was orphaned at an early age, received a traditional education before coming under the influence of the ideas of the Enlightenment. He supported himself by tutoring until he met Israel *Jacobson, who appointed him teacher and subsequently principal of the *Seesen school. An able administrator and controversial reformer and innovator (concerning confirmation, use of German in the liturgy, music, etc.), he held this post for 33 years. He was also Jacobson's influential aide in the Jewish Consistory of *Westphalia and was partly responsible for its daring and unpopular reforms, which he tried to make acceptable by stressing education as the panacea for the ills of German Jewry. In this vein he contributed to Ha-Méassef and Sulamith. In 1806 Schottlaender presented a memorandum on the necessity for improved education for Jews to the Paris *Assembly of Jewish Notables convened by Napoleon. In 1808 he published his pamphlet *Sendeschreiben an meine Bruder die Israeliten in Westfalen, die Einrichtung eines juedischen Consistoriums betreffend. [Michael Panitz (2nd ed.)]

SCHOTTLAND, CHARLES IRWIN (1906–1995), U.S. social welfare expert. Born in Chicago, Schottland received a B.A. from UCLA in 1927; he received a social work certificate from the Graduate School of Social Work in the New York School of Social Work in 1929; and he graduated from the University of Southern California Law School in 1933. He was director of the California Relief Administration from 1933...
to 1936. During his service as lieutenant-colonel in the U.S. army in World War II, he served as chief of section of the Displaced Persons Branch at Allied Supreme Headquarters, Paris (1944–45), and as the assistant director of the United Nations Relief and Rehabilitation Administration (UNRRA) for Germany (1945). After directing the New York Child Care Association (1946–48), he headed the California State Department of Social Welfare (1950–54). Appointed by President Eisenhower as commissioner of social security in the Department of Health, Education, and Welfare (1954–59), he directed the American social security system. In 1959 Schottland became professor and dean of the Graduate School for Advanced Studies in Social Welfare at Brandeis University, and was elected acting president of Brandeis University in 1970. Active in national and international organizations, he was president of the National Conference of Social Welfare, 1953, 1959–60; assistant treasurer-general and vice president of the International Conference of Social Welfare (1962–68); and president of the International Conference in 1968. He was also president of the National Association of Workers (1967–69). He was the principal adviser to the U.S. delegation at the United Nations Social Commission (1955 and 1957). He was chairman of the 1981 Arizona White House conference on aging. He also served as chairman of the Arizona Governor's Council on Aging; president of the National Senior Citizen Law Center; president of the American Society on Aging; and a board member of the Pima Council on Aging and the National Council on Aging.

[Schottlander, Bernard (2nd ed.)]

**SCHOTTLANDER, BERNARD** (1891–1984), British sculptor. Schottlander was born in Estonia, the son of a watchmaker, and at the age of 20 joined his brother at Glasgow University. He became a naturalized British subject in 1930. In the 1920s he exhibited at the Royal Glasgow Institute of Fine Arts and other venues in Scotland and England. From 1938 to 1960 he was head of the Sculpture Department at Glasgow School of Art. Influenced by Epstein, Schottlander established himself with a series of portraits of distinguished Scotsmen. He also made portraits of famous Jews: Herzl, Sholem Asch, Lord Samuel, and Ben-Gurion. Schottlander's deep Jewish feelings are reflected in a series of more experimental works, such as *The Prophet* (1957). The Catholic Church in Scotland commissioned from him monumental decorations for new churches.

Schottlander is regarded as one of the most important Scottish sculptors of the 20th century and is sometimes known as the “Scottish Epstein.” He was buried in Jerusalem. Schottlander wrote an autobiography, Bronze *In My Blood: The Memoirs of Benno Schottlander* (1981).

**SCHRADER, ABE** (1900–2001), U.S. apparel manufacturer. Schrader came to the U.S. in 1921 practically penniless, after feeling the effects of bigotry as a member of the Polish Army, and became the quintessential garment industry success story, an iconic figure whose life spanned the entire 20th century.

His mother had hoped he would become a rabbi, but he joined his uncle's company as a shipping clerk for $10 a week. After learning to cut patterns, he opened his own factory and was a contractor from 1927 to 1952. During World War II, his business prospered when he was contracted to make uniforms for the Women's Auxiliary Army Corps. In the early 1950s, Schrader decided to leave the anonymity of contracting and put his own name on the clothes he made. He briefly went into business with Leonard Arkin but eventually opened his own company, Abe Schrader Corp., building a $70 million business known for tasteful dresses and separates. The company went public in 1969, and in 1984 he sold his business to Interco Inc. of St. Louis for almost $40 million, remaining as chairman. Four years later Interco began to sell off its apparel units and Schrader tried to buy his company back. He could not come to terms, however, and retired in February 1989.

In addition to being a leading dress manufacturer for almost 40 years, Schrader led a campaign to have New York City recognized as “the fashion capital of the world,” helped open channels between the industry and the city's government, and led the fight to have part of Seventh Avenue – the heart of the city's garment district – renamed Fashion Avenue. Schrader was also active politically. After becoming a major fundraiser for the 1964 presidential campaign of Lyndon B. Johnson, a man he admired because of his stance on civil rights, Schrader was invited to the White House on numerous occasions. He also led campaigns to raise money for the Federation of Jewish Philanthropies and for Israel Bonds. Schrader was known...
for his wry wit and intelligence and could quote Sartre, Dostoyevsky, and the Talmud as easily as he could price a dress. Although Schrader was an activist on behalf of his fellow manufacturers, he believed in labor unions and was a long-time confidante of David *Dubinsky, president of the International Ladies Garment Workers Union.

For many of the years he had been in business, Schrader was joined by his son Mort, who became president of Abe Schrader Corp. in 1968. Another son, Steven, was with the company for a short time, but established his own career in publishing. In 1988, the Fashion Institute of Technology in New York named one of its apparel manufacturing labs the Abe Schrader Production Laboratory. Schrader marked his 100th birthday in October 2000 with a party for more than 200 guests at New York’s Plaza Hotel. He spent part of the night dancing. [Mort Sheinman (2nd ed.)]

SCHRECKER, FRANZ (1878–1934), German composer and conductor. Schrecker was born into a poor family in Nagyvarad, Hungary, and in his youth lost his father, a Hebrew teacher. During 1882–87 he studied at the Rabbinical Seminary and the University of Budapest, where he came under the influence of Ignaz *Goldziher. Schrecker served as rabbi in Csurgo in 1887–92, and during 1892–94 as instructor at the Jewish Teachers’ Training Institute in Budapest. From 1894 to 1902 he was a professor at the Lehranstalt fuer die Wissenschaft des Judentums in Berlin. Becoming mentally ill in 1902, he spent the rest of his life, a quarter of a century, in a sanatorium.

Schrecker’s contributions to learning appeared in 1884–1902 and were of an increasingly high order, marked by erudition and penetrating analysis of Islamic intellectual development, its impact on medieval Jewish thought, interfaith polemics, Jewish philosophy, and *Karaism. While his scholarly work was published in German or French, he wrote in a more popular vein in Hungarian. He was interested in current communal affairs and exercised a strong influence on his students. His last major publication was Die jüngsten Urteile uber das Judentum … (1902), directed against the academic Jew-baiting of de Lagarde, E.V. Hartmann, E. Meyer, and Houston Chamberlain.

Most of his studies appeared in MGWJ (vols. 34, 35, 40, 42, 43); ZAW (vol. 6); REJ (vols. 12, 29, 31); ZDMG (vols. 42, 45, 48, 52, 53); ZHR (vols. 1, 3); Bericht der Lehranstalt fuer die Wissenschaft des Judentums, 13 (1895); 18 (1900); the Acts of the V111 Orientalist Congress; and Semitic Studies in Memory of G.A. Kohut (1897), 495–513.

[Richard H. Popkin]

SCHREINER, MARTIN (Mordechai; 1863–1926), scholar in the field of medieval Jewish and Islamic letters. Schreiner was born into a poor family in Nagyvarad, Hungary, and in his youth lost his father, a Hebrew teacher. During 1882–87 he studied at the Rabbinical Seminary and the University of Budapest, where he came under the influence of Ignaz *Goldziher. Schreiner served as rabbi in Csurgo in 1887–92, and during 1892–94 as instructor at the Jewish Teachers’ Training Institute in Budapest. From 1894 to 1902 he was a professor at the Lehranstalt fuer die Wissenschaft des Judentums in Berlin. Becoming mentally ill in 1902, he spent the rest of his life, a quarter of a century, in a sanatorium.

Schreiner’s contributions to learning appeared in 1884–1902 and were of an increasingly high order, marked by erudition and penetrating analysis of Islamic intellectual development, its impact on medieval Jewish thought, interfaith polemics, Jewish philosophy, and *Karaism. While his scholarly work was published in German or French, he wrote in a more popular vein in Hungarian. He was interested in current communal affairs and exercised a strong influence on his students. His last major publication was Die jüngsten Urteile uber das Judentum … (1902), directed against the academic Jew-baiting of de Lagarde, E.V. Hartmann, E. Meyer, and Houston Chamberlain.

Kohut (1897), 495–513.

[Richard H. Popkin]

SCHRECKER, PAUL (1889–1963), historian of philosophy. Born in Vienna, he was appointed associate editor of the Prussian Academy of Sciences’ journal of publishing the complete critical edition of Leibniz’s works. The project was suspended in 1933, under the Nazis. Schrecker lost his post and fled to Paris, where he worked in the Centre Nationale de la Recherche Scientifique on the history of philosophy and the history of science. With D. Roustan, he began a critical edition of Malebranche’s writings. The first volume appeared in 1938, and the second was under way when the Germans took over Paris. He prepared an edition of some of Leibniz’ Latin writings, which he translated into French also. An English translation of some works of Leibniz by Schrecker and his wife appeared posthumously. He immigrated to the United States and was professor at the New School of Social Research, 1941–45, and at Swarthmore, Haverford, and Bryn Mawr colleges near Philadelphia, and from 1950 to 1961 at the University of Pennsylvania. He wrote many articles on themes in the history of philosophy, history of science, and philosophy of history; and a book, Work and History: An Essay on the Structure of Civilization (1948).

[Moshe Perlmann]
SCHRENZEL, MOSES (1838–1912), ideologist of Jewish nationalism. Born in Lemberg, Schrenzel was a property owner and, as is apparent from his book on banking problems in Austria (1876), was well informed on economic matters. In 1881 he published a booklet entitled Die Loesung der Judenfrage ("The Solution of the Jewish Problem") and in the same year brought out a supplement. The booklets express the writer's disillusionment with Jewish emancipation in Europe, especially in light of the situation of the Jews in the most advanced country in Western Europe, Germany. He saw the only solution to the Jewish problem in the establishment of an independent Jewish state and Jewish engagement in agriculture there. The best locality for the Jewish state, he believed, was North America, since in Erez Israel land was expensive, and once the rulers of Erez Israel, the Turks, discovered Jewish activities there "not only will they expel us, they will also annihilate us." These two pamphlets aroused much opposition, both among those who believed in emancipation and those who favored the settlement of Erez Israel. The similar ideas advanced by Leon Pinsker in his Autoemancipation, which appeared after Schrenzel's pamphlets, lead to the assumption that he had read the pamphlets before publishing his book, besides being aware of the controversy they had aroused in the press. Several years later Schrenzel changed his opinion about Erez Israel and founded a society called Kreuzer Verein ("Penny Society"), the contributions of whose members were intended for the purchase of land in Erez Israel for the purpose of Jewish settlement. The society, whose regulations emphasized national ownership of the land to be purchased, never reached the stage of practical activity.

[Getzel Kressel]

SCHRIRE, VELVA (1916–1972), South African cardiologist. Schrire was born in Kimberley, South Africa, and after completing his medical studies at the University of Cape Town proceeded to London, where he studied cardiology at the National Heart Hospital. Returning to South Africa, he founded the Cardiac Clinic at the Groote Schuur Hospital in Cape Town in 1951, and under his leadership the clinic achieved an international reputation, with Schrire playing a decisive part as a member of the team under Dr. Christiaan Barnard which performed the first heart transplant in history. In 1964 he was appointed associate professor of medicine at his university, and was promoted to full professor a few weeks before his death. Together with Barnard he published The Surgery of Common Congenital Cardiac Malformations (1966) and, in the same year, Clinical Cardiology.

SCHUB, MOSHE DAVID (1854–1938), Erez Israel pioneer. Born in Moinești, *Romania, Schub was a shohet in his home town. As early as the 1870s he was among the founders of an association for settlement in Erez Israel, which sent him to buy land there in 1882. He acquired the abandoned settlement Ja‘una near Safed. At the end of that year *Rosh Pinnah was established on this land, Schub was elected head of its committee and obtained permission from the Turkish authorities in Damascus to build houses there. When the settlement came under the patronage of Baron Rothschild, Schub refused to cooperate with Rothschild’s officials, gave up his land, and became headmaster of the first Hebrew school in the settlement. In 1891 he under took the management of the new settlement *Mishmar ha-Yarden and was later manager of *Ein Zeitim. At the invitation of Hovevei Zion he went to Germany in 1896 to run the exhibition of Jewish settlements in the Holy Land held in *Berlin and Cologne. There he met Theodor Herzl, became one of his ardent supporters, and accompanied him on his visit to Erez Israel in 1898.

He wrote many articles in Hebrew, Yiddish, and German on the problems of Jewish agricultural settlement. His writings include a history of the settlement, Yesud ha-Ma‘alah (1931), and his memoirs, Zikhronot le-Veit David (1937), which is also a valuable source on the early history of Jewish settlement in Erez Israel.

[Yehuda Slutsky]

“SCHUBERT, KURT (1923 – ), Austrian scholar. Schubert, a Catholic, was born in Vienna. He was the founder and head of the Institute for Judaic Studies (Judasitik) at Vienna University and chairman of the Austrian Christian-Jewish Friendship League. Schubert initiated the establishment of the Austrian Jewish Museum in Eisenstadt and was appointed to eliminate antisemitic references in Catholic textbooks and passion plays. He edited the periodicals Kairos (1959–94/5) and Studia Judaica Austriaca (1974–92). Among Schubert’s published works are Die Religion des nachbiblischen Judentums (1955); Israel – Staat der Hooftung (1957); Die Gemeine vom Toten Meer (1958; Eng. transl. Dead Sea Community, 1959); Die Kultur der Juden (2 vol., 1970, 1979); Juedische Geschicht (1995); and, together with his wife, Ursula, Juedische Buchkunst (2 vol., 1983, 1992).

[Mirjam Triendl-Zadoff (2nd ed.)]

SCHUBERT, LIA (1926 – ), dancer and choreographer. Schubert was born in Vienna and trained with the Russian ballerinas Preobrazhenska and Egoreva in Paris. During World War 11, her family was deported but she escaped. After the war, she worked with Leonid Massine and, in 1950, was a dancer and the choreographer of the Malmö City Theater in Sweden. In 1953, she moved to Stockholm and, in 1957, founded the Ballet Academy at Stockholm University, which she directed until she left for Israel in 1968. In 1969, Schubert and Caj Lottman, known professionally as Caj Selling, the male star of the Royal
Swedish Ballet, founded the Institute for Dance in Haifa. The Institute comprised a children's dance school, a two-year training course for dance teachers, and, in 1971–74, a modern dance company called The Dancers Stage. In 1974, Schubert and Lottman established The Haifa Piccolo Ballet, which performed in the style of classical ballet. In 1976, Selling left the company to become the artistic director of the *Batsheva Dance Company. Although the Institute was highly esteemed, it accumulated debts and, in 1980, Schubert left Israel and returned to Sweden. Most dance teachers in Haifa and the north of Israel, as well as many dancers, were students at the Institute.

[Schück, Johan Henrik Emil (1855–1947), Swedish literary historian. Born in Stockholm, Schück was the child of a mixed marriage, his mother being a non-Jewess. From 1898 until 1920 he was professor of literature at the University of Uppsala, where he also served as rector (1905–18). His historical approach to literary research profoundly influenced later Swedish criticism and his gifted teaching produced several outstanding pupils, notably Oskar *Ivar *Levertin and Martin *Lamm. In 1918, five years after his election to the Swedish Academy, Schück was honored with the post of president of the Nobel Foundation. After publishing an important study of Shakespeare (1888–84), he planned a large history of world literature, only two parts of which appeared: Antiken (1900) and Den israelitska litteraturen (1906). Later, however, he produced a six-volume manual of general literature (1919–26); histories of the Swedish people (1913–15) and of the Swedish Academy (1935–39); and a history of the literatures and academies of antiquity (8 vols., 1932–44). His outstanding achievement was the monumental Illustrerad svensk litteraturhistoria (1895–97; 7 vols., 1926–33”), written in collaboration with Karl Johan *Warburg. Together with R.G. Berg and F. Böök he also published an immense anthology of Swedish literature from 1500 to 1900 (30 vols., 1921–22) and an anthology of world literature in Swedish translation (3 vols., 1932). As a critic, Schück always excelled in clear analysis of genres and literary periods.

"SCHUDT, JANNI " (1664–1722), German Christian Hebraist, pedagogue, and Orientalist from Frankfurt am Main. The son of a Lutheran priest, Schudt studied theology in Wittenberg, and in 1684 went to Hamburg to study Oriental languages, including Hebrew. In 1689 he returned to Frankfurt, where he served in different positions in the local gymnasium, becoming its rector in 1717.

Schudt devoted himself especially to the fields of Hebrew and Jewish history and antiquities. He became interested in the Jews, their customs and history through his Oriental studies and meetings with Jews in Hamburg and Frankfurt. Another factor accounting for his interest was his desire to convert Jews to Christianity. The writing of what later became his most renowned work, Juedische Merkwuerdigkeiten ("Jewish Peculiarities," 1714–18), was motivated by the great fire of the Frankfurt ghetto on Jan. 14, 1711. The work consists of four volumes. The first volume is a detailed account of Jewish communities all over the world. In the second volume, which is devoted to an ethnographic depiction of the Jews of Frankfurt, Schudt provides detailed and mostly first-hand information about their history, ways of life, customs, professions, language, and clothing. The third volume contains Yiddish poems, such as the account of the Vincent *Fettmilch disturbances, a Purim play and comedy, and legislation concerning Frankfurt Jewry. The fourth volume contains supplements to the first three.

Although Schudt stated that his aim was to seek the truth and avoid all preconceived opinion, he drew upon doubtful sources which presented the Jews in an unfavorable light, and often referred to *Eisenmenger’s Entdecktes Judentum. Thus he transmitted such contemporary prejudices as that Jews were predisposed to usury and cheating, deploring their supposed insolence and pride, and their foot Judaesium ("Jewish stench"). However, he was skeptical of the *blood libel and the alleged desecrating of the *Host. When Schudt presents actual reports, especially those dealing with the Jews of Frankfurt, his books are an important historical source for the life and culture of the German Jews in the 17th century. Among his many works one should also note Compendium historiae judaicae (1700), Vita Jephtae (1701), and Juedisches Franckfurter und Prager Freuden-Fest (1716).

SCHUECK, JENÖ (1895–1974), Hungarian rabbi. Schueck was born in Onod, north Hungary, where his father was rabbi. After World War I he was appointed rabbi to one of the districts of Budapest, where he founded and maintained a home for Orthodox Jewish children from the country districts. He was appointed chaplain to the Hungarian armed forces and later Senior Orthodox chaplain. In this capacity he was extremely active in finding solutions to the problems of agunot. During this period Schueck played a prominent part in the reconstruction of Orthodox Judaism in Hungary. In 1960 he was appointed rabbi of Miskolc and became president of the Hungarian Council of Orthodox Rabbis. At the request of the Hungarian authorities he joined the World Union of Hungarian Jews, an organization centered in Budapest for the promotion of the Hungarian viewpoint throughout the world. He represented Hungarian Orthodox Jewry at the Conference of European Orthodox Rabbis held in London in 1965.

Among his publications in Hungarian are As ortodoxia a felszabadulás után ("Orthodox Judaism after the Liberation," Yearbook, Budapest, 1959); A két Szofer dinasztia ("Two Dy-

[Yehouda Marton]

“SCHUERER, EMIL (1844–1910), leading Protestant New Testament scholar. Born in Augsburg, Germany, the son of a merchant, Schürer studied theology at the universities of Erlangen, Berlin, and Heidelberg. In Heidelberg he was particularly influenced by Richard Rothe. He received his doctorate at Leipzig in 1868 and taught at the universities of Giessen (from 1878), Kiel (from 1890), and Göttingen (from 1895), where among his colleagues he counted Williamowitz-Möllendorf and Julius Wellhausen. Two achievements of his many-sided scholarship are especially noteworthy: his founding in Leipzig in 1876 of the Theologische Literaturzeitung, which he published for many years, thereby wielding an enduring influence on the critico-historical research of his time; and, even more important, his Geschichte des juedischen Volkes im Zeitalter Jesu Christi (Leipzig, 1901–09; index volume 1911). These were the third and fourth editions; the first appeared in 1874 under the title Lehrbuch der neustamentlichen Zeitgeschichte, and the second (Leipzig, 1886–1900) also appeared in English under the title, A History of the Jewish People in the Time of Jesus Christ (1885–91). In 1888 a partial translation appeared in Dutch. Another partial translation is A History of the Jewish People in the Time of Jesus, edited with an introduction by Nahum N. Glatzer (New York, 1961, 1963).

Schuerer’s historiographic concept evolves from a thesis which he formulated in the introduction as follows: “There is not one detail in evangelic history, not one word in Jesus’ message, which can be understood without a knowledge of Jewish history and of the Jewish people’s world of ideas.” An elucidation of New Testament history can therefore in particular be expected from research into post-biblical Judaism of this era. Schuerer’s achievement thus differs from that of all his predecessors by excluding from his study the non-Jewish ancient world and, simultaneously, by aspiring to make critical use as comprehensively as possible of all available sources (literary texts, inscriptions, papyri, coins), together with almost all of the so-called secondary literature. That his historical review commenced not with the conquest of Jerusalem by Pompey, but with the Maccabean revolt – because it was here that he detected the origins of later developments in the Jewish people’s internal history – also constituted a new approach. Schuerer’s encyclopedic work, dry and without stylistic pretensions, does not attempt to put forward daring hypotheses or even historical-theological interpretations. Occasionally, he seems to show a cool reserve with regard to the material, which, in his presentation of the Jewish religion, leads to a conspicuous narrowing of his horizon, as he restricts himself to dealing only with the messianic expectation and with the external fulfillment of the Law. This reserve approaches uncealed hostiltity in the chapter “Das Leben unter dem Gesetz” (11, 464–96) in which he deals with the legalistic side of Jewish piety, taking the point of view of the New Testament.

By the 1960s the need was felt for a thorough revision and updating of what was by then considered a minor classic. The new English edition was organized by the late Matthew Black (1908–1994) of the University of St. Andrews, and carried out by three Oxford scholars, Geza Vermes, Fergus Millar, and Martin Goodman, with the late Pamela Vermes as literary editor, under the title The History of the Jewish People in the Age of Jesus Christ in three volumes (1973, 1979, 1986/87). The editors resolved not to mark additions, corrections, and deletions in the text, but to revise it directly, introducing four types of change: (a) the removal of out-of-date items of bibliography and purely polemical material; (b) the revision of the bibliographies; (c) the correction and modernization of the references to, and quotation of, literary texts, papyri, inscriptions and coin legends in Greek, Latin, Hebrew and Arabic; and (d) above all, the addition of relevant new archaeological, epigraphic, papyrological and numismatic material. This has meant the introduction not only of fresh data of a type already known to Schuerer, but also of wholly new areas of evidence, such as the Babylonian tablets relative to Seleucid chronology, the Dead Sea Scrolls, and the Bar Kokhba documents.

The revised work has preserved as much as possible of the original Schuerer and has offered a substantially updated compendium for research for the use of late 20th and early 21st-century historians of Judaism in the age of Jesus. The new English Schuerer has subsequently been translated into Spanish (Historia del pueblo judío en tiempos de Jesus, 1985) and into Italian (Storia del popolo giudaico al tempo di Gesù Cristo, 1985–99).

[Heinz Schreckenberg / Geza Vermes (2nd ed.)]

**SCHUHL, PIERRE-MAXIME** (1902–1984), French philosopher. Born in Paris, he received his doctorate there in 1934. He taught at Montpellier and was appointed professor at Toulouse in 1938. In World War II Schuhl was a captain in a motorized division; he was captured and spent 1940–44 at the Colditz camp for officers of various Allied countries. After the war he became a professor at the Sorbonne, and chairman of its philosophy department in 1962. He was also editor of the Revue philosophique from 1952, and editor of the series Bibliothèque de Philosophie contemporaine. In addition, Schuhl was president of the Société des Etudes Juives (1949–52). His main interest was in Greek philosophy, especially that of Socrates and
Plato. He wrote on these subjects as well as on their influences on later thinkers, ancient and modern.

His books include *Platon et l'art de son temps* (1933, 1932); *Essai sur la formation de la pensée grecque* (1934, 1949); his the- sis; *Machinisme et philosophie* (1938, 1947); *Études sur la fabulation platonicienne* (1947); *Pour connaître la pensée de Lord Bacon* (1949); he edited, *Trois essais de Montaigne* (1951); *L'Oeuvre de Platon* (1943); *Etudes platoniciennes* (1960), which includes an essay on contacts between Jewish and Greek think- ers; and *Le Dominateur et les possibles* (1960).

[Richard H. Popkin]

**SCHULBERG, BUDD WILSON** (1914– ). U.S. author. Born in New York. Schulberg was for some time, like his father, a Hollywood screenwriter. His first and best-known novel, *What Makes Sammy Run?* (1941), is largely a description of a ruthless Jewish success-hunter in Hollywood during the 1930s, with a sentimental portrayal of Sammy's East Side family. From 1943 to 1946 he served in the U.S. Navy, in the Office of Strategic Services, and was decorated for collecting the photographic evidence used at the Nuremberg Trial (1945–46). Schulberg's subsequent works include *The Harder They Fall* (1947); *The Disenchanted* (1950); *Some Faces in the Crowd* (1953); and the script of the prize-winning film, *On the Waterfront* (1954), which Schulberg turned into a novel, *Waterfront* (1955). During the hearings of the House Un-American Activities, Schulberg was identified as a member of the Communist Party. In 1951, in a telegram to HUAC, as well as in subsequent testimony, Schulberg stated that he had a Communist affiliation from 1937 to 1940 but pointed out that his “opposition to communists and Soviet dictatorship is a matter of record.” Among his later works are *From the Ashes: Voices of Watts*, edited by him and published in 1967, and *The Four Seasons of Success* (1972), his understanding of what several writers made of their success and/or failure. His autobiog raphy, *Moving Pictures: Memories of a Hollywood Prince*, was published in 1981.

**SCHULHOF, ISAAC** (d. c. 1733), rabbi; chronicler of the siege of Buda (Ofen, see *Budapest*) of 1686. Born in Prague, on his mother’s side he was a descendent of *Judah Loew b. Bezalel. He married the daughter of Ephraim Cohen, a fugi- tive from the *Chmielnicki* massacres. The family settled in Buda in 1666, where Ephraim was appointed rabbi; he died in a plague, before the siege. After the death of his father-in-law, Schulhof became the leading figure in one of the circles for prayer and study which devoted three nights a week to prayer. In his work *Megillat Ofen* (*Scroll of Ofen*), he describes the capture of the city from the Turks, the desperate defense they put up, and the extreme cruelty of the Austrians, who looted, massacred, and thirsted after Jewish blood. His wife Esther lost her life and her eight-year-old son was taken captive and car-
Festivals of the International Society for Contemporary Music. In 1942 he was seized by the Nazis and died in the Wetzburg (Bavaria) concentration camp.

His compositions favor the grotesque and make use of atonal and polytonal devices, jazz-like idioms, and quarter-tone experiments. They include symphonies; works for voice and orchestra; a ballet, La Somnambule (1931); an opera, Plameny (“The Flames”, 1932); and chamber music. His works with political themes are Symphony of Freedom (1941) and his oratorio The Communist Manifesto, performed posthumously in Prague in 1962.

**BIBLIOGRAPHY:** Grove, Dict; MGG, s.v. (incl. bibl.).

**SCHULLER, GUNThER** (Alexander; 1925– ). U.S. horn player and composer. Born in New York, Schuller studied and later taught at the Manhattan School of Music. He played the horn in the Cincinnati Symphony Orchestra and at the Metropolitan Opera, New York (1945–59). In 1957 he coined the term “Third Stream” for the combination of jazz improvisations with classical musical forms, and in 1962 directed the first international jazz festival in Washington, D.C. Schuller’s rhythm, Schoenberg’s serialism, Webern’s orchestration, and Babbitt’s principles of “combinatorality” found expression in a Symphony for Brass (1950); a ballet, Variants (1960); a piano concerto (1962); a cello concerto (1945); two operas: The Visitatation (Hamburg, 1966), which is based on Kafka’s novel The Trial, and The Fisherman and His Wife, a chamber opera for children (Boston, 1970). A collection of his writings can be found in his book Musings: The Musical Worlds of Gunther Schuller (1986).

[Israela Stein (2nd ed.)]

**SCHULMAN, KALMAN** (1819–1899). Hebrew writer of the Haskalah era. Born in Stari Bichov, Belorussia, he studied in his youth in Lithuanian yeshivot but, attracted by the Haskalah, he studied Bible, grammar, and German independently. He settled in Vilna in 1845, where he tutored the sons of affluent families. He joined the circle of maskilim in the town and became a close friend of the poet M.J. *Lebensohn. From 1849 to 1861 he taught Hebrew language and literature in the high school attached to the state rabbinical school. After leaving this post he devoted himself to literary work, and was under contract with Romm publishers, who paid him a pittance that scarcely enabled him to support his family. His books, mostly translations, were intended to spread Haskalah among the Hebrew reading public and youth. Schulman was moderate and careful in expressing his ideas, and his books, many of which went through several editions, were also popular in Orthodox circles. His widely read abridged translation of Mystères de Paris (1857–60 and five more editions in the next half-century), an adventure novel by the French writer, Eugène Sue, was an innovative experiment in the translation of a contemporary novel into Hebrew; it triggered a dispute, for the conservative circles believed it was sacrilegious to use the Hebrew language for a description of the Paris underworld. This controversy probably deterred Schulman from translating more novels, and he devoted himself to translating and adapting scientific books. Divrei Yemeni Olam, a history in nine volumes, based on Georg Weber and other German historians, was commissioned by Hevrat Mefizei Haskalah (*Society for the Promotion of Culture among the Jews of Russia*; 1867–84). His translation of Josephus from German into Hebrew, focusing on the Wars of the Jews (1861–63), was the first rendition of the Jewish historian into Hebrew. His book on Bar Kokhba’s heroism, Harisot Beitar (1858), was influential and popular. Schulman, a prolific contributor to the Hebrew press, published a series of books and compilations dealing with the history of Palestine and its environs, Toledot Hakhmei Yisrael (4 vols., 1873–78). Schulman used a florid biblical Hebrew, and was skillful in the presentation of new terms. His books have been forgotten, but in their time played an important role in developing the Hebrew reading public. Among his other works are Safah Berurah (1848) and the geographies, Mosedei Ereẓ (1871–77), and Mehkerei Ereẓ Rusyah (1870).

[Yehuda Slutsky]

**SCHULMAN, SAMUEL** (1864–1955). U.S. Reform rabbi. Schulman, born in Russia, was taken to the U.S. as a small child. By the age of 13 he had a significant knowledge of Hebrew and of the Talmud. He received his B.A. from the City College of New York in 1885 and then went to the Berlin Hochschule fuer die Wissenschaft des Judentums (1885–89), where he received his ordination. Returning to the U.S., he briefly served as rabbi in New York City and then in Helena, Montana, from 1890 to 1893 and in Kansas City from 1893 to 1899. In 1899 Schulman moved to Temple Beth El in New York City, remaining there until 1937 when it merged with New York’s Temple Emanu-El, the wealthiest and most prestigious Reform congregation in the U.S. He retired in 1935. An eloquent orator, Schulman was also one of the most learned figures in Judaism in the U.S. Reform movement, on which he sought to exert a moderating influence. He was president of the Central Conference of American Rabbis from 1911 to 1913 and president of the Association of Reform Rabbis of New York from 1921 to 1926. He was president of the interdenominational Synagogue Council of America from 1934 to 1935 and director and vice president of the YMHA Association of New York. In addition, he served as one of the non-Zionist members chosen to sit on the executive committee of the Jewish Agency for Palestine in 1929. His main activity outside the rabbinate, however, was de-
voted to the Jewish Publication Society of America; he was a member of its publishing committee for many years and took part in the society's retranslation of the Bible into English that commenced in 1903 and was concluded in 1917. He argued for the greater incorporation of Jewish ritual into Reform Judaism and was a moderating force at the Columbus Platform of 1937, that repudiated the earlier *Pittsburgh Platform.

[Hillel Halkin]

**SCHULMANN, ELIEZER** (1837–1904), Hebrew writer; researcher into the history of Yiddish language and literature. He was born in Salant, Lithuania, and became treasurer of one of the large enterprises of the *Brodski family in Kiev. Financially independent, he spent his free time doing research and contributed to various Hebrew papers (Ha-Shahar, Ha-Asif, Pardes, Ha-Shiloah, etc.). He made his name in Hebrew literature with his richly researched studies of Heine and Ludwig Boerne (Mi-Mekor Yisrael, 1877 and 1894), which illuminated these writers' characters, actions, and era. For many years Schultmann pursued research into the Yiddish language and its early literature. Noteworthy among his essays on this subject is *Imrei ha-Safah* (Ha-Shiloah, 4 (1898)), and a monograph, *Safah Yehudit-Ashkenazit ve-Sifrutah mi-Kez ha-Me’ah ha-Tet-Vav ad Kez Shenot ha-Me’ah ha-Yod-Het* ("German-Yiddish and its Literature from the Late 15th Century to the Late 18th Century," 1913). His attitude to what he termed a "mixed language" was negative, but he saw in Yiddish "an integral part of us, in which the spirit of our nation is displayed just as in our primal literature, Hebrew." The book is important for its originality and the abundance of citations from manuscripts and old editions.

**BIBLIOGRAPHY:** Rejzen, Leksikon, 4 (1929), 548–52; Klausner, Sifrut, 5 (1957a) 275–9; Waxman, Literature, index.

[Yehuda Slutsky]

**SCHULSINGER, JOSEPH** (d. 1943?), Belgian author. A religious Zionist active in Antwerp Jewish life, Schulsinger contributed to various Jewish periodicals. *La gémulisation d’Aléno* (1932), his historical drama about Jewish persecution in Ferrara, led to an interesting correspondence with the French poet and playwright Paul Claudel (*Cahiers de Paul Claudel*, vol. 7, 1968). He was deported by the Nazis.

**SCHULTENS, ALBERT** (1686–1756), Dutch Orientalist. Schultens studied theology and Oriental languages in his native city Groningen, where in 1706 he defended his *Dissertatio theologica-philologica de utilitate linguæ Arabicæ in interpretanda sacra lingua*. In 1707 he studied in Utrecht with Adrian *Reland*, whose emphasis on interpreting Hebrew with the help of, inter alia, Persian, strengthened Schultens' conviction of the importance of Oriental cognates for the retrieval of the primitiva significatio or origines of Hebrew. In 1713 Schultens was appointed ordinary professor in Franeker. In 1729 he left for Leiden, where he was entrusted with the supervision of the Oriental manuscripts. Within three years, he was appointed professor *linguæ orientalium*.

Schultens employed the inductive empirical method characteristic of Dutch enlightened science. His comparative methodology (known as the Dutch School) was based on the theory of the "sisterly relationship" between Hebrew and Arabic, and deeply influenced 18th-century study of Hebrew, both in the Netherlands and abroad.

Schultens published grammatical works, including *Institutiones* (Leiden, 1737) and *Vetus et Regia Via Hebraicae* (Leiden, 1738), various dissertations on the comparative method (*Oratio de fontibus, 1713, Origines Hebraeae, 1724, Oratio de linguae Arabicae antiquissima origine, 1729*), and philological commentaries on Job (1747, also translated into English and German) and Proverbs (1748).

[Irene E. Zwiep (2nd ed.)]

**SCHULTZ, DUTCH** (Arthur Simon Flegenheimer, "The Dutchman"; 1902–1935), U.S. gangster of the 1920s and 1930s, only boss of Murder Incorporated to be killed by Murder Inc. Born in Manhattan to Emma Neu and Herman, Austrian-German immigrants, Schultz was raised in the Bronx after his father abandoned the family when Schultz was young. Leaving school at 14 in order to support himself and his mother, Schultz worked for low-level mobsters at a neighborhood nightclub and robbed crap games before graduating to burglary. On December 12, 1919, he was caught breaking into an apartment in the Bronx and arrested and sentenced to jail, the first of 13 arrests but his only prison sentence. After serving 15 months, he took on the name "Dutch Schultz," the nickname of a notorious young gangster from the late 1800s. Schultz rode shotgun in trucks for mobster kingpin Arnold *Rothstein*, and by 1928 was in business for himself working as a bootlegger and extortionist. With a quick temper and a reputation for brutality, Schultz muscled in for complete control in the Bronx of bootlegging, eliminating anyone who crossed him, like Legs Diamond and Vincent Coll, and, some say, Rothstein.

With the end of Prohibition, he moved on to the numbers racket, and soon was named by the FBI as Public Enemy #1. On January 25, 1933, the state of New York indicted Schultz for tax evasion in the sum of $92,103.34. Schultz moved to New York to evade arrest, but on November 28, 1934, he was surrendered in Albany on the tax indictment charges. The case in Syracuse ended in a hung jury on April 29, 1935, and he was acquitted in a second tax trial in Malone, N.Y., on August 2, 1935. Schultz wanted to have Special Prosecutor Thomas E. Dewey assassinated and presented a plan before the heads of the national Syndicate, including Lucky Luciano, Lepke *Buchalter*, and Meyer *Lansky*. But the Mob worried about the backlash of such a murder, and voted against the plan. Schultz left the meeting saying he would do it himself.
Within 48 hours. As a result, hit men working for Buchalter’s Murder, Inc. shot Schultz and three cohorts two days later on October 23, 1935, at the Palace Chop House, which served as Schultz’s headquarters in Newark, N.J. The three bodyguards were shot dead, but Schultz was taken to Newark Hospital and held onto life for another day. As time passed, Schultz began talking incoherently and nonsensically, influenced by a high fever and large quantities of morphine. Police assigned a stenographer to write down everything he said right until he died at 8:35 p.m. on October 24, 1935. Schultz received last rites in his hospital room from a Roman Catholic priest at the request of Schultz’s 21-year-old wife, Frances, after he had been baptized three months earlier while awaiting trial in Malone. At his funeral in a Catholic cemetery three days later, only his mother, sister, wife, and Father McNerney, who performed a Catholic service, were present. His mother had a Jewish talit, or prayer shawl, draped over the coffin.

Schultz’s life, and specifically his death-bed confession, became legend, and were used by writers as the basis of numerous novels and feature films, including E.L. *Doctorow’s Billy Bathgate* (1989), which was made into the 1991 movie starring Dustin *Hoffman; William Burroughs’ The Last Words of Dutch Schultz* (1969); and the 1997 film *Hoodlum*. He was also the subject of Paul Sann’s *Kill the Dutchman! The Story of Dutch Schultz* (1971).

[Schulweis, Harold Maurice (1925– ), U.S. rabbi, theologian, community leader. Born in the Bronx, N.Y., Schulweis was educated at Yeshiva College, Jewish Theological Seminary of America, New York University, and the Pacific School of Religion in Berkeley, Calif. He taught philosophy at City College of New York before taking pulpits in Parkchester, N.Y., Oakland, Calif., and Encino, Calif.

Schulweis is widely regarded as the most successful and influential synagogue leader in his generation. His theology of the American synagogue extended the traditional role of the synagogue to encompass the full cultural life of a living Jewish community. Beginning in 1970, at Valley Beth Shalom in Encino, Schulweis introduced a series of synagogue innovations that spread widely among American congregations. These include: Synagogue-based “Havurot” – small groupings of families sharing learning and celebration in congregants’ homes; “Response” – a support and educational organization welcoming gays and lesbians and their families into the synagogue; and “Keruv” – a vigorous outreach to unaffiliated Jews and “unchurched” Christians, offering classes and counseling toward conversion into Judaism.

As a theologian, Schulweis has reconsidered the classical concept of God. He locates God not above but within and between human beings, not a vertical relationship but communal and internal. The conception of “the God within and between” allows him to argue that revelation is both divine in origin and carried out by human powers of expression. Morality is the expression of conscience, which is a living nexus between the divine and the human in everyday life. Schulweis thought that by defining God as the source of history’s dynamic, the conception of the personal God reduces the human being to passivity and subservience. Instead, Schulweis argues for a two-dimensionalized conception: Elohim, the amoral God of nature; Adonai, the God of transformation, whose attributes of goodness – Godliness – we make real in bringing the world closer to perfection. Thus, the focus of religious experience and reflection for Schulweis is not God but “Godliness.” This “predicate theology” concentrates upon God’s attributes of goodness instead of arguing the existence of a personal, “subject” God. In this way, Schulweis rescues belief from the problem of evil, and simultaneously restores the dignified place of the human being as God’s Covenantal partner.

This conception runs aground if there is some circumstance wherein Adonai’s attributes of Godliness are totally absent. The Holocaust would seem to present this scenario, prompting some to proclaim that the God of the Bible died at Auschwitz. In response, Schulweis notes that despite the overwhelming evil of the Holocaust, there remained “sparks” of Adonai even in that most benighted moment. In the late 1960s, Schulweis was introduced to a Jewish family rescued and hidden from the Nazis by German Christians. In response he founded The Jewish Foundation for the Righteous as a way of celebrating the heroic goodness of Christians who rescued Jews in German-occupied Europe.

In a similar way, Schulweis argued that action is de-
manded in all circumstances of moral darkness. He cofounded MAZON, as an answer to poverty in America, and established Jewish World Watch, a coalition of Jewish organizations dedicated to alleviating suffering and raising political awareness of on-going genocide around the world.

Rabbi Schulweis wrote many books, including: Approaches to the Philosophy of Religion, Evil and the Morality of God, For Those Who Can’t Believe, Finding Each Other in Judaism, In God’s Mirror, and two books of original religious poetry and meditation: From Birth to Immortality and Passages in Poetry.

[Edward Feinstein (2nd ed.)]

**SCHULZ, BRUNO** (1892–1942), Polish author and painter. Born in Drohobycz, Galicia, Schulz trained as an architect and during the years 1924–39 taught art in the high school of his home town. Księga Bałwochwalcza, a volume of his collected pictures, appeared in 1922–24. He first made his mark as a writer with reviews published in 1933 in Wiadomości Literackie. The two surviving works of fiction which Schulz produced were Sklepy cynamonowe (1934) and Sanatorium pod klepsydrą (1937), both volumes of short stories. He set his tales in a small town, much like his own, though bereft of local color, combining authenticity with fantasy and myth. Like *Kafka*, whose novel *The Trial* he translated into Polish (1936), Schulz was a literary pioneer of the magical and absurd and he produced works that were accompanied by his own illustrations. Schultz’ two collections were translated into English by Celina Wieniewska and published in the Penguin series “Writers from the Other Europe,” edited by Philip Roth. The first collection to appear was The Street of Crocodiles, followed by Sanatorium under the Sign of the Hourglass (1979) consisting of 13 stories, partly re-creations of childhood memories. Isaac Bashevis Singer called them “the work of one of the most remarkable writers who ever lived.” V.S. Pritchett called The Street of Crocodiles “a masterpiece of comic writing: grave yet demented, plain yet poetic, exultant and forgiving...” Cynthia Ozick’s Messiah of Stockholm is an imaginative fable about the search for Schulz’s lost manuscript. During the Nazi occupation Schultz was murdered by the S.S.

[Stanislaw Wygodzki]

**SCHUMACHER, GOTTLIEB** (1857–1924), architect, cartographer, and archaeologist. Born in Zanesville, Ohio, in his childhood he went to live in the German Templar colony in Haifa. Until 1918 he worked in Haifa as an architect and contractor, building roads, bridges, houses, and also some Jewish settlements. He traveled widely and surveyed the Jaulan (1885) and the Hauran and northern Ajlun (1886) for the Palestine Exploration Fund, and in 1891, the Hauran and Belqa for the Deutscher Palästinaverein. Every year from 1894 to 1902 he visited parts of Transjordan. He was the first to excavate at Megiddo (1903–05) and worked as well at Baalbek (1903–04) and Samaria (1908).

In 1924 he published a map of Transjordan (*Karte des Ostjordanlandes*). He also published *Tell el-Mutesellim* (Ger., 1908), the report on his excavations at Megiddo; Jaulân (Eng., 1888); *Across the Jordan* (1886); and *Northern Ajlûn* (1890). The remainder of his notes on Ajlun were published by C. Steuernagel.

[Michael Avi-Yonah]

**SCHUMAN, WILLIAM HOWARD** (1910–1988), U.S. composer. Born in New York, Schuman studied at the Malkin conservatory there. After holding various teaching posts, he became director of publications for the music publishing firm of G. Schirmer, Inc. (1945–52). He was head of the Juilliard School of Music (1945–62) and in 1962–1969 became president of the Lincoln Center, New York. He wrote ballets, symphonies, choral works, chamber music, and songs. Among his best-known compositions are Symphony for Strings (no. 5; 1945) and the ballet *Undertow* (1945). The emotional intensity of his work and its vigorous rhythms and complexity of contrapuntal structure established him as one of the most prominent American composers of his generation.

**BIBLIOGRAPHY:** Grove, Dict.; MGG; Reimann-Gurlitt; Baker, Biog Dict.

**SCHUMANN, MAURICE** (1911–1998), French politician and journalist. Born in Paris, Schumann worked for the French news agency, Havas, in London and Paris, and in 1939 became political editor of *L’Aube*. Following the fall of France, Schumann went to London and was head of the French radio service of the BBC from 1940 to 1944. He was a member of the provisional consultative assembly from 1944 to 1945 and was one of the founders of the Mouvement Républicain Populaire (MRP). From 1945 to 1958 Schumann represented the MRP in the Constituent Assembly and the National Assembly and later became head of the party. Subsequently he held office in several coalition cabinets as foreign minister (1951–54) and was a minister of state for scientific research (1957–68) and minister of social affairs (1968–69). In 1969, following the election of Georges Pompidou as president of France, Schumann was once more made minister of foreign affairs (serving until 1973), in which capacity he faithfully carried out his government’s pro-Arab policy. In 1974 he was elected to the French Academy. Schumann converted to Christianity in his youth and took no part in Jewish affairs.

His writings include *Le Germanisme en Marche* (1938); *Honneur et patrie* (1945); *Le vrai malaise des intellectuels de
SCHUR, ISSAI (Isaiah; 1875–1941), mathematician. Schur was born in Mogilev, Ukraine. In 1920 he became professor of mathematics at the University of Berlin. He specialized in the theory of numbers, particularly with regard to finite groups and their representations. He is widely known as the author of “Schur’s lemma,” which states that the only operators that commute with a unitary irreducible representation are the scalar multiples of the identity operator. Schur is also credited with extending the finite group theory to compact groups and is noted for his work in the representation theory of the rotation group. With the rise of Nazism he emigrated to Erez Israel, where he lived until his death.

[Aaron Lichtenstein]

SCHUR, ZEV WOLF (William; 1884–1910), pioneer Hebrew writer and journalist in the United States. Born in Lithuania, he settled in the United States in 1888 and spent most of his life in poverty. A friend of Abraham *Mapu, Schur devoted himself to Hebrew literature, traveled and taught in many countries, including the Far East, and wrote about his voyages in the periodicals Ha-Meliz, Ha-Yom, and Ha-Shahar. His travelogues were collected in two books: Mahazor ha-Hayyim (1884) and Masot Shelomo (1886/7). He was an ardent pioneer of the Hebrew press in America and, later, of political Zionism, participating in the Fourth Zionist Congress. Under his editorship the periodical Ha-Pisgah (1889–99), in which Tchernichowsky made his literary debut, attracted the best Hebrew writers in America and some Hebrew writers from abroad. After it ceased publication, it was continued as Ha-Tehiyah (1899–1900). Schur wrote several novels in Hebrew. His most important book is Nezah Yisrael (1897), a defense of Judaism against Christian attacks, against Reform Judaism, against socialism and anarchism. It affirms the twin axiom: the eternal existence of Jewry and the eternal nature of the Torah. Supporting nationalism, it was the first Hebrew work in America to react favorably to political Zionism.

[Eisig Silberschlag]

SCHUSHEIM, AARON LEIB (1879–1955), early member of *Po'alei Zion. Born in Radymno, Galicia, Schussheim became a basket weaver when a boy. In 1905 his search for work brought him to Cracow, where he joined the Po'alei Zion movement. After the publication of his first articles in Yiddish, he became the editor of the Po'alei Zion Yiddish newspaper Der Yidisher Arbeter in 1906. Schussheim continued to work at his trade at the same time. Years later the previous coeditor S. *Kaplansky said of him: “In the basket weaver of Cracow we found a born journalist,” and the period of Schussheim’s editorship was indeed the paper’s finest era. He educated his readers in the principles of socialism and Judaism and also developed the paper’s literary section. Schussheim served in the Austrian army during World War I and after his demobilization continued his journalistic career in Vienna and Galicia. In 1926 he emigrated to Argentina, and was a member of the editorial board of the Yiddish daily Di Yidische Tsaytung in Buenos Aires until his death. He wrote hundreds of articles and essays for the paper, a few of which were published in his book Fun Klayne un Groyse Zakhen (1949). He also published a booklet on Menahem *Ussishkin (Yid., 1943).

[Menel Singer]

SCHUSTER, English family of German origin. The founder of the Frankfurt mercantile family of Schuster was JUDEL JOSEPH SCHUSTER (d. 1782), who started a cotton-goods business in 1750. It was enlarged by his son, SAMUEL JUDAH, who in 1786 established the firm of Gebruder Schuster. By the time Samuel Judah’s eldest son, JOSEPH SAMUEL (1785–1858), became the head of the firm, it was doing a considerable amount of trade with England, and violated the restrictions imposed by Napoleon when he occupied Frankfurt. As a result of the penalties imposed, the Schusters decided to leave Germany. Two of Joseph Samuel’s brothers, LEON and SAMUEL, emigrated to England in 1808, while the youngest brother HENRY moved to Brussels, although his son LOUIS followed his uncle to England. Joseph Samuel stayed behind to wind up the business and in the event remained in Frankfurt and carried on Gebruder Schuster as a banking house. Joseph Samuel’s son, FRANCIS JOSEPH SCHUSTER (1823–1906), was a citizen of considerable standing in Frankfurt, where among his activities was directorship of the Municipal Bank. In 1869, not wishing to become a Prussian citizen after the city’s annexation, he too decided to emigrate to England. Like his uncle before him, he started his new life in Manchester and then moved to London, where he became a partner in the firm of Schuster, Son and Co., merchants and bankers. Francis Joseph’s three sons were ERNEST JOSEPH SCHUSTER (1850–1924), Sir Arthur *Schuster (1851–1914), a noted mathematical physicist, and Sir FELIX SCHUSTER (1854–1936; see below). It is not known if they abandoned Judaism before leaving Germany, but none of them had any connection with the Jewish community in England. Ernst Joseph was a partner in the family firm for many years before becoming a member of the bar. He was an authority on international law and lectured for the Institute of Bankers and the London School of Economics. Felix Schuster, the youngest of Francis Schuster’s three sons, became a leading figure in British banking and played an important part in the direction of the country’s finances during World War 1. He joined the family firm at the age of 19 and was a partner at 24. Part of the business was taken over in 1887 by the Union of London and Smith’s Bank, of which he was governor from 1895 until, in 1918, it merged with the National Provincial Bank. Sir Felix— he had been created a baronet in 1906—became a director and one of the two alternating chairmen of the great new concern. Among the many public offices he held
was membership of the Council of India (1906–16). Another member of the family to achieve distinction was CLAUDE SCHUSTER, first BARON SCHUSTER (1869–1956), a grandson of Leo Schuster. A barrister educated at Winchester and Oxford, he was head of the legal branch of the Board of Education and several other governmental bodies, and from 1915 to 1944 was clerk of the crown in Chancery and permanent secretary to the Lord Chancellor. In 1944–47 he was head of the Allied Control Commission in Austria. He was knighted in 1913 and made a peer in 1944. Ernest Schuster's son SIR GEORGE ERNEST SCHUSTER (1881–1982), educated at Charterhouse and Oxford, was a major figure in the British administration in India, serving as finance minister in the Viceroy's Council in 1928–34. From 1938 to 1945 he was a Liberal National member of Parliament. In 1961 he was one of the founders of Voluntary Service Overseas and was later involved in the creation of Atlantic College. His autobiography, Private Work and Public Causes (1979), appeared when he was 98.

**ADD. BIBLIOGRAPHY:** ODNB online.

**SCHUSTER, AARON** (1907– ), chief rabbi of Amsterdam. Born in Amsterdam to parents who had recently emigrated from Russia, he was trained at the Ashkenazi Rabbinical Seminary of Amsterdam and graduated in classics at Amsterdam University. On ordination in 1941 he was appointed one of the communal rabbis of Amsterdam. In 1943, he was deported with other Dutch rabbis and his wife to Bergen-Belsen, where he was the only Dutch rabbi to survive. In 1955, after the death of Chief Rabbi Justus Tal, he was appointed chief rabbi of Amsterdam, holding the position until the end of 1972, when he resigned in order to settle in Israel. The synagogue which he attended regularly was named in his honor.

Schuster was rector of the Ashkenazi Rabbinical and Teachers' Seminary in Amsterdam from 1948 to 1972, and a member, and later chairman, of the Chief Rabbinate of The Netherlands, a standing conference of all Orthodox rabbis in that country. In this capacity he took the initiative, in 1957, in the establishment of the conference of (Orthodox) European Rabbis. While strictly Orthodox and uncompromisingly opposed to Reform, which during the 1950s and 1960s became active in The Netherlands, he represented, within the Orthodox community, the more tolerant attitude of most prewar Amsterdam rabbis, in contrast to the more extreme one of some of his postwar colleagues. A modest Liber Amicorum, with contributions by several Orthodox chief rabbis abroad, was published in his honor in 1971.

[Henriette Boas]

**SCHUSTER, SIR ARTHUR** (1851–1934), British scientist. Schuster was born in Frankfurt. When in 1866, following the war with Austria, the free city passed to Prussia, his father decided to emigrate and to join the Manchester branch of the family's merchant-banking firm. In 1870, Arthur Schuster entered the business, but soon decided on an academic career. He studied physics and mathematics and did research on the spectrum of nitrogen (he coined the word spectroscopy). He worked in Heidelberg under Gustav Robert Kirchhoff and Robert William Bunsen. In 1874 he returned to England, and at the age of 23 took charge of Sir Norman Lockyer's expedition to Siam to study the solar eclipse. There and elsewhere he obtained valuable visual observations and instructive photographs of solar corona. For several years Schuster worked and lectured at Owen's College, Manchester, and also at the Cavendish Laboratory, Cambridge, under James Clerk Maxwell and John William Strutt Rayleigh. From 1881 to 1907 he held a professorship at Manchester. There he became the friend and guide of Chaim Weizmann.

Schuster is known for his work on the discharge of electricity through gases and in seismology. In addition to working intensively as a research scientist he was an active administrator, taking a leading part in the organization of three universities – Manchester, Liverpool and Leeds. In 1904 he drew up the program of the International Union for Solar Research in collaboration with Hale and Arrhenius. In 1915 he was president of the British Association, and in 1918 he participated in the formation of the International Research Council. He was foreign secretary of the Royal Society from 1920 to 1924.

[Arthur Beer]

In 1988 Simon and Schuster were inducted posthumously into the Publishing Hall of Fame for “a lifelong commitment to book publishing.”

[Israel Soifer / Ruth Beloff (2nd ed.)]

**SCHUSTERMAN, CHARLES** (1935–2000) and LYNN (1939– ). U.S. business persons and philanthropists, Charles Schusterman was born to Russian immigrants living in Tulsa, Oklahoma. A graduate of the University of Oklahoma with a degree in petroleum engineering, Schusterman became a successful entrepreneur and generous philanthropist, whose
charitable efforts helped to revitalize Jewish life in America, the former Soviet Union and Israel.

Lynn Josey Schusterman was born in Kansas City, Missouri. She was raised in Oklahoma City, Oklahoma, and moved to Tulsa after she married Charles in 1962. Lynn served as president and CEO of their eponymous family foundation. Their daughter, Stacy Schusterman, served as a member of the foundation board.

In addition to co-founding and directing the Charles and Lynn Family Foundation (CLSFF), Lynn plays a leadership role in several national and international charitable organizations responsive to her philanthropic and religious goals. In 2006 her positions included president of BBYO, the largest, non-denominational Jewish youth group in North American; co-chair of the International Board of Governors of Hillel: The Foundation for Jewish Campus Life; and president of STAR (Synagogues: Transformation and Renewal), a philanthropic partnership conceived to promote Jewish renewal through the synagogue.

Charles (“Charlie”) Schusterman founded Samson Resources Company in 1971. Over the next 30 years, Samson grew to rank among the largest independent energy exploration and production companies in the United States. In 1983, shortly before his 48th birthday, Charlie was diagnosed with chronic myelogenous leukemia (CML). He responded to this disease with characteristic vigor, but later developed a second illness, interstitial lung disease (ILD), from which doctors believe he ultimately died in 2000.

In 1987, during the most trying times of Charlie’s battle with CML, he and Lynn established their foundation with an emphasis on education. While not overtly spiritual or religious, the couple also identified strongly with Judaism and their deep affiliation with the Jewish people permeated every aspect of their philanthropic agenda. “In a very short time,” Rabbi Irving “Yitz” Greenberg remarked when Charlie died, “The Schustermans established themselves as world leaders on the frontier of philanthropy for Jewish renewal.”

Their passion to work on behalf of Judaism and Jewish causes was fueled by their first visit to Israel together in 1977. It was during that experience that Lynn, in her own words, “fell in love with being Jewish.” The Schustermans eventually purchased an apartment in Jerusalem and increased their funding of causes vital to the security and economic future of the Jewish state, as well as to organizations that focus on education, children, and community service. Among its grantees in the early 21st century were the University of Oklahoma-Tulsa, the Tulsa City County Library Commission, the Parent Child Center of Tulsa, and the Community Action Project of Tulsa County, an organization that helps families in economic need achieve self-sufficiency. The foundation also seeks to create links between the programs it funds in Oklahoma and projects with similar missions in Israel.

Nationally and internationally, the CLSFF supports organizations that bring greater vitality and relevance to Jewish life. Its pursues its mission – to help spread the joy of Jewish living, giving, and learning – in communities throughout the world, from Moscow to Minneapolis and from Montevideo to Modi’in. The CLSFF seeks to ensure that a community of proud and educated Jews thrives for generations to come, even as increasing numbers of Jews count themselves among the unaffiliated and the intermarried. The foundation’s support for programs that make Judaism more accessible has produced positive results in all of the geographic areas upon which it has chosen to focus: United States, Israel, and the former Soviet Union.

In America, the CLSFF has funded a carefully selected array of programs and organizations including Birthright Israel, which has brought tens of thousands of college-age students to Israel to experience the same sense of connection that Charles and Lynn felt during their first family trip to Israel. The CLSFF also supports the American Israel Education Foundation, The Foundation for Jewish Camping, MyJewishLearning.com, and The Curriculum Initiative, a project designed to provide quality Jewish experiences for Jewish high school students attending boarding or other private schools.

The foundation also supports a diverse and growing number of Israel-based organizations, including the Beit Lynn network, a growing number of facilities designed to treat victims of child abuse and neglect, and the Meitarim network of schools, institutions that educate Jewish children in a religiously pluralistic environment. In the former Soviet Union, the CLSFF promotes Jewish renewal through its contributions and work with Hillel, the American Jewish Joint Distribution Committee, the Hebrew Union College, and the World Union of Progressive Judaism.

One of the hallmarks of the foundation’s operating philosophy is to engage in coalition-building of philanthropic partnerships, in efforts such as Birthright Israel and the Partnership for Excellence in Jewish Education (PEJE). Such partnerships leverage resources for maximum effect, and reflect the foundation’s continued adherence to the Schustermans’ leadership model. In particular, the CLSFF encourages unity among Jewish organizations, and stresses that Jews from all

178 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
denominations, backgrounds, and affiliations should work cooperatively on matters of mutual concern. The CLSFF also places a high priority on the professional development of those working on behalf of the Jewish people and sponsors several conferences each year to assist in that effort.

The CLSFF maintains offices in Tulsa, Washington, D.C., and Jerusalem.

[Alana Hughes (2nd ed.)]

SCHUTZBUND, REPUBLIKANISCHER, Austrian paramilitary organization. The organization was founded in 1922 at the initiative of the Social Democratic Party in opposition to the *Heimwehr, the right-wing paramilitary organization. Its leaders included Julius Deutsch, Rudolf Rafael Loew, Otto *Bauer, and Julius *Braunthal. At its height in the late 1920s it had approximately 40,000 members, including several hundred Jews, mainly in Vienna. It was disbanded by E. *Dollfuß in 1933 but continued to operate as an underground army until it was put down in the February uprising of 1934. Like the Social Democratic Party, the Schutz bund was careful not to be branded as a *Judenschutztruppe ("Jew-protector troop"). The question whether it should protect Jewish gatherings in the second district of Vienna (Leopoldstadt) from Heimwehr and Nazi attacks often became the subject of intense controversy; Schutz bund units would protect Jewish assemblies, wearing their uniforms but not their badges or service-belts. The organizational forms of the Schutz bund and the related workers' sports movement influenced the *Hapoel and the *Haganah in Palestine. Rudolf Rafael Loew was a member of the Schutz bund's military leadership and its financial officer. He emigrated to Palestine in 1938, where he became a member of the Haganah's general staff and later director of the Israeli military archive.

[Meir Lamed / Evelyn Adunka (2nd ed.)]

SCHUTZJUDEN (Ger. "protected Jews"), Jews who held letters of protection. In the Holy Roman Empire, from 1236 on, Jews were considered serfs of the chamber (*servi camerae regis), a special class of the population protected and taxed by the emperor. Later the emperors transferred their rights over the Jews to the free cities and territorial princes, who issued letters of protection for a regular fee to the Jews living within their dominions, thereby making them their subjects. The letter of protection (Schutzbrief), either general (to a community) or personal, included articles on commercial privileges, religious rights, freedom of movement, and taxation, and had to be renewed regularly. In the 17th and 18th centuries, when impoverished Jews from Eastern Europe sought rights of trade and residence in the west, the number of protected Jews became restricted and any increase was resolutely opposed by Christian (and sometimes Jewish) merchants. Most of the immigrants were therefore granted only letters of safe-conduct (Geleitbriefe) and further entrance rights were restricted, but some managed to obtain the highly coveted status of Schutzjuden, while a growing number of Jews were unvergeltet ("without letters of safe-conduct") and thus without secure legal status. In the late 18th and early 19th century, through the influence of the Enlightenment, letters of protection were often drawn up containing educational and commercial conditions which the recipient had to fulfill. Schutzjuden continued to be a common feature of German Jewry until full emancipation was granted to the Jews.

SCHWAB, HERMANN (1879–1962), German journalist and historical writer. In his native Frankfurt Schwab joined the school of the Israelitische Religionsgesellschaft (see S.R. *Hirsch). He was employed from 1902 to 1927 in the metal enterprises of Aron Hirsch near Berlin and in Halberstadt. He also worked as a journalist for the Frankfurter Zeitung, the Vossische Zeitung and other newspapers, was editor of the Juedischer Volkschriftverlag, and author of Orthodox children's books. A supporter of *Agudat Israel and its founder, Jacob *Rosenheim, Schwab organized its war orphans' fund during World War I, which established a number of orphanages in Poland. From 1927 he ran a press service in Berlin which he continued after emigrating to England in 1934. In London, he became president of the Golders Green Beth Hamidrash.

His main published works are: Kindertraeume: Ein Mainzerbuch fuer juedische Kinder (1911; Dreams of Childhood, 1945); Orthodoxie und Zionismus... (1919); Aus der Schuetzenstrasse (1923; Memories of Frankfurt, 1955); A World in Ruins: History, Life and Work of German Jewry (1946); The History of Orthodox Jewry in Germany (1950); 1933: Ein Tagebuch (1953); Jewish Rural Communities in Germany (1956); and Chachme Ashkenaz (Eng., 1964).

[Archiv Bibliographia Judaica]

SCHWAB, JOSEPH J. (1909–1988), U.S. educator, who emphasized the study of the philosophies of education and science in connection with the preparation of school curricula. Born in Columbus, Mississippi, Schwab began to teach at the University of Chicago in 1936 and was appointed professor of natural sciences in 1953. Although his interest was in general education, he was also concerned with Jewish education, as indicated by his paper The Religiously Oriented School in the United States: Memorandum on Policy (1964). He served as editor of the first experimental editions of the textbooks of the American Institute of Biological Sciences and as supervisor of its Teachers' Handbook. He was on the academic board of the Mellon Research Center for Jewish education at the *Jewish Theological Seminary of America and the consulting editor of
its Bible project textbooks. In 1938 and in 1965 he was awarded the University of Chicago’s Quanrell Award for Excellence in Undergraduate Teaching.

[Abraham J. Tannenbaum / Ruth Beloff (2nd ed.)]

SCHWAB, LöW (1794–1857), chief rabbi of Pest, Hungary. Born in Krukau, Moravia, he studied in Nikolsburg (‘Mikulov) and Pressburg (*Bratislava) under Mordecai b. Abraham Naphtali *Banet and Moses *Sofer respectively. Having served first as rabbi of Prossnitz (‘Prostejov), Schwab was invited to become chief rabbi of Pest in 1836. An outstanding talmudist and orator, Schwab also succeeded in creating an atmosphere of tolerance and conciliation in his congregation. The term of his rabbinate coincided with increasing Magyarization within Hungarian Jewry, which culminated in the struggle for full emancipation. Schwab encouraged the members of his community to cultivate the use of the Hungarian language, and to engage in agriculture and other productive labor: he was one of the founders of the Society for the Promotion of Handicrafts and Agriculture among Hungarian Jews (miKéFÉ).

In 1844 he submitted a proposal to publish the main tenets and principles of the Jewish religion, in order to prove their compatibility with the requirements of a modern state, to refute slanders by the opponents of Jewish civil rights, and to allay their suspicions. His proposal was rejected by the rabbinic council of *Paks (1844), but in 1846 his own congregation of Pest entrusted him with preparing this publication. It was printed in both Hungarian and German as a compendium of religious instruction for secondary school graduates and went into seven editions.

During the 1848 revolution Schwab voiced his opinions on both religious and secular political matters. Although admitting the need for some moderate and cautious innovations in the religious sphere, Schwab strongly opposed the extreme reformist program of the congregation led by Ignaz *Einhorn. He supported, however, the Hungarian national liberation movement, including the declaration of independence from Hapsburg rule (1849). On the suppression of the revolutionary struggle, Schwab was arrested with his son-in-law, Leopold *Löw.

Schwab’s published works include religious poems, in Hebrew and German, and some sermons.

[Jeno Zsoldos]

SCHWAB, MOÏSE (1839–1918), French scholar. Schwab, born in Paris, attended the Talmud Torah of Strasbourg. He served as secretary to Solomon *Munk, the Orientalist, during 1857–66, later writing his biography: Salomon Munk, sa vie et ses œuvres (1900). In 1869 Schwab began a 40-year career with the *Bibliothèque Nationale, first as an assistant and later as associate keeper. His scholarly interests were wide: he translated the Palestinian Talmud into French (Talmud de Jérusalem, 11 vols., 1871–90; repr. 1961), and he wrote Abravanel et son époque (1865); Histoire des Israélites (1866, 1895); and Vocabulaire de l’Angélologie (1896–99). Schwab also published Les Incunables orientaux et les impressions orientales au commencement du xvi siècle (1883). He described the Hebrew manuscripts and incunabula in the library of the Alliance Israélite (1904) and in other French and Swiss libraries.

Schwab contributed many articles to the Revue des Études Juives, the Journal Asiatique, and the bulletins of the Bibliothèque Nationale. Of particular importance is his Répertoire, a bibliography of articles published on Jewish subjects in learned journals between 1665 and 1900 (1899, 1914–23). The Répertoire, arranged alphabetically according to authors, lists 112 items by Schwab himself. His great erudition was not always matched by equal exactitude, and his work must therefore be checked thoroughly.

BIBLIOGRAPHY: D. Sidersky, Moïse Schwab, sa vie et ses œuvres (1919).

[Colette Sirat]

SCHWAB, SHIMON (1908–1995), German and American Orthodox rabbi. Born in Frankfurt am Main, Germany, Schwab was brought up in the Separatist Orthodox community founded by Samson Raphael *Hirsch. Unlike most German Orthodox rabbis, who received a seminary education, Schwab studied at the traditional Lithuanian yeshivas in Telz and Mir from 1926 to 1931 and received his ordination from three distinguished Lithuanian rabbis, among them Chaim Ozer Grodzinski. Despite his German background and devotion to the customs of German Jewry, Schwab remained under the influence of the Lithuanian yeshiva world for the rest of his life and tried to introduce its ethos into German Jewish life.

After an initial tenure as a rabbi in the large Bavarian rural community of Ichenhausen, Rabbi Schwab immigrated to the United States in about 1936 to serve as rabbi of Congregation Shearith Israel in Baltimore, one of the most strictly Orthodox congregations in the city at the time. In 1938 he accepted the post of assistant rabbi to the 76-year-old Rabbi Joseph *Breuer of Congregation K’hal Adath Jeshurun in Washington Heights (the heir to the Frankfurt Separatist Orthodox community at the northern end of Manhattan). He and Rabbi Breuer were co-rabbis of the congregation until the latter’s death in 1960, after which Schwab served as the main rabbi of the congregation.

Rabbi Schwab helped to steer the already strictly Orthodox “Breuer community” to the right, by placing greater emphasis on traditional Torah learning and treating exclusive study of Torah as an equally valid approach to Samson Raphael
Hirsch’s philosophy of “Torah im derekh ereẓ” (the integration of Torah and secular knowledge). He was a strong leader of his community, exerting his influence through his eloquent English language sermons, articles in the congregational newspaper, and active supervision of the community of some 1,000 families. He expanded the community’s educational system to include an adult yeshivah and kollel and a women’s teachers seminary, while continuing such other aspects of the community’s institutional network as kashrut supervision, the ritual bath, and youth organizations. Schwab strongly encouraged his community to remain in Washington Heights despite the growing influx of a Hispanic population into the neighborhood. Under his leadership, the congregation spearheaded a neighborhood patrol and created a neighborhood Jewish communal council to represent the needs of all the Jews of the neighborhood. These efforts were able to slow the exodus of his congregants from the neighborhood.

Schwab was a leader of the Agudath Israel of America, a lifelong advocate of the Hirschian policy of Austritt [non-cooperation with non-Orthodox forms of Judaism], and a fierce anti-Zionist. Besides his commentaries on the Bible, essays on history and Jewish thought (hashkafah), Schwab was probably best known for two volumes Heimkehr ins Judentum (Frankfurt 1934), which called into question German Orthodoxy’s compromises with modern culture and Elu ve-Elu. These and Those (New York, 1966) which gave equal weight to religious sources supporting and opposing secular studies.

[Schwarzer (2nd ed.)]

SCHWABE, MOSHE (Max; 1889–1956), classical scholar. Schwabe studied classical philology first in his native Halle, then in Berlin. His dissertation on Libanius, the fourth-century C.E. rhetorician of Antioch, presaged his interest in the Hellenistic East and in the Jewish history of that period. An ardent Zionist from his youth, Schwabe was among the founders of the first pioneer group (halutzim) in Germany. After World War I he headed the department of schools in the Lithuanian Ministry of Jewish Affairs and was deeply involved in the Hebrew and Zionist movements of Lithuania. Settling in Jerusalem in 1925, Schwabe joined the Hebrew University faculty and established the department of classics. He served as dean of the faculty of humanities (1945–47), and later as rector (1950–52).

Schwabe’s field of research was Greek-Jewish epigraphy in Erez Israel, and he became the leading interpreter of Greek inscriptions, especially those found in *Bet Alfa, *Caesarea, and *Bet She‘arim. His meticulous interpretations of Greco-Jewish inscriptions was an important contribution to the understanding of Erez Israel history and of the Jewish role in the Hellenization of the East. Schwabe’s research was published in leading Israeli and foreign periodicals.

He published reports on the excavations at Bet She‘arim (together with N. Avigad); contributed to jubilee and memorial volumes, and to the Sefer ha-Yishuv; edited the Philo translation by J. Mann, with an introduction and notes (1931); and coedited the memorial volume for Y.H. Lewy (1949) and the Dinaburg (Dinur) jubilee volume (1949). He also edited the classics division of the Encyclopaedia Hebraica. The first volume of Erez Yisrael, Meḥkarim bi-Yadot ha-Areẓ... (1951) was dedicated to him, and includes a bibliography of his writings.

[Shalom Perlman]
cruel, and maximalist, was based on the principle that the complete solution to the Jewish problem was through the settlement of millions of Jews in their homeland. Schwadron’s campaign of incessant and aggressive admonition, reflected in Mauschelpredigt eines Fanatikers (1916), Von der Schande eurer Namen (1920), and Aus der Zionisten-Predigt eines Fanatikers (1923), was at first conducted in German and owed much of its style to the influence of Karl *Kraus, with whom he cooperated in Die Fackel.

After he had settled in Ereẓ Israel he continued in the same vein in Hebrew, acquiring a pungent polemical style in that language as well. He published hundreds of critical and admonitory articles in almost every Hebrew newspaper, making *Ahad Ha-Am and his followers, such as those in the *Berit Shalom movement, his main target. He also published some pamphlets, including Torat ha-Ziyyunot ha-Akhzarit (“The Doctrine of Cruel Zionism,” 1944), and began to publish his collected writings, Mi-Shenei Evrei ha-Shādāh (“From Both Sides of the Hour,” 1946).

**BIBLIOGRAPHY:** Schweizerischer Verband der Freunde der Hebraischen Universität Jerusalem, Zum Andenken an Josef Chasnowitsch and Awraham Scharon (1960).

[Dov Sadan]  

**SCHWARTZ, ABRAHAM JUDAH HA-KOHEN (1824–1883),** Hungarian rabbi. Schwartz was a pupil of Moses Sofer and of Benjamin Wolf Levi. From 1861 to 1881 he served as rabbi of Bergszasz and for a number of years in his native town of Mad. He was an active participant in the rabbinical gathering in Nagymihaly in 1886 and at the congress held in Budapest in 1869. Although his personality was molded by the atmosphere of Pressburg, which was opposed to Hasidism, after a visit which he made to the head of the hasidic dynasty of Nowy Sacz (Zanz), Hayyim Halberstam, he became deeply attached to him and to Hasidism. He spent the festival of Shavuot in Zanz for 26 successive years. He also had connections with Isaac Meir Alter, the head of the hasidic dynasty of Gur (Gora *Kalwaria). Although he left only one work, responsa Kol Aryeḥ (1904), its influence on the rabbi of Hungary was very great. One of his grandchildren, Dov Beer Spitzer, wrote his biography – Toldot Kol Aryeḥ (1940).

[Naphtali Ben-Menahem]  

**SCHWARTZ, ABRAHAM SAMUEL (1876–1957),** Hebrew poet. Born in Lithuania, he immigrated to the United States in 1900. He became a physician in New York City in 1906. Schwartz’s poetry, written over a period of 50 years and collected in a posthumous volume in 1959, is conservative in form and predominantly lyrical and ethical in coloration. His long poem "Job" is an interesting and even daring conception: Job returns, after all his afflictions, to his original afluencc, but he misses the great privilege of contending with God about the order of the world. Other biblical and post-biblical themes on which he wrote poems include Ruth, Jeremiah, R. Johanan b. Zakkai, and Rashi.

[Eisig Silberschlag]  

**SCHWARTZ, ANNA JACOBSON (1915– ),** leading U.S. economist and economic historian. Schwartz was born and educated in New York City, the daughter of Pauline Shainmark Jacobson and Hillel Jacobson, recent immigrants from Eastern Europe. Anna Jacobson received her B.A. from Barnard College in 1934 and her M.A. (1935) and Ph.D. (1964) from Columbia University. In 1935, she married Isaac Schwartz, a controller for an importing firm. She and her husband had four children.

After working briefly for the U.S. Department of Agriculture and the Columbia University Social Science Research Council, Schwartz became a research assistant in the National Bureau of Economic Research in 1941 and was promoted to senior research associate 20 years later. In 1981–82, Anna Schwartz served as staff director of the U.S. Gold Commission and was in charge of writing the Gold Commission Report. She held various part-time academic positions at Brooklyn (1952), Baruch (1959), and Hunter Colleges (1967–69) of the City University of New York as well as at New York University (1969–70), and was appointed adjunct professor of economics at the CUNY Graduate Center in 1986, soon after she became emerita research associate of the NBER.

Schwartz, known for her meticulous attention to detail, was a leading authority on economic statistics, economic history, international monetary systems, and monetary economics. She published numerous articles, reviews, and books, both on her own and in collaboration with other prominent economists such as Walt W. Rostow, Milton Friedman, and Michael D. Bordo. Among her most important publications coauthored with Milton Friedman are A Monetary History of the United States, 1867–1960 (1963); Monetary Statistics of the United States (1970); and Monetary Trends in the United States and the United Kingdom: Their Relations to Income, Prices, and Interest Rates, 1867–1975 (1982). In 1987–88, Schwartz served as president of the Western Economic Association. She received honorary degrees from the University of Florida (1987), Stonehill College (1989), and Iona College (1992). In 1989, Money, History, and International Finance: Essays in Honor of Anna J. Schwartz, edited by Michael D. Bordo, was published in her honor. In 1993, the American Economic Association recognized Schwartz as a Distinguished Fellow.

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
SCHWARTZ, DAVID (1897–1985), U.S. apparel manufacturer. Schwartz, a native New Yorker, was raised in Harlem, then a neighborhood of Jewish and Italian immigrants. He went to work as a shipping clerk at 13, spent his life in the garment industry, and built his company, Jonathan Logan Inc., into the biggest independent dress business in the U.S. When Schwartz was 19, he and a friend named William Schwartz (no relation) started their own firm, TruSize Dress Co. They later formed Gladly Dress Co. and created a new entity, Gladly TruSize. They remained partners until 1937, when David Schwartz purchased Jonathan Logan Dress Co., then unknown, and began turning it into one of the garment industry’s biggest success stories. He added numerous labels and categories to the core Logan line of popularly priced dresses, either through internal growth or acquisition. In 1960 Jonathan Logan Inc. made history by becoming he first company making only women’s apparel to be listed on the New York Stock Exchange when it merged with Butte Copper & Zinc Co., a mining company, whose assets were then sold off to Anaconda Copper. Logan subsequently formed a division called Butte Knit, specializing in knitted apparel at a time that clas-sification was just beginning to flourish. It became one of the company’s most valuable units. In 1963, Logan recorded more than $100 million in annual sales, the first women’s clothing business to reach that milestone. Schwartz guided Logan until 1964, when he appointed his son president and chief operating officer but remained as chairman. RICHARD J. SCHWARTZ was then 25 years old, the youngest president of any business on the New York Stock Exchange. He became chairman in 1977, when his father retired. In 1984, United Merchants & Manufacturers acquired Logan, which had diversified into sportswear and swimwear. Its divisions included Misty Harbor, The Villager, Rose Marie Reid, Modern Juniors, Etienne Aigner, R&K Originals and Alice Stuart. The Schwartz family owned more than 7 percent of the stock, gaining almost $45 million in the deal. Richard Schwartz left the apparel business in 1985, opened his own investment concern and operated the David Schwartz Foundation. In 1999 he was named chairman of the New York State Council on the Arts. David Schwartz was an active fundraiser for United Jewish Appeal, the Jewish Memori-al Hospital, Brandeis University, the Albert Einstein College of Medicine at Yeshiva University, New York University Hospital, and Lincoln Center for the Performing Arts.

SCHWARTZ, DELMORE (1913–1966), U.S. poet, author, and critic. Born in Brooklyn, Schwartz was a member during the 1930s and 1940s of the literary-political group centered in the magazines Partisan Review (of which he was editor, 1943–55) and Commentary. In 1938 he won fame overnight with his first book, In Dreams Begin Responsibilities. This combined 35 lyric poems of “experiment and imitation” with other writings, including the short story which gave the book its title. His other works include two volumes of short stories, The World is a Wedding (1948) and Successful Love and Other Stories (1961); a verse-play, Shenandoah (1941); and a collection of lyrics, Vaudeville for a Princess (1950). Existence for Schwartz was fraught with terror, frustration, agony, and disappointment, and to him the Jew symbolized alienation. His deep vein of pessimism was expressed by a character in The World is a Wedding, who says, “You can’t fool me, the world is a funeral.” Schwartz found his most profound drama in the East European Jewish dream of America as the land of golden streets, freedom, and boundless opportunity. In his long, ambitious prose poem, Genesis (1943), which discussed the American Jew’s self-preservation, as well as in various short stories, Schwartz described with biblical grandeur the immigrant’s dream of the New World, his early struggles, his successes and failures, his marriages and children, the conflict between parents and children, the pressures of World War I, the ensuing boom, and the depression of the 1930s. During the years 1940–47, Schwartz taught at Harvard and Princeton universities.

Schwartz appears as the eponymous protagonist of Saul Bellow’s Humboldt’s Gift (1975).

SCHWARTZ, FELICE NIERENBERG (1925–1996), pioneering U.S. advocate for the advancement of women in the workplace. Born in New York City, the daughter of Albert and Rose (Kaplan) Nierenberg, Schwartz was a graduate of Smith College. In 1945, she founded the National Scholarship Service and Fund for Negro Students (NSSFNS), an organization dedicated to increasing opportunities for African-American students in higher education. The wife of a physician and mother of three, Schwartz founded Catalyst in 1962, with the goal of enabling women to rejoin the workforce. Catalyst developed a nationwide network of 250 resource centers and counseled women who wished to combine family duties with part-time employment. Concentrating on placing women in the public sector, the organization pioneered several job-sharing pilot projects. Schwartz co-authored How to Go to Work When Your Husband Is Against It, Your Children Aren't Old Enough, and There’s Nothing You Can Do Anyhow (1972) with colleagues, Margaret H. Schiffer and Susan S. Gilotti.

In the 1970s and 1980s, when increasing numbers of women were forced to seek full-time work, Catalyst shifted its focus from the private to the public sector and from counseling to research and advocacy. Catalyst also began promoting the participation of women in corporations and their recruitment on corporate boards. During these years Schwartz became a widely respected expert on work and family issues, and Catalyst increasingly served in an advisory capacity to major companies and firms.

Schwartz’s final years at Catalyst were colored by the national controversy ignited over her article “Management
Women and the New Facts of Life" (Harvard Business Review (January/February 1989)). A call to action to corporate leaders to remove the barriers to productivity and advancement still facing female managers, the article posited two ends of a spectrum along which corporate women fall: the “career primary” woman and the “career family” woman. As a result of her suggestion that creating policies to accommodate the “career family” woman was good business, she came to be known as the “mommy track author” and was the subject of hundreds of articles on the “mommy track controversy.” Ironically, after 27 years dedicated to the advancement of women, the founder of Catalyst was accused of establishing barriers to women’s advancement.

[Schwartz, Frederic Nierenberg, "Smith College..."

SCHWARTZ, FREDERIC (1951– ), U.S. architect, founder of Frederic Schwartz Architects. Born in New York, Schwartz worked in the city for over 22 years, won many prizes, and lectured to university audiences all over the world. He earned his A.B. Architecture from the University of California at Berkeley in 1973 and his Master of Architecture from the Harvard School of Design in 1978. Among his many awards were the Rome Prize in Architecture (1995); Deutsch Inc. Decade of Design Competition; and a National Endowment for the Arts Design Fellowship in 1983. His drawings and designs were seen in over 50 exhibitions from the Paris Biennale des Beaux Arts in 1982 to the Venice Biennale in 1992 and were included in the Avery Library, Columbia University permanent collection. Schwartz Architects won the revised contract for the construction of the $315 million Whitehall Ferry Terminal building in New York. Opened in 2005, the terminal was designed to accommodate 70,000 people a day commuting from Staten Island. The plans called for a 200,000-square-foot glass and steel building with an open feeling so that people can feel they are already on the water, and also includes a roof deck for viewing Lower Manhattan, the upper harbor, and Governor’s Island. Schwartz was the winner from among over 320 entrants in a competition to design the New Jersey memorial to those who died in the September 11 attack on the World Trade Center. Outside of New York, New Jersey lost more residents (674) than any other state. The memorial was slated to be erected in Liberty State Park on the banks of the Hudson River, affording a direct view of Lower Manhattan where the Trade Center stood. Named “Empty Sky,” the title of a song by New Jersey rock star Bruce Springsteen, the design calls for a pair of brushed stainless steel walls 200 feet long and 30 feet high, the footprint of the vanished towers. The names of the victims are to be etched on the walls in random fashion. A paved blue-stone path runs between the walls. Space for visitors to express their grief by leaving items at the base of the walls are meant to personalize sorrow in contrast to the cold steel. The area is to be surrounded by a grove of dogwood trees. Schwartz was a runner-up with architect Rafael Viñoly in the competition to design a master plan for rebuilding the World Trade Center site. As a keynote speaker at a conference on Business Geography and Human Conditions, Schwartz described his vision of the rebuilt World Trade Center as a world cultural center. The towers would be the tallest structures in the world, but not containing offices, with a spectacular outdoor amphitheater 20 floors up.

[Schwartz, Frederic]

SCHWARTZ, GERALD (1940– ), Canadian businessman and philanthropist. Schwartz was born in Winnipeg, Manitoba. He received his B.A. and LL.B. degrees from the University of Manitoba and an M.B.A. from Harvard University. In 1977 he co-founded CanWest Capital, which later became CanWest Global Communications, and in 1983 he founded Onex Corporation, a worldwide investment company of which he remains the president and CEO. Schwartz has been active with more than 70 firms, among them Celestica, IBM’s former manufacturing arm, and others in such diverse areas as airline catering, electronics manufacturing services, and automotive components manufacturing. His holding company, whose firms include parts manufacturer Dura Automotive and the Loews Cineplex motion picture theater chain, had revenues of $23 billion in 2002.

Schwartz has been generous in support of the Canadian and Canadian Jewish communities. In 1999, for example, he made a multimillion dollar donation to St. Francis Xavier University in Antigonish, Nova Scotia, which was used to establish the Gerald Schwartz School of Business and Information Systems. A long-time Liberal Party supporter, Schwartz was also reportedly the top corporate fundraiser in Prime Minister Paul Martin’s successful campaign to lead the Liberal Party of Canada.

Together with his wife, Heather *Reisman, chief executive of Indigo Books and Music, Schwartz founded the Gerald Schwartz/Heather Reisman Centre for Jewish Learning at Holy Blossom Temple in Toronto, where they live. The Centre is designed to engage the members of Holy Blossom more deeply in Judaism and in issues of Jewish responsibility. Schwartz and Reisman have also endowed a lecture series at Holy Blossom – free and open to the public – to which many of the world’s major figures have been invited to speak. Schwartz was also deeply involved with the 2004 organization of the Canadian Council for Israel and Jewish Advocacy, which now oversees Canadian Jewish Congress and Canada Israel Committee activities.

In 2003 Gerald Schwartz and Heather Reisman were the first husband and wife team to be honored with the University of Manitoba’s International Distinguished Entrepreneur Award.

[About Schw...
SCHWARTZ, ISRAEL JACOB (1885–1971), Yiddish poet and translator. Born in Petroshun, Lithuania, he began his literary career translating some of *Bialik’s poems into Yiddish. In 1906 he emigrated to New York and, as soon as he had mastered English, translated poems by Shakespeare, Milton, and Walt Whitman. He participated in the publications of the literary movement Di *Yunge, but dissociated himself from its rebelliously militant members. In 1918 he settled in Lexington, Kentucky, where he found rich material which he incorporated in his verse epic, Kentoki (“Kentucky,” 1925), translating it himself into Hebrew (1962). It is generally rated as one of the finest achievements of American Yiddish literature. The hero of this narrative is a Jewish peddler who rises from poverty to influence in the course of decades of hard work and just dealings with his neighbors and becomes a respected, prosperous pillar of Kentucky society. Schwartz’s verse autobiography, Yunge Yorn (“Young Years,” 1952), wove a web of enchantment about his native Lithuanian town along the Nieman River and about the Kovno yeshivah where, together with traditional studies, he became familiar with Bialik’s Hebrew, *Reisen’s Yiddish, and Herzl’s Zionist visions. Yunge Yorn ends with his departure from home for the New World. Because of Schwartz’s lifelong preoccupation with translating contemporary Hebrew poets, his Yiddish style has a rich Hebraic flavor.

SCHWARTZ, JOSEPH HA-KOHEN (1877–1944), Hungarian rabbi and author. Born in Felsőviső, Hungary (now Viseul-de-Sus in Romania), Schwartz was the son of Naphtali ha-Kohen Schwartz and a pupil of Jacob *Tennenbaum. He edited the periodical Va-Yelakket Yosef for 20 years, from 1899 to 1918, in Bonyhad. In 1924 he moved to Grosswardein (Oradea), where he served as rabbi to the Mahzikhei Torah society and published several important books.

The most valuable are: Zafenat Pa’cnah (1909), notes on the Yad Yizhak of Abraham Isaac Glueck; Ginzei Yosef (1930); and Va-Yizkor Yosef (1936), responsa. A detailed bibliography of his many publications published by Ben-Menahem in his Mi-Sifrut Yisrael be-Ungaryah (1958, 330–70), includes his testament, written a few months before his death in the Holocaust, together with a biography of him.

[Naphtali Ben-Menahem]

SCHWARTZ, JOSEPH J. (1899–1975), U.S. communal leader and Semitics scholar. Schwartz was born in Russia and taken to the United States in 1907. He studied at the Rabbi Isaac Elchanan Theological Seminary in New York (1915–21) and at Yale University (1926–28), and he taught at the American University, Cairo (1928), and at Long Island University (1930–33). His first work in the community was as director of public information (1929–31) and executive director (1931–38) for the Federation of Jewish Charities in Brooklyn, New York. During World War II, with the approval of the U.S. War Refugee Board and through neutral representatives, he negotiated the rescue of thousands of Jews from Germany and the occupied countries. As chairman of the European executive council of the “American Joint Distribution Committee (IDC; 1940–49), Schwartz supervised relief and welfare programs in 30 countries, involving over one million people. After the war he directed the transfer of over 500,000 Jews to Israel from Europe, North Africa, and the Middle East. He also helped 100,000 Jewish refugees emigrate to the U.S., Canada, and Latin America. In 1945, at President Truman’s request, he assisted Earl G. Harrison, the U.S. member of the Intergovernmental Committee on Refugees, in surveying and writing the first report to the U.S. people on the conditions of displaced persons in the camps in the U.S. zones of occupation.

He was director general of IDC (1950–51) and from 1951 to 1955 was vice chairman of the United Jewish Appeal; from 1955 to 1970 he was vice president of the State of Israel Bond Organization. From 1967 he served as president of the Encyclopedia Judaica Research Foundation. Schwartz achieved general recognition as one of the foremost Jewish social workers. He was also known as one of the most effective and successful large-scale fund raisers. A former editor of Scripta Mathematica, he published articles and monographs on Semitics and Jewish affairs.

SCHWARTZ, LAURENT (1915–2002), French mathematician. Born in Autouillet near Paris, Schwartz received his formative mathematical and political education at the Ecole Normale Supérieure. After military service he eventually completed his mathematical doctoral thesis in 1943 at the University of Clermont-Ferrand in Vichy France, temporarily conjoined with the University of Strasbourg. As a Jew with well-known left-wing political views, he was in increasing danger after the Germans occupied the whole of France in November 1942. He took refuge in St. Pierre-de-Paladru, a small hamlet near Grenoble, where his most influential mathematical ideas began to crystallize despite the constant problems of survival. After a one-year appointment at the University of Grenoble (1944), he became professor of mathematics at the University of Nancy (1945–52) before moving to the Sorbonne in 1952. In 1958 he became a professor at the Ecole Polytechnique (1953–83), where in 1966 he founded the Centre de Mathématique. His major work concerned the concept of distributions leading to the Fourier theory of distribution transforms. His work broadened the scope of calculus and brought Paul Dirac’s ideas of “delta functions” in...
quantum mechanics within the scope of rigorous mathematics. For this work he was awarded the Fields Medal in 1950, the mathematicians’ equivalent of the Nobel Prize. He was a brilliant teacher of mathematics for professional and lay audiences and in his sabbaticals did much to establish mathematics teaching in underdeveloped countries. His honors included membership in the Académie des Sciences. He was also an expert on butterflies.

Schwartz was a Trotskyist as a student, but he was eventually disillusioned with political affiliation. He became a passionate supporter of individual freedom and rights and an anticolonialist over French policy in Algeria and U.S. policy in the Vietnam war, even though his views provoked temporarily unfavorable reactions from the French and U.S. governments. He maintained that mathematical discovery is rigorous and subversive, principles to be followed in life in general. An atheist, he was nonetheless committed to Jewish rights and an early advocate of organized anti-Nazi Jewish military action.

[Michael Denman (2nd ed.)]

SCHWARTZ, MANFRED (1909–1970), U.S. painter, illustrator, and educator. Born in Lodz, Poland, he immigrated to New York in 1920 at the age of 11. In Paris, he attended the Sorbonne and the Académie de la Grande Chaumière; in America, he was educated at the Art Students League, New York, the Cape Cod School of Art, and the National Academy of Design. Prodigiously talented, Schwartz exhibited at the inception of his career with such luminaries as Edward Hopper, Maurice Vlaminck, and Andrew Wyeth. His teachers included the Ashcan School artists John Sloan and Charles Hawthorne. He moved to Paris in 1929, where he studied both classicism and the art of his immediate predecessors, Vincent van Gogh, Paul Cézanne, and Picasso. Schwartz also became active in the School of Paris. He was known first, from the mid 1930s through the 1940s, for a liberated, colorful version of synthetic cubism applied to circus subjects, such as jugglers and acrobats. The oil painting The Juggler (1935) demonstrates this period in his art: depicting a figure balanced on her torso with arms upraised as she juggles several balls, the composition is executed in vibrant reds, violets, and black, which flatten the already simplified forms. By 1950, Schwartz had already had several solo shows at prestigious galleries, including the Lilienfeld and Durand-Ruel Galleries. At the urging of Henri Matisse, he traveled to the French town of Étretat on the Normandy Coast in 1950. Having already obtained a reputation among French artists, including Courbet, Monet, and Braque, as an area with unparalleled luminosity, Étretat captured Schwartz’s eyes and imagination as well: observing the movement of radiance and shadow on the town’s seashore, the artist made paintings and drawings which reflected his new, keener sense of the relationship between color and light. Schwartz returned to Étretat in 1960. Unlike other artists who had visited this Normandy town, Schwartz did not focus on representation of the cliffs, but rather the beach, which he infused with color and light in order to stress the flatness of the can-vas or paper. By the 1960s, he gradually restricted his work to a form of pointillism, based on empirical observation, which he mobilized in order to represent light, rather than landscape. Thousands of his cool, graded dots converge or disperse to describe constellations, nebulae, pebbles, and sand. Schwartz also worked in Provincetown, Massachusetts. He was a member of the Federation of Modern Painters and Sculptors and the American Abstract Artists. He has had solo retrospectives at the Brooklyn Museum of Art, the Providence Museum of Art, and the Whitney Museum. His work has been exhibited at the Art Institute of Chicago, the Carnegie Institute, and the Metropolitan Museum of Art. His work is in the collections of the Brooklyn Museum, the Guggenheim Museum, and the Whitney Museum, among other institutions.

[Nancy Buchwald (2nd ed.)]

SCHWARTZ, MAURICE (1890–1960), U.S. Yiddish actor. Schwartz was the last major figure in the Yiddish theater of New York. He flourished at a time when there were about 20 Yiddish shows on Second Avenue in New York City, and his Jewish Art Theater was among the last to close. He belonged to the older theatrical tradition; he had an impressive figure, he used wide gestures, and though he tended to be flamboyant, like many of his school, he achieved performances of great dignity.

In 1901, Schwartz reached New York with his parents from Sedikov in the Ukraine, and grew up on the Lower East Side. He made his debut with a Yiddish stock company in Baltimore in 1905 and seven years later was engaged by David Kessler for the opening of the Second Avenue Theater. Here he remained until launching the Jewish Art Theater in 1918. During the 40 years that followed, Schwartz became known in almost every corner of the Yiddish-speaking Diaspora. He toured North America, South America, Europe, Israel, and South Africa. His company had a repertoire of 150 plays from Shakespeare, Lope de Vega, Toller, and George Bernard Shaw to Shalom Aleichem. He was known especially for his playing of Reb Malech in Singer’s Yoshe Kalb, Luka in Gorki’s The Lower Depths, Oswald in Ibsen’s Ghosts, Shylock in Merchant of Venice, and the title role in King Lear. The Jewish Art Theater became an institution in New York, breeding talent for both the Yiddish and English-speaking stage. Schwartz’s vital performances drew the Broadway critics, who found his theater vital and perceptive. The Jewish Art Theater lasted until 1950, when both audiences and companies had moved out of Second Avenue. An attempt to revive it in 1955 met with little success. Schwartz turned to motion pictures, but without success. In 1960 he went to Israel hoping to establish a Yiddish art center. He attracted a number of Israel players to his company and opened in Yoshe Kalb but two months later he died.

SCHWARTZ, MELVIN (1932–2006), U.S. physicist and businessman. Nobel Prize winner. Born in New York City, Schwartz studied at Columbia University, from which he received his Ph.D. in 1958. He was an associate physicist at Brookhaven National Laboratory from 1956 to 1958 and on the faculty of Columbia University from 1958 to 1966, becoming a professor in 1963. From 1966 to 1983 he was a professor at Stanford University. He was also chief executive officer of Digital Pathways, Inc. in Mountain View, California. In 1991 he became associate director of high-energy and nuclear physics at Brookhaven National Laboratory.

A member of the American National Academy of Sciences and a fellow of the American Physics Society, he was also on the board of governors of the Weizmann Institute in Israel.

In 1962 he and two colleagues, Jack *Steinberger and Leon M. *Lederman, developed a means for utilizing neutrinos, subatomic particles, to aid in determining the structure of other basic particles. In 1988 they were the recipients of the Nobel Prize in physics in recognition of the greater understanding of elementary particles and forces resulting from their work.

SCHWARTZ, PHINEHAS (Pinhas) SELIG HA-KOHEN (Sigmund; 1877–1944), Hungarian scholar. He was born in Felsőviső and died in the Holocaust. His most important work is Shem ha-Gedolim me-Erez Haggar (3 vols., 1913, 1915), a series of biographies of Hungarian rabbis and a bibliographical list of their works. In 1935 and 1941 he published supplements in two pamphlets (all photocopied 1950). Despite its many errors, the book still serves as a biographical source for the rabbis of Hungary.

Between 1932 and 1935, Schwartz published a Torah periodical entitled Or Torah and several valuable works on specific topics, including: Yizraḥ Or (1925, photocopy 1952), the order of the blessing of the sun; Givat Pinhas (1926), on the laws of the slaughter and examination of animals; Ateret Paz (1928), on the laws of the priestly blessing; Minḥat Omer (1931, photocopy 1969), on the laws of the counting of the Omer; Temimiẓ Derekh (1935, 2nd ed. Szatmar, 1947, photocopy in German, no date), on the laws of the blessing and prayers on going on a journey; Minḥah Hadashah (1937, photocopy N.Y. 1969), topics connected with Shavuot; Shulḥan Arukh Yoreh De'ah (1938), on the laws of the redemption of a firstborn, together with his own novellae on that topic. A detailed list of his works was published by N. Ben-Menahem in Aresheth, 4 (1966), 427–35.

[Naḥptali Ben-Menahem]

SCHWARTZ, STEPHEN (1948– ). U.S. theater composer. Born in New York City, Schwartz studied piano and composition at the Juilliard School of Music while in high school and graduated from Carnegie Mellon University with a degree in drama. He returned to New York and soon began to work in the Broadway theater. His first major credit was the title song for the play Butterflies Are Free, which was also used in the movie version. In 1971 he wrote the music and new lyrics for Godspell, for which he won several awards including two Grammys. This was followed by the English texts, in collaboration with Leonard *Bernstein, for Bernstein's Mass, which was commissioned for the opening of the John F. Kennedy Center for the Performing Arts in Washington, D.C. The following year he wrote the music and lyrics for Pippin and two years later, The Magic Show. At one point all three shows were running on Broadway simultaneously. After stumbling with The Baker's Wife, in 1976, he wrote the musical version of Studs *Terkel's Working, which he adapted and directed, winning the Drama Desk Award as best director, and contributed four songs to the score. He also co-directed the television production. Next came songs for a one-act children's musical, The Trip, and a children's book, The Perfect Peach. His next major triumph was in collaboration with the composer Alan Menken on the score for the animated Disney feature Pocahontas (1995), for which he received two Academy Awards and another Grammy, and The Hunchback of Notre Dame (1996). He also provided songs for the first animated feature for DreamWorks, The Prince of Egypt (1998), for which Schwartz won another Academy Award for the song “When You Believe.” In 2003 he returned to Broadway as composer and lyricist of Wicked, a prequel to The Wizard of Oz, which enjoyed a long run.

[Schwartzenberg, Roger-Gerard (1943– ), French professor of law and politician. Born in Pau, France, Schwartzzenberg, a brilliant student and scholar, was appointed professor at the law school of Orleans at the age of 25. While pursuing his university career, he joined the Mouvement des Radicaux de Gauche (MRG), a moderate leftist party traditionally pro-Israel, of which he was elected president in 1981. A long-time supporter of French President Mitterrand, Schwartzzenberg was entrusted with the difficult university portfolio, as Secretary of State for University Affairs, in the Socialist government in 1983. His main task was to streamline the cumbersome structure of the French university system while retaining its most positive assets, richness and diversity; its democratic character; and above all, the fact that tuition is completely free. He continued to sit as a deputy in the National Assembly in the 1980s and 1990s, while also serving as mayor of Villeneuve-Saint-Georges (Val-de-Marne) in 1989–95. In 2000–2 he was minister of research.

Schwartzzenberg wrote a number of textbooks and political pamphlets: La campagne présidentielle de 1966 (1967); La force juridique des décisions administratives (1968); Traité de sociologie politique (1971); and L'État Spectacle, essai sur et contre le star-system en politique (1977).

[Schwartzenberg, Roger-Gerard]
SCHWARTZMAN, SYLVAN DAVID (1913–1994) U.S. Reform rabbi, academician, administrator. Schwartzman was born in Baltimore and received his B.A. from the University of Cincinnati in 1936. In 1941, he was ordained at *Hebrew Union College, which awarded him an honorary D.D. in 1981. In addition, he earned a Ph.D. from Vanderbilt University in 1952 and an M.B.A. from the University of Cincinnati in 1970. After ordination, he became rabbi of Congregation Children of Israel in Augusta, Georgia (1941–47), following which he spent a year as director of Field Activities for the *Union of American Hebrew Congregations (1947–48) and two years as rabbi of the Temple in Nashville, Tennessee (1948–50).

In 1950, Schwartzman was appointed professor of Jewish Religious Education at HUC-JIR in Cincinnati, where he remained until his retirement in 1981. While on the faculty, Schwartzman served as chairman of the Academic Senate and as faculty representative to the board of governors. In 1975, he was named dean of the Cincinnati campus of HUC-JIR, but resigned after one year because of what he termed the lack of a “free hand to carry out my responsibilities.” For the entire 30 years of his tenure at HUC-JIR, he also served on the Reform movement’s Joint Commission on Jewish Education; and for many years he was on the executive committee of the National Association of Temple Educators. Upon his retirement, Schwartzman was elected finance chairman of the “Central Conference of American Rabbis, and in that capacity also served as chairman of the Committee on Budget and Finance and on the executive board of the CCAR (1981–83). He was also elected president of the National Association of Retired Reform Rabbis and was co-chairman of the group’s Mitzvah Fund at the time of his death.

Schwartzman is the co-author of two critically acclaimed books, in two very different fields. His Our Religion and Our Neighbors (with Milton G. Miller, 1959, rev. 1963, rev. 1971), the first book ever published in Jewish religious education for the teaching of comparative religion, earned him the Emanuel *Gamoran Curriculum Award from the National Association of Temple Educators. His Elements of Financial Analysis (with R.E. Ball, 1977, rev. 1984) was selected for the “Investors Book Shelf of the Year” by Business Week magazine. He also wrote Reform Judaism in the Making (1953); Rocket to Mars (1953, rev. 1969); Reform Judaism Then and Now (1971); The Story of Reform Judaism (1949, rev. 1958); and The Living Bible (with J. Sprio, 1962).

SCHWARZ, ADOLF (1846–1931), rabbi and scholar. Born in Hungary, Schwarz studied at the Breslau Juedisch-theologisches Seminar, where he was Z. *Frankel’s favorite pupil and intimate friend. From 1875 he was rabbi in Karlsruhe, a post he accepted at Frankel’s behest in spite of his misgivings about the use of the organ in the Karlsruhe synagogue. In 1893 he became head of the newly founded Israelitisch-theologische Lehranstalt in Vienna, where he trained several generations of modern rabbis and teachers as leaders of traditional Judaism. Schwarz enjoyed the respect and affection of his pupils and did much to raise the intellectual and moral standards of Viennese Jewry.

His scholarly work was a conscious effort to continue in the paths of his teacher Frankel and was devoted mainly to the understanding of the Talmud and its methodology. His prize-winning essay on the Jewish calendar (1872), written while a student at Breslau, was followed by his studies on the Tosefta (Tosefta... Shabbat, 1879; Eruvin, 1882, Tosefta Zera’im, 1890) in which he examined its relationship to the Mishnah. At the same time he published its text in the order of the Mishnah with a Hebrew commentary, *Hegyon Aryeh. In later years Schwartz continued this work, issuing editions of the tractates *Hallin (1901), *Bava Kamma (1912), and Horayot (1929). His principal contribution to talmudic scholarship was his *Controversen der Schammaiten und Hilleliten (1893) which was followed by six monographs on the “hermeneutic rules: Die hermeneutische Analogie in der talmudischen Literatur (1897), Der hermeneutische Syllogismus in der talmudischen Literatur (1901), Die hermeneutische Induktion (1909), Die hermeneutische Antinomie in der talmudischen Literatur (1913), Quantitaetsrelation (1916), and Der hermeneutische Kontext (1921). A summary of these appeared in 1923 (Hauptergebnisse der wissenschaftlich-hermeneutischen Forschung, 1923). Schwarz found that a main cause of the halakhic controversies between the schools of Shamai and Hillel, apart from the weakened power of the Sanhedrin and the consequent shift from practice to theory, was a disagreement on the use of the (seven) hermeneutical rules ascribed to Hillel. Schwarz’s modern approach provoked some sharp polemics from Orthodox scholars (A. Friedmann, *Penei ha-Dor, 894–6). He also devoted a major study to Maimonides’ Code (Der Mishneh Torah, 1905), in which he examined the logical as well as the artistic structure of the Mishneh Torah. A great number of his lectures and sermons appeared in print, as well as many articles in periodicals and some polemics against R. *Kittel. On the occasion of his 70th birthday his friends and pupils published a Festschrift (1917, with bibliography) as did his pupils ten years later (*Minhat Bikkurim, 1926). A memorial volume (Sefer Zikkaron..., 1946) commemorated the centenary of his birth.

His son, ARTHUR ZECHARIAH SCHWARZ (1880–1939), was a scholar and bibliographer. Born in Karlsruhe, Schwarz followed his father in Jewish scholarship. Graduating from the Israelitisch-theologische Lehranstalt and the University of Vienna, he was appointed district rabbi and teacher of Jewish religion in that city, but devoted much of his time to scholarship. As a young man he was attracted, in contrast to his father, by Herzl and the Zionist movement and contributed regularly to their official organ, *Die Welt. When the Nazis invaded and usurped power in Austria, Schwarz was arrested and tortured by the Gestapo. Broken in body and soul, he was able to leave for Erez Israel where he died soon afterward.
His interest in Jewish bibliography and the study of Hebrew manuscripts owed much to the influence of A. Ratti, later Pope Pius X, whom he met on a visit to the Ambrosiana Library at Milan. As a model for his bibliographical work he took M. *Steinschneider. The first fruit of his studies was *Die hebraischen Handschriften der k. und k. Hofbibliothek in Wien* (1914), in which he described those manuscripts not included in the previous and rather unsatisfactory catalogs of Goldenthal, Deutsch, and Kraft. The work was very favorably received and Schwarz was encouraged to publish a comprehensive catalog, which appeared in 1925 (*Die hebraischen Handschriften der Nationalbibliothek in Wien*). His detailed scholarly description of the 212 manuscript collections and 160 fragments represented a new and exemplary standard of bibliographical scholarship. This was followed by *Die hebraischen Handschriften in Oesterreich* (vol. 1, 1931), describing 283 manuscript collections, the greater part of which belonged to the Vienna Jewish community library (250), the rest to other Jewish public and private collections as well as to some monasteries. This catalog remained unfinished, though the author had prepared up to no. 302 for press.

Schwarz contributed numerous bibliographical articles and book reviews to learned periodicals. He also published a number of texts discovered in the course of his research, such as Jacob *Sasportas*’ letters to the Hamburg Jewish community (*Allin*, 2 [1935], 20–23), a letter by Abraham b. Hyya ha-Nasi to Judah b. Barzailai (*Festschrift... A. Schwarz*, 1917), and a supplement to Yomtov b. Abraham Ishibli’s (*Rita*) *Sefer ha-Zikkaron* (*Ha-Zofeh le-Hokhmot Yisrael*, 7 [1923], 299–304). The latter was the result of his preparing a manuscript of Nahmanides’ *Penateuch* commentary for publication; he had published a sermon by him in 1913. He also prepared Sasportas’ anti-Shabbatean *Zizat* *Novel Zevi* for publication. Schwarz’s manuscript serving as basis for *Y. Tishbi’s* edition of 1964. His son Benjamin became professor of mathematics at the Technion in Haifa, and his daughter Tamar married Teddy *Kollek*, mayor of Jerusalem.

**SCHWARZ, DAVID** (1845–1897), airship inventor. Schwarz, a fairly wealthy timber merchant in Zagreb who taught himself the principles of engineering and mechanics, decided that a rigid airship could be built by using aluminum. The industrial production of this metal had been greatly facilitated by the discovery in 1886 of an electrolytic process. Schwarz gave up his business and began to do research on the properties of aluminum; he showed that it could be soldered and hardened. After some years, he interested General Krieghammer, the Austrian minister of war, in an airship which he began constructing in 1890. However, government financing for actual flight experiments was not forthcoming. Schwarz then went from Vienna to Russia, where he made some successful flights. In 1892 he went to Germany and constructed an improved form of his airship. However, the German government procrastinated in its financing of flight tests until January 1897. When Schwarz received the telegram informing him of the German government’s willingness to finance the flight tests, he died of shock. In November 1897 Schwarz’s dirigible was flown from Tempelhof Field. It crashed and was destroyed after being flown for four hours. The pilot saved his life by jumping out of the dirigible. Count Zeppelin, who witnessed the flight, bought all Schwarz’s plans and designs from his widow, and then rebuilt Schwarz’s airship with his own modifications. This rebuilt airship was the famed “Zeppelin.”

[Samuel Aaron Miller]

**SCHWARZ, HARRY HEINZ** (1924– ), South African politician, lawyer, and Jewish communal leader. Born in Cologne, Germany, Schwarz immigrated to South Africa in 1936 as a refugee from Nazism. He served as a navigator in the S.A. Air Force during World War II, after which he qualified as a lawyer at the University of the Witwatersrand. He practiced as both an advocate and an attorney, amongst other things serving on the defense teams of Nelson Mandela and other anti-apartheid activists during the 1961–64 Rivonia Trial. Schwarz’s political career commenced with his election to the Johannesburg City Council in 1951. As a member of the opposition United Party, he was leader of the Provincial Opposition from 1963 to 1974.

He entered Parliament on the UP ticket in 1974 and was official Opposition spokesman on finance in 1974–75 and 1977–87. He was leader of the breakaway Reform Party in 1975–77, until it merged with other opposition groups to form the Progressive Federal Party. From 1990 to 1994, although still on the opposition benches, he served as South Africa’s ambassador to the United States. Schwarz was an outspoken critic of the government’s racial policies throughout his parliamentary career and frequently denounced antisemitism. He served on the management committee of the South African Jewish Board of Deputies from 1983 to 2000.

[David Saks (2nd ed.)]

**SCHWARZ, LEO WALDER** (1906–1967), U.S. author and editor. Born in New York, Schwarz was active in communal and educational work. During World War II he was awarded a battle commission in Normandy by General Patton and stayed in Germany until 1947 as the Joint Distribution Committee’s director for displaced persons in Munich. This experience formed the basis of his book, *The Redeemers* (1953), which dealt with the return of Jewish concentration camp survivors to freedom. He was adviser to Jewish students in South African universities (1959–61) and professor of Judaic studies at the Iowa University’s School of Religion (1960–62). Among his publications are an anthology of Jewish memoirs and autobiography, *Memoirs of My People Through a Thou-

[Sol Liptzin]

SCHWÄRZ, RUDOLF (1905–1994), conductor. Born in Vienna, Schwarz joined the Düsseldorf Opera as répétiteur at the age of 18 and conducted an opera there the following year (1924). From 1927 to 1933 he was at Karlsruhe under Josef Krips. When Hitler came to power, he was forced to resign, and in 1936 was appointed musical director of the *Jüdische Kulturbund (Jewish Cultural Organization) in Nazi Germany. In 1941 he was sent to Bergen-Belsen, and after his release in 1945, he settled in England. He directed the city orchestras in Bournemouth (1947–50) and Birmingham (1951–57). From 1957 to 1962 he was chief conductor of the BBC Symphony Orchestra, and then became principal conductor of the Northern Sinfonia Orchestra, Newcastle (1967–73). He furthered the performance of British music, including new works by Bliss, Gerhard, Hamilton, Rubbra and Tippett; and in 1958 he conducted the première of Britten’s Nocturne. Schwarz was a recognized authority on social and economic conditions in the U.S.S.R. Schwarz was a recognized authority on social and economic conditions in the U.S.S.R. [Israel Stein (2nd ed.)]

SCHWÄRZ, SAMUEL (1880–1953), discoverer of 20th-century Crypto-Jews. Born in Poland, Schwarz was a mining engineer by profession. In 1913 he moved to Portugal and settled in Lisbon, but his work involved travel through the undeveloped stretches of the country. In 1917, on a surveying trip to remote *Belmonte, on the Spanish border, Schwarz met a group of persons who practiced certain Jewish rituals. They married only among themselves and observed in their own way the Sabbath and the major Jewish festivals. Schwarz identified them as Crypto-Jews or Cristãos-Novos, who were believed to have faded into extinction shortly after the Portuguese Inquisition was abolished in 1821, but who instead continued to live as New Christians. Their Jewish observance had suffered considerably from its underground nature and from a lack of formal education and leadership. Schwarz publicized his discovery in the Portuguese review Arqueologia e história (4 (1925) 5–115) and subsequently in the book Os cristãos-novos em Portugal no século XX (1925). At about this time Artur Carlos de *Barros Basto, a descendant of New Christians who had achieved importance in Portuguese national life, openly espoused Judaism and vigorously began to organize his fellow New Christians in a return to the Jewish fold. These activities served to underscore the practical aspects of Schwarz’s discovery, and considerable interest arose among British Jews toward educating the Portuguese descendants of Crypto-Jews into the mainstream of the faith. Schwarz and Barros Basto did not get along well and mutual antagonism and suspicion characterized their relations.

For a time Schwarz was president of Lisbon’s Jewish community. In 1922 he took title to a 15th-century synagogue of *Tomar, opening it as a museum for Portuguese Hebrew inscriptions, called the Museu Luso-Hebráico de Tomar. Schwarz published a study of epitaphs and inscriptions of Portugal’s early Jewish inhabitants, Inscrições hebraícas em Portugal (1923). He was a member of the Portuguese archaeological society, and a leader of the Portuguese association of Polish nationals.

A Hebrew version of his Os cristãos-novos em Portugal no século XX came out in Jerusalem in 2005. Stuczynski’s introduction is the most extensive study of Samuel Schwarz’ career.

[Aaron Lichtenstein]

SCHWÄRZ, SOLOMON (1883–1973), Russian Social Democratic politician and historian. Born into an assimilated family in Vilna, Schwarz studied medicine, law, and economics at German and Russian universities. He was repeatedly arrested by the czarist authorities for his socialist and trade union activities. Following the outbreak of the Russian Revolution in February 1917, he was made head of the social insurance department of the Provisional Government’s Ministry of Labor. After the Bolshevik seizure of power, Schwarz led the Menshevik opposition to the Bolsheviks until his arrest and imprisonment. He was allowed to leave Russia in 1922 and settled first in Germany, and after 1933, in France. While living in Germany and France he began his research on contemporary Russian history, much of which was published in Sotsialisticheskii Vestnik. In 1940 Schwarz settled in the U.S., where he continued his research. He served as an adviser to the *American Jewish Committee, and the New School for Social Research, and was associated with the Russian Institute of Columbia University. In 1970 he settled in Jerusalem where he became an adviser on Soviet and Soviet-Jewish affairs at the Hebrew University. Schwarz was a recognized authority on social and economic conditions in the U.S.S.R. and the history of Soviet Jewry. He was one of the first to disclose that millions of Soviet citizens were subjected to forced labor in camps and prisons. After the death of Raphael Abramowitz, Schwarz became the last editor of Sotsialisticheskii Vestnik, but was compelled to cease publication because of a shortage of contributors and readers.

His writings include a number of works on general Russian affairs, among them Management in Russian Industry and Agriculture (with G. Bienstock and A. Yugow, 1944) and Labor in the Soviet Union (1951). His works on Jewish affairs

**SCHWARZ, YEHOSEPH** (1804–1865), rabbi and early Ereẓ Israel geographer. Born in Floss, Bavaria, Schwarz studied at the University of Wuerzburg, devoting himself to the understanding of the Bible and the oral tradition. In 1829 he prepared a map of Ereẓ Israel in Hebrew and German that was published in three editions by 1832. He settled in Jerusalem (1833) and lived there until his death, being the first Jew, after *Estori ha-Parḥi, to devote himself to the study of historical topography of the Land of Israel. Schwarz registered the rising and setting of the sun 4,000 times and composed a calendar of the length of each day of the year in Jerusalem, which was published in 1860 by his son-in-law R. Azriel Aharon Yaffe. In 1845 he published *Tevu‘ot ha-Areẓ* (“The Produce of the Land”) in Jerusalem. It deals with the borders of Ereẓ Israel, its topography, the division of the country according to the Bible and the rabbinic tradition, the genealogy of the peoples (Gen. 10), geographical names in the Bible, Jerusalem, and the Temple Mount. It also includes chapters on the flora and fauna, climate, and the earthquakes of the country and a section devoted to the history of Ereẓ Israel from the destruction of the Second Temple. This book was translated into English by Isaac *Leeser under the title A Descriptive Geography and Brief Historical Sketch of Palestine* and printed together with a map and illustrations in Philadelphia, Pennsylvania, in 1850 (reprint 1970), when Schwarz visited there on behalf of the scholars of Jerusalem. Two years later the book appeared in German, translated by Israel Schwarz, the author’s nephew. It is less valuable than contemporary scientific works on the subject (e.g., Edward *Robinson’s*) because Schwarz ignored the achievements of Christian scholars. However, the book contains about a hundred correct identifications of places based on talmudic literature. Schwarz headed a “yeshivah ketannah,” i.e., an elementary yeshivah for students before proceeding to an ordinary yeshivah, and published his work on *halakhot* and *aggadah* in *Sarei ha-Me’ah* (Jerusalem, 1861), and *Divrei Yosef* (ibid., 1862).

**SCHWARZBARD, SHOLEM** (Samuel; 1886–1938), Yiddish poet who assassinated *Petlyura. Born in Izmail (Bessarabia), Schwarzbard, who was active in the revolutionary movement of 1905 and organized Jewish *self-defense during the pogroms, had to escape from Russia in 1906. Ultimately he settled in Paris as a watchmaker. In World War I, he joined the Foreign Legion and was awarded the Croix de Guerre. In 1917 he returned to Russia. In Odessa he joined the Red Guard and fought against the Cossack followers of Simon Petlyura and his henchman Smessenko, who carried out pogroms of unprecedented ferocity in the Ukraine in the winter of 1919. Fifteen of Schwarzbard’s own relatives were among the thousands of Jews massacred. In 1920 he published a book of poems in Yiddish (*Troymen un Virklikhkhayt*, “Dreams and Reality”) and returned to Paris. Petlyura himself settled there in 1921. Schwarzbard shot him dead in May 1926. In the trial which followed, Schwarzbard was acquitted after a moving address by his counsel, Henri Torrès (October 1927). His experiences are recorded in his autobiography *Inem Loyf fun Yon Yoren* (“In the Course of Years,” 1934). He died in Cape Town, South Africa.

**SCHWARZ-BART, ANDRÉ** (1928– ). French novelist. Schwarz-Bart was born in Metz, the son of immigrants from Poland. His childhood and education were disrupted by World War II, and at the age of 15 he joined the Maquis. He was arrested by the Germans, but escaped and served in the French army after the Liberation. Returning home, he learned that his entire family had been murdered in Nazi camps. After several years of hardship he was able to complete his education at the Sorbonne. Schwarz-Bart’s first novel, *Le Dernier des justes* (1959; *The Last of the Just, 1961*) sought to reinterpret the old Jewish legend of the “Lamed Yav Zaddikim” (“Thirty-Six Hidden Saints”) in terms of the martyrdom of European Jewry, from the 12th-century massacre of *Yorok* to *Auschwitz*. The author’s comparative ignorance of Jewish history and culture— the legacy of his tragic boyhood—led him to distort the real tradition by making the Zaddikim (his “Justes”) a hereditary clan, rather than three dozen hidden saints whose virtues preserve the Jews in each generation. Paradoxically, therefore, there is a distinctly Christian element in this tale of pre-ordained self-sacrifice, whereby men’s sins are atoned for by Schwarz-Bart’s lamedvovniks. Despite this blemish, *The Last of the Just* remains a powerful indictment of Christendom from the era of until the death of the fictional Ernie Levy, the “last of the just,” in the European Holocaust. A kind of Jewish passion play, Schwarz-Bart’s novel was awarded the Prix Goncourt in 1959. Schwarz-Bart received the Jerusalem Prize in 1966. A dedicated champion of society’s outcasts, Schwarz-Bart later turned to the problems of non-whites, whose emancipation and restoration to dignity he advocated no less than he had that of the Jews. In collaboration with his West Indian wife, Simone, he embarked on a seven-part epic, the first volume of which, *Un Plat de porc aux bananes vertes*, appeared in 1967. In 1972, he published *La mulatresse Solitude* (*A Woman Named Solitude*, 1973), a novel about an episode of the 1802 revolt against the reinforcement of slavery in the French colonies of the Antilles. André and Simone Schwartz-Bart then published together, in 1989, a seven-volume encyclopedia of black women, *Hommage à la femme noire* (*In Praise of Black

[Claude (André) Vigée / Philippe Boukara (2nd ed.)]

SCHWARZBART, ISAAC IGNACY (1888–1961), Zionist leader in Poland. Born in Chryzanow, Galicia, Schwarzbart completed his legal studies at the University of Cracow (1913). He was active in the academic Zionist society, Ha-Shaḥar, while still a student and was the chief editor of the Polish-language Zionist daily Nowy Dziennik (1921–24). He was the chairman of the Zionist Federation in west Galicia and Silesia and wrote its history in the Cracow Book. Schwarzbart was among the main founders of the World Movement of *General Zionists, of which he was chairman from its establishment in Cracow in 1931 until the split in 1935, after which he became the chairman of the General Zionists b. He became a member of the Zionist General Council in 1933. In 1938 he led the establishment of a committee to coordinate the activities of all the Zionist groups in western Galicia and Silesia. He was elected to the Polish Sejm in 1938. At the outbreak of World War II he fled to Romania and aided Polish refugees and Polish and Romanian Jews who were making their way to Palestine. He then became a member of the Polish government-in-exile in Paris and London (1940–45). From 1946 Schwarzbart lived in the U.S., where he directed the administrative department of the World Jewish Congress. He published articles in Polish and Yiddish and also brought out a book on Jewish life in Cracow from 1919 to 1939 entitled Tsvishn Beyde Velt Milkhomes ("Between the Two World Wars," 1958), as well as booklets on the Warsaw Ghetto (1953).

[Getzel Kressel]

SCHWARZBERG, SAMUEL BENJAMIN (1865–1939), Hebrew publisher and editor in Poland and the U.S. Schwarzberg, who was born in Russia, published Hebrew books at the close of the 19th century in Warsaw, among them I.L. *Peretz* Hebrew poems, Ha-Ugav (1894). Arriving in the United States in 1897, he became editor of the Hebrew monthly Ner ha-Ma‘arav which appeared from 1895 to 1897. In 1898 he published a 33-page pamphlet Tikkatev Zot le-Dor Aharon ("This Shall be Written for the Final Generation"), a scathing attack on the attitude of the Jews toward the new Hebrew literature. He fought Yiddishism and its standard-bearer Chaim *Zhitlowsky. He also published a bibliography of the works of Senior *Sachs.*

[Eisig Silberschlag]

SCHWARZFELD, Romanian family whose members were prominent in literary activity in the 19th and 20th centuries. Its first notable member, BENJAMIN SCHWARZFELD (1822–1897), was born in Galicia, and settled with his family in *Jassy* when he was a boy. In his early years he wrote Hebrew poems and translated German poetry into Hebrew which were published in Hebrew periodicals. He also wrote articles on the contemporary situation of the Jews in Moldavia. He was among the pioneers of Haskalah in *Romania, and founded the first modern Jewish school in Jassy (1853–57). In 1860 he was appointed inspector of the Jewish schools in Moldavia. He was active on the board of the modern temple (founded in 1861), was a member of the community council, and of the governing board of the Jewish hospital in Jassy. He was also a banker and founded an insurance business.

Benjamin’s sons, Elias, Wilhelm, and Moses (see below), were journalists and historians, and may be regarded as the founders of Jewish historiography in Romania. Benjamin’s nephew was the poet Benjamin Fundoianu, known later in France under the name Benjamin *Fondane. The eldest son, ELIAS SCHWARZFELD (1855–1915), historian and novelist, founded Revista Israelită in 1874 in which he published his first Jewish novel. He edited a political weekly, Fraternitatea from 1881 to 1885. In 1881 he graduated in law. His main achievement was in the field of history of the Jews in Romania. He published numerous historical studies, mostly in Anuarul pentru Israeliti ("Jewish Yearbook"), edited by his brother Moses. As vice president of the Fraternitatea Zion lodge he was instrumental in founding B’nai Brith lodges in Romania. He was among the Romanian Jewish writers who were expelled in 1885 for attacking the official antisemitic policy. Settling in Paris, he became secretary of the Jewish Colonization Association (ICA). There Schwarzelfeld continued his historical activity, and was coeditor of the Egalitatea founded in 1890 in Bucharest by his brother Moses. He wrote Les Juifs en Roumanie (1901) combating the assertions of anti-Jewish Romanian historians. His two essays, “The Jews of Romania from the earliest time to the present day” and “The situation of the Jews in Romania since the Berlin Treaty” (1878), were published in the American Jewish Year Book for 5662 (1901–02); other essays on the history of the Jews in Romania appeared in Jewish Quarterly Review and Revue des études juives. In 1914 he published the history of the founding of the Jewish villages in Moldavia. Schwarzelfeld also wrote several novels on Jewish themes.

His brother, the third son of Benjamin, MOSES SCHWARZFELD (1857–1943), was also a prolific writer on Jewish subjects. At the age of 20 he edited the first issue of Anuarul pentru Israeliti ("Jewish Yearbook"), a collection of studies in Jewish history and folklore which appeared for 19 years, to which the most noted Jewish writers in Romania contributed. His biography of the Romanian Jewish author, Moise *Cilibi* (1885; 1907), attracted attention, and in 1887–90 he edited three volumes of the proceedings of the Julius *Barasch Historical Society, named after the noted Jewish physician and author (on whom he also wrote a monograph in 1919); he published several historical essays there. The weekly he founded in 1890, Egalitatea, dealt widely with Jewish affairs and was Zionist in tendency; it appeared for 45 years. Of no less im-
portance was his work as a recorder of Jewish folklore. He collected more than 10,000 Jewish fables and proverbs.

The second son of Benjamin, Wilhelm Schwarzschild (1856–1894), researched the tombstone inscriptions in the Jewish cemetery at Jassy, and investigated the history of Jews of Moldavia who had been converted to Christianity. He also took an active part in the development of the Julius Barasch Historical Society, and published a number of historical and philological essays.

**BIBLIOGRAPHY:** M. Schwarzschild, in: Anuarul pentru Israeliti, 19 (1897–99), 177–87. [Theodor Lavi]

Schwarzschild, Steven Samuel

**Schwarzschild, Karl** (1873–1916), German astronomer and mathematician. Born in Frankfurt, Schwarzschild published his first paper, on celestial mechanics, at the age of 15, and worked at the Kuffner Observatory, Vienna, from 1897 to 1899. Schwarzschild taught at the University of Goettingen in 1901 and was elected a member of the Academy of Sciences in 1905. In 1909 he was appointed director of the Astrophysikalisches Observatorium in Potsdam, and in 1913, a member of the Berlin Academy and professor at the university. In 1914 he was involved in war work and contracted the rare infectious disease that was to kill him. His achievements were far ahead of his time; he probed deeply into the field of astronomy, celestial mechanics, stellar motions, the foundations of the new science of astrophysics, and into wide areas of theoretical physics, optics, electricity, and atomic theory. He achieved lasting results of fundamental importance. His great quality was the mathematical insight which enabled him to think about, and work simultaneously on, two or three problems which to other researchers appeared to belong to quite different areas. He was an eminently practical man, devising new instruments and advanced observational methods which remained valid often with only very small modifications. His lectures were prototypes of lucidity, and his success in transmitting the most difficult ideas was unrivaled. Several lectures have become classic, for instance “Vom Universum” (Frankfurt, 1908).

His son, Martin (1912– ), was an astronomer and astrophysicist. Born in Potsdam, Germany, he became a research fellow at the Institute for Theoretical Astronomy in Oslo (1935–36) and then emigrated to the United States. He was appointed professor of astronomy at Princeton University in 1950. His contributions to astronomy cover a wide range, centered mainly around the complex problems of stellar structure and evolution. His publications include a monograph, Structure and Evolution of the Stars (1958). He was involved in astronomical space programs. He was awarded the Gold Medal of the Royal Astronomical Society in London in 1968.

---

Schwarzschild, Steven Samuel

**Schwarzschild, Steven Samuel** (1924–1989), U.S. rabbi, editor, scholar, and professor of Judaic Studies. Born in Frankfurt, Germany, to a family long established there, Schwarzschild was raised in Berlin and escaped with his family to the U.S. in 1939. He was ordained at the (Reform) Hebrew Union College in Cincinnati. His most important teacher there was the talmudist Samuel Atlas. Schwarzschild’s HUC doctoral dissertation was on the philosophy of history in Nachman Krochmal and Hermann Cohen. In 1948 he returned to Berlin to serve as rabbi of the reconstituted Jewish community. This was followed by rabbinical posts in North Dakota and near Boston (where he became close to the late Rabbi Joseph B. *Soloveitchik), and then an academic career at Washington University in St. Louis. A highly influential rabbi, Schwarzschild was editor of Judaism – A Quarterly Journal (1961–69); under his stewardship it was one of the few serious journals of scholarship and opinion in the North American Jewish world of that time. Ever-hard to classify, Steven Schwarzschild for a long time was the only rabbi to hold simultaneous membership in Reform and Conservative rabbinical associations, but saw as his rabbinic teacher the Orthodox Rabbi J.B. Soloveitchik and later found much to learn from the Ultra-Orthodox rabbis Isaac Hutner and Joel Teitelbaum (the Satmar Rebbe).

A democratic socialist, Schwarzschild was also a leading Jewish exponent of pacifism and vegetarianism. He fol-
ollowed Hermann Cohen in the latter’s resistance to Zionism, although, out of Jewish solidarity, he was very circumspect in his public criticisms of Israel.

Schwarzsschild placed halakhah at the center of his vision of Judaism, seeing it as an expression of a system of moral ideals making demands upon reality. Schwarzsschild adopted Maimonides as an intellectual and Jewish standard, citing him over and over again in his writings, and using him as a hook on which to hang his interpretations of Judaism. For Schwarzsschild, Maimonides anticipated the critical idealism of Immanuel Kant as explicated by Hermann Cohen. In Schwarzsschild’s eyes, both Maimonides and Kant (correctly) understood that much that other thinkers see in reified terms should be seen as regulative concepts.

[Menachem Kellner (2nd ed.)]

**SCHWEID, ELIEZER** (1929— ), Israeli philosopher, scholar of Jewish studies, and educator. Born in Jerusalem to socialist-Zionist parents who made aliyah to Palestine in 1924/5, he was educated in the “worker’s-stream” school system established by the Zionist labor movement. He was active first in the Mahanot ha-Olim youth movement and later in the Tenu‘ah ha- Me’uḥedet. In 1947 Schweid joined his youth movement’s hakshurah, with which he enlisted in the Palmah and fought in Israel’s War of Independence. Upon release from military service in 1949 he became a founding member of kibbutz Zor’a.

In 1953, Schweid began his studies at the Hebrew University under such formidable figures as Gershom Scholem, Shlomo Pines, and Yitzhak Baer. He joined the faculty of the university in 1961 and subsequently redesigned the discipline of Jewish Thought as a course of study that includes all intellectual endeavor within Jewish civilization, from biblical literature to the present. His most important contribution to Jewish scholarship, in this regard, was the introduction of Jewish Thought in the modern period as a legitimate focus in both teaching and systematic research. Schweid’s scholarly and philosophical works delve into the breadth and depth of modern Jewish Thought, though he also contributed to the research of medieval Jewish philosophy, as well as biblical thought.

Schweid always displayed a deep interest in Jewish education, including his role in establishing (1974) Kerem, the humanistically oriented teachers college in Jerusalem aimed at training teachers in Jewish studies for the non-religious Israeli public schools; his involvement in “the Shenhar Commission” (1995), which formulated a new approach to Jewish studies in the general educational system in Israel; and his teaching at the Schechter Institute of Jewish Studies in Jerusalem. He was awarded the Israel Prize in Jewish Thought in 1994.

As a philosopher of Judaism, Eliezer Schweid is best known for his focus on the concept of Judaism as culture. His particular understanding of Jewish existence may be seen as a combination of the attitude initially held by the eastern European *Haskalah of the 19th century, and that of the western European Liberal Judaism and the *Wissenschaft des Judentums* which developed within its environment. The latter contributed to Schweid’s interpretation of Judaism from a universal-humanistic perspective and religio-philosophical dimension. The thinkers whose writings had the biggest influence on him are Ḥayyim Nahman *Bialik, Aharon David *Gordon, and Hermann *Cohen. Bialik’s call for a renewal of Jewish culture and religiosity, combining modern secularism with a deep commitment to the continuity of Jewish tradition, reappears in Schweid’s work as a call for the general public to take responsibility for Jewish culture in all its aspects (see:* The Jewish Experience of Time: Philosophical Dimensions of the Jewish Holy Days*, trans. by Amnon Hadary, (2000)). A.D. Gordon’s philosophy of nature, on the other hand, serves as the basis for Schweid’s particular interpretation of Zionism as an extension of Jewish life, and for his ethical-religious vision of a future Jewish society that may be described in terms of prophetic-socialism. In *Masot Gordoniyot Hadashot – Humanism Globalizazya, Post-Modernism ve-ha-Am ha-Yehudi* (2005), Schweid uses various insights acquired through his studies of Gordon’s writings to delineate the social, cultural, and moral challenges facing the Jewish people in the present period of globalization, and to show how these challenges may be met successfully. Finally, Schweid found in the thought of Hermann Cohen a basis for discussing the religio-ethical value of Judaism as a historical religion. From the beginning, Schweid’s understanding of Judaism as culture was of a secularist orientation, in that for him culture is the result of human creativity. And yet, over time, he came to emphasize more and more the religious elements of Judaism as necessary to bring to fruition the social and ethical orientations already emphasized in the socialist-Zionist education he received as a youth.

As an educator and a philosophical observer of Jewish education in its social-cultural context, Schweid’s approach may be seen as similar to that of the American Jewish philosopher, Mordecai *Kaplan. The Israeli equivalent to Kaplan’s presentation of Judaism as a civilization is Schweid’s demand that we understand Judaism as a broad culture in which non-religious Jews must be party to the continued existence of the Jewish heritage and contribute to its current development. Like Kaplan, Eliezer Schweid’s philosophical reflection on the problems of Jewish existence is that of a man of faith who nevertheless is deeply rooted in the tenets of modern secularism.

[Joseph Turner and Yehoyada Amir (2nd ed.)]

**SCHWEINFURT**, city in Bavaria. A Jew is first mentioned there in 1212; the community dates from at least 1243. Jews acted as moneylenders to the local aristocracy in 1310. The community suffered during the *Rindfleisch persecutions in 1298 and the *Black Death massacres of 1349*. Emperor Charles IV permitted Jews to return to the city in 1368. Both a synagogue and a cemetery are recorded in the 15th century; the oldest tombstone dates from 1432. A *Jüdengasse* is mentioned in 1437. There were 100 Jews in the city in 1553, but two years later they were expelled. No Jews returned to Schweinfurt until the mid-19th century. There were 27 Jews in the city in 1832, and a community was organized in 1864. Its numbers rose to 490 (3.9% of the total population) in 1880 but subsequently declined to 263 in 1933 and 120 in 1939. A cemetery was consecrated in 1874 and a synagogue in 1877. Schweinfurt was the headquarters of the Union of Orthodox Communities in Bavaria during R. Solomon Stein’s tenure (1894–1934). On Nov. 10, 1938, most Jewish homes were ransacked, the synagogue was looted and desecrated, and the community buildings were destroyed. On April 24, 1942, there were 23 persons deported to *Izbica near Lublin, and 54 more were sent to *Theresienstadt on October 9. Three Jews lived in Schweinfurt in 1949. There are memorials at the site of the destroyed synagogue (consecrated in 1973) and at the Jewish cemetery.

**SCHWEITZER, EDUARD VON** (1844–1920), Hungarian soldier. In the Austro-Prussian War of 1866, Schweitzer was decorated for gallantry and transferred to the officers’ training school. He fought with distinction in the war against Turkey in 1878, receiving a second decoration. He was knighted in the following year and received permission to enter the staff officers’ course. Because Schweitzer refused to convert to Christianity, he was refused admission to the general staff. However, he continued to advance as a result of the personal intervention of the emperor Franz Joseph. In 1898 he was given command of a crack infantry regiment. The emperor is reported to have told a minister, who hinted that a Jewish officer should not remain in such an exalted post, that Schweitzer was one of the best commanders in the army. In 1908 he was promoted to lieutenant field marshal. He retired in 1912. For many years Schweitzer was president of Jewish charities in Vienna.

[Mordechai Kaplan]

**SCHWERIN-GOETZ, ELIAKIM HA-KOHEN** (1760–1852), Hungarian rabbi. Schwein-Goetz was born in Schwerin (Skwierzyna), Poland, and added the name of the town to his family name of Goetz. While still young he went to study in the yeshivot of Posen (Poznan) and later in Pressburg (now Bratislava). In 1782 he went to Prague, where, in addition to pursuing his talmudic studies, he devoted himself to secular studies, particularly mathematics. In 1796 he settled in Baja in southern Hungary and lived at first with his father-in-law. Already during this period students attracted by his reputation as a scholar gathered around him, and he founded a small yeshivah. He struck up a friendship with Mir *Eisenstadt, the young rabbi of the community. It was not until 1812, when he was 52 years of age, that he first took a position as rabbi of Szabadka in southern Hungary (now Subotica, Vojvodina). When Mir Eisenstadt left Baja, Schwerin-Goetz was appointed to succeed him in 1815. During his period of office the community made great spiritual progress and because of him became the center for all the communities of the region. In 1827 the convention of representatives of the communities of the region elected him district rabbi. In his method of learning he was opposed to *pilpul*. He was also opposed to *Hasidism* and to the study of *Kabbalah*. Though he criticized the attempts of Aaron *Chorin, rabbi of Arad, to introduce reforms in Judaism, he nevertheless took a decidedly liberal stand, especially in matters of personal status such as marriage and divorce. He participated in the convention of Hungarian rabbis in Paks in 1844 and there opposed the current of religious extremism. His relations with Moses *Sofer, the dominant figure of his time among Hungarian rabbis, were at first friendly but later became strained. In the great controversy concerning Jonathan Alexandersohn, rabbi of Hejőcsaba, which at this time occupied the rabbis of Central Europe, Schwerin-Goetz opposed the stand of Moses Sorer and actively supported the persecuted Alexandersohn, who was also a vehement opponent of *Hasidism* (see also *Benjamin Ze’ev Rapoport*). The outcome of this controversy marked the victory of extreme Orthodoxy in Hungary over a more liberal approach. His grandson was Samuel *Kohn* (1841–1920), Hungarian Jewish historian who wrote *Schwerin-Goetz’s biography*.

[Yehouda Marton]

**SCHWIEFFERT, PETER** (1917–1945), author; son of a Jewish mother and non-Jewish father, Fritz Schwieffert, a German dramatist.
Schwiefert left Germany in 1938 and went first to Portugal and then to Athens, where he lived in poverty. His mother, on the other hand, escaped to Bulgaria, where she married a Bulgarian, renounced Judaism, and converted to Christianity. Peter Schwiefert, who was greatly influenced by the Jewish atmosphere of his maternal grandparents’ home, determined to live as a loyal Jew. Nevertheless, he remained passionately attached to his mother, and the separation from her, his acute loneliness, and the desire to probe her ways and make her face up to the issues, which she tried to avoid, while clarifying his own position, served as the basis of L'Oiseau n'a plus d'ailes (“The Bird No Longer Has Wings”; ed. Claude Lanzmann, 1974) consisting mostly of letters to his mother, and although written in German, they were posthumously published in a French translation. The title is taken from one of these letters—a long and poignant one—written in November 1944, filled with hopes for the future as well as with a thirst for retribution for the terrible German crime, and reached his mother six months after his death. The book constitutes not only a fine literary work but a moving document, a testimony of rare moral integrity. “The proclamation of my Jewish being,” he writes, “is the most absolute thing I can imagine and feel for me and in me.” Therefore he goes on to say that being Jewish is not, as his mother wanted to believe, a matter of choice or the result of a decision to enter upon a new path.

A sensitive, dreamy, meditative intellectual, Schwiefert chose the hard course of military service against Nazi barbarism. He fought in Syria, Africa, Italy, and France. During that period he came to regard Erez Israel as his home, and though neither religious nor Zionist in the ordinary sense, he studied Torah and observed the Sabbath and festivals. He died in action at the beginning of 1945.

[Denise R. Goitein]

SCHWIMMER, DAVID (1966– ), U.S. actor. Schwimmer was born in Queens, NY, but moved with his parents to Los Angeles as a child. Encouraged by a high school instructor to attend a summer program in acting at Northwestern University in Chicago, he later returned to Northwestern and earned a bachelor’s degree in speech and theater. Along with seven other Northwestern graduates, he co-founded Chicago’s Lookingglass Theater Company in 1988. Schwimmer tried out for a role in a television pilot, but lost out. The show was not produced, but it was reconceived as a show for singles and was sold to NBC as Friends in 1994. Schwimmer was the first of the four major actors to be cast. The show, with Schwimmer playing a perpetually kvetching, neurotic paleontologist named Ross Gellar, was an instant hit and was the cornerstone of the network’s economic success for the ten years it ran on Thursday nights. Each of the stars was reportedly earning $750,000 an episode in 1994. By the end of its run, the actors were earning far more and stood to earn even more as the show went into syndicated re-

runs. Schwimmer directed many episodes of the comedy and earned an Emmy nomination in 1995 as best supporting actor in a comedy series. He branched out to film and later stage, and appeared in The Pallbearer, Breast Men, Six Days Seven Nights, and Uprising, a film about the Holocaust. He also appeared in the Steven Spielberg-Tom Hanks television production Band of Brothers. Schwimmer spoke out often about antisemitism, recounting incidents as a child, and noted more than once that the slain civil rights workers in Mississippi were two Jews and an African-American. “When it comes to certain prejudice and the hatred that still pervades this country,” he said on national television, “I’m a Jew first and not a white person.”

[Stewart Kampel (2nd ed.)]

SCHWIMMER, ROSIKA (1877–1948), feminist and world federalist. Rosika Schwimmer, who was born in Budapest, became one of the leaders of the feminist movement in Hungary in the early years of the 20th century. At the outbreak of World War I she went to the United States to urge President Wilson to mediate the conflict. Touring the country and writing numerous articles, she joined Jane Addams and others to form the Women’s Peace Party, and was also active in Henry Ford’s abortive efforts to bring the war to an end. During the last days of the conflict she returned to Hungary and joined the short-lived government of liberal Count Michael Karolyi. When Admiral Horthy’s reactionary regime came to power, she was smuggled out of the country by friends and reentered the United States. Though denied U.S. citizenship because of her pacifist beliefs, a case she appealed to the Supreme Court and lost in 1929, she continued to campaign for world peace and the establishment of a federal world government. In this capacity she served as vice president of the International League for Peace and Freedom, and as president of the International Campaign for World Government, whose headquarters were located in her home in New York City.

[Judith S. Stein]

SCHWINGER, JULIAN SEYMOUR (1918–1994), U.S. physicist and educator; Nobel laureate. Schwinger, who was born in New York City, entered college at the age of 14 and when only 19 years old received his Ph.D. from Columbia University. He was subsequently research associate at the University of California (1940–41), instructor, then associate professor, at Purdue University (1941–43), staff member of the metallurgical laboratory at the University of Chicago (1943), and associate professor at Harvard (1945–47). In 1947 he was appointed a full professor at Harvard, one of the youngest in its history. Schwinger, Richard Phillips *Feynman, and Shinichiro Tomonaga were awarded the Nobel Prize for physics in 1965 for their work (conducted independently of one another) which

From 1972 until his death Schwinger worked at the University of California. He was enormously respected, was a highly gifted lecturer, and supervised a succession of outstanding graduate students, 70 in all, of whom three received Nobel Prizes. He also received many honors, including the first Einstein Prize (1951), the National Medal of Science (1964), and the Nature of Light Award of the National Academy of Sciences of the U.S. (1949).

**SCHWOB, MARCEL** (1867–1905), French scholar, essayist, and biographer. Schwob was born in Chaville, near Paris. He began his career as a journalist, but spent much time on medieval and philological studies. His erudition is evident in all his writing, particularly his studies of François Villon, and most notably in *Spicilège* (1896). His writing is pure, rich, and varied. *Coeur double* (1891) and *Le Roi au masque d’or* (1893) are tales based on legend and history and La Croisade des en-fants (1896) on medieval narrative. His outstanding *Vies imaginaires* (1896) is a collection of the lives of princesses, poets, pirates, and murderers, based on scholarly texts and bringing historical dramatically to life. His philosophic and poetic impact is achieved sometimes by fantasy, sometimes by an ethereal, dreamlike atmosphere. Thus his novel *Le Livre de Monelle* (1894) is full of frail, unhappy little girls, reminiscent of Maeterlinck’s *Pelléas et Mélisande* (1892). He was a friend of Oscar Wilde, who dedicated *Salome* to him.

Schwob’s other works include *Etude sur l’argot français* (1889); *Mimes* (1894), a book of verse; *La Lampe de Psyché* (1903); and translations from Shakespeare and Defoe. For the last ten years of his life Schwob suffered from an incurable disease. His collected works appeared in ten volumes (1927–30).

[Denise R. Goitein]

**SCIAKI, JOSEPH** (Pepo; 1917–1998), Greek lawyer and author. Sciaki wrote *Pikres alithies* (“Bitter Truths,” 1952), a book of short stories, one of which deals with Jewish life in Athens. He wrote historical articles in *Chronika*, the historical periodical of the Greek Jewish Board of Communities in Athens. He also published a short study on the Athenian/Coriote Jewish activist and journalist Mois Caimi as representing Greek Jewry; as well as a piece on the ancient history of Chalkidan Jewry. He was born to a Romaniot Greek-speaking family in Chalkis in the Evia Peninsula. He sat for years in the Gennadion Library, the Gennadion Newspaper Reading Room, and the National Library in Athens and recorded references to Greek Jewry throughout the ages. He had a keen interest in Hellenistic Jewry in the late classical period and the Jews in the Greek Peninsula in particular. Unfortunately, he published literature and kept most of his knowledge to himself. After his death, his family established an archive of his papers in Athens.  
[Rachel Dalven / Yitzchak Kerem (2nd ed.)]

**SCIALOM, DAVID DARIO** (1880–1966), physician in Tunis. Scialom was a specialist in tropical diseases and was the personal medical attendant of the bey of Tunis and his court. A man of extraordinary simplicity, he was first and foremost the physician of the lower classes, being called “the ghetto doctor.” He published articles on physical characteristics of the Tunisian population (1906); on the 1911 cholera epidemic in Tunisia; on influenza and tuberculosis among Tunisian Jews (1920, 1921); and on Mediterranean fever.

**BIBLIOGRAPHY:** J. Vehel, in: *L’Union Marocaine*, 4 (July 25, 1935).  
[Robert Attal]

**SCIENCE FICTION AND FANTASY, JEWISH**. Fantasy is a genre of literature in which realistic narratives are disrupted by unnatural or unexplainable events. The term “Science Fiction” (sf) emerged during the 1930s as a catchall descriptor for a publishing category with roots traceable to 18th-century Gothic romance, 19th-century scientific romance, and early 20th-century pulp fiction. A subset of the fantastic – forms of expression that are not generally realistic – sf focuses on the world as it might have been, may be, or could become, depending on the occurrence, advent, or continuation of a particular set of seemingly possible cultural, social, scientific, or technological developments. As such, it is more realistic in orientation than fantasy, and contains various thematic preoccupations and subgenres, including Space Opera, Time Travel, Utopia/Dystopia, Artificial Intelligence/Robotics, Alternate History, and some offshoots of Horror, or Dark Fantasy.

As a discrete brand of commercial fiction, sf was first discerned, and subsequently marketed, by Hugo Gernsback (1884–1967), a Belgian-Jewish immigrant to the U.S. sometimes referred to as the “Father of Science Fiction” (although Gernsback first referred to the genre as “Scientifiction”). In 1927, Gernsback launched *Amazing Stories*, the first magazine dedicated exclusively to sf. Often blamed (because of his emphasis on technological speculation at the expense of literary proficiency) for sf’s literary ghettoization and for its formative reputation as sub-literate, Gernsback nevertheless became the namesake for the Hugo, the genre’s premiere achievement award.

**Traditional Jewish Attitudes toward the Fantastic**

It would overstate matters to describe either fantasy or science fiction as necessarily Jewish, or even as bearing any great degree of Jewish specificity. Indeed, the word “imagination” only made its first appearance in the Hebrew language during the 12th century, in Maimonides’ *Guide of the Perplexed*, where it was referred to as the literal dimyon or in terms of koah hamedammeh (the imaginative faculty). As scholar David Stern observes in *Rabbinic Fantasies: Imaginative Narratives from Classical Hebrew Literature*, normative Judaism regarded even
its own non-didactic imaginative literature – “mere stories and profane matter” – with ambivalence or contempt. This is not to say that many of the seminal biblical and post-biblical Jewish texts (most of which embarked upon narrative embellishment either to fill in gaps in the original Torah narrative or to resolve contradictions) were not thoroughly permeated by what we would now call the fantastic. Imaginative works, which included Midrash (exegetical tales, such as the eighth-century Pirkei de-Rabbi Eliezer or the 16th-century Sefer ha-Yashar) mashal (parables and fables), aggadah (rabbinic legends, typically found in Talmud or Midrash), medieval apocalyptic literatures (such as Sefer Zerubbabel), sacred biographies (like the Sefer Hasidim), maqama (rhymed prose narrative typified by Abraham ibn Ezra’s 12th-century Hai ben Me’iz, about a journey to the six planets of the medieval solar system and their imaginary inhabitants); Merkabah (mystical theories of creation), and the apocryphal and pseudepigraphical Heikhalot texts (describing heavenly journeys), were rarely regarded as inherently imaginative. Indeed, the more imaginative the narrative, the more emphatic the author or redactor’s insistence on its veracity. Unabashedly imaginative tales were generally deemed far inferior to legal, philosophical, or even mystical texts elevated to canonical or near-canonical status.

Disdain for the purely imaginative persisted as a hallmark of Hebrew literature even after the 19th century; it remains partly resistant to a resistance to the fantastic that endures to this day among writers and readers of contemporary Hebrew-language fiction. However, Hebrew writers such as S.Y. Agnon, Benjamin Tammuz, Häyyim Nahman Bialik, M.J. Berdyczewski, Häyyim Hazaz, Yehudah Yåari, Yitzhak Oren, M.Z. Feierberg, Aharon Appelfeld, Pinhas Sadah, Yoram Kaniuk, Yizhak Orpaz Averbuch, David Shahar, David Grossman and, A.B. Yehoshua, and Yiddishists such as I.L. Peretz, and I.B. Singer, have variously embraced rabbinic literature (such as aggadah, rabbinic legends, typified in Talmud or Midrash), medieval apocalyptic literatures (such as Sefer Zerubbabel), sacred biographies (like the Pirkei de-Rabbi Eliezer, the 16th-century Sefer ha-Yashar mashal (parables and fables), aggadah (rabbinic legends, typically found in Talmud or Midrash), medieval apocalyptic literatures (such as Sefer Zerubbabel), sacred biographies (like the Sefer Hasidim), maqama (rhymed prose narrative typified by Abraham ibn Ezra’s 12th-century Hai ben Me’iz, about a journey to the six planets of the medieval solar system and their imaginary inhabitants); Merkabah (mystical theories of creation), and the apocryphal and pseudepigraphical Heikhalot texts (describing heavenly journeys), were rarely regarded as inherently imaginative. Indeed, the more imaginative the narrative, the more emphatic the author or redactor’s insistence on its veracity. Unabashedly imaginative tales were generally deemed far inferior to legal, philosophical, or even mystical texts elevated to canonical or near-canonical status.

Singer, have variously embraced biblical and talmudically inspired folk tales, often reformulating the aggadist tradition for modern secular sensibilities.

A Universe of Jewish SF Writers
The contributions of unusually large numbers of Jewish writers, editors, and publishers to the development of American, Russian, and (to a lesser extent) British SF, and the incorporation of themes and devices inspired by biblical and post-biblical rabbinic sources, suggest that SF may, like talmudic Judaism, provide an ideal venue for consideration of the inherent mystical or mysterious. Literary theorist Eric Rabkin regards SF and fantasy in a manner akin to talmudic Judaism: a mode of truth-seeking and reality-testing in which normative concepts of reality can be understood as a collection of perspectives and expectations that we learn to abide by in our daily existence. In Judaism, these perspectives are made to accord with holy writ, whereas in SF and what Rabkin calls “Fabulism,” they are arbitrarily and subjectively laid down by the author. Hence, perhaps, critic Leslie Fiedler’s observation that, “even in its particulars, the universe of science fiction is Jewish.”

Origins in Jewish Myth
While some SF scholarship traces the genre as far back as the Babylonian Epic of Gilgamesh, through the subsequent speculations of Johannes Keppler, Jonathan Swift, Thomas More, Rabelais, and Cyrano de Bergerac, one can point to the apocryphal Books of Enoch (excluded from the Hebrew Bible yet still a canonical text for Ethiopian Jewry) as an antecedent to SF tales – the most famous being British writer Olaf Stapledon’s 1937 novel Star Maker, in which a human mind embarks through space and time on a quest to unlock the mysteries of creation. The Bible’s most formative component – the so-called “J-source” – has been characterized by scholar Harold Bloom as a particularly ironic and deliberate work of fantasy. The Hebrew Bible certainly reconfigured or introduced myths that resonate through the contemporary fantastique, most notably Genesis, the Garden of Eden, the sons of God and the daughters of men, the Tower of Babel, the Flood, the decimation of Sodom and Gomorrah, the Abrahamic Covenant, the Exodus, the parting of the Red Sea, the giving of the Torah and, of course, the End Time, or Apocalypse.

“All mythology,” observed Karen Armstrong, “speaks of another plane that exists alongside our own world, and that in some sense supports it.” Not incidentally, science fiction has sometimes been described as a mythology for the contemporary world. (Some of the more simple-minded SF treatments of biblical myth, however, inspired British writer and SF historian Brian Aldiss to christen these tales “Shaggy God stories.”)

While the purpose of science fiction has never been to prophesize so much as to comment on the present, the prophetic traditions of the Bible (many of them established in the
The Book of Daniel certainly accord with science fictional efforts to delineate the general topography of things to come. Yet post-biblical Jewish myths have also resonated, sometimes formatively, often profoundly, within contemporary fantasy and science fiction. One of the most ubiquitous, the “golem” (Hebrew for “shapeless form”) was first referred to in Psalm 139. Renowned in various 20th-century novels and plays celebrating the kabbalistic skills of Rabbi Judah Loew (1525–1609), the Maharal (Hebrew acronym for Morenu ha-Rav Loew (“Our Teacher Rabbi Loew”) of Prague, this soulless homunculus was purportedly fashioned from clay and blessed with supernatural powers, but eventually defied its creator and ran amok. This oft-recounted folk tale is believed to have inspired Mary Shelley’s Frankenstein (1818), consensually the first identifiable example of modern science fiction. It remains an influential precursor for myriad SF stories featuring robots and androids.

Tales involving dybbuks, wandering souls that attach themselves to living people, have made regular appearances in Jewish folklore since the 16th century, and were popularized on the Yiddish stage in the U.S. in 1920 by S.Y. An-Ski. Such tales helped inspire stories about spirit possession, a mainstay of religious fantasy and gothic horror, and, alternately, about another SF mainstay, rogue artificial intelligence (AI). Some scholars regard the dybbuk as a literary response to the psychological conflicts generated by Jewish emancipation.

Christological myths about Jews have also figured in contemporary SF. The “Wandering Jew, a 13th century English apocryphal character in 17th-century German pamphlets, fueled a number of best-selling novels in the mid-19th century. The archetype has reappeared in SF novels as disparate as Louis Golding’s This Wanderer (1935), Wilson Tucker’s The Planet King (1959), Walter M. Miller’s A Canticle for Leibowitz (1960), and Dan Simmons’ Hyperion (1990), and, somewhat more obliquely, as the titular character in David Brin’s The Postman (1985). The Left Behind franchise series launched by Tim F. LaHaye and Jerry B. Jenkins in 1995, meanwhile, envisions the advent of a Revelations-inspired Rapture, which begins with a miraculously thwarted attack on Israel, but results in the mass conversion or decimation of world Jewry following the tumultuous seven-year “Tribulations” preceding the Last Days. Veteran SF editor and historian Brian Stableford published an anthology in 1991 called Tales of the Wandering Jew.

**Thematic Anthologies and Collections**

Jewish themes and characters have been explored in various modern science fiction and fantasy collections, most notably in two anthologies, Wandering Stars (1974) and More Wandering Stars (1984), both edited by Australia-based American writer Jack Dann, and both largely and sardonically focused on issues pertaining to intermarriage (with aliens, one of them a sentient, ambulatory vegetable), who (or what) is a Jew, and various near and far-future Jewish and Israeli Holocausts. A pair of short novels, Can Androids Be Jewish? by Joe Sampliner, and Miriam’s World by Sol Weiss, appeared in 1996 in The Stars of David: Jewish Science Fiction. Jewish Sci-Fi Stories for Kids (1999), by Rivka Lisa Perel, contains stories by Stephanie Burgis, Eliot Fintushel, Yaacov Peterseil, Miriam Baskin, Dan Pearlman, and Mark Blackman.

**Jews, the Universe, and Everything**

For the most part, however – and despite serious offerings in French, Russian, and even Hebrew – English remains the lingua franca of contemporary SF, Jewish or otherwise. In Walter M. Miller’s A Canticle for Leibowitz (1960), a post-nuclear holocaust Catholic Order grapples with the meaning of an obscure ancient document that belonged to a beatiﬁed Jewish physicist. A Jewish psychotherapist traveled back in time in Michael Moorcock’s Behold the Man (1967), whence he replaced the historical Yeshua on the cross to ensure the Passion unfolds as described in Gospel. Curt Siodmak preserved the DNA-based memories of a Nazi scientist within a Jewish-American scientist’s brain in Hauser’s Memory (1968); Harry Harrison’s The Daleth Effect (1970) concerned an Israeli scientist who discovers an anti-gravity device, and subsequently spirits it out to Denmark rather than see his invention used to fight the Cold War. Isidore Halbium’s The Tsaddik of Seven Wonders (1971) offered a Yiddish-inflected romp through alternate time tracks, considering, among other outcomes, a world in which the Hasmonean revolt against King Antiochus never occurred, and in which the defenders of Masada had defeated the besieging Romans. In The Texas-Israeli War: 1999 (1974), Israel emerged from World War III unscathed.

**A Glut of Golems**

In the post-feminist fable, *He, She and It* (1991; U.K. 1992 as *Body of Glass*), Marge Piercy explored the *golem* myth while considering a dystopian future characterized by nuclear fallout and environmental catastrophe. The novel directly concerned the destruction of the Middle East, the emergence, within a Balkanized America, of the freebooting Jewish community of Tivka, and within the shattered former state of Israel, the birth of a Jewish-Palestinian feminist collective reliant on cloning for propagation. In *Kiln People* (2002), David Brin, the son of the late Los Angeles Jewish newspaper editor Herb Brin, used the *golem* myth to explore the prospects of immortality, as people regularly inject their consciousnesses into expendable clay doppelgangers. He also featured a sentient Jewish dolphin in his “Uplift” series. In *The Iron Council* (2004), British author China Miéville grated weird fantasy with a Trotskyist sensibility to the archetypal western, casting “golem master” Judah Low as a gay rebel who makes a bid for personal and political freedom by absconding with a “perpetual train.” Alexander C. Irvine’s *The Narrows* (2005) opens in a Detroit factory in an alternate World War II, where workers work under a rabbi to manufacture golems tasked with fighting Hitler’s minions.

Golems have cropped up in many other mainstream and genre offerings for at least 50 years, beginning with Roger Zelazny’s *This Immortal* (1966) and providing the focus of numerous fanciful stories by Avram Davidson, Isaac Asimov, Ted Chiang, and others. The *golem* has appeared as well in poems by (non-Jewish) Argentinean “magical realist” Jorge Luis Borges; in Gregory Keyes’ *A Calculus of Angels* (1999); in Michael Chabon’s Pulitzer-winning novel, *The Amazing Adventures of Kavalier & Clay* (2000); in Frances Sherwood *The Book of Splendor* (2002); in Terry Pratchett’s humorous Discworld novels *Feet of Clay* (1996) and *Going Postal* (2004); in the second book of Jonathan Stroud’s Bartimaeus Trilogy, *The Golem’s Eye* (2004); in an episode of television’s *X-Files*; in several comic books (including DC’s *Regan* (1976) and *Monolith* (2004)) as well as Marvel’s *The Invaders* (2004), and,
most recently, as a brilliant parody of the superhero comic book genre by Israeli artist Uri Fink.

**Counterfactual Thought-Experimentation**

The Holocaust remains a thematic and philosophical preoccupation for many contemporary Jewish writers. Fantasy, often denigrated as escapist, nevertheless offers an occasionally useful lens through which to consider a human event at once both singular and ineffable, and most often simply beyond the ability of realistic fiction to accurately represent. The challenge of representation becomes exponentially harder for writers who not only did not directly experience the event, but who were not even alive when it transpired. Some fantasists, sf writers, and children’s authors outside of Israel have resorted to the familiar sf trope of time travel to confront and either undo, or wreak revenge for, the decimation of European Jewry. Others have adopted a more versatile and, thanks to recent developments in particle physics (which postulates the endless generation of parallel worlds), a more realistic sf device: alternate, or counterfactual, history.

Whether conducted by writers of fiction or historians, alternate histories are usually intended as classical thought experiments that posit different outcomes to historical events due to vital alterations – fictional tweaking of points of divergence – in the sequence of events during critical moments in human development. An offshoot of both conventional historical study and of contemporary science fiction, alternate history tries, whether in fiction, film or essay form, to imagine what the world might look like today, in the recent past, or in the near (and occasionally far) future, had some key variant in the historical timeline taken a pivotal turn toward a different direction. Initially disdained for its subjectivity, alternate history has come increasingly into vogue in recent years, becoming a recognizable, if not yet entirely commonplace, literary and cinematic commodity.

Of the myriad historical events available for imaginative inquiry (most notably a failure of the Protestant Reformation, a Southern victory in the American Civil War, a failed bid for American Independence), not a few have concerned themselves with the vagaries of Jewish history. The earliest known example of what we today would term alternate history is the apocryphal Sefer Yehudit (Book of Judith), which depicted a reversal of the Babylonian conquest and a return to Zion by Jewish exiles that never actually happened. Another example is Benjamin Disraeli’s *Prince of the Captivity, A Wondrous Tale* (1833), dramatized in 1907 as a musical by P.P. Grunfeld), about a 12th-century Jewish false messiah who founds a global empire.

No event, however, surpasses the Nazi defeat in 1945 as a focal point for counterfactual speculation. Among devotees and practitioners of alternate history, this variant is known as “Hitler Victorious (HV).” Within this variant of alternate history, Hitler’s war against the Jews becomes a central preoccupation, second only, perhaps, to questions about the extent and nature of possible domestic collaboration under a Nazi regime.

Scores of HV and other alternate history stories, novels, film, and TV adaptations and series have appeared in Great Britain, the U.S., and Germany since the 1930s, and in the early 21st century showed few signs of ceasing to enthral writers, readers, and viewers. Noteworthy recent examples, including those considered outright science fiction, include Philip K. Dick’s Hugo-winning novel, *The Man in the High Castle* (1962); *If Israel Lost The War* (1969), by Richard Z. Chesnoff, Edward Klein, and Robert Littell; Norman Spinrad’s *The Iron Dream* (1974); Len Deighton’s *SS-GB: Nazi-Occupied Britain, 1941* (1978); Robert Harris’s *Fatherland* (1993); Harry Turtledove’s *In the Presence of Mine Enemies* (2003); Philip Roth’s *The Plot Against America* (2004); and Michael Chabon’s *The Yiddish Policemen’s Union* (2006).

**Antisemitic sf**

Many sf writers of the late 19th and early 20th centuries were influenced by, and even propagated, the normative racism of their day, including anti-semitism. Unflattering and even malevolent images of Jews (and blacks and Asians) occurred in the writing of Edgar Rice Burroughs, H.P. Lovecraft, M.P. Shiel, Clark Ashton Smith, Louis Tracy, King Wallace, H.G. Wells, and Jules Verne. Gernsback, though nominally Jewish, translated and published supremacist utopian fantasies by the German Otfried von Hanstein in *Amazing Stories*.

A number of writers subsequently found sf useful for disseminating antisemitic agendas. French poet Robert Brasillach published a poem in 1943 about a future visit to the Vincennes Zoo, where mothers bring their children to attend the death of the world’s last living Jew. In *The Turner Diaries* (1982), Andrew MacDonald concocted a thoroughly racist and antisemitic libertarian fantasy chronicling a white Christian insurrection against a Jewish and African-American-controlled U.S. government. The book has become a ca-
nonical text for American white supremacists, and is believed to have inspired the bombing of the Federal Building in Oklahoma. Another anti-Jewish tract that resorted to apocalyptic sf-tinged scenarios was Serpent's Walk (1991), by Randolph D. Caverhall. The book chronicles the rise of a new American fuhrer and an Israeli-created plague that ultimately turns on its makers, decimating world Jewry and the various “mongrel” races Caverhall purports to despise. David Britton's Lord Horror (1986) provoked vigorous argument as to whether his novel was in fact antisemitic or a deliberate, if entirely over-the-top, parody of antisemitism. In 1993, a non-Jewish producer of the TV series Star Trek: Deep Space 9 complained that his fellow producers – both of them Jewish – had peopled the series with thinly veiled antisemitic alien “shylocks” whose holiest book, “The Rules of Acquisition,” malevolently parodied the Talmud. A novel, The Hand that Signed the Paper (1995), generated controversy in Australia when it was discovered that its author, Helen Demidenko, was not the daughter of a Ukrainian father victimized by Jewish commissars, as she described herself, but a British immigrant, Helen Darville, who used her book to vent spleen upon Ukrainian Jewry and justify Ukrainian collaboration with the Nazis.

Israel Science Fiction and Fantasy

The Jewish state, reconstituted in 1948 as the State of Israel, may be the only country in the world to have been at least partly inspired by a science fiction novel. The work in question was called Altreneuland (1902; Old-New Land), and was written by the Austrian journalist Theodor (Binyamin Ze'ev) Herzl on the heels of his Zionist manifesto Der Judenstaat, (1896; The Jewish State). The earlier pamphlet was a cri de coeur lamenting the deplorable condition of Jews throughout the European Diaspora and containing the blueprint for the modern Zionist movement that within a half century would achieve sovereignty in parts of the historic Jewish commonwealth in Palestine. The latter publication, a thinly plotted work of fiction, was an attempt to fire up the political imagination.

“If you will it,” Herzl declared in an utterance that resounds with a science fiction sensibility, “it is no dream.” Fearful lest his own dream be dismissed as a frivolous Romantic fancy, however, Herzl initially sought to dissociate Zionism from the utopian discourse that had returned to vogue during the 19th century with the publication, in 1888, of Edward Bellamy’s Looking Backward, 2000–1887. At least one other such work, Theodor Hertzka’s Freiland: Ein Soziales Zukunftsbild (“Freeland: An Image of Future Society,” 1890) is believed to have directly influenced Herzl’s decision to craft Altreneuland as a conventional utopian novel, quite possibly because of the many editions it had inspired as well as some of the real-world utopian passions it had sparked.

With his otherwise mundane story of a modern, liberal, technocratic, German-speaking Jewish commonwealth, where Jews (with Arab compliance) could engage in the kind of human engineering that would allow them to shed two millennia of disfiguring dispersion and subjugation, Herzl was actually one of literally dozens of Jewish thinkers indulging in the utopian literary and ideological speculation as to what a future Jewish state might look like. One of these, Massa le-Erez Yisrael bi-Shenet Tat be-Elef ha-Shishi (“A Trip to the Land of Israel in the 800th Year of the Sixth Millennium”), published in 1892 by the Hebrew writer Elhanan Leib Lewinsky and envisioning the flowering of Hebrew culture in Palestine, would have been recognizable as a scientific romance to H.G. Wells, who made his genre debut in 1895 with The Time Machine. Another such book was Max Austerberg-Verakoff’s Das Reich Juidaen im Jahre 6000 (2241), published in 1893 and depicting a mass exodus of Jews from Europe, their settlement in Erez Israel, and the founding there of a Jewish state with Hebrew as its official language. Looking Ahead (1899), by Henry Pereira Mendes, offered an American response to Herzl’s Der Judenstaat (and a Zionist response to Bellamy’s tome), describing a future Jewish state with Jerusalem as its capital. Isaac Fernhoff described a future state called Israel in the aptly named Sheneti Dimyonot (“Two Imaginings”). Hebrew-Yiddish writer Hillel Zeitlin published another such tract, In der Modinas Yisroel in Yor 2000 (“In the State of Israel in the Year 2000”), in 1919, following Great Britain’s proclamation of its Balfour Declaration. In Mandatory Palestine, Boris Schatz wrote Yerushlayim ha-Benuyah (“Rebuilt Jerusalem”), published in 1924 and concerned with social and labor issues of the period. In 1921, Russian-based Hebrew author Shalom Ben Avram published Komeniyut (“Resurgence”), which contained an astute and accurate portrayal of future mass immigration and the challenges and benefits of aliyah.

Most of these writings failed to inspire great notice or enthusiasm. Two, however, attained something of Altreneuland’s stature as a constituting document – a text containing some of the basic myths of the new Hebrew society slated to arise in Palestine. These were Abraham Mapu’s Ahavat Zion (“Love of Zion,” 1853), a historical novel set in an idealized Kingdom of Judah during the reigns of Ahaz and Hezekiah, and Yosef Luidor’s Yoash (1912/13), the Akedah (Binding of Isaac) as a Maccabean myth set against the struggle against the Arabs during the Second Aliyah.

Herzl strived mightily to avoid donning the mantle of utopian visionary even as he sought, in Altreneuland, to use the genre’s conventions to stir the imaginations of Jewish and Gentile readers in a manner that would provoke sympathy and support. But the term “utopian,” even a half century before Altreneuland, carried pejorative associations of impracticality, naive, and wish fulfillment. The Zionist movement – as well as the new Hebrew republic – would move mountains to avoid being stigmatized for what it was – a modern, unabashedly utopian, thoroughly realistic political movement driven, not by imaginative musings or imperialistic hubris but by desperate circumstances and diminishing options.

It has been argued that the contemporary State of Israel not only grew out of science fiction, but also has quite literally lived it every day of its unlikely existence. In their most desperately fanciful imaginings, neither Herzl nor his fellow
Zionist utopians would have entertained the possibility that a mere century after the first Zionist Congress in 1898, the world would include a Jewish democracy six-million strong with the most powerful economy in the region, a first-rate military able to project devastating force thousands of miles away, seven major research universities, its own satellites and astronaut in orbit, and pride of place as a world-class scientific and technological innovator.

Despite these achievements, and despite a breakneck pace of change that heralds fundamental and continual transformation at nearly every level of Israeli society, the fantastic, in most manifestations outside of the literal, fares almost as poorly now – and is as thoroughly stigmatized as déclassé – as during Herzl’s heyday.

Reasons for the inordinately low premium still placed by Israeli writers and Israeli letters and arts on most forms of the literary fantastique since the founding of the state in 1948 are varied, complex, and contradictory. Despite their talent for hard-nosed realism, Israel’s founding pioneers did not, in fact, forsake the strong utopian component of Zionist ideology. Nor did the founding generations restrict their imaginings and activities merely to bringing into being a new Jewish commonwealth. A homeland in and of itself would be insufficient – even unsustainable – unless in recreating theirs, Jews could reclaim their dignity and independence, shuttered during 2,000 years of dispersion, through physical labor and militant self-sufficiency.

A human engineering project of such scope and ambition, however, required a clean break with a Jewish past and culture deemed moribund, shameful, or disfiguring. With roots in the Russian Pale, many of the pre-state Yishuv’s writers and ideologues, already predisposed to the conventions of Russian literary realism, deliberately cut themselves off from the imaginative reservoir of the Jewish past. The task of the Israeli writer was to grapple with questions of religious, national and personal identity considered through the prism of the Zionist endeavor in the land of Israel. As Israeli literary theorist Orsion Bartana has argued in his study of the work of Yoram *Kaniuk, Yitzhak *Orpaz Averbuch, and David *Shahar, Israeli writers are invariably bound up in these larger issues and simply cannot create characters who are not in some way involved in the redemptive communal effort or affected by it.

The so-called “Palmah Generation” of the 1950s added social realism to their literary menu, but they, too, consigned centuries of Jewish myths, stories, motifs, images, tropes, commentaries, and super-commentaries to history and literature’s dustbin. Some of Israel’s leading contemporary writers, most notably David *Grossman, Meir *Shalev, Etgar Keret, and Orly *Castel-Bloom, have, in recent years, acquainted themselves with, and even incorporated, some of the trappings of magical realism. To the extent that they take up the tropes of fantasy, however, it is most often to cast their glance backward, to the formative years of the nation-building effort, and almost never ahead into the foreseeable or distant future. For these writers, as indeed for their predecessors, outright science fiction and fantasy remain, even with the advent of the new millennium and the fantastique’s growing popularity and accumulating literary gravitas worldwide, at the far margins of Hebrew letters.

Israelis have yet to establish their own national borders. Any consideration of imaginary realms must therefore be seen as frivolous or escapist. With the proverbial day-after-tomorrow almost always fraught with peril, not a few Israelis prefer to avoid long-term speculation of any kind. Indeed, the culture seems almost to fetishize its fascination for the here-and-now. SF is considered a foreign import reflective of normative values far removed from Israel’s, where the struggle to consolidate a nation and its territory is ongoing and all consuming.

Whereas most Israeli fiction (and indeed, most modern fiction) concerns itself with the individual’s psychological response to the exigencies of a particularistic life, SF and fantasy, almost by definition, consider broader questions of society’s place in a changing world and a boundless cosmos. In a country where even the ground under one’s feet is not assured, such concerns are considered a luxury bound to distract and weaken. Israel has yet to contend fundamentally and directly with its relationship with its minority populations, and is only beginning to grapple with the exigencies of its relationship with the Palestinians in the West Bank and Gaza. Other issues that remain to be resolved include the rift between secular and religious, between Ashkenazim and Sephardim, and between haves and have-nots. Those Israelis oriented toward any future beyond one characterized by perennial strife and insecurity are therefore often dismissed as astronaughts.

Also, many Israelis mistakenly consider fantasy and science fiction to be a form of children’s entertainment. Despite the musings of Bruno Bettelheim and other devotees of the fairy tale, not a few continue to believe that fantasy and fairy tales stir up subconscious fears in children unavoidably saddled from an early age with various forms of existential angst. And indeed, Jewish literature lacks a mythic basis for the kinds of heroic or Arthurian fantasy that might generate a Jewish version of The Lord of the Rings, a Narnia, or a Harry Potter.

Hebrew, moreover, appears to be at a disadvantage compared to the richer, more agile Yiddish language in conveying what fans of SF and fantasy call “a sense of wonder.” Indeed, the mere act of settling on a Hebrew term for science fiction initially inspired argument, with some arguing for mada dimyoni (imaginative science), with the majority finally favoring mada bidyoni (fabricated science).

Perhaps of greatest consequence for prospective and publishing writers, though, is the Israeli literary establishment’s continuing disdain for commercial literature of almost any kind as inherently unserious, and its sense that science fiction and fantasy represent the lowest forms of commercial fiction. Israeli aficionados themselves regard indigenous forays into the genre as inherently substandard, and prefer imports or translations. And publishers must contend with the fact that Israel publishes so many books every year that most books – genre or non-genre – do well if they cover their expenses.
Tales of Zion’s Fiction

A number of works construable as fantasy and science fiction nevertheless trickled into the Yishuv as early as 1931, when Reuven Grossman translated and published a Hebrew collection of stories by Edgar Allan Poe. Translations of stories and novels by Jules Verne and H.G. Wells soon followed; most were marketed as children’s literature. Several immigrants to pre-state Palestine, including the Russian-Hebrew poet Zalman *Shneour, playwright Jacob Cohen, and Austrian novelist Leo *Perutz, indulged an occasional literary penchant for the fantastic. Cohen’s Beluz (1939) concerned a hidden city ofimmortals at ideological loggerheads over whether to share their secret. Perutz (1882–1957) wrote a series of baroque fantasies, including The Marquis de Bolivar, in which the Wandering Jew defeats a German regiment under Napoleon, and novels such as The Master of the Day of Judgment (1929) and The Virgin’s Brand (1934), in which aspects of human civilization are inspired by viruses, fungi, and other unseen conveyances.

The first identifiable SF novel to be published in Israel in the immediate post-Independence period was Yisrael be-Shenat 2000 ("Israel in the Year 2000"), published by S. Goldfluss in 1951. The name is believed to have been a pseudonym, but the book proved oddly prescient, even alluding, in metaphoric terms, to the likelihood of future Arab uprisings. American science fiction writer Avram Davidson, an Orthodox Jew, lived in Israel from 1948 to 1953 and served in the Israel Defense Forces during Israel’s War of Independence. Polish-born Mordecai Roswhald, who sojourned in Israel and taught at the Hebrew University before leaving for Great Britain, wrote two well-regarded post-nuclear holocaust novels, Level 7 (1959) and A Small Armageddon (1962). Lionel *Davidson, a British-born immigrant, wrote The Sun Chemist (1976) about the rediscovery of a lost formula devised by British chemist (and Israel’s first president) Chaim *Weizmann that uses sweet potatoes to tap solar energy. Davidson wrote two other genre novels, The Rose of Tibet (1962) – a lost world fantasy – and a children’s fantasy adventure, Under Plum Cake (1980).

During Israel’s first decade, local publishers began to publish as many as 30 Hebrew translations of science fiction standards a year, including novels by Robert Heinlein, Poul Anderson, and Frederic Brown as well as Verne, Wells, and Huxley. An early example of this kind of activity was provided by the publishing house Matzpen (Compass), which specialized in a line of translations edited by renowned Israeli SF pioneer and namesake of the nation’s top SF prize, Amos Geffen. The early 1950s, however, were marked in Israel by economic hardship, with the country’s limited resources earmarked for massive immigrant absorption and defense, and with little cash left for light reading. These publishing ventures failed, but some intrepid local fans proceeded to publish two different SF magazines, both launched in 1958. Mada Dimyoni (Imaginary Science) ran for 12 issues, Kosmos: Sipurei Mada Dimyoni (Cosmos: Imaginary Science Stories) folded after four.

At the start of the 1970s, buoyed by the economic gains following the 1967 War, Am Oved launched a series of translations of SF standards that, in fact, continues to this day. Another well-established publisher, Masada, followed suit with a new series of translations edited by Geffen. Their efforts proved successful enough to induce nearly every major commercial Israeli publishing house to launch an SF line of its own, under the respective banners of local SF mavens (and established academics) Adi Tzemach, Emanuel Lottem, and Dorit Landes.

The economy nosedived in the aftermath of the 1973 Yom Kippur War, during which time only one Israeli of literary consequence, poet David *Avidan, expressed any interest in the genre. A respected poet, Avidan was one of a very few writers who not only wrote science fiction but happily embraced the label and its conventions, going so far as to name his own publishing company The 30th Century. Avidan incorporated such standard SF themes as time travel, sentient computers, the destruction of humanity, and telepathic powers into both his poetry and his various stage productions. In 1979, Avidan wrote and directed a short SF film, Sheder min ha-Atid ("Broadcast from the Future"), based on one of his poems. Avidan belonged to the Israeli avant-garde, but he was not the only Hebrew poet to have addressed concerns usually the purview of science or science fiction. Others have dipped their pens in this well included Romanian-born poet Dan *Pagis (1930–1986), scientist Zvi Atzmon (1948– ), and writers Shlomo Shoval, Maya *Bejerano, (1949– ), and Rahel Chalfi.

The election of the Likud in 1977 spurred growth in the consumer market, creating new demands for entertainment, including popular literature. In 1978, Tel Aviv University students Eli Teneh and Aharon Hauptman launched a glossy SF monthly, Fantasia 2000, which ran for 44 issues over four years and became the standard-bearer for local science fiction fandom. The magazine appealed mostly to adolescent males, some of whom emulated their counterparts in the U.S. and the U.K., starting clubs and publishing mimeographed pamphlets and newsletters, called fanzines. The magazine published dozens of stories culled mostly from the New York-based Magazine of Fantasy and Science Fiction (F&SF), running ample book and film review sections as well as popular science columns and covers by talented local artists, including Avi Katz, who in 2000 would be commissioned to design an issue of millennial Israeli stamps dedicated to “SF in Israel” and slated to coincide with a major conference in 2001. Another in-house artist was Victor Ostrovsky, who would achieve notoriety in 1991 as a Mossad renegade and best-selling writer of (largely fabricated) exposes.

Apart from being the country’s longest-running SF magazine and the source of 400 stories, many now deemed canonical, Fantasia had the added distinction of publishing close to 100 original, hitherto unpublished Israeli Hebrew-language SF stories. While few of these proved exceptional, some were competent, and the mere existence of a venue for Hebrew SF spurred many young people to try their hand at writing.
Some of them went on to careers in letters. In this, Fantasia mimicked some of the American magazines of the 1930s and 1940s, which also functioned as greenhouses for up-and-coming writers and researchers. The late Israeli astronaut, Col. Ilan “Ramon, claimed to have read the magazine assiduously, saying that while he typically hid it from his peers in the Air Force, sf made him receptive to the possibility, one day, of an Israeli foothold in space.

Israel’s forays into Lebanon, however, put a damper on both the economy and on activities deemed frivolous. Fantasia folded, and a major international science fiction convention that had been slated to commence in June 1982 in Jerusalem was canceled. Two other magazines that had emerged during the same period as Fantasia fell by the wayside as well: Mada Bidyon (by now, the consensual term for Science Fiction), folded after a single issue; a second, a rechristened Kosmos, gave up the ghost after six, both victims not so much of the zeitgeist as of poor quality and inadequate resources. A number of fly-by-night publishers that had climbed on the sf bandwagon, some producing poor translations of marginal titles, quickly imploded as well. By 1984, Am Oved, with Dorit Landes at the helm of its sf line, had the genre to itself.

As Israel’s Lebanon adventure bogged down, and as the political, religious, and cultural polarization of the Jewish state became more pronounced, various writers, many of them established in the Israeli mainstream, began to make forays into the fantastic, some of them producing undeniable science fiction, though they asserted, for reasons of commerce and prestige, that it was anything but. In fact, at least one Israeli author, I. Hayek, had come down with a bad case of the apocalyptic shudders as early as 1968, when his novel, The Next War, contemplated a 40-day-long doomsday battle between Israel and the rest of the world. The 1980s, however, produced what for Israel constituted a veritable deluge of nightmare visions of the imminent future, beginning with Amos “Kenaan’s Shoah 2 (“Holocaust 2,” 1975), and proceeding through David Yaron’s Ha-Patria (1981), Moshe Ben David’s Ha-Berih (“The Final Escape,” 1984), and David Melamed’s Ha-Halom ha-Rivi’i (“The Fourth Dream,” 1986), each offering variations on Israel’s impending destruction.

In September 1982, nearly half a million Israelis gathered in Tel Aviv to demonstrate against the war in Lebanon. In February 1983, a right-wing heckler tossed a grenade at Peace Now protesters in Jerusalem, killing a 33-year-old kibbutznik and paratroop officer. Kach firebrand and Jewish Defense League founder Meir “Kahane, meanwhile, traveled throughout the country calling Arabs “dogs” and promising a day of reckoning. The prospect of destruction from without had always been an integral component of the collective Israeli psyche. But suddenly, internal dissension, which had rendered the erstwhile Jewish republic 2000 years earlier vulnerable to external forces, appeared even more likely to precipitate Israel’s eventual undoing.

In 1984, Amos Kenan, a veteran of the War of Independence, responded to this cumulative angst with Ha-Derekh le-En-Harod (“The Road to En-Harod”), which postulated a right-wing military putsch and a concurrent attempt to change the distant past, and enhance Jewish fortunes, with a time travel device. The book, which was translated into French, English, and Arabic, won a literary prize from the PLO, and was adapted for film by Israeli director Doron Eran in 1989. In 1996, Kenan would complete his dystopian triptych with Blok 23: Mikhtavim mi-Nes Ziyyonah (“Block 23: Letters from Nes Ziyyonah”), depicting the utter destruction of the Jewish state.

Throughout, Kenan vehemently denied having ever written science fiction (except in an interview in Fantasia 2000, which of course none of his literary confreres would admit to having read). The stigma attached to the genre, however, did not dissuade other Israeli writers of note from indulging in the form. A favorite theme involved a fundamentalist takeover, à la Iran’s Ayatollahs, by ultra-Orthodox Jewish zealots. Examples of sci-fi in shtrimeles (fertile fur hats worn by hasidic men) included Binyamin “Tammuz’s Pandako shel Yermiyahu (“Jeremiah’s Inn,” 1984), Yitzhak *Ben Ner’s Malakhim Ba’im (“Angels Are Coming,”1987), Motti Lerner’s Hovlei Moshiah (“Messianic Pang,” 1988), and Assi *Dayan’s Tokhen ha-Inyanim (“Table of Contents,” 1989) and from a right-wing perspective, Ora Shem Or’s Ha-Karirist (“The Careerist,” 1990).

Variations on this theme ensued during the 1990s, culminating with Michal Peleg’s Ha-Ir ha-Peinitim (“The Inner City,” 1998) and Hadi Ben Amar’s Be-Shem Shamayim (“In the Name of Heaven,” 1998). Ironically, a number of books that indulged in various sf trappings appeared during this time that were written for the sensibilities of Orthodox youngsters in Israel and in various enclaves in New York and Los Angeles. Their purpose was purely didactic.

While many of the books and stories appearing during the late 1970s and 1980s reflected the parochial political and social anxieties of the time, a number of Israeli authors turned to science fiction to explore more universal themes. Some of these stories and novels went so far as to feature protagonists with Anglo-Saxon names operating in nondescript or foreign settings. In 1973, A. Kaley published Groteska (“Grottesque”), a series of absurdist novellas weighing man’s place in the universe. In 1980, David Melamed, a graduate of Fantasia 2000, published his first and only collection of sf stories, Zavu’a be-Korundi (“A Hyena in Corundi”). Though well received within the country’s fledgling sf community, the book did not perform well in the marketplace, and after writing his aforementioned novel, The Fourth Dream, Melamed deserted the genre entirely.

Bibliographer Lavie Tidhar, a former kibbutznik living in South Africa, has established a world-class reputation as a science fiction writer who favors Israeli settings and characters, and works with Jewish and Christological myth in a sub-genre he calls “Hebrewpunk.” His novel An Occupation of Angels (2005) concerns the murder of archangels that first materialized over the Nazi death camps in 1945. He also published a play, There Will Be A Time (2005), that purportedly takes place at the cusp of a black hole. Tidhar won the 2003 Clarke Bradbury International Science Fiction Competition sponsored by the European Space Agency.

Ironically, as commercial fiction began to come into its own during the 1990s, with detective novels by Batya *Gur* and political thrillers by Ram Oren regularly achieving best-seller status, those inclined to the fantastique in Israel began to express a greater interest in outright fantasy than in SF. Reflecting this shift in interest, a number of small publishing houses, including Mitzuv and Opus, began publishing extensive lines of fantasies, as well as role-playing games of the Dungeons & Dragons variety, with an occasional SF title thrown in to keep the wells primed.

One development that may bode well for the future of Israeli SF is the immigration, since the fall of the Soviet Union, of more than a million Russians, many of whom had established themselves as professional SF writers, editors, and publishers. Whether they can continue to pursue this interest in Israel, either within the Russian-speaking and -reading community, or once they achieve proficiency in Hebrew, remains to be seen.

Israeli publishing houses now issue some 40 genre-related titles yearly, some 15 percent of them indigenous efforts. Halomot be-Aspazia (“Pipe Dreams”), a bimonthly fan magazine created by Ron Yaniv and edited by Geffen Award winner Vered Tochterman, began publishing original local SF stories on a bimonthly basis in 2003. The country boasts several clubs and an organization, including The Israeli Society for Science Fiction and Fantasy (http://www.sf-l.org.il), which organizes yearly lecture series and conventions, awards its annual literary prize – the Geffen Award, and publishes a glossy magazine featuring original stories, Ha-Meinad ha-Asiri (“The 10th Dimension”). Israeli Star Trek fans have their own society, and publish their own journal, Starbase 972.

**Other Israelis**

Although still gun-shy of science fiction and fantasy, Israeli writers have generated dozens of counterfactuals – Alternate Histories – both as fiction and in essays. Notably, relatively few deal directly with the Holocaust, reflecting a deep-seated Israeli taboo against any kind of fanciful consideration of the event, most especially by those who did not experience it outright. Examples of allohistorical fiction include Dan *Almagor’s Ilu Rak* (“If Only,” 1990), about Hitler’s premature death; Shmuel Argaman’s Takala be- Halal (“Mishap in Space,” 2000), in which the Soviet Union and the Cold War endure; David Avidan’s *Ei Tu, Brute* (1973), in which Caesar outwits his assassins; Uri *Avnery’s Ha-Telai ha-Shahor* (“The Black Patch,” 1986), in which Nazi Germany develops along non-antimitic lines; Eli Bar-Navi’s Suryah ha-Deromit asher le-Hofo shel ha-Yam ha-Tikkhon (“Southern Syria, on the Coast of the Mediterranean,” 1998), in which Palestine became a part of postwar Syria; Israel Bartal’s Medinah Mizrahit Ketanah le-Lo Tashbikh (“A Small, Eastern Nation Without a Complex,” 1998), in which the Jews never rebelled against Rome, and hence never went into exile; Dorit Ben-Tovim’s *Nad Ned* (“See-Saw,” 1997), postulating an Israeli defeat in 1960 and a Jewish Intifada against Palestinian police; Uri Fink and Shadmi Koren’s Profil 107 (1998), a graphic novel about Israeli superheroes emerging from World War II military experiments; Yanai Gose’s Be-Mehoza Yisadeti et Medinat ha-Yehudim. (“At Mehoza I Founded the Jewish State,” 1995), about a pro-Jewish Babylonian empire in 502 C.E. that supports a Yemenite Jewish state against Ethiopia; Yitzhak Laor’s Am, Ma’akhal Melakhim (“The People, Food Fit for a King,” 1993), in which Israeli soldiers refuse to fight in the Six-Day War; Isaac Oren’s Ha-Kongres (“The Congress,” 1968), in which historians use a device that demonstrates alternate historical outcomes; Amiram Pals *Masa be-Merhav ha-Zeman* (“Journey in the Dimension of Time,” 1980), in which time travelers prevent the fall of Jerusalem in 700 B.C.E.; Doron Rosenblum’s Ha’am Yesh Mekhabad ba-Ulant (“Is There a Notable in the House?”, 2000), in which Albert Einstein agrees to become Israel’s first president in 1948; Arye Sivan’s Le-Olam Al Tomar Ilu (“Never Say If,” 2001), a poem imagining a French takeover of Palestine after World War 1; Jacob Weinshall’s Ha-Yehudi ha-Aharon (“The Last Jew,” 1946), in which victorious Nazis working on a huge space project discover a Jew living in Madagascar; Ivor H. Yarden’s On the Death of Hitler’s Assassin, in which Hitler’s murder in 1938 by a Jewish assassin leads to a massive pogrom, causing the assassin to be reviled by world Jewry after his release from prison four decades later; Ben-Dror Yemini’s Lo Matimim le-Halom ha-Ziyony (“Not Fit for the Zionist Dream,” 1988), in which Sephardi Jews were barred from immigrating to Israel in 1949; and Oren Zibilin’s Ahalan Haver (“Howdy, Friend,” 2000), in which Rabin is spared assassination, and peace with Syria results.

It is a testament to the vigor of Israeli literature that it can sustain itself on a literary tradition dating back less than one century. To be sure, the country is, in per capita terms, a
publishing powerhouse and a voracious consumer of books, not a few of which are, and have been, identifiable as science fiction or fantasy. Literary scholar Alan Mintz has observed: "No culture, however thickly substantial, can forgo its past, especially when it extends so far back in time, without running the risk of desultory shallowness ... around the margins there are [in Israel] signs of cultural insufficiency that may signal more serious problems if a deeper connection to the past is not made." To which many within the somewhat beleaguered universe of Israeli science fiction might well add, "or to the future."

[Sheldon Teitelbaum and Eli Herstein (2nd ed.)]

**SCLIAR, MOACYR** (1937– ), Brazilian author and physician. The city of his birth, Porto Alegre, is often the setting of his books. He established a career as one of Brazil’s most important contemporary writers and as a successful medical doctor working in public health. Scliar is often compared to North American Jewish authors such as Philip Roth and Mordecai Richler. His novels and short stories are commonly characterized as a unique blend of Jewish humor, Yiddishkeit, and Latin American magical realism. He received some of the most prestigious literary awards of Brazil and Latin America, including the Casa de las Americas prize (1988). Most of his major works have been translated into English and many other languages. As a whole, Scliar’s approximately 30 books provide a unique lens through which to view both Brazilian and Jewish culture.

The novel *The Centaur in the Garden* (1980) is one of his most representative and well known. It is the fantastic story of a centaur born to Russian parents who is raised as a Jew in rural Brazil. Guedali, the main character, serves as a metaphor for those who exist at the margins of dominant culture and as a symbol of the cultural hybridism of which he is a product. His life story is an allegory of the search for identity, self-discovery, and ultimately the multiplicity of human existence. The novel *The Strange Nation of Rafael Mendes* (1983) is a mix of fantasy and history; the story is revealed through a Brazilian businessman who discovers his Jewish roots as a descendant of Maimonides. The novel traces the history of the Jewish presence in Brazil and the title character learns he belongs to the "strange nation" of the Jewish people in addition to being Brazilian. In *O ciclo das águas* (1976) Scliar narrates the story of the Jewish white slave trade in Brazil through the voice of a prostitute who was deceived into emigrating from Poland to Brazil in the 1930s. In the novel *A mulher que escreveu a Bíblia* (1999) Scliar utilizes Harold Bloom’s *The Book of J* as a point of departure to invent the story of a woman who lived in King Solomon’s time and was responsible for writing the Bible. His complete short stories have been published in English as *The Collected Stories of Moacyr Scliar* (1999). Scliar is no doubt one of the most influential of Jewish writers from Latin America.

[Darrell B. Lockhart (2nd ed.)]

**SCORPION** (Heb. 2778, akrov; pl. akrabrim). The scorpion is mentioned once in the Bible as a dangerous creature of the wilderness (Deut. 8:5). The word akrabrim is also used for prickly thornbushes (1 Kings 12:11; Ezek. 2:6), and Ascent of Akrabrim (*Máäleh Akrabrim*) in the Negev (Num. 34:4) owes its name either to the scorpions or to the thorns found there. Ten species of scorpion are found in Israel, the most dangerous of which is *Busbus quinquestrarius*. This species is found mainly in deserts, but it occurs also in inhabited regions. When young, the scorpions are yellowish white, later becoming yellow, brown, or black. One of the minor miracles mentioned as occurring in the Second Temple period was that "no serpent or scorpion inflicted injury in Jerusalem" (Avot 5:5).

**SCOTLAND**, northern part of Britain. Although there are records of applications by individual Jews for rights of trade and residence in Edinburgh as early as 1691, and there is reason to believe that a short-lived congregation was established there in 1780, the first organized Jewish community in Scot-
land, that of Edinburgh, was not established until 1816. It was followed shortly by that of Glasgow. The mass immigration from Eastern Europe in the late 19th and early 20th centuries brought many Jewish settlers to Glasgow, but comparatively few to Edinburgh. Of the 15,000 Jews living in Scotland in 1971, all but some 220 resided in Glasgow (13,400) and Edinburgh (1,400). The remainder were distributed in Dundee (84), Ayr (68), Aberdeen (40), and Inverness (12). In the mid-1990s the Jewish population of Glasgow dropped to approximately 6,700 and that of Edinburgh to approximately 500. According to the 2001 British census, there were 4,224 declared Jews by religion in Glasgow, 763 in Edinburgh, 30 in Aberdeen, and 22 in Dundee. There is a Scottish Council of Jewish Communities, and a range of Jewish institutions, especially in Glasgow. Dr. Kenneth Collins has written widely on the history of Scottish Jewry in such works as *Aspects of Scottish Jewry* (1987), which he edited. Relations between Jews and non-Jews in Scotland have always been harmonious.

*SCOTT, CHARLES PRESTWICH* (generally known as C.P. Scott; 1846–1912), British editor and supporter of the Zionist cause. Born in Bath, Scott was first the editor and later the owner of the great liberal daily, the *Manchester Guardian*. From 1895 to 1906 he was a leading Liberal member of parliament. Scott met Chaim *Weizmann at a private party on Sept. 16, 1914, and became a staunch friend of Weizmann and of Zionism thereafter. He introduced Weizmann to D. *Lloyd George, Herbert *Samuel, and other British statesmen, and thus helped Weizmann and his colleagues in their dealings with the British government that led to the *Balfour Declaration.* In a letter to Harry *Sacher he explained his Zionism in the following words: “To make the Jew a whole Jew… to clear him up in his own eyes and the eyes of the world – that seems to me sound, at least as an ideal, and there may be a chance now of moving a long way towards it.” After Turkey’s entrance into World War I, Scott stressed the importance of Palestine for British interests. Scott also revealed to Weizmann the details of the *Sykes-Picot treaty and thus contributed to its undoing. After Weizmann introduced Vladimir *Jabotinsky to Scott, the *Manchester Guardian* editorially supported the idea of the *Jewish Legion and contributed substantially to its realization. Scott remained a firm supporter of the Zionist movement and the *yishuv in Palestine throughout his life. Ironically, after 1967 the *Guardian* (now published from London rather than Manchester) became a venomous critic of Israeli policy, one of the most important disseminators of left-wing anti-Zionism in the British mainstream.*

*SCOTT, SIR WALTER* (1771–1832), Scottish poet and novelist. *Ivanhoe* (1819), one of his “Waverley Novels,” set in 12th-century England, introduces Isaac of York and his daughter Rebecca. The juxtaposition of these two, as well as many incidental features of the book, recalls the story of Shylock and Jessica in *Shakespeare’s Merchant of Venice.* However, Scott’s characters are, in their ethical intention, the opposite of their Shakespearean prototypes. Though a usurer, Isaac is a basically noble character, while Rebecca is the true heroine of the novel. She nurses the eponymous hero back to health and, when she falls into the hands of the villainous Knight Templar Bois-Gilbert, gives expression to the moral virtues of her race and fiercely condemns the false code of honor of medieval chivalry. Rebecca was apparently inspired by Rebecca *Gratz of Philadelphia, of whom Scott had heard from his friend, Washington Irving.*

Toward the end of his life, Scott drew another set of Jewish characters in *The Surgeon’s Daughter* (1827). These are far less sympathetic than the Jews in *Ivanhoe.* Richard Michelle, the half-Jewish rogue, is ambitious, violent, and treacherous. The novel ends somewhat theatrically with his being crushed to death by an elephant in India.

[Harold Harel Fisch]

**SCOUTING.** The Jewish youth movements which emerged in the first half of the 20th century in central and eastern Europe (e.g., *Blau-Weiss*) were influenced more by the German variety (mainly the Wandervögel) than by the British scouting movement founded by Baden-Powell. However, the Zionist youth organization Ha-Shomer (so called after the watchmen’s organization in Ereẓ Israel bearing the same name; see *Ha-Shomer*), which emerged in western Galicia (then under Austrian rule) before World War I, was a full-fledged scouting movement and employed its usual educational methods and techniques. During World War I (Vienna, 1916) this organization merged with other Zionist youth groups to form the large Zionist youth and pioneering movement *Ha-Shomer ha-Za‘ir, which preserved in its educational system, particularly for the younger age groups (from 11 to 17), a strong element of scouting (Heb. zofyyut). Similar educational techniques were widely used between the two world wars in most other Zionist or Zionist-oriented youth movements in eastern Europe, such as Betar, Ha-Shomer ha-Le‘ummim, and Ha-No‘ar ha-Ziyoni. In western European countries, particularly Great Britain (see below) and France, Jewish scout troops and similar youth formations emerged, often established for religious reasons or for the purpose of preventing total assimilation, but at first they did not adopt the Zionist program. In the case of France, they played a considerable role in the active resistance against the Nazi occupation (see below). In
Palestine a full-fledged Jewish scout movement was formed in 1919, shortly after the establishment of the British mandatory regime. Gradually it became an important factor in the pioneering settlement effort in the country. After the establishment of the State of Israel (in 1948) it also comprised non-Jewish (Druze and Arab) units (see below). The Israel Scout movement maintains fraternal contacts and exchanges with ‘Young Judea in the United States, which also incorporates certain scouting methods in its educational system.

**In Great Britain**

Since England was the original home of Baden-Powell's Boy Scout movement, Jewish youngsters were quickly attracted to scouting and, although no religious stipulations prevented their joining local troops, specifically Jewish groups were founded. This was especially the case in the major centers of Jewish population after World War I. During the 1920s and 1930s Jewish Boy Scout and Girl Guide troops were organized in London, Manchester, and Leeds, and others also flourished in cities such as Birmingham, Glasgow, and Liverpool. Increasing competition from the various Zionist youth movements – which also fostered scouting activities – and the disruption caused by the World War II era and the growth of the Jewish youth clubs combined to reduce the appeal of the Boy Scouts and Girl Guides after 1945. The movement nevertheless retained its popularity in certain areas and in 1970 there were several troops in London and others in Hove, Leeds, Manchester, Glasgow, and other towns. A synagogue at the Boy Scout Center in Gilwell Park, Essex, was consecrated in 1957.

A rival movement in Great Britain was the Jewish Lads’ Brigade (JLB), founded in 1895 as a Jewish equivalent to the (Protestant) Boys’ Brigade. The JLB, which trains its members “in loyalty, honor, discipline, and self-respect,” with the emphasis on good citizenship, is organized on semi-military lines – with officers, NCOs, uniforms, and parades – and has had a fluctuating appeal. However, after a noticeable decline in the postwar years, it underwent a significant revival in the 1960s and by 1970 had about 20 branches in the Greater London area alone; there were also large groups in Glasgow and Liverpool (both of which included girls’ sections), and in Birmingham and Manchester. The Glasgow JLB boasted the world’s only Jewish bagpipe band. Both the Jewish scouts and the JLB appointed Jewish chaplains, and their members often formed guards of honor for visiting dignitaries at Jewish communal events and memorial services, in conjunction with adult organizations such as the Association of Jewish Ex-Servicemen and Women. It remained a thriving movement into the 21st century, with hundreds participating in summer camps and a full range of year-round programs, including a three-week Israel tour.

**In France**

The Jewish Scout Movement (Eclaireurs Israélites) was founded in France in 1923 by the electronic engineer Robert Gamzon (known as “Castor”) with a dual purpose: to employ the methods of the scouts in order to imbue a Jewish consciousness into French Jewish children threatened by total assimilation, and to encourage the integration of recently arrived young Jewish immigrants within French society. The early development of the movement was slow. In 1935 there were 3,000 members in Paris (the largest group), as well as groups in Strasbourg, Mulhouse, Lyons, and Marseilles, and in Tunis, Algiers, Oran, and Casablanca in North Africa. When Hitler came to power, the arrival of German Jews in France, especially Leo Cohn (a brother of the Israel jurist Haim *Cohn), enabled the movement to intensify its attachment to Judaism; at the same time the Nazi threat brought it closer to Zionist ideology. Gamzon then elaborated the “pluralist” outlook of the movement: the scouts, who declared their adherence to Judaism, were authorized to identify themselves with one of the Zionist trends – Zionist, religious, or liberal – but a “common minimum” of religious observance (Sabbath and kashrut) was to prevail in all scouting activities.

From this period the movement was concerned with the problems of young refugees. In 1939 a training farm was established which welcomed young immigrants and older scouts; a carpentry workshop was also opened in Paris in the scout headquarters (the first community center).

During World War II the activities of the movement were modified in important respects and encompassed five spheres:

1. The maintenance of normal scout groups and the establishment of new groups in all the towns of the Southern Zone (Vichy France), where there were many Jewish refugee families. There was also an enormous expansion in North Africa, where groups were established in more than 50 towns.

2. The establishment of children’s homes for non-French children separated from their parents. At the end of 1943 these homes were closed down for security reasons and the children were entrusted, under false names, to peasants or placed in non-Jewish boarding schools.

3. The establishment of 13 rural groups throughout the Southern Zone for training in agricultural work and eventual aliya to Palestine. A considerable number of this youth eventually settled in Israel.

4. The creation of a social service for youth which hid young Jews who were in danger and provided adults with false French identity cards. Over 30,000 such documents were forged and distributed by social workers, who thus risked their lives. About 100 of them were arrested by the Gestapo.

5. The establishment of an underground combat unit. In 1944, the boys of the rural unit of Lautrec decided to join the resistance movement (Maquis) and fight the Germans. This Jewish Maquis of 70 members was led by Gamzon and Gilbert Bloch and incorporated within the secret army of the Free French. Supplies were parachuted to it on many occasions. Its headquarters were attacked by the German army and seven boys, including Gilbert Bloch, lost their lives. On Aug. 22, 1944, this same group, in conjunction with two others, attacked an armored train between Mazamet and Castres.
Tarn) and put it out of action, thereby liberating these two towns and taking 3,000 prisoners.

After World War II the movement was reorganized on a more normal basis; groups were maintained or reconstituted in most towns, and the movement’s total membership was 10,000. In 1946 Gamzon founded the Ecole Gilbert Bloch for training youth leaders for the movement and the Jewish organizations of France and North Africa. Rapidly developing into a center of advanced Jewish learning, the school was subsequently headed by Leon Askenazi (known as “Manitou”) for many years. The two leaders of the movement, Shimon Hammel (known as “Chameau”) and Gamzon, settled in Israel in 1947 and 1949, the latter at the head of a group of 50 former scouts which settled in Sedeh Eliyahu and then in Nir Eyyon. In 1971 the movement had around 5,000 members in all the towns of France. Its general orientation was religious but not Orthodox. Its long-standing interest in Israel developed into a definite Zionist orientation in 1970, so that knowledge of Israel became one of its focal points, along with Judaism as such and art, music, and sports. In the early 2000s it had around 4,000 active members in 55 groups and organized 60 summer and winter camps in France and abroad (Israel, Peru, Madagascar, Canada, eastern Europe).

[Denise Gamzon]

In Israel

The first troop of scouts (zofim) in Palestine was started in 1919 at the *Herzlia gymnasium (high school) in Tel Aviv and, together with groups in Jerusalem and Haifa, founded His-tadrut ha-Zofim be-Israel (the “Jewish Scouts’ Federation”). The federation was dissolved after the secession of some sections in 1930 (see the State of *Israel: Youth Movements) and re-formed in 1936 under the aegis of the Education Department of the Va’ad Le’ummi. As the Jewish scout organization was coeducational, it was not admitted to the world movement and did not participate in international scout meetings during the Mandatory period. In 1938 the zofim started sending members for agricultural training, and in 1941 the federation adopted pioneering on the land as one of its aims. Its graduates founded *Ma’agan Mikha’el in 1949 and subsequently established 26 other kibbutzim.

In 1951 the federation was accepted into the world movement and in 1953 merged with Muslim, Christian, and Druze scouts in Israel to form Hitahadut ha-Zofim ve-ha-Zofot be-Israel (the Israel Boy and Girl Scout Federation). There is also a separate section for religious scouts (zofim datiyyim). In 1957 the Girl Scouts (zofot) were affiliated to the corresponding world movement. The zofim differ from most organizations of this kind elsewhere in having troops (shevatim, or “tribes”) comprising all three age groups; 8–10 years, 11–14, and 15–19. In the first two there are separate units for boys and girls, each with its own program; the last comprises both. All the constituent sections, Jewish, Muslim, Christian, and Druze, participate on an equal basis in the jamborees held in Israel and send representatives to international scouting events.

Unlike other youth movements in Israel, the federation is not associated with any party or sectional organization; it operates within the framework of the schools and under the supervision of the Ministry of Education and Culture, which appoints half the members of its governing body. It lays stress on good citizenship and national service, including agricultural pioneering and service in *Nahal outposts. In the early 2000s it had about 70,000 members: 45,000 in the Federation of Jewish Scouts; 13,000, mostly Muslim, in the Organization of Scouts from Arab Schools; 2,000 in the Muslim Arab Scouts and 2,000 in the Greek Orthodox Arab Scouts; 3,000 in the Organization of Catholic Scouts; and 5,000 in the Organization of Druze Scouts. The Arab movements have separate sections for boys and girls; the Druze scouts are all boys, in keeping with the community’s religious traditions.

SCRANTON, city in N.E. Pennsylvania, U.S.; county seat of Lackawanna County. The earliest Jews, who came to Scranton before the Civil War, lived in Wilkes-Barre, where a synagogue existed, and came to Scranton to peddle their wares.

Scranton grew because of the large coal fields located nearby. Many immigrants, just after the Civil War, were brought to the area just to become miners. The Jews came to open stores and businesses.

By 1860 there were enough Jews who had settled in the city so that they could form their own congregation, “Anshei Hesed.” The synagogue was actually incorporated in 1862. Itinerant rabbis assisted them throughout the war. In 1866 a property was purchased on Linden Street. Just prior to Passover in 1867, on a Friday afternoon, the synagogue building was dedicated with great fanfare in the city. The guest speaker was Rabbi Isaac Meyer Wise, then a rabbi in Cincinnati. A few years later when he founded the Reform movement in America with a rabbinical school, HUC, and a congregational arm, UAHC, “Anshei Hesed” was one of the first congregations to affiliate.

Rabbis served two functions in Scranton — first as the spiritual leader and second as the Jewish educator. At times the rabbi even led a school in German and English, teaching both secular and religious subjects. In 1869 the Amos lodge of B’nai B’rith was founded with 18 members. The lodge still exists and holds two annual events of substance. One honors a local Jewish leader; the second has become most noteworthy as the Americanism Award Dinner. Over the 40 years of its existence until 2003, the award was given to leading citizens of the community, including Governor William Scranton, a Scranton native.

Even before the major Eastern European immigration started, Hungarian Jews began to find their way to Scranton as early as 1877. The first Orthodox synagogue was founded in 1886 by Hungarian Jews and was located in the “Flats,” where the immigrant population of Jews, Irish, Italians, and Polish lived. The “Flats” became a major center of the Jewish community until the synagogues, butcher shops, and Hebrew schools were flooded out in 1956.
The second Orthodox synagogue formed was located in downtown Scranton and included Lithuanian and Russian Jews, who prayed differently than their Hungarian brethren. That synagogue was listed in the first volume of the American Jewish Yearbook as established in 1895. When the wealthier Reform Jews began to move to the Hill section, they built a new synagogue in that area and became “Temple Hesed.” Their original building was sold to a new Orthodox group and was renamed the “Linden Street Synagogue.” Several fascinating tales about the building are recorded in a book by A.B. Cohen.

In 1907 a young, brilliant yeshivah graduate got a job in Scranton at the local Montefiore School. His name was Harry Wolfson and he became a legend in America Jewish academia. Within a few months he completed grammar school. By the time he graduated Central High School in Scranton in 1910, he had earned the right to be the valedictorian and had also been awarded a four-year scholarship to Harvard College. Once Wolfson entered Harvard he never left, ultimately being given the Littauer Chair, the first Judaica chair in an American university. Wolfson had a soft spot in his heart for Scranton, maintaining ties with people whom he had met during his three years in the community.

The Jewish community of Scranton grew rapidly before World War 1. One noted rabbi who served the “Linden Street Synagogue” was Wolf Gold. After moving to New York, Gold was very active in Mizrahi and became the head of America Mizrahi before making aliyah in the 1930s. When Israel became a state on May 14, 1948, Gold was in Jerusalem because of the siege. He could not attend the signing of Israel’s Declaration of Independence in Tel Aviv, but space was left for him and two others. He and Golda Meir are the only American signatories on that monumental document in Israel’s history.

Shortly after World War 1, led by M.L. Goodman, a Scranton news baron, a Conservative synagogue, Temple Israel, was founded in 1921. The synagogue benefited from the great interest of the leadership in Jewish education. In 1923 Louis Wolf was hired to be a teacher. The following year Dr. Max Arzt became the rabbi of Temple Israel. Between the two, Temple Israel created one of the most outstanding afternoon Hebrew schools complemented by a Junior Congregation, which became a model for Conservative synagogues throughout the U.S. At Temple Israel Arzt produced an outstanding weekly bulletin, gave excellent sermons on the topics of the day rooted in traditional sources, and made it quite clear what a synagogue-center could accomplish.

In the early 1930s, Scranton Jewry grew to 8,000 and then its numbers began to diminish. With clothing factories, needlework trade and other industrial plants, Scranton Jews made it possible for Scranton itself to have sufficient employment in 1935 for 135,000 people. Arzt left in 1939 to become the vice chancellor of the Jewish Theological Seminary. His students continue to remember him and his talented educator Louis Wolf.

Following World War II, during which 1,200 Scranton Jews served, Temple Israel grew dramatically, with a Hebrew school of 575 at its peak. The rabbi, Simon Shoop, who served from 1949 to 1990, led the congregation to become the most traditional Conservative synagogue in North America. Shoop, who had a doctorate, was one of the first to teach courses on the Holocaust, which he initiated at the University of Scranton and Marywood University, both Catholic schools. Among Shoop’s students was Professor Michael Brown, a Jewish historian at York University in Canada, and Professor Mark Harris of the USC film school, who won three Oscars for documentary films, including The Long Way Home and The Kindertransport.

Another student of the Shoop era, Ralph Levy, has invented many toys including the talking “Furby.”

A most fascinating personality arrived in Scranton from Baltimore in 1955. His name was Harry Weinberg, and he had bought all the bonds of the Scranton Transit Company, which had been on strike for over 300 days. Weinberg, without any formal education, was an entrepreneur in the most exciting way. During his decade in Scranton, he bought almost a quarter of a million dollars of real estate in the city. His love was for transit companies. He bought the Dallas Transit company and other companies in the West. He also bought the Fifth Avenue Bus Company, even though the mayor of New York said that he would not let Weinberg run it. Within a week in the early 1960s, Weinberg made over a million dollars when he had to sell.

He was actually looking at Hawaii as a real center for financial growth. First, he purchased the Honolulu Transit Company. Once he saw the possibilities in that area, he moved to Hawaii. From 1966 until 1989, Harry Weinberg became the largest landholder in Hawaii. His fortune began to grow and his main interest was in creating a major foundation. By the time of his death in 1991 the Jeanette and Harry Weinberg Foundation was worth almost a billion dollars. Just before his death he promised the University of Scranton 6 million dollars for a new library building and for a Chair of Jewish Studies. The library was completed in 1992 and the Jesuits all call it the Weinberg library. Professor Marc Shapiro holds the Weinberg Judaica chair.

Since 1980 there has been a definite change in Scranton, as Temple Hesed and Temple Israel have grown smaller. The Orthodox community is led by the Lakewood Yeshiva branch in Scranton. Rabbi Moshe Fine, a rabbi in the community for 27 years, has built the Orthodox community through his teaching, his determined leadership, and his pastoral skills. There were about 3,000 Jews in Scranton in 2005; almost half were Orthodox Jews.

In 2002 Rabbi David Geffen of Temple Israel received agreement from Father McShane, president of the University of Scranton, for an exhibit on the history of the Jews of Scranton to be mounted at the university. The exhibit was held in the spring and summer of 2004, curated by Arnine Weiss, a noted educator. Scranton thus participated in the 350-year celebration of the Jews’ arrival in New Amsterdam.

[David Geffen (2nd ed.)]
SCRIBE. The Hebrew term for “scribe” is sofer, a participle form of the root spr, meaning “to count.” It is a Canaanite word, appearing in Ugarit (rb spr, “chief scribe”) as well as a loanword in an Egyptian text – sofer yode‘a, i.e., “wise scribe” (Papyrus Anastasi I; late 13th century B.C.E.). It may be a cognate to Akkadian sāpiru, “secretary, official.” The first biblical reference to sofer is found in the Song of Deborah (Judg. 5:14). Another term used frequently in the Hexateuch is shoter, which probably meant “recorder.” This functionary is associated with food rationing (Num. 11:16; Josh. 11:10; cf. Prov. 6:7), raising the levy (Ex. 5:6; et al.; Deut. 20:5; cf. 11 Chron. 26:11), and the law courts (Deut. 1:15; 16:18). The root of shoter is derived from the cognate Akkadian satîru, “to write,” and reappears in later Aramaic and Hebrew in shetar, “a written document” (see also Job 38:33). The common Akkadian word for scribe was tupšarru which appears as ti’afstar in Nahum’s prophecy of the destruction of Nineveh (3:17) and Jeremiah’s words on Babylon’s doom (51:27). The change from sh to s probably reflects Assyrian pronunciation.

As in neighboring lands, the Israelite scribe learned his profession in family-like guilds (cf. “the families of scribes who inhabited Jabez,” 1 Chron. 2:5). A 15th century B.C.E. text does indicate the existence of scribal schools in Canaan proper. It is a letter written by a teacher to a student’s father living in Shechem asking for the long overdue tuition fee that could be paid in kind. The teacher describes his relationship to his students as that of a parent. (For a more detailed description of the scribe studies see “Education.”)

W.F. Albright reads this important text:

Unto Birashshena say:
Thou Baniti – [Ashirat (?)]:
From three years (age) until now thou hast not caused me to be paid –
which thou canst send?
What is my offense that thou hast not paid [me]?
The children who are with me continue to learn –
their father and their mother every [day] alike am I...
Now [behold] whatever [there is] at the disposal of
my lord let him send unto me, and let him inform me!

During the time of David, a certain Seraijah (11 Sam. 8:17; Sheva, 11 Sam. 20:25; Shisha, 1 Kings 4:3; Shabsba, 1 Chron. 18:16) was appointed royal scribe. Both his sons Elihoreph and Ahijah followed him in Solomon’s court. R. de Vaux has argued that this post, like most of David’s cabinet, was adopted from Egyptian models. Furthermore, A. Cody maintains that the name Shisha etc. is a barbarism of the Egyptian term ssh, meaning “scribe.” B. Mazar argues for a Canaanite origin for David’s officials and derives all the above forms from an original Hurrian name Šewe-šarrī. Among the returnees to Judah in early Persian times were “the sons of Hassophereth” – perhaps “members of the scribal office” – listed among the descendants of Solomon’s servants (Ezra 2:55 = Neh. 7:57). The Judean monarchy produced a prominent scribal family that influenced the political scene for several generations (11 Kings 22:3, 12, 14; 25:22; Jer. 26:24; 36:11, 12):

Scribes of various degrees of competence were attached to all government and temple offices. Apparently there were also independent scribes who either served the public or were in the employ of men of means. The highest scribal post was that of royal scribe. It is difficult to determine his exact position among the king’s other ministers, even if it is assumed that the various biblical lists follow the principle of order of importance (see 11 Sam. 8:16–18 = 1 Chron. 18:15–17; 11 Sam. 20:23–26; 1 Kings 4:2–6). In the time of Hezekiah, the royal scribe seems to be of a lower rank than royal chamberlain (ašher ʾal ha-bayit) but higher than mazkir (Isa. 22:15–25; 36:3; 11 Kings 18:18, 37 and also 11 Chron. 34:8). Exactly what the duties of the royal scribe were is unknown. Besides fulfilling an advisory capacity (11 Kings 18:18ff.; 22:14; cf. 1 Chron. 27:32), he seems to have been in charge of financial matters (11 Kings 12:1ff.; 22:3ff.). This function may underlie the original meaning of the title, which may have been “accountant.” Quite likely, other ministries had their own scribal service. The priesthood definitely needed literati (1 Chron. 24:6; 11 Chron. 34:13) and so did the chief of staff (11 Chron. 26:11; 11 Kings 29:19 = Jer. 52:25). City governments, as well, required lists of prominent landowners for purposes of taxation and army service (Judg. 8:14). The public at large would also turn to a scribe to draw up documents of legal (Deut. 24:1; Isa. 50:1; Jer. 3:8; 32:11) or religious character (Deut. 6:9; 11:20). Wealthy gentiles could afford a personal secretary for their business affairs (cf. the inscribed handles from Gibea, late seventh century). Baruch son of Neriah served Jeremiah in this capacity, though the relationship may be better characterized as that of master and disciple (Jer. 32:12; 36:4, 18; 43:3; 45:1ff.). Several inscribed seals from the Monarchy period bearing the title sofer have been discovered and in and around Palestine: mš ḥsr (מש הספר), kmšš/mkmšš/hspsr, (בְּמַשׁ מַמְשׁוּר), ḥšspr (חַשַּׁפְר), לָכָהּ בְּמַשׁ רְפָא (לכחה במשרפה). They are all probably non-Israelite in origin. The Persian Empire, consisting of many peoples and languages, is noted for its efficient civil service and far-flung system of communication (Est. 3:12; 8:9). Each governor was assisted by his own scribe (Ezra 4:8, 9, 17, 23). The contemporary Aramaic papyri from Elephantine shed much light on scribal practice of that time. One of the prominent Jewish personalities of the period was Ezra the Scribe (BK 82a; Sanh. 21b). H.H. Schaefer suggested that Ezra’s title (Ezra 7:6, 12) probably testifies to his high po-
sition in the Persian court, perhaps "secretary for Jewish affairs." During the Second Temple Period the word soferim had a special connotation.

In Judaism
Later the scribe was a professional expert in the writing of Torah scrolls, *tefillin, *mezuzot, and bills of divorce. Scribes are, therefore, known as sofer setam, *setam, *tefillin, and mezuzot. These have to be written with a feather quill in indelible ink, in straight lines, and on specially prepared parchment. It is inferred from the Bible that every Jew should write for himself a Torah scroll (see Deut. 31:19; see Sanh. 21b).
Expertness, however, being required in writing a Torah scroll, the commandment can only be fulfilled by ordering it from a scribe. The profession of scribe was indispensable to the Jewish community, and according to the Talmud (Sanh. 17b) a scholar should not dwell in a town where there is no scribe. In the talmudic period, scribes were poorly paid lest they become rich and desert their vocations, leaving the community without their services. The scribe writing a Torah scroll must devote utmost attention and care to the writing; he is forbidden to rely on his memory and has to write from a model copy (Meg. 18b). His guide is the professional compendium for scribes, Tikkan Soferim, which contains the traditional text of the Torah, the specific rules concerning the decorative flourishes (tagin, "crowns") on certain letters, the regulations as to the spacing of certain Torah sections ("open" or "closed" pericopes), and the rules for writing Torah scrolls in which each column begins with the Hebrew letter vav (vavei ha-amudim). Only the Scroll of Esther may be adorned with artistic illustrations but not the Torah scroll, although Alexandrian scribes are said to have gilded the name and appellations of God (Sof. 1:9). When writing a Torah scroll a scribe must especially prepare himself so that he writes the names of the Lord with proper devotion and in ritual purity. It is, therefore, customary that he immerse himself in a ritual bath (mikveh) before beginning his work. (The rules for the writing of Torah scrolls and other ritual texts are laid down in Sof. 1–10; Maim. Yad, Tefillin, Mezuzah, 1–10; Sh. Ar., YD 270ff.) Scribes also acted as recording clerks and court secretaries of the bet din and were, therefore, also called lavlar, from the Latin libellarius. They wrote legal documents such as bills of divorce (get) and contracts. In halakhad there are established rules as to who pays the scribe's fee. The general principle is that the person who receives the greater benefit from a transaction has to pay the scribe, e.g., the buyer of property and the borrower of money. In modern times printed forms are used for most legal transactions and the only document that has to be written by an expert scribe is the bill of divorce.

SCROLL OF ANTIOCHUS

*תְּמוּנָה אֶמְצַוְתָּא* or Scroll of the Hasmoneans (Heb. מִלְכַּת תִּכְנָּא), popular account of the wars of the Hasmoneans and of the origin of the festival of Hanukkah. The scroll has been handed down in several Aramaic versions, probably dating from the late talmudic period (its Aramaic language indicates the period between the second and fifth centuries C.E. in Palestine). It is first mentioned in the *Halakhot Gedolot* (ed. by A. Hildesheimer (1890), 615, cf. also the ed. princi. (Venice, 1548), 141) which describes it as originating in "the oldest schools of Shammai and Hillel"; unlike the Scroll of Esther, it is not read on the holiday with which it is connected and will be elevated to this position only "when there arises a priest with Urim and Thummim."

Saadiah, in his *Sefer ha-Gallai*, deals more fully with the scroll. He calls it "The book of the Sons of the Hasmoneans" (הָגָּנָא הַיִּשְׁרָאֵלִים) and quotes a sentence which, with minor variations, is also found in the existing version (v. 23 in ed. Filipowski and Gaster); the scroll which he knew was probably also already punctuated and divided into verses. Nissim of Kairouan assigns the scroll an important position in the literature of the Apocrypha; in the introduction to his *Sefer Ha-Ma‘asiyyot*, he promises to relate the entire history of the Jews, "with the exception of that contained in the Scroll of Esther, the Scroll of the Hasmoneans (presumably the Scroll of Antiochus) and the 24 books [of the Bible]." Isaiah ‘i Trani reports on the custom of reading the scroll in synagogues on Hanukkah (cf. his *tosafot* to Sukkah 44b (Lemberg, 1868), 31b).

Contents of the Scroll

King Antiochus, who has already conquered many countries, decides in the 23rd year of his reign to destroy the Jewish people, because it adheres to another law and other customs and secretly dreams of dominating the world. He sends to Jerusalem his commander in chief Nicanor, who instigates a massacre there, sets up an idol in the Temple and defiles the entrance hall with pigs’ blood. On the pretext of being willing to submit to Antiochus’ commands, “Jonathan, a son of the high priest Mattathias, gains a secret audience with Nicanor, and kills him with a sword concealed under his robe; he then attacks Nicanor’s army, which is now without a leader, and only a few of the soldiers succeed in escaping and returning by ship to Antiochus. In commemoration of the victory, Jonathan has a pillar erected in the town, bearing the inscription "The Maccabee has killed strong men." Antiochus then sends to Jerusalem a second commander, Bagris; he metes out a terrible revenge upon the town and upon those Jews who have returned to the faith (here the scroll includes the story related in 1 Macc. 5:37–40 and 11 Macc. 6:16 of the devout people in the cave who were killed on the Sabbath because they would not fight to defend themselves). Jonathan and his four brothers defeat Bagris, who escapes and returns to Antiochus. He
is equipped with a new army and armored elephants and then makes an attack on Judea. Judah Maccabee now appears in the story for the first time; and Jonathan, the third son of Mattathias, henceforth remains in the background. At the news of Bagris’ approach, Judah proclaims a fast and calls for prayers in Mizpah (cf. 1 Macc. 3:46ff.); the army then goes into battle and wins several victories, though it pays for them with the death of its leader. Now old Mattathias himself assumes command of the Jewish soldiers; the enemy is decisively defeated, and Bagris is taken prisoner and burned. When Antiochus is told the news, he boards a ship and tries to find refuge in some coastal town; but wherever he arrives he is greeted with the scornful cry: “See the runaway!” so that finally he becomes desperate and throws himself into the sea. At this same time, the Jews are reconsecrating their Temple; while searching for pure oil for the lamp, they find a vessel bearing the seal of the high priest and dating back to the time of the prophet Samuel. By a miracle the oil, which is sufficient for only one day, burns in the lamp for a full eight days; and this is why Hanukkah, the festival commemorating the reconsecration of the Temple, is celebrated for eight days.

Author of the Scroll
As can be seen from this summary, the author was totally ignorant of the historical circumstances at the time of the Maccabees and made no use of any reliable sources on the period. The following points must be emphasized in connection with the text:

(1) The statement at the end of the scroll that 206 years elapsed between the beginning of the Hasmonan dynasty and the fall of the Second Temple is entirely correct if the time is reckoned from the first year of John Hyrcanus (135 B.C.E.) until the destruction of Jerusalem. This method of dating from the first year of John’s reign, which was still being used in the Hebrew business documents of the later talmudic period (111889), was most probably the sole point of reference which made the author of the scroll give 135 B.C.E. as the first year of the Hasmonans. This incorrect assumption also seems to have been the basis for the legend about the high priest Jonathan, who according to the scroll led the revolt of the Maccabees.

(2) In view of their form and content, the stories about Nicanor, set as they are in the spirit of a later period, are intended to provide information on the festival of Nicanor’s Day (13th Adar) rather than to relate events that actually took place during the time of the Maccabees (Meg. Ta’an. 12; Ta’an. 18).

(3) The story of the miracle of the oil, which is also found in talmudic writings (Meg. Ta’an. 9, Shab. 21b), could have originated only at a time when Hanukkah had already become a festival lasting eight days; and it serves as a reason for the practice of lighting the candles.

Thus the author of the scroll was aware of customs and recollections which the people of his time still cherished in memory of the Hasmonan victory, even though the historically reliable sources were unknown to him. Moreover, the tone of the whole story and the way in which the events of the period are represented are evidence that in his day there was no longer any interest in a political evaluation of the Hasmonans; all that was important was to explain the origin of certain halakhic prescriptions concerning Hanukkah, and the origin of several later customs. Hence it is understandable that the author of the scroll of Antiochus, as stated above, connects “Megillat Ta’anit with the Scroll of Antiochus and ascribes both works to the schools of Shamai and Hillel. In talmudic tradition (Shab. 13b), the editing of Megillat Ta’anit is attributed to scholars of earlier generations; discussions on questions of halukkah relating to Hanukkah are ascribed to the schools of Shamai and Hillel (Shab. 21b), and it was the statements on halukkah which were the main source of interest to talmudic scholars editing the two scrolls.

The Language of the Scroll
The language of the original scroll was Western Middle Aramaic. From the language it can be established that the scroll was composed in Ereẓ Israel and was possibly edited from a language point of view in Babylonia (as was the Targum Onkelos). The scroll is written in a historiographical style; it imitates ancient Jewish sources (i.e., biblical Aramaic, Megillat Ta’anit) and closely follows the historiographical style of the Bible in the Aramaic versions found in the Targums. The language of the scroll was not the spoken language of its author but rather a literary language; even if the author knew, as seems likely, the Palestinian dialect of Aramaic, he nonetheless uses an Aramaic which was very close to the Targum Onkelos.

Editions of the Scroll
The scroll was first edited by H. Filipowski from a manuscript in the British Museum (Sefer Mivhar ha-Peninim u-Megillat Antiochus (1851), 73–100). Besides the Aramaic version, there is also a Hebrew one; but this is only a late translation of the Aramaic text (published by D. Slutzki, Warsaw, 1863, with an introduction and amendments). Jellinek published a second manuscript (Beit ha-Midrash, 6 (1932), 4–8), and J. Taprower a third (Kevod ha-Levanon, 10, pt. 4 (1874), 17–28). The most complete publication is that of M. Gaster, which is based on six manuscripts (Transactions of the Ninth International Congress of Orientalists, 2 (1893), 17–27); S.A. Wertheimer published another manuscript in Leket Midrashim (Jerusalem, 1903), 13b–18a; a facsimile edition of a European version by L. Nemoy, The Scroll of Antiochus (New Haven, 1952); a critical edition, based upon Yemenite texts provided by super-linear vocalization, by M.Z. Kadari, “The Aramaic Antiochus Scroll,” Bar-Ilan, Sefer ha-Shanah, 1 (1963), 81–105, Bar Ilan, Sefer ha-Shanah, 11 (1964), 178–214; the princ. ed. re-edited by I. Joel, K5 37 (1961/62), 132–6. The version given by J.D. Eisenstein (in Ozar Midrashim (1915), 185–9) is an unaltered reprint of the text by Slutzki. The scroll has been translated into Latin, German, Spanish, Arabic, and Persian.

SCROLL OF ESTHER (Heb. מִגְּדַלַת אֶסְתַּר, Megillat Ester), the festal scroll of *Purim, the only one of the Five Scrolls to bear the title megillah as part of its traditional name (see *Scrolls, the Five). The Scroll of Esther tells the story of the salvation of the Jews of the Persian Empire.

Contents
The Persian king *Ahasuerus, in the third year of his reign, climaxes 180 days of banqueting for his officials with an additional feast of seven days for the entire populace of Shushan. On the seventh day of this party, the king, while drunk, orders Queen *Vashti to appear so that all may appreciate her beauty. When the queen refuses, the king, having consulted his advisors, removes Vashti from her position, and a decree is sent to all the husbands of the realm ordering them to dominate their own households (chapter 1).

A contest is held among all the beautiful maidens of the kingdom to find a successor to Vashti. One of the girls taken to the palace is *Esther, or Hadassah, the cousin of *Mordecai the Jew. Esther, concealing her origins, finds favor in the eyes of the king and is chosen to succeed Vashti. Mordecai, who is one of the officials who “sit in the King’s Gate,” learns of a plot against the king devised by two of his eunuchs. He reveals this to Esther, who in turn informs the king. The eunuchs are executed (chapter 2).

Ahasuerus elevates *Haman the Agagite, a descendant of Agag king of Amalek (1 Sam. 15), above all his courtiers, and all the king’s courtiers bow to Haman in recognition of his distinguished rank. Mordecai refuses on the grounds that he is Jewish, presumably because there is a perpetual feud between Amalek and the Jews (Ex. 17: 14–16; Deut. 25:17–19). Angered by this snub, Haman resolves to exterminate Mordecai and the entire Jewish people and determines the appropriate day by lot. He then persuades the king that the Jews are a subversive people who should be eliminated, reinforcing this argument with an offer of 10,000 talents of silver. Ahasuerus authorizes Haman to deal with the Jews as he chooses. Haman writes to all the royal governors appointing the 13th of Adar for the slaughter of the Jews (chapter 3).

Learning of the decree, Mordecai appeals to Esther to intercede with the king. In spite of the mortal danger of appearing before the king without being specifically summoned, Esther agrees to spend three days fasting and then to go to the king (chapter 4). On the third day, Esther approaches the king and is spared. She requests that the king and Haman come to a banquet that night. At the banquet, Esther refuses to reveal her true wishes, but merely asks that Ahasuerus and Haman attend a second banquet she will give on the following night. Haman returns home proud of having been so honored. At the advice of his wife and supporters, he prepares a stake 50 cubits high upon which to hang Mordecai (chapter 5).

Since the king cannot sleep that night, he orders that the royal annals be read to him, and thereby discovers that Mordecai had never been properly rewarded for denouncing the two eunuchs. He asks Haman’s advice concerning a means of honoring someone whom the king deems worthy of honor. Haman, thinking he is the chosen one, proposes a procession in royal garb upon a royal horse through the streets of the city, with a noble leading the horse and proclaiming: “This is what is done for the man whom the king desires to honor.” The king then orders Haman to do this for Mordecai (chapter 6). At the second banquet, Esther denounces Haman as plotting the destruction of her people. When Haman appeals to Esther for mercy, the king, thinking he intends to ravish her, orders him to be hanged on the stake prepared for Mordecai (chapter 7).

Haman’s place in the king’s favor is taken over by Mordecai, but Haman’s decree sealing the fate of the Jews poses a serious problem, since according to the Medo-Persian constitution a royal decree may not be revoked (both the idea of a Medo-Persian partnership and the attribution to it of this law are taken, with other features, from Dan. 6). Mordecai, however, writes to all the satraps, governors, and other important officials of the realm authorizing the Jews to defend themselves and to destroy anyone who may attack them (chapter 8). Mordecai’s prestige is sufficient to insure that the royal officials favor the Jews on that fateful day. Instead of being exterminated on that day, the Jews seem to have suffered no casualties at all; instead, they themselves kill 500 of their enemies as well as the ten sons of Haman in Shushan, and 75,000 enemies in the provinces. At Esther’s request, the Jews of the capital are also given the following day, the 14th of Adar, to avenge themselves on their foes. The Jews are so feared that many gentiles pretend to be Jews (this and not “are converted to Judaism,” is the meaning of mitzyahadim, 8:17).

The days following the battles, the 14th of Adar in the provinces and the 15th in Shushan, are declared by Mordecai and Esther days of feasting and merrymaking forevermore, and they are designed “the days of Purim” in memory of the lots that Haman cast (chapters 9–10). As is pointed out by H.L. Ginsberg, Esther 9:30–31 obliquely justifies the innovation of a new festival with no basis in the Torah, by invoking the authority of the prophet Zechariah (who had flourished in the reign of Ahasuerus’ predecessor Darius 1) in that they call the ordinance of Mordecai and Esther “an ordinance of equity and honesty” and state that its content was: “These days of Purim shall be observed at their proper time, as Mordecai

the Jew – and now Queen Esther – has obligated them to do, and just as they have assumed for themselves and their descendants the obligation of the fast with their lamentations." The reference is to Zechariah 8:19: “Thus said the Lord of Hosts: The fasts of the fourth, fifth, seventh, and tenth months [corresponding to the modern 17th of Tammuz, Ninth of Av, Fast of Gedaliah, and Tenth of Tevet] shall be turned into joy and gladness and happy seasons for the House of Judah; just love honesty and equity.” The reference to this verse implies the following midrashic interpretation of it: having adopted those fasts, the House of Judah is bound – as a matter of honesty and equity – to adopt new holidays as well.

**Historicity**

The Scroll of Esther claims to be a simple historical account of events that actually took place in the fortress of Shushan, or Susa. It is true that there was a Persian king named Ahasuerus; for Ahasuerus is merely a Hebrew form (the consonantal text of the Hebrew is quite close to the way the name is written in Aramaic documents; the vowel points added in medieval times made for distortion) of the Persian name which the Greeks heard as *Xerxes*. Xerxes 1 (for it is he who is meant, since the reign of Xerxes II was ephemeral) reigned from 486 to 465, B.C.E. It is also true that the name Marduka (= Mordecai) is attested as a personal name in documents of the period and as a Jewish name in Ezra 2:2 and Nehemiah 7:7. Finally, the author of Esther is well acquainted with Persian customs and court practices, as is illustrated by Vashti's refusal to degrade herself and appear at the drinking party. A Persian wife left when the drinking began.

Nevertheless, accepting Esther as veritable history involves many chronological and historical difficulties. If Mordecai was exiled from Judea with Jehoiachin (589 B.C.E.), as Esther 2:6 suggests, he would have been over 100 years old at the time of Xerxes 1. Herodotus reports that Xerxes' queen was neither Esther nor Vashti, but a Persian general's daughter named Amestris (Hist. 7:114). Herodotus also says that the Persian king could only choose a queen from among seven Persian noble families (3:84). In addition, the entire plot is full of improbabilities; for example, while Mordecai is well known as a royal Jewish courtier (3:4), his cousin and adopted daughter, whom he visits daily (2:11), can successfully conceal her Jewish origin and religion. Finally, the story often seems mockingly serious and suspiciously areligious. Prayers are never addressed to God in the hours of danger and need, and no mention is made of thanksgivings to God after the salvation of the Jews. Indeed, the rabbis of the Talmud had to read references to God into the Scroll of Esther (Meg. 7a). The Greek translation (see below) and the Aramaic targums made the book much more pious. Assuming that Esther is not veritable history, there are innumerable possibilities for the book's origin, date of composition, historical context, meaning, and purpose.

**Interpretations**

One significant group of scholars considers Esther, much like Daniel, a pseudepigraph, in which the narrative set in Persia is merely a stage setting for the true meaning. Willrich, for example, suggests that Ahasuerus is really Ptolemy Euergetes II (170–164 B.C.E. and 145–117 B.C.E.); Esther, his queen, Cleopatra III, who was friendly to the Jews; and Haman, the anti-Jewish party at the Ptolemaic court. Haupt and Lewy have proposed solutions that understand Esther in relation to the periods of the Maccabees and Herodians, respectively. A detailed examination of one example of these “historical” interpretations of Esther will reveal the difficulties inherent in this approach. R.H. Pfeiffer argues that Esther was written during the Hasmonean era, specifically at the time of John Hyrcanus (135–104 B.C.E.). Haman, Pfeiffer proposes, looks like a caricature of Antiochus Epiphanes. He persecutes the Jews on the grounds that they are different from other peoples (3:8), just as Antiochus ordered that all peculiar national customs be discontinued (1 Macc. 1:41). The Jews in Esther have taken matters into their own hands with great success, and, indeed, ultimately force the gentiles to convert to Judaism (8:17), just as they did under the Maccabees. The author of Esther, like that of Maccabees, is militantly nationalistic, more ardent in his patriotism than in his religious zeal. He outwardly conforms to religious practice, but “appears to have made no demands on God and to have expected that God would make none of him.” The background of Esther, according to Pfeiffer, is therefore neither the Persian period nor the period of the persecution of Antiochus (168–165 B.C.E.) but rather the reign of John Hyrcanus. Hyrcanus, among his other achievements, forced the conquered Idumeans to accept Judaism by compulsory circumcision. Represented in our book by Mordecai and Esther, Hyrcanus was the author’s ideal and hero. These parallels between the events described in Esther and those of the Maccabean period are, however, at best broad and general. Furthermore, the reign of Hyrcanus may not represent the low level of spiritual life essential to Pfeiffer’s argument. Finally, if Esther is the product of intense nationalism, why does the author allow his heroine to hide her Jewish origin and enter the harem of a gentle king? Why must the Jews depend on successful intrigues at court and not revolt openly, as Hyrcanus’ ancestors had done?

Another school of thought bases its interpretation on the fact that the names of Mordecai and Esther are derived from the names of the Babylonian deities *Marduk* and *Ishtar*. This approach sees the story as an account of the conflicts of these gods or of their worshipers. The most extensive formulation of this approach is that of Lewy. Lewy’s analysis of Esther begins with the fact that the Septuagint and 11 Maccabees preserve different features of the story than the Hebrew text. Thus, according to the Septuagint, the Persian king is Artaxerxes rather than Xerxes. Haman is called Bugaean and not the Agagite, and the name of the holiday is Phourdaia, or Phourdia, and not Purim. Finally, the holiday is called the “Mardochaic day” in 11 Maccabees 15:36.

A proper understanding of these divergences, Lewy maintains, can solve the problem of the origin and purpose of Esther and of the feast of the 14th and 15th of Adar which it
proclaims. The Phrouraia or Phourdaia suggests the Persian festival of Favardigan which was celebrated from the 11th to the 14th of Adar. The Jews adopted a Babylonianized version of this feast and also accepted the Babylonian legends connected with the festival. The name of the festival in 11 Maccabees 15:36, the "Mardochaic day," does not mean the day of Mordecai but the day of the Mardukians or worshipers of Marduk. Bugaean suggests a worshiper of Mithra. Combining this information with the clear fact that the name Esther is equivalent to Ishtar, Lewy proposes that it is now possible to reconstruct the Babylonian original behind the last eight chapters of Esther. These chapters recount the threat to the worshipers of Marduk which resulted when *Artaxerxes 11 (404–358) instituted the cult of Mithra, a threat from which they were saved by the goddess Ishtar. Another legend concerning Ishtar is behind the story in the first two chapters of the book. This legend tells of the elevation of Ishtar-Esther over the Elamite goddess Mashti-Vashti.

While Lewy's interpretation explains many features of Esther, it must be considered more as a hypothesis or conjecture rather than as proof. It seems far too complicated to be true, and accounts for the features of Esther only by disregarding the scientific canon of economy. The same canon of economy would account for the absence of God's name and of prayer and thanksgiving and of dietary and marital restrictions: Esther was produced in non-pious circles in which ethnicity mattered more than religion.

Recent Research

Research on the Scroll of Esther, in particular the contributions of E. Bickerman, has elucidated many aspects of this deceptively simple book. Bickerman has solved many of the problems left unsolved by the other commentators we have considered. He has clearly recognized the literary structure of the book and the fact that, while it may be ultimately based on actual events, Esther contains two originally independent plots derived from Oriental romance: one plot of harem intrigue of which Esther is the heroine, and another of court intrigue of which Mordecai is the hero. Mordecai's story is based on a type of Oriental romance. It is the story of the struggle between the vizier and the dashing new courtier who outwits the vizier and replaces him in the king's favor. Mordecai's refusal to bow to Haman (3:2), which puzzled the later Jewish commentators, is thus comprehensible as an attempt by Mordecai to demonstrate his equality with Haman. Haman is angry, consults his friends and prepares the stake. Meanwhile, the episode of the king's sleepless night occurs, and at its conclusion Haman must honor Mordecai. Finally, Haman is overthrown and Mordecai replaces him in the king's favor.

The second plot is that of the queen who brings about the downfall of the vizier. In Esther, the conflict between Haman and the queen is accidental, as he does not know that she is Jewish. This cannot have been the motive in the original story or stories. Yet the fact that Esther is not the "original story" explains one puzzling feature of the book – the non-Jewish, if not un-Jewish, character of the narrative. The heroes of the original story were not Jewish. These two plots were combined quite effectively. Having heard stories of the struggles of a Jewish courtier and of a Jewish queen against an evil vizier, the author combined them. However, traces of the independent stories can still be seen in several places in the book, as in the two separate epistles at the end (9:20–28 and 9:29–32) or in the unexplained presence of two where one would suffice – the delay being necessary for Mordecai's first triumph over Haman on the night of the king's insomnia. The Scroll of Esther presents Purim as a festival commemorating the victory of the Jews, but it is odd in that it occurs on the day following the victory, unlike other Jewish festivals celebrated on the anniversary of the event itself. It is therefore clear, Bickerman concludes, that the author of Esther invented his story to explain an already existent festival. Purim, Bickerman suggests, was originally a seasonal festival of mock ritual combat between "our side" and "their side" celebrated for two days in the capital and one day in the countryside, followed by a day of pleasure. Similar festivals are well known in the ancient world. On these days, stories such as those which eventually contributed to Esther were told for the pleasure of the celebrants.

This festival, originally a local feast of the Jews of Shushan and Persia (cf. Meg. 7a), received the name Purim after the story of Mordecai and Esther had been elaborated. The name Purim is based on the story of Esther and is properly explained by our author as being derived from the lots (Akkadian pūrū; not a Persian word) which Haman cast to determine the date for the annihilation of the Jews (3:7; 9:24).

This analysis of Esther makes it difficult to propose a specific date for its author, since most of the motifs occurring in the book are now explained as belonging to the long tradition of Oriental romance. Nevertheless, a few facts may be established. The author was definitely a Persian Jew, possibly from Shushan. He certainly wrote before 78/77 B.C.E., the date the Greek translation of Esther (see below) was brought to Egypt, and before the composition of 11 Maccabees 15:36, which mentions the 14th of Adar as the "Day of Mordecai."

Much recent research has been directed to the way in which Esther presents a picture of Persian life quite similar to that drawn by the Greeks (see Berlin, xxviii–xxxii); Persians love luxury and are constantly drinking. Persian emperors are controlled by women. Persians love making laws and finding ways of getting around them. Herodotus' portrayal of the bloodthirsty Amestris is refracted in Esther's request for additional killing (Est. 9:12–14). Another avenue focuses on the ways in which Esther borrows elements from earlier biblical books, which were already Scripture for the author. The virgin search in Esther 2:2 is borrowed from 1 Kings chapter one; In Esther 8:2 Ahasuerus gives Mordecai the ring off his finger just as Pharaoh does in Genesis 41:42. (Other parallels to the Joseph story were already pointed out over a century ago by Rosenthal.) More significant, the Book of Esther permits the Jews to right ancient sins of omission and commission. In 1 Samuel 15, Mordecai's ancestor Saul...
and his troops had disobeyed the divine will by sparing King Agag of Amalek, and by taking Amalek’s possessions for themselves in violation of the laws of *herem*. In Esther, the Jews kill Haman and all his sons (9:7–10) along with all their other enemies, but as we are informed three times (9:10, 15, 16), take no plunder for themselves although they had received royal permission to do so (8:11). Feminist scholarship has also been attracted to Esther, as has redaction criticism (see Moore in *DBI*).

**Canonization and the Greek Version**

One direct result of the non-Jewish atmosphere which pervades the Scroll of Esther was the refusal of some of the rabbis to admit Esther into the Jewish canon. The *Talmud* (Meg. 7a) preserves debates on whether Esther was written with the proper divine inspiration (*Rūḥ ha-Kodesh*) and whether it “defiles the hands” like other scriptural works. The major objection to including Esther in the canon seems to have been the lack of clear references to God, His providence, or His intervention in the events of our story. The stridently militant and anti-gentile tone of the concluding chapters added to the rabbis’ objections. They seem to have been afraid that Esther might arouse the jealousy and hatred of non-Jews. Ultimately, of course, the book was admitted (Meg. 7a and Rashi ad loc.). The Christian reception of Esther was historically cool. The book is never quoted or alluded to in the New Testament. Martin Luther declared his hostility to II Maccabees and Esther, the book was admitted (Meg. 7a and Rashi ad loc.). The Christian reception of Esther was historically cool. The book is never quoted or alluded to in the New Testament. Martin Luther declared his hostility to II Maccabees and Esther, and famously wished they did not exist “for they judaize too greatly and have much pagan impropriety.”

Esther was translated into Greek by Lysimachus son of Ptolemy of Jerusalem. His translation was brought to Egypt in the “fourth year of the reign of Ptolemy and Cleopatra,” according to the colophon at the end of the Greek version. Of the three Ptolemies associated with a Cleopatra in the fourth year of their reign, the most probable one in this case is Ptolemy XII Auletos and his sister and wife Cleopatra V. Documents about Ptolemy XII and Cleopatra V are the only ones which illustrate in the same royal style as the colophon. The translation was thus brought to Egypt in the year 78/77 B.C.E.

Lysimachus follows his original fairly closely, although he obviously felt free to adapt and alter the text for the sake of clarity or his own notions of probability. For example, he makes the slaughter of the opponents of the Jews occur on the same day as the festival rather than on the day before, so that Purim will be celebrated on the anniversary of the victory, as were Hellenic and Jewish festivals.

The Greek translation also contains six passages not found at all in the Hebrew text. These passages should not all be understood as entirely new compositions of Lysimachus. The representations of Esther on the walls of the synagogue at *Dura-Europos also contain scenes not in the Hebrew text. This suggests that the author of the Hebrew Esther only utilized part of a larger circle of stories concerning his heroes. Lysimachus’ “additions” and the paintings at *Dura-Europos may be other elements of this cycle.

The character and purpose of these additions have been much debated. Three purposes, at least, can be discerned. These passages add a religious element, specifically prayer, to the book to help explain how and why the Jews were saved. The additions also adapt the book to the tastes of contemporary readers by introducing documents, namely the decrees of Haman and Mordecai. Finally, a particular interpretation of the conflict between Haman and the Jews is emphasized. Haman’s decree, according to the Greek version, charges the Jews with exclusiveness and disloyalty which endanger the state. The Jews, in Mordecai’s decree, answer that their God is the ruler of the world who takes and gives away kingdoms. Sovereigns ought to recognize this, as Ahasuerus ultimately does, understanding that those who oppose the Jews are the real traitors who seek to deprive the kingdom of the support of the “chosen people” and of their God. This exchange of charges of disloyalty fits well into the reign of Alexander Yannai, and it may be conjectured that this is when Lysimachus translated the work.

[Albert I. Baumgarten / S. David Sperling (2nd ed.)]

**In Art**

Since the talmudic period it has been customary to write the Book of Esther on parchment in the form of a scroll, and the rules governing its production and writing are basically the same as those for a traditional Torah scroll. It is not known when and under what circumstances artistic embellishment of Esther scrolls began. The earliest extant illuminated Esther scrolls emanate from 16th-century Italy, commissioned by well-to-do Italian Jews. Cylindrical or polygonal cases were often made to house such scrolls, often provided with a crank handle to roll the parchment through a vertical slot. Cases were made of copper, tin, and wood, but fine silver and some ivory cases have survived as well.

The decoration and illustration of Esther scrolls, mostly by unknown Jewish artists, reached its height during the 17th and 18th centuries, in Italy and other countries in Europe, particularly Holland. The great demand for an illustrated megilah led the makers to produce engraved scrolls, printed from copper plates, while the text was still copied by hand, as required by Jewish law. Some of the best-known engraved Dutch megillot were produced by the Jewish engraver Shalom *Italia* (1619–1664?), born and raised in Italy.

The decorative programs of Esther scrolls usually depict the Esther story in great detail, one episode after the other. The episodes usually refer directly to the text column in the center, but often include midrashic elements. The narrative scenes are often set in exquisite landscapes or contemporary buildings. Other forms of decoration include architectural elements, allegorical representations, nude putti, the signs of the zodiac and the twelve tribes, heavenly Jerusalem, and scenes that reveal the daily life of the Jews of the time, particularly scenes related to the celebration of the festival.

Outside Italy and Holland figurative representations in megillot appear among the Ashkenazi communities in Ger-
Figure 1. Illuminated Scroll of Esther from southern France, early 16th century. The illustration on the left shows the hanging of Haman’s ten sons. Cecil Roth Collection.

man-speaking lands: Germany, Austria, Bohemia, and Moravia. Many of the attractive megillot from these lands were produced by the scribe-artists of the so-called “Moravia School” of Hebrew illumination (for example, Aaron Wolf Herlingen of Gewitch or Meshullam Zimmel of Polna). Noteworthy are also the fine silver cases from these lands, at times engraved with the Triumph of Mordecai or other central episodes in the Esther story. Some figurative scrolls are also known from Poland and France (Alsace).

Examples of decorated megillot are extant from Turkey, Greece and the Balkans, and Morocco, where they were mainly decorated with floral, architectural, or other decorative designs. Megillot from former centers of the Ottoman Empire were often housed in ornamental silver cases – megillot from Istanbul in exquisite gold-plated silver cases made in a delicate filigree technique. In other lands of Islam and the East, decorated megillot were not as common. Notable are the colorful megillot of Baghdad, which feature in large capitals along the upper border a long list with the genealogy of Mordecai (tracing him back to Abraham) and contain Haman’s genealogy, upside down, going back to “wicked Esau.”

The art of the illustrated scroll, which declined in the 19th century, was revived in the 20th by artists of the “Bezalel School, Zeev Rabin (1890–1970) in particular, who created megillot with images showing the influence of Persian miniatures mixed with Western-Orientalist symbolic elements. Side by side with the new hand-illuminated megillot, graphic artists in the Land of Israel joined efforts in issuing colorfully decorated printed Esther scrolls, which were far less expensive and thus popular, especially in the early days of the young state. With the improvement of the conditions of life and renewed interest in Jewish tradition in the late 20th century, young artists, including women, revived the art of the hand-illuminated megillah.

[Shalom Sabar (2nd ed.)]

SCROLLS, THE FIVE (Heb. hamesh megillot), a designation for the five shortest books of the Hagiographa (Heb. Ketuvim): Song of *Songs, *Ruth, *Lamentations, *Ecclesiastes, and Esther. Although in modern printed Hebrew Bibles the Five Scrolls constitute a unit, this was not originally the case. Thus, in an ancient tradition, recorded in Bava Batra 14b, in which the order of the books of the Hagiographa are listed, the megillot are placed in chronological order among the other books of the Hagiographa. The order is given as follows: Ruth, Psalms, Job, Proverbs, Ecclesiastes, Song of Songs, Lamentations, Daniel, the Scroll of Esther, Ezra, and Chronicles (see *Bible, Canon). In manuscripts of the Hebrew Bible the megillot are grouped together. The Leningrad manuscript (1008), on which the Biblia Hebraica of Kittel, from the third edition onward, is based, groups the megillot together in chronological order. In other printed Hebrew Bibles the megillot are grouped according to the order of the festivals on which they are read by the Ashkenazim in the synagogue:

1. The Song of Songs is read in the Ashkenazi ritual on the intermediate Sabbath of *Passover, or on the seventh day of that festival (eighth in the Diaspora), if the latter coincides with a Sabbath. It is read at the Shaharit service prior to the reading of the Torah. In the Sephardi ritual it is read before the Minhah service on the afternoon of the seventh day of Passover (eighth day outside Israel). In certain communities, the Song of Songs is also read after concluding the Passover Haggadah on *seder night. The association of the Song of Songs with Passover is thought to be due to the tradition that this exegesis which interprets the Song as an allegory of the love between God and Israel; Passover is the springtime of this love (Song 2:11–13) and the “honeymoon” of God and Israel (Jer. 2:2). In many congregations the Song of Songs is also read on Friday evenings before the Kabbalat Shabbat service, at which the “bride,” the Sabbath, is welcomed.

2. Ruth is read on *Shavuot, in most rites, at the Shaharit service prior to the reading of the Torah. In the Diaspora, it is read on the second day of Shavuot. In the Sephardi and Italian rituals, it is divided into two parts and recited on both mornings (or afternoons). The association with Shavuot is based on the seasonal reference to “the beginning of the barley harvest” (Ruth 1:22); on the traditional belief that King David – whose genealogy concludes the book (Ruth 4:17–22) – was born and died on Shavuot (Tos. to Hag. 17a Tj, Bezah 2:4, 61c); and on

“...”
the parallel drawn between Ruth’s embracing the Jewish faith and Israel’s accepting the Torah at Mount Sinai on Shavuot.

(3) Lamentations, a dirge over the destruction of Jerusalem and the Temple, is read on the Ninth of ‘Av as part of the synagogue service. It is recited in the evening and in the morning (see Tur, Or. 559).

(4) Ecclesiastes is recited on the intermediary Sabbath of *Sukkot, or on the eighth day of the festival (Shemini Azeret), if the latter coincides with a Sabbath. It is read during the morning service before the reading of the Torah. In some Oriental rites, it is read in the sukkah. Ecclesiastes (11:2) has been interpreted by some commentators as an allusion to the duty to rejoice during the eight days of Sukkot (cf. Deut. 16:15). The warning (Eccles. 5:3–4) not to defer the fulfillment of vows (including donations to the poor and to the sanctuary) was also thought to be particularly appropriate at the last festival of the annual cycle. Others have suggested that the somber and pessimistic outlook of Ecclesiastes fits the atmosphere of autumn.

(5) Esther is read as the central rite in the *Purim festival in both the evening and morning services. The custom of reading the Five Scrolls originated in various periods. The Scroll of Esther was read already in the Second Temple period; the reading of Lamentations is mentioned in Taanit 30a; and the post-talmudic tractate Soferim (14:18) records only the custom of reading Esther, the Song of Songs, and Ruth, although in an order different from the modern practice. The introductory blessing (“who has sanctified us by Thy commandments and commanded us to read…”) is recited only before the reading of Esther. Likewise, only the Scroll of Esther must be written on parchment. In Jerusalem, however, the blessing is said prior to the reading of all the scrolls (with the exception of Lamentations), and all are read from a parchment scroll.

Musical Rendition

THE SONG OF SONGS, RUTH, AND ECCLESIASTES. Discussions about the sanctity of Song of Songs are already reflected in Mishnah Yadayim 3:5. In Sanhedrin 101, it is explicitly forbidden to “treat the Song of Songs ke-min zemer,” i.e., as if it were a (secular) song. The choice and positioning of the masoretic accents in the text of the Song of Songs seem to imply that a definite convention in their musical execution, perhaps in the form of ornate psalmody, was present in the minds of the masorets. It is difficult to use these data as evidence that the original folk-song tunes of the Song of Songs could still have survived in talmudic times, but it is at least clear that a folk-song tradition was still attached to it. The presently observable traditions, however, show that most of the melodic formulas for the rendition of the Song of Songs, Ruth, and Ecclesiastes are late developments, and that they are often indebted to previously existing melodic conventions connected with other books of the Bible or parts of the liturgy. Differences between the melodies or formulas are found not only as regards the various communities but also within many communities for the communal or solo singing of the text, as demonstrated especially in Yemen. The adaptation of secular tunes for the Song of Songs is mentioned as late as 1870 (Mikra Kodesh by R. Mordecai Abbadi of Aleppo). In many communities there are common melodies for several of the scrolls, such as one melody for Ecclesiastes and Ruth. In the Polish-Lithuanian tradition there is one melody for the Song of Songs, Ruth, and Ecclesiastes, and this melody shows the clear influence of the masoretic cantillation of the Pentateuch. In some Near Eastern communities such as Aleppo, the maqāmā tradition of the surrounding area is also reflected clearly (Idelsohn, Melodien 4, no. 338 for Ruth and no. 339 for Ecclesiastes).

Esther

The traditional view that Esther should be read “like a letter” has greatly influenced its musical rendition. There is also the traditional practice of changing the motives or the tempo where especially gladdening or sad events come to be narrated. A.Z. *Idelsohn’s analysis of the Babylonian melody for Esther showed that it is very near to that used for Ruth, with the addition of motives from the Song of Songs – the borrowing of motives in Ashkenazi tradition is especially developed (talsha and munnah-legarni from Lamentations, and talsha gedolah and darga from the reading of the “21 books,” and kadma ve-azla, with certain changes, from the prayer mode of the High Holy Days (see *Cantillations). *Idelsohn’s division of the Esther melodies by style into two basic areas – Yemen, Persia, Syria, London Sephardi, and Carpentras, as against Iraq, Eastern Sephardi, and Morocco – needs further study. In addition to the melodic relationships between Song of Songs, Ruth, and Ecclesiastes, the following are also to be noted: Song of Songs and Esther (Morocco) and Ruth and Esther (Iraq).

Lamentations

As *Idelsohn showed, the scale of the singing of Lamentations is peculiar, and it was his opinion that it had no parallel in the traditional Jewish repertoire. This scale is also found among the Syrian (Maronite and Jacobite) Christians and among the Copts in Egypt: in ascending order it progresses G-sharp, A, B-natural, C, D, E-flat; all the internal cadential movements end on A, and the final endings are on G sharp. In many Jewish traditions there are slight changes in the melody from chapter to chapter, and the last chapter especially has a melody of its own.

The masoretic accents of the scrolls do not always find expression in their melodies. Some readings resemble more the simplest forms of psalmody and do not take the accents into account at all. In others a psalmodic fundament is at least clearly discernible (cf. Song of Songs in Morocco, *Idelsohn Melodien 11, no. 173, p. 56). In *Idelsohn’s opinion the lyrical atmosphere of some of the scrolls, such as Ruth and Song of Songs, does not permit an emphatic rendition of the text. This would be the reason why the more melodic accents – such as shalshelet and merkha kefulah – do not appear in the scrolls, and that some others, such as zarka, are used very sparsely. Against this, it must be said that the choice of
SCULPTURE.

The Biblical and Talmudic Periods

Within the general context of the problem of representational art among the Jews in antiquity, sculpture, together with *medals and *seals, was in a special category. The Bible (Ex. 20:4) forbade the ‘graven image’ in the most explicit fashion, more categorically and comprehensively than the mere likeness. Hence, while the representation of human or animal figures on a plane surface was condoned or permitted most of the time during the periods in question, greater difficulties were constantly raised with regard to three-dimensional representations on medals and seals, and four-dimensional sculptures in the round. Indeed, in some Orthodox circles, even making an impression with a seal bearing the human or animal form was considered religiously objectionable, since by doing so a man actually “made” a graven image, even though not for worship or veneration. From a very early period, however, this was qualified in practice. The *Cherubim of the Tabernacle and in the Temple of Solomon were representations in the round. A fourth century Jewish scholar states (TJ, Av. Zar. 3:1, 42c) that all manner of images (דְּמוּשׂים, parsyfim, mod. Heb. *parsyfim; i.e., “visages,” from the Greek πρόσωπον) were to be found in Jerusalem before its destruction in the year 70 C.E. Even if this information is not quite accurate, it is obvious that this scholar himself had no objection to graven images as such. R. *Gamaliel in the second century C.E. is said to have had a human head engraved on his seal. A statue of the ruling Parthian monarch stood as a patriotic symbol in the synagogue where *Abba Arikha and “Samuel worshiped in Nehardea (811 24b). The talmudic statement (Av. Zar. 42b) that “all images are permissible except those of human beings” presumably refers to their retention when they were found rather than to their manufacture.

In the Middle Ages

The rabbis of northern France discussed and even permitted the representation of the human form in the round, provided that it was incomplete (Tos. to Av. Zar. 43a). Even *Maimonides (Yad, Avodat Kokhavim 3:10–11), while forbidding the human form in the round, apparently sanctioned three-dimensional animal figures. In the Renaissance period, carved lions flanked the steps leading up to the ark in the synagogue at Ascoli in Italy, although this eventually gave rise to objections. There are traces of Jewish sculptors in Spain in the Middle Ages, including the anonymous Jew who was said to have been responsible for the first recorded statue of Francis of Assisi (1214). There were also a number of metal workers whose work included the making of figures in gold and silver. Jaime Sanchez, the Aragonese court sculptor, was assisted in his work by a certain Samuel of Murcia, who is even designated as rabbi. Some scholars maintain that the eminent German sculptor Veit Stoss (Wit Stowski, 1447–1542), creator of the altar of the church of St. Mary in the Polish city of Cracow, whose earlier life is wrapped in mystery, was in fact of Marano birth, and even recorded the fact in Hebrew characters in one of his paintings.

The fashion of commissioning portrait medals was known among Italian Jews of the Renaissance period, such as Gracia *Nasi and members of the *Norsa and *Lattes families. The actual work was done by non-Jewish artists, but one Jew, Moses da *Castelazzo, was employed as a medalist at the court of Ferrara, though none of his productions can be identified. Biblical and other scenes in high relief appear on the tombstones in some of the cemeteries of the Sephardi communities of the Atlantic seaboard, especially Amsterdam. In the Jewish cemetery in Curacao in the West Indies, the deathbed scene is sometimes shown on the tombstone with the likeness of the deceased in high relief. Nevertheless, there seems to have been some reluctance among the Jews to tolerate sculpture in the complete sense of the term. The earliest bust of a Jew is usually held to be that of Moses Mendelsson by P.A. Tassaert (1727–88). The bust of Antonio Lopes *Suasso, Baronavernas le Gras, attributed to Rombout Verhulst (1624–98), is, however, of an earlier date. But as late as the 20th century, there were Orthodox Jewish collectors in western Europe who refused to allow sculptured figures in their homes unless they were either defective or slightly mutilated. In the light of this attitude, Jewish medalists of some reputation came into evidence relatively early, while Jewish sculptors emerged only in the 19th century.

Song of Songs: Esther, Ruth, Songs of Songs

Lamentations: Ruth, Ecclesiastes, Lamentations, Ecclesiastes

Esther: Ecclesiastes, Esther, Esther

The nine mss. collated for this table are the following in the British Museum:

(1) Add. 9400; (2) Add. 9403; (3) Add. 19776; (4) Harley 5706; (5) Add. 9404; (6) Orient. 2786; (7) Harley 5773; (8) Harley 15283; (9) Add. 15262. The fifth column represents the order adopted in the first, second and third editions of the Hebrew Bible, as well as that of the second and third editions of Bomberg’s Quarto Bible (Venice 1521, 1525), in all of which the five Megillot follow immediately after the Pentateuch.

[Ceceil Roth]
sculptors are remembered today, although some of their work survives on the facades or in the interior of public buildings, in the squares of large cities, in parks, or in the vaults of museums. Possibly the earliest to achieve a measure of fame was the Hungarian, Jacob *Guttmann, for whom Prince Metternich and Pope Pius IX sat, but whose name is not to be found in any history of modern art. Guttmann shares the fate of scores of non-Jewish sculptors of his time, who were famous in their day, obtained gold medals and held professorships, but fell into oblivion with the emergence of Auguste Rodin (1840–1917), who was to overturn the prevailing notions concerning the function and scope of sculpture.

These men were gifted enough to furnish Victorian society with statues of celebrated statesmen or generals, or with the knickknacks that adorned the tables and mantelpieces of upper-middle-class homes. Most of these pieces were conceived in a style that might be described as “sentimental naturalism.” Often, tolerably good likenesses of individuals were created, yet they suffered largely from an excessive preoccupation with detail. Works on literary or religious themes were frequently burdened with an all too obvious and even trite “symbolism.” Thus, of 19th-century Jewish sculptors, Samuel Friedrich *Beer is chiefly remembered for his association with Theodor Herzl and the Zionist movement rather than for his own work. Similarly, Boris *Schatz is revered today as the founder of the *Bezalel School of Art and the Bezalel Museum in Jerusalem, while his actual works are no longer held in high esteem.

After 1900, artists discarded the academic formula. Art is imitation of nature, and Jewish sculptors, like their non-Jewish confrères, stressed the emotional or expressionist element, abandoning mechanical accuracy or photographic likenesses. They were encouraged in this by the discovery and evaluation of aboriginal art from Africa and Oceania, which, nonnaturalistic in character, made a strong impact by its daring simplifications and exaggerations of forms. Among the authors of pioneering studies of African sculpture were Carl Einstein (1885–1940) and Paul Westheim (1886–1963). It is remarkable that almost all the Jewish sculptors whose careers began around 1910 came from east European communities, where the taboo against the making of three-dimensional objects was still strong. They included Enrico (Henoch) *Glicenstein; Elie *Nadelman; Chana *Orloff; Anton and Naum Nehemia *Pevsner (d. 1977) who were brothers; Ossip *Zadkine; and Myse *Kogan. The best known of this group of sculptors is Jacques *Lipchitz, in whose work can be found figures and groups drawn from Jewish and biblical themes. Another well-known sculptor, Sir Jacob *Epstein, born in New York and living most of his life in England, was the son of Polish immigrants. The Italian painter Amadeo *Modigliani first worked as a sculptor and left more than 20 carvings as evidence of an unusual talent.

Although most of the modern sculpture belongs to the category of expressionism, Jews have also been pioneers in post-expressionist trends, among them László Moholy-Nagy (1895–1946), and Naum Nehemia Pevsner. In the United States, two dentists who became sculptors, Herbert *Ferber and Seymour *Lipton, achieved wide acclaim, Ferber with lead and bronze pieces that, while abstract, were imbued with psychological or symbolic meaning, and Lipton with roughly textured metal works that, equally abstract, are vaguely reminiscent of plants or animals. The huge assemblages of scraps of wood of Louise Nevelson (1900–1988) create environments of their own. Of a later generation than these is George *Segal, whose white plaster figures are cast from living models and placed in pseudo-realistic settings such as shops or bedrooms. A naturalized Frenchman, Hungarian-born Nicolas Schoeffer (1912–1992), created complicated constructions making use of light, and even noise. In England, the pioneer of minimal sculpture was Anthony *Caro.

While the synagogue for a long time rejected any decoration in the round, in the 1950s and 1960s more and more Reform temples and, to a lesser degree, Conservative congregations, especially in the United States, commissioned the services of sculptors to fashion large menorot and other ritual objects, or to decorate walls with semi-abstract designs of such symbols as the Burning Bush or the Tablets of the Law.

[Alfred Werner]

**Sculpture in Erez Israel**

In the same way as painting was continuous and intense in Palestine after 1906, sculpture also flourished as the result of the efforts of a few sculptors over a considerable period. Avraham Melnikoff (1892–1960) is known for his famous “Lion” at Tel Hai (1926), and Zeev *Ben Zvi, who taught sculpture at the Bezalel School from 1936, had a good knowledge of cubism and left some important works. It was the more academic school of sculpture, represented by Moshe Ziffer (1902–1989), Aharon Priver (1902–1979), and Batya Lishansky (1900–1990), which dominated the field prior to the establishment of the State of Israel. During this time there was hardly any open-air sculpture. In 1938, however, Yitzhak “Danziger executed his “Nimrod,” which was in itself an attempt to create a synthesis between Middle Eastern sculpture and the modern concept of the human figure. Danziger’s art underwent profound changes after World War II, and he became the leader of the younger generation of sculptors. His style rapidly became more abstract. Not only did he work in new materials, such as iron, but he attacked the double problem of open-air sculpture and its integration into its surroundings and its relation to town planning. Yehiel *Shemi, Dov *Feigin, Moshe Sternschus (1905–1992), Kossio Eloul (1920–1995), and David *Palombo followed Danziger in developing abstract styles of their own. They were in turn copied by younger sculptors, such as Ezra Orion (1934– ), Menashe Kadishman (1932– ), and Buky (Moshe) Schwartz (1932– ). Two others who worked on monumental sculptures and integrated them into urban landscapes were Igal *Tumarkin and Shamai *Haber.

SEA, SONG OF THE

The Song falls into two natural halves: verses 1–13a, describing the actual destruction of the Egyptian hosts; and 13b to the end, a vivid imaginary picture of the pangs and terror which seized the inhabitants of Canaan and of the neighboring countries (including, anachronistically, Philistia). It concludes with the confident assurance (mentioned already in 13b) that the Children of Israel will enter the Land of Israel and build the sanctuary and with the triumphant declaration of the eternal sovereignty of God.

This division is substantially that given by E.M. Cross and D.N. Freedman. Other modern scholars however detect a more complicated structure. Cassuto sees it divided into three strophes:

(a) verses 1b–6,
(b) verses 7–11,
(c) verses 12–16, with verses 17–18 as an epilogue; whereas Rozelaar proposes four:

(a) verses 2–5,
(b) verses 6–10,
(c) verses 11–13
(d) verses 14–17, with a prologue (verse 1b) and an epilogue (verse 18).

Critical View

Many scholars have seen in the Song of the Sea references to Ancient Near Eastern myths of the war between the ruling deity (Marduk, Baal) and the sea-god with its helpers (Leviathan, Rahab). In the Song of the Sea, however, if there are any such vestiges of the myth, they are mere clichés or figures of speech; the sea is a passive tool of God’s will. Some scholars (e.g., A. Bentzen) even regard the Song as part of a hypothetical enthronement festival celebrating YHWH’s victory over His primordial enemy, the sea, though there is no cogent evidence whatsoever of the existence of such a festival. Dates suggested for the Song’s composition range from the 12th century B.C.E. to the end of the First Temple period. E.M. Cross and D.N. Freedman date it on orthographic and linguistic grounds from the 12th to the 10th centuries B.C.E. Yet the mention of God’s sanctuary is probably a reference to Solomon’s Temple, and the declaration of God’s rule means His rule in Zion. The poem is probably to be dated, therefore, at the end of the united monarchy (S.E. Loewenstamm). The Song of Miriam quoted in verse 21, which is identical with the opening of the Song of the Sea, is either the original kernel of the Song or a refrain from it, indicating that the whole song was sung. The Song of the Sea is basically independent of the YH and P narratives, but it may have served as the primary source of the P narrative, which took literally the phrases about the waters being heaped up like a wall (verse 8) and elaborated upon them. The Song is probably the oldest extant source for the story of the sea crossing, just as the Song of Deborah (Judg. 5) antedates the prose account of the Israelite victory over the Canaanites (Judg. 4).

Liturgical Usages

The Song of the Sea has special regulations both in the manner in which it is written in the Torah Scroll, and the manner in which it was chanted. It is written in 30 lines, its outward form resembling “half bricks set over whole bricks” (Meg. 16b), thus:

It was also chanted in a special fashion. In the Talmud (Sot. 30b) three different methods of rendering it are given, and each obviously reflects different local usages. R. Akiva declared that it was read in the same way as the “Hallel, i.e., the cantor declaimed it, and the congregation responded merely with “heads of chapters,” i.e., they made the response “I will sing unto the Lord” after every verse. R. Eliezer the son of R. Yose the Galilean states that the congregation repeated the whole Song after him, while R. Nehemiah said that the cantor and congregation recited the verses alternately (so Elbogen; for a full discussion see his Gottesdienst).

The Song of the Sea occupies a prominent place in the liturgy. It is read in the Sabbath portion on which it occurs (Be-’Shallah) and that Sabbath is called Shabbat Shirah. It is the scriptural reading of the seventh day of Passover; the custom also developed among some hasidic sects of chanting it at a special ceremony at midnight of that evening. In Israel, large crowds assemble at the beach in Tel Aviv and Eilat on the seventh day of Passover, where it is ceremonially sung. It is included in the daily “Pesukei de-zimra,” and in some congregations when the father of a child to be circumcised that day is in synagogue, it is read antiphonally by reader and congregation.

In Jewish Tradition

The fact that Miriam took out the women to sing the Song separately was taken as the authority for the segregation of the sexes in prayer in the synagogue (Mekh. Shirah 10, 44a, Midrash Lekah Tov to Ex. 15:20).
SEAL, SEALS.

In the Ancient Period

The seal was employed from the beginning of the historical era as a method of identifying property, as protection against theft, to mark the clay stoppers of oil and wine jars or the strip with which packaged goods were bound, and for other uses. Gradually seals became invested with magic powers. With the spread of writing in the early days of the Mesopotamian dynasties, seals were used as signatures on clay-tablet inscriptions. In Egypt, seals were used to sign papyrus scrolls. In various regions, including Palestine in the early Canaanite period, earthenware vessels were imprinted with seals before they were fired. Seals were made of a variety of stones which were usually semiprecious. The carving and relief were done by means of a simple drill, an auger, or a stylus. Cylinder seals were usually pierced through their length and threaded on a fastening pin, cord, thread, wire, chain, or — from the second millennium B.C.E. — on a ring. Ancient seals are of great value in the study of ancient art, religion, and mythology, as well as the legal and social structures of ancient societies. Seals found in archaeological excavations are important for chronology, and Hebrew seals are useful in the study of Hebrew paleography and the Hebrew onomasticon.

Four main types of seals, classified according to their shape and function, were used.

(1) Cylinder seals, pierced lengthwise, and between 1 and 2 in. (3 and 5 cm.) in length. They originated in Mesopotamia and spread over the entire Ancient Near East. They were engraved with symbols of worship and mythological and hunting scenes. When they were inscribed with writing, it was in the cuneiform of Western Asia. The cylinder when rolled over the soft clay imparted a long row of impressions. Clay vessels have been found in Palestine bearing impressions of cylinder seals from the early Bronze Age (third millennium B.C.E.), and from the second millennium B.C.E. Some of these seals were imported, from Mesopotamia, but most of them were made in Ereẓ Israel and in adjoining countries, particularly Syria. Syrian-Hittite, Mitanni, and mixed styles can be distinguished among them. Most of them are made of hematite.

(2) Scarab seals, which were small Egyptian seals, oval-shaped, approximately \( \frac{3}{4} \times \frac{3}{4} \) in. (18 × 12 mm.), and generally made of amethyst, carnelian, or faience. They were generally slightly convex and were carved to resemble the sacred scarabaeus beetle of Egypt, often including legs around the perimeter. The base was level and engraved with hieroglyphs representing the names of kings, officials, and individuals; and titles, blessings, and incantations. It was also engraved with the figures of gods, men, animals, and birds; and floral and geometric designs which were impressed by means of pressure. Many such scarabs were exported to all the countries of the region, but others were made in Palestine and other lands under Egyptian influence. Some unusually large scarab seals imported from Egypt have been found in Ereẓ Israel. Such seals have been discovered in most archaeological excavations of the second millennium B.C.E. They are particularly numerous in the Hyksos period (18th–17th century B.C.E.). During that period and after, Egyptian writing and words were carelessly copied, and the names of Egyptian monarchs — especially of Tuthmosis III and Ramses II — were engraved long after their deaths. Many of these seals were obviously not used functionally but rather as charms or jewelry.

(3) Scaraboid seals. These became widespread during the middle Israelite era (ninth to fifth centuries B.C.E.). They resemble the former category but are not carved with the beetle shape on their backs or legs along the perimeter. They were used mostly for signatures or to mark possessions and were common in Syria, Phoenicia, and Palestine. The base of these seals was generally engraved with an inscription in the Phoenician-Hebrew script, in Hebrew, Phoenician, or Aramaic, and they are commonly known as Hebrew seals. The inscriptions were sometimes combined with decorative designs in the mixed Phoenician style, with mythological subjects, flora and fauna, and geometrical patterns. It would appear that the mythological figures lost some of their religious significance and gradually became common decorative motifs throughout the region. These motifs include the figures of human beings, animals, and winged legendary creatures, such as the griffin or the sphinx, the winged beetle, winged serpent (uraeus), the winged sun, and so on. The chief function of the seal was vested in the name engraved upon it, which was often left undecorated. The name of the owner of the seal was frequently given together with that of his father, sometimes with the word "son" and sometimes without it (e.g., Shebna Ahah, Remaliah son of Neriah, etc.). There were also women’s seals (Abigail wife of Asaiah, Aliah handmaid of Hananel, etc.). While most of the seals were personal, a few contained the name of a "servant" (official) and his monarch (Shema servant of Jeroboam, etc.) or the official’s name and title (Jaazaniah servant of the king, Gealah son of the king, Gedaliah the steward of the palace, etc.). The importance of the seal and its usage in biblical days is evident in various texts, letters, or documents that were sealed with a seal (1 Kings 21:8; Isa. 29:11; Job 38:14). The king’s ring was synonymous with the king’s seal, and it symbolized royal power (Esth. 8:8). Ordinary citizens also carried seals (Gen. 38:18). As a figure of speech the seal represented something precious and cherished (Jer. 22:24; Hag-
Seal, Seals

gai 2:23; Song 8:6). Scaraboid seals were also used during the Persian era (fifth and sixth centuries B.C.E.).

(4) Conical seals. During the late Babylonian and Persian eras (seventh to fourth centuries B.C.E.), conical seals with round, or octagonal, somewhat convex, bases, usually made of clear chalcedony, were commonly used. They originated in Mesopotamia, and their bases are generally inscribed with ritual motifs. In later periods they also had decorative motifs engraved on their outer surface.

Archaeological excavations in Palestine have yielded many vessels of the second part of the middle Israelite era (eighth to sixth centuries B.C.E.) imprinted with their owners’ seals. Some bear the name of a royal official (Eliakim, Eliakam steward of Yaukin (= Jehoiakin)). A lump of clay with the seal imprint “Gedaliah steward of the palace,” which was used to seal the cord around a papyrus scroll, has also been found. There has been a great deal of interest in vessels bearing upon their handles a royal stamp consisting of the inscription “of the king,” together with one of the following names: Hebron, Socco (swkh), Ziph, and Mamshit (mmsht). The first three are names of towns; there is some dispute concerning the fourth. In any event, these vessels appear to have been used in collecting royal taxes. Similarly, vessels of the Persian and early Hellenic eras were also imprinted with official seals bearing one of the words: Judah, Jerusalem, or Moza. Among the Yahud (Judah) imprints, there are some which include the name of a person followed by the Aramaic word pehāra (the potter). Two important Jewish impressions have been found from the late Second Temple period. They are little clay plaques between 1 and 2 in. (3 and 5 cm.) in length. One bears the name of the city of Gezer and the other the name of a type of wine, “tamad,” and the name of the vintner, “Hoshea,” engraved between the arms of a swastika. Both seals are in the square Hebrew script and were probably used to seal wine jars.

[Nachman Avigad]

Post-Biblical Period

Apart from the biblical וַיהוּא, rabbinical literature used the Aramaic words תַּשָּׁם and מֶשֶׁמֶש (ibid.) and the Greek σφραγίς as synonyms for seals or signet rings. Seals could be made not only from gems but also from sandalwood and metal (Kel. 13:6; for iron see Ber. 6a). They were engraved with emblems and figures, except the human one, though a halakhic distinction is made between a figure in relief and one engraved (Tos. to Av. Zar. 5:2, 468 and parallels); emblems on the seals of some well-known rabbis are mentioned (Git. 36a).

The use of seals was restricted for Jews in the event that the emblem was idolatrous (ibid., cf. Tj. 4.4, 4.44 for an incident with Bar Kappara), and there are a number of instances in which seals are reported to have been used for magical purposes (Ber. 6a; Shab. 66b; Git. 68a). They were normally used for signing documents, however, though generally the signature of witnesses alone was sufficient. Vessels containing foodstuffs were sealed to assure the ritual fitness of the contents (Av. Zar. 31a). In addition, all sorts of objects, valuable or less valuable, were stamped to mark ownership (Tos. to Av. Zar. 5:1, 468 and parallels). The Mishnah speaks of seals for packing bags as distinct from letter seals (Shab. 8:5). While men may go out with a signet ring on their hand on the Sabbath, women may not as this is not adornment for them (Shab. 6:1; 3). While, by implication, women did not normally wear signet rings, the Talmud mentions the נבשתא (“woman treasurer”) as an exception (ibid. 62a). Seals were also worn hanging from one’s neck or garment (Tos. Shab. 5:8, 116; TB. 58a). The Albertinum Museum in Dresden formerly had two seals dating from the second to the third centuries C.E., one of which was an amethyst with a *menorah emblem and the other a cornelian with a seven-branched menorah between two pillars. A small bronze seal ring in Isaac Einhorn’s collection in Tel Aviv bears a similar seven-branch menorah on it. A seal in the Israel Museum (formerly in the Heinrich Feuchtwanger Collection no. 615) bearing the inscription משן חמור is probably from Babylonia dating from the fifth or sixth century.

After the Arab conquest of Babylonia, the caliph Omar (634–44) prohibited the use of seals by Jews (and Christians), except for the exilarchs, on whose seal a fly was engraved (*Bustanai b. Haninai). This privilege was no doubt granted to the exilarchs and the geonim. The gaon Ḥai b. Sherira (d. 1038) had a seal with a lion as an emblem, signifying Dauidic descent. With the revival of the exilarchate in the 12th century, the right to have an official seal was restored as well. Large wooden seals for meat, bread, or cheese are known from the East, mainly from Egypt from the Fatimid period, as for example, Berlin Staats-Museum, cf. Synagoga, Recklingshausen no. A. 32.

In Europe the use of seals spread among the Jews in imitation of the coats of arms and other heraldic devices prevalent among kings and the nobility, the higher clergy and monasteries, and cities and guilds; later the custom spread to the rising class of burghers. Jewish businessmen and financiers needed seals for the purpose of signing business documents; in the 13th century the seal on a document was regarded as more important than the signature. Not only did individual Jews have their own seals but Jewish communities had them as well (e.g., Augsburg, Cologne, Metz, Regensburg, Ulm). The use of seals met with the opposition of some rabbis, who regarded it as imitating non-Jewish practices. Others, however, such as *Baruch b. Isaac of Regensburg and *Moses of Coucy, defended the use of seals, some even using them themselves, such as the tosafist *Samson b. Samson, Israel *Isserlein, and Jacob *Moellin (Maharil, 14th century), whose seals bore the emblem of a lion. *Meir b. Baruch of Rothenburg permitted the wearing of a signet ring on the Sabbath. In 1906 the gold ring of a certain Abba b. Abba was found in Breslau. Made and ornamented in the Gothic style, it had a seal and the inscription, “This is not in imitation of Amorite (non-Jewish) practices.”

In several countries the authorities intervened in the use of seals by Jews. As early as 1206, Philippe II of France decreed that promissory notes should have the special Jews’ seal at-
tached to them – which was to remain, however, in the custody of two city notables – while his son Louis v111 prohibited the use of seals by Jews entirely. In Navarre they had to seal their documents with the royal seal. In Portugal, Jewish seals were already in use in the 12th century, and in the 15th, the chief rabbi ('Arraby Moor), as well as the seven provincial dayyanim, had their own seals by virtue of royal decree. Later in the century the chief rabbi was entitled to use the royal seal. The earliest Jewish seal mentioned in Central Europe is that of an Austrian official in 1527, while that of a Jewish banker of Regensburg is noted in 1297. In the 14th century reference is made to a decree of Duke William of Austria concerning promissory notes to be sealed by the Jews' judge, to be entered in the Judenbuch of the city of Pressburg (Bratislava), and to be signed with seals by a Christian and a Jew. Among the taxes levied on the Jews, "seal taxes" occupied an important place.

From the 13th century onward in Spain and Germany many seals of Jews, mainly of communities, have been preserved. That of Augsburg had the double eagle with the Jews' hat; the Regensburg one had a crescent with a star, an emblem that can be found on contemporary non-Jewish seals as well. Two Jewish seals from Spain are preserved in the British Museum, London, probably dating from the 14th century; one was the seal of the Seville community, the other of Todros b. Samuel ha-Levi. Many promissory notes of Jews, which were deposited with the Exchequer of the Jews in England, had Jewish seals affixed to them, some engraved with figures. A Jewish sigillificus (seal maker) is mentioned in Dijon, France, about 1363. The absence of errors in the Hebrew inscriptions is an indication of Jewish craftsmen having been employed, while the cock on the seal of Peter b. Moses of Regensburg (1391) points to a Christian seal maker.

Jewish seals were distinguished from others by their inscription in Hebrew and the absence of the human figure. Apart from Hebrew, some seals had Latin or vernacular inscriptions as well; double seals, in particular, had Hebrew on one side and the other language on the reverse. Such a seal was used by Saul *Wahl, the 16th-century Polish financier. Emblems in use included animals, flowers, cups, hats ("Jews' hat"), the crescent, and stars. Occasionally the figures reflect the name, so-called armes parlettes (but also Davidic descent), e.g., a lion for Judah, a bear for Issachar, a bull's head for Joseph – as in the seal of *Josel of Rosheim – a stag as on the seal of Herz (= Hirsch) Wertheimer of Padua (16th century), the rose bush of the Rosalis family in Hamburg, and Spinозa's thorny branch. Men of priestly descent had outspread hands on their seals, levites a water jar. Solomon *Molcho's seal had two mountains (the hills on which he had his vision) and that of *Shabbetai Zevi, a serpent (צבי being numerically equivalent to מессיה – Messiah). David Portaleone, the physician, had a lion crouching on a gate as his seal in accordance with the family tradition. The handle of his seal, in the Einhorn Collection, depicts the sacrifice of Isaac. Certain families of Frankfurt and Worms used their house signs on their seals as well. Other emblems reflected the occupation of the owner, e.g., the anchor for merchants. The seal used by three brothers had three Jews' hats with their points meeting. Some of these symbols were set in an escutcheon and appeared on the background of a three-cornered shield, a pentagram, or David's shield, as in the seal of Jacob b. Nathaniel-Daniel, treasurer of the archbishop of Trier (1341–47). This was really the privilege of those "born to the shield and helmet," but Jews used the shield only (écu français). The name was usually engraved on the periphery of the generally round but also square and parabolic seals.

From the Middle Ages there are also seals of kashrut, mainly for meat. A metal seal in the collection of Cecil Roth has the word kosher inscribed on it.

From the 16th century the seals of the Jews of Poland were generally crudely made. In Hungary the use of seals by the leaders of the Jewish community was common from the end of the 15th century. These seals showed engraved human figures, animals, and Hebrew monograms in the Renaissance style. In the 16th–17th centuries the use of seals by the Jews in Germany and Austria became more widespread, mainly for business purposes. They reveal a tendency to reproduce the signs of the zodiac, due to a belief in astrology, as well as allegorical designs in the baroque style.

The Prague community, by privilege of Ferdinand II in 1627, had the Shield of David surrounding a Swedish hat; the inscription was Sigillum Antiquae Communitatis Pragensis Judaicorum, with the letters תורם (Magistrat) in the corners. In Prague the Jewish butchers' and barbers' guilds also had their own seals, traditionally of great antiquity but certainly not later than the 17th century. The communities of Vienna (1655), Fuert, and Kremsier (1690) also had the Shield of David on their money. Halberstadt (1661) had a dove with an olive branch over the Holy Ark with the inscription "Gute Hoffnung," and Ofen had the Ark as well. In the mid-18th century the chief rabbi of Swabia at Pfersee had an official seal. Somewhat later (1817) both the Sephardi and Ashkenazi congregations of Amsterdam were granted seals, as was the Sephardi congregation of Hamburg. The Paris *Sanhedrin of 1807 had a seal with the imperial eagle and the two Tablets of the Law; the *consistory of Westphalia bore the arms of the state on its seal, as did the Philanthropin school of Frankfurt. Moses *Mendelssohn's seal had his initials both in Hebrew and German. Seals – generally those of the authors themselves – on printed Hebrew books were intended to prevent forgery and theft; the first known seal of this type dates from 1598. A comparative study of medieval seals throws light on Jewish-Christian relations and on the influence of one community on the other. Much research is still required in this field, particularly relating to Jewish seals in Italy, Spain, and France, as well as in Germany from 1350 onward.

One of the largest Palestine seal collections of the last century in the Israel Museum is mostly from the former Heinrich Feuchtwanger Collection. To a large extent these are seals of institutions and individuals – as well as kosher seals – of 19th- and 20th-century Ereẓ Israel. The inscriptions
are in Hebrew, Arabic, Latin, and Cyrillic letters, sometimes with dates, both Jewish and secular. The engravings are of the panoramas of the holy cities of Jerusalem, Hebron, Safed, or particular holy places in them such as the Western Wall, the Hurvah Synagogue, and the Cave of Machpelah. Other figures used are animals, trees, outspread hands in priestly blessing, etc. While most of these seals belong to the old yishuv, there is a seal of “Yesud ha-Ma’alah, one of the early new settlements (founded 1883). The collection also contains a series of 18th- and 19th-century seals of German, Austro-Hungarian, East European, Italian, Turkish, and even Yemenite origin, mostly of communities and their rabbinates, and kasher seals. Among them is that of S.J.L. Wormser, the Baal Shem of Michelstadt, and another belonging to a woman.

**SEA OF THE TALMUD**, a post-talmudic expression indicating the vastness of the Talmud, the innumerable subjects it deals with, and its all-embracing character. Although it is not found in the Talmud itself, the comparison between the vastness of knowledge and the sea is already found in the Bible: “The earth shall be full of the knowledge of the Lord, as the waters cover the sea” (Isa. 11:9); “Canst thou find out the deep things of God? The measure thereof is longer than the earth and broader than the sea” (Job 11:9). The same image appears in the Apocrypha: “The first man knew her not perfectly, for her understanding is fuller than the sea, and her counsel is greater than the deep” (Ecclus. 24:28f.). In the Jerusalem Talmud there is a concept which, while not directly comparing the Talmud to the sea, does embody the simile; R. Simeon b. Lakish transmitted: “Just as there are little waves between the great waves of the sea, so are the slightest details, even to the specific teachings of its letters, found in the general laws of the Torah” (TB, Sot. 83a, 22d). One of the earliest passages where the expression occurs is in the preface to *Menorat ha-Maor* (c. 1300) by Isaac ibn Aba: “The precious pearls that lie upon the bed of the sea of the Talmud, the aggadic passages so rich in beauty and sweetness.”

[Harry Freedman]

**SEASONGOOD**, U.S. family prominent in Cincinnati, Ohio, during the second half of the 19th and the 20th centuries. Lewis Seasongood (1856–1914), who was born in Burgenstadt, Bavaria, immigrated to Cincinnati, Ohio, in 1851. He worked in the dry goods business and subsequently became a partner in the firm of Heidelbach, Seasongood & Co. Long prominent in city and state public life, Seasongood was a founder and treasurer (1872) of the Cincinnati Exposition, served as one of the four U.S. commissioners to the Vienna Exposition (1873), and was a Cincinnati sinking-fund commissioner (1875). He was appointed quartermaster general and commissary general of Ohio (1880). Seasongood was also active in Jewish communal affairs, and was a longtime executive board member of the Union of American Hebrew Congregations.

His brother Alfred Seasongood (1844–1909), who was also born in Burgenstadt, immigrated to the U.S. in 1860. He also worked in the dry goods firm of Heidelbach, Seasongood & Co. In 1868 he became a full partner in the firm of J. & L. Seasongood. Alfred, who became a staunch anti-slavery Republican soon after his arrival in Cincinnati, reputedly exercised great influence in that party, though he held neither elective nor appointive office.

Lewis’ son Murray Seasongood (1878–1958), who was born in Cincinnati, Ohio, was a lawyer and mayor of Cincinnati. Seasongood was admitted to the Ohio bar in 1903, and practiced law privately for several years. He was active in the political reform movement, which fought and finally destroyed the power of the Cox machine in Cincinnati and introduced the council-manager form of municipal government, elected by proportional representation, in 1924. Seasongood was elected mayor of Cincinnati by the nine-man council in 1926, serving two terms until 1930. He was a capable, well-respected mayor who expanded numerous services while reducing costs. During this period, he also headed the Cincinnati City Planning Commission. Seasongood’s other public posts included chairman of the Ohio Commission for the Blind (1915–25); member of the U.S. Civil Service Commission’s Loyalty Review Board (1947–53); and security counsel to the U.S. Atomic Energy Commission’s Personnel Clearance Security Board (1954–59). From 1925 to 1959 he lectured in law at the University of Cincinnati. He established the Hamilton County Good Government League and served for many years as national president of the Legal Aid Society. President Herbert Hoover appointed him to a national commission to investigate housing conditions. In 1974 he was named one of the 100 Greatest Ohio Citizens. Seasongood, who lived to be 104, practiced law into his nineties at the law firm of Paxton & Seasongood.

Long active in Jewish affairs, Seasongood served as a member of the Hebrew Union College’s board of governors (1913–42); board member of the Joint Distribution Committee; and executive committee member of the American Jewish Committee (1938–47).

SEATTLE, city and port in the state of Washington; located in the far N.W. of the United States; Jewish population estimated at 37,000 in the early 21st century. Euro-Americans settled Seattle in 1851. Attracted to Seattle’s growing economic success, a temperate climate and abundance of natural resources such as lumber and coal, Jews began arriving in 1868. In 1897, when gold was discovered in Alaska’s Klondike region and Seattle became an embarkation point for those going to the gold fields, many more followed to take advantage of the many business opportunities. By the early 1900s, Seattle, the state’s largest and most dynamic city, had an active Jewish community made up of people from Central and Eastern Europe and the Mediterranean Basin (Turkey, Marmara, and the island of Rhodes).

B’nai B’rith, established in 1883 was the city’s first Jewish organization. As the number of eastern European Jews increased, men formed new lodges, sorting out members by connection with synagogues. A women’s auxiliary, Emma Lazarus, chartered in 1916, brought women into the organization. Other voluntary groups that provided money and a proper burial service for the poor quickly followed.

On a more social level, Jewish men in 1910 founded the Young Men’s Hebrew Association (YMHA). During World War I, the YMHA provided soldiers on leave from Camp Lewis, an army camp near Tacoma, Washington, with a bed and a place to meet other Jews. Seattle’s large Sephardi population formed the Young Men’s Sephardic Association (YMSA). The restriction barring Jews from fraternities and sororities at the University of Washington inspired Jewish students to organize a local Menorah Society in 1913.

To help the growing Jewish community and increasingly large immigrant population, Jewish women established several organizations. The earliest, the Seattle Ladies’ Hebrew Benevolent Society, began in 1892. Over the years it has evolved to become the Jewish Family Service (JFS), the largest Jewish social service organization in the state. The Seattle Section, National Council of Jewish Women, joined the ranks of Seattle Jewish organizations in 1900 and within a few years established a Settlement House for poor immigrants. The NCJW was followed, in 1913, by the Hebrew Ladies Free Loan, which made interest-free loans. The Caroline Kline Galland Home for Aged opened its doors in 1916 and is now a nationally recognized skilled nursing facility. There are also two retirement homes, Council House and the Summit at First Hill.

Swamped by the increasing arrival of Russian refugees, Washington Jewry in 1915 set up a branch of the Hebrew Immigrant Aid Society (HIAS) and established a shelter house for those who had no sponsors.

In the early 1920s, new groups such as Hadassah, the Jewish Consumptives Relief Society, Mizrachi, the Seattle Sephardic Brotherhood, and the Jewish Federation of Greater Seattle, joined the roster of philanthropic and social groups. The Federation is now the coordinating umbrella organization for local non-congregational Jewish groups. Most of the groups are still active and have been joined by a myriad of others, such as the American Jewish Committee, the Stroum Jewish Community Center of Greater Seattle, and the Holocaust Survivors Assistance Office.

To keep track of the social, organizational, and congregational events and to "enable the Jews of Seattle and the Northwest to become better acquainted with each other," Sol Krems, an active member of the Seattle Jewish community, published The Jewish Voice in 1915. After its demise, Herman Horowitz began The Jewish Transcript (JT News) in 1924. The newspaper focused on news, people, politics, religion, and education both locally as well as nationally and internationally.

In 1889 Seattle Jews planned their first congregation, Ohaveth Sholom, a quasi-Reform temple, and purchased land for a Jewish cemetery. It survived until 1896. Seattle’s Orthodox Bikur Cholim Synagogue, the oldest surviving congregation in the state, began as a benefit and benevolent society in 1889, but within a decade became a religious congregation.

Reform-minded Jewish people organized Temple De Hirsch in 1899. In 1906, Herzl, an Orthodox synagogue attracted members interested in promoting Zionism. It would become Conservative in 1932. Seattle’s Sephardi community, which by 1913 had the largest number outside of New York, launched their own religious institutions, Sephardic Bikur Holim, Ahavath Ahim, and Ezra Bessaroth congregations.

Because the Sephardi immigrants spoke Judeo-Spanish (Ladino) not Yiddish, were poor, and unskilled, and ate strange foods, the Ashkenazim at first questioned their Jewishness. Later, Ashkenazi Jews and the larger community grew to know and appreciate their customs and culture and realized that Seattle is fortunate in having such a large Sephardi community. This turn of events began in the 1940s with Rabbi Solomon Maimon, who grew up in Seattle and became the first Sephardi Jew in America to receive ordination. Today Sephardi Studies is a special area in the Jewish Studies Program at the University of Washington. The famed Benaroya Symphony Hall is named to honor the substantial gift of Jack and Rebecca Benaroya, a testament to the Sephardic’s success. Although the 2001 demographic study of Jewish Seattle shows that their numbers have declined in proportion to the total number of Jews because new migrants are generally not Sephardi, this vibrant community’s culture and resources remain important.

Except for Ohaveth Sholom and Ahavath Ahim, all the early religious institutions are still active. With growth in the Jewish population after World War II, new groups joined the list. In 2005, there were 18 active congregations in the greater Seattle area. Besides the traditional Conservative, Orthodox, and Reform, they embrace a meditation synagogue, a gay and lesbian congregation, a Jewish Renewal movement, and a Lubavitch center.

Before 1913, Seattle youth learned Hebrew in the area’s congregational Hebrew schools. After 1913, the community began its support of a Hebrew School. Though Hebrew education floundered over the years, a talmud torah eventually opened and had its own school building. In 1945, Rabbi Solomon
SEBAG, surname widely used in North Africa, particularly in *Morocco. HANANIAH SEBAG (d. after 1570) was a wealthy merchant in *Fez; the problem of his inheritance preoccupied the dayyanim of both the megorashim and the toshavim. Their legal conclusions became law in the rabbinical tribunals of Morocco. The family subsequently settled in *Meknès, *Marrakesh, and in *Mogador (c. 1770). R. ISAAC BEN ABRAHAM SEBAG (d. after 1725), scholar, poet, and dayyan in Meknès, wrote Shir Yedidut ("Song of Friendship"), well-known piyutim in Morocco. R. SOLOMON BEN SHALOM SEBAG (d. 1780), dayyan in Marrakesh, was well known as a talmudist and legal authority. A number of his decisions were published in the responsa of various Moroccan rabbis. SOLOMON SEBAG (d. before 1790), a leader of the Meknès community, was wealthy and one of the benefactors of his community. The poet David b. Hassine dedicated some of his poems, published in Tehillah le-David ("Praise of David," Amsterdam, 1807), to him. SOLOMON BEN MAŠ’UD BEN ABRAHAM SEBAG (fl. early 19th cent.), born in Mogador, was sent to *London in 1799 to manage the family’s business. His success enabled him to publish several works in English and Hebrew by Moroccan authors, among them the above-mentioned Tehillah le-David and An Historical Account of the Ten Tribes (London, 1836) by Moses *Edrehi. He was also the official secretary to his uncle Meir *Macnin, the Moroccan ambassador. In 1813, Sebag married Sarah, the elder sister of Sir Moses *Montefiore. His son JOSEPH added Montefiore to his own name, thus founding the Sebag-Montefiore family. JUDAH BEN MAŠ’UD (1832–1923), born in *Lisbon, lived in *Brazil for many years and amassed a considerable fortune there. In about 1890 he settled in Mogador, the place of his family’s origin, and became one of its most prominent leaders. He was politically active on behalf of his coreligionists, who benefited from his generosity.

SEBASTIAN, MIHAIL (originally Josef Hechter; 1907–1945), Romanian novelist, playwright, and critic. Sebastian, who was born in Brâila, practiced as a lawyer in Bucharest, but from the age of 20 devoted himself mainly to writing. He came to be widely recognized as the most versatile and significant Jewish figure in Romanian literature. Between 1927 and 1940 Sebastian contributed to, among others, Cavintul, Urmia, Rampa, Viata Românească, and Revista Fundațiilor Regale, on which he also worked as an editor; and from 1927 to 1929 he also wrote for the official Romanian Zionist paper, Stiri din lumea evrească. Sebastian’s humanity and courage as a critic won him great respect. At his death much of his work remained scattered in the archives of the journals in which it originally appeared. Sebastian was greatly interested in Marcel *Proust, on whom he published an important study in Corresponzenta lui Marcel Proust (1939). He first achieved success with Femei ("Women", 1933), stories analyzing the psychology of seven

The most representative of Sebastian’s novels was De două mi de ani (“For the Past 2,000 Years,” 1934) which dealt with the problem of the Jew in an alien community. Written in the form of a diary, it portrays the spiritual torment of a Jewish intellectual unable to find a solution to his doubts in either Communism or Zionism. The novel contains a preface by Nae Ionescu who, under the influence of current anti-Semitism, suggested that the Jews were fated to suffer because they had not accepted Jesus, the Christian messiah. Attacked both by Romanian nationalists and by Zionists, Sebastian replied in a mordant and ironic book, Cum am devenit huligan (“How I Became a Hooligan,” 1935), which accused Ionescu of moral and intellectual dishonesty, denouncing the preface as a monstrous act of injustice.

It was as a dramatist that Sebastian won fame even beyond Romania. Three of his best plays have for their theme the intellectual’s flight from a reality to which he is unable to adjust himself. Jocul de-a vacanța (“Let’s Play Holiday,” 1936, staged 1938); Steaua fără nume (“The Nameless Star,” 1943, and produced in 1944 under a fictitious name because of Nazi anti-Jewish laws); and Ultima Oră (“Last Hour,” 1943–44, staged 1946) all show the hand of a master. Sebastian’s plays have been translated and performed in many languages, including English, Hebrew, and Chinese. He was killed in a road accident after the liberation of Romania from the Nazis.

**SEBBA, SHALOM** (1897–1975), Israel painter and designer. Born in Germany, he settled in Palestine in 1936. The strong influence of the theater world is seen in the simplicity of his designs and in his choice of materials. He designed for theaters in Germany, in Stockholm, and in Israel for the Habimah Theater.

**SECONDHAND GOODS AND OLD CLOTHES, TRADE IN.** In Western and Central Europe and Italy trade in secondhand goods and old clothes was an integral part of money-lending against pledges, as the pawned and forfeited articles (jewelry, clothing, etc.) had to be sold. As many of the goods had to be refurbished or repaired, dyeing, tailoring, and mending became ancillary occupations. Later it became a separate trade which, until the spread of the industrial and technological revolutions, catered to the needs of large sectors of the population.

The trade in old clothes in Italy, known as strazzaria (from straccio, strazzo, “rag”), was conducted mainly through peddling and eventually came to include trade in new garments and cloth as well. From the 16th to the 18th centuries it was the most important Jewish occupation after money-lending. The strazziaioli often dealt in imported wares, thereby angering the local textile and clothing manufacturers. A 1667 list of 112 Jewish households in Mantua (about one-half of the community) included eight traders in secondhand goods, five tailors, three renovators of clothes, two clothing shops, three scrap-iron traders, and 15 “general” merchants. Fifty years later there were 25 dealers in old clothes and secondhand goods, 19 textile and cloth merchants, and nine traders in scrap iron. Strazzaria was a major and characteristic occupation of Roman Jewry even before the issue of Pope Paul IV’s extremely restrictive and discriminatory bull of 1555, Cum nimis absurdum, which made it the sole trade permitted to them. In the mid-19th century the historian F. Gregorovius reported:

> If we now enter the streets of the ghetto itself we find Israel before its booths, buried in restless toil and distress. They sit in their doorways or outdoors on the street which affords scarcely more light than their damp and dismal rooms, and tend their ragged merchandise or industryiously patch and sew... The daughters of Zion sit upon these rags and stitch anything that can be stitched. They have a reputation for great art in patching, darning, and piecing, and it is said that no rent in any sort of drapery or fabric can be so fearful that these Arachnes cannot make it invisible and untraceable... It was frequently with painful sympathy that I looked upon them, pale and exhausted and stooped, as they diligently plied their needles, men as well as women, girls, and children (The Ghetto and the Jews of Rome (1866), 66f).

Their lot and vocation continued well into the 20th century, though many branched off into the antiques trade and the clothing industry. In 1940 the licenses of the street vendors of old and new clothes were revoked and in the subsequent persecutions they were particularly hard hit.

Elsewhere in Europe Jews frequently traded in old clothes, at first in association with money-lending and later, in conjunction with related crafts, peddling, and textile trading. In the Netherlands and England, as well as other countries with large numbers of Jewish immigrants, Jews were active in the trade in secondhand goods. In Amsterdam poor Ashkenazi Jews were officially designated as “repairers of old clothes.” The mended clothes were exported in large quantities to various destinations. One of the richest merchants in Amsterdam was instructed by a Jew in Poland to pay a Polish Jew in Amsterdam a sum of 10,000 to 12,000 guilders for the sale of rags. These may have been utilized for paper production. In London the old clothes trade was situated in the “Rag Fair,” in Rosemary Lane (Royal Mint Street), where there were about 500 to 600 Jewish old clothes dealers in 1850 (in 1800 there had been about 1,000). The “old clo’ men, as they were called after their traditional call, brought their wares to two exchanges, Isaac’s & Simmons and Levy, from where they were resold either to wholesale merchants or to retail dealers for a variety of purposes. The German and Dutch Jews who
entered the secondhand-clothing and rag dealers’ markets at Houndsditch in the East End in the 18th century, later dominated the trade and thereby fixed the area of future Jewish settlement in London. The rag trade became obsolete with the rise in the standard of living of the masses and the introduction of Isaac Singer’s sewing machine and modern methods of mass production of ready-made clothing. In different countries and at various times when traditional Jewish occupations were attacked (as in Prussia in the 18th century) the trade in secondhand goods also came under pressure. In Paris in 1911 there were about 1,500 Jewish old clothes dealers (brocanteurs) and 400 ragpickers (chiffonniers); in 1941, 2,533 traders in secondhand goods were recorded. Their real number on both dates was probably larger; the majority were impious immigrants from Eastern Europe (M. Roblin, Les juifs de Paris (1952), 108).

Both in England and the U.S. some Jews extended their activities from the secondhand goods trade to buying and selling waste products in general. A case study on Detroit by J.S. Fauman (in 1905, 3 (1941), 41 ff.) revealed that while there had been no Jewish dealers in waste products (such as paper and scrap metal) there until 1870, from 1880 Jews were predominant, and the location of the lots and junkyards moved in relation to the areas of Jewish residence. “The waste industry, low in status, poorly organized, requiring little capital and unattractive to other groups, was easily accessible to Jews.” Enterprises of this kind attracted and held Jews because of resemblances to their traditional commercial activities, because of strong familial ties, and because the independence of this type of trade enabled them to close their businesses on the Sabbath and festivals. The Detroit pattern prevailed in many other cities. An economic survey made by Fortune magazine (“Jews in America” (1936), 43) estimated that 90% of the scrap-iron and steel industry (worth half a billion dollars in 1929) was Jewish-owned. Through trade in waste materials and particularly in ferrous and nonferrous metals many Jews entered the metal industry, especially in Germany (see “Metals and Mining”).

*Henry Wasserman*

**SECTS, MINOR**

In addition to the main sects which existed during the period of the Second Temple and after, such as the Pharisees, the Sadducees, the Essenes, the Therapeutae and the Dead Sea sects, the sources mention a number of others. As will be noted, some scholars identify some of these sects with those belonging to the above-mentioned categories.

**Bana’im**

The Bana’im were an Essene-like Jewish sect in Palestine in the second century. The name occurs only in *Mikva’ot* 9:6 where a passage referring to the question of dipping clothing for levitical purification records: “Garments belonging to the Bana’im may not have a mudstain even upon one side, because these people are very particular concerning the cleanliness of their clothing, and any such spot would prevent the purifying water from actually penetrating the garment as it is usually worn; but with a *bor* [an unlearned and uncultured man], it matters not if his clothing contain a red spot at the time of dipping, for such a one is not particular about cleanliness.”

Considerable debate centers around the meaning of Bana’im and the activities of the sect in Palestine. Two separate theories have developed on the origin of the name. One group of scholars identifies it with *banah* (“to build”) and explains them as “scholars who occupy themselves with the study of the world’s construction.” Frankel (see bibl.) understands the word *banai* to mean “building master” or “builder” and accordingly concludes that the Bana’im were an Essene order employed with the ax and shovel (cf. Jos., Wars, 2:178).

Other scholars, among them Sachs and Derenbourg, consider Bana’im to be derived from the Greek ὑπάλλευτον (“bath”), and suggests that it means “those who bathe.” In this case, the meaning would make the sect similar to the *Tovelei Shaharit* or Hemerobaptists. A third suggests that they might be the followers of Bannus, who was apparently an Essene hermit, with an emphasis on the ritualistic pledge. It is more probable that the word means simply “bathers” and refers more to the clothing and its cleanliness at the bath than to a specific sect. If the word *bor* in the passages quoted from *Mikva’ot* is interpreted as “a well” rather than “an uncultured person” then the purity of the garment would be dependent on whether the mud was from a large or small pit, and again it is a question of the garment rather than the type of person.

**Hypsistarians**

The Hypsistarians were a semi-Jewish sect who worshiped God under the name θεός Ὑψιστός Παντοκράτωρ (“The most High and Almighty One”). Its members lived on the Bosphorus in the first century C.E. and were found from time to time in Asia Minor until the fourth century. They were Jewish to the extent that they observed the Sabbath and some of the dietary laws, but they deviated from Judaism in that they entertained a certain pagan awe for fire and light, the earth and sun, although no indication is given that they practiced any idolatrous worship or prayer rites. They are probably related to, and may be identical with, either the Mossalians (“Mezallins”), or the Euchomenoi, or the Euphemitai who are distinguished as “God-worshipers who also worshiped the Almighty God at the blaze of many lights.” The Hypsistarians may also be related to the *Yirei Shamayim* (“venerators” or “worshipers of
heaven”), mentioned in *Codex Theodosianus*, xvi, 5:43 and 8:19. The general view is that they were undoubtedly a remnant of Jewish proselytes who retained a few pagan notions but were regarded as hostile to Christian doctrine.

**Hemerobaptists**

The Hemerobaptists (Heb. Tovelei Shaharit; “Morning Bathers”) were part of the baptist group for which the baptismal rite of initiation is the single most important feature. Significant of the Hemerobaptists is that this baptismal rite was repeated each day, rather than once and for all. The Hemerobaptists were probably a division of the Essenes who placed particular emphasis on bathing as a ritualistic cleansing before the hour of prayer each morning in order to be able to pronounce the Name of God with a clean body (Tosef., Yad., 2a). Samson of Sens translates a section of this Tosefta which refers to this cleansing: “The morning bathers said to the Pharisees: ‘We charge you with doing wrong in pronouncing the Name without having taken a ritual bath.’ Whereupon the Pharisees said: ‘We charge you with wrongdoing in pronouncing the Name with a body impure within.’” The sect is also mentioned in the Talmud (Ber. 22a). Hemerobaptist baptism differed from proselyte or synagogue ablutions in that this baptism was both symbol and sacrament. John the Baptist was probably a Hemerobaptist, as suggested in *Clementine Homilies* (2:23). His followers were eventually absorbed into the Christian Church, although a part may have gone to the sect of Mandaeans in lower Mesopotamia. A remnant of this group was still active in the third century C.E. Several early Christian authors make mention of the Hemerobaptists. Hegesippus (See Eusebius, *Hist. Eccl.*, iv, 22) refers to them as one of the Jewish sects or divisions opposed to Christians; Justin calls them “Baptizers.” According to the Christian editor of the Didascalia (“Apostolic Constitutions,” vi, 6), the Hemerobaptists do not make use of their beds, tables, and dishes until they have cleansed them. This is a misunderstanding of the true purpose of this sect, i.e., bodily cleansing. Another author, Epiphanius, asserts that the Hemerobaptists deny future salvation to persons who do not undergo daily baptism.

**Maghāriya.**

Maghāriya was a sect that appeared during the first century B.C.E. according to “Kirkisānī. The name is Arabic, meaning “men [people] of the caves” and refers to their practice of keeping their books and sacred writings in caves in the surrounding hills of Palestine. Doctrinal differences with the rest of the Jewish community pivoted around the Maghāriya’s transcendental view that God is too sublime to mingle with matter. They therefore rejected the idea that the world was directly created by God, but rather held that an intermediary power, an angel, was responsible for that act and now represents God in the created world. The sect wrote its own peculiar commentaries on the Bible and attributed the Law, all communications, and all anthropomorphic references, not to God, but to this angel. Two writings of importance, the Al-

SECUNDA, SHOLOM (1894–1974), composer. Secunda was born in Aleksandia (Kherson region), Ukraine. His family moved to Nikolayev in 1897 and immigrated to New York in 1908. As a child, Secunda had already been a *meshorer* and assistant *hazan*. In New York he began studying music and in 1913 was engaged at the Oden Yiddish Theater as “choris-

\[Menahem Mansoor\]
Sedaka, Neil

(1939– ), pop composer and performer whose songs appeared on the music charts from the 1950s through the early 21st century; member of the Songwriter's Hall of Fame. Born in Brighton Beach, Brooklyn, Sedaka is the son of Mac, a Turkish Jewish immigrant and cab driver, and Eleanor (Appel), a concert pianist of East European descent. Sedaka's parents bought him a piano before he was 10, and he attended Juilliard School of Music. At his bar mitzvah, his parents were approached by a cantor to discuss training him to be a cantor. At 16, Arthur "Rubinstein named him one of the finest classical pianists in New York City high schools. Despite the classical training, Sedaka formed a pop music vocal group while at Brooklyn's Lincoln High School and began his recording career shortly after. From 1959 to 1963, songs co-written by Sedaka and Howard Greenfield sold more than 25 million copies. One of his songs reached #1 on the charts, becoming the first song recorded in a different version by the same artist to reach the Top Ten. “Breaking Up” was later listed by recording industry group BMI as one of the 50 most performed songs of the 20th century. He and Greenfield wrote “Love Will Keep Us Together,” a No. 1 hit for The Captain and Tennille and the bestselling record of 1975. In 1980, Sedaka had a Top Ten hit with “Should've Never Let You Go,” which he recorded with his daughter, Dara; it was one of the few father-daughter songs ever to make the charts. He continued to reach the charts sporadically in coming years, becoming one of the only performers to reach the pop music charts in six decades, and recorded jazz and pop classical albums, as well. He also recorded an album of Yiddish songs in 2003, and released a Christmas album in 2005. Sedaka was inducted into the Songwriter's Hall of Fame in 2005, and was given a star on the Hollywood Walk of Fame. In 2005 he received the Sammy Cahn Lifetime Achievement Award from the National Academy of Popular Music/Songwriters Hall of Fame. The prolific Sedaka had written more than 1,000 songs by 2005. In 2005, a petition was circulated to have Sedaka named to the Rock and Roll Hall of Fame.

[Alan D. Abbey (2nd ed.)]

SEDEH BOKER (Heb. שדי בוקר; "Cattle Rancher's Field"), kibbutz in the central Negev hills of Israel, 11 mi. (19 km.) S. of Yeroham, affiliated with Ihud ha-Kevuzot Ve-Ha-Kibbutzim. Sedeh Boker, founded as a pioneer outpost in 1952, was initially an isolated "farming cooperative" in the middle of the desert, unaffiliated with any nationwide settlement association. The settlers were mostly veteran Israelis of different political affiliations. They began with horse breeding, but later introduced sheep flocks and orchards. They reclaimed the loess soil for farming from the desert by special methods. Irrigation depends on the rare flood waters in the rainy season and sewage water. Farming is based on the orchards as well as vineyards, organic citrus groves, and poultry. Sedeh Boker also operates a cellophane factory. From the end of 1953, David *Ben-Gurion and his wife made their home at the kibbutz. In the mid-1990s the population of Sedeh Boker was approximately 365 and at the end of 2002 it was 471.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

In 1965 Midrashet Sedeh Boker was founded on the initiative of Ben-Gurion. It comprised a teachers' training seminary, a boarding high school whose students were mostly from Negev towns and settlements, and a school for field studies. The Midrashah, located 3 mi. (5 km.) south of the kibbutz, on the rim of the wild Zin Canyon, provides both general education and vocational training, with emphasis on the natural sciences. It defines itself as an interdisciplinary center for desert studies and hosts elementary schools, high schools, and field schools, offering advanced seminars. The Midrashah includes two academic research centers: the Institute for Desert Research and the Ben-Gurion Heritage Center.

SEDEH ELIYAHU (Heb. שדה אליהו), kibbutz in central Israel, in the Beth-Shean Valley, affiliated with Ha-Kibbutz ha-Dati. Sedeh Eliyahu was founded in 1939 by religious pioneers from Germany. In 1970 Sedeh Eliyahu had 375 inhabitants, increasing to 656 in 2002. Farming was intensive and fully irrigated, based on field crops, dates, vineyards, vegetables, organic farming, fish breeding, and dairy cattle. The kibbutz manufactured spices and biological pest control products (Bio-Bee). The name of the kibbutz commemorates Rabbi Eliyah *Gutmacher.

WEBSITE: www.seliyahu.org.il.
SEDEH NAḤUM (Heb. סְדֶה נָחֹ�ּמ), kibbutz in northern Israel, on the border of the Harod and Beth-Shean valleys, affiliated with Ha-Kibbutz ha-Me’uhad. Together with “Nir David, Sedeh Nahum was the first *stockade and tower outpost in the valley. It was founded in 1937 by pioneers from Poland and Austria. In 1970, Sedeh Naḥum had 290 inhabitants, increasing to 335 in 2002. Farming was highly intensive and fully irrigated, including plantations and poultry. The kibbutz ran a plastic factory as well. Its name commemorates the Zionist leader Nahum *Sokolow.

SEDEH NEHEMYAH (Heb. סְדֶה נֶחֶמְיָה), kibbutz in northern Israel, in the Huleh Valley, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. Sedeh Nehemyah was founded in 1940 by pioneers from Holland and Czechoslovakia in the vicinity of the then-existing Huleh Swamps. In 1970 Sedeh Nehemyah had 304 inhabitants, rising to 383 in 2002. Farming was intensive and fully irrigated, based on field crops (in partnership with Kibbutz *Amir and Kibbutz *Shamir), fruit orchards, and citrus groves. The kibbutz also manufactured plastic products. Its name commemorates the Dutch Zionist Nehemiah de *Lieme.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

SEDEH WARBURG (Heb. סְדֶה וָרְבּוּרֵג), moshav in the southern Sharon, Israel, near Kefar Sava, affiliated with Ha-Ihud ha-Haklai. Sedeh Warburg was founded in 1938 by middle-class immigrants and later joined by other newcomers, mainly from Poland. Farming was highly intensive and fully irrigated. In 1970 Sedeh Warburg had 380 inhabitants, increasing to about 500 in the mid-1990s and 956 in 2002. Its name commemorates the Zionist leader Otto *Warburg.

[Efraim Orni]

SEDEH YA’AKOV (Heb. סְדֶה יַעֲקֹב), moshav in northern Israel, southeast of Kiryat Tivon, affiliated with Ha-Po’el ha-Mizrachi Moshavim Association. Sedeh Ya’akov was founded in 1927 by immigrants from Poland, Lithuania, and Hungary. The moshav raised field and garden crops, citrus groves, fruit orchards, dairy cattle, and poultry. In 1970 the moshav, including the religious Youth Aliyah village, Neveh Ammiel (named for Rabbi Moses A. *Amiel), numbered 500 inhabitants, rising to about 740 in the mid-1990s and 821 in 2002. The name of the moshav commemorates Rabbi I.J. *Reines.

[Efraim Orni]

SEDER (Heb. סֵדֶר, “order,” “arrangement”). The word seder occurs only once in the Bible, in the plural (Job. 10:22), but it is extensively used in rabbinical literature. The best known of these uses are the following:

(1) The pericopes of the Bible according to the triennial cycle. These divisions are called sedarim, hence the Aramaic form sidra, popularly but wrongly used, particularly in Yiddish (sedra) for the weekly portion (instead of parashah).

(2) The six orders into which the Mishnah is divided. See “Shas.”

(3) An order of prayers. Although the word usually employed is siddur, that of R. Amram is properly called the seder of R. Amram.

(4) An order of service and worship. This is the most extensive use of the word. Thus there is reference to the seder of the *benedictions (RH 4:5), of the sounding of the *shofar (RH 4:9), and for fast days (Ta’an. 2:1), while the detailed description of the daily sacrifice concludes “thus was the seder of the daily offering in the service of the House of God” (Tam. 7:3). Similarly the service in the Temple is called the seder *Avodah. The most common use of the word in this sense is the seder of Passover, which, in the piyut on the conclusion of the prose part of the *Haggadah is called siddur Pesah (for a full description see “Passover”).

SEDER OLAM (Heb. סֵדֶר עֲלָם, “The Order of the World”), name of two midrashic, chronological works called respectively Seder Olam Rabbah (“The Great Seder Olam”) and Seder Olam Zuta (“The Small Seder Olam”).

Seder Olam Rabbah
Seder Olam is mentioned in the Talmud (Shab. 88a; Yev. 82b; et al.) and is ascribed by the Palestinian amora R. Johanan (third century) to the second-century tanna Yose b. *Halafta (Yev. 82b; Nid. 46b). The work is divided into three parts, each consisting of ten chapters. Part one enumerates the dates of major events from the creation of the world until the death of Moses and the crossing of the Jordan by the Israelites under Joshua; part two, from the crossing of the Jordan to the murder of Zechariah, king of Israel; part three, chapters 21–27, from the murder of Zechariah to the destruction of the Temple by Nebuchadnezzar; and chapter 28, from the destruction of the Temple to the conquest of Babylon by Cyrus. Chapter 29 and the first part of chapter 30 cover the Persian period, which is stated to be only 34 years. The larger part of chapter 30 contains a summary of events from the conquest of Persia by Alexander until the Bar Kokhba Revolt. This summary may be an epitome of a large section shortened by some later editor uninterested in post-biblical history. The book is written in a dry but clear Hebrew style. It is embellished with midrashic interpretations of biblical passages which are used as sources for the chronological calculations.

Yose b. Halafta, the presumed author of Seder Olam Rabba, probably had access to old traditions that also underlay the chronological computations of the Jewish Hellenistic chronographer *Demetrius (third century b.c.e.). The most significant confusion in Yose’s calculation is the compression of the Persian period, from the rebuilding of the Temple by Zerubbabel in 516 b.c.e. to the conquest of Persia by Alexander, to no more than 34 years. Like other rabbinic scholars, he believed that Zerubbabel (sixth century b.c.e.), Malachi,
Ezra, Nehemiah (all fifth century B.C.E.), and Simeon the Just (third century) were all contemporaries. The work in its present form has gone through many hands. Some quotations from it in the Talmud are missing in the extant text (see bibl. Ratner, Mavo, 118ff.). On the other hand, the book contains many later additions (ibid., 134ff.).

Seder Olam Rabbah was the first to establish the era “from the creation of the world” (ab creazione mundi, abbreviated A.M. for anno mundi). Utilizing the biblical chronology and reconstructing post-biblical history as well as he could, the author arrived at the conclusion that the world was created 3828 years before the destruction of the Second Temple by the Romans. According to this calculation the destruction took place in the year 68, which is in contradiction to the accepted chronology that it took place in the year 70 C.E. An attempt to harmonize the contradiction was made by E. Frank (see bibl.). It was a long time until the reckoning according to the anno mundi era took root in Jewish chronology. For many centuries the calculation of the Seder Olam Rabbah was of interest only to talmudic students who tried to satisfy their curiosity for historical reconstruction. The usual calculation accepted by Jews in talmudic and even post-talmudic times was that of the Seleucid era, beginning with the year 312 B.C.E., and usually referred to in Jewish literature as minyan shetarot (“dating of documents”). Only when the center of Jewish life moved from Babylonia to Europe and the calculation according to the Seleucid era became meaningless was it replaced by that of the anno mundi era of the Seder Olam.

The first mention of the anno mundi date is in the chronological book Baraita di-Shemu’el (eighth–ninth centuries; see A. Epstein, Mi-Kadmoniyot ha-Yehudim (1957), 18, 193), on tombstones in Venosa, southern Italy (ninth century; see U.(M.D.) Cassuto, in: Kedem, 2 (1945), 99–120), and in the commentary of Shabbetai Donnolo (tenth century, Italy) on the Sefer Yezirah (ed. by David Castelli (1880), 3). From the 11th century onward it became dominant in most of the Jewish communities in the world. In the 16th century, Azariah de *Rossi was the first Jewish scholar to doubt the antiquity of the usage of this era (see Me’or Einayim, ch. 25). Until the 12th century the book was known only as Seder Olam, but the word rabbah was then added in order to differentiate it from the chronicle Seder Olam Zuta. The first to use the name Seder Olam Rabbah was Abraham b. Nathan ha-Yarhi (see Sefer ha-Manhig, 52ab).

The book has gone through many editions and was commented upon by many scholars, among them Jacob *Emden, *Elijah b. Solomon Zalman Gaon of Vilna, and B. Ratner, who devoted to the book a separate large introduction (mavo) containing valuable critical references. A Latin translation by G. Genebara of Seder Olam Rabbah and Seder Olam Zuta appeared in 1577, and another one appeared in 1692. An attempt at a critical edition of the book was made by Alexander Marx, who published the first ten chapters of it with a German translation in 1903.

Seder Olam Zuta

This is an anonymous early medieval chronicle. Written mostly in Hebrew and partly in Aramaic, it consists of ten chapters. The first six chapters deal with the chronology of 50 generations from Adam to Jehoiachin, king of Judah, who was exiled by Nebuchadnezzar to Babylon and according to this chronicle was the first of the Babylonian exilarchs. Chapters 7–10 deal with 39 generations from Jehoiachin until the end of the Babylonian exilarchate under the Sassanid dynasty. The object of the chronicle is presumably to show that the exilarchs were of Davidsic descent and that the lineage of these exilarchs had died out in Babylon when Mar Zutra (11) left Babylonia for Ereẓ Israel in 520. A detailed account of Mar Zutra’s adventures is given at the end of the book to substantiate this contention. This part, which enumerates the exilarchs of the fourth and fifth centuries, is historically important as it is the only source of information for this period. The Karaites also traced back the descent of their exilarchs through this record.

There is a difference of opinion concerning the time of composition of this chronicle. Many hold that it was written about 804, which corresponds to the date given in the De Rossi manuscript (Parma) published by Schechter (MGW), 39 (1895), 23–28. However, this may be a later addition. According to others it was written in the time of the *savoraim (sixth century), and others claim that it was written when there was considerable doubt about the authenticity of the genealogy of the Babylonian exilarchs (second half of the seventh century; see *Bustanai b. Haninai). For the biblical period the author drew on the Seder Olam Rabbah and for the talmudic period, on the chronicles or chronological lists which were composed in the Babylonian academies (Sifrei Zikhronot le-Veit David, Sifrei Beit David; see Igeret Sherira Ga’on, ed. Lewin, 96). Abraham Zacuto included the greater part of this chronicle in his Sefer Yehudain (see Sefer Yehudain ha-Shalem, ed. by H. Flipowski and A.H. Freimann, 91–93).

JUDAH M. ROSENTHAL

SEDEROT (Heb. סדרות), development town in the southern Coastal Plain of Israel 11 mi. (18 km.) S. of Ashkelon. Sederot’s beginnings were in 1951, when immigrants from Kurdistan and Persia were housed in temporary huts near kibbutz *Nir Am and found occasional employment as hired laborers, mainly in farming, in the vicinity. In 1954 the place became a ma’abarot (transitory immigrant camp), called Ma’barat Gevim-Dorot; it absorbed newcomers from North Africa. In 1956 it was declared a development town and permanent housing schemes
were started. In the ensuing years, Sederot continued to suffer from unemployment caused by the lack of local industry, from an exorbitant burden of welfare cases, and consequently, from a large turnover of population. The situation improved in the 1960s when industries were set up in the town and the simultaneous industrialization of the region’s kibbutzim provided additional places of work for Sederot residents. Projects were devised to attract skilled labor and professionals from among new immigrants and veteran Israelis, thus also attempting to diversify the town’s population – 7,500 in 1970 – the majority of whom originated from North Africa, mainly Morocco. Local industry included enterprises in food packing (citrus, poultry, etc.), as well as metal and textile plants, cotton mills, etc. In the mid-1990s the population was approximately 14,600, rising to 19,400 in 2002 on an area of around 2 sq. mi. (5 sq. km.). In 1996 Sederot received city status. Unemployment reached the 12% mark in the early 2000s. Located barely half a mile (800 m.) from Beit Hanun in the northern Gaza Strip, Sederot came under Kassam rocket attack in the al-Aqsa Intifada, with nearly 100 hitting the town between 2001 and 2004 and four residents killed and dozens injured. Dozens more hit the town after Israel’s disengagement from the Gaza Strip in 2005. Sederot is known for its native rock groups (such as Tipex). Since 2001 its cinemateque has hosted the Southern Film Festival in conjunction with nearby Sapir College. It also operates haredi and hesder yeshivot.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

SEDOT YAM (Heb. סוֹדֶת יָם), kibbutz in central Israel on the site of ancient Caesarea, affiliated with Ha-Kibbutz ha-Me’uhad. Sedot Yam was founded in 1940 by Israel-born youth of the Ha-No’ar ha-Oved movement and by Youth Aliyah graduates from Germany and Hungary (among them Hannah Szenes). Initially, the kibbutz took on as its principal assignment pioneering in sea fishing, but abandoned this branch in the course of time and developed fruit orchards, irrigated field and fodder crops, etc. The kibbutz also produced quartz surfacing products (CaesarStone) and other surfacing materials (marble, granite, ceramics). It had a small museum containing ancient artifacts uncovered in the area. In 1970 Sedot Yam had 510 inhabitants, increasing to 634 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

SEDRAH (Sedransky), BARNEY (1891–1969), U.S. basketball player. Born in New York, Sedran was considered too small for high school basketball but became a varsity player at the City College of New York (1909–11). He turned professional in 1911, and in 15 seasons his teams won a number of championships.

Only five feet four inches tall and weighing 188 pounds, the smallest regular professional player, he excelled nevertheless in all phases of the game, and in 1913 set an all-time scoring record of 34 points on 17 field goals without the benefit of a backboard. From 1932 to 1946, Sedran coached such teams as the Brooklyn Jews, Kate Smith Celtics, Wilmington Bombers, and New York Gothams. In 1962 he was elected to the Basketball Hall of Fame.

[Yoel Yehuda Slutsky]

SEDUVÁ (or Sheduva; Pol. Szadów; Rus. Shadow), city in N. central Lithuania. The Jewish community in Seduva dates from the 15th century. Seduva was the birthplace of R. Moses of *Kiev. In 1766 there were 508 Jews who paid the poll tax, and in 1897 the Jewish population numbered 2,695 (61% of the total population). During World War I Jews were deported to the interior of Russia, only some of them returning after the war, and in 1923 only 916 (28% of the total population) remained. Subsequent migration abroad and to the large cities reduced the number of Jews even further; in 1939 there were only 200 Jewish families in Seduva. Shortly after the German invasion the community was completely destroyed. The Russian-Jewish historian Pesah (Piotr) *Marek was born in Seduva.

BIBLIOGRAPHY: Yahadut Lita, 3 (1967), 362.

SÉE, family originally from Lorraine; the name is said to derive from the Seille River. Toward the end of the 16th century, most of the members of the family had settled in *Alsace and Lorraine (in Metz, Bergheim, Rappoltsweiler (Ribeauvillé), and Colmar), but later most of them lived in Paris. During the 19th and 20th centuries, its members included the politician Camille Sée (1847–1920), the playwright Edmond *Sée (1875–1959), the physician Germain Sée (1818–1896), the soldier Léopold *Sée (1822–1904), and the historian Henri Sée (1864–1936), whose works on economic history, La vie économique et les classes sociales en France au XVIIIe siècle (1924) and Histoire économique de la France (2 vols., 1939–42), are of lasting importance. He also contributed articles on French Jewish history to the Revue d’études juives.

SÉE, EDMOND (1875–1959), French playwright. Born in Bayonne, Sée forsook the law to write witty plays analyzing human emotions. Mainly comedies in the 18th-century French classical tradition, these include the highly successful La brebis (1866), L’indiscrét (1903), L’irrégulière (1913), La dépositaire (1924), and Charité (1932). He also wrote two romantic novels, Un cousin d’Alsace (1918) and Notre amour (1920), and critical works such as Le théâtre français contemporain (1928).

SÉE, LÉOPOLD (1822–1904), French general. Born in Bergheim, Alsace, into a distinguished French family, Sée graduated from the military academy at St. Cyr and in 1850 was ap-
Seekers after Smooth Things

pointed to one of the famous Zouave regiments with the rank of captain. He was sent to Algeria to fight against insurgent tribes and in 1854 his regiment was transferred to Crimea on the outbreak of war against Russia. Sée fought in the bitter battles of Alma and Inkerman and at the siege of Sebastopol. Twice wounded, he was mentioned in dispatches and received the Legion of Honor. He led a Zouave battalion in the attack on Port Malakoff. By the end of the Crimean War, Sée was a very popular figure in France and was transferred to the Imperial Guard at Versailles. In 1859 he served in the Italian campaign. On the outbreak of the Franco-Prussian War in 1870, Sée commanded his regiment at the siege of Metz. He was wounded and taken prisoner, but was released because of the severity of his wounds. Sée became a lieutenant general in 1880 and commanded various army divisions until his retirement in 1887. Throughout his life, he was active in Jewish affairs and was a member of the French Jewish Consistory.

[Mordechai Kaplan]

Seekers after Smooth Things, or “Givers of Smooth Interpretations” (Heb. רעשנים חלולים, doreshei halakot), a designation given in the *Qumran texts to certain people who followed a different (and presumably less exacting) application of the law than that favored by the Qumran community. At the beginning of the Zadokite Admonition (CD 1:18) those who paid heed to the “man of scoffing,” the “spouter of lies,” are said to have “given smooth interpretations” (a phrase probably derived from Isa. 30:10, where the rebellious people say to the prophets, “speak unto us smooth things, prophesy delusions” – i.e., tell us what we like to hear). From samples of these “smooth interpretations” given later in the same work (CD 4:19ff.), with special reference to the marriage laws and the rules of purity, it seems most probable that the people referred to are the Pharisees.

In the “Thanksgiving Psalms the tension between the community and the “seekers after smooth things” finds repeated expression: the psalmist has become “a man of dispute for the interpreters of error... a spirit of jealousy to all who would succeed him in 1950, to fill the gaps and to try to continue the pre-war history of the collection. He combined both his rabbinical training and his philological studies in his Ph.D. dissertation on The Septuagint Version of Isaiah (Leiden 1948, re-edited in The Septuagint Version of Isaiah and Cognate Studies, 2004). He aimed at understanding the Septuagint as a document of Jewish-Alexandrian theology. In 1950 he joined the Bible Department of the Hebrew University of Jerusalem, where he taught as a lecturer and as a professor for 25 years. Shortly before his death he was presented with a three-volume Festschrift as a measure of the esteem many scholars held for him.

In addition to his book on the Septuagint, Seeligmann’s scholarly contribution was in his lectures at international congresses and his articles in periodicals and Festschriften. A selection of these, in German and English, was published in Gesammelte Studien zur Hebräischen Bibel (2004), including translations from Hebrew.

In his first lecture for the International Organization of Old Testament Scholars (later: for the Study of the Old Testament) in Copenhagen 1953, he drew attention to the flexibility of biblical stories and literary motifs in “Voraussetzungen der Midraschexegese” and later, on the same theme, in “Anfänge der Midraschexegese in der Chronik” (1980).

He became fascinated by the theme of the different stages of writing history in the Hebrew Bible. Among the fruits of his research into biblical historiography are “Hebräische Er-
zählung und biblische Geschichtsschreibung" (1962), "Von historischer Wirklichkeit zu historiosophischer Konzeption in der Hebräischen Bibel" (1971), and his last congress lecture in Goettingen, "Die Auffassung von der Prophetie in der deut-
teronomistischen und chronistischen Geschichtsschreibung" (1977).

He demonstrated his interest in philological research in articles such as "Untersuchungen zur Textgeschichte der Hebräischen Bibel" (1956) and "Indications of Editorial Alter-
tation and Adaptation in the Massoretic Text and the Sep-
tuagint" (1961). Among his other works are Phasen uit de ge-
schiedenis van het Joodsch historisch bewustzijn (1947); Profetie en profeten in Israel (1927); and Tekst-, Litteratuur- en godsdi-
enis geschiedenis van het Oude Testament (1935).

His colleague Rudolf Smend (Goettingen) wrote an ex-
tensive biographical sketch which highlights the trends of
Seeligmann’s research.

dia Rosenthaliana, 38 (2005/6) includes an English translation of a long passage of Smend’s biographical sketch.

[Fr. Hoogewoud (2nd ed.)]

SEELIGMANN, SIGMUND (1873–1940), bibliographer and
historian. Born in Karlsruhe, Germany, Seeligmann came to
Amsterdam in 1884, later studying at its rabbinical seminary. Maintaining worldwide contacts with Jewish scholars, he put his rich knowledge and important library at their disposal. Of his many articles and monographs on Jewish bibliography and the history of the Jews in the Netherlands, especially impor-
tant are “Het geestelijk leven in de Hoogduitsche Joodsche Gemeente te’s Gravenhage” ("The Spiritual Life of the Dutch Jewish Community in The Hague," in: D.S. van Zuiden, De Hoogduitsche Joden in ’s Gravenhage (1931)); and Bibliographie en Historie; bijdrage tot de geschiedenis der eerste Sephardim in
Amsterdam ("Bibliography and History; Contribution to the History of the First Sephardim in Amsterdam," 1927). Many of
his writings are collected in his Varias (1935), nos. 1–36, in one volume. His original theories on the settlement of Con-
versos in The Dutch Republic and his emphasis on the special character of Dutch Jewry (Seeligmann coined the by now leg-
endary phrase species hollandia judaica) greatly stimulated the study of this chapter of Jewish history. In 1919 he founded the
Genootschap voor Joodsche Wetenschap in Nederland ("So-
ciety for the Science of Judaism in the Netherlands"). He was
active in many Jewish institutions, including a term as presi-
dent of the Dutch Zionist Organization.

[Frederik Jacob Hirsch / Irene E. Zwiep (2nd ed.)]

His son, Isac Leo *Seeligmann (Arieh; 1907–1982), bib-
liical scholar, was born in Amsterdam, and served as lecturer in
the Netherlands Israelite Seminary from 1936 to 1939. In
1946, after returning from a Nazi concentration camp, he was
librarian at the University of Amsterdam. In 1950 he joined the
department of Bible at the Hebrew University of Jerusalem,
becoming professor in 1966.

Campen, In Memoriam Sigmund Seeligmann (1941).

SEENSEN, town in Lower Saxony, Germany. Throughout its
history the Jewish community of Seessen was small, its num-
bers never exceeding 200. In 1801 the financier and Court Jew
Israel *Jacobson founded and richly endowed the Jacobson
Schule in Seesen as a means of implementing his humanistic
and reform ideals. Modern subjects and vocational instruc-
tion were emphasized. The school began to accept Christian
pupils in 1805, and later in the 19th century lost its Jewish
character. In 1810 the Seessen synagogue (the controversial
Jacobstonempel), featuring for the first time in Germany an
organ, choir, and sermons in German, was consecrated as an
offshoot of the school. There were 54 Jews in Seessen in 1819;
178 in 1871; and 209 in 1895. In 1852 a nonsectarian orphanage
was founded by Jacobson’s son Mayer. It was closed in 1923
and reopened in 1929 as a Jewish youth sanatorium. Only 30
Jews lived in Seessen in 1933, when Jewish teachers and pup-
ils were expelled from the school and its foundation funds
confiscated. After World War II, a short-lived community
of 60 was established, but by 1952 only nine remained. A liberal
Jewish community was founded in 1997. It numbered 43 in
2005. All the members are immigrants from the former Soviet
Union. They use a room in the original Jacobson school. The
community is a member of the Union of Progressive Jews in
Germany.

“SEETZEN, ULRICH JASPER” (1767–1811), German ex-
plorer. He studied medicine in Goettingen. During his exten-
tive travels in the Near East, he visited Palestine (1802), Mecca
and Medina (1810), and Yemen (1811), where he was poisonous.
His diaries were edited posthumously by Kruse and Fleischer
(1854–59). Seetzen was the first of the scientific explorers of
the 19th century. His knowledge of Arabic and his courage en-
abled him to visit unexplored regions, such as the Dead Sea.
He was the first European to note the ruins of Masada (Sabra),
although he did not identify the site.

SEFER HA-HAYYIM, an anonymous Ashkenazi-hasidic
treatise, unique in its combination of mystical esoteric theol-
ogy with ethical teaching. Whereas all other works of *Hasidei Ashkenaz deal with either one area or the other, the author of *Sefer ha-Hayyim attempts first to establish a theological basis – beginning with the essence of God, His holy Names, and His different powers, and concludes with the ethical problems of good and evil tendencies among men, suggesting ways to overcome them. Because some theories in this work closely resemble basic kabbalistic ideas, *Sefer ha-Hayyim is important for the history of Jewish mysticism. R. Moses *Taku attributes the book to R. Abraham *Ibn Ezra. There seems to be no basis for this, however, even though the author used Ibn Ezra’s exegetical and theological works. In the introduction of *Sefer ha-Hayyim the author numbers 15 chapters, briefly describing their contents; the text, however, does not follow that structure, and entire subjects mentioned in the introduction are either missing or appear in a different order.

[Joseph Dan]

**SEFER HA-M’ASIM LI-VENEI EREZ YISRAEL,** halakhic work written in Ere Izrael. In 1930 B.M. *Lewin published two fragments from the *Gentzah collection in Oxford of the *Sefer ha-Ma’asim with an introduction (Tarbiz, 1.1 (1930), 79–101). Since then various additional fragments have been published by J.N. *Epstein and J. *Mann. All these fragments together amount to only 15 pages, but in 1972, Z.M. Rabinowitz published the largest extract yet found, consisting of ten pages. This additional extract makes possible a fuller evaluation of the importance of this work. These fragments confirm the conclusion of Epstein that the work belongs to the end of the Byzantine and the beginning of Arab rule in Ere Izrael (end of the 7th century) and the *terminus ad quem is provided by the fact that the far-reaching geonic enactment, permitting the *ketubah of a woman to be levied from movable goods of the orphaned children, enacted in 787 C.E., was unknown.

The word *Ma’asim refers to the fact that the work consists of practical halakhic discussions, excluding laws which had no practical application. As such it affords interesting glimpses into aspects of the life of the Jews in Ere Izrael at the time. Thus it reveals that Jews engaged extensively in agriculture and cattle raising and that they rented land for this purpose from the Arabs.

The importance of the work lies in the fact that unlike other halakhic codes and commentaries which are based mainly upon the Babylonian Talmud, *Sefer ha-Ma’asim is the first and earliest example of the codification of the halakhah according to the Jerusalem Talmud and the halakhah observed in Ere Izrael until the time of *Yehudai Gaon and his disciples (8th century).

The *Sefer ha-Ma’asim contains some laws and customs for which there is no other source. Further extracts from the *Sefer ha-Ma’asim, from the literary legacy of the late Prof. Mordecai Margaliot, have been published.

**BIBLIOGRAPHY:** Z.M. Rabinowitz, in: Tarbiz 41:3 (1972).

[Louis Isaac Rabinowitz]

**SEFER HA-NEYAR,** an anonymous book of halakhic decisions by one of the last French tosafists of the late 13th or early 14th century. Extremely strange and farfetched theories were put forward by Jewish bibliographers and chroniclers about this book, which was known to them only by hearsay. Only after its publication did it become possible to gain an idea of its true nature. The work contains about 40 chapters, embracing all the halakhot governing the day-to-day observance of the Jew. The book chiefly relies on the teachings of the great French and German scholars, the tosafists, down to *Isaac of Corbeil and *Perez b. Elijah of Corbeil who are, however, rarely mentioned by name. The author also made use of the works of the great Spanish *posekim, such as Maimonides and Isaac Alfasi, and the *Halakhah Gedolot. In its general characters, sources, and aims, there is a strong resemblance between *Sefer ha-Neyar and the *Kol Bo, another anonymous work. The *Neyar, however, appears to have been compiled before the *Kol Bo, since it contains very few references to *Meir b. Baruch of Rothenburg and Perez of Corbeil. The *Sefer ha-Neyar describes the customs of France and Germany, and contains valuable halakhic, literary, and historical material, for which it is often the sole source. One of its main sources was the work of a certain Baruch Hayyim b. Menahem, a scholar not otherwise known. From the quotations themselves it is clear that Baruch was a pupil of *Samson of Sens and of his own father, who was also a pupil of Samson and of the brothers *Moses and *Samuel of Evreux. Anonymous haggahot (“glosses”) have been added to the text of the book; although they resemble it in content and in use of sources, they seem to be by another scholar who lived a generation later than the author of the work, and may have been his pupil. There are also a number of anonymous haggahot of a different type, entitled Nofekh; the exact relationship between them and the book itself is not clear. Some consider that the name of the work (apparently not its original name) was derived from the French town Niort (and there are additional indications that the book originated there). Others connect it with the introduction into France of writing paper (neyar, “paper”) at the end of the 13th century, it being one of the first books written on paper. The book enjoyed a wide circulation and manuscripts of it are extant. Later its popularity declined. The only halakhist to quote the work, in his responsa, was Joseph *Colon. The first part of *Sefer ha-Neyar (25 chapters) was published in New York in 1960 by G. Appel.

[Israel Moses Ta-Shma]

**SEFER HA-YASHAR** (Heb. יש־ח, “The Book of Righteousness”), an anonymous work, probably written in the 13th century, one of the most popular ethical books in the Middle...
Ages. The book was published for the first time in Venice, in 1544, and since then has been reprinted many times. It was frequently attributed to R. *Tam, the tosafist, who wrote a book by that name (*Sefer ha-Yashar le-Rabbenu Tam, Vienna, 1811); his writing, however, is concerned only with halakhic problems. Some manuscripts attribute the book to Zerubiah ha-Yevani, but there is no evidence to bear out the authenticity of such an ascription. Some scholars have suggested that the author might have been R. *Jonah Gerondi, one of the foremost writers in the field of ethics in the 13th century; however, the difference between R. Jonah's known views and those expounded in *Sefer ha-Yashar would suggest otherwise.

There is also some confusion regarding the nature of the book and the school of ethical concepts to which the author adhered. The style and language conform to contemporaneous philosophical ethical writings and ideas; the author especially made use of Aristotelian terms and concepts. The work, however, is also marked by a tendency to deviate from the central stream of philosophical conventional ethics. This is evidenced in some of the main ideas. The difference is so great that some scholars have concluded that the author might have been a kabbalist who did not want to reveal the full scope of his mystical beliefs. Some ideas in the work also bear great similarity to the ethical concepts of the Ashkenazi hasidic movement which reached its peak in the 13th century, and especially to *Sefer ha-Hayyim, which was written by one of the *Hasidei Ashkenaz.

Most of the unusual ideas are found in the first part of the work which describes the creation and explains why the wicked were created together with the righteous. The rest of the work is concerned, in a rather conventional way, with the main themes of Jewish ethics: love and fear of God, repentance, prayer, and good deeds. In several editions there are variations in the arrangement of the chapters and even in the content. No critical edition of this work has been published, and until the correct text is ascertained, the problems concerning the authorship and the underlying philosophic thought cannot be solved satisfactorily.

**SEFER HUKEI HA-TORAH** (Heb. לספר הyectosה תורה, “The Book of the Laws of the Torah”), one of the earliest and most detailed treatises in Hebrew in the fields of education and educational ethics. This short work, dealing with the problems of education at its various levels, describes the first level, *midrash katan*, a community school, and the later one, *midrash gadol*, a yeshivah, to which, according to the book, every community should send a quota of its children. In the *midrash gadol*, the students, who study and live with their teachers, somewhat monastically, are forbidden to marry or communicate with society until they conclude their studies. *Sefer Hukkei ha-Torah* is found in manuscript Bodleiana Neubauer, Cat. 1 (1886), 181, no. 873, 2b. It was first published in Guedemann’s *Ha-Torah ve-ha-Hayyim* (see bibl.).

The date, provenance, and purpose of this work are not known. Nor is it known whether this system was practiced in any Jewish community, or whether it is simply a utopian suggestion. Any similarity which various scholars have attempted to uncover between practices described in *Sefer Hukkei ha-Torah* and those which existed in Babylonia, France, or England has not been satisfactorily proven.

**SEFER TORAH** (Heb. ספר תורה; pl. סフリー תורות; scroll of the law), scroll containing the Five Books of Moses written on parchment according to strict rules and used mainly for reading at public worship (see *Torah Reading*). The *Sefer Torah* is normally written by a specialist known as a *sofer* (“scribe”).

**The Writing of the Scroll**

The tools and materials used by the scribe are parchment, quill, ink, stylus and ruler, and *tikkun* (“guide”) – a book with the Torah text. The Torah is written on parchment manufactured from specified sections of the hide of a kosher animal. The hide consists of three layers, but only the flesh side of the inner layer and the outer side of the hairy layer may be used for Torah parchment (Shab. 79b). The method of cleaning and softening the hide, which must be of the best quality, has changed throughout the centuries. During talmudic times, salt and barley flour were sprinkled on the skins which were then soaked in the juice of gallnuts (Meg. 19a). There is, however, a reference to the use of dogs’ dung for this purpose (Yal. Ex. 187). Nowadays the skins are softened by soaking them in clear water for two days, after which the hair is removed by soaking the hides in limewater for nine days. Finally, the skins are rinsed and dried and the creases ironed out with presses. The processor must make a verbal declaration when soaking the skins that his action is being performed for the holiness of the *Sefer Torah*. Whereas reeds were used as pens in the days of the Talmud, quills are used today, the quill of the turkey feather, which is sturdy and long lasting, being preferred. The *sofer* cuts the point of the feather to give it a flat surface, which is desirable for forming the square letters, and then slits it lengthwise.

The ink must be black, durable, but not indelible. During talmudic times a viscous ink was made by heating a vessel with the flame of olive oil, and the soot thus produced on the sides of the vessel was scraped off and mixed with oil, honey, and gallnuts (Shab. 23a). Ink is now made by boiling a mixture of gallnuts, gum arabic, and copper sulfate crystals. Some
scribes also add vinegar and alcohol. To ensure that the letters will be straight and the lines equally spaced, 43 thin lines are drawn across the width of the parchment with a stylus and ruler. Two additional longitudinal lines are drawn at the end of the page to ensure that all the lines end equally. To enhance the appearance of the printing on the parchment a four inch margin is left at the bottom, a three inch margin at the top, and a two inch margin between the columns.

Although there is no law regulating the number of pages or columns a Torah must have, from the beginning of the 19th century a standard pattern of 248 columns of 42 lines each was established. Each column is about five inches wide since by tradition there must be space enough to write the word ה名字 (Gen. 8:19), the longest occurring in the Torah, three times.

Before the sofer begins his daily work, he performs ritual ablation in a mikveh. To avoid mistakes, talmudic soferim copied from another scroll, and according to one tradition there was a copy of the Torah kept in the Temple which scribes used as the standard (Rashi to MK 3:4, TJ, Shék. 4:3, 48a). Before commencing, the scribe tests the feather and ink by writing the name “Amalek” and crossing it out (cf. Deut. 25:19). He then makes the declaration, “I am writing the Torah in the name of its sanctity and the name of God in its sanctity.” The scribe then looks into the tikkun, reads the sentence aloud, and proceeds to write it. Before writing the name of God the sofer repeats, “I am writing the name of God for the holiness of His name.”

The Torah is written in the square script known as Ketav Ashuri, of which there are two different types: the Ashkenazi, which resembles the script described in the Talmud (Shab. 104a), and the Sephardi, which is identical with the printed letters of the Hebrew alphabet currently used in sacred texts. The thickness of the letters vary and it is often necessary for the sofer to make several strokes to form a letter. The scribe holds the feather sideways to make thin lines, and flat, so that the entire point writes, to make thick lines. Particular care must be given to those letters that are similar in appearance (e.g., dalet and resh) so that they can be easily distinguished. Each letter must be complete, with the exception of the “split vav” in the word shalom in Numbers 25:12. Although Hebrew is read from right to left, each individual letter in the Sefer Torah is written from left to right. Six letters are written particularly small (e.g., the alef in the first word of Lev. 1:1) and 11 letters are written very large (e.g., the bet in the first word of Gen. 1:1). There must be a space between the letters, a greater space between the words, and a nine letter gap between the portions. A four line separation is made between each of the Five Books of Moses.

Seven of the 22 letters of the alphabet have special designs on the upper left hand corner of the letter called tagin. Shaped somewhat like the letter zayin, three such tagin are placed above the letter, touching it lightly. The center tag is slightly higher than the two on the ends. The Torah contains no vowels or punctuation marks. However, there are a number of dots over several words (e.g., Deut. 29:28; see “Tikkun Soferim”). There are two shirot or songs in the Torah which are written in unique fashion. Shirat ha-Yam (Ex. 15:1–19) has a nine letter gap in the middle of each sentence, and these gaps are so spaced that they appear like “half bricks set over whole bricks” (Meg. 16b; Shab. 103b). Shirat Haazinu (Deut. 31:2–43) also contains a nine letter separation in the middle of each sentence, but these blank spaces form a single space down the center of the entire column.

After the copying of the Torah has been completed, the sheets of parchment are sewn together with giddin, a special thread made of tendon tissue taken from the foot muscles of a kosher animal. Every four pages are sewn together to form a section or yeriah. These sections of parchment are sewn on the outer side of the parchment, with one inch left unsewn both at the very top and bottom. To reinforce the giddin, thin strips of parchment are pasted on the top and bottom of the page. After connecting the sheets the ends are tied to wooden rollers, called azei hayyim, by inserting the giddin in holes in the rollers. The ez hayyim consists of a center pole, with handles of wood and flat circular rollers to support the rolled-up scroll. Besides serving as a means of rolling the scroll, the azei hayyim also prevent people from touching the holy parchment with their hands. In Oriental and some Sephardi communities, the flat rollers are not employed since the Torah scrolls are kept in an ornamental wooden or metal case (tik).

[Aaron Rothkoff]

Invalid and Disqualified Scrolls

Mistakes in the Torah scroll can generally be corrected, since the ink can be erased with a knife and pumice stone. However, a mistake in the writing of any of the names of God cannot be corrected since the name of God may not be erased, and such faulty parchments must be discarded. When a mistake is found in a Sefer Torah, the wimple is tied round the outside of its mantle as a sign that it should not be used until the mistake has been corrected. According to the Talmud, a Sefer Torah which has less than 85 correct letters is to be discarded (Yad. 3:5; Shab. 116a). This number is the number of letters in Numbers 10:35–36, which is sometimes regarded as a separate book (hence the references to seven instead of five books of the Torah: Gen. R. 64:8; Lev. R. 11:3). However, it was later laid down that too extensive corrections rendered the scroll unsightly and therefore invalid (for this and other details see “Haggahot”). If a scroll is beyond repair, it is placed in an earthenware urn and buried in the cemetery.

It was customary to bury such scrolls alongside the resting place of a prominent rabbi (Meg. 26b). The Mishnah (Git. 4:6) permits the purchase of a Sefer Torah from a non-Jew at its market value and the Talmud (ibid., 45b) even records that Rabban Simeon b. Gamaliel permitted the purchase of those written by a non-Jew. Another tradition, however, laid it down that a scroll written by a non-Jew must be stored away, while one written by a heretic must be burned since it is feared that he may have maliciously altered the text (ibid.).
The Duty to Possess a Sefer Torah

It is regarded as a positive biblical commandment for every Jew to possess a Sefer Torah, the word “song” in Deuteronomy 31:19, “now therefore write ye this song for you,” being interpreted to apply to the Torah as a whole. Even if he has inherited one from his father he is still obliged to have one of his own (Sanh. 21b). He may write it himself, or have it written on his behalf by a sofer, or purchase one, but “he who writes it himself is regarded as though it had been given to him on Mt. Sinai” (Men. 30a).

On the basis of the statement of the Talmud (ibid.) to the effect that he who corrects even one letter in a Sefer Torah is regarded as though he had himself written it, a custom has developed which both gives every Jew a portion in a Sefer Torah and symbolically regards him as having fulfilled the command of writing one. The sofer writes only the outlines of the words in the first and last passages of the Sefer Torah and they are completed at a ceremony known as Siyum ha-Torah (“the completion of the Torah”). Those present are honored by each being invited to fill in one of the hollow letters, or formally authorize the sofer to do so.

Sanctity of the Sefer Torah

The Sefer Torah is the most sacred of all Jewish books. A valid Sefer Torah must be treated with special sanctity and great reverence (Yad, Sefer Torah 10:2). Its sanctity is higher than that of all other scrolls of the books of the Bible, and therefore, though one Sefer Torah may be placed on top of another, or on the scroll of another book, another scroll must not be placed on it (Meg. 27a).

It is obligatory to stand in the presence of a Sefer Torah (Mak. 22b; Kidd. 33b) both when the ark is opened to reveal the scrolls and when it is being carried, and it is customary to bow reverently or kiss it when it passes. The bare parchment must not be touched with the hand. So insistent were the rabbis on this that they declared “He who touches a naked Sefer Torah will be buried naked,” although the statement was modified to mean either “naked of good deeds” or “naked of the reward for good deeds” which he would otherwise have had from reading it (Shab. 14a). For this reason the yad (“pointer”) is used for reading and the Sefer Torah is covered by the outside of the parchment with silk for the same reason.

It was forbidden to sell a Sefer Torah except to provide the means for marrying, studying (Meg. 27a), and for the ransom of captives. Should a Sefer Torah accidentally fall to the ground, the whole congregation is obliged to fast for that day. It was permitted and even enjoined to disregard the Sabbath in order to save not only the Sefer Torah but even its case from destruction (Shab. 161a), and should it be burnt one had to rend one’s garment (MK 25a); if one saw it torn one had to rend the garment twice, “once for the writing and once for the parchment” (ibid. 26a, cf. the statement of Hananiah b. Teradyon when he was being burnt at the stake wrapped in a scroll, “I see the parchment burning but the letters soar aloft” (Av. Zarah 18a)). The Sefer Torah must not be carried about unless for religious purposes, and even for the purpose of reading from it at services held at a temporary place of worship, such as a ‘shivah, it may not be taken there unless it is read on at least three occasions. When it is transferred to a permanent site it is usually done with full ceremonial. The Sefer Torah is carried through the streets under a canopy and the procession is accompanied by songs and dances.

Among the Sephardim before the reading of the law, and among the Ashkenazim at its conclusion, the Sefer Torah is ceremoniously held aloft (“Hagbahah), its writing exposed to the congregation, who recite “and this is the Torah which Moses set before the children of Israel (Deut. 4:44), according to the commandment of the Lord by the hand of Moses.” One must make every effort to acquire a beautiful Sefer Torah (Shab. 13b). Unless it is corrected, a text of the Sefer Torah that is in error may be kept only 30 days (Ket. 19b). When it is transferred to a permanent site it is usually done with full ceremonial. The Sefer Torah is carried through the streets under a canopy and the procession is accompanied by songs and dances.

Other Uses

In addition to its main use for reading the scriptural portions in synagogue (see Reading of the “Torah), the Sefer Torah is used on a large number of ceremonial occasions. According to the Mishnah (Sanh. 2:4) it accompanied the king in battle, and on the occasions of public fasts for drought the ark with the Sifrei Torah was taken out into the public square and the supplications and exhortations were recited in front of it (Ta’an. 2:1). It also played a central role in the ceremony of *Hakkel.

During the Middle Ages the solemnity of taking an oath was enhanced by the vower making it while grasping a Sefer Torah. For the same reason three leading members of the congregation stand round the *hazzan while he is reciting *Kol Nidrei on the eve of the *Day of Atonement.

In modern times it is extensively used. Seven Sifrei Torah are taken out for the circuits with the *four species on *Hoshana Rabba, and on the next day (in the Diaspora two days later) the sevenfold circuit of the synagogue with all the Sifrei Torah is the central part of the ceremonial of *Simhat Torah. The custom of the worshippers joyfully dancing with the Sefer Torah on this occasion is widespread.

[Louis Isaac Rabinowitz]

SEFIRAH, SAADIAH BEN JOSEPH (middle of the 19th century), Yemenite author of the work Kesef Zaruf (Jerusalem, 1896), novellae on the Torah. The work includes extracts from ancient and recent biblical commentators, especially from the Ḥemdat Yamim, which is attributed to *Shabbazi. A sup-

SEFIROT

(SEFIROT) a fundamental term of the *Kabbalah. It was coined by the author of the Sefer Yeẓirah who designated by it the ten primordial or ideal “numbers” (from the Hebrew root safor, to numerate). From the first sources of kabbalistic literature onward it was used in a much wider sense and denotes the ten stages of emanation that emerged from Ein-Sof and form the realm of God’s manifestation in His various attributes. Every single Seferah points to an aspect of God in His capacity of Creator, forming at the same time a whole world of divine light in the chain of being. The whole of the ten Seferot, forming the “Seferot Tree” is conceived as a dynamic unity in which the activity of God is the fundamental rhythm of all creation and can be detected on each of its different levels. For details on the doctrine concerning the Seferot see *Kabbalah.

SEGAL, ARTHUR (1875–1944), German painter. Born at Jassy, Romania, he moved to Berlin in 1892 to study at the Academy of Art. In 1895 he continued his artistic training in Paris and Munich at the private school of Schmid-Reutte and Fehr. Segal began as an impressionist painter and started to create landscapes such as The Meadow, The Field of Wheat, or German Landscape in the period 1896–1903 (private collections) under the influence of the neo-impressionist Giovanni Segantini. In 1903 he married his cousin Ernestine Charas and returned to Berlin, where he exhibited various paintings at the Berliner Secession Gallery in 1907 and 1909, his style of painting now changed to Neo-Expressionism. In 1910 he and 27 other artists, among them Heckel, Tappert, Kirchner, Richter, and Schmidt-Rottluff, founded the organization Neue Sezession, a movement that revolted against German impressionism. Segal chose still life, landscapes or urban views as his motifs to express his new attitude to painting. From 1914 to 1920, deeply shocked and terrified of the brutality of World War I, he lived in Ascona, Switzerland with his family. Back to Berlin, his intellectual approach to painting then caused him to change his style again and to evolve an individual form of cubism, dividing many of his pictures into four equal parts. Most of these paintings stem from the period of 1922 to 1925 and show abstract compositions in cubic forms with a prism-like scheme of intense colors. One of his most well-known paintings, is Prismatische Konstruktion (1923, Petit Palais, Geneva).

When Hitler came to power, he left Germany for the Spanish island of Mallorca and in 1936 settled in London, where he founded “Arthur Segal’s Painting School” for professionals and non-professionals, which became a synonym for therapy with the help of the arts. He died during the London “Blitz” in 1944 of heart failure. His books include The Objective Impersonal Laws of Painting (1929).

SEGAL, BERNARD (1907–1984), U.S. Conservative rabbi, administrator. Segal was born in Lipno, Poland, and immigrated to the United States in 1922. He received a B.S. from Columbia University in 1931 and was ordained at the Jewish Theological Seminary in 1933, earning a D.H.L. there in 1950. He served briefly as rabbi of the Patchogue Jewish Center on Long Island, N.Y. (1933–34), before becoming rabbi of Queens Jewish Center (1934–40). He was the first Jewish chaplain in the United States to be called to active duty in World War II, serving as chairman of the Chaplaincy Availability Board (1943–46) and co-chairing the Conservative movement’s Wartime Emergency Commission (1944–45). He was discharged in 1945 with the rank of lieutenant colonel, staying on in the Army reserves as founding president of the Association of Jewish Chaplains of the Army and Navy of the United States (1945–47).

Returning to civilian life, Segal assumed the first of a series of leadership positions in the Conservative movement, becoming the first executive director of the Rabbinical Assembly (1945–7) as well as director of the Joint Placement Commission of the Rabbinical Assembly and the Jewish Theological Seminary. In 1947, Segal was appointed executive vice president of the Rabbinical Assembly, where he continued to oversee placement of rabbis during the post-war growth years. In 1949, he moved from the Rabbinical Assembly to JTS, first as assistant to the president (1949–51) and then as executive vice president (1951–53). Recognizing the need for Jewish educators, he encouraged graduates to pursue careers in Jewish education. He also directed the National Ramah Commission (1950–54).

In 1953, Segal was appointed executive director (executive vice president from 1970) of the United Synagogue of America, now the United Synagogue of Conservative Judaism, where he spent the next 23 years, until his retirement, supervising the expansion of the organization, creating new departments, and hiring more professionals. He emphasized education, creating programs for synagogue members of all ages, developing curricula for congregational schools, publishing educational materials, establishing Solomon Shechter day schools in numerous communities, launching the Burning Bush press as the imprint of the National Academy of Adult Jewish Studies, and distributing the El Am Talmud. Striving always to foster unity in the Conservative movement, he led the United Synagogue into joining with the Rabbinical Assembly and the National Women’s League in forming the Commission on Social Ac-
tion (1954). In 1957, he was instrumental in founding the World Council of Synagogues and implementing uniform standards for synagogue practices. He also brought the United Synagogue into the membership fold of umbrella organizations of American and world Jewry, such as the "Conference of Presidents of the Major American Jewish organizations and the "World Zionist Organization.

Outside of the Conservative movement, Segal was a member of the Board of Directors of the Committee on Religion in American Life (1954–56), the New York City Mayor's Commission on Housing (1954–58) and the New York Association for Middle Income Housing (1960–68). Following his retirement in 1977, he moved to Jerusalem, Israel.

**SEGAL, BERNARD GERARD** (1907–1997), U.S. attorney. Born in New York City, Segal grew up in Allentown and Philadelphia, Pennsylvania. After graduating from the University of Pennsylvania Law School, Segal served as deputy to the Pennsylvania attorney general from 1932 to 1935. At age 24, he was the youngest person to ever assume that position. He taught at the American Institute of Banking (1936–39) and at Franklin and Marshall College (1937–38), joining the law firm of Schnader, Harrison, Segal, and Lewis in 1936. A friend of the Kennedy family, Segal was appointed by Attorney General Robert Kennedy, in 1962, to help set up a commission that would dispatch Northern lawyers to handle civil rights cases in the South. He served on several American Bar Association committees from 1952 to 1968 and was the first Jew to be elected president of that organization (1969–70). Later, President Lyndon Johnson selected Segal to head the National Legal Service Program, which established legal services for the poor.

Besides holding many positions on government committees and in various foundations and legal institutes, Segal served as president of the Allied Jewish Appeal of Philadelphia; director of the American Jewish League for Israel; vice president and trustee of the Jewish Publication Society of America; honorary director of the Jewish Family Service; and trustee of the Hebrew University of Jerusalem, whose law library is named for him.

Regarded by many as one of the greatest lawyers in recent American history, Segal was known as "the conscience of the bar," who strived to promote individual rights and the rule of law. Among his many honors and awards, Segal received the American Bar Association's Gold Medal; the U.S. Attorney General's National Civil Rights Award; the National Conference of Christians and Jews' National Human Relations Award; the NAACP Legal Defense Fund's Judge William H. Hastie Award; and the World Peace through Law Award as the World's Greatest Lawyer.

Segal wrote *Pennsylvania Banking and Building and Loan Law* (1935).

---

**SEGAL, ERICH** (1937– ), U.S. novelist. Born in Brooklyn, N.Y., the son of a rabbi, Erich Wolf Segal attended Harvard University, graduating as both the class poet and Latin salutatorian. He also obtained his master's and doctorate from Harvard. While a professor of comparative literature at Yale University in 1967, Segal wrote the screenplay for the Beatles' wildly successful animated feature film *Yellow Submarine*. He collaborated on other screenplays and tried to sell a romantic story he wrote about two students attending Harvard. It failed to sell, but his literary agent suggested he turn the script into a novel. The result was a literary and motion picture phenomenon, *Love Story* (1970), starring Ali McGraw and Ryan O'Neal. It tells the story of two college students: Oliver, the emotionally vacant son of rich parents, and the Italian-American Radcliffe girl he falls in love with, Jenny. The film is considered one of the most romantic of all time. Its catchphrase is "Love means never having to say you're sorry." Another famous quote is "What can you say about a 25-year-old girl who died? That she was beautiful and brilliant. That she loved Mozart and Bach. The Beatles. And me." The book was the leading seller of fiction for 1970 in the United States and was translated into more than 20 languages. The movie of the same name was the No. 1 box-office attraction of 1971 and won Academy Award nominations for best picture, best actor, actress, supporting actor, director, and original screenplay, by Segal. Ironically, its success virtually destroyed Segal's academic credibility with his colleagues. Segal went on to write more novels and screenplays, including a sequel to *Love Story*, called *Oliver's Story* (1977). He also published a number of scholarly works and taught at the college level. His books include *The Comedy of Plautus* (1968), *Doctors* (1988), *The Death of Comedy* (2001), and *Oxford Readings in Greek Tragedy* (2001).

[Stewart Kampel (2nd ed.)]

---

**SEGAL, ESTHER** (1895–1974). Yiddish poet; sister of J.I. "Segal. Segal was born in Solobkivts (now Solobkovtsy), Ukraine. Her father, a cantor, died when she was young. In 1910 the family emigrated to Canada to join her mother's siblings. Segal attended a religious school in Montreal, then worked in a factory while studying in the evening. She later attended the Jewish Teachers Seminary in New York. She married poet A. Sh. Shkolnikov.

Segal wrote from a young age, but did not publish any work until 1922, when her work appeared in the collection *Epokhe*, edited by her husband, her brother, and A. Almi. Following this debut her work appeared in many literary journals in Canada, the United States, Lithuania, and Poland. In 1928 her only book, *Lider*, was published by a Toronto branch of the Labor-Zionist Yidish-Natsyonaler Farband. She continued to write poetry for journal publication, including lyrics, children's poems, and poems on topics of social concern. Her husband died in 1962, and in 1965 she moved to a kibbutz in Israel, where she lived until her death.

[Faith Jones (2nd ed.)]
SEGAL, GEDALIAH BEN ELIEZER (18th century), preacher. He lived in Boskowitz (Boskowice), where his father, Eliezer, was the rabbi, and studied under Phineas of Boskowitz. Gedaliah wrote the ethical work *Ammudei Gavra* (Brenn, 1756), based upon the statement in the Mishnah (Avot 1:2) that the world is based upon three things: Torah, divine service, and the practice of charity. Gedaliah discusses the various types of charity — visiting the sick, hospitality to wayfarers, support of scholars, etc. The chapter *Mäaser Ani* (“Poor Man’s Tithe”) deals with the laws of *terumot and maäserot*, making abundant use of talmudic, midrashic, and halakhic sources. The author, influenced by kabbalistic literature, borrows its terminology and quotes from the *Zohar. Ammudei Gavra* contains three other works on halakhic themes: a work by David Skutsch, a relative of Gedaliah; the novellae of Gedaliah’s son, Eliezer, who died aged 18; and the novellae of Abraham Katz Gibtisch, who also died young.

SEGAL, GEORGE (1924–2000), U.S. sculptor and painter. Best known for his stark, plaster sculptural figures placed in real environments, Segal was born in the Bronx to immigrant parents from Eastern Europe. He studied at various schools, including Cooper Union (1941–45); Rutgers University (1942–46; 1961–63); and New York University (1948–49), where Larry *Rivers was a classmate. Initially Segal painted the human form in a gestural, colorful fashion influenced by Abstract Expressionism, but by 1958 he discovered that sculpture was a more effective way for him to convey his interest in the psychology of the figure. Early experiments were made from burlap, wire, and plaster and executed in a rough, expressive manner akin to his painterly work, but beginning in the summer of 1961 Segal was casting live models from medical bandages saturated with plaster to capture pose and mood. *Butcher Shop* (1965, Art Gallery of Ontario, Toronto), an homage to his father — a kosher butcher in the Bronx during the Great Depression who died six months before the conception of the piece — presents a plaster cast of Segal’s mother slaughtering a plaster chicken behind a glass window labeled “Kosher Butcher” in Hebrew. Her impressionist rendering betrays the artist’s touch, a technique especially vivid in work completed before 1971 when Segal kept his casts hollow. Indeed, in 1971 Segal began to reproduce negatives of the interior of casts rather than piecing together molds of his models’ bodies, thereby creating more lifelike, smoothly rendered, and detailed sculptures.

Segal executed many public commissions, notably *In Memory of May 4, 1970: Kent State – Abraham and Isaac* (1978), cast in bronze as an allegory in commemoration of the four students killed by National Guardsmen at Kent State University when they were protesting the Vietnam War. After the controversial sculpture was rejected by Kent State it was subsequently erected at Princeton University in November 1978. *The Holocaust* (1983), commissioned by the city of San Francisco, overlooks Lincoln Park. The memorial shows several corpses lying on the ground with a lone living figure standing behind a barbed wire fence. The plaster model of the tableau is on display at New York’s Jewish Museum.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

He made his film debut in 1961 in *The Young Doctors*. Segal’s stardom was assured with two performances in successive films, *King Rat* (1965) and *Who’s Afraid of Virginia Woolf?* (1966), the latter winning him an Oscar nomination for Best Supporting Actor. Segal has starred in more than 50 motion pictures, including *The Quiller Memorandum* (1966); *The St. Valentine’s Day Massacre* (1967); *Bye Bye Braverman* (1968); *No Way to Treat a Lady* (1968); *Loving* (1970); *Where’s Poppa?* (1970); *The Owl and the Pussy-cat* (1970); *Born to Win* (1971); *The Hot Rock* (1972); *A Touch of Class* (1973); *Blume in Love* (1973); *California Split* (1974); *The Black Bird* (1975); *Fun with Dick and Jane* (1977); *The Last Married Couple in America* (1980); *Look Who’s Talking* (1989); *For the Boys* (1991); *Me, Myself and I* (1992); *Flirting with Disaster* (1996); *The Cable Guy* (1996); and *The Mirror Has Two Faces* (1996).

In addition to his roles in dozens of TV movies, Segal starred in the TV crime series *Murphy’s Law* (1988–89) and the sitcom *Just Shoot Me* (1997–2003).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

SEGAL, HUGH (1951– ), Canadian author, political strategist, educator, and pundit. Segal was born in Montreal into a family of modest means. He attended Jewish parochial school but, unusual in the heavily Liberal Party-supporting English-speaking Jewish community of Montreal, Segal was early drawn to the Conservative Party of John Diefenbaker. In 1962, when Segal only 13, Diefenbaker, then Conservative prime minister, visited Segal’s school and so impressed Segal that he campaigned on behalf of his local Conservative Party candidate in the 1962 federal election. The Conservative candidate lost the seat but Segal was hooked on politics and went on to become an influential Conservative Party insider.

In 1972 Segal graduated in history from the University of Ottawa, where, very active in the Young Conservatives, he was elected student union president. Also in 1972 and again in 1974 Segal unsuccessfully sought election in Ottawa for a seat in the House of Commons. While never elected to public office, as a high-profile Red Tory, fiscally conservative but socially liberal, Segal served on the staff of Robert Stanfield, leader of the Opposition, as a senior aide to Ontario premier William Davis, and a close advisor and, for a time, chief of staff to Prime Minister Brian Mulroney. In 1998 he ran un-
SEGAL, JACOB ISAAC (Yankev Yitshok; 1896–1954), Yiddish poet. Segal was born in Solobkovtsy, Ukraine, the second youngest of seven children. For most of his childhood Segal lived in Korets, Ukraine, one of the original centers of Hasidism and a place idealized in many of his poems. He received a basic religious education in heder and talmud torah. In 1911, when he was 15, he immigrated to Canada and settled in Montreal, near his sister Esther Segal, later a Yiddish poet. For a number of years he worked as a tailor in the garment industry and then taught at the Montreal Folks Shule, one of the first Yiddish-language day schools in Canada. Encouraged by Moshe Shmuelson, editor of the Yiddish daily the Keneder Odler (“Canadian Eagle”), he began to publish Yiddish poetry in 1915. His first volume of verse, Fun Mayn Velt (“From My World”), appeared in 1918. He was immediately recognized by Yiddish literary critics as a gifted poet, notable for strong feeling and natural, idiomatic diction.

Segal assumed a leadership role in the development of Yiddish culture in Canada. He helped to establish a number of journals: Nyuansn (“Nuances,” 1921), Epokhe (“Epoch,” 1922), and Royerd (“Untilled Soil,” 1922–23) and as editor held them to a high literary standard. In 1923, after a short sojourn in Toronto, he and his wife and daughter moved to New York. There he enjoyed the companionship of the new generation of Yiddish poets: *Mani-Leib, Zisha *Landau, M.L. *Halpern, and Jacob *Glatstein. Segal returned to Montreal in 1928 after the death of his young daughter, Tsharnele, whom he often addresses in later poems.

Thereafter Segal continued to teach in Yiddish schools and to write and edit for the Keneder Odler. As an essayist, he wrote regularly on literary topics and on educational and cultural issues. From 1941 until his death he was coeditor of the literary pages along with Melech *Ravitch. In addition, he contributed to nearly all the Yiddish literary journals of his day and served as president of the Canadian Yiddish Writers Union. Segal was a prolific poet and the author of 12 volumes of poetry, among them, Sefer Idish ("The Book of Yiddish," 1950), the last collection published in his lifetime, and Letste Lider ("Last Poems," 1955), published posthumously.

Many of Segal’s poems move from the pain and emptiness of the present to an idealized past, embodied in the hasidic masters and in shtetl figures. Segal also wrote on entirely different themes, with a different tone and emotional impact. He wrote poems of carefully observed cityscape and seasonal and inward-looking poems, examining his moral worth and his purpose as a poet. He also wrote many times about Yiddish, the instrument and common bond of the culture he attempted to preserve.

Segal’s diction is most often simple, but the flow of thought in his poems is complex. He continually plays with meaning, as in the use of religious terms in contexts that have to do with the Yiddish language or his role as a poet. His verse is musically sophisticated. He moves easily from the speaking to the singing voice and uses countable meter as a framework for more open poetic rhythms.

After his death, the annual J.I. Segal Award for Yiddish Literature was established in his honor in Montreal.

[Haroold Troper (2nd ed.)]
SEGAL, SAMUEL, BARON

(1902–1985), British politician and physician. Segal, the son of Prof. M.H. *Segal, was born in London. He qualified as a physician and served from 1939 to 1945 in the Royal Air Force medical service with the rank of squadron leader and subsequently (1951–62) as a regional medical officer of the Ministry of Health. After unsuccessfully contesting parliamentary elections for the Labour Party before World War II, he was elected Labour member of Parliament for Preston in 1945 and served in Parliament till 1950.

In 1946 he was created a life peer and took an active part in discussions in the House of Lords, serving on many parliamentary delegations, and becoming in 1973 a deputy speaker and deputy chairman of committees of the House of Lords (of which the Lord Chancellor is ex officio Speaker). His services to Anglo-Israeli relations were many and varied, including chairmanship of the Anglo-Israel Association and presidency of the Anglo-Israel Archaeological Association. With a home near Oxford, he was identified with the preservation of Oxford’s amenities, received the honor of Honorary Fellowship of Jesus College, Oxford, and served as honorary president of the Oxford Jewish congregation. His medical interests were reflected in his chairmanship of the National Society for Mentally Handicapped Children and of the British Association for the Retarded. Though an active politician, his scholarly and courteous approach gained him a reputation as a statesmanlike expert of Middle Eastern and medical subjects.

SEGAL, URI (1944– ), Israeli conductor. Born in Jerusalem, Segal studied the violin and conducted at the Rubin Conservatory in Jerusalem, and then conducting at the Guildhall School of Music in London (1966–69). In 1969, he won first prize in the Dimitri Mitropoulos Conducting Competition in New York, which resulted in his becoming an assistant conductor to *Bernstein with the New York Philharmonic Orchestra. From 1970 he began touring in Europe and America, conducting many of the great orchestras such as the BBC Welsh Orchestra in Cardiff, the English Chamber Orchestra (1971), and the Chicago SO (1972). In 1973 he was appointed as a regular guest conductor with the South German Radio Orchestra in Stuttgart. He was musical director and principal conductor of the Philharmonica Hungarica in Germany (1981–85) and principal conductor of the Bournemouth Symphony Orchestra (1980–83). In 1982 he was appointed principal conductor of the Israel Chamber Orchestra and in 1989 principal conductor of the Osaka Orchestra, Japan. Among his recordings are works by Stravinsky, piano concertos by Mozart and Beethoven, and oboe concertos by Françaix, Honegger, and Ibert.

SEGALL, LASAR (1891–1957), Brazilian painter and sculptor. Born in Vilna, Lithuania, to a religious family, Segall studied at the Design Academy of Vilna in 1905 and moved the next year to Berlin, where he studied at the Imperial Superior Academy of Arts until 1910. Segall rebelled against the strict academic discipline and presented his works in an exposition of the “Free Sezession,” one of the precursor movements of expressionism. In 1910 he moved to Dresden, where he joined the Fine Arts Academy as Meisterschueler (student-instructor) with his own atelier and freedom of creation. After being accepted in the German Expressionist movement at the end of 1912, he traveled for the first time to Brazil, and his exhibitions in Campinas and Saõ Paulo were among the first presentations of modern art in Brazil. After eight months he returned to Dresden. In 1919 Segall participated in the foundation of the “Dresdner Sezession, Grupe 1919,” and in the next four years he participated in the German Expressionist movement, presenting exhibitions in The Hague, Frankfurt, and Leipzig and publishing two albums: *Bibu* (1921) and *Remembrance from Vilna* (1922).

In 1923 Segall settled in Brazil. He joined the modernist group and held his first exhibition in Saõ Paulo. Afterwards he exhibited the first works of his Brazilian stage in Berlin and...
Dresden. In 1927 Segall adopted Brazilian citizenship and in 1928 traveled to Paris for three years, where he began to sculpt. Back in São Paulo (1932) he founded and led the Society for Modern Art. In 1938 he represented Brazil in the International Congress of Independent Artists in Paris. In this period he started to work with socio-political themes and produced a collection related to the experience of immigrants and the war. In the 1940s and the 1950s he presented his works in exhibitions in Brazil and the United States.

The Jewish perspective is present in some of Segall’s works. In a number of paintings he included Hebrew letters and he signed a few in Hebrew. Other paintings were focused directly on Jewish themes: Rabino con alumnos (“Rabbi with Students” – 1931), Rolo de Torá (“Torah Scroll” – 1922 and 1933), Pogrom (1937), Navio de Emigrantes (“Emigrants’ Ship” – 1939/1941), Campo de Concentração (“Concentration Camp” – 1945), Exodo (“Exodus” – 1947), and others that were part of the collection Visões de Guerra 1940–1943 (“Visions from War 1940–1943”).

[Ernaim Zadoff (2nd ed.)]

SEGALOWITCH, ZUSMAN (1884–1949), Yiddish poet, novelist, and journalist. Born in Białystok, Segalowitch was educated privately, worked in a factory, organized labor strikes, and was frequently arrested. In 1903 Segalowitch published his first poem in Russian, but a year later turned to Yiddish as his language of expression. In his first collection of lyrics, Shtyle Troyemen (“Quiet Dreams,” 1909), his strong romantic penchant is clearly revealed, but it was “In Kazmerzh” (1912), a poem in which he describes a village where young men dreamed of freedom in a stifling traditional environment, that brought him early fame. The first poetic product of Segalowitch’s Warsaw period was a cycle of love poems, Tsaytike Tsvilke (“Wild Tsvilke,” 1922); Romantishe Yorn (“Romantic Years,” 1923), an autobiographical trilogy, and Di Brider Nemzar (“The Nemzar Brothers,” 1929), were very popular and were translated into Polish. In Warsaw Segalowitch wrote lyrics that were put to music and sentimental stories for the dailies Haynt and Moment. He also presided over the Association of Yiddish Writers and Journalists. In his memoirs, Tlomatske 13 (1946), he gave a moving though somewhat idealized account of the association, which served as a center of Yiddish culture between the world wars. The Holocaust and its aftermath radically altered every aspect of Segalowitch’s writing. During the Nazi invasion of 1939 he escaped from Poland one step ahead of the Nazis, the terror and horror of which he vividly described in Gebrente Trit (“Burnt Steps,” 1947). Dortn (“There,” 1946), is a heartrending elegy which he dedicated to Samuel *Zygelbojm, the Bundist leader who committed suicide in London in 1943 to awaken the world’s conscience to Jewish suffering. He wrote it upon his arrival in Tel Aviv, where visions of the less fortunate Jews trapped in Europe pursued him relentlessly. The poetic style of his works during this period became one of bitter accusation. In this final period of creativity, Segalowitch eulogized the devastated Polish-Jewish culture and his own destroyed generation.

[Sol Liptzin]

SEGHERS, ANNA (pseudonym of Netty Radvanyi, née Reiling; 1900–1983), German novelist. Born in Mainz, she joined the German Communist Party in 1929. In 1933 she fled to Paris and visited Republican Madrid during the Spanish Civil War. In 1941 she moved to Mexico City, but in 1947 returned to Germany, settling in East Berlin. The novels of Anna Seghers combine a highly poetic form with a strong socialist element, describing the living conditions of the lower classes in many countries – fisherman, peasants, and miners. A convinced Communist and an outspoken anti-Fascist, she was active in the fight against Nazism. Her prizewinning first novel, Der Aufstand der Fischer von Santa Barbara (1928), was followed by Die Gefahrtten (1932); Der Weg durch den Februar (1935), which deals with the uprising of the Viennese workers in 1934; and Die Rettung (1937). Das siebte Kreuz (1941), written in her Mexican exile, which became a best seller in America as The Seventh Cross (1942), was an expression of her faith in the innate decency of human beings. Other works by Anna Seghers were Transit (1941); Eng. trans. Transit Visa, 1945); Die Toten bleiben jung (1949); and Die Entscheidung (1959), hailed in East Germany as a masterpiece of Socialist Realism. She received many awards after World War II, including the International Lenin Peace Prize of the U.S.S.R. (1951). Her later works include Ueber Tolstoi-Ueber Dostojevski (1963); Die Kraft der Schwachen (1965); Das wirkliche Blau (1967), and Das Vertrauen (1968).

[Rudolf Kayser]

SEGORBE, city in Valencia, E. *Spain. It appears that many Jews settled in Segorbe after the Christian conquest. In 1270 the taxes of the city were leased by Astruc Jacob Sisson, and in 1274 the community was combined with *Murviedro and *Burriana to form a single district (collecta), paying 2,000 solidós in taxes. Several exact details on the community are known from the second half of the 14th century. The financial situation of the community during this period is reflected in a query (Responsum, 282) addressed to R. Isaac b.
Sheshet *Perfet (Ribash). The responsum indicates that the community borrowed money from Muslims in order to redeem a Sefer Torah crown which had previously been pledged. Some community leaders did not agree to stand surety for the debt, and the community therefore took it upon itself, under the strength of a ban, to repay the debt within one year. A number of members who had not been present at the proclamation of the ban demanded that it be abrogated because of debts already owed by the community for taxes to the crown. The ban was lifted and R. Isaac b. Sheshet ratified its abrogation. Although it is clear that the community of Segorbe was affected by the persecutions of 1391, the degree to which the community suffered is not known. In 1393 Juan I acquitted Jacob Hassan of Murviedro and his wife of having committed several “offenses,” including the accusation that Jacob had given unleavened bread to a “Converso of Segorbe. There is no information on the community during the 15th century, and it is possible that none existed. At some unspecified time the small number of Jews living in Segorbe moved to neighboring Murviedro.

[Haim Beinart]

**SEGOVIA**, town in Old Castile, central Spain. The community of Segovia was one of the most important in Castile, and several of the nearby communities were under its jurisdiction. The Jewish quarter was located in the center of the town, on land belonging to the cathedral. The Jewish cemetery was at the place now called Cuesta de los Hoyos. There were many synagogues in Segovia, the biggest of which was confiscated in 1420. It was built in the Mudéjar style, like the Santa María la Blanca synagogue of *Toledo, and was probably erected at the same time (13th century). In 1572 the building became the property of the Franciscan nuns. It caught fire in 1899.

The community of Segovia achieved prosperity in the 13th century, together with other communities in Castile. The earliest sources on the Jews in Segovia are from this century. At the end of this century there were around 300 Jews in Segovia. It was an important center of Kabbalah.

The community was beset by difficulties in the war between Pedro the Cruel and Henry of Trastamara in 1366–69. In the introduction to his Mekor Hayyim, R. Samuel ibn Seneh *Zarza describes the plight of many communities in Castile. In Segovia itself the Jews were attacked and robbed of the securities and promissory bills which they had in their possession, and King Henry canceled the debts owed by Christians to Jews. In about 1390 there were about 50 Jewish homeowners in Segovia. There were 23 craftsmen in the community, among them weavers, saddlers, tailors, furriers, smiths, potters, and painters, as well as a few merchants, a physician, and a bullfighter. A center for the study of the *Kabbalah was founded in Segovia, which was the reputed burial place of the kabbalist Jacob Gikatilla.

When persecutions broke out in 1391, the king was in the town and from there he issued instructions to deal with the rioters in different cities. In Segovia itself, however, the authorities were unable to protect the Jews, and, as elsewhere, some of them converted to Christianity. The community subsequently recovered, though it never attained its former prosperity. In 1409 John II complied with the kahal’s request and exempted it from the current alcabala tax on meat and wine. In 1412 he granted to the convent of Santa María de la Merced in Segovia the right to lease a synagogue with all its accessories. This was a compensation for lands taken from the convent, on which Jews had been settled due to the segregation enforced between Jews and recent *Conversos. In 1415 the Jews of Segovia were accused of a *Host desecration. According to Alfonso de Espina’s work, Fortalitium Fidei, Don Meir *Alguades himself was involved, but the author’s authority in this matter is unreliable. The community declined from the late 1430s. In the 1480s Segovia became a center of anti-Jewish and anti-Converso activity, inspired by Tomas de *Torquemada. In 1485 Abraham *Seneor – who had been made alguacil (an executive officer) of the community’s tribunal for life, lodged a complaint with the court against Antonio de la Peña, who incited the masses to violent anti-Jewish feelings. Seneor also acted against the towns alcalde, who had vetoed the baking of unleavened bread, and against the apostate José Talavera, who informed against the community and was finally imprisoned. Anti-Jewish activity came to a head at the close of the 1480s, when the inquisitor Fernando de Santo Domingo appeared in Segovia. He wrote an introduction to a book published there against the Talmud. Another book on Jewish customs was published in Segovia at that time by Antonio de Avila, the “specialist” on Jewish affairs in the La *Guardia trial. The town council continued to restrict the Jews of Segovia in acquiring food and shelter, as in other cities of Castile. At the same time the community grew in size, due to the arrival of Jews expelled from Andalusia. Among the wealthy Jews of Segovia several were active as tax farmers, in and outside the town, during the decade of 1480–90, among them R. Meir *Melamed, son-in-law to Abraham Seneor, Don Isaac b. Joseph *Caro, and others. In 1488 two anti-Jewish polemical works were written in Segovia: Libro de Alboraygue and Censura contra el Talmud. The decree of expulsion from Spain was issued in May 1492. Abraham Seneor and Isaac *Abrabanel arranged for Jewish property in Segovia to be sold to the Conversos who remained there. At that time the community of Segovia was the most important one in Castile. The exiles from Segovia probably left for Portugal; with them went the last rabbi of the town, Simeon *Maimi, who died a martyr in Portugal in 1498.

The Jewish quarter has been very well described by J.A. Ruiz Hernalso. Until 1412 the Jews lived in the area of San Andrés, where they had two synagogues, and in San Miguel, where they had their Sinagoga Mayor, today the Corpus Cristi. From 1481, the Jewish quarter was enclosed. The Jewish quarter began in Corpus Cristi and continued through the Juderia vieja and in
the streets beyond as far as the Gate of San Andrés. Until the beginning of the 15th century there were three synagogues in Segovia: Mayor, Vieja or Menor, and the sinagoga de los Burgos. At the time of the expulsion there were two other synagogues: the new Mayor (after the confiscation of the first, turned into Corpus Cristi) and the sinagoga del Campo. The new sinagoga Mayor, in the calle Barrionuevo, is today a girls’ school which is run by the Jesuit monastery. Part of the Ark has been discovered. Abraham Seneor had a bet midrash in his house.

【Haim Beinart / Yom Tov Assis (2nd ed.)】

SEGRE (Segrè), family in northern Italy, possibly of Spanish origin. The following are among its most important members: JUDAH (14–15th centuries), author of TOSAFOT on HULLIN and ERUVIN; his son NETHANEL (d. 1535), a scholar who lived in Lodi; JACOB BEN ISAAC (c. 1629), rabbi of Casale Monferrato, poet and liturgist, author of a selihah on the siege of Casale in 1629; ABRAHAM BEN ZERAH (d. 1641), dayyan in Alessandria; NETHANEL BEN AARON JACOB (d. 1691), born in Chieri, later of Cento. A collection of his responsa, entitled Ezer Ta’ikov, is extant in manuscript. ABRAHAM BEN JUDAH (17th–18th centuries), rabbi, poet, and book collector in Casale Monferrato; HAYYIM (17th century), lived in Padua. He was considered a supporter of Shabbatei Zevi and was one of the three delegates sent from Italy to the East in 1666 to study the Shabbatean movement. His work Binyan Av on the regulations for blowing the shofar is unpublished. His son ELISHA lived in Vercelli and was the father of Joshua Benzioni Segrè (c. 1705–1797). BENJAMIN, grandson of Hayyim (18th–19th centuries), a scholar in Vercelli, was the father of Salvatore *Segrè (1729–1809). ABRAHAM BEN JUDAH (d. 1772) was born in Turin. At the age of 25 he emigrated to Safed and later lived in Jerusalem. He studied under Israel Ashkenazi and wrote commentaries on the Mishnah and on Maimonides’ Mishneh Torah, responsa, and sermons. Several times he traveled abroad as a rabbinical emissary. Other noted members of the family were Corrado *Segrè (1863–1924), mathematician; Gino *Segrè (1864–1942), jurist; Roberto *Segrè (1872–1936), general; Arturo *Segrè (1873–1928), historian, and Emilio Gino *Segrè (1905–1989), Italian-American nuclear physicist.

【Elia Samuele Artom】

SEGRÈ, ARTURO (1873–1928), Italian historian. Segrè was professor of history in the Liceo d’Azeglio of Turin and also lecturer in the university. He specialized in the history of Piedmont and the House of Savoy, particularly in the 16th and 19th centuries. A founder of the series Collana Storica Sabauda, he contributed two biographies to it – Vittorio Emanuele I (1928) and Emanuele Filiberto (1928) – published posthumously. Among his other writings was Storia del commercio (2 vols.; 1923). He was also editor of I diari di Girolamo Priuli (1912), one of the most important sources for the history of Venice, for the new edition of Muratori’s Rerum Italicarum Scriptores.

【Donald Weinstein】

SEGRÈ, BENIAMINO (1903–1977), Italian mathematician. Segrè was professor of mathematics at Bologna University until he was dismissed in 1938 under the Fascist anti-Jewish laws. He was then invited to England by the Society for the Protection of Science and Learning and spent the years until 1946 at the Universities of London, Cambridge, and Manchester. He returned to his chair at Bologna in 1946 and moved to Rome in 1950. He was elected president of the Accademia Nazionale dei Lincei in 1968. Segrè made important contributions to geometry. His books include Non-singular Cubic Surfaces (1942) and Arithmetical Questions on Algebraic Varieties (1951).

【Barry Spain】

SEGRÈ, EMILIO GINO (1905–1989), nuclear physicist and Nobel Prize laureate. Segrè, who was born in Tivoli, Italy, studied at Rome University, where he later assisted Enrico Fermi in research on the use of neutrons as missiles to break up the uranium atom. He conceived the idea that an element having the atomic number 43, which theory had shown must exist, might be produced by neutron bombardment. The discovery of this element had been reported ten years earlier, but not confirmed. During a visit which he paid to the University of California in 1937, Segrè was given a sample of molybdenum (the element with atomic number 42) which had undergone a process shown by J.R. *Oppenheimer to be the equivalent of neutron bombardment. Segrè analyzed this sample when he returned to Italy. He traced what had become of the radioac-
SEGRÈ, GINO (1864–1942), Italian jurist. Born in Bozzolo, Mantua, Segrè lectured at the universities of Camerino, Cagliari, Messina and at Parma before being appointed to the chair of Roman law at the University of Turin in 1916. He was a member of the Italian Academy of Sciences, of the Accademia dei Lincei, served on the commission for the reform of Italian civil law, and was the author of many monographs, mainly on Roman public and private law. A staunch liberal and a loyal Jew, Segrè suffered persecution by the Italian Fascists and many of his writings were banned and destroyed. In 1952 his disciple Professor G. Grosso edited Segrè's Scritti vari di diritto Romano.

In 1974 another book of his articles appeared, Dalla radice pandettistica alla maturità romanistica. Scritti di Diritto Romano, with a preface by his disciple G. Grosso, who also published an article on his work in his memory, "G. Segrè a trent'anni dalla morte" (in: Bullettino Ist. Dir. Rom. 75 (1972), 1ff.).

[Alfredo Mordechai Rabello / Mordechai-Alfredo Rabello (2nd ed.)]

SEGRÈ, JOSHUA BENZION (Salvador; c. 1705–c. 1797), Italian dayyan and rabbi. Born probably in Casale Monferrato, Segrè went to Scandiano in 1735 or 1736 as a children's tutor (melammed tinokot), but pretended to function as a fully fledged teacher (moreh horah), claiming that he had graduated at the Mantua yeshivah. This claim caused him to quarrel with the rabbis of Reggio Emilia under whose jurisdiction he came. At the age of 23 he had already shown his taste for polemics by writing Asham Talui against Christianity in which, although not particularly well versed in Latin, he attempted mainly to prove that "Jerome had made many errors in his translation of the Old Testament. G.B. De 'Rossi published a synopsis of the work, criticizing it severely.

Segrè also wrote a polemical against Giulio *Morosini's Derekh ha-Emunah (La Via della Fede). As well as writing commentaries on the Bible, Kabbalah, and halakhah, he was the author of a commentary on Psalms, Zorer u-Moreh (a summary of the laws of terufah), a booklet on Hebrew grammar, and an Italian translation of the principal prayers, partly in verse. The works were never published. His booklet Kol Omerim Hodu (Mantua, 1740) celebrates the inauguration of a reconstructed synagogue in Scandiano, financed by the *Almansi family (in whose house the synagogue was located).

[Menachem E. Artom]

SEGRÈ, ROBERTO (1872–1939), Italian soldier. Son of an army colonel, Segrè was made an officer at the age of 18 and joined the artillery corps. He was transferred to the general staff in 1902. He served in the Italo-Turkish war (1911–12), and was decorated several times. During World War I Segrè commanded artillery formations in the battle of Gorizia (1916) and in 1917 was made chief of staff of the fifth army corps. After the war he was appointed head of the Italian-Austrian Armistice Commission. Segrè was eventually promoted to lieutenant general and corps commander. He served in this last capacity until the racial laws of 1938 forced him to resign his commission. An outstanding gunnery officer, Segrè was capable of using heavy artillery with devastating effect. He published numerous military studies and books on military history and politics and was awarded several decorations, including the Cross of Savoy.

[Massimo Longo Adorno]

SEGRÈ, SALVATORE (Joshua Benzion; 1729–1809), Italian rabbi. Segrè was born in Vercelli, and was a wealthy property owner. One of the few Italian rabbis who inclined toward Reform, he served in the rabbinate and on the town council of...
Vercelli after the occupation by the French revolutionary army. When Napoleon convened the Sanhedrin in Paris in 1806 (see French "Sanhedrin"), Segre was one of the North Italian delegates. In a speech delivered in Paris on Aug. 15, 1806, he obsequiously praised the emperor and the following February he was chosen av bet din of the Sanhedrin. When the work of the Sanhedrin was finished Segre returned to his rabbinical position in Vercelli. In 1809 he went back to Paris and died during his visit.

SEIGEL, JOSHUA

SEIBER, MÁTYÁS GYÖRGY (1905–1960), composer. Seiber was born in Budapest and from 1919 to 1924 studied music at the academy there, mainly with Kodály. He was the most prominent of a group of young composers hailed by Kodály in an influential article as the new hope of Hungarian music. In 1926, after a period of traveling, he became a teacher at the Hoch conservatory in Frankfurt on the Main, where he stayed until 1933. Among his pedagogical innovations was the establishment, against strong objection, of a class for the study of jazz. From 1933 to 1935 he taught in Budapest and then settled in London. In 1960 he was killed in a car accident in South Africa. Kodály dedicated the choral work Media vita in morte sumus to his memory.

Seiber’s early works rank among the most important of the Hungarian school, and his later ones, with their utilization of both pre-classic and 12-tone techniques, made contributions to the contemporary European musical achievement. They include several stage works, Transylvanian Rhapsody for orchestra (1941), three string quartets, songs, study works for jazz percussion and the accordion, incidental music for some 25 films and many plays (including Buechner’s Wozzeck, and the music for the bbc’s bicentenary production of Goethe’s Faust in its entirety), works for solo instruments and orchestra, and choral works, including the cantata Ulysses, based on James Joyce’s novel (1948).

SEID, RUTH (1913–1995), U.S. novelist who wrote under the pen name Jo Sinclair. Born in Brooklyn, the fifth child of Ida (Kravetsky) and Nathan Seid, she grew up in Cleveland. Although family poverty precluded higher education, Seid was determined to be a writer and read voraciously in Cleveland public libraries. During the depression, she worked as a researcher, editor, and writer for the WPA and wrote fiction and plays in her spare time. In 1938, she befriended Helen Buchanan, a married woman with a family, who invited Ruth to live in her home and supported her writing ambitions.

Seid took on her pseudonym in order to publish in magazines such as Esquire, which only accepted work written by men. This non-ethnic, androgynous pen name reflected Seid’s ambiguous literary identity, which straddled religious, racial, and gender categories. Her first published story, “Noon Lynching,” in New Masses, 20 (1936), is one of many she wrote that dealt with African American characters. Other early stories addressed poverty, self-hatred, sexuality, and Seid’s own experiences in the work world. Critics have identified central Jewish themes in her novels as well as in such short stories as “Second Blood,” The Medal,” and “The Red Necktie.” In 1946, Seid published her first novel, Wasteland, which won the prestigious $10,000 Harper Prize. In his PM review of the novel, Richard Wright praised its representation of Jewish family life and called it a “monumental psychological study.” The novel centers on a self-hating photographer, Jacob Braunein, who changes his name to John Brown to hide his Jewish identity. Urged by his lesbian sister Debbi, Brown consults a psychiatrist to work out his neuroses. The novel is organized around references to Passover and the seder. The Holocaust also hovers in the background; at the conclusion of the novel, Jakes embraces his Jewish American identity by enlisting in the army to fight on behalf of America and European Jewry.

After Wasteland, Seid published Sing At My Wake (1951) and The Changelings (1955), a novel dealing with Jewish and Italian responses to African Americans moving into their neighborhood. The novel treats issues of sexuality, as well, and is considered a gay-lesbian classic. Seid’s well-received fourth novel, Anna Teller (1960), about a Hungarian immigrant Jewish family, headed by a formidable matriarch, has strong Holocaust themes. With the rise of feminist, ethnic, and queer studies in the closing decades of the 20th century, interest in Seid/Sinclair’s writing increased. Three of her novels were reissued and an abridged version of her memoir, The Seasons: Death and Transfiguration (1993), was published. Sinclair spent her last years in Jenkintown, Penn., with her partner Joan Sofer.

SEIGEL, JOSHUA (1846–1910), rabbi. Born in Kitzburg, Poland, Seigel is perhaps best known for his controversial halakhic treatise, Erav ve-Hoqiah, an interpretation of Jewish law that allowed Jews to carry things on the East Side of Manhattan on the Sabbath. He believed that the island of Manhattan was surrounded by a natural *eruv, a stance rejected by most of his rabbinic peers.

Seigel started out as a Talmud scholar under the direction of Rabbi Leibl Harif of Plotsk and Rabbi Joshua of Kutna, who ordained him as a rabbi. Seigel received another ordination later on from Rabbi Joseph Kara of Vlatzlovak. He inherited his father’s pulpit as rabbi of Sierpc, Poland, but not with unanimous consent from the community. Seigel was not a ḥasid, so many of the ḥasidic members of Sierpc resisted
his leadership, despite the intervention of Rabbi Joshua of Kutna.

Later known as the “Sherper Rav,” Seigel left Europe in 1884 and immigrated to the United States. In New York, he became rabbi of a poor congregation of families divided between hasidic and non-hasidic traditions. His Polish ancestry set him apart from the Lithuanian rabbis who came to the United States in the late 19th century. Due to this tension, Seigel declined to join the Agudat Harabbonim, a union of mostly Lithuanian-educated rabbis formed in 1902.

Seigel negotiated a position as mashgiach for several New York slaughterhouses and butcher shops, a good way to earn supplementary income to his modest — inadequate — synagogue-pulpit salary. By 1890 almost 20 Galician congregations relied on Seigel for kashrut guidance, and many Galician butchers remained under his rabbinic supervision.

In 1908, Seigel went to Palestine in hopes of living in Jerusalem, but the harsh climate prevented him from taking up permanent residence there. A year later, he returned to New York. Seigel left a a posthumous work of responsa titled Oznal Yehoshua.

SEINFELD, JERRY (1954–), U.S. comedian and television star. Born in Brooklyn, New York, Seinfeld grew up in the Long Island town of Massapequa. He graduated from Queens College, New York, in 1976, with a double major in theater and communications. He worked at a variety of odd jobs while trying to break into the field of stand-up comedy.

His big break came when he was talent-spotted for Johnny Carson’s Tonight Show in 1981. His first appearance was a success and the prelude to dozens more on the same program. He also became a regular on David Letterman’s Late Night show after that program debuted in 1982. In 1987 he enjoyed his first solo television credit with “Jerry Seinfeld: Stand-Up Confidential,” while in 1988 he earned an American Comedy Award as Funniest Male Stand-up Comic.

In 1988 Seinfeld and his friend Larry *David developed the idea for the Seinfeld show, based upon the daily life of a stand-up comedian and his group of friends. It premiered on NBC in July 1989 and maintained its status as one of the most popular and successful of American television sitcoms. The show spares no one, not even the handicapped, cruising along blithely and irreverently with its distinct brand of New York cynicism and its own brand of good-humored callousness.

Nominated nine times for an Emmy, Seinfeld – and Seinfeld – took home the award in 1994 for Outstanding Comedy Series. In 1992 and 1993 he won the American Comedy Award for Funniest Male Performer in a TV Series.

SEINI (Hung. Szinérváralja), village in Transylvania, N.W. Romania; until the end of World War I and between 1940 and 1944 within Hungary. A geographical-historical description of Hungary published in 1799 mentions Jewish inhabitants among the Catholics and Protestants in Seini. There is also information that speaks about the attempt of Jews to establish themselves in the place during the previous century. A community headed by a rabbi probably existed by the close of the 18th century; from its inception the community was Orthodox. In 1885 the community became the official center for the Jews in the surrounding area. The Jewish population numbered 673 (13% of the total population) in 1930.

The Seini community was important in the history of Transylvanian Jewry because of the Hebrew printing press established there by Jacob Wieder. The first Hebrew work was printed in 1904 and the last in 1943. Between the two world wars the press was among the most important in Transylvania. It printed religious works, religious periodicals, and several works in Yiddish. A member of this family of printers, the son of the founder, Judah Wieder, settled in Haifa in 1932 and established a press there.

Between the two world wars, and especially during the Depression of the early 1930s, many local Jews left the area and moved to larger towns, where they hoped they would be able to support their families.

Holocaust and Contemporary Periods
During World War II, in the summer of 1944, at the time of the deportations of Jews from northern Transylvania, the Hungarian Fascist authorities sent all the Jews in Seini to the death camp at Auschwitz via the Satu Mare ghetto.

The survivors formed a small community after World War II, numbering 150 in 1947, but after a while their numbers declined as a result of emigration to Israel and other countries. The community organization ceased to exist. The three Jewish families who still remained in Seini in 1971 took care of the large and ancient synagogue, which, though in a state of dilapidation, was still standing.

[Yehouda Marton / Paul Schveiger (2nd ed.])

*SEIEP, IGNAZ (1876–1932), Austrian statesman, Catholic prelate, and university professor; leader of the *Christian Social Party and five times chancellor of Austria
(1922–24; 1926–29). Although his party’s program demanded the restraining of Jewish influence, he personally was of the opinion that “antisemitism was for the gutter,” but he tolerated it in his party, particularly among student groups. While in office his attitude toward Jews was always unprejudiced and even benevolent in matters of religion and conscience. In his bitter struggle against the Social Democratic Party he was confronted by many leaders of Jewish origin, in particular their leader Otto *Bauer. Among his principal advisers were also persons of Jewish descent. His financial adviser was Gottfried Kunwald, his legal counsel Wilhelm Rosenberg, while in foreign affairs he was assisted by Dr. Gruenberger. Seipel came to reject parliamentary democracy and supported a constitution based on occupational estates in the sense of the papal encyclical “Quadragesimo Anno.” Although not favoring Fascism and dictatorship, he furthered the Fascist *Heimwehr as a temporary counterweight to the Socialists.

[Hugo Knoepfmacher]

**SEIR, MOUNT** (Heb. הר שיר, hir shir), biblical name for a number of regions, the appellation originally meaning “hairy,” i.e., wooded.

(1) The area originally inhabited by the Horites (Gen. 14:6; Deut. 2:4) and later by the Edomites, the children of Esau (Gen. 32:4; 33:14, 16). An archaeological survey of the region south of the Zered River has shown that it was inhabited by an Early Bronze Age population until about the 20th century B.C.E. After a gap, the kingdom of Edom was established in the same area in about 1300 B.C.E. Seir is mentioned in Egyptian sources from the time of *Merenptah. The Israelites were ordered to leave the area in the possession of “their brethren, the children of Esau,” who dwelt in Seir (Deut. 2:4, 5, 8; Josh. 24:4). Actually, they were unable to penetrate the strong defenses of the Edomites and were forced either to pass between them and the Moabites or go around Seir. Nevertheless, Balaam prophesied that the region would fall to Israel (Num. 24:18), as it did in the days of David. Part of Seir was later occupied by the Simeonites (1 Chron. 4:42). Jehoshaphat and Amaziah, kings of Judah, fought against the people of Seir (11 Chron. 20:22–23; 25:11). The prophets Isaiah and Ezekiel use the name as a synonym for Edom (Isa. 21:11; Ezek. 35). The area is now known as Jebel (Ar. al-jibāl), a mountainous region (highest point: Jebel Hārūn, 1396 m.) which is well watered (up to 400 mm. annual rainfall) and wooded in parts. The name is attributed to parts of the Negev west of the Arabah in Deuteronomy 1:2 and 1:44 and some scholars place the theophany referred to in Deuteronomy 33:2 in this area.

(2) An area on the northern border of the territory of Judah, between Kiriath-Jearim and Chesalon (Josh. 15:10). Most of this mountainous region was evidently wooded until the period of the United Monarchy.

(3) An unidentified locality, the place to which Ehud escaped from Jericho after killing Eglon, the king of Moab (Judg. 3:26; as Seirah).

[Leo Hershkowitz]

**SEJM**, the Polish parliament (from 1922 also the senate as an upper house) During the existence of the Polish republic between the two world wars, there were six terms which varied in length and electoral principles. The first or legislative term (1919–22) produced the 1921 constitution. It operated in a time of emergency, when the young state was being consolidated while at war with external enemies and undergoing an internal ferment caused by alien national groupings. Jewish representation, with 11 seats, was only 3% as against a proportion of 11% for the general population. The delegates elected from the Jewish lists constituted a parliamentary club called the “Free Union of the Delegates of Jewish Nationality in the Sejm,” consisting of Zionists, Orthodox, *Polispartei*, and *Poále Zion, most of whom had a definite connection with the “National Jewish Council” which was under Zionist influence. The struggle for national and civil rights against the hostility of most of the Sejm required daring, a capacity for suffering, and perseverance. The small number of Jewish members prevented in the beginning a suitable representation in the parliamentary committees and thus limited their possibilities of political action.

The Second Sejm (and Senate) (1922–27) was of particular importance. It provided a background to considerable political changes in the stormy life of the country and in the means adopted by the Jewish representatives in their struggle, their number having reached 35 in the Sejm and 12 in the Senate as a result of their being organized during the election in the framework of the *Minority Bloc*. This enabled them to overcome the obstacles in the perverse election regulations. In that situation of party divisions and social struggle in the Sejm and outside, there was an increase in the importance of the Jewish Club (Kolo Żydowskie) which had become consolidated. Its successive presidents were O. *Thon, Yizhak* *Gruenbaum, L. *Reich, and M.A. *Hartglas. The Jewish deputes were active in important committees, and in the plenum were outstanding through their speeches on specifically Jewish subjects and even on general questions. The leadership throughout that entire period was in the hands of the Zionist group, which was split by matters of principle into two schools of thought: the radical faction led by Gruenbaum, standing for greater links with the national minorities and a policy of fighting the government, and the Galician Zionists, headed by Reich and Thon, who had reservations about adhering too closely to the minorities alliance and attempted to achieve a rapprochement with the Polish government by means of an “agreement” (”Ugoda”).

The last four Sejms marked a reduction in the importance of the legislature following the progressively stronger Fascist tendencies of the Polish government. These were expressed primarily in a sharp struggle between the “Sanacja” government and the parliamentary opposition, which began in 1935 as a result of the new constitution which attacked electoral freedom through selective candidature and appointment made by ruling circles. In an atmosphere of political pressure by the regime, the disintegration of the Minority Bloc, and the inclusion of Jewish candidates in the government list (BBWR), there began a most drastic process of contraction in Jewish representation in the Sejm and the Senate, as shown in these figures: Third Sejm (1928) – 22 Jewish seats; Fourth Sejm (1930) – 11 Jewish seats; Fifth Sejm (1935) – 6 Jewish seats; Sixth Sejm (1938) – 7 Jewish seats. Under these conditions of internal disruption among the Jewish representatives and intensified manifestations of antisemitism both among the extreme reactionary parties and in the government camp (”Ozon”), there was no chance of developing real political activity, apart from a defensive attitude of despair and expressions of protest against the injury to the Jewish population, which was caught up in a process of grave decline.

[Moshe Landau]

**SEKIRYANY** (Rom. *Secureni*), village in Bessarabia, E. Chernovtsy oblast, Ukraine. Jews began to settle in Sekiryany at the invitation of the owner of the place, who wished to develop his estate after the Russian annexation of Bessarabia in 1812. As a result of Jewish immigration to Bessarabia which continued until the end of the 19th century, the community grew, numbering 5,042 Jews (56% of the total population) in 1897. Thus for all practical purposes, Sekiryany became an urban community even though it formally held the status of a village and it served as a commercial center for all the villages in the area. Jews marketed agricultural products and supplied farmers with their needs. They also were engaged in crafts and agriculture. After Bessarabia was annexed by Romania in 1918 the community developed an active public life. A network of educational institutions was established, including a kindergarten, elementary and high schools, all maintained by the Tarbut Organization, and a *talmud torah*. In 1920 a Jewish hospital was founded. Jews numbered 4,200 (72.6% of the total population) in 1930.

[Eliahu Feldman]

**Holocaust Period**

Following the Nazi-Soviet pact of 1939, Bessarabia passed to
the Soviet Union. On July 6, 1941, Sekiryany was captured by German-Romanian forces. These troops killed all the Jews they found in the villages on the way and in Sekiryany itself they killed 90 Jews in the first two days of the occupation. Many Jews committed suicide. The local peasants were incited to attack and rob the Jews, thus setting a three-day pogrom in motion. On the third day the Jews were driven to the cemetery and tortured by the troops. A few days later all the Jews were sent on a month-long death march. They were first led to *Brichany, where they spent eight days in the homes of the local Jewish families; then to Koslov where they were left in the open for three days, without food, water, or sanitary facilities. Whoever lifted his head was shot to death on the spot. The survivors were dispersed in the neighboring villages in groups of 200, to be reassembled a few days later and dispatched to Moghilev, *Transnistria (i.e., Mogilev, Ukraine). From there, still numbering a few thousand at this time, they were transferred to Skazinet, and some returned to their home town. Throughout these wanderings they subsisted on the grass and rotten beets collected along the road. Those unable to carry on were buried alive. The old and the sick were shot to death in a forest near Skazinet, and others succumbed to the cold, hunger, and epidemics. In the woods near Kosouty they underwent a brutal body search, during which a large number were killed. Their next stop was Obodovka, where they were locked in a pigsty and could not leave to bury their dead. The survivors were then taken to the kolkhoz Dubina, and to Bershad. By this time, only a few were still alive. After the expulsion of its native Jews, Sekiryany became a large concentration camp for 30,000 Jews from the entire district. The camp was disbanded on Oct. 3, 1941, and all its inmates deported to Transnistria.

[Jean Ancel]

**BIBLIOGRAPHY:** Z. Iggeret (ed.), Sekurian (Bessarabiyah) be-Vinyanah u-re-Harbannah (1945), 89–120; Herz–Kahn, in: Eynikayt (Aug. 23, 1945); M. Carp, Cartea neagra, 3 (1947), index.

**SELA, MICHAEL** (1924– ). Israeli biochemist and immunologist. Born in Poland, Sela was taken to Bucharest as a child and immigrated (1941) to Palestine. He graduated in chemistry from the Hebrew University of Jerusalem (M.Sc. 1947, Ph.D. 1954). He became active in the *Aliyah* movement from Italy and helped many Jewish displaced persons reach Ereẓ Israel. He then spent two years (1948–50) as commercial secretary to the Israel Legation in Prague.

Sela began his scientific career as a biophysicist under Ephraim *Katriz in* Rehovot, and developed a special interest in immunology. He headed the new unit in that science established in 1965, when he was made professor, and in the ensuing years did extensive research and teaching in the subject. He wrote many papers for scientific journals, edited several books, and lectured widely in Israel and at international forums. His work in elucidating the chemical basis of antigenicity won him the Rothschild Prize (1968). Nine years earlier he received the Israel Prize in natural sciences for work on synthetic polypeptides as protein models. In 1966 he undertook a survey of immunological research in Russia and Hungary for the who and between 1975 and 1979 served as council chairman of the European Molecular Biology Organisation (EMBO).

Among the posts he held at the Weizmann Institute of Science are dean of biology (1970–75), vice president (1970–71), and president (1975–85). In 1976, Sela was elected a foreign member of the U.S. Academy of Sciences, president of the International Union of Immunological Societies, and a member of the Pontifical Academy of Sciences (in the Vatican). He received several additional prizes, including the Baillet-Latour Prize in Belgium and the Wolf Prize in Israel. His name is linked with the drug against multiple sclerosis which he created at the Weizmann Institute and which was developed by Teva Pharmaceutical Industries under the name Copaxone. He is an institute professor and deputy chairman of the Board of Governors of the Weizmann Institute of Science.

[Julian Louis Meltzer]

**SELBSTEMANZIPATION,** the first Zionist newspaper in Western Europe, in German. The idea of the newspaper originated in the group centered on the first Zionist student group in Western Europe, *Kadimah, and its name reflected the admiration felt by members of the group for Leo *Pinzer and the influence exerted on them by his book of the same name. The paper first came out in 1885, in Vienna, under the editorship of Nathan *Birnbaum, and with the encouragement of Pinzer. It was the first newspaper in Western Europe to be entirely devoted to advocating the Zionist cause, from its editorials to the notes on local events. The word Zionism itself was used for the first time in its columns (by Birnbaum, in 1890). The moving spirit behind the paper was Birnbaum, whose articles on current affairs and ideological essays on the national character of the Jewish people polemicized both against assimilationism and socialist cosmopolitanism. The paper devoted much of its space to Ereẓ Israel and its resettlement, and became the central organ of the Zionist movement in the West. It experienced great financial difficulties and ceased publication in the middle of 1886 after one and a quarter years of existence. The *Esra society in Germany, then at the height of its activities for the settlement of Ereẓ Israel, renewed publication in September 1886, transferring the paper to Berlin and changing its name to Sersubabel. Although Birnbaum continued to write for the paper, Willi *Bambus now became its moving spirit. Since Esra was mainly concerned with Ereẓ Israel, the paper devoted most of its space to this cause, as well as to research and information on Ereẓ Israel. The debate with those opposed to the Jewish national idea continued in its columns, and the first attempts were made to bring about a rapprochement between Eastern and Western Jewry. The paper again ceased publication because of financial difficulties (July 1888) and renewed publication on April 1, 1890, under its original name and editor. In its new form, Seltzmanzipation constituted a synthesis between its
two previous forms. It opposed Baron de *Hirsch's proposed settlement program in Argentina. The paper also involved itself in the elections to the Austrian parliament, supporting I.S. Bloch, the candidate who was closest to the Zionist line. Two of the paper's main opponents in Vienna were the rabbis and scholars M. *Guedemann and A. *Jellinek.

With the arrival of the Hebrew writer Reuben *Brainin in Vienna (1891), ties with Eastern Jewry were further strengthened, and the paper began to devote much of its space to the new Hebrew literature. Birnbaum's Zionist articles continued to feature prominently in the paper (whose subtitle “Jewish National Organ” was replaced in May 1893 with “Zionist Organ”) and it played an influential part in the establishment of the united Zionist Federation of Austria and Galicia in 1893. In 1894 the name of the paper was changed to Juedische Volkszeitung with the addition of “formerly Selbstemanzipation.” The paper was transferred to Berlin, but the editorial board remained in Vienna. While there were no policy changes, the addition of a group of young men later to constitute *Herzl’s immediate following (S.R. *Landau, M. *Ehrenpreis, O. *Thon, H. *Loewe, etc.) to the paper's contributors made it into the representative organ of the Zionist movement before Herzl. At the beginning of 1895, however, the paper ceased publication.

[Getzel Kressel]

**SELBSTWEHR** (“Self-Defense”), Jewish weekly founded in Prague. It was first published in 1907 and appeared regularly until the fall of 1938. After amalgamation with the *Juedisches Volksblatt*, a weekly published in *Ostrava*, it was the most widely read Jewish newspaper in Czechoslovakia. Editors of the paper included Siegfried Katchnelson, later manager of the publishing house Juedischer Verlag, Berlin; Leo Herrman, later general secretary of the Keren Hayesod, Jerusalem; Felix *Welsch; and Hans Lichtwitz (Uri Naor; d. 1988), later of the Israel Foreign Ministry, Jerusalem. Among regular contributors were Max *Brod and Martin *Buber. Selbstwehr was the official organ of the Czechoslovakian Zionist Movement and the German-language organ of the Juedische Partei, which represented the interests of the Jewish minority in Czechoslovak internal politics. After World War I Selbstwehr also published the annual “Jewish Almanac,” edited by Felix Welsch and Friedrich *Thieberger, which dealt mainly with cultural activities in Palestine. The regular monthly supplement, *Die juedische Frau* (“The Jewish Woman”), edited by Hannah *Steiner, was the official organ of Czechoslovak wizo. Selbstwehr had to cease publication after the Munich agreement.

[Uri Naor]

"**SELDEN, JOHN** (1584–1654), English parliamentarian, lawyer, and antiquarian. Selden was a prominent member of the Antiquarian Society – the important forum for research in the 17th century. He had an exceptional command of Oriental languages, notably of both biblical and rabbinical Hebrew.

His attitude toward Jews and Judaism was marked by contradictions. Thus, in his short *Treatise on the Jews in England* (1617), he gives credence to ritual murder, albeit as past history. On the other hand, in all his works on Jewish subjects he expresses boundless admiration for rabbinical scholarship, which sometimes borders on the grotesque (cf. Ehrman, in: *Papers from the Fourth World Congress of Jewish Studies* 1 (1967), 181–3 (Heb.), 267 (Eng. abstract)). In his famous *Table Talk* he also writes sympathetically about Jews. Selden’s amazing familiarity with the intrinsic problems of rabbinical scholarship and his erudite exposition of rabbinical law, which runs into many volumes, form a unique contribution to scholarship. A list of the short titles of his rabbinical writings indicates the extensiveness of his work in this field: *History of Tithes* (1617), leading up to questions on the relations between church and state; *De Jure Naturali et Gentium* (1640), on international law (a work to which particular attention is drawn by Shabtai Rosenne in “The Influence of Judaism on the Development of International Law,” *Netherlands International Law Review*, 5 (1958), 128–30; *De Anno Civili* (1644), a work which first refers to the doctrines and practices of the Karaites; *Uxor Ebraica* (1946), on Jewish marriage and divorce laws; *De Synedriis* (1650), on the constitution of Jewish ecclesiastical courts, drawing attention to relevant parallels with the constitution of the Church as regards the division of authority between clergy and laymen; *De Successionibus* (1631), on Jewish laws of inheritance. In fact all his works, and not just his specific rabbinical writings, make frequent reference to rabbinical sources.

It was probably to explain or justify and also occasionally to protest against specific Christian institutions that Selden had recourse to rabbinical sources. Thus, for instance, when he was writing his *Uxor Ebraica*, his friends assumed that his aim was to throw further light on a topic of Christian interest. R. Cudworth wrote to him from Cambridge (Mss. Seld. 108, Arch. Seld. A, Bodleian Library, Oxford): “I hope in your Workes de Nuptys Hebrays you will bring something to light which the world is yet ignorant of, for the clearing of our Sav-iour’s descent from David’s line”; Cudworth then goes on in a scholarly fashion to point to an apparent contradiction between Abrabanel’s commentary on Isaiah and an instance in the Talmud, touching as it were on the Christian viewpoint under discussion. As to Selden’s treatment of the sources of Jewish law, it is certain that he did not rely merely on secondary sources (e.g., the works of Johannes *Buxtorf, 1 and 11) but read the Talmud (both the Babylonian and the Jerusalem) at least to the extent of looking up references suggested to him in Jewish and non-Jewish post-talmudic works. His library was apparently crowded with different editions of the Talmud as well as the most varied works of the post-talmudic rabbinical literature (Selden Handlist, *Libri Bibl. Seld.*, Bodleian Library, Oxford). It is evident, however, that his main source was Maimonides’ Code, which he preferred to the standard codes of
Arba'ah Turim and Shulhan Arukh. Whatever the shortcomings of Selden's rabbinical writings may have been, the inaccuracies, obscurities, and digressions which were severely exposed by Herzog (in: Journal of Comparative Legislation, 13 (1931), 236–45), it is clear that by stimulating interest in rabbinics he greatly contributed to Christian scholarship as well as to modern Judaic studies.

Selde, George (1890–1995), U.S. journalist and author. Born in Alliance, New Jersey, Seldes was a crusading pamphleteer who wrote exposés of many facets of American life. He started as a reporter, and was night editor of the Pittsburgh Post (1910–16). Going to New York, he became managing editor of Pultizer's Weekly (1916). He was a war correspondent during World War I, in Syria 1926–27, and in Spain 1936–37. His candid reporting led to his expulsion from more than one country, such as Russia and Italy. He served as head of the Berlin and Rome bureaus of the Chicago Tribune until he resigned in 1928 and returned to New York. From 1940 to 1950 Seldes, as a media critic, published a weekly bulletin of "outside" news called In Fact, which attained a circulation of 175,000. In 1941 he began writing about the dangers of tobacco but few newspapers would carry the stories, as many of their advertisers were cigarette companies. Seldes, who lived to 104, spent his life fighting for a free, fair, and responsible press. In his view, the best formula for the media was "the facts fairly and honestly presented; truth will take care of itself."

In You Can't Print That (1929), The Truth Behind the News (1929), and Lords of the Press (1938), Seldes assailed what he considered the venality of American journalism. Sawdust Caesar (1935) was a debunking biography of Mussolini. His other books include Freedom of the Press (1935), Facts and Fascism (1945), Our Thousand Americans (1947), The People Don't Know (1949), Tell the Truth and Run (1953), The Great Quotations (1960), Never Tire of Protesting (1968), Even the Gods Can't Change History (1976), The Great Thoughts (1985), and his autobiography, Witness to a Century (1987), which he completed at age 96.

Richard Goldsmith's film Tell the Truth and Run: George Seldes and the American Press (1996) was nominated for an Academy Award for Best Documentary.

Selde, Marian (1928– ), U.S. actress. Born in New York City to critic Gilbert and Alice (née Hall) Seldes, as a teenager Seldes studied with the American Ballet from 1941 to 1944, debuting on stage in Petrouchka (1942). In her late teens she changed her focus to acting and enrolled in the Neighborhood Playhouse School of the Theatre, making her stage acting debut with the Cambridge Summer Theater in 1945. After graduating at 19, Seldes made her Broadway debut in Medea (1947) in a small role as the attendant to the title character. After supporting roles in Crime and Punishment (1947), That Lady (1949), The Tower Beyond Tragedy (1950), and The High Ground (1951), Seldes made her silver-screen debut in The Lonely Night (1952). Seldes returned to Broadway for Ondine (1954) and The Chalk Garden (1955) before trying her hand in Hollywood again with the films The True Story of Jesse James (1957), Crime and Punishment (1959), and Crime and Passion (1959). In 1960, she returned to New York for the Broadway play The Wall (1960) and then went on to star in original Broadway productions, including Tennessee William's The Milk Train Doesn't Stop Here Anymore (1964) and Edward Albee's Tiny Alice (1966) and A Delicate Balance (1966), which earned her a Tony Award for best actress. In 1968, Seldes began teaching drama at the Juliard School, a position she held for 22 years. After her turn in Equus from 1974 to 1976, she starred as the murdered wife of a playwright in Deathtrap, a role that lasted from 1978 to 1982. In 1981, she wrote the novel Time Together. In 1990, Seldes married writer-director Garson *Kanin. After leaving Juliard, Seldes returned to Hollywood to portray Alice B Toklas in Gertrude Stein and a Companion and Charlotte Sandler, the mother to Terri Garr's character in the short-lived sitcom Good and Evil. Following more television work, Seldes returned to Broadway for Ivanov (1997), which included one-time Seldes student Kevin Kline. Less than two months after the March 13 death of Kanin, Seldes came to the aid of Ring Round the Moon (1999) after the actress portraying Madame Desmemor fell ill; the role earned her a Drama Desk and a Tony Award nomination. Other award-nominated turns followed in The Butterfly Collection (2001), The Play about the Baby (2001), and Dinner at Eight (2003).

Selde, Harry M. (1895–1975), U.S. oral surgeon. Born in Russia, Seldin was taken to the U.S. in 1905. From 1919 to 1924 he was an instructor in the dental department of New York University, and headed its department of general anesthesia from 1926–31. He was associate director of the dentistry division of the Department of Hospitals, New York City, from 1928 to 1930, and director from 1930 to 1934. In 1934 he was appointed consulting oral surgeon to the Harlem Hospital in New York and in 1942 to the Peekskill Hospital in Westchester County, New York. Seldin played a leading part in the establishment of the Hebrew University-Hadassah School of Dentistry in Jerusalem founded by the Alpha-Omega Fraternity. He was governor of the Hebrew University and of Tel Aviv University. In 1960 he founded the Harry M. Seldin Center of Oral-Maxillary Surgery at the Rambam Hospital in Haifa.
Seldin was the author of a textbook on oral surgery, and his achievements in this field earned him academic honors and the highest awards of his profession in the United States and abroad.

**SELEKMAN, BENJAMIN MORRIS** (1893–1962), U.S. labor relations expert. Born in Bethlehem, Pa., Selekman worked in the field of Jewish social work and labor relations. He was executive director of the Associated Jewish Philanthropies of Boston from 1929 to 1945, and was professor of labor relations at the Harvard University School of Business Administration from 1945 to 1962. Though impressed by the degree of goodwill shown by many employers in improving industrial relations and in particular by the efforts of John D. Rockefeller after the bitter Colorado Fuel and Iron Company's Ludlow, Colorado, strike, Selekman regarded social conflict in labor relations as virtually unavoidable. They were part of the process of economic development and the emergence of democratic social stability. Selekman's work leaned heavily upon the relevance of psychoanalytical insight. His numerous writings include *Labor Relations and Human Relations* (1947), *Power and Morality in a Business Society* (1956), and *A Moral Philosophy for Management* (1959).

[Mark Perlman]

**SÈLESTAT** (Ger. *Schlettstadt*), town in the department of Bas-Rhin, Alsace, in eastern France. The presence of Jews in Sélestat is confirmed from at least the beginning of the 14th century. While town officials succeeded in protecting Jews from outside attacks, particularly from the *Armleder* bands, a number of Sélestat's inhabitants attacked them in 1347 and again in 1349, believing that they were responsible for spreading the *Black Death*. As a result of these attacks, several Jews were murdered and others fled. Others accepted baptism, but they were soon accused, with the rest of the Jewish population, of spreading the Black Death. The synagogue was confiscated and converted into an indoor market; from the middle of the 16th century it was used as an arsenal. The Jews returned a short while later, but they were again expelled at the beginning of the 16th century. The street which was known at first as *Judenschuel* and later as the Rue des Juifs was inhabited by this second community. From that time onward, Jews visited Sélestat for trading purposes, but they were not allowed to settle there. During the 17th century Jews from neighboring localities acquired a plot of land for use as a cemetery, which still existed in 1971. A new Jewish community was not established in Sélestat until after the French Revolution. It was soon the third largest Jewish settlement in Alsace. The population continued to decline throughout the 19th and early 20th centuries, however. Between the two world wars, the community numbered approximately 250. The synagogue, which was erected in 1890 and sacked by the Germans during World War II, was later rebuilt. The community was reconstituted after the war and in 1971 numbered 180 persons.

[Bernhard Blumenkranz]

**SELEUCIA**, name of two cities.

(1) City in Gaulanitis, S.E. of Lake Huleh. Seleucia was among the numerous cities and fortresses captured by Alexander Yannai during his campaign in Transjordan. With the outbreak of the war against Rome (66 C.E.), Seleucia was fortified by Josephus, who describes the area as having very strong natural defenses. Early in the revolt, however, Seleucia was induced by Agrippa II to come to terms with the Romans (Jos., Wars, 1:105; 2574; Life, 187, 398). See Schuerer, *Hist*, 89 ff., in connection with the cities of Gadara and Abila.

(2) City on the west bank of the Tigris (south of modern Baghdad), founded by Seleucus I Nicator (312–280 B.C.E.). During the Parthian period the city was inhabited mainly by Greeks and Syrians, and Pliny gives its population as 600,000 (*Natural History*, 6:122). Relations between the two elements were strained, and conditions were exacerbated when, in the first century C.E., a large number of Jews took refuge in Seleucia, after the defeat of the Jewish leader *Aniaeus* (c. 35). At first the Jews joined with the Syrians but this alliance was successfully broken up by the Greek party. Subsequently there developed a common enmity toward the Jews, and in a sudden attack upon the community over 50,000 Jews were said to have been slain. The surviving Jews eventually fled to *Nehardea* and *Nisibis*, both beyond the Seleucid sphere of influence.

[Isaiah Gafni]

**SELEUCID ERA**, the basis for Jewish reckoning of years during the Second Temple period, and in certain Jewish communities down to the late medieval period and until comparatively modern times. This era, commonly referred to in Hebrew as *minyan shetarot* (see *Calendar*), coincides with the founding of the Seleucid monarchy, but there are discrepancies regarding the precise beginning of the cycle. Whereas the return of Seleucus I Nicator to Babylon, following the battle of Gaza (autumn 312 B.C.E.), is officially regarded as the date of the founding of the empire, it appears that certain nations, including possibly the Jews, regarded the following year, 311 B.C.E., as the beginning of that era.

[Isaiah Gafni]

*SELEUCUS IV PHILOPATOR*, Seleucid monarch 187–176 B.C.E., son of *Antiochus II the Great*. Following the crushing defeat by the Romans at Magnesia (190), the Seleucid Empire found itself in extreme financial difficulties, and...
these were to have a direct effect in altering the friendly relations cultivated by Antiochus IV with the Jews of Palestine. In an attempt to raise funds for the Seleucid treasury, Seleucus dispatched his minister *Heliodorus to Jerusalem. The mission whose purpose was to appropriate funds on deposit in the Temple treasury, was encouraged by Simeon, an official of the Temple. According to the description in 11 Maccabees (1:1ff.), Heliodorus was miraculously prevented from entering the treasury. Forced to return empty-handed to Seleucus, he was eventually responsible for the assassination of the king. Seleucus IV was succeeded by his younger brother *Antiochus IV Epiphanes.

SELF-DEFENSE (in modern Jewish history). Jewish efforts against attacking mobs in Russia and in Austria-Hungary from the end of the 19th century until shortly after World War I. The nature of the pogroms in this period (especially in the years 1881–82, 1903–05, and 1917–20) taught Jews that they occurred with the compliance of the governing authorities and at times even at their instigation. The government, therefore, could be no guarantee of protection. A segment of the Jewish community gradually became aware of the necessity for Jews to come to their own defense and to concern themselves with the safety of their brethren and the protection of their property. They should not depend for their security on the forces of law and order of a hostile government, and on occasion they must even oppose those forces directly. This point of view gained strength in the wake of the revolutionary movement throughout Russia and the rise of modern Jewish nationalism (both its Zionist and its socialist-Diaspora manifestations) which reawakened the sense of national honor among Jews. In the "Pale of Settlement" in Russia there was an overcrowded Jewish population, and in many of the cities and towns in this area Jews constituted the majority of the local population, or at least a very substantial minority. There was a steady increase in the number of Jewish artisans and workers who were physically fit and knew how to wield a knife or ax. Conscription into the Russian army created, especially among the lower strata of Jewish society, a pool of young men accustomed to military discipline and trained in defense tactics.

During the pogroms of 1881–82, self-defense was organized spontaneously in different places. Equipped mainly with light arms, the defiant Jews tried to prevent the rioting mobs from penetrating their streets (especially in *Berdichev and *Kirovograd (Yelizavetgrad), and *Warsaw). In *Balta, the teacher Eliezer Meshbir organized a self-defense unit largely made up of porters, coachmen, and apprentices, and even set up a form of communication through signaling with blasts of the *shofar. The founders of the self-defense movement in Odessa were M. *Ben-Ammi and W.M. *Haflkine. They had to overcome the opposition of those Jewish revolutionaries who believed that pogroms merely expressed the anger of the awakening Russian proletariat and therefore Jews should not act with the police against the people, even when the people were in the wrong. The first such group of defenders, composed mostly of students and Hebrew teachers, turned to the synagogues and made a special effort “to attract the butchers and coachmen.” The wealthy did not take part, nor did their synagogues participate. The equipment of these fighters consisted of “sticks, axes, and iron poles – pistols were rare.” During actual pogroms their defense activity had very limited success in itself; it was effective mainly in the poorest quarters, even when the Jews had to stand up to the combined strength of the army and the police. More than 100 of the defenders were arrested, among them Haflkine, who had a revolver in his hand when he was seized. Although those who were captured were mainly simple men, they never revealed at their trial that students were the initiators of the movement. In the succeeding years the youth and workers continued in their efforts to form defense organizations. In the proceedings instituted against 14 Jews in 1897, it became clear that in Minsk that year a group of defenders which had been hastily assembled had been able to strike back with combat weapons against soldiers rioting in the marketplace.

The pogroms of 1903, especially that in *Kishinev, created renewed interest in self-defense. Although even in Kishinev there had been individual examples of courageous defenders, the slaughter there symbolized in the mind of the Jewish community the weakness and shame of their general defenselessness in the face of their attackers. The Russian government had announced its official opposition to organized defense. However, all active nationalist Jewish circles, the youth in particular, whether Zionists or socialists, concluded that their collective defense was a spiritual as well as a physical necessity. In April 1903, two weeks after the Kishinev pogroms, the *Aguddat Soferim Ivrim ("Hebrew Writers League"), including *Ahad Ha-Am, H.N. *Bialik, M. Ben-Ammi, S. *Dubnow, and Y.H. *Rawnitzki, issued an announcement, composed by Ahad Ha-Am, stating that “it is degrading for five million people … to stretch out their necks to be slaughtered and to call for help without attempting to protect their property, dignity, and lives with their own hands.” They demanded the establishment of a permanent organization to defend against and repel attackers “in all places where we live,” and they urged that “a general gathering of the representatives of all major Jewish communities within our land” should be convened for this purpose. This same outlook also gradually became evident within leftist Jewish circles, although for them the decision to act against the masses of the Russian people was a bitter one. In its policy statement of 1903, the *Bund declared “violence must be answered with violence, wherever it comes from.” A group of left-wing Zionist students called for “the same healthy, free response made by a man when a wild animal leaps upon him … acquire as many weapons as you possibly can!” This mood found its strongest poetic expression in Bialik’s poem “The City of Slaughter,” which sharply
condemns the shame of the meek acquiescence of the "calves for the slaughter."

In Odessa, collective defense was set up at this time, with Vladimir *Jabotinsky as one of the active participants. They collected money, bought guns by the dozens, and prepared small arms. In proclamations in Yiddish and in Russian they urged the youth to arm itself. However, the various leftist organizations, which had been fairly active in the area of self-defense, did not join forces with Jabotinsky's group, and still less were they prepared to act jointly with bourgeois circles; the Bund in particular was strongly opposed to such cooperation. Between 1903 and 1905 collective defense units were set up in the cities and towns of Belorussia and the Ukraine. In *Ekaterinoslav (*Dnepropetrovsk), for instance, the *Po'alei Zion were the organizers: they raised money, acquired guns, and "in the smithies special iron poles were fashioned, with iron spikes on them." To improve their marksmanship, they went out to deserted islands on the River Dnieper for target practice. Two hundred students in "Kiev formed a defensive unit, "each armed with a large stick, a Finnish knife, and pistol." The artisans in the group fashioned hand-combat weapons. The defenders were divided into groups of ten, and whenever the outbreak of a pogrom appeared imminent they took up their arms and mobilized for action in private homes with telephones. They also had spies among the potential attackers, and a number of non-Jewish teachers at the university aided the defenders. Similar organizations were established in *Shklov, *Vilna – where Michael *Helpern was one of the leaders – Warsaw, and *Rostov on the Don. The Minsk experience in setting up defensive units was used as a model for the entire area. The self-defense organization in *Gomel (Homel) developed from the nucleus known as Gibborei Ziyyon ("The Heroes of Zion"), the military unit of the *Po'alei Zion, and "during the summer of 1903 the entire city was organized, blacksmiths ... butchers, and wagon drivers, each separately," and the rest of the citizens along occupational lines. (There was also a separate defense unit of the Bund.) When the army mounted an attack against them in 1903, many fell and numerous others were captured and brought to trial. Seeing that the army was on the point of attacking them, the defenders had tried to arouse the Jewish masses against the pogromists. Even the government-appointed rabbi of *Kremenchug, A.Y. Friedenberg, issued a proclamation in Russian in 1903 calling for collective defense and convening a conference of all the neighboring communities for the purpose of "consulting on the establishment of secret defensive units in various places." Hayyim Berlin, the rabbi of Moscow, took part in this convention.

In 1904 the self-defense movement was widespread throughout many cities and towns, but the splintering-off into factions and the growing revolutionary tide among the workers prevented real cooperation and unity. In many cities there were a number of parallel defense groups – affiliated with the Bund, Po'alei Zion, etc. Yet in the face of a pogrom they usually united, and even secured the help of the ordinary "unpolitically minded" Jews. The Bund defense group in Dvinsk (*Daugavpils) successfully repelled its attackers in 1904, and, when its leader, Mendel Daich, was sentenced to death for an attack on a police officer during what was actually a general revolutionary action, *Meir Simhah ha-Kohen, the rabbi of Dvinsk, proclaimed a fast and called for the recitation of psalms to mark his righteous act of defending his fellow Jews. Revolutionary circles began to take pride in this central and unifying activity for Jewish self-defense. V. Fabrikant, the left-wing Zionist, described how in 1904 "a defensive unit ... was set up. At its center was organized labor, and the rest of the elements both organized and unorganized were on the periphery." He also stated that "every Jew, even one of the higher echelons of the bourgeoisie, is entitled to be defended by us if he is in danger of injury solely because he is a Jew." Defining the goals of self-defense, he said it was a war "for our present ... for the possessions of the poor; for the lives of our brethren of Israel who are in distress; for the honor of our sisters; for our national honor ... for our future as a nation." He also recommended taking retaliatory action against individuals who stirred up pogroms and against those officials who were lax in their duty to protect Jewish citizens. Even Bundist circles recognized as desirable the continued existence of defense units and of their branching-out into other cities and towns. The Bund claimed the honor of setting up the committees for self-defense. At the initiative of Po'alei Zion, an all-Russian conference on self-defense programs was convened in Odessa on Jan. 6, 1905; Ahad Ha-Am and S. Dubnow promised to speak there. However, since some letters dealing with conference plans were intercepted and several of the delegates were arrested, the full-scale meeting envisaged did not take place.

When the government turned "the wrath of the masses" against the Jews in 1905, an extensive self-defense movement existed in many Russian cities and towns. The nucleus of the movement came from the Jewish labor parties and their military units, and it had a widespread following among the rest of the people. Although anxious to form countrywide links among its units, the movement was weakened by party and class divisions and suspicion. Organized defense groups are known to have existed in 42 cities; 30 of these went into action, particularly in October of 1905. The most important were in Odessa, Akkerman (*Belgorod-Dnestrovski), *Zhitomir, *Starodub, *Yelizavetgrad, *Ekaterinoslav, *Chernigov, and Rostov on the Don. Some enlightened Russian non-Jews aided the cause of Jewish self-defense and in Odessa the university assisted the defenders. In the battles of 1905, 132 fighters fell, including four women and a number of Russians. Both the strength and the weakness of the self-defense endeavor were clearly embodied in its activity in Zhitomir, in which three organizations were involved: the Bund, Po'alei Zion, and the "non-labor Zionists." In clashes with rioters and security forces (May 6–7, 1905) all three groups worked together under the command of a young Bundist. The battle lasted for four hours and 13 of the defenders fell. From Berdichev and *Chudnov
Jewish defense groups came to the aid of the Jews of Zhitomir. However, this example of cooperation between cities ended in tragedy; when the Berdichev unit came up against a crowd of rioters at a railway station, the local Jews – fearful of the mob – refused to give them refuge. Ten of the Berdichev group were killed. The dangers inherent in the movement of the Jewish defense units throughout Russia were also revealed in many other incidents, as in October 1905, when 23 fighters belonging to the defenders' group from *Rechitsa perished in Odessa. Other cities also witnessed a wide range of defensive activities, including Poltava, where the head was Izhak *Ben-Zvi. In Yekaterinoslav the fighters succeeded in killing 47 of their attackers.

After 1905 the strength of the self-defense movement waned along with the lessening of revolutionary tensions within Russia. In 1909 the central ammunition storage dump of the Bund was liquidated. However, the circumstances of the civil war in 1917–20 brought new and stronger calls for self-defense and initiated new methods of setting it in motion. In those years pogroms were perpetrated not only by the rioting masses but also by bands of soldiers and even by regular units of the forces of the warring sides. In such conditions of social upheaval and the disintegration of the czarist army, the defense movement was obviously likely to gain greater support than previously through the aid of Jewish soldiers and because of the revolutionary excitement prevailing among the leftist factions. Nevertheless, it was also liable to rapid collapse, for it could not stand alone against attackers who were trained troops of regular or semi-regular armies. Those soldiers of the disintegrating army who had some nationalist consciousness made a great effort to set up a Jewish defense force which would concentrate on guarding the honor, lives, and property of their brethren. Drawing attention to the force of 400,000 Jewish soldiers in the Russian army, they pointed out that various other peoples were attempting to establish units of their own from the fragments of the czarist army. Especially active in the Ukraine in 1917 was the Iggud ha-Zeva'i ha-Yehudi ("Jewish Military League"), whose president was Isaac Gogol. In the beginning the leftist factions opposed the separatist goal of the defensive groups, but by the time they had come to the conclusion, in 1918, that Gogol was right, they had missed their opportunity. The Ukrainian army attacked the Iggud and murdered its president.

From then on self-defense became a local matter, at most the concern of a very limited area. Even then there were some Jewish soldiers among the defenders, but their success depended solely on local conditions and the qualities of the local defenders. In spite of these circumstances, there were defense units which enjoyed limited success. In *Golovanovsk, for instance, a township of 1,200 Jewish families, many of whom were artisans, a company of defenders which had repelled pogromists in 1905 was reformed in 1917 under the command of an ex-soldier. They set up a permanent guard of 25 men, who appeared as if they were “in charge of the place” and confiscated or bought arms from deserting soldiers and sailors. They also purchased a cannon and prepared bombs. Several times men of the defense force went to the outskirts of the town and fought in the fields – at times alongside the Red Army and at times on their own – to repel bands of approaching attackers. The defense organization was active there until its leader fell at the end of 1919. In *Bershad too the defenders rallied around a nucleus of soldiers who had just returned from the front. At their head was a capable leader, Moshe Dubrovensky. This defense unit waged bitter battles with roving armed bands and held its position of strength until 1919. On the eve of Purim 5679 (1919), some of the finest of their company, their leader among them, fell in action during a battle with a troop of Cossacks that stormed the city. Similar information has been preserved about defense fighters in other towns.

The value of Jewish self-defense in Russia was not limited to its own time and place alone. The goal which became clearly articulated in the movement – to protect the Jewish community independently of the state authorities – pointed the way for the Jews in Erez Israel under Turkish rule and later in their struggle with the British Mandate authorities. From the ranks of these defenders came many of the methods and leaders of the *Haganah in Erez Israel.

In Austria-Hungary

Jewish soldiers’ committees were founded in some major garrisons of Austria-Hungary at the time of the dissolution of the empire (1918). Officers who were members of Zionist students’ and youth organizations formed units of Jewish soldiers returning from the front, which were instrumental in protecting Jewish life and property. They wore cockades in the Zionist colors, utilized Hebrew text in their official seal, and were seen by some Jews as presaging the coming of the Messiah. They put themselves at the disposal of the Jewish national councils (see *Nationalrat) then established in Vienna and Prague. Besides Vienna and Prague (where the committee was under the command of Samuel Hugo *Bergman), soldiers’ committees were set up in *Brno (Brnoen), *Olomouc (Olmutz), Terezin (*Theresienstadt), and other towns. A Jewish company effectively protected the Jewish quarter of *Bratislava (Pressburg) while possession of the town was contested between Czechoslovakia and Hungary.

After World War I

After World War I and its aftermath, no self-defense units of a solidly organized and permanent character are known to have existed. In the 1930s in some universities of Central Europe, which by tradition were closed to the entrance of police, antisemitic and Nazi students sometimes attacked their Jewish colleagues, who then organized themselves for self-defense.

During World War II, under the conditions of the *Holocaust, the struggle of ghetto fighters and the *partisans, as well as the rebellion of some Jews in the extermination *camps themselves, formed a unique chapter of heroism and desperation exceeding the usual definition of self-defense.
After World War II, particularly in Latin American and Arab countries, members of Jewish sports organizations and Zionist youth groups organized self-defense units against antisemitic and neo-Nazi violence (as by the Takuara in Argentina; see *Neo-Nazism*) and aggressive Arab nationalists (in Iraq and in some North African countries).

**Jewish Defense League**

In 1968 a group under the name Jewish Defense League (JDL) was formed in several sections of Brooklyn, N.Y. At first the group, consisting mostly of Orthodox young people, served as a semi-vigilant unit to protect local Jews from physical attacks, mainly by delinquent blacks and Puerto Ricans. Later the group grew into a quasi-political movement, using the slogan “Never again” (with reference to the Holocaust and citing Vladimir Jabotinsky extensively). In the contemporary style of “confrontation” and “direct action” engulfing certain sections of U.S. youth, it adopted the “defense” of Soviet Jewry, Israel, and Jews in Arab countries by forceful means in New York and other U.S. cities. Its declared aim was to disrupt commercial and cultural exchanges and tourism between the U.S. and U.S.S.R. The JDL achieved a high degree of publicity and also entered into sharp controversy with the organized Jewish community, to which it refused to adhere. Its leader, Rabbi Meir Kahane, became a focus of polemics in the U.S. and other countries, as well as in the Jewish and general press (see, e.g., Michael T. Kaufman, “The Complex Past of Meir Kahane,” in the *New York Times*, Jan. 24, 1971).

Kahane moved to Israel in 1971 and in 1976 founded “Kach, the Israeli branch of the Jewish Defense League. He was assassinated in New York in 1990. In the meantime the U.S. branch continued to operate (for a chronology of its activities in the ensuing decades see www.adl.org, the Anti-Defamation League website). In 2001, JDL chairman Irv Kugel was charged with conspiracy to commit acts of terrorism. In 2002, while in detention, he fell 18 feet to his death at the Federal Detention Center in Los Angeles. After his death the JDL split into rival factions.

**SELF-HATRED, JEWISH.** The phenomenon of self-hatred arises among minority groups forced together by outside pressure and produces a negative attitude on the part of members toward their own group, but the very word is absent from important dictionaries of the English language, and it would appear to have been coined by Theodore Lessing (see below), since in his book dealing with it he gives it in quotation marks.

It was first diagnosed in Central European Jewish social theory and fiction. As expressed by Jews, it is both a group phenomenon and an individual trait. One Jewish group may take a hostile position toward another, e.g., German Jews against East European Jews in Europe; Orthodox Jews against Conservative and Reform Jews in the United States and the State of Israel; and vice versa. A Jew who expresses self-hatred, according to Kurt Lewin, “will dislike everything specifically Jewish, for he will see in it that which keeps him away from the majority for which he is longing. He will show dislike for those Jews who are outspokenly so, and will frequently indulge in self-hatred” (Lewin, *Resolving Social Conflicts*, p. 164).

With the decline of positive traits of Judaism and Jewish identification in Western Diaspora communities, both in Europe before World War II and in the United States afterward, self-hatred became endemic. The most important early analysis of the phenomenon among Jews appeared in Berlin, 1930, in Theodor Lessing’s *Juedischer Selbstblass* (Berlin, 1930). To the self-hating Jew, all misfortune derives from the fact that he is Jewish. The Jews, moreover, are held responsible for their own fate and are therefore “to blame for all their misfortunes.” Clinical reports by Lessing include Jews who urge the Aryans to exterminate the Jews like vermin, and others who remained childless or even committed suicide so as “to remove the stain of Jewishness from mankind.” Lessing therefore describes Jewish self-hatred as an acute pathology of psychosis.

In Western democracies, on the other hand, Jewish self-hatred appears as a chronic malady of neurosis. But, while in Central Europe the self-hating Jew removed himself as far as possible from Jewish associations, in the United States he found himself at the top of Jewish community life. Lewin diagnosed this phenomenon in 1941. “In a minority group, individual members who are economically successful… usually gain a higher degree of acceptance by the majority group. This places them culturally on the periphery of the underprivileged group and makes them more likely to be ‘marginal’ persons. They frequently have a negative balance and are particularly eager not to have their ‘good connections’ endangered by too close a contact with those sections of the underprivileged group which are not acceptable to the majority. Nevertheless, they are frequently called on for leadership by the underprivileged group because of their status and power. They themselves are usually eager to accept the leading role in the minority, partly as a substitute for gaining status in the majority, and partly because such leadership enables them to have and maintain additional contact with the majority.” This type of person Lewin calls “the leader from the periphery.” He uses his position to de-Judaize the Jewish community and remove those traits which make Jews Jewish.

With the renaissance of Jewish pride and self-respect consequent upon the establishment of the State of Israel and
its positive impact upon Jewish and world public opinion of the 1950s and 1960s, Jewish self-hatred tended to decline. Indeed, the rise to public prominence of clearly identified Jewish personalities in the Western democracies and of the State of Israel served as a powerful antidote to both public and private self-hatred. Evidence of the development of Jewish self-respect is the dramatic shift in budgets of Jewish community federations and welfare funds, and of public opinion affecting those budgets in favor of positive evidences and programs of Jewish self-identification.

Lewin regarded Jewish self-hatred as a social-psychological phenomenon in that it occurs among entirely normal persons. He therefore concluded: “Jewish self-hatred will die out only when actual equality of status with the non-Jew is achieved. Only then will the enmity against one’s own group decrease to the relatively insignificant proportions characteristic of the majority groups. Sound self-criticism will replace it.” It is generally maintained, therefore, that through Jewish education feelings of inferiority and fear may be counteracted by positive identification with the Jewish people. For example, Zionism in the Germany of the 1930s was a powerful force in the face of Hitler for hope and Jewish affirmation (“Jasagen zum Judentum”). On this subject Lewin further commented: “…there is nothing so important as a clear and fully accepted belonging to a group whose fate has a positive meaning. A long-range view, which includes the past and the future of Jewish life, and links the solution of the minority problem with the problem of the welfare of all human beings, is one of these sources of strength. A strong feeling of being part and parcel of the group and having a positive attitude toward it is … sufficient condition for the avoidance of attitudes based on self-hatred.” Since, as noted, Zionism before 1948, and the State of Israel thereafter, provided that locus of unity and long-range view of a past of courage and a future of hope which Jewish self-esteem demands, it is not to be wondered at that the growing impact of Zionist activity in the Western countries as well as among the Jews of the former U.S.S.R. materially limited the formerly commonplace and endemic expressions of this phenomena.

[ Jacob Neusner]

SELIG, ALLAN H. ("Bud"); 1934— ), U.S. baseball commissioner. Originally a highly successful auto dealer in his hometown of Milwaukee, Selig first became involved in professional baseball in 1963 as the largest stockholder of the publicly owned Milwaukee Braves. Two years later the Braves left for Atlanta, and the disappointed Selig formed an organization dedicated to bringing baseball back to Milwaukee. An exceptional opportunity arose when the expansion Seattle Pilots failed in their maiden 1969 season, and Selig led a consortium of investors in purchasing, and promptly moving, the Pilots to Milwaukee for the 1970 season and renaming them the Brewers. Over the next two decades, the Brewers organization would be given an award seven times for excellence in management. When in September 1992 Commissioner Fay Vincent resigned, fellow baseball owners turned to the now senior Selig to act as interim commissioner via his new role as chairman of the Executive Council. Six years later, Selig was elected by his peers to become the official ninth commissioner of Major League Baseball. During his 14 years as acting and official commissioner through 2005, Selig was involved in a number of turbulent episodes, including a 272-day strike in 1994 and 1995, which saw the cancellation of the 1994 World Series, the early termination of the 2002 extra-inning All-Star Game because of a lack of pitchers, and the steroids controversy which exploded in 2005. Among the major changes implemented by Selig during his tenure were interleague play, revenue sharing between big and small market clubs, the institution of the three-division format in each league, and the creation of wild card berths along with an extra tier of playoffs. In recognition of his efforts on behalf both of baseball and various causes, Selig was the recipient of a plethora of awards and honors, including the 2003 Jewish Foundation for the Righteous Recognition of Goodness Award, the 2001 Sports Torch of Learning Award from the American Friends of the Hebrew University, the 1994 Anti-Defamation League’s World of Difference Award, the 1993 Ellis Island Medal of Honor, the 1989 August A. Busch Jr. Award (equivalent to the MVP award), the 1983 U.S. Olympic Committee Sportsman of the Year Award, and the 1981 International B’nai B’rith Sportsman of the Year Award. In July 2001, Selig created an endowment to establish the Allan H. and Suzanne L. Selig Merit Scholarship Fund at the Rothberg International School at the Hebrew University of Jerusalem.

[Robert B. Klein (2nd ed.)]

SELIG, PHINEAS (1856–1941), New Zealand journalist and newspaper proprietor. Born in Melbourne, Australia, Selig was the son of Rev. B.A. Selig (formerly of Penzance), reader and shohet to the Wellington community, who had emigrated there in 1862. After a career as a reporter and correspondent, he founded (with A.E. Bird) the New Zealand Referee (1884) and was manager of the Christchurch Press (1901–23). During the 1920s and 1930s he was the outstanding figure in the New Zealand press. For 20 years he was president of the New Zealand Newspaper Proprietors’ Association and Canterbury Master Printers’ Association. A leading administrator of athletics and boxing, he was president of the New Zealand Trotting Association for 25 years. He played an influential role in the Jewish community and was president of the Canterbury Hebrew Congregation in Christchurch from 1917 to 1941 and supported Jewish and Palestine appeals.

[Maurice S. Pitt]
SELMAN, family of international bankers from Bairesdorf, Bavaria, where they are known from the early 18th century. 

JOSEPH SELIGMAN (1819–1880) was the oldest son of David, the village weaver and an itinerant trader in woolens. Joseph, after attending university, immigrated in 1837 to the United States, where he was first employed in a small Pennsylvanian mining town. Soon he sent for his brothers, and pooling their resources they peddled in Pennsylvania, then moved to Alabama and Missouri, and in 1846 made New York their headquarters as wholesale clothiers. They also ran a store at Watertown, New York, where they formed a friendship with the then Lieutenant Ulysses S. Grant, the future president of the United States. After the discovery of gold in California, the Seligmans installed themselves in San Francisco in the city’s only brick building. The Seligmans benefited from a clothing monopoly and the gold they received was shipped to New York, where it established the firm’s credit. Their family’s business interests were ultimately concentrated in banking in New York City. After the outbreak of the Civil War Joseph placed more than $200 million of United States Government securities in Europe, mainly in Germany and Holland. In 1864 the present firm of J. & W. Seligman & Company was formed in New York, with branches in London, Paris, Frankfurt, New Orleans, and San Francisco. The London and Paris branches became independent, and were known respectively as Seligman Brothers Limited and Banque Seligman. The branch in Frankfurt operated under the name of Seligman & Stettheimer. The San Francisco office was the forerunner of the Anglo & London-Paris National Bank. During the 1870s the firm assisted the government in connection with the treasury’s refunding of the national debt and the resumption of specie payment. The firm became prominent in railroad financing and headed the De Lesseps Panama Canal syndicate; it also entered international underwriting for railroad construction, public utilities, and a wide range of industrial enterprises including General Motors and Republic Iron and Steel. The firm served as fiscal agents of Puerto Rico and as financial advisers to foreign governments. During World War I the firm held major positions in all Allied loan syndicates and invested heavily in United States Government bonds. In recent times the company has operated as an international issuing and underwriting house, securities dealer, and foreign exchange trader, and provides most investors’ services. It also heads one of the largest investment trusts in the United States, the Tri-Continental Corporation. Joseph Seligman, the firm’s first senior partner, was followed by his brother JESSE (1827–1894) who in turn was succeeded by Joseph’s son ISAAC NEWTON (1855–1917). Another of Joseph’s sons was EDWIN ROBERT ANDERSON *SELMAN. By 1970 there were no more bearers of the name among the firm’s partners. The family was prominent in New York’s German-Jewish society and members were among the founders and members of the boards of Temple Emanu-El and the Ethical Culture Society and generously contributed to Jewish and general charities.

[Joachim O. Ronall]

SELMAN, CHARLES GABRIEL (1873–1940), British physician and anthropologist. Born in London and educated at St. Paul’s school, Seligman trained as a physician oriented to medical research. He became professionally interested in anthropology as a result of his participation as a medical researcher in the Cambridge Torres Straits Expedition. In 1903 he persuaded Major Cooke Daniels, a wealthy American, to finance an expedition to New Guinea. This research culminated in his work *The Melanesians of British New Guinea* (1910). Seligman served as lecturer and subsequently as professor, holding the first chair of anthropology established at the University of London. His wife, BRENDA ZARA SALAMAN SELIGMAN (1883–1965), became his professional collaborator and was also an important anthropologist. Together the Seligmans undertook a number of other expeditions, to Ceylon to study the Veddas and to the Sudan. In between the field sorties, Seligman continued his research in pathology; he was elected a fellow of the Royal College of Physicians and a member of the Royal Society. During World War I he served as a medical officer and worked in a psychoneurotic hospital where he saw the clinical value of Freudian psychoanalysis, which he later applied to anthropology. In his fieldwork Seligman regarded himself as a natural historian of ethnology, studying living societies with scientific detachment. He rejected the extreme diffusionist theories and investigated carefully the diffusion and transmission of culture traits. Seligman’s research prepared the way for Bronislaw Malinowski’s fieldwork in Melanesia.

[ Ephraim Fischoff]

SELMAN, EDWIN ROBERT ANDERSON (1861–1939), U.S. economist. A member of the *Seligman* banking family of New York, Seligman began teaching at Columbia in 1885 and held the post of professor of political economy and finance from 1888 to 1931, when he became professor emeritus in residence. His wide-ranging interests and his sense of social responsibility involved him in many academic, public, and civic organizations and institutions. He was instrumental in forming the American Economic Society and served as its president, 1902–04. He also served a term as president of the National Tax Association, and the American Association of University Professors, and chaired its committee which in 1915 published the fundamental report on academic freedom. In his special field, public finance, he was a consultant member of numerous public committees, at the city, state, and federal
levels, as well as in international organizations. In 1932, while lecturing at Havana University, he undertook, at the request of President Gerardo Machado, the reorganization of Cuba’s fiscal system. His writings on taxation were influential since many of the innovations he advocated were adopted, and the terminology he originated passed into common use.

He published 15 works on taxation and economics generally, including *The Economic Interpretation of History* (1902), a significant contribution to the development of the subject; *Principles of Economics* (1905); *The Economics of Farm Relief* (1929); and *Price Cutting and Price Maintenance* (1932). His wide range of interests enabled him to become the chief promoter and editor in chief of the Encyclopaedia of the Social Sciences (15 vols., 1930–35), to which he also contributed articles and biographies. He was also editor of the *Columbia Series in History, Economics, and Public Law*, and the *Political Science Quarterly*. A bibliography of his writings was published in 1931 by Columbia University; his correspondence was published by Joseph Dorfman in 1941, and a collection of memorial addresses in 1942.

[Joachim O. Ronall]

**Seligman, Herbert Spencer** (1872–1951), British army officer. Born in London, Seligman attended St. Paul’s school and the Royal Military Academy. In 1892 he was commissioned in the Royal Artillery. He fought in the South African war, being awarded the Queen’s Medal, and on the outbreak of World War I was sent as commander of a battery to the front in western France. Seligman was given command of an artillery brigade in 1915 and in the following year commanded the artillery of the Seventh Division. Subsequently he was made commanding officer of the Cavalry Corps artillery, and took part in the Allied assault on the German lines in the summer of 1918. Seligman was mentioned in dispatches six times and received numerous decorations. After the war he was promoted to honorary brigadier general and served in the Territorial Army until his retirement in 1935.

[Mordechai Kaplan]

**Seligmann, Caesar** (1860–1950), leader of Liberal Judaism in Germany. Born in Landau, Seligmann was appointed preacher of the Liberal synagogue (Temple) in Hamburg in 1889, and from 1902 to 1939 he officiated as rabbi in Frankfurt. In 1910 he published for the Liberal synagogue (Western synagogue) a two-volume prayer book (*Israelitisches Gebetbuch, 2nd ed. 1928*) that was even more extreme than any proposed by the German Reform movement to that date. One of the founders of the *Vereinigung fuer das liberale Judentum in 1910, he edited its organ, *Liberales Judentum*, which appeared from 1910 to 1922. In cooperation with I. "Elbogen and H. Vogelstein, in 1929 he published the "unified prayer book," restoring to the Liberal rite many traditional prayers which had been previously excluded. His other works include a collection of popular lectures, *Judentum und moderne Weltanschauung* (1905), and a history of the Reform movement, *Geschichte der juedischen Reformbewegung von Mendelsohn bis zur Gegenwart* (1922). When addressing the Liberal rabbis in Wiesbaden in 1937, on the occasion of the 100th anniversary of the rabbinical conference convened by A. Geiger, Seligmann advised his colleagues to become reconciled with Zionism. In 1939 he moved to London, where he lived until his death. His autobiography, *Mein Leben. Erinnerungen eines Grossvaters*, was written in 1941 but only one chapter was published.

[Jacob Rothschild]

**Seligmann, Kurt** (1900–1962), U.S. painter, illustrator, graphic artist, printmaker. Born in Basle, Switzerland, Seligmann studied at the Geneva Academy of Art. He lived in Paris from 1929 to 1938, where he joined the circle of Surrealists. Seligmann and his wife relocated to the U.S. in 1939, and while living there played a crucial role, with the assistance of Alfred Barr, in facilitating the immigration of a large number of artists and writers fleeing the Nazis, including André Breton and his wife, André Masson, Paul Eluard, and Pierre Mabile. Breton and Eluard included his work in their *Dictionnaire abrégé du surréalisme*, published to accompany the *International Exposition of Surrealism* in Paris in 1938. Seligmann’s imagery characteristically features anthropomorphic figures, sometimes ominous, intertwined in complex convolutions of drapery; he often adorned these heterogenous figures with feathers, helmets, heraldic insignia, and references to alchemy. He also fashioned objects like *Ultra-meuble*. Like many other Surrealist artists, Seligmann’s art responded to the development of psychoanalysis and its revelations about the dark and irrational aspects of dreams and the unconscious, a preoccupation understandable during a lifetime which witnessed two world wars. His art also references a much earlier tradition of medieval and 16th century German and Swiss artists, including Albrecht Altdorfer, Hans Holbein, and Matthias Grunewald, artists whose works also possessed an engagement with violence and human suffering. Seligmann exhibited at the Nierendorf, Durlacher, and Ruth White Galleries, as well as designing sets and costumes for ballets choreographed by Hanya Holm and George Balanchine. He participated in the “Artists in Exile” show at the Pierre Matisse Gallery in 1942. In the 1940s, he was a regular contributor to the *Surrealist periodicals View* and *VVV*. He taught at Briarcliff Junior College and Brooklyn College. Towards the end of his life, he spent the preponderance of his time at his farm in Sugar Loaf, N.Y., located an hour away from New York City. In addition to his...
art, Seligmann’s interests included the occult, mysticism and tarot; in fact, he wrote a treatise titled *The Mirror of Magic* (1948). He also developed a passion for Native American art. In addition to producing a large body of etchings, lithographs, and paintings, he illustrated many books. His work has been exhibited at numerous museums, including the Art Institute of Chicago, the Carnegie Institute, the Museum of Modern Art, and the Whitney Museum. His art has been collected by museums and galleries around the world, including the Bibliothèque Nationale, the Guggenheim Museum, the Metropolitan Museum of Art, the Whitney Museum, and the Yale University Art Gallery, among other places.

[Nancy Buchwald (2nd ed.)]

### SELIGSBERG, ALICE LILLIE (1873–1940), U.S. Zionist and civic leader. Alice Seligsberg was born in New York City. Although her parents were founders of the Ethical Culture Society, she was to identify herself fully with the Jewish community. She became an active social worker, conducting girls’ clubs and working with the Hebrew Sheltering Guardian Society Orphanage. To help place children leaving the orphanage, she founded Fellowship House, serving as president during 1913–18, and was also responsible for other programs to aid orphans. Alice Seligsberg's friendship with Henrietta *Szold led to her involvement with Zionist projects and Hadassah. In 1917 she helped organize the American Zionist Medical Unit and was in charge of its staff of 44 medical and administrative personnel when it embarked secretly for Palestine in June 1918. There Alice Seligsberg laid the foundations for Hadassah's comprehensive medical program in Palestine. In 1919 she became executive director of the Palestine Orphan Committee of the Joint Distribution Committee to help care for displaced and abandoned children. Upon her return to the United States, Alice Seligsberg helped organize Junior Hadassah to aid the war orphans. She served as national president of Hadassah (1920–21) and during 1924–40 was senior advisor to Junior Hadassah. In 1942 Hadassah established the Alice L. Seligsberg Vocational School for girls in Jerusalem in her memory.

[Gladys Rosen]

### SELIGSON, ESTHER (1941– ), Mexican author. Born in Mexico City, she studied French and Hispanic literature at the Universidad Nacional Autónoma. Seligson was an accomplished translator into Spanish of such authors as Edmond Jabés. Her writing covers a broad spectrum of genres that include poetry, essay, novel, short story, and literary criticism. Her creative work is characterized by a profound introspection, lyrical quality, and relationship to diverse literary traditions. Many of her early works – *Luz de dos* (1978), *Diálogos con el cuerpo* (1981), *Sed de mar* (1987), among others – have been collected in one volume titled *Toda la luz* (2002). Simi- larly, her novel *La morada en el tiempo* (1981) has been reissued (2004). It is her most well-known work and is a singular example of her style and contribution to Mexican letters. The novel is clearly influenced by the author’s own spirituality as well as kabbalism. In general, her narrative fiction can be said to be lacking in traditional plot and character development. Seligson is much more interested in writing narrative that serves as a form of meditation, a way to unravel the mysteries of the human condition through poetics. This is clear from her first book, *Otros son los sueños* (1973), to her later *Simiente* (2004), which is a meditative collage on suicide and is based on a personal experience. As a literary critic Seligson examines the work of authors as diverse as Elena Garro, Virginia Woolf, Clarice Lispector, Marguerite Yourcenar, and Franz Kafka in her book *La fugacidad como método de escritura* (1988). In 2005 Seligson lived in Israel.

[Darrell R. Lockhart (2nd ed.)]

### Selihot ( Heb. שליחת). The word *selihah* means “forgiveness,” and in the singular is used to indicate a *piyyut* whose subject is a plea for forgiveness for sins. In the plural, the word is used for a special order of service consisting of non-statutory additional prayers which are recited on all fast days, on occasions of special intercession, and during the Penitential season which begins before *Rosh Ha-Shanah and concludes with the *Day of Atonement. The Mishnah (Ta'an. 2:1–4) gives the order of service for public fasts, usually proclaimed during periods of drought. It provided, inter alia, for the addition of six blessings to the normal eighteen of the daily *Amidah*, and gives the concluding formula before the actual blessing for each:

May He Who answered our father Abraham on Mt. Moriah answer you…. may He that answered our fathers at the Red Sea… Joshua in Gilgal… Samuel at Mizpah… Elijah in Carmel… Jonah in the belly of the whale… David and his son Solomon…

The first mention of a distinct order of Selihot occurs in *Tanna de-Vei Eliyahu Zuta* (23 end):

David knew that the Temple was destined to be destroyed and that the sacrificial system would be abolished as a result of the iniquities of Israel, and David was distressed for Israel. With what would they effect atonement? And the Holy One blessed be He said, "When troubles come upon Israel because of their iniquities, let them stand together before Me as one band and confess their iniquities before Me and recite before Me the order of Selihot and I will answer them"… R. Johanan said, "The Holy One blessed be He revealed this in the verse ‘and the Lord passed before him and proclaimed, the Lord, the Lord God, manifest and gracious etc’ (Ex. 34:6 which gives the thirteen divine attributes). This teaches that the Holy One blessed be He descended from the mist like a sheliḥah zibbur, enveloped in his tallit and stood before the ark and revealed to Moses the order of Selihot.”

It was not until the ninth century that such an order of Selihot is found, in the *Seder* of R. Amram, and these two passages, the "May He Who answered" and the scriptural verse quoted...
above, together with a number of others, are the essential elements in it, as in all subsequent Selihot.

During the course of time, however, a considerable number of piyyutim, of which the Selihah is the most important, were added to this basic formula. There are a great number of different rites in many individual communities, as distinct from countries evolving their own order of Selihot. Selihot composed by great personalities such as Saadyah Gaon, Gershon b. Judah, Rashî, Solomon ibn Gabirol, etc. are included in orders of Selihot. The Selihot were at first inserted, as indicated by the Mishnah, after the appropriate sixth blessing of the Amidah (the prayer for forgiveness for sins), but the Palestinian custom of reciting them after the Amidah prevailed (Sh. ar., 666,4) and became the almost universal custom. The Italian and Roman rites, however, retain the old custom. Originally Selihot were recited only on fast days, both statutory and special, proclaimed in times of trouble, their recitation being a form of zidduk ha-din, the justification of God. Since God was just, the calamities were the result of Israel's sins, and the evil could be averted by confession and praying for forgiveness for those sins. Their extension to what is at the present time the most widespread recital of Selihot, those of the Penitential days, derived from the custom of fasting on the six days before Rosh Ha-Shanah, when Selihot were said in connection with the fast, and the custom of saying Selihot was then extended over the *Ten Days of Penitence (including the Day of Atonement, but not Rosh Ha-Shanah; cf. Mordekhai, Yoma, beginning). The Sephardim follow the custom of reciting Selihot for the 40 days from Rosh Hodesh Elul to the Day of Atonement, but the Ashkenazi custom is to commence reciting them on the Sunday before Rosh Ha-Shanah or of the preceding week should Rosh Ha-Shanah fall on Monday or Tuesday. (Sh. ar., 581 and Rema in loc.). The Selihot for the first day are usually recited at midnight and thereafter before the morning service.

In addition to the Selihot on statutory fast days and the Penitential season, Selihot have been composed for semiofficial voluntary fasts undertaken by pious individuals. They are “BaHaB” – fasts undertaken on the Monday, Thursday and Monday following the festivals of Passover and Sukkot (ibid. 492c) and, during a leap year, on the Thursday before the eight Sabbaths during which the scriptural portions from Shemot to Tetzaveh (called from their initial letters “Shovavim Tet”) are read, and on Yom Kippur Katan. Selihot are also recited by the members of the kevra kaddisha at their annual service, and to avert plague affecting children.

A critical edition of the Ashkenazi Selihot with notes was published by D. Goldschmidt. An edited version of the Selihot service for the whole year, along with an English translation, was issued by Abraham Rosenfeld of London (1937). For the different kinds of piyyutim in the Selihot see *Tokhehah; *Akedah; *Tehinnah; *Bakhashah.

[Louis Isaac Rabinowitz]

## SELIKOVITCH, GEORGE

(Getzl Zelikovitsh; 1855–1926), Yiddish and Hebrew writer and scholar. Born in Rietavas (Ritveye), Lithuania (in 1855, as Z. Goldberg clarifies), he studied Semitics and Egyptology at the University of Paris. For a while he worked at the Bibliothèque Nationale in Paris and, in 1885, accompanied Lord Kitchener as a translator on his
expedition to relieve General Gordon at Khartoum. In 1887, after traveling in Turkey, Greece, Italy, and North Africa, he reached the U.S., where he briefly lectured on Egyptology at the University of Pennsylvania and at the Franklin Institute of Philadelphia. He then settled in New York and became active as a Yiddish journalist. In 1890 he joined the Yiddish Tageblat, where he remained with short interruptions until his death, writing scholarly articles and serial fiction. His weekly column “Literatur un Lomdes” (“Literature and Learning”) reviewed important works of Jewish scholarship. He contributed to the Jewish Encyclopedia and to the Hebrew encyclopedia Ozar Yisrael (“Treasure of Israel”). His most important contributions to Hebrew literature are his Ziyyurey Massa (“Travel Portraits”, 1910), a description of his journey in Ethiopia, and Torat Budha (“Buddha’s Teaching”, 1922), a translation into biblical Hebrew of Buddha’s sayings. He also translated into Hebrew part of the Egyptian Book of the Dead. Among his publications are Literarisshe Breef (“Literary Letters,” 1909); an Arabic-Yiddish textbook (1918); and Geklibene Shriftn (“Collected Writings,” 1913), consisting of stories, sketches, poems, and critical essays. He was a pioneer feminist, a satiric feuilletonist, and an author of erotic and sensationalist fiction.

[Elias Schulman / Leonard Prager (2nd ed. )]

**SELIM I** (reigned 1512–20), Ottoman sultan. The son of Sultan Bayazid II, Selim was the ninth Ottoman sultan. Demonstrating military prowess, he was favored by the army over his elder brother Ahmed to succeed his father. He succeeded within a short time to ward off the Safavid (Persian) menace and to destroy the *Mamluk Sultanate, annexing *Syria and Egypt and the Muslim holy places in Mecca and Medina to his domains. Through these conquests, the *Ottoman Empire became the leading Muslim power.

Jewish exiles from Spain and Portugal were welcomed by the Ottoman sultans. Joseph *Hamon (d. 1518) became Selim’s physician. The sultan displayed a benevolent attitude towards the Jews and permitted the construction of new synagogues. Elijah Mizrahi was the chief *dayyan of Constantinople and in Selim’s time there existed the office of *kahya, i.e., a liaison officer between the Jewish communities and the government, among whose functions was the collection of taxes.

[Butrus Abu-Manneh (2nd ed. )]

**SELIM II** (reigned 1566–74), Ottoman sultan, the son of Sultan Suleiman the Magnificent and his favorite wife, Hurrem Sultan (Roxelana). During his reign *Cyprus was conquered from *Venice (1570–71). In the ensuing naval battle of Lepanto (October 1571), a combined fleet of Venice, the Papacy, and Spain defeated the Ottoman fleet and destroyed it. Prominent Sephardi families such as Dona Gracia and her nephew and son-in-law Don Joseph *Nasi were close to the court during his reign. Other families, such as *Hamon, De Segura, and Ibn Ya’ish, were also influential. Joseph Nasi acquired the leasing of the taxes of Naxos along with the title of Duke, and Dona Gracia that of *Tiberias and its surroundings.

**SELUJKS** (Arab. Saljūq), dynasty of Turkic origin which ruled *Iran and the surrounding countries in the 11th and 12th centuries. The conquest of much of the Middle East by the Seljuks, who founded an empire extending from Central Asia to the Mediterranean, influenced *inter alia the situation of its Jewish subjects.

The Seljuks adopted and developed various institutions of military and civil administration which became the basis of much of the government structure in many of the states which succeeded them, including the *Ayyubids, the *Mamluk Sultanate, and the *Ottoman Empire; among the most important of these institutions was the military land-tenure system known as *āqāt, which some scholars mistakenly call “Oriental feudalism.” No less important, they supported and helped restore the primacy of orthodox *Islam, known as Sunnism. From their crossing of the Oxus to *Khurasan in 1035 at the head of their Turkoman warriors, which resulted in the conquest of Persia (Iran), they saw themselves and projected an image as champions of orthodox Islam and “the friends of the caliph.” The 200 years prior to their conquests had seen an increased influence of Shi’ite heretical sects and the establishment of Shi’ite dynasties, such as the *Fatimids in 969 in *Egypt and later in parts of *Syria (including Palestine), and the Buwayhids in *Iraq and western Persia. This latter dynasty even held sway over the Arab basid caliphs, who had been reduced to virtual puppets. The Seljuks, therefore, had the sympathy of orthodox scholars and notables who facilitated their conquest in many places. In 1055 the Seljuk leader Tughril Bey entered *Baghdad and concluded a solemn treaty with the Abbasid caliph, who recognized him as “king of the East and the West,” and granted him the title “sultan.” This was the first time this title was officially used in the Islamic world for the de facto ruler of the caliph’s realm, whose authority now was recognized as mainly de jure. Accordingly, the Seljuks made great efforts to stress the Islamic tendency of their policy and to strengthen the hold of orthodox Islam; in fact, in many ways they saw their main enemy as
the extreme Shi‘ite Fatimids, and not the non-Muslims. This being said, when Seljuk armies invaded Christian countries, there were often massacres of monks, churches were burnt, and nonconformist Muslim groups were required to adapt to orthodox Islam; some of these more extreme measures were apparently the initiative of local commanders or Turcoman tribesmen and did not necessarily always represent the policy of the central government. The Seljuks founded religious colleges (madrasas) to educate new generations of theologians in the spirit of orthodox Islam. Their graduates, rigidly orthodox, became the class of scholars from which government officials were recruited, as were the teachers of the new colleges. The result was a strong, loyal, and militant class of Sunni scholars, who in turn influenced the tone and policy of Seljuk rule. The Seljuk official par excellence was the wazir Niẓām al-Mulk, who served the sultans Alp Arslan (1063–72) and Malikshah (1072–92) until his assassination. Besides being responsible for the orderly running of the vast empire and the establishment of a network of madrasas (called the Niẓāmiyya after him), he wrote a work in the Mirror-for-Princes genre, known as the Siyaset-Nameh, which gives tremendous insight into the working of these bureaucrats—cum—scholars’ minds.

The 1070s and 1080s also saw the conquest by Turcomans, more or less under Seljuk authority, of Syria and Palestine. There is ongoing discussion among scholars about the nature of this rule and the degree of violence which the local population, including the small Jewish communities, suffered. In any event, by the mid-1090s the Fatimids had regained control over Palestine. Seljuk victories in Anatolia and Syria, including the conquest of Jerusalem, had indirectly contributed to the initiative of the first Crusade, which led to the conquest of Jerusalem in 1099 by the Franks. Ironically, by the time the Crusaders arrived in Syria at the end of the 1090s, the Seljuk state had begun to fall apart in this area and even further east, and no concerted resistance to the invaders could be offered. On the other hand, Seljuk authority was maintained in central and east Iran (and in Anatolia under another branch of the family) until the mid-12th century.

The orthodox Seljuks and their client princes considered reenactment of the so-called Covenant of Ṭabari, i.e., the repressive laws designed to differentiate and humiliate non-Muslims, as an integral part of their policy. Shortly after the conquest of Persia (Iran) and Babylonia (Iraq), a series of decrees were issued, enforcing the old repressive laws on Christians and Jews, and manifestations of intolerance occurred. Ibn al-Jawzi and other chroniclers dwell on the efforts to implement the Covenant of Omar in Babylonia. In 1058 the non-Muslims of Baghdad were forced to wear distinctive signs on their turbans; they could not raise their voices when praying, nor build houses higher than those of their Muslim neighbors. Again taverns were closed and wine was poured into the streets. In 1091 the caliph decreed that the ḍhimmi wear yellow headgear and girdles of various colors, and a sign of lead around their necks as well. Women had to wear shoes of different colors, such as one red and the other black. The Arabic chronicler reports that the promulgation of these laws caused many non-Muslims to embrace Islam, in order to escape the humiliation. In 1105, however, the laws were abolished. In a diploma issued by Sanjar, the last Seljuk ruler of central and eastern Persia, to the māḥtāsib (inspector of markets and public morals) of Mazandaran, among his many responsibilities, he is called upon to make sure that the dhimmis wear distinguishing clothing to mark their inferiority. As can be seen, the Jews were not selected especially for restrictive measures under the Seljuks, but rather were swept up in general anti- ḍhimmi fervor, which also affected the more numerous Christians.

The Arabic historians reveal that the measures of the caliphs and the Seljuks authorities vis-à-vis the dhimmis, the aim of which was their humiliation, were not kept consistently. One outstanding example of the selective and far from consistent implementation of the Covenant of Omar was the Jewish taxfarmer Ibn Ḍallān, one of Niẓām al-Mulk’s protégés, who was executed by some of the latter’s opponents in 1079–80. On the other hand, the jīzya (poll tax) taken from the non-Muslims was regularly collected, making an important contribution to the revenues of the empire (and representing a real burden to the ḍhimmin, both as individuals and communities). Large Jewish communities existed in Baghdad and Nishapur, as well as other large cities of the Seljuk empire. *Benjamin of Tudela, writing several years after the end of Seljuk power in central and eastern Persia, notes Jewish communities in Hamadan, Isfahan, Nahavand, and Shiraz. These Jewish inhabitants were probably mostly involved in trade and commerce.

While not always enforced, Seljuk policy towards the ḍhimmin, like many other Seljuk institutions, served as models for subsequent dynasties. Therefore its importance should not be underestimated.

[Eliyahu Ashor / Reuven Amitai (2nd ed.)]

**SELLERS, PETER (Richard Henry; 1925–1980), British actor. Born in Portsmouth, the son of a non-Jewish pianist and a Jewish mother, Agnes née Marks, Peter Sellers was educated at a Catholic school to the age of 14 and was originally a jazz drummer. Joining the R.A.F. in 1943, he discovered his talent for mimicry while entertaining the forces in India. After the war he worked in vaudeville and in 1952, with Spike Milligan and Harry Secombe, began *The Goon Show*, a radio comedy series...**
that became a national favorite. Success took him into television and the London theater. After several small film roles, he appeared with Alec Guinness in The Ladykillers (1956). He first won wide notice in the U.S. with The Mouse That Roared (1959), in which he played several roles. Though most of his films were comedies, he won the British Film Academy Award for his serious portrayal of a union member in I'm All Right, Jack, a 1959 satire on trade unionism. His other films include Dr. Strangelove (1963), in which he played three roles: What's New, Pussycat? (1965); The Return of the Pink Panther (1975); Murder by Death (1976); The Pink Panther Strikes Again (1976); Revenge of the Pink Panther (1978); and Being There (1979).

Sellers was one of the most famous and memorable British comic actors of his time.

[Lee Healey / Jonathan Licht]

“SELLIN, ERNST” (1876–1946), German Bible scholar and archaeologist. Sellin was professor of evangelical theology at various universities. In the field of Bible research, he published Einleitung in das Alte Testament (1900, 1950) in which he emphasized the literary critical method. His book on the prophets, Deraelteste Prophetismus (1912), contains studies on the history of prophecy, the messianic age, and a comparison of the appearance of God in the Bible and the signs of divinity among pre-Hebrew peoples. He also wrote books on Job (1919), Moses (1922), and a commentary on the minor prophets – Das Zwelfprophetenbuch (1922, 1929–302-2). In his introduction to this commentary (p. 8), he sharply attacked Bible criticism of the previous 50 years. Sellin claimed that whatever exponents of that school could not reconcile with their theory they rejected as meaningless additions and, therefore, their approach to the prophetic literature was basically unsound. He also edited a series of 13 volumes of Bible commentaries, Kommentar zum Alten Testament, the first of which appeared in 1913. He published studies of the religious background of the biblical period, Beiträge zur israelitischen und juedischen Religionsgeschichte (2 vols., 1896–97).

In a history of Israel in the biblical period (Geschichte des israelitisch-juedischen Volkes, 2 vols., 1924–32), Sellin points out the relation between Israel's geographic position and the history of its community life. He differentiated between legends and history and emphasized the importance of religion, which he regarded as a decisive factor in the development of Jewish history. Sellin also made important contributions to archaeology. He conducted excavations at Tell-Tāannek, Jericho (1907–8), and Shechem (1913–14) and published reports of his work. Although his methods are outdated, his discoveries at these sites are of great value.

references to their Zionist sentiments. Davaye pomechayem o bessmertye (“Let us Dream of Immortality”) was published posthumously in 1969.

[Maurice Friedberg]

SELZ, OTTO (1881–1944?), German psychologist. Born in Munich, he first taught in Bonn until, in 1923, he was appointed professor at the Handelshochschule (a business college) at Mannheim. In 1933, when the Nazi regime came to power, he was dismissed and he emigrated to the Netherlands. During World War II he was deported and killed in a concentration camp, probably in 1944.

His work was concerned primarily with thought processes and foreshadowed the modern approach to the psychology of thinking. His theories grew out of the work of the Wuerzburg school, which rejected the notion that thinking could be analyzed by detailed self-observation. He also reacted against G.E. Mueller’s constellation theory, which interpreted thinking along purely associative lines. In 1913 and again in 1922 Selz called for a psychology of thinking that dealt primarily with processes rather than content. His theory of productive and reproductive thinking (1924) marked a major turning point as the first attempt to deal with these two processes in a single theoretical framework. In its main elements, his theory anticipated modern theories of thinking and fits in well with some recent work on computer simulation of human problem solving. His major works include Ueber die Gesetzte des geordneten Denkenverlaufs (1913), Zur Psychologie des produktiven Denkens und des Irrtums (1922), and Die Geschichte der produktiven und reproductiven Geistestaetigkeit (1924).

[Helmut E. Adler]

SELZNICK, U.S. family in the film industry. LEWIS B. SELZNICK (1872–1933), who was born in Kiev, emigrated to Pittsburgh and started a jewelry business there. Later he moved to New York. In 1910 he joined a film-making company and, becoming general manager, he persuaded the “Shubert brothers, the theatrical producers, to allow him to turn stage shows into films. He thereupon made Trioby, The Boss, and Wildfire, in which actors who later became famous played. Selznick also helped to start the star system. MYRON SELZNICK (1898–1944), his eldest son, born in Pittsburgh, worked with his father and they formed Select Pictures. During the 1920s the Selznicks controlled a multi-million-dollar business. The family fortune was, however, wiped out in the 1929 crash. Myron then became a press agent in Hollywood. DAVID OLIVER SELZNICK (1902–1965), Lewis’ youngest son, also born in Pittsburgh, became a production assistant on Westerns at MGM studios and rapidly rose to the front rank of Hollywood’s producers. He worked for Paramount and later RKO, making such films as A Bill of Divorcement, The Animal Kingdom, and King Kong. Returning to MGM as vice president, he produced major successes such as Rebecca (1940), Dinner at Eight (1933), David Copperfield (1935), Anna Karenina (1948), Duel in the Sun (1947), and Gone with the Wind (1939), then the most expensive and successful film yet made. David Selznick made or discovered many stars and at the height of his career was voted top producer by U.S. exhibitors for ten successive years. His exacting demands, however, led to many disputes with directors and actors, some of whom refused to work with him. Among his later films were The Prisoner of Zenda (1952), A Star is Born (1954), A Tale of Two Cities (1957), and A Farewell to Arms (1957).

[Ellis Nassour]

SEMAHOT (Heb. סמהות, also called Evel, divided into Evel Rabbati and Evel Zuta), the classic rabbinic text on death and mourning, one of the minor tractates generally appended to the Babylonian Talmud. Although it is not included in the Codex Munich, the only complete manuscript of the Babylonian Talmud, it does appear in its edition princeps (Venice, 1523) and in many of the later printed editions. The euphemistic title, Semahot (“Rejoicings”), which is usually applied to it, was already used by the Franco-German scholars in the 11th century. The Babylonian Talmud cites a work bearing the name Evel Rabbati as the source for three tannaitic rulings (MK 24a, 26b; Ket. 28a). In response to a query on the nature of this work, the Gaon Natronai (head of the academy at Sura 853–58) writes: “Evel is a tractate of Mishnah containing most of what is taught in Elia Megallehin [the third chapter of MK]; there are two such tractates, one major, the other minor” (Z. Wolfensohn (ed.), Hemdah Genuzah (1863), 17a; on the identity of the minor tractate, see M. Higger (ed.), Massekhet Semahot (1931), 59–72, 211–29). Although modern scholars disagree as to whether the tractate on mourning mentioned in the Talmud and described by the gaon is to be identified with this text, the medieval commentators apparently took this identity for granted (D. Zlotnick (ed. and trans.), The Tractate “Mourning,” 1, n.). Most modern scholars favor a late date for this work, placing the time of final redaction at about the middle of the eighth century. There is nothing in the text, however, pointing clearly to a late date. The latest authorities cited areJudah ‘ha-Nasi and his contemporaries in the third century. It is written in the language of the Mishnah; its style and structure throughout is that of the tannaim. It therefore seems preferable to follow the ancients in suggesting an early date— the end of the third century (D. Zlotnick, ibid., 4–7).

The text, which contains 14 chapters, begins with the legal status of the dying man, asserting that he must be considered the same as a living person in every respect. The second chapter discusses those people who did not die a natural death, e.g., suicides or executed criminals. Although funeral rites were withheld from them (Sem. 2:1, 6; D. Zlotnick, ibid., 100, no. 1), they were never denied a burial. In later chapters, the behavior and activities of the mourners during the seven- and thirty-day mourning periods are treated in detail, and rules of conduct are set down for priests and for close and distant relatives of the deceased. Burial practices not considered
elsewhere in rabbinic literature are also found here, such as the custom of inspecting the dead to make certain that death had actually occurred (8:1). Several rites, discontinued in the Diaspora lest the Jews become a cause for derision or be accused of sorcery, are also discussed: e.g., the requirement of the mourner to invert the bed, to cover his mouth and head in the manner of the Arabs, and to bare the arm and shoulder during the funeral procession (D. Zlotnick, ibid., 12–13).

What is, perhaps, the most complete martyrlogy to be found in tannaite literature is included in this tractate (ch. 8), as is the classic eulogy of R. Akiva for his son (8:13).

The standard Hebrew commentary to this work, the Nahalat Yaakov by R. Jacob Naumburg, was written during the 18th century and is found in the regular editions of the Babylonian Talmud. A critical edition of the first four chapters with a German translation was published by M. Klotz (1890). The first critical edition of the entire text was published by M. Higger (1931). An English translation including an introduction and notes with an appended Hebrew text edited from manuscripts has been published by Dov Zlotnick (1966).

**BIBLIOGRAPHY:** Bruell, Jahrbucher, 1 (1874), 1–57.

[Dov Zlotnick]

**SEMAN, PHILIP LOUIS** (1881–1957), U.S. educator and organization executive. Seman, who was born in Warsaw, Poland, went to the U.S. in 1892. After holding positions with Jewish organizations in New York and St. Louis and teaching at Washington University's School of Social Economy (1908–10), Seman became director of the Jewish People's Institute of Chicago in 1913. He held this post until 1945, during which time he turned the institute into a vitally important institution in Chicago Jewish life and became recognized as a national leader in Jewish social work. During his tenure in Chicago, he was co-founder of Hillel (1923); president of the National Conference of Jewish Social Service (1931); vice president of the National Conference on Social Work (1932); member of the executive commission of the White House Conference on Child Health and Protection; and chairman of the Chicago Recreation Commission (1934). After retiring from the institute Seman moved to Los Angeles, where he became a member of the board of the Bureau of Jewish Education (from 1947), and of the faculty and board of overseers of the University of Judaism (from 1949).

His works include *Jewish Community Life* (1924); *The Jewish Community Center* (1925); *Problems of the Leisure Hour* (1927); *Training for Leadership* (1928); *Social Orientation* (1930); and *Community Culture in an Era of Depression* (1932).

**SEMIKHAH** (Heb. סמיכה; "laying," lit. "leaning" of the hands). The word is used in two senses.

**Of Sacrifices**

The act of *semiakh* constituted the dedication by the owner of animals sacrificed on the altar. The act, which was obligatory whenever sacrifices were offered by individuals (Men. 9:7; Maim. Yad, Maaseh ha-Korbanot 3:6), was carried out by the owner laying both his hands with all his might between the horns of the animal immediately before it was dispatched (Lev. 1:4ff.; Sifra 4; Maim. loc. cit. 3:13). The ceremony took place in the courtyard of the Temple, where the animal was slain (Men. 93a, b). It had to be performed with bare hands, so that nothing might interpose between them and the head of the beast (Maim. loc. cit.). It did not apply, with two exceptions, to communal sacrifices (Men. 9:7), nor to birds (Git. 28b). Another requirement was that the act had to be carried out by the owner in person and could not be performed by proxy (Men. 9:8; Maim. loc. cit. 3:8).

**Of Judges, Elders, and Rabbis**

All Jewish religious leaders had to be ordained before they were permitted to perform certain judicial functions and to decide practical questions in Jewish law. The Bible relates that Moses ordained Joshua by placing his hands on him, thereby transferring a portion of his spirit to Joshua (Num. 27:22, 23; Deut. 3:4,9). Moses also ordained the 70 elders who assisted him in governing the people (Num. 11:16–17, 24–25). The elders ordained by Moses ordained their successors, who in turn ordained others, so that there existed an unbroken chain of ordination from Moses down to the time of the Second Temple (Maim. Yad, Sanh. 4:2). For some centuries the tradition of ordaining by the laying of the hands was continued, but the rabbis later decided to ordain by merely conferring the title “rabbia” either orally or in writing (ibid., 4:2).

Ordination was required both for membership in the Great Sanhedrin, and the smaller Sanhedrins and regular colleges of judges empowered to decide legal cases. Three rows of scholars always sat before the Sanhedrin, and whenever it became necessary to choose a new member, a scholar from the first row was chosen and ordained (Sanh. 4:4). During the time of Judah ha-Nasi it was decreed that any religio-legal decision, including decisions relating to purely ceremonial law, could only be given by those properly authorized (Sanh. 5b). While any qualified Jewish person could serve as a judge in civil cases, only Jews of pure descent were eligible to adjudicate in criminal matters involving capital punishment (Sanh. 4:2). Ordination was also required to judge in cases involving corporal punishment and fines, to intercalate months and years, to release the firstborn animals for profane use by reason of disqualifying blemishes, to annul vows, and to pass the ban of excommunication (*herem*). Only a transfer of the Divine Spirit which originally rested on Moses empowered the ordained person to make decisions in these crucial areas. Ordination could be limited to only one or some of these various functions. The lowest degree of ordination entitled the rabbi to decide only religious questions, while the highest degree entitled him to inspect firstlings, in addition to deciding religious questions and judging criminal cases (Sanh. 5a; Maim. loc. cit. 4:8). The complete formula of ordination was “Yoreh Yoreh Yaddin Yaddin. Yattir Yattir” (“May he decide? He may decide”)...
decide. May he judge? He may judge. May he permit? He may permit."

Rav, the founder of the academy of Sura in Babylonia, was authorized to exercise only the first two of these three functions since it was feared that his excessive knowledge of blemishes might enable him to declare a blemish permanent and the animal thus be permitted for profane use, where to the bystanders it appeared transitory (Sanh. 5b). The privileges of ordination could also be limited to a specific period. R. Johanan only ordained R. Shamai for the duration of his Babylonian visit (ibid.).

The ordination itself, which required the presence of three elders, one of whom was himself ordained, was originally performed by every ordained teacher upon his pupils (Sanh. 13; TJ, Sanh. 13. 19a). Nevertheless, as the influence of the Babylonian exilarch increased, it became necessary for the ordinands to obtain his authorization before serving as judges in Babylonia (Sanh. 5a). In Erez Israel it also became necessary for individual scholars to obtain the consent of the patriarch before ordaining their pupils. On account of the high regard entertained for the patriarchs of the house of Hillel, who were the recognized heads of the Jewish community of the Holy Land during the centuries subsequent to the demise of Rabban Johanan b. Zakkai, no ordination was considered valid without the patriarch's consent. The patriarch himself was at first permitted to confer it without consulting the Sanhedrin. Later the patriarch could only grant the degree in cooperation with the court (TJ, Sanh. 13. 19a).

The term used in the Holy Land in the days of the Jerusalem Talmud for ordination was minnui (literally "appointment" to the office of judge). In Babylonia the designation of semikhah (semikhuta in Aramaic) was retained (ibid.). On the day of ordination, the candidate wore a special garment (Lev. R. 2:4). After the ceremony, the scholars present praised in rhythmic sentences the person ordained. At the ordination of R. Ze'ira it was sung: "No powder, no paint, no waving of the hair, and still a graceful gazelle"; at the ordinations of Ammi and Assi: "Such as these, such as these ordain unto us" (Ket. 17a). After the ceremony, it seems that the ordinand delivered a public discourse on a specific topic (cf. the case of the incompetent teacher, Sanh. 7b). Semikhah could only be granted by scholars residing in Erez Israel to scholars present in the Holy Land at the time of their ordination. The ordinand did not have to be present at the ordination; it sufficed if the ordaining teachers sent a message to him, as long as they all were in Erez Israel (Maim. Yad, Sanh. 4:6). It is related that Johanan was grieved because he could not ordain Hanina and Oshaya since they did not reside in Palestine (Sanh. 14a). It is also related that there were two sages, Jonathan b. Aknai and Simeon b. Zirud, one of whom was ordained because he was in Palestine while the other was not because he left. The appellation of "rabbi" is therefore never used for the Babylonian amoraim since they did not possess semikhah, and they have the title "rav." As a result, the Babylonian sages were dependent upon their Palestinian colleagues. "We submit to them" was the Babylonian attitude (Pes. 51a). Nevertheless, to expedite justice, the Babylonian scholars were empowered to adjudicate all monetary cases as the "agents of the judges in Israel" (BK 84b). Once ordained in Palestine, a scholar could exercise his full authority even outside its borders.

After the Bar Kokhba Revolt (132–35 C.E.), the Roman emperor Hadrian attempted to end the spiritual authority still wielded by the Sanhedrin, which had been shorn of all government support, by forbidding the granting of semikhah to new scholars. It was declared that "whoever performed an ordination should be put to death, and whoever received ordination should be put to death, the city in which the ordination took place demolished, and the boundaries wherein it had been performed uprooted" (Sanh. 14a). R. "Judah b. Bava was executed for ordaining several of his pupils in a no-man's-land between Usha and Shefaram. It is not clear when the original semikhah with the powers described above was discontinued. Majority opinion favors the latter part of the fourth century during the time of Hillel II. According to Nahmanides (cf. his notes on Maimonides, Sefer ha-Mitzvot, no. 153), this happened before the fixing of the permanent calendar by Hillel in 361 C.E. Some date it with the extinction of the patriarchate at the death of the last patriarch, *Gaon
diel v1, in 425 C.E. Others set the time as late as 1062 with the death of Daniel b. Azariah, the Gaon of Palestine. Still others cite proof that this traditional ordination continued until the time of Maimonides.

[Aaron Rothkoff]

**In Medieval and Modern Times**

Due to the changing conditions of Jewish life, which transformed some of the functions of the rabbinate, semikhah acquired new connotations. In the geonic period the rosh go-
lah, the *exilarch, conferred a license (reshut) only "to effect compromises among litigants, to investigate legal disputes, to act as arbitrator, and to execute legal documents." The geonim too were authorized to appoint scribes, leaders in public worship, judges (*dayyanim), and teachers. In the tenth century Sherira Gaon wrote: "The row [in the academy] takes the place of the Sanhedrin and its head takes the place of Moses our teacher," thus continuing to a certain extent the claim to a kind of sacred order among the academy scholars. The head referred to evidently is the av bet din. *Samuel b. Ali, Gaon of Baghdad in the 12th century, defined the functions and authority of the av bet din when writing of R. *Zerachiah b. Isaac ha-Levi: "We have ordained him av bet din of the academy and have empowered him to render decisions in money and ritual matters, to proclaim the firstborn permissible for profane use by reason of blemishes, to preach the Torah in public, to deliver lectures, and to appoint an interpreter." The 12th-century traveler *Benjamin of Tudela wrote that in his day the exilarch had the authority to appoint local clergymen in Persia and in many other countries and that they came to him to secure the right to deliver decisions. *Judah b. Barzilai of Barcelona (11th–12th century) distinguished between a ketav minnui, a certificate of appointment as dayyan or head of an academy, and a ketav masmikh, a certificate of ordination.
WHEREBY they ordain one of the students to be called rabbi or hakham. Cases involving fines are not adjudicated outside Ereṣ Israel and ordination is not effected by the laying on of hands on the head of the ordinand. They merely write a certificate of ordination.

These reformulations and transformations of the ancient semikhah tend to show that from the fifth century onward there was both a document of appointment to office and an act conferring powers, which was always of a sacral nature. This was particularly strong in the centralistic and aristocratic regime of the geonic leadership but the sacral element was never present to the same extent as that involved in ancient semikhah. Despite this continuity of many elements of the traditional semikhah, attempts at its complete restoration were made from time to time. As early as the days of Elijah ha-Kohen Gaon of Palestine in 1083 such an attempt was made. From the very structure and logic of an autonomous pattern of national leadership and of a cultural scale of values in which learning and the scholar were supreme, it can be deduced that everywhere in Jewish communities – even after the 12th century – there was some formula for conferring judicial function and powers and for attesting to scholarly achievements. Of necessity this would be to some greater or lesser extent of a sacral nature. After the “Black Death, and under the influence of diplomas and titles conferred by Christian universities, the term semikhah reappeared in Ashkenaz (Franco-Germany), becoming transformed into a diploma conferred by a teacher on his pupil which affirmed his capacity and right to be judge and teacher. The first waves of the Spanish exiles tended to regard the Ashkenazi semikhah as evidence of an improper pride and imitation of Christian ways. Yet various factors – the messianic hopes entertained after the expulsion, the feeling that it was necessary to respond to exile and dispersion by the restoration of a central sacral authority, and the urge for an authority that could grant penance and absolution to people who labored under a sense of guilt for having lived for some time as “anusim” – combined to recall Maimonides’ view that in principle semikhah could be restored (see above), and on the basis of this to advocate ordaining one man who would renew the sacral chain of ancient semikhah, thus later restoring the Sanhedrin and paving the way for repentance and the Messiah.

[Isaac Levitats]

Controversy on the Renewal of the Semikhah

Despite the continuity of the Jewish judiciary even after the loss of the traditional formal semikhah, there have been some attempts to reinstitute the original semikhah. Maimonides’ viewpoint is focal to this concept of renewal for he ruled that “if all the Palestinian sages would unanimously agree to appoint and ordain judges, then these new ordinants would possess the full authority of the original ordained judges” (Yad, Sanh. 4:11). Based on this ruling, an attempt was made in 1538 by R. Jacob Berab of Safed, at that time the largest community in Ereṣ Israel, to restore the practice of ordaining. At Berab’s initiative, 25 rabbis convened, and they ordained Berab as their chief rabbi. Berab then ordained four other rabbis, including Joseph Caro, the author of the Shulḥan Arukh, and Moses di Trani. Caro ordained Moses Alshekh, who later ordained Ḥayyim Vital, the leading disciple of R. Isaac Luria. Berab hoped that he could thus unify the various Jewish communities by ultimately reestablishing a Sanhedrin. Cases involving fines could now be judged again, and flagellation, which was required by law to atone for the sins of the Conversos, could be ordered by the court. However, Berab had neglected to obtain the consent of the Jerusalem rabbis. The latter felt slighted and rejected Berab when he requested that they recognize his authority. They protested his innovation, and the head of the Jerusalem rabbinate, Levi ibn Ḥabib, wrote an entire treatise to prove the illegality of Berab’s actions (Kunteres ha-Semikhah). A caustic controversy arose between Ibn Ḥabib and Berab, and after the latter’s death in 1541 the renewed institution of ordination gradually languished into obscurity. Modern scholars have approved Ibn Ḥabib’s opposition; it was also felt that he feared that Berab’s actions would arouse messianic speculations which could result in a false messianic movement (see B. Revel in bibl.). It may also be that Ibn Ḥabib held that it was not permitted to hasten the advent of the messianic era by reestablishing the Sanhedrin but to wait for Divine initiative (see J. Katz in bibl.).

With the establishment of the State of Israel in 1948, R. Judah Leib Maimon, Israel’s first minister of religious affairs, made a similar plea to restore the Sanhedrin. He was, however, opposed by the overwhelming majority of his colleagues of the non-Orthodox groups as well as by rabbis of the extreme right. Israel’s then Ashkenazi chief rabbi, Isaac Herzog, was also hesitant, and again the attempt came to naught.

“Neo-Semikhah” and Hattarat Hora’ah

The term semikhah has also been utilized for ordination other than the formal traditional semikhah. It has evolved from the term hattarat hora’ah which literally means “authorization to render decisions” in matters permitted or forbidden by Jewish religious law. The infinitive lehorot, in the sense of the authoritative interpretation of the law, occurs in connection with the duties of the descendants of Aaron, the priests, who also served as teachers and judges in Leviticus 10:11 (cf. Deut. 17:9 ff.). It was also understood in this sense in the Talmud (Ker. 13b). The hattarat hora’ah generally was a rabbinical diploma testifying to the fitness of the person to whom it had been issued. It also empowered the recipient to fulfill the functions of a rabbi, which were originally those of acting as a judge for the members of the community that engaged him. At first this document did not resemble the language of the original semikhah, it did not state yoreh yoreh yaddin, and had none of the far-reaching authority of the original semikhah. The earliest form of hattarat hora’ah was called iggeret reshut (“letter of permission”) or pitka de-dayyanuta (“writ of jurisdiction”). Such a document, composed in Aramaic in the geonic period of the ninth century, reads:
We have appointed Peloni b. Peloni [i.e., N., son of N.] a justice in the town of… and have invested him with authority relating to the Commandments and that which is prohibited and permitted and connected with the fear of God. He has the authority to do that which he thinks is proper to anyone not obeying his verdicts. The miscreant is likewise liable to [the punishment of] Heaven" (A. Harkavy (ed.), Zikkaron la-Reshonim ve-Gam la-Aharonim, 4 (1887), 80).

Originally, the title “rabbi” was restricted to religious authorities performing the functions of judges ordained with the formal tradition of semikhah. As stated, their counterparts in Babylonia were always referred to as “rav” (cf. Sanh. 136f. and BM 85bf). The title “rabbi” appears again in the Middle Ages. It was then bestowed on both Ashkenazi and Sephardi authorities in rabbinic law, although not in the same sense as its previous usage during the talmudic period when the original semikhah was still granted. By the 13th century, documents of “neo-semikhah” ordination began to resemble the format of the traditional semikhah. Recipients were empowered to be yoreh yoreh in matters of rituals, while the more advanced student was permitted to be yaddin yaddin in all areas of Jewish law. The Sephardim made more discriminate use of this rabbinical epithet than the Ashkenazim by calling the ordinary rabbinic scholar hakham, and reserving the more honorific designation of “rabbi” for men of outstanding learning (cf. David Messer Leon’s Kevod Hakhamim, ed. by S. Bernfeld (1899), 63). During the second half of the 14th century the title Morena (“our guide and teacher”) was introduced as the designation for one who possessed “neo-semikhah” in Franco-Germany. Formulas for “neo-semikhah” were fixed, as well as the stipulation of well-defined qualifications and privileges for those possessing this degree. Formerly there was no need for all rabbis and scholars to carry a patent of semikhah with them since their authority rested on personal, rather than institutional grounds. This changed with the uprooting of yeshivot and communities in the 14th and 15th centuries in Franco-Germany. Formal semikhah became a necessity for safeguarding the academic standards of the rabbinate at a time when the dispersal and migration of scholars and yeshivot endangered the continuity of academic traditions. However, as soon as semikhah was formalized, a process of institutionalization set in, thus making it possible for lesser types of scholars to attain rabbinical authority and privilege. This was also hastened by the oncoming process of local rulers to appoint “chief rabbis” for the purpose of tax administration. The social, personal, and academic problems involved in the Ashkenazi semikhah continued to form a subject for lively discussion among scholars well into the 17th century. It came under heavy attack from Sephardi rabbis after the expulsion from Spain.

Occasionally, semikhah became a source of income for rabbis and it was necessary for communities and general councils to promulgate takkanot regarding the privileges and qualifications connected with semikhah. By the end of the 16th century, the title of Morena had ceased to be of a purely academic character and it was increasingly used as a symbol of social status in the communities (see Breuer in bibl.). The scholar equipped with this “neo-semikhah” was only able to exercise his authority with the consent of the community that elected him. His jurisdiction was limited to that community. R. Isaac b. Sheshet rendered a decision (1380) on this point in the case of the French community of Provence, which would not permit the interference of R. “Meir b. Baruch of Rothenburg in its affairs (Teshuvot ha-Ribash, nos. 268–73). Meir had ordained and appointed a new chief rabbi for Provence who he felt was worthier than the community’s own choice. Nevertheless, his intervention was rejected. Because of his involvement in this type of dispute, some scholars erroneously thought that Meir had attempted to reintroduce the original formal semikhah. However, within the confines of his own community the scholar’s jurisdiction was supreme. No other rabbi had the right to intervene without his consent (cf. Samuel Archivolti’s Palgei Mayim (Salonika, 1608), 15a).

It was an established principle, dating from the time of the tannaim, that no pupil was to issue a decision in the presence of his teacher (Er. 63a). The age for receiving semikhah or the hattarat herusha was 18. Eleazar b. Azariah was appointed head of the academy at this age (Ber. 27b, 28a) as was Rabbah (Ber. 64a; cf. Yev. 105a) and Hai Gaon. David Messer Leon received his title at 18, at Naples (Kevod Hakhamim, 64). The question of what degree of learning entitles a scholar to receive the diploma from his teacher is fully discussed by Messer Leon. It is necessary for the student to master the original sources of Bible and Talmud and to possess logical reasoning power. In the 18th and 19th centuries it became customary for aspiring rabbinical students to receive ordination from leading rabbinical figures, in addition to the diplomas they received from their own teachers. They were orally tested by noted rabbis, and if found sufficiently learned and worthy, they were also granted certificates of ordination by these well-known scholars. The following is the text of such a diploma granted by R. Isaac Elhanan “Spektor of Kovno (d. 1896), from whom most Russian rabbis of the second half of the 19th century received their “neo-semikhah”:

Crysta meri esh yon chelovSupreme unto him the proclamation of God, who has blessed the most of the world, to command. His jurisdiction was supreme. No other rabbi had the right to exercise the functions of judges ordained with the original formal semikhah. However, within the confines of his own community the scholar’s jurisdiction was supreme. No other rabbi had the right to intervene without his consent (cf. Samuel Archivolti’s Palgei Mayim (Salonika, 1608), 15a).

It was an established principle, dating from the time of the tannaim, that no pupil was to issue a decision in the presence of his teacher (Er. 63a). The age for receiving semikhah or the hattarat herusha was 18. Eleazar b. Azariah was appointed head of the academy at this age (Ber. 27b, 28a) as was Rabbah (Ber. 64a; cf. Yev. 105a) and Hai Gaon. David Messer Leon received his title at 18, at Naples (Kevod Hakhamim, 64). The question of what degree of learning entitles a scholar to receive the diploma from his teacher is fully discussed by Messer Leon. It is necessary for the student to master the original sources of Bible and Talmud and to possess logical reasoning power. In the 18th and 19th centuries it became customary for aspiring rabbinical students to receive ordination from leading rabbinical figures, in addition to the diplomas they received from their own teachers. They were orally tested by noted rabbis, and if found sufficiently learned and worthy, they were also granted certificates of ordination by these well-known scholars. The following is the text of such a diploma granted by R. Isaac Elhanan "Spektor of Kovno (d. 1896), from whom most Russian rabbis of the second half of the 19th century received their “neo-semikhah”:

Verily, these words of truth may be ascribed to that worthy man, rabbi…, a native of…, with whom I have fully discussed the Talmud and codes in which I find him to be filled with the Word of the Lord. He is also an excellent preacher, preaching what is moral and practicing what he preaches. Therefore I say: Let his power and might in the Torah be encouraged. Let him teach and decide in all matters of monetary, dietary, and ritual law, get and halizah, and laws relating to cleanliness and uncleanliness. May it be the will of the Almighty to send him an hon-
orable position in accordance with his virtues. The said rabbi well deserves and is truly competent to guide a flock. Signed on this date… Isaac Elhanan, who dwells here in the holy congregation of Kovno.

Modern Practice of Ordaining Rabbis

During the 19th century, a drastic change took place with regard to the position, requirements, and training of rabbis. The change originated in Germany, which became the center for the development of Reform Judaism and for the scientific study of Jewish history and the Jewish religion. Knowledge solely of the Talmud and codes was no longer deemed sufficient, and many communities now demanded that their rabbis be versed in the vernacular, secular studies, and auxiliary Judaic subjects. The yeshivot and unsupervised instruction by individual rabbis were found to be increasingly unsatisfactory. The discontent with the traditional rabbinate was further intensified by the rapid spread of Reform Judaism. To meet these new conditions, rabbinical seminaries were organized in rapid succession. With the development of these schools, curricula were evolved which no longer placed the stress on Talmud and codes. The more the particular seminary moved away from Orthodoxy, the less its curriculum emphasized Talmud and related subjects. Bible, homiletics, Jewish history and philosophy, the grammar of Hebrew and of cognate languages, pastoral psychology, and synagogue administration gradually became integral required courses of study for rabbinical students. Many of these seminaries no longer granted the traditional rabbinical degree, but rather certified their graduates as “preachers and teachers in Israel.” Some schools granted two different diplomas. Most graduates were simply awarded the “preacher and teacher” degree, while the more advanced students also received the traditional yoreh yoreh yaddin yaddin ordination after passing special examinations in Talmud and codes. Some schools continued to include the traditional formula of ordination in the format of its degree, but this formula was now being utilized in the ceremonial sense rather than as an indication of the graduate’s knowledge of the codes.

In contemporary Israel, where there are solely traditional yeshivot which ordain rabbis, the traditional method and form of ordination is utilized. In the United States, the Rabbi Isaac Elchanan Theological Seminary of “Yeshiva University also ordains its graduates in the traditional fashion after they complete a course of study which stresses Talmud and codes. The Jewish Theological Seminary does not grant the traditional ordination to its students. The Hebrew Union College includes the traditional formula of yoreh yoreh yaddin yaddin in the Hebrew version of its certification, but this is purely in the formal sense. The title “rabbi” is therefore no longer an indication, as it was up to the last centuries, that its bearer is thoroughly acquainted with the Talmud and codes, but it is the commonly accepted title for the spiritual leaders of all Jewish denominations, Orthodox, Conservative, Reform, and Reconstructionist.

Ordination of Women

Female rabbinical ordination began to be seriously pondered in the late 19th century in Germany and the United States as a natural, if uncomfortable, consequence of Reform Judaism’s insistence on the equality of men and women. Ordaining women also emerged as part of a larger debate about women’s rights and their access to the learned professions. If women wished to become doctors, lawyers, and ministers, professions which then largely excluded them, why should they not also aspire to the rabbinate? However, the ambivalence of Reform Jewish leaders, who struggled to balance their long-stated commitment to the religious emancipation of Jewish women with their own ingrained prejudices about women’s proper sphere, and their perceptions of the receptivity of their congregations to female rabbis, delayed a positive commitment to women’s ordination for nearly a century, despite a series of challengers. It took the collision of second-wave feminism with American Judaism to propel women into the rabbinate in a sustained and institutionalized way. By the first decade of the 21st century, the presence of hundreds of female rabbis had expanded traditional notions of religious leadership throughout the Jewish world.

The American debate over female rabbis first surfaced publicly in the 1890s as the press ordained the charismatic female Jewish preacher Ray “Frank “the girl rabbi of the golden west.” In the decades that followed, a series of individuals challenged the established American rabbinical seminaries, each seeking unsuccessfully to become the first woman ever ordained and hoping to blaze a path for others to follow. These include Martha Neumark (1904–1981), whose request for a High Holiday pulpit, following three years of intensive study at Hebrew Union College, ultimately led to a 1923 vote by the lay board of governors supporting the policy of only ordaining men. The aspirations of other able women of this era were also disappointed, including those of Helen Hadas-Levinthal who was not ordained with her male classmates at the Jewish Institute of Religion in 1939, despite becoming the first American woman to complete a rabbinic curriculum. Apparently, none of these challengers were aware that in 1935, in Germany, Regina Jonas (1902–1944) had already been privately ordained. She used her rabbinic position to offer solace to her persecuted co-religionists in Nazi Germany, but, because she shared their fate, the news of her breakthrough perished with her.

In the 1950s, the question of women’s ordination received new attention when the story of Paula Herskovitz Ackerman, a rebbetzin who succeeded her late husband in the pulpit was considered so newsworthy that her picture appeared in Time magazine. Publicity about the growing success of women in the Protestant ministry also prompted Reform rabbis, Jewish journalists, and leaders of the Reform National Federation of Temple Sisterhoods to return to the question of women rabbis. Concurrently, in the 1950s and 1960s, a small group of idealistic and able women students had come to HUC-JIR with hopes that their studies would lead to rabbinic ordina-
tion. The question of female ordination gained greater urgency in the 1960s. As many Americans and American Jews embraced a feminist commitment to egalitarianism, female ordination became an important symbol of Judaism's commitment to gender equity.

Sally Jane *Priesand (1946–), a talented and tenacious young woman, became the first woman rabbi in North America in 1972, ordained by the Hebrew Union College-Jewish Institute of Religion in Cincinnati, Ohio. The decision to ordain Priesand was never a foregone conclusion, but it seems likely that proclaiming a woman rabbi no longer appeared so revolutionary against the backdrop of the dramatic social and political upheavals in American life in this epoch. By acquiescing to women's ordination, Reform leaders were able to portray themselves as continuing their historic project of adapting Judaism to respond to modernity while simultaneously demonstrating Reform Judaism's commitment to women's equality. Two years later the Reconstructionist movement ordained its first female rabbinic student, Sandy Eisenberg Sasso (1947–), and, in 1986, after a vociferous public debate that lasted slightly over a decade, the Conservative movement followed suit with the ordination of Amy *Eilberg (1955–). Even as the question of the permissibility of women's ordination closed in the liberal movements of American Judaism and the first women were ordained in Great Britain and in Israel, engaged Orthodox Jews began to ask if and when there would be female Orthodox rabbis. In the early 21st century, halakhically knowledgeable women served as rabbinic assistants in some Modern Orthodox congregations in North America, and as expert advocates on legal issues connected with women's status in Israel.

As the struggle for female ordination closed for many, the history of women in the rabbinate has opened. Women rabbinical students and rabbis have had a transformative impact on their seminaries, their congregants, and their male colleagues, and have faced numerous challenges in the effort to reconcile Judaism with women's voices and perspectives. The first generations of female rabbis learned to convince congregations to hire them, to establish their authority in a hitherto exclusively male profession, and to negotiate for benefits such as maternity leave. Moreover, female rabbis have confronted the marginalization of women's voices and views in the sacred texts and liturgy of Jewish tradition and have focused attention on models of female strength, intelligence, and leadership in the Jewish past. Many have joined with other contemporary Jewish women to create new rituals to recognize and sacralize moments of change, joy, and despair in women's lives. They have also extended their feminist critique to include the challenges that face gays and lesbians.

In every context in which they function, on pulpits and in classrooms, under the *huppah and at the circumcision table, women rabbis have enlightened their congregants, students, and male colleagues about the impact of gender in Judaism and for Jewish women. In doing so, they have reshaped modern Judaism in ways utterly unimaginable a short half century ago.

SEMINAIRE ISRAÉLITE DE FRANCE, institute of higher education of Jewish and secular learning; also known as École Rabbinique; founded in Metz in 1829 and transferred to Paris in 1859. The Séminaire Israélite de France has trained rabbis, *hazzanim, and Hebrew teachers for France and French-speaking countries. It has followed the motto of *Torah im derekh eretz ("Torah combined with general culture") to meet the needs of modern Judaism. During the German occupation the seminary went to Vichy, Chamallières, Lyons; officially suppressed after World War II he resumed work as economic editor of the daily *Revista Cultului Mozaic and other papers.

SEMILIAN, SAVIN SOLOMON (1902– ), Romanian journalist and historian of Romanian Jewry. Born in Brăila, Semilian edited the economic columns of various Bucharest papers and wrote for most Romanian literary magazines and Jewish journals until dismissed during the Nazi regime. After World War II he resumed work as economic editor of the daily Co-didianul, Națiunea and other papers. He also wrote the history of Braila Jewry and on Jewish elements in Romanian folklore. He became librarian of Bucharest's Jewish archives and edited Revista Cultului Mozaic, a cultural fortnightly published by the Federation of Jewish Communities.
SEMITES

with the ancient rabbinical and more recent commentaries; philosophy; ancient and modern Hebrew literature and Jewish history; homiletics and liturgy. The program of general studies consists of philosophy and French literature. Students can, or are encouraged to, follow a general academic course at the same time. Studies are spread over a period of one to five years according to a student’s previous qualifications. During their program of study, students are encouraged to attend a yeshivah in Israel for one year. They undergo various terms of probation, namely as talmud torah teachers, at the bet din, and in the communities. Formerly a preparatory section, which admitted younger pupils who had not yet obtained the baccalaureate and which was known as the talmud torah, had been affiliated with the institute. Another branch, the Ecole de Pédagogie et de Liturgie, previously trained hazzanim and Hebrew teachers. The central consistory assumes the administrative and financial responsibility of the institute, with increasing financial difficulties moving into the 21st century. The chief rabbi of France is the legal president of the administrative commission, and the institute provides boarding facilities for an average of 15 to 20 students. The final examination includes the preparation of a memorandum ("mémoire") and a rabbinical degree is awarded. Three degrees, on an average, are awarded each year. As the oldest institution of the seminary-type in the world and the last one existing in Western Europe, the stiff has recruited more than 400 students, more than 300 of whom obtained the degree of rabbi, hazzan or teacher. In the early 21st century it faces the new, contradictory aspirations concerning the role of the rabbis and suffers from a lack of prestige and even from some suspicion among that part of religious Judaism whose references are in the "world of the yeshivot." Its library, with some 60,000 volumes, is unique in Paris despite losses in previous decades; in certain fields it is complementary to that of the "Alliance Israélite Universelle. The library was restored in 2004 and scholars have access to it; its manuscripts are on deposit in the Alliance library.

[Henri Schilli / Jean-Pierre Rothschild (2nd ed.)]

SEMITES, a term originally referring to those peoples listed in the table of nations (Gen. 10) as descendants of Noah’s son Shem (Sem in the LXX and the Vulgate). The derivative "semitic" was coined as a linguistic term by A.L. Schlozer in 1781 (in J.G. Eichhorn (ed.), Repertorium fuer bibliische und morgen laendische Literatur, 8 (1781), 161). Shem is given five sons who had 21 descendants, making a total of 66 peoples derived from him. These include the Elamites and the Assyrians, the Lydians (but note Gen. 10:13), the Arameans, and numerous Arab tribes (Gen. 10:21–31). They are spread from Lydia, eastward through Syria and Assyria, to Persia. Their northern boundary is Armenia, and their southern, the Red Sea and the Persian Gulf. Early in the development of modern ethnology it was realized that the list in Genesis combines peoples that sometimes have nothing in common but geographic propinquity. "Semite" was then defined by the supposed physical characteristics of the chief surviving representatives of the list, the Jews and the Arabs: dolichocephalic skulls; curly and abundant hair; slightly wavy or straight strong beard, predominantly black; prominent (straight or aquiline) nose; oval face (DB, s.v.).

The problematic nature and evil results of earlier racial theories have led to a restriction of the terms Semite and Semitic in careful modern usage to linguistic categories. Aside from the biblical referent, the linguistic is the only modern scholarly-scientific use of the term. The combination of peoples under the rubric Semites in Genesis 10 is not justified by the linguistic criterion. The common features of the languages of the Assyrians, Arameans, and Arabs, which suffice to mark them as members of one family, set them apart from the "Semite" Lydians (Lud) and Elamites, whose languages are totally unrelated. These common features comprise the identifying marks of the Semitic "languages, and in current usage the peoples speaking these languages are called Semitic – today mainly the Jews (Hebrew) and Arabs, but in ancient times the Akkadians, the Amorites, the Babylonians, the Phoenicians, and the Canaanites as well. A striking instance of divergence between modern and ancient classification is the case of the Canaanites and Phoenicians. Genesis 10:6 and verses 15–19 represent them as Hamites, perhaps owing to their close relationship with Hamitic Egypt over many centuries. However, the languages of Phoenicia and Canaan – the best known of which is Hebrew (Isa. 19:18) – are Semitic in the modern sense, as are the peoples who spoke them. (The "Hebrews" do not appear at all in the table of nations; however, it is generally supposed that Eber, a descendant of Shem (Gen. 10:21, 25), is their eponym.) For the modern ethnological classification of the "Semites" see the article Theory of *Race; for the political use of the term, see "Antisemitism.

[Moshe Greenberg]

SEMITIC LANGUAGES, the name given by A.L. Schlozer in 1781 to the language family to which Hebrew belongs because the languages then reckoned among this family (except Canaanite) were spoken by peoples included in Genesis 10:21–29 among the sons of Shem.

1. Wider Background

The Semitic family forms part of a wider grouping generally called Hamito-Semitic, but lately also known as Afroasiatic or Afrasian. This includes with certainty:

(a) Ancient Egyptian and its descendant, Coptic;

(b) the Cushitic languages, comprising a large number of mostly little-explored languages spoken in the northeast corner of Africa, the most important ones being Beja (on the Red Sea coast), Galla (in Ethiopia), and Somali;

(c) Berber, with numerous dialects, spread from the Siwa Oasis in Egypt to Morocco, and southward into the Sahara (Tuareg). Less well established is the status within this family of the Chadic languages of West Africa, the chief of which is
Hausa, and of the Central-Saharan group. Genetic relationship has often been claimed between the Semitic languages and the Indo-European family (to which English belongs as one of the Teutonic languages, as well as Latin and its descendants, Greek, Slavonic, Iranian, Sanskrit, Hittite, etc.). Though such a connection is intrinsically probable, no definite proof has been provided.

2. The Semitic Family

About 70 distinct forms of Semitic are known, ranging from important languages with large literatures to language forms used over a limited territory and either entirely unwritten or possessing but few preserved documents. It was usual, until a short time ago, to group all these into five great branches: Canaanite, Aramaic, Akkadian, Arabic, and Ethiopic, each with an important literary language at its center, and the other forms treated as dialects. This division can no longer be maintained because of the discovery of languages that do not fit into any of those branches, and the rise of doubts with regard to the genetic justification of the assumption of such branches as Canaanite, Aramaic, or Arabic. It is, however, still convenient to describe the languages and dialects roughly in the order of the above branches.

3a. Northwest Semitic

This is the grouping to which Hebrew belongs. Starting from the north, there is Ugaritic, on the seacoast in the northwest corner of Syria, documented in the 14th–13th centuries B.C.E. by poetry, mainly epic, and by administrative lists and letters. While quite distinct from Hebrew as a language, it closely resembles Hebrew in its poetic style, and its study has thrown much light on certain aspects of Hebrew literature. South of Ugaritic, along the coast as far as Haifa and even beyond, was the area of Phoenician. The oldest inscriptions have been variously dated to the 17th, 12th, or even ninth century B.C.E. In the Phoenician homeland, inscriptions appear down to the first century B.C.E. Inscriptions in this language are also known from Cyprus, from Cilicia (the inscription of Azatiwada of the eighth (?) century is the longest Phoenician inscription known), and from various places in the Mediterranean as far west as Spain, from Marseille, from Pyrgoi in Italy, etc. In Carthage, a Phoenician colony, the language developed a distinct form, called Punic, and in its latest stage, documented down to the first centuries C.E., Neo-Punic. In Punic there exists the only continuous text which shows what Phoenician sounded like, namely the Punic passages in Latin script inserted in the play Poenulus by Plautus (254–184). From these it is also learned that at least second-century Phoenician was more different from Hebrew than can be guessed from the unvocalized Semitic script of the inscriptions.

The earliest attestation of the language of Phoenicia, however, is not in documents written in that language, but is obtained through the mistakes made by scribes in that area in the Babylonian cuneiform text of the Tell el-Amarna Letters (14th–13th centuries B.C.E.), as well as in a small number of local words used to gloss certain Babylonian words in those letters. These so-called Canaanisms show clearly that already at that time a language was spoken in the area which had typical features of later Phoenician. However, the senders of the Tell el-Amarna Letters were not only local rulers in what later became Phœnicia, but also in the inland of Syria and further south in Palestine. The Canaanisms in letters from all those areas are so similar that a single language was used in that entire region. That there should have been no marked differences of language in such a large, geographically broken-up and politically disunited area is rather strange, and in fact there is evidence of at least one difference, in the development of the sibilants, between Jerusalem and the areas further north, which appears in place names. Therefore, the question may be asked whether the Canaanisms in the Tell el-Amarna Letters do not represent a common literary language rather than the actual spoken local forms. This problem, still unsolved, is of great importance to the history of Hebrew, in view of the large-scale Canaanite element in that language. The evidence, however, speaks in any case for the assumption that a language very close to Hebrew was spoken in Palestine in the period preceding the Israelite conquest. Unfortunately there exists no later literary document in the language of the non-Israelite Semitic population of Palestine. All views about the relation between Canaanite and Hebrew are based on extrapolations from what is known of Phoenician and of pre-Israelite Canaanite. Apart from the Tell el-Amarna Letters, there are two other sources of information about the Semitic languages spoken in Palestine. One source is the Semitic loanwords in Ancient Egyptian and the few words in Egyptian texts put into the mouths of Semites. This material is unmistakably Northwest Semitic, but cannot be further defined with any certainty, and there are many items the semantic identification of which is doubtful. Part of it is written in the so-called syllabic hieroglyphic spelling, and according to the reading of this system by W.F. Albright, the Semitic words show up in places where Semitic a is represented in Canaanite by d. The other source is a number of inscriptions in an early form of alphabetic writing, which has not yet been satisfactorily deciphered, and some in legible Canaanite script, of which a few may be non-Israelite.

To the south of Canaan a number of inscriptions have been found in the Sinai Peninsula, some superimposed upon datable Egyptian objects. The whole series is variously dated by scholars between 1900 and 1500 B.C.E. Their Semitic character has not been doubted, but the attempts at decipherment have not produced enough agreement even to identify their language with assurance as Northwest Semitic.

Proceeding inland, east of the coastal languages described, from south to north, there is in southern Transjordan evidence of three ancient peoples: the Edomites, the Ammonites, and the Moabites. The few Ammonite and Edomite inscriptions found are insufficient to allow conclusions as to the exact character of those languages. As for Edomite, quite a few scholars have sought evidence concerning the Edomite language in the deviations of the Book of Job from normal
biballic Hebrew, some drawing the conclusion that it was a form of Arabic, others, especially N.H. Tur-Sinai, that it was Aramaic. King Mesha of Moab set up a lengthy inscription, of which now two copies are known. Unless the view of Segert is accepted that the inscription is in Hebrew, written by an Israelite, it must be concluded that eighth-century Moabite was very similar to biblical Hebrew, at least as far as its consonantal skeleton was concerned. A plaster text found at Tell Deir Alla (biblical Succoth?) revealed an unknown Northwest Semitic dialect, though some consider the language of the text to be Aramaic.

The linguistic situation in inland Syria is complicated. At Mari and in Mesopotamia, one finds in the second quarter of the second millennium large numbers of personal names of a Northwest Semitic character, and at Mari also a few common nouns apparently belonging to the same language. Historically, these names are connected with Amurrū. Although the bearers of these names ruled Mari and Babylonia, they did not, as far as is known, produce any documents in their own language, but used Akkadian, and the proper names are practically all there is to go on in reconstructing the language they spoke; it shows connections with Uguritic and Canaanite. It is still a moot point whether the Emûrû mentioned in the Bible were Amurrū. Also the connection between the Amurrū and the central Syrian state of Amuru (biblical Succoth?) is not clear. Because of the position of the Amorites as a link between Mesopotamia and Syria and Palestine, it is possible - but cannot be proved at present - that the Amorite language had considerable influence upon the rest of Northwest Semitic.

At Zenîrî, in northern Syria, there are, for a short period in the eighth century B.C.E., inscriptions in the local language of a region called Shamal or Ya‘udi. This so-called Samalian stands about halfway between Phoenician and Aramaic. The existence of such an intermediate dialect is of importance for determining the origins of the most widely developed branch of Northwest Semitic, Aramaic. It is widely believed, following the researches of Moscati and Mazar, that Aramaic, used from the early ninth century onward in inscriptions from northern Syria to Damascus, did not come as a separate language with the Aramaic tribes from outside Syria, but rather spread from the region of Damascus as a result of the unification of large parts of Syria under the tenth-century kingdom of Damascus.

The presence of certain “Aramaic” phonetic features in the Hebrew of the 11th-century Song of Deborah shows that Northeastern Hebrew shared these features with the Damascus dialect. As a result of political events, dialects in middle and northern Syria, which originally may have resembled Amorite and or Ya‘udic, became Aramaicized. (For the later fortunes of this language, see “Aramaic.”) The great importance of the Aramaic language group for the study of Hebrew is due

(a) to its being the best-preserved member of the Northwest Semitic branch,

(b) to its persistent influence on Hebrew at almost all the stages of the latter’s development, and

(c) to the existence of several specific Jewish-Aramaic dialects at various times, beginning with biblical Aramaic and ending with today’s colloquials from Iraqi, Turkish, and Iranian Kurdistan.

3b. East Semitic

This is represented by the various branches of the Akkadian language and by Eblaitic. The former is divided into Old Akkadian (c. 2500–1950 B.C.E.), Babylonian (which also was used as a literary language in Assyria), and Assyrian. Akkadian was written in a script that expressed syllables, and hence also indicated the vowels, but on the other hand seems to have been in several respects phonetically imperfect, owing to its having been adapted originally from a non-Semitic language, Sumerian. Documents were written mainly with a stylus on clay tablets (cuneiform), and are thus practically imperishable. The huge number of private letters, contracts, public documents, and literary texts preserved makes Akkadian one of the principal sources for ancient Semitic. Various forms of Akkadian served in the second millennium B.C.E. for purposes of official correspondence in Syria and Palestine. The outstanding case of this is the Tell el-Amarna Letters. This use of Akkadian bears witness to what must have been extensive cultural influence. In its wake, hundreds of Akkadian words entered the Hebrew language, and this number was further increased during the political contacts in the ninth to sixth centuries and once more through indirect loans via Aramaic. It appears that by a gradual process, between the eighth and the sixth centuries, Akkadian died out as a spoken language, and was in its homeland replaced by Aramaic. Its written use, however, continued on a smaller scale after 539, and Akkadian documents so far discovered can be dated as late as 75 C.E. Eblaitic is the language of the Syrian city of Ebla and is attested from the 24th–23rd centuries B.C.E. It too is written in cuneiform, though many features of the language are obscured by the orthography and thus its classification is difficult. Some have argued that it is an early dialect of Akkadian.

3c. South Semitic

The earliest attestation of South Semitic speech are a number of names borne by leaders of the Arībi tribes whom Assurbanipal and Sennacherib fought in the Syrian Desert and in northern Arabia. Their language seems to have belonged to a group of dialects now called Proto-Arabic or Ancient North Arabian. The chief one is Thamudic, attested along the northern and southern edge of Arabia as well as in Transjordan. Others are Dedanite and Liḥyānic in biblical Midian, and Sa‘aitic in an area east of Damascus. The numerous inscriptions consist mainly of names, but give enough information about the language to show that it is related to Arabic. The time of these inscriptions extends from c. 500 B.C.E. to 500 C.E. The Nabatean inscriptions in Transjordan, southern Palestine, and Sinai (c. 150 B.C.E.–300 C.E.), and the Palmyrene inscriptions in the Syrian Desert (first–third centuries C.E.), though in Aramaic, were put up by speakers of Arabic dialects, and provide further information about
the earlier history of that language. Later Arab philologists have preserved some data on dialects spoken in the peninsula closer to the seventh century, and there are also a few inscriptions. It is probable that Classical Arabic was formed as an intertribal lingua franca before 500 C.E. It is first attested by a fairly large number of poems of the sixth century and by the Koran in the early seventh century. Owing to the Muslim conquests, Arabic became the vehicle of a far-flung and lively culture, with uninterrupted literary use until the present day. From the beginning, much Arabic was written by people who did not speak it, and through the efforts of grammarians and schools it has maintained its grammar and syntax, and much of its vocabulary, almost unchanged. Since the Muslims conquered the entire territory occupied by Semitic languages in Asia, the speakers of such languages gradually gave up their own speech in favor of Arabic, and only small islands of Aramaic and of South Arabian persisted. On the other hand, Arabic absorbed many words from those languages.

A short time after the conquests there is evidence that spoken Arabic differed profoundly from the written form; in part it seems to have continued pre-Classical dialects. In the Middle Ages Christians and Jews often wrote an Arabic that showed influence of the spoken forms. Except for Maltese, no spoken Arabic colloquial achieved official status as a written language, but there was some popular literature in various dialects, and of course many have been recorded and described by mainly western linguists.

At the southern end of Arabia an entirely different group of languages exists. It is attested since about the middle of the first millennium B.C.E. by inscriptions in a number of Ancient South Arabian languages: Sabean, Minean, Hadramautic, etc. Minean inscriptions have also been found in biblical Midian, probably set up by a trading colony. Owing to the absence of vowels and the rigid style of the texts, these languages are only partly recoverable; but what is known shows some interesting similarities with Northwest Semitic. Ancient South Arabian speech died out probably before 1000 C.E.; inscriptions were set up until just prior to the Islamic period. What is probably a distinct branch of the same language group, spoken in an area outside that in which Ancient South Arabian culture flourished, is at present represented by Mahri (Mehri), Sha'ari (Shikhauri), Harusmi, and Botahari, spoken at the southern tip of the Sultanate of Muscat and Oman, and by Soqotri, spoken on the island of Socotra in the Indian Ocean. These very archaic and, for the comparative study of Semitic, highly interesting languages, are only rather sketchily recorded, mainly by a mission of Austrian scholars in the late 19th century. Eritrea and the adjoining Ethiopian region of Tigre, with its capital Aksum, appear to have been colonized by South Arabs. At first, in the beginning of the Christian Era, Sabean was used on monuments, but by the third century C.E. there are texts written in the local language, Ge'ez (Ethiopic), first in South Arabian characters, then in a special script, which in the fourth century was provided with regular vowel markings by adding short strokes or circles and other alterations in the shape of letters. Until the tenth century, Ge'ez literature consists entirely of translations of Christian religious texts; after the 12th century, when Ge'ez was no longer spoken, it served also for original writing. The present spoken languages of Semitic stock in Ethiopia are undoubtedly related to Ge'ez. Tigrinya, the language of Eritrea, and Tigr in northern Ethiopia and the Sudan, seem to be direct descendants of Ge'ez, while the exact connection with the southern group, consisting of Amharic, Gafat, Argobba, Harari, and Gurage, the latter a cluster of rather divergent dialects, is not clear. Amharic, written since the 14th century, is now the rapidly developing official language of Ethiopia.

4. The Divisions of Semitic

The most widely accepted view is that the first division which Semitic underwent, probably before 3000 B.C.E., was between East Semitic (Akkadian) and all the rest. At a later date, but before 2000 B.C.E., West Semitic divided into a northern and a southern branch. Northwest Semitic then divided into Canaanite and Aramaic; Southwest Semitic into Arabic and South Arabian plus Ethiopic. The units mentioned again broke up into the languages actually attested. Another version of this view associates the theory of the “family tree” with successive “waves” emerging from the original home of the Semites, by most assumed to have been the Arabian Peninsula: first the Akkadians, then the Canaanites, Aramaeans, Ethiopians, and finally the Arabs. The picture here presented has been questioned since the discovery of Ugaritic, Amorite, and Deir Alla, which do not fully fit into the accepted division of Northwest Semitic, and since the realization that Arabia could hardly have supported sufficient population for such large waves of emigration before the domestication of the camel not long before 1000 B.C.E. No alternative theory has yet been generally accepted, either with reference to the original homeland of the Semites – or of the Semitic language family – or to account for its subdivisions. Some scholars have questioned the existence of either a proto-Canaanite or a proto-Aramaic, and suggested that Northwest Semitic was in 2000 B.C.E. still undifferentiated, and the closer similarity of some languages to each other might be due to later influences of one upon the other. Recently many scholars have preferred a classification that divides West Semitic into a South Semitic branch that includes South Arabian and Ethiopian, and a Central Semitic branch consisting of Arabic and the Northwest Semitic languages.

5. Proto-Semitic

Sounds. Proto-Semitic probably had the sounds indicated in the following table.

<table>
<thead>

</tbody>
</table>
Recent studies have reconstructed ʿ, ʾ, and ʿ as originally glottalic or ejective; s, š, and sh as ʿ, ʾ, and s respectively; and d as ū.

**Remarks on Grammar.** Proto-Semitic nouns had at least three cases: nominative ending in -u, genitive in -i, and an adverbial accusative case in -ā. The feminine nouns ended mainly in -t, but there were other suffixes. There was no definite article. The plural of nouns seems to have been expressed in a number of different ways. There was also a dual.

The most remarkable feature of the verb in Semitic and Hamitic is the possibility of varying the meaning of the verbal root by prefixes: šh, and perhaps also ʿ, to express causation (to make someone else do the action); t and n (also prefixed t after the first root letter) for passive and reflexive. The middle or the last root letter could also be doubled or repeated, or part of the root repeated, to express various modifications, such as repetition or an elusive quality called emphasis. Internal vowel changes in the stem expressed intransitivity and the passive voice.

There were three tenses, fully preserved only in Akkadian: the perfect yaqtul, the imperfect yaqattil, and a form to express state rather than action, qattil or qatala. The first two were conjugated by a combination of prefixes and suffixes, the last by suffixes only. Moods and certain other variations were indicated by adding vowels or n to the first two tenses. These tenses were only partly for the expression of time; it is thought that their main function was aspect: yaqattil expressed an action that takes place once and was accomplished, while yaqattil indicated that an action goes on for some time. This aspect function is still clearly seen in the biblical Hebrew perfect and imperfect tenses.

The outstanding peculiarity in syntax is the nominal sentence, which corresponds roughly to English sentences containing “is” (though its use is much wider), but contains no words for “is.” These sentences are timeless, and it seems that Proto-Semitic did not yet possess the possibility to express the perfect and imperfect moods by a verb meaning “to be,” since the verbs for this purpose differ in the various languages. A special type of nominal clause enables the Semitic languages to take any element out of an ordinary verbal or nominal sentence and to place it in front of the sentence, making it the subject, and the rest of the sentence (with a pronoun to represent the word taken out) the predicate. For example, the sentence “The way of God is in storm” is transformed into “God (is) his way is in storm” (cf. Nahum 1:3).

All Semitic languages make use of the same root in different functions within the same sentence, mainly to express emphasis, such as “a killer killed” (= someone killed), “he killed a killing,” “she pancaked pancakes” (11 Sam. 13:6), “the boy (was) a boy” (1 Sam. 1:24).

6. Relation of Hebrew to Other Semitic Languages
If the changes from the Proto-Semitic situation are taken as an index of the genetic relationship between languages it will be found that Hebrew shares important developments with different languages. Thus it shares with Phoenician, considered with Moabite to be closest to Hebrew, the development of original ā to ŏ. It appears that Phoenician, like Hebrew, lengthened short vowels under certain circumstances; it pronounced the lengthened a as ŏ, and in this agrees with the Ashkenazi and Yemenite, but not the Sephardi pronunciation of Hebrew. The changes of dh to z, th to šh, ẓ and d to s are common to Hebrew, Moabite, Phoenician, and Akkadian, while those of gh to ʿ and kh to h appear in Hebrew, Moabite, Phoenician, and Aramaic only. Hebrew agrees with Aramaic in changing ū to s (probably late), while Phoenician and Akkadian changed it into šh, as did Ugaritic. Ugaritic changed d to ś, but not ẓ. The only sound change that Ugaritic is known to have shared only with Phoenician, Moabite, and Hebrew, is that of initial w into y. Though the earlier development of the sounds of Aramaic was rather different from the Hebrew, Hebrew underwent two important changes which it shares with later Aramaic:

(a) the ordinary plosives p, b, t, d, k came to be pronounced as fricatives f, v, th, dh, kh, gh when preceded by a vowel, unless they were doubled;

(b) short vowels in unstressed open syllables (unless lengthened) were reduced to an indeterminate vowel ě (šēva mobile). This (as also the further reduction, called šēva medium) continues to turn plosives positioned after it into fricatives. Hebrew, Phoenician, and Aramaic lost at an early stage the ability to pronounce short vowels at the end of a word, and through this gave up the cases of nouns; in Arabic the same change occurred only after 600 C.E.

It should be noted that Ugaritic was almost as close to Proto-Semitic in its sound system as were Ancient South Arabian and Classical Arabic, and therefore quite unlike Hebrew. Neither did it resemble Hebrew closely in its grammar. The main feature common to Ugaritic, Phoenician, and biblical Hebrew was the -m ending for the masculine plural, as opposed to -n in Moabite, Aramaic, and Arabic, but also in mishnaic Hebrew. However, Ugaritic, like Tell el-Amarna Canaanite, still distinguished a nominative -ima from genitive and accusative -ima, while Phoenician and Hebrew have -im only. Hebrew early elided the t of the feminine ending att(u), Phoenician only very late, Arabic first in the end of the sentence, and after 600 C.E. throughout (the t remains in the construct state). With Phoenician, Moabite, and Ancient North Arabian, Hebrew shares the article ha-; with Phoenician, Aramaic, and Classical Arabic the ha- or hā- before the demonstrative pronoun (Heb. ha-zeh).

Biblical Hebrew and Moabite stand alone in preserving the original form yaqattil when preceded by wa- (“and”), while at the same time using the old stative form, qatal, as a perfect when not preceded by “and” (i.e., at the beginning of an utterance, or in the middle of a sentence). Phoenician, Yaʿedic, Old Aramaic, and perhaps Ancient North Arabian abandoned the old perfect yaqattil altogether much earlier than Hebrew, which did so only during the Second Temple period. Classical Arabic still has some remnants of perfect yaqattil. Ancient South Arabian has very rare cases of perfective wa-
yaqtol, Ethiopic only perfective qatala. Ugaritic poetry usually employs perfective yaqtol, but the administrative prose only perfective qatala. Hebrew thus was more conservative than neighboring languages in carrying out a change characteristic of the whole of West Semitic.

Characteristic of Tell el-Amarna Canaanite, Hebrew, Moabite, and Phoenician (where it is only attested late) is the ending -ti of the first person singular of the perfect (elsewhere -tu). The first person singular pronoun 'nk (Heb. anōkkhi), as opposed to 'n (Heb. dni), also in Akkadian, Ugaritic, Phoenician, Moabite, and Ya'udic, is an ancient form, found also in Egyptian, Somali (aniga), and Berber. It ended in -i also in Tell el-Amarna Canaanite and in Phoenician.

The Hebrew hayah ("to be"), from hwy, is also found in Aramaic, Ya'udic, rarely in Akkadian, and according to an ancient lexicon possibly also in Ugaritic, while the ordinary verb for "to be" in Ugaritic is kwn, as in Phoenician, Arabic, South Arabian, and Ethiopic. The usage of yesh ("there is"), from yth, is paralleled by Ugaritic, Aramaic, and Akkadian; in Arabic only in the negative. The Hebrew negative ēyn ("there is not") is found in Ugaritic, Late Phoenician, Moabite, and Babylonian. Phoenician and Akkadian have sh- as relative pronoun and mark of the genitive; this is found in very early Hebrew (the time of the Judges), in the Hebrew of the Second Temple period, and in mishnaic Hebrew. It is not clear what the relation is between this and the Classical Hebrew ăsher in the same sense. The Hebrew accusative sign et is also found in Moabite, Phoenician (y̱t), Ya'udic (wt), and early Aramaic (yât).

A survey of the first 100 Phoenician (not Punic) words in the dictionary shows that 82% have the same meaning in Hebrew. A comparison with Ugaritic on the basis of the basic word list of Morris Swadesh shows 79% with the same meaning as in Hebrew. Comparisons with other languages according to the same list indicate the following percentages of correspondence with Hebrew: 66% for Syriac, 53% for Akkadian, 50% for Arabic, and 47% for Ge'ez (Ethiopic). Calculation of these results according to Swadesh's lexicostatistical method suggests that these differences reflect not only the difference in the date at which these words were recorded, but also different degrees of relationship, corresponding to the accepted "family tree" grouping of the Semitic languages (cf. para. 4). The following examples will give some idea of the forms the same word takes in different Semitic and Hamitic languages.

1. "Water": Heb. mayim, Ug. mm, Syr. mâyê, Old Akk. mu, Ar. mā‘ûn, Eth. mary, Egyptian mw, Somali māh, Berber amar (pl.), Chadic am, yam.
2. "Name": Heb. shem, Phoen. shm, Ug. shm, Syr. shmā, Akk. shumu, Ar. ismn, Gēez sēm, Beja sim, Hausa sūnā.
3. "Three": Heb. šalōsh (fem.), Late Punic salus, Ug. thlth, Syr. tlth, Ar. thalluḥ, Gēez šalāš.
4. "Fingernail, claw": Heb. sippōren, Syr. tēphrā, Akk. strupr, Ar. zwfrin, Soqotri tiser, Gēez sēfēr, Cushitic (Agau) chiffr, Berber (Touareg) atfer.

7. The Origin of Hebrew

The thoroughly "Hebraic" character of Tell el-Amarna Canaanite, as far as it can be discerned from the glosses (cf. para. 3a), demands an answer to the question how the Israelites, who came from outside the country, arrived at speaking a language so closely similar to that which had been spoken in Palestine before the conquest. Since the outstanding similarities (ō for ā, -ti in the first person perfect, anōkhi ("I") with ī) are restricted to a well-defined and comparatively small area, it is impossible to claim that they would have appeared already in the speech the patriarchs brought from their home in Mesopotamia. It is generally assumed that the Israelites, either in the patriarchal period or after the conquest, adopted the Canaanite speech. Hans Bauer, G.R. Driver, H. Birkeland, and other scholars, however, saw in Hebrew traces of an admixture of the former language spoken by the Israelites. This Mischsprache ("mixed language") theory has been employed to account for certain inconsistencies and doublets in Biblical Hebrew grammar and vocabulary, e.g., for the fact that ā did not always become ă, and for the coexistence of wa-yaqtol and qatal to express the perfect (and wē-qātal and yaqtol for the imperfect).

SEMMEL, BERNARD (1928– ), U.S. historian. Born in New York City, Semmel taught at Columbia University and at Park College and was appointed professor of history at the State University of New York at Stony Brook. He later became Distinguished Professor of History at the Graduate School, City University of New York.

[Seth R. Beloff (2nd ed.)]

SENNAH or MIGDAL SENAHA (Heb. סנה), a name which has been variously interpreted. The children of Sennaah are listed after those of Jericho in the enumeration of Jews returning from the Babylonian Exile (Ezra 2:35; Neh. 7:38). In the Persian period, it may have been the second capital of the Jericho district. Eusebius mentions a Magdalsena 8 mi. (c. 13 km.) north of Jericho (Onom. 154:16) and a watchtower he helped to found. When he retired the Semen Lectureship was founded in his honor at the University of London.

Semon counted prominent English and overseas personalities among his patients and attended Queen Victoria and other members of the royal family as well as Gladstone. At the queen's recommendation he became confidential physician to Prince Edward, who made him physician extraordinary to the king after his accession to the throne. He was knighted in 1905.

Semon was vice president of the National Hospital for Epilepsy and Paralysis. His research into the progressive destructive lesion of the motor nerve supplying the laryngeal muscles brought him to the formulation of the Semon-Rosenbach Law. His published a number of works including an autobiography (ed. by H.C. Semon and T.A. McIntyre, 1926).

SEMON, RICHARD WOLFGANG (1859–1918), German zoologist. Born in Berlin, he was educated at Jena, where in 1891 he was appointed professor extraordinary. In that year Semon undertook an extensive voyage of exploration to Australia and the Malay Archipelago to study the primitive reptile-like mammals and the Australian lungfish, both of which had great interest for students of evolution. The results of this expedition appeared in an extensive series of scientific publications, including Semon's classic monographs on the embryology of the lungfish. Semon wrote an account of his travels in a book Im australischen Busch (1896; In the Australian Bush, 1899). In 1897 Semon left his professorship at Jena and went to Munich. He then devoted himself to the theoretical problems of evolution.

Semon's theory, set forth in Die Mneme (1904; The Mneme, 1921), was an attempt to describe a mechanism for the inheritance of acquired characteristics. His thesis was that the organism is permanently affected by its reactions to external stimuli. These reactions produce impressions or “engramms,” which modify the development of the progeny through “somatic inductions” that affect the germ cells. The power of the organism thus to accumulate a record or “memory” of past reactions to the environment Semon termed the “mneme.” This theory, which was found mystical and lacking in a convincing experimental basis, was rather coldly received by most biologists, and is today of historical interest only.

[Mordecai L. Gabriel]
**SENECA THE ELDER**

(1834–1911), American internist. Born in Berlin, Senator was active in various social welfare bodies in Germany and was secretary-general of the European Office of the American Jewish Joint Distribution Committee in Berlin from 1923 to 1930. He joined the Jerusalem Executive of the Jewish Agency as a "non-Zionist" member from 1930 to 1935 and served as treasurer and later head of the Immigration Department and the Department of Settlement of German Jews. Senator then returned to Europe and directed the Central Committee for Aid and Reconstruction of the Reich Representation of German Jews (Zentralkommission fuer Hilfe und Aufbau der Reichsbuergerzett). A moderate on the Jewish Agency Executive, he resigned in 1935 as a result of his opposition to the "activist" policy of the Jewish Agency. He became an administrator of the Hebrew University and was the executive vice president of the university from 1949 until his death. Senator supported a policy of Jewish-Arab rapprochement through his membership in Berit Shalom. He died in Atlanta, Georgia, while on a tour of European and American universities.

[Kurt Loewenstein]

**SEREAT, HERMANN** (1834–1911), German internist. Senator, who was born in Gnesen, province of Posen, became professor of internal medicine at the Augusta Hospital in Berlin. Later, he was appointed a director of the Charité Hospital and professor at the University of Berlin. Senator carried out research and wrote about the treatment of diabetes, on albuminuria and its significance in health and disease, on renal diseases and hemorrhagic disorders of the spleen, on polycythemia and plethora, and on peripharyngeal phlegmon.

[Suessmann Muntner]

"**SENDLER, IRENA** (1910– ), head of the children's section of the Council for Aid to Jews (codenamed Zegota), a Polish underground organization created in the latter part of 1942 and which operated primarily in the Warsaw area; Righteous Among the Nations. In the early days of the German occupation, Sendler worked to alleviate the suffering of many of her prewar Jewish friends and acquaintances. As a social worker for the Social Welfare Department of the Warsaw municipality, she carried a special permit allowing her to visit the ghetto area, ostensibly for the purpose of combating contagious diseases. This afforded her ample opportunity to learn of the terrible conditions inside the ghetto and try to alleviate the suffering of the people there with additional clothing, medicine, and money. In the summer of 1942, Irena Sendler was invited to join Zegota, which was then in the stages of formation. Readily consenting to this, she had already assembled a group of people dedicated to her charitable work, including her companion Irena Schulz, and she developed a widespread network of contacts inside and outside the ghetto. Under the codename Jolanta, with the help of her coworkers, she arranged for Jewish children to be smuggled out of the ghetto and for sheltering them in secure places either with non-Jewish families or in religious institutions. "I myself had eight or ten flats where Jews were hiding under my care," Irena proudly recalled. The sheltering families received financial support from Zegota for their additional expenses. In October 1943, she was betrayed and arrested by the Gestapo, taken to the infamous Pawiak prison, and brutally tortured. Failing to elicit information from her, her inquisitors condemned her to be shot. However, unbeknownst to her, the Jewish underground operating in the Warsaw region had managed to contact and bribe one of the Gestapo agents, and on the day of her execution she was freed, although she was officially listed among those executed. Forced to stay out of sight for the remainder of the German occupation, Irena carried out her humanitarian activities from her hiding place. Irena Sendler explained that the motivation for her humanitarian work came from lessons learned at home. Her father was a physician, and most of his patients were poor Jews. "I grew up among these people. All my life, I had Jewish friends." She then added, "My family taught me that what matters is whether people are honest or dishonest, not what religion they belong to." In 1965, Irena Sendler was awarded the title of Righteous Among the Nations by Yad Vashem.

[Moredecai Feldler (2nd ed.)]

**SENDREY, ALFRED** (Szendrei, Aladar; 1884–1976), musician and writer on music. Born in Budapest, Sendrey became an operatic conductor in Hungary. From 1911 to 1914 he conducted in Chicago and New York, and later in Berlin, Vienna, and Leipzig. He wrote on radio music and conducting, but his most important work was an extensive Bibliography of Jewish Music which, completed in 1943, was published in 1951 (reprinted 1969). It was the first work of its kind and became a standard book of reference. From 1945 to 1952 he taught at the Westlake College of Music, Los Angeles, and in 1962 became professor of Jewish music at the University of Judaism in Los Angeles. Sendrey published several works on the history of Jewish music, including Music in Ancient Israel (1969). His compositions include an opera, a ballet, and a number of orchestral and choral works.

"**SENECA THE ELDER** (Annaeus Seneca; c. 55 B.C.E.–40 C.E.), Roman rhetorician. He was the father of Seneca the Younger, the philosopher, and the grandfather of the poet Lu-
SENECA THE YOUNGER

"SENECA THE YOUNGER (Lucius Annaeus Seneca; c. 5 B.C.E.–65 C.E.), Stoic philosopher and adviser to *Nero. He mentions the properties of the *Dead Sea (Quaestiones Naturales 3:25) and seems to allude to Jewish abstinence from certain foods (Epistulae, 108:22). He disapproves of the practice of lighting lamps for the Sabbath (Epistulae 95:47). The most extensive comments of Seneca on Jews are cited by Augustine. The Sabbath is blamed for encouraging idleness among the Jews, a criticism echoed by many subsequent Latin authors. Seneca gives evidence that at the time there was widespread sympathy for, and acceptance of, Jewish customs (an acceptance of which he heartily disapproves; De Civitate Dei, 6:10).

SENEOR, ABRAHAM (c. 1412–c. 1493), one of the most prominent Jewish courtiers in Spain during the expulsion period. During the reign of King Henry IV (1454–74) he acted as chief tax farmer of Castile. In 1468, in appreciation of his numerous services, the king appointed him albedin of the Jewish community of *Segovia, where he lived. In 1474, when Spain was united under the Catholic Monarchs, they expressed their gratitude to Abraham Seneor for his numerous services and did not forget his favorable stand in their struggle for power. From 1476 he appears as the rabbi and supreme judge of the Jews of Castile and the assessor of the Jewish taxes throughout the kingdom. He enjoyed the special protection of the kings, who allocated him an income of 150,000 guilders for life (1475) and exempted him from the restrictions on dress which had been imposed on the Jews of Spain (1479). In 1488 he was appointed treasurer of the Hermandad, a military organization which was established to maintain order and security in the country. Since Jews were not admitted to this office, his involvements were registered in the name of one of the Christian courtiers.

Criticisms have been voiced against Abraham Seneor by Jewish scholars and authors of contemporary Hebrew chronicles, claiming that he was an unbeliever and that he had become rabbi of the Jews because of royal patronage without the consent of the Jews. During his period of office, however, he did much to assist the Jewish communities, and in a letter which the Jews of Castile sent to their coreligionists in Rome in 1487 they referred to him as the “exilarch over us.” On many occasions he protected the Jews of Spain from violent incitements by monks and the cruel hands of the *Inquisition. After the conquest of *Malaga by *Ferdinand and Isabella in 1487, his efforts were directed toward the redemption of Jewish captives. The authors of Jewish chronicles describe his position and wealth at length: “He rode together with 30 mules,” “he rode a mule and wore a golden necklace… all the dignitaries of the kingdom accompanied him.”

Pressure by Ferdinand and Isabella that he should convert to Christianity finally prevailed and he decided to abandon Judaism, together with his son-in-law *Melamed and the members of his family. At a public ceremony, which the sovereigns arranged in honor of the event, at *Guadalupe on June 15, 1492, they themselves served as godfathers for the baptism. Seneor then changed his name to Fernando Nuñez Coronel. A few days later he was appointed regidor of Segovia,

the Brenner and Agnon Prizes. For translations see the ITHL website at www.ithl.org.il.

[Getzel Kressel / Anat Feinberg (2nd ed.)]
a member of the royal council, and chief financial administrator of the crown prince.

**SENNABRIS**

**SENNABRIS**, locality in Galilee, **SENDE**. (1862–1939), one of the first American Jewish philanthropic federations.

**SENIOR, MAX** (1862–1939), U.S. businessman and communal leader. Senior, who was born in Cincinnati, Ohio, became the president of Model Homes Company, one of the first companies to construct low-cost housing on a large scale. Active in Jewish affairs, Senior was a founder of the United Jewish Social Agencies, a forerunner of the contemporary community chest. In 1896 he was the prime founder of the United Jewish Charities of Cincinnati, one of the first American Jewish philanthropic federations, and later served as its president. He was elected the first president of the National Conference of Jewish Charities in 1899. During World War I Senior and Boris D. *Bogen, while serving as European representatives for the Joint Distribution Committee in Holland, established a network whereby relief funds and supplies from the U.S. could be funneled to the war-ravaged territories, particularly German-held Poland, through Dutch Jewish intermediaries. Senior was also active on behalf of the Cleveland Jewish Orphan Asylum, headed the Shoemaker Clinic for the Promotion of Negro Health and Welfare in Cincinnati, and served as a member of the Ohio State Tuberculosis Association.

**SENIOR, SOLOMON** (16th century), Marrano notable. Descended from Abraham *Seneor, the last crown rabbi of Castile, who converted to Christianity, Solomon Senior was born a Marrano under the name Juan Perez and is said to have become governor of Segovia. He later escaped to *Turkey, where he adopted Judaism and entered the service of Joseph *Nasi, duke of Naxos, becoming his principal adviser on political matters. Nasi so relied on his judgment that he was spoken of as the other’s right eye. Solomon Senior was the father of Dr. Francisco Coronel (Coronello), who was ostensibly a Catholic; the latter administered the duchy of Naxos for Nasi and defended it when attacked by the Venetian fleet during the War of Cyprus (1571).

**BIBLIOGRAPHY:** C. Roth, House of Nasi, Duke of Naxos (1948), 87.

[Hyman Kublin]

**SENKOV, YASUE** (1888–c. 1950), Japanese “specialist” on Jewish affairs. An army officer in 1927–1928, he traveled in Palestine and Europe to study Jewish problems. On his return, he published Kakumei Undo wo Abaku (“Revolutionary Movements Exposed,” 1931) and soon became known as one of Japan’s leading anti-Semites. In Yudaya no Hitobito (“The Jewish People,” 1937) he continued his attacks on the Jews. In 1938 Senko, promoted to colonel, was dispatched to Manchuria to advise the Japanese army on policy toward the Jewish communities but his anti-Semitism abated in the following years and at times he tried to protect the Jews in *Manchuria and *Shanghai. In 1945 he was captured during the Soviet occupation of Manchuria, and after 1950 nothing further was heard of him.

[Hyman Kublin]

**SENGLASS**, town on the Adriatic coast of Italy. Jewish loan bankers made their appearance there in the 14th century. As a result of Church pressure, the anti-Jewish decrees imposed in the second half of the 16th century were enforced in Senigallia also, when the town was under the rule of the Della Rovere family. In 1651 the town came under the direct rule of the popes with the rest of the duchy of Urbino; three years later a ghetto was instituted for the 40 families. During the next century and a half, the Jewish population trebled; many Jews also attended Senigallia’s famous fair. In 1789 there were about 600 Jews living in the town. Taking advantage of the temporary withdrawal of the French occupying forces in 1799, the populace sacked the ghetto, killed 13 Jews and drove the rest into temporary exile. In 1870 around 300 Jews lived in Senigallia. In 1969 there were 30 Jews living in Senigallia, who were considered a part of the *Ancona community.

**SENGLASS**

**SENGLASS** (1571), the last crown rabbi of Castile, where he adopted Judaism and entered the service of Joseph *Nasi, duke of Naxos, becoming his principal adviser on political
Jordan continued to be of some importance in the Crusader and *Mamluk periods. The exact identification of Sennibris is still debated, with some identifying it with Kinneret near the issue of the Jordan from the Sea of Galilee, a location adjoining Bet Yerah, in agreement with the Jerusalem Talmud (Meg. 11, 70a). Another proposed identification is with Senn en Nabra.

[Michael Avi-Yonah]

**SENS**

**SENS** (Akk. Sin-ahh-eriba; Heb. סנער, סנהר), king of Assyria and Babylonia (705–681 B.C.E.), son of *Sargon II*. During his reign the northern and eastern frontiers were relatively calm; however, he had to deal with rebellions in Babylonia and Syro-Palestine. In 702 Sennacherib defeated *Merodach-Baladan, who, upon his return from exile in Elam, had deposited the new Babylonian king. In 689 the Babylonians, supported by Elam, revolted again. Sennacherib met them at Hallulê, on the Tigris, and defeated them but not without heavy losses. To solve the Babylonian problem once and for all, he destroyed Babylon and let the Euphrates flow over it.

In 701 Sennacherib marched again the rebels of Syro-Palestine. He went from victory to victory: Sidon, Ammon, Moab, Edom, Ashkelon, Ekron, and Lachish fell before him. At Elteke he defeated a considerable Egyptian army, which had come to the rescue of Ekron. It was from Lachish that he sent a mission headed by the *Tartan, *Rab-Saris, and *Rab-Shakeh, to *Hezekiah in Jerusalem in order to convince him to surrender (11 Kings 18:31–39; Isa. 36:1–37). According to his annals, Sennacherib took 46 fortified cities and “small cities without number” of Judah; he made 200,150 prisoners of war and exacted from Hezekiah a heavy tribute – 30 talents of gold and 800 (300 according to 11 Kings 18:14) talents of silver. Although he besieged Jerusalem, he was unable to take the city, for “that night the angel of the Lord went forth, and slew 185,000 in the camp of the Assyrians” (11 Kings 19:35). Another version tells of a legion of rats that invaded the Assyrian encampment (Herodotus) and a third version tells of a pestilential sickness (Berosus). Whatever happened, the fact remains that Sennacherib was forced to abandon the siege and return to Assyria. Sennacherib is remembered as a great builder; he enlarged and embellished *Nineveh, built and restored various temples and public buildings all over Assyria, and undertook very important hydraulic works.

He was assassinated by one of his own sons in a temple of Nineveh. For further details see “*Mesopotamia.*

**In the Aggadah**

After having previously conquered the rest of the world (Meg. 11b), Sennacherib equipped a massive army against Hezekiah, consisting of 45,000 princes, each enthroned in a golden chariot and accompanied by his ladies and courtiers, 80,000 warriors in coat of mail, 60,000 swordsmen, and numerous cav-
demolished about 1750. The most eminent of the scholars of Sens was *Samson b. Abraham, tosafist, legal authority, commentator, and liturgical poet. Other tosafists who lived in Sens were Eliezer (c. 1175), and Moses and Isaac ha-Levi (c. 1250). Nathan b. Joseph *Official and his son Joseph b. Nathan, author of Yosef ha-Mekanne, probably lived in Sens.

A small Jewish community existed in Sens before World War II and there were still about 50 Jews there in 1941. A new small community, consisting mainly of Jews from North Africa, was established in the 1960s. In 1970 there were 50 Jews living in the town.

[Bernhard Blumenkranz]

SENTA (Hung. Zenta), town on the Thissa River, Vojvodina province. Jews arrived there during the 18th century, mostly from Hungary and Moravia. They engaged in trade of cereals and textiles though quite a few were artisans. The first rabbi was Isaac Heilborn, followed by Solomon Klein and Moses Leibowitz. A hevra kaddisha was founded in 1858. In the wake of the great split that occurred in Hungarian Jewry in 1868/69, the local Jewry separated, too, into *Neolog (Reform) and Orthodox communities. A small group declared itself status quo, as did some of the communities in Hungary which did not join either of two rival groups. This phenomenon was unique as far as Yugoslavia was concerned. Consequently, there were three kehillot in Senta. The Orthodox renamed themselves inexplicably “Sephardim.” This was probably in imitation of what occurred in the community of *Sighet in Romania, where a dissident group of Orthodox Jews eccentrically adopted the name, also without any Sephardi members. A Neolog synagogue was built in 1873, another in 1929.

A yeshivah was established, headed by Rabbi Eliezer Rausnitz. Michael *Fekete, mathematician and well-known professor at the Hebrew University, was born in Senta.

Among the Senta rabbis, Hermann-Zvi Schweiger was a prominent Hebraist. Neolog community leaders were Armin Graf, Nathan Kramick, and Solomon Ehrenfeld. Armin Fischer was the Zionist leader.

During the Holocaust all the Jews perished. The “Sephardi” rabbis, without a single Sephardi present, was Moses Teitelbaum; he was extricated from a concentration camp, eventually reaching the United States and joining the Satmar congregation in New York. The kehillot were not renewed. The great synagogue was demolished and a smaller one serves as a sports club.

[Zvi Loker (2nd ed.)]

SEPARATION OF POWERS, a fundamental principle of Public Law, which seeks to distinguish between the roles and powers of a number of different public authorities operating in tandem, such as the legislative, executive, and judicial authorities. On the one hand, this principle is meant to prevent too great a concentration of power in the hands of a single authority (such as a king in previous times, or a government or parliament, in our own day); on the other, this model is meant to fashion a system of controls, checks and balances, to ensure the proper and appropriate operation of a public authority. In modern times, this model was developed in the wake of ideas first presented as an appropriate democratic model by Montesquieu in his book, The Spirit of Laws. It goes without saying that this principle, as it exists today, did not exist in ancient legal systems such as Jewish Law, based on a central monarchic regime. Nevertheless, one can find more than a few principles in Jewish Law which are consistent with the model of separation of powers, even if not identical to it.

Separation of powers does not find formal expression in Jewish Law, but at times is expressed in the practical realm. Thus, for example, the prophets held prominent status in Biblical times but, being outside the institutionalized system, were free to, and indeed did, criticize the king, and were a balancing factor to his ruling power. In other cases, by contrast, we find the prophet involved in royal affairs, and even in the appointment of judges (1 Sam. 8:1–3). Similarly, during the early Biblical period we find the model of "elders" and "princes" working concurrently, each with their own powers. Their concurrent functioning created the requisite balances for a suitable social system. A striking example of the separation between the two branches, the judicial and the executive, is found in the command, “You shall appoint judges and officers in all your gates which the Lord your God gives you, according to your tribes; and they shall judge the people with righteous judgment” (Deut. 16:18).

The structure of government during the monarchic period expresses a classic model of centralized authority, in which most of the power is concentrated in the hands of one ruler. Thus, for example, we find that the king of Israel was involved, not only in running his kingdom, but also in legislation (such as laws imposing tax payments). The king (such as Solomon) also served as judge. So strongly identified did these two tasks become that in biblical language the term "judge" (shofet) relates not only to court judges who must decide cases between litigants, but also to the king or ruler (see, for example, 1 Sam. 8:6: “give us a king to judge us”).

Maimonides (Yad, Melakhim) also highlights the merging of sovereign functions in the position of the king. In addition to serving as the executive authority, the king functioned simultaneously as both legislator and judge (see, for example, Yad, Melakhim 4:10). In addition, in the Middle Ages members of the public authority (see "Public Authority") were involved on a regular basis in both legislative and judicial activities, such as judicial interpretation and sentencing. The responsa literature attests to hundreds of such cases (see...
"Takkanot, *Takkanot ha-Kahal) by tuvei ha-kahal, the communal leadership, who were the central executive authority in the Jewish community. This blurring of roles, which clearly goes against contemporary principles of separation of powers, indeed aroused opposition among some of the scholars of Jewish Law, and a number of them regarded this blurring of roles as the reason for the opposition found in Scripture itself to the enthronement of a king over Israel, who would concentrate too much power in his own hands without proper and effective checks and balances (see Meir Ish-Shalom’s commentary on Sifre, 105:1, n. 4).

Similarly, the “Sanhedrin, the Great Court of Seventy One, and the local courts in the Jewish communities of the Middle Ages (see “Bet Din”) not only engaged in adjudication but, alongside their role as the supreme judicial authority, also dealt with legislation (regarding the passage of communal enactments, see *Takkanot and *Takkanot ha-Kahal) and with law enforcement functions (such as in punishing criminals; see *Punishment).

The Courts in the State of Israel

The model of separation or non-separation of powers, as expressed in the sources of Jewish Law, has been discussed in the Israeli courts on several occasions. In one instance, the Supreme Court (Justice Y. Cohen) highlighted the substantive difference between the modern legal system (which prevents a judge from engaging in execution of the law or in legislation) and Jewish Law, in which the judge is granted the authority to both rule and legislate (Fl 39/75, Israel Port Authority v. Ararat, 31 (1) PD 545). In two other cases, the Supreme Court (Justice M. Elron) stressed that, unlike the model of the court under Jewish Law, which holds the power to mete out and administer punishment (“The court administers lashes and other punishments not prescribed by the Torah” – Yev. 90b), in modern law, which maintains separation of powers, it is accepted that changes in legislation are made by legislators and not by the courts (App. 22/83 Kraus v. the State of Israel, 37 (1) PD 369; Cr.A. 543/79 Avishai Nagar v. the State of Israel, PD 651(1) PD 165–170).

This issue of “Separation of Powers” was also discussed by the Supreme Court in connection with the question of whether or not a judge is entitled to deal with political issues. Relying on sources in Jewish Law, the Supreme Court (Justice Goldberg) noted the dual role of the rabbinic judge, who played a central role not only in Jewish judicial authority, but also in communal leadership. He stressed the difference between this approach and that prevalent in our day, in which there is separation of powers between the two roles (HC 732/84 Tzaban v. the Minister of Religious Affairs, 40 (4) PD 153). This issue occupied both the civil and rabbinical courts in Israel with respect to the communal status of the Chief Rabinate of Israel and the ability of its members – both rabbis and *dayyanim (judges in rabbinical courts) – to participate in activities obviously in the realm of the executive branch. In another case, the question arose of *dayyanim’s involvement (as part of the judicial branch) in the functioning of the religious councils (being part of the executive branch). The District Court (Judge N. Hendel) relied on sources from Jewish Law to support his decision that it was inappropriate for one branch to impinge on the activities of another branch, and for *dayyanim to be involved in activities associated with the executive authority (SSA (Beer-Sheva) 276/05 Shana and Bros. v. Haziza and Bros. (not published).

[Aviad Hacohen (2nd ed.)]

SEPHARAD (Heb. ספָרָד), the site of a colony of exiles from Jerusalem, mentioned in Obadiah 20. It is predicted that the exiles in Sepharad would possess the cities of the south.

Sepharad was identified as *Sardis, the capital of Lydia in Asia Minor, after the publication by E. Littmann of a bilingual Aramaic-Greek inscription found in the excavations of Sardis in which Sepharad is equated with Sardis. This identification is supported by another bilingual inscription, in Lydian and Aramaic, found at Sardis, in which Sepharad is written in the date formula at the opening of the Aramaic part (see bibl. for Donner and Roelling; and Kent).

Targum Jonathan renders Sepharad as Ispania or Spmania, and the Peshitta, as Ispania, i.e., Spain. From the end of the eighth century C.E., Sepharad became the usual Hebrew appellation for the Iberian Peninsula.

SEPHARDIM (Heb. ספרדים, sing. ספרד; Sephardi), descendants of Jews who lived in Spain or Portugal before the expulsion of 1492. (The term Sephardim is often erroneously used for other Jews of non-Askenazi origin.)* Sepharad, mentioned in Obadiah 1:20, was connected fancifully or erroneously with Hispania, the Latin name for Spain.

Legend holds that there were Jews in *Spain as early as Solomon’s time. In any case, the settlement is extremely old. Jews suffered persecution there during the period of the Visigoths, which ended when the Arabs conquered the country in 711 C.E. Thus politically and linguistically the Jews of Spain were put in touch with the center of Jewish life in Babylonia-Iraq and carried on the tradition of Babylonian Jewry. The Muslim era in Spain gave rise to the “Golden Age” of Spanish
Waves of Sephardi emigration from Spain and Portugal after the expulsion of 1492, with dates of establishment of new communities where known. Based on a map drawn by H. Bainart.
Jewry, which produced such figures as the statesman *Ḥ isdai ibn Shaprut, the statesman, poet, and halachist *Samuel ha-Nagid, the poet Moses *ibn Ezra, the poets and philosophers Solomon ibn *Gabirol and *Judah Halevi, and above all, the physician, philosopher, and halakhist Moses *Maimonides.

After the Almohad persecutions of 1148, Jewish life in Spain was concentrated in the Christian parts of the country, which, in the course of the Reconquista, gradually extended over the entire peninsula. The vigorous and creative Jewish community was disrupted in 1391 by an outbreak of persecutions that led to wholesale insincere conversions to Christianity, creating so-called "New *Christians," or Conversos, many of whom in fact only outwardly professed Christianity but practiced Judaism in secret and taught their children to do likewise. The Inquisition was established to extirpate the scandal of Christians relapsing to a previous "dead" faith, but its work was hampered by the presence of unconverted Jews over whom the Inquisition had no authority. Accordingly, in March 1492 a decree of expulsion was issued against all Jews who refused to accept Christianity, and this edict officially remained in force until 1968. Some accepted conversion; others, perhaps as many as 250,000, moved away to North Africa, Italy, and especially Turkey, where Sultan Bayazid II admitted them gladly. The seaport of Salonika, in particular, became a great center of Sephardim, with all the important Spanish towns and districts being represented there by congregations that maintained their identity.

Thus was created the Sephardi Diaspora, a dispersion within a dispersion that not only looked back to Erez Israel as its homeland, but had been indelibly impressed by a long sojourn in Spain. The exiles took with them the language and songs of Spain, which they preserved with fidelity; the foods of Spain, so that the Bulgarian or Serbian Jew would eat pastel or pandeleon; and children's games, so that in the Balkans a game with nuts called el castillo was played to the recitation of an old Spanish quatrains; while R. Joseph *Caro, the Sephardi author of the *Shulhan Arukh (the standard code of Orthodox Judaism) draws on words like panadas (a kind of croquette with meat), pala (a baker's peel), or limones (lemons) to express domestic items for which he found no equivalent in the rabbinic Hebrew of his day. The Sephardim bore Spanish personal and family names, and their world view had been shaped by the customs and conduct of their Spanish neighbors.

A century later the formation of another branch of Sephardi Jewry began – the Marrano Diaspora. Many *Crypto-Jews had moved to Portugal, where the danger of detection was less. From there they slipped away in increasing numbers to lands where they could cast off their Christian mask and reassert Judaism. The freedom which Holland achieved from Spain at about this time made Amsterdam the great center of the Marrano Diaspora, which evolved into the Western Sephardi Diaspora or Portuguese Nacion. Portuguese Jews moved there in great numbers, especially during the 17th century, often totally ignorant of Jewish practice and the Hebrew language, but anxious to learn. A magnificent synagogue was built, and educational institutions were founded whose students are thus described in 1680 by the much traveled Shabbetai *Bass:

> In my eyes they were as giants on account of their expertise in the Bible text and Hebrew grammar. Moreover they can compose songs and poems, and speak Hebrew fluently… the teachers are paid from community funds according to their merits and do not need to flatter anyone…

Subsequent migrations of Sephardim took place to England and the Americas, as well as to centers of Western Europe such as *Bordeaux, *Bayonne, and *Hamburg. These Sephardim differed from the Sephardim of the East in that their day-to-day language was Portuguese, although they also knew Spanish, which they used for commerce and as a semi-sacred language for Bible translation. They remained in the mainstream of West European culture, frequently writing their vernacular in Roman rather than Hebrew script.

Language

The Spanish language, as it was preserved by the Sephardim, is called *Ladino, Judezmo, or Judeo-Spanish. It has a number of archaic characteristics (e.g., the preservation of original j and sh sounds, which standard Spanish has lost, as well as peculiar lexical and syntactic features, including loan words from Hebrew, Turkish, and other languages) and makes a quaint and pleasing impression on speakers of the standard language. According to the research of David Bunis, Judeo-Spanish came to contain a great many Hebrew and Aramaic loan words since the 16th century. It was greatly influenced by regional languages like Ottoman-Turkish, Turkish, Greek, Bulgarian, Serbian, and after the mid-19th century French and Italian. In Spanish Morocco, in the communities of Tangiers, Tetuan, Melilla, Ceuta, and elsewhere, the dialect of the language was called Hakedita. Ladino was formerly written in the rabbinic cursive script called Solitreo (the modern, originally Ashkenazi, Hebrew cursive never having been in use among Sephardim), but with efforts at modernization in Turkey, the Roman alphabet was adapted to Ladino and is now generally used. Ladino is still spoken by Jews in Turkey, Greece, and adjacent countries, as well as by immigrants to Israel, the U.S., Latin America, and elsewhere. It seems probable, however, that the dialect will be extinct within a short time, and efforts are being made in Jerusalem and Madrid to record the language systematically. Portuguese survived as the language of the Marrano Diaspora until the early 19th century; it still survives in some centers in certain fossilized usages, for example in the prayer for the queen in Amsterdam and the announcement of congregational honors and elections in London.

Literature

The literature of the Sephardim may be divided into three categories:

(1) works written in Hebrew;

(2) works written in Spanish (including Ladino) and Portuguese;

(3) works written in regional languages such as Bulgarian, Serbian, and French.
(3) anonymous folk literature in Ladino.

The first category, consisting of Bible commentary, polemic literature, poetry, drama, legal texts, and kabbalistic works by such individuals as Isaac *Abrabanel, Joseph Caro, *Manasseh Ben Israel, and David Franco *Mendes, forms part of the mainstream of Hebrew literature of the period and will not be treated here.

The second category includes works written before the expulsion of the Jews. Notable are the *Proverbios Morales de *Santob de Carrión (based on talmudic sources) and the Bible translation with glosses made by Moses *Arragel at the command of Don Luis de Guzman (1430). Writing subsequent to the expulsion tends to be derivative or polemical, directed mainly toward the edification of those deficient in Hebrew. In consequence, translations or adaptations from the Hebrew form a substantial part of this literature. The famous Ferrara Bible of 1553 was soon adapted to a Ladino version for the benefit of eastern Sephardim. Other parts of the Bible which appeared in Spanish were a Pentateuch paraphrase by Isaac *Aboab da Fonseca (Amsterdam, 1681), a paraphrase of the Psalms by Hamburg-born Leon *Templo, and paraphrases of the Song of Songs, based on the Targum, for liturgical use. The Mishnah was translated into Spanish, as were other monuments of Jewish literature such as Judah Halevi’s *Kuzari, translated by Jacob *Abendana (Amsterdam, 1665), Bahya ibn Paquda’s *Duties of the Heart (Amsterdam, 1610), of which a Portuguese version by Samuel Abbas appeared in 1670, and later still a Ladino version. Even Ben Sira was translated into Ladino by a Serbian rabbi, Israel Haim (1818).

Leading polemical works include Samuel *Usque’s *Con-solaçaõ as Tribulaçõens de Israel (Ferrara, 1553), a set of dialogues in Portuguese relating Jewish history from earliest times and intended to confirm the Conversos in their faith and display the divine plan for Israel. Manasseh Ben Israel wrote his *Conciliador (“The Conciliator,” 1632), reconciling places in scripture which appear to contradict one another, and his *Experanza de Israel, on the “Ten Lost Tribes, was translated into Latin, English, Dutch, Hebrew, and German during the 19th century. David *Nieto, rabbi of the London community, wrote the *Matteh Dan (London, 1714) to demonstrate the authority of the Oral Law. Isaac *Cardozo, who was born in Portugal and reassumed Judaism in Italy, wrote Las Excelencias y Calaminas de los Hebreos (Amsterdam, 1679), in which he describes at length the ten privileges of the Jewish people and the ten slanders brought against them.

Ethical and inspirational works included Moses *Almos-nino’s *Regimento de la Vida (Salonika, 1564) and Extremos y grandeszas de Constantino-pole (Madrid, 1638), and Abraham Israel Pereira’s *Certeza del Camino (Amsterdam, 1666), a treatise on divine providence and the love of God. Preeminent is the *Me-Am Lo’ez, an elaborate commentary on the Bible based on talmudic and midrashic sources which was initiated by the Turkish scholar Jacob *Culi and continued after his death by others. This work rapidly became the vade mecum of the Ladino-speaking Sephardim and achieved the status of a sacred book. Its imaginative character, combined with its religious themes, made it a perfect vehicle of combined entertainment and edification. It derived from a circle of Jewish savants who deliberately aimed at raising the spiritual level of the Jews of the Ottoman Empire, among whom poverty, ignorance, and illiteracy were rife. Other members of this circle included Abraham de Toledo, who wrote Complas de Josef (Constantino-pole, 1722); Isaac Magrizo; and Abraham Asa.

Original writers include Daniel Levi *Barrios, who was born in Spain, reassumed Judaism in Italy, and from there went to Amsterdam. He wrote sonnets, pastoral romances, and a panegyric on three martyrs burned alive in Cordoba in 1665 entitled Contra la Verdad no hay Fuerça (Amsterdam, 1666). Another poem of 550 lines celebrating a martyr burned alive in 1644 was written by Antonio Enríquez *Gómez. The Poema de la Reyna Esther (Rouen, 1637) by Joaın Pinto *Delgado can be understood only in the light of its rabbinic background.

The folk literature of the Sephardim consists of an enormous corpus of ballads in Ladino, the romancero, which survives in manuscripts and, precariously, in the memories of the older generation of Ladino speakers. Menéndez Pelayo published ten ballads he received from Salonika in 1885, and this was followed by Menéndez Pidal’s Catálogo del romancero judío-español (in El Romancero, Madrid, 1927). The work of collection and publication goes on, chiefly in Israel and the U.S.

Religious Practice

While the Sephardim do not differ from the Ashkenazim in the basic tenets of Judaism, with both groups viewing the Babylonian Talmud as their ultimate authority in belief and practice, there are great differences in matters of detail and outlook. Once the trauma of persecution in Spain had worn off, many Sephardim settled in places where they enjoyed a life relatively free of external constraints in the practice of their religion, and they had a fair measure of security of life and property. This may be the reason why many of them displayed a more sympathetic attitude to outside culture, and were ready to see good outside the “four cubits of the law.” Sephardim follow the codification of R. Joseph Caro (*our master*), the Shulhan Arukh, in matters of religious law without regard to the strictures of R. Moses b. Israel *Isserles, whom they call Moram, which may mean equivocally “our teacher and master R. Moses” or “their teacher” (i.e., of the Ashkenazim). The compilation by R. Joseph Caro represents a more liberal and permissive trend than that approved by the Ashkenazi authorities. For example, Sephardi authorities permit rice to be eaten on Passover, and allow whole eggs found inside a slaughtered chicken or vegetables cooked in a pot previously used for meat to be eaten with milk products. Ashkenazi authorities forbid all such practices, and instances could be multiplied.

Many differences, however, simply reflect a difference in custom or interpretation, with no implication of leniency. Thus, a blessing is recited on the head phylactery only if there has been an interruption after placing that for the hand, and
Patterns of Secularization of the Western Sephardi Diaspora in the 17th Century in Jewish Law

Examined here is the secular direction of the processes of change which took place among the Western Sephardi Diaspora by referring to two separate historical and social meanings which the term "secularization" can have within Jewish society.

One meaning is that of departure or liberation from religious influence in areas of social and cultural activity which had previously been strictly in the domain of religion.

The second meaning is the transfer or translation of religious symbols and values to a secular context. The differentiation between these two meanings is of particular importance for analyzing the processes of change which took place among the Western Sephardi Diaspora in the 17th century in light of the possibility, already discernible, that the Jews would abandon the Torah and the commandments without taking this to be a withdrawal from the content of Jewish life or Jewish society. In order to gain some notion of the secular trend among the group under discussion, it is sufficient to refer to the social and historical significance of the concept ummah ("nation"; Yiddish: natsiyon; Hebrew: ummatenu) and to the increasing emphasis among this Diaspora on communality of race and blood.

There is no doubt that the term ummah denotes first and foremost, in the social and historical context under discussion, communality of fate and social and cultural solidarity among the Marranos (who were forced to convert to Christianity), former Marranos, and at times also "New Christians" (who may or may not have been forced to convert) scattered throughout the "Terras de judeusmo" (Lands of Judaism, i.e., where Judaism could be practiced freely) and "Terras de idolatria" (Lands of Idolatry, i.e., countries where the influence of Spain and Portugal), including the Lands of Forced Conversion (arzot ha-shemad) in the Iberian peninsula. Communality of fate is of course problematic from the aspect of Jewish law (halakhah), when speaking of "New Christians," and when referring to actual Marranos, who had the opportunity to leave their countries of residence but did not do so. Yet even more important is the term ummah itself or the Western Sephardi self-identification as benei ha-ummah (members of the nation; Spanish: miembros de la nación; Portuguese: membros da nação). These terms appear frequently in the community registers of the Western Sephardi congregations and were often used by the rabbis of that period as a substitute for Kehillah Kedoshah (holy congregation) and as a general appellation for members of the Western Sephardi Diaspora as well as the general Sephardi Diaspora, both eastern and western. Moreover, even though the communality which the term ummah denotes was not initially intended to serve a religious value but rather a social, economic, and political one, and despite the fact that this term in the specific context of "trading nation" and in the broader context of "cidadãos de um dado país vivente em um país estrangeiro" ("citizens of a given country living in a foreign country"), which does not refer especially to Jewish society, we see that it becomes intertwined with the ritual sphere. Thus, for instance, rule 39 of the Book of Regulations (Livro dos Acordos da Nação Ascambot) of the Amsterdam congregation “Talmud Torah” admonishes against performing a circumcision upon anyone who is not included among benei ummatenu, “members of our nation.” This is also the case regarding the blurring of the limits of the term “congregação” and the term “nação” as they appear in texts of excommunication (herem) warnings as can be seen a number of times, for example, in the Livro de Memorias of that same community.

A blurring of the distinction between a situation which can be described as “natural” and between an existence with
“holy” religious significance is distinctly noticeable also in the repeated use of the concept “shimmur” (Spanish: conservación; Portuguese: conservação) in the community books of the Western Sephardi congregations by its systemic combination precisely with the term Kahal Kadosh (“holy congregation”), and not to the concept of worshipping God. This is so much the case that at times it seems that the “holiness” of the Jewish people or the holiness of a certain community takes the place, as it were, of the “holiness” of the Torah, and that the true destiny of Jewish religion is to serve the needs of man or, alternatively, the needs of the society to which he belongs.

In the same vein is the emphasis placed on communality of blood and race by the former Marrano Isaac Cardozo in his Las Excelencias de los Hebreos, as well as in statements by Manasseh Ben Israel in his Igerert ha-Anavah concerning nobility and the purity of blood of the Jewish people. This is also true for the former Marrano Isaac Orobia de Castro, who expresses a skeptical opinion regarding those who join the nation as converts, since “they will never become Israel nor of the seed of Abraham,” even “if they are beloved by God,” because “Israel is not a spiritual entity, but a nation.”

This stringency over lineage in the blood, the nobility in the race, and the biological connection to society, goes beyond the concepts of religious superiority demonstrated by the rabbis of that time, such as for example, Saul Levi Morothea and Isaac Aboab da Fonseca. It certainly does not mesh with the position of the majority of the sages of Israel, foremost among them being Moses Maimonides who feels that this nation is from the beginning of its history a “nation of converts,” and that the father of Israel is the father for anyone who follows in the way of Abraham. Yet it is clear that this stringency concerning race and blood reflects a certain development in thought, based on an awareness that Judaism has national content which is not dependent upon accepting the commandments.

A number of historians have noted these phenomena and claimed that this specific development on the issue of “Who is a Jew?” is to be found in the Spanish concepts of honra (honor) and hidalgua (pedigree) and in the ideological socio-cultural model of purity of blood (“limpieza de sangre”) which already existed in Spain in the 15th century. Although this explanation is interesting and even daring in its humanistic perspective, it is not quite correct historically.

If we refer not only to terminology, then the biological belonging to “the seed of Abraham who loves Him,” which serves as a barrier against converts in a certain historical context, is that which safeguards and encourages, in a different historical context, the continuation of the connection of the Marranos themselves to the Jewish nation. This can be understood from the testimonies of Profiat Duran of the 14th century, Isaac Arama of the 15th century, and even from statements of Isaac Abrabanel who was among the exiles leaving Spain in 1492. The difference between the version of Orobio di Castro and that of Duran, Arama, and Abrabanel is that the latter are not stringent over the purity of origin and blood of someone seeking to take upon himself the obligation of the commandments, but rather to the purity of the origin and blood of one who disengages himself from that obligation.

The skeptical declaration by Orobio di Castro that they who join the Jewish nation as converts, that is, who become observant Jews, “will never be part of Israel and not of the seed of Abraham,” leads not only to the past of Di Castro as a Marrano, but also to the distinction in the Book of Numbers between the declaration of Moses, “and do all My commandments, and be holy unto your God” (Num. 15:40), and that of Korah, “seeing all the congregation are holy” (Num. 16:3).

In the dispute between Moses and Korah, Korah was punished for saying things unacceptable to Moses and apparently irritating to God. Yet the concept of “Holy Nation” (goy kadosh) in “essence” appears, albeit in a different, secondary status in Judaism, over and over again in traditional Jewish thought. For Judah Halevi the convert can approach God but cannot become a prophet, because prophecy is the heritage only of descendants of Jacob. According to the Zohar, the soul of the convert is not on the same level as that of the Jew by birth despite the fact that this new soul descends upon him from heaven during the conversion process.

In Orot Yisrael by the 20th-century rabbi Abraham Isaac Kook, the Patriarchs influence the natural side of the Jewish people while Moses influences the studious side (through the Torah, the spiritual base). “In the future,” writes Rabbi Kook, “Moses will be completely linked with the Patriarchs and the Messiah will be revealed.”

The national, primordial as it were, content of Judaism may be discernible in history and Jewish thought wherever it is not enough to contrast the Jewish people with other nations over the observance of commandments. This is so both whether against the background of deep divisions between societies and peoples, or the background of rapprochement between societies and nations, and the fear of the blurring of the boundaries of the minority society with the majority.

At least Jewish society was still in the process of building its “centers,” to use the terminology proposed by the sociologist E. Shils, a society in which a large part of the members were taking their first steps in Judaism, when speaking of observing commandments.

In the same social and historical setting, Rabbi Moses Raphael D’Aguiar stresses the hesitations and difficulties facing those Jews as Jews in the transfer from their places of residence (neste captiveyro) in Spain and Portugal to their new places of residence and observance of Judaism, including the objective difficulties of learning the “holy doctrine” (sagrada doctrina). Others also describe these problems, among them the former Marrano physician Elijah di Montalto, who lived in Paris, and Immanuel Aboab.

In Western Sephardi society of the 17th century, the emphasis on the biological-racial foundations, as it were, of Judaism served a certain function, namely, a social need which was one of the expressions of “faith for the sake of the nation.”
To be sure, when speaking of Mannaseh ben Israel, his address when he extols the special virtues of the Jewish people, i.e., its nobility and purity of blood, is the English society of the time of the Cromwell protectorate, and not Jewish society. However, neither Di Castro nor Isaac Cardozo discusses these virtues except as a barrier and fortress for Jewish existence in the face of Christianity.

When speaking in Jewish historiography about processes of secularization among the Western Sephardi Diaspora in the 17th century, it is usual to speak of “emancipation” or “emerging from” the influence of religion in the areas of social and cultural activity which had previously been controlled by religion. In the same context, emphasis is placed on the integration of Sephardi Jews into the world of intellectual creativity of Western Europe, their contribution to the European “crisis of conscience” of the 17th century, and their part in the development of capitalist economy in the new centers in northwest Europe, Hamburg, Amsterdam, and London.

However, a question which has not been asked but should be is: What is the social and historical significance of the process of “liberation” and “emancipation”? What was “liberated,” and to which social models within Jewish society itself did this “emergence” lead in replacing old models?

This question was apparently not relevant in the generation of Rabbi Moses *Hagiz, who in his work Sefat Emet did not distinguish between the social aim of integration within the non-Jewish majority society and the goals of change directed toward the Jewish society of origin. He therefore calls both by the term holelim, a term which was derived from the Hebrew root h, l, l, which means contempt and derision of the holy by turning it into the profane. However, this question is relevant, because even if there is a historical link between the two aims, a differentiation must be made between one who goes from identifying with one religious national, social, cultural unit to identifying with another, and one who does not accept the authority of halachic tradition, but stubbornly insists on his historical, ethnic, and social belonging.

This distinction is to be found even when speaking of the extreme heterodox such as Juan de *Prado, on the one hand, and *Spinoza, on the other. Both of them leaned towards Deism and to the rationalism of the early Enlightenment, but their attitude to the Jewish community and to the question of their belonging to that community was completely different. While Prado sought to have the excommunication placed on him repealed and to be readmitted to the Jewish community, Spinoza apparently accepted his banishment from the community without regret.

The fact that within the confines of Western Sephardi society the patterns of community organization and leadership were maintained in their traditional form throughout the 17th century and most of the 18th demands an explanation. A negative explanation, that during this period the historical conditions were not ripe for the development of an “ideology of change intended to lead to a change in the patterns of Jewish society,” is inadequate. The weakness of this explanation is that it focuses mainly on the perspective of Jewish-Christian relations, in an attempt to latch onto a historical process at the final point of that historical process (Jewish integration into modern Western civilization) and in its understanding the concept of secularization as denoting the process of emancipation from the yoke of religion. This approach ignores the main characteristic of secularization in this society, that is, the transfer or translation of concepts, symbols, and beliefs from their transcendental-salvational origin to temporal uses, more specifically, to the sphere of society itself as an autonomous entity, distinct from Jewish religion.

To ignore this characteristic of secularization is also to ignore that for the public involved there was clearly a basic element of enjoyment in belonging to the congregation, and not only a feeling of subservience and sacrifice. This is also the case with the upper classes, the big businessmen, who enjoyed the relative freedom in which they could finally live as members of the elite, even when they were among their own people. The fact that during the 18th century there was a relative increase among Sephardi merchants who refused to take upon themselves any role in the community, or to contribute to it financially, is linked both to the process of leaving one world of collective being and joining another and to the gradual economic decline of this social class.

The question is not of the stability of the social system during this period of change, but rather the nature of that stability. What did the conformism to the social order of the iehidim, elected community leaders, represent?

Placing the stress on iehidim rather than institutions is important, since it has happened in Jewish history that communal organizations continued to exist even in order to serve the social and political needs of the non-Jewish majority society, needs which have nothing to do with religious tradition or even Jewish solidarity. The question is whether the stability of the social system represents the original historical effort at creating a sphere of religious “holiness,” where whatever located outside of it becomes secular, or does it represent social needs linked to ensuring the maintenance of the society as a cultural, historical, ethnic unit, with no alternative framework for its existence?

One who succeeded in describing the basic features of the secularization of the society under discussion was Spinoza, who determined – albeit not precisely in relation to Jewish society – that “it is almost impossible to know what a person is, that is, whether he is a Christian, Turk, Jew, or pagan, except... by the fact that he visits this or that house of worship, or finally by the fact that he is devoted to this or that outlook and is accustomed to answering Amen to the words of his teacher.”

Spinoza does indeed include among his statements on collective signs of recognition issues of manner and dress, but from the text cited we can see that even those signs of recognition were not important for him.

What would have been significant for him was apparently the fact that the M’lamad of the congregations of Amsterdam,
Hamburg, or London could enact regulations and obligate the *iehidim* to obey them “Em nome del Dio Benditto” (“in the name of blessed God”) and “para sevico... de Dio Benditto” (in service to blessed God), even when between this activity and the religious idea of the *kehiliyah* there was nothing more in common than the public itself and the structural significance of the religious notion.

If we use as an example the Dotor of Amsterdam, we find that this institution, which was called “Santa Companhia” (Hebrew: *hevrakh kedoshah*, “holy society”) maintained close connections with Marranos and even with “New Christians,” who were still in conflict over their religious identification. The institution in any case considered itself their patron and assisted them.

Albeit as far as Spinoza was concerned, “the reason for this evil” (the devaluation which had taken place with regard to the esteem of religious “holiness”) was that the Church “is becoming a mass movement in the guise of religion.” Yet, with his aristocratic, overbearing attitude to the “masses,” Spinoza ignores the fact that the church is changing not only because of an ostensible lowering of the value of religious “holiness,” but also because the “Church” is the body which will take upon itself in situations of social or national crises, the role of the model society (the “good,” “true” society) which is embedded in the base of all social organization.

From the point of view of religion itself, one of the indications of the decline of religion is its turning into the servant of society and the social order. An outstanding example of this trend can be taken from the statements of Leone *Modena in his Magen ve-Zimmah* (in referring to D’Acosta’s objections to Rabbinical Judaism) that “a basic element of the divine intention in the Torah is that we should all of us observe it and each detail in one manner, and not one this way and one another, for if not so Israel will not be one nation!”

In *Sefat Emet* by Moses Hagiz, the opposite trend emerges whereby “ammudei ha-Torah” (“pillars of the Torah”) take precedence over the existence of the world and the existence of the Jewish people itself. “For this purpose (being tested and observing commandments),” says Hagiz, “He, God, made us one nation in our land.”

One of the most striking institutional manifestations demonstrating that the territory of “religious” holiness (halakhic-institutional, in the term of Y. Leibowitz) was growing ever more restricted in this society, was the historical fact that the Western Sephardi congregations had problems in training rabbis from among themselves, not only in the difficult times of their establishment but also at the end of the 17th and beginning of the 18th centuries. The small number of people looking for a career for themselves as rabbis (most of the young “devote their time exclusively to commerce,” according to the statement of Rabbi Judah Leib of Zelichev), while the prestige of the rabbi or of the *talmid hakham* was declining, as can be learnt from Rabbi Moses Hagiz or even Rabbi Judah Leib of Zelichev. There was also a significant decline in the power of the sages of the community who served alongside the *parnasim*, the sages who were also called by the title “Ḥaham da-nação” (“sage of the nation”).

Even the Amsterdam community, despite its central position in matters of *halakhot* among the Marrano Diaspora of Western Europe, already in the early 17th century had to seek the assistance of the Sephardi centers in the Ottoman Empire, North Africa, and Italy when looking for rabbis. This is also true of the Sha’ar Shomayim congregation in London and the Beth Israel community of Hamburg, which struggled fiercely over issues of the rabbinate. The decline in the status of the *talmid hakham* was also attributable to the increased importance of other “wisdom” (*hokhmah*) or “knowledge,” representing a non-Torah sphere of learning.

It is to this type of knowledge to which Abraham Pereira is referring in his book *Espejo de la Vanidad del Mundo*, where he is careful to differentiate between that side of man’s nature with which he searches for truth wherever it may be found and “conducts research,” and another side of his character whereby he admires things “because they are new.” The latter facet is considered by Pereira to be likely to lead to the disowning of tradition, because “What could be a greater new thing than to turn a sinner towards God?” But this distinction of Pereira’s between knowledge and truth depends in effect upon the recognition that Jewish tradition does not ignore the realm of non-Torah knowledge, and does not even oppose it (on condition that it does not contradict the teaching of the Torah).

Maimonides himself mentions in his *Guide for the Perplexed*, “the Spaniards of our people” (i.e., of the 12th century) “who all accept the words of the philosophers and lean toward their interpretations as long as they do not contradict any fundament of the Torah.” Long before Maimonides, Midrash Lamentations Rabbah (2:13) stated: “If someone should say to you that there is wisdom among the nations, believe [him]; there is Torah among the nations, do not believe [him].” This shows us that even when dealing with the confrontation of the individual Jew with a culture foreign to him, it does not necessarily follow that there is a conflict with the binding nature of tradition, or alternatively of “social deviation.”

The prevailing error among historians on this point generally stems, as J. Katz has shown, “by analogy to the 19th century,” to a period in which “the traditional society was no longer a total society, but one with peripheral members who have abandoned tradition,” and despite this, or apparently because of this, it is ostensibly more “traditional” than in the traditional period in its own time.

The same is true in the economic sphere. There was nothing improper in the participation of the Jews in the stock exchange of Amsterdam or London, as long as they also reserved for themselves time for Torah study. Yet there was serious fault to be found in Jews going to the stock exchange as described by the Sephardi Jews Joseph Penso de la Vega in his satirical work, *Confusion de Confusiones*, written in Amsterdam in 1688, because in that stock exchange “whoever steals more earns more.” It is not accidental that the book includes...
Eclipse of Sephardi Jewry

After the middle of the 17th century a contraction in the importance of the Sephardi element in relation to the rest of the Jewish world took place. During the Middle Ages (from c. 1000 to 1492) the Jews of Spain formed a most numerous and active part of the Jewish people, perhaps at least one half of world Jewry. From the mid-17th century, however, their relative (though not absolute) importance dwindled. Shabbateanism, the movement of the false messiah Shabbetai Zevi, which was extremely popular in Salonika and Izmir from the 1650s until his messianic proclamation, arrest, and conversion to Islam in 1666, brought the Ottoman communities to spiritual and economic ruin. The reverberations of the movement were later felt in Amsterdam, Hamburg, Altona, and Poland in the early 17th century. Support and suspicion of Shabbateanism caused division between Sephardi communities in these areas of Northern Europe.

In modern times the Ashkenazi portion of the Jewish people has constituted approximately nine-tenths of the whole. Before the Holocaust, of the approximately 16,500,000 Jews in the world, about 15,000,000 were Ashkenazim and only 1,500,000 Sephardim and other non-Ashkenazi communities. The numerical decline was inevitably accompanied by a contraction in intellectual and cultural productivity, and the energetic Ashkenazi Jews took the lead. Eminent Sephardim in the modern period include Sir Moses Montefiore and Adolphe Crémieux; Benjamin Disraeli also came from a Sephardi family. Among the fathers of the rebirth of the Jewish settlement in Erez Israel were, besides Montefiore, the American Sephardi Judah Touro, and the Bosnian rabbi Judah Alkalai.

By the 19th century the celebrated old Sephardi communities in Western Europe and the U.S., established in the 16th and 17th centuries, had been numerically far outnumbered by the Ashkenazi element there. Although contributing less to Jewish culture, the Sephardim preserved their former homogeneity and pride in their historical heritage. The greatest center of this group was still Amsterdam, though the Spanish and Portuguese community in London had attained great significance. In the Ottoman Empire the Sephardim still preserved their ancestral traditions, and their economic and political position was favorable. They had the same rights as other minorities in the Ottoman Empire (see *Capitulations). *Salonika continued to be the greatest center of Sephardi Jewry in the world. Its Sephardi Jews contributed greatly to the in-

no discussion of the halakhic or Jewish significance of dealing in the stock exchange despite the fact that it is directed to Sephardi Jews, not only because Jews like Joseph Penso de la Vega knew how to separate the “holy” from the “profane”, but mainly because the book’s intention is to “entertain” and “to paint with the brush of truth” the reality of the exchange itself. The statements quoted above with regard to the intellectual and economic spheres apply as well to the area of the arts. Here too halakhah recognizes various degrees of approaching the profane.

In terms of institutions, in the same way that the obligation of discipline binding on individuals of the congregation towards the leaders of the community was not derived in Western Sephardi society exclusively from a religious command to “pay heed to the voice of their elders, the makers of fences, and the protectors of the hedges,” so the presence of the *tehedim in the synagogue was not dependent exclusively upon observing the commandments and religious obligations. It is a fact that even the heretics, such as Spinoza, maintained a seat for themselves in the Great Portuguese synagogue in Amsterdam almost up to their excommunications. Perhaps, as J. Katz says – albeit in a different context – because “the most traditional, rooted sub-meaning of the adjective Jew is connected to religion.” The regulations and prohibitions on business conversations in the synagogue and the need for emphasizing time and again the biblical commandment “Revere my sanctuaries” (Lev. 26:2) – as for example the emphasis of Pereira on the respect and awe which we are to bring to the Holy Temple – lead to the assumption that there were mundane conversations during prayer services. Yet, although prayer must come from the heart and “with humility,” we would not suggest that in this too one should not see excess criticism of the patterns of behavior of Sephardi Jews in the synagogue.

Regular conversations as well as those concerning livelihood were carried on in the synagogue and even were the subject of conflicts, almost through the entire history of this institution. It was not without reason that a distinction was made between the synagogue as a place of gathering for prayer and study and as a place in which all come together is already found in the Talmud (B. Shab. 32a), “R. Ishmael ben Eleazar said: Because of two sins ammei ha-areẓ die – because they call the holy ark (aron kodesh) arana (a plain cabinet) and because they call the bet keneset a meeting hall (bet ha-am).”

One should not assume that the *ammei ha-areẓ about whom the *baraita is speaking had committed such as grave sin as to deserve death (albeit, divine and not by a court) only because they were not fluent in the language of the sages (lashon ha-kodesh, i.e., Hebrew), since they were Aramaic speakers. They were guilty of having blurred the boundaries between the “holy” and the “profane.”

At the same time, the threat of secularization does not draw its strength precisely from the secular concepts of the surrounding, non-Jewish society or culture, but from the contrastive parallel which socio-historical reality creates between the synagogue and the holy ark, on the one hand, and the meeting hall and the cabinet, on the other.

This is to be stressed not in order to show that tendencies towards secularization existed in traditional Jewish society many centuries before the meeting with pre-modern or modern secular society, which is an important fact in itself. We emphasize this issue in order to learn of the very possibility of blurring the borders between the “holy” and the “profane” within the boundaries of the synagogue or within the limits of the community itself.

[Ezer Kahanov]
dustrialization of the city, the Alliance Israélite Universelle had eight schools in the city, the community had numerous daily newspapers in Judeo-Spanish and French, and an active Judeo-Spanish theater existed from the latter quarter of the 19th century until the Holocaust. It had an elaborate philanthropic structure and an active Zionist movement. The ultra-secular and anti-Zionist Jewish socialist workers movement numbering some 6,000 Jewish Sephardi tobacco workers represented a fourth of the local Jewish community, and laid the foundations for the Greek Communist movement. *Izmir and *Sarajevo were also prolific Sephardi communities with yeshivot, numerous synagogues, and communal mutual aid societies. Izmir had an active Judeo-Spanish press and theater life. Sarajevo had a special rabbinical seminary and strong Sephardi youth and cultural movements. In North Africa the degree of Jewish well-being was proportionate to the extent of European influence. Westernization and the British penetration into Egypt brought considerable amelioration of the condition of the Jews there. In *Algeria the French had conferred full rights of French citizenship on the Jews, though this led to a local antisemitic movement, and an outbreak of anti-Jewish rioting in 1897. The French occupation of *Tunis was also beneficial to the Jews, but in most of *Morocco the old medieval maltreatment and code still prevailed.

After World War I

The hopes that western influences would gradually lead to a marked improvement in the position of the Jews in the Balkans and Middle East did not materialize. After World War I, when large stretches of the former Ottoman Empire passed to the various Balkan powers, large populations were transferred in order to lessen friction between Greece and Turkey by ensuring greater homogeneity. In Salonika, the Jewish population, formerly in the majority, was reduced to about one-fifth of the total, and the Greek authorities began to take steps to replace Jewish economic and cultural influence by Greek. In Turkey, now being reorganized on national lines, the former privileged position of ethnic minorities came to an end. Many Jews emigrated from both Greece and Turkey to Western Europe, America, and especially to Spanish America. Istanbul Jewry underwent Turkification after the founding of the modern Turkish Republic in 1924, became greatly secularized, and Judeo-Spanish was put aside at the expense of modern Turkish. Political Zionism was scorned. As all international movements were banned in Turkey, Zionist activities went underground and dwindled. The 1934 antisemitic riots in Eastern Thrace and in the region of the Dardanelles and Tekirdag, prompted by Armenian, far-right Turkish, and pro-Nazi nationalist elements, was the beginning of the end for the old Sephardi Jewish community of Edirne (Adrianople) and other Sephardic communities in European Turkey and the Dardanelles. Some 12,000 Jews became refugees and moved to Istanbul.

Holocaust

During World War II, the Nazis first tried to sow division by discriminating between Jews of various origins. In Holland, the Sephardim were left until last, but eventually almost all were “liquidated.” The small communities came to an end, and the illustrious Spanish and Portuguese community of Amsterdam was reduced to one-tenth of its former number. In Italy, the old Sephardi communities of *Venice, *Ferrara, *Florence, and *Leghorn suffered appallingly. The victimization of the Jews in the Balkans was carried out on a far larger scale, and most were eventually sent to the death camps. In Bulgaria, which had a long tradition of just treatment of the Jews, the government was able to evade the enforcement of the German orders, but most males were sent to forced labor and more than half of the Jews of Sofia were moved to the periphery. That strongly Zionist community survived almost intact to find its way after the war en masse to Erez Israel. The Bulgarian pro-German government deported the Jews of Yugoslavian Macedonia and Greek Thrace to their deaths in Treblinka, and the Bulgarians shot on the shore of the Danube River some 1,100 Jews from Cavalla and Cuomotini, Greece, who were sent by boat from Lom, Bulgaria. The local Croatian, Bosnian, and Serbian Fascists and their German masters in Yugoslavia almost wholly annihilated the Jewish population there. Most of the Jews of the vibrant Sephardi communities in Belgrade and Sarajevo were murdered on Yugoslavian soil in concentration camps and the Jasenovac death camp run by the Croatian Fascist Ustase movement. The traditional Sephardi communities of Monastir and Skopje were deported by the Bulgarian occupier to Treblinka, where all those deported were gassed upon arrival. Although the small Athens community suffered less owing to the aid of the Orthodox patriarch Damascenos, the number of those deported in the rest of Greece rose in some places to 99%, and almost the whole of the Salonika community perished.

The Jews of Turkey suffered from the Varlık Vergisi luxury tax in 1942. Many who could not pay the exorbitant sums were sent to forced labor in camps like Askale. In Izmir, the wealthy industrialist Rabenu Politi paid the equivalent of $46 million to ransom his community members from harsh labor. As a result of this wealth tax, most of Turkish Jewry moved to Israel in the late 1940s and early 1950s, leaving 20,000 Jews mainly in Istanbul and only 1,500 Jews in Izmir.

In Romania, 12,000 Sephardi Jews perished in the Holocaust. The Sephardi communities in Bucharest, Craiova, Braila, Turnu Severin, Timisoara, and elsewhere ceased to exist.

In Holland, 4,000 of the country’s 5,000 Sephardim from Amsterdam and The Hague were deported by the Nazis to Sobibor, Auschwitz, and Theresienstadt. The majority of the Sephardim in Vienna and Hamburg were also murdered in the Holocaust.

After World War II

As antisemitism had spread in Europe, the attitudes toward Jews in the countries of North Africa and the Middle East changed for the worse. Ostensibly this was bound up with artificially stimulated opposition to Zionism in the Arab and
Muslim countries. After Israel’s *War of Independence (1948), the position of the Jews in this region became increasingly precarious. A mass emigration began, in which many eventually arrived in Israel.

While Sephardi Jewry was almost annihilated in Europe and had largely moved from Asia (except Israel), a new Sephardi Diaspora came into being in circumstances very different from the old. In the interwar years emigrants from the eastern Mediterranean countries augmented the old Sephardi communities of *London, *Paris, and New York (see below). New Sephardi groupings were also founded, including congregations in *Salisbury (Rhodesia) and the Belgian *Congo by emigrants from *Rhodes (whose ancient community was almost annihilated by the Nazis during World War II). Large numbers of emigrants established themselves in Central and South America, where they found themselves linguistically more at home. The rapid growth of the new communities in *Latin America has been one of the most remarkable and significant events in Jewish history of the past generation. In Buenos Aires, the Damascan and Aleppoan Jews had their own synagogues and institutions. The Rhodian and Turkish Jews had their own synagogues in the Buenos Aires area, but they were more secular than the Syrian Jews. There also was a small Moroccan community in Buenos Aires. Since the 1990s, the Sephardim in Mexico City have been a majority of the general Jewish community. The Jewish-Spanish speaking community, and the separate Monte Sinai (Damascan) and Aleppoan communities with their synagogues, schools, and cultural and philanthropic organizations outnumber the Ashkenazim, and are a major part of the future communal trend.

Whereas the majority of Jews in Latin America and North America are of Ashkenazi origin, increasing numbers are speaking Spanish, and an important Jewish-Spanish cultural life is developing. Thus while the antecedents and synagogue rites of these communities are Ashkenazi, their cultural life links up with that of medieval Spain and cannot fail to be influenced by the Spanish intellectual and literary traditions.

[Cecil Roth / Yitzchak Kerem (2nd ed.)]

**In the United States**

In 1654, 23 Jews fleeing Portuguese reprisals in Brazil found refuge in the Dutch colony of New Amsterdam (see *New York), where they established the Shearith Israel Congregation, popularly known as the Spanish and Portuguese Synagogue of New York City. Other Sephardi congregations followed along the Atlantic coast. The contribution of the Sephardim was greater than their small numbers would suggest. They were prominent in the struggle for civil rights, and as craftsmen, merchants, ship owners, manufacturers, professionals, public servants, and writers they enriched the life of the general American community. They constituted about half of the estimated 2,000 Jews living in the American colonies. Many of the colonial Sephardim migrated to the British colonies from the Sephardi communities in the Caribbean, where there had been Jewish Portuguese settlement since the late 16th century under the British, Dutch, and Danish in *Jamaica, *Curacao, *Barbados, and later in Nevis, St. Eustatius, the *Dominican Republic, St. Croix, Trinidad, Tobago, *St. Thomas, and elsewhere. With the increase in English, German, and Polish Ashkenazim during the 19th century, the Sephardim played a correspondingly lesser role in the life of the U.S. Jewish community. However, the descendants of these “Founding Fathers” continue to hold a very respectable place in U.S. society. They often take the initiative in cultivating Sephardi religious and cultural activities, and take pride in their distinctive “Portuguese minhag,” a hallmark in dignified Jewish worship. From 1900 onward, marked numbers of Oriental Sephardim immigrated to the U.S. from the Balkans, Asia Minor, and Syria. The exodus was precipitated by natural disasters, the rise of nationalism among the Balkan peoples, and the general economic and political deterioration in the Ottoman Empire. In the period from the Young Turk Revolution in 1908 to the fixing of U.S. immigration quotas in 1924–25, 50,000–60,000 Sephardim arrived in the U.S. After World War II, the U.S. Sephardi community was augmented by several thousands from Morocco, Egypt, Iraq, Syria, Iran, Israel, and some of those who left Cuba after 1959.

The 20th-century arrivals from the Levant were segregated from the mass of Yiddish-speaking East European Ashkenazim by linguistic, social, and cultural barriers, and they also felt estranged from the hitherto independent Sephardim. Moreover, they further divided themselves into three language groupings: Judeo-Spanish, Greek, and Arabic. Dispersed through the efforts of the Industrial Removal Office, small Sephardi colonies were soon to be found in *Rochester, *Philadelphia, *Cincinnati, *Chicago, *Atlanta, *Montgomery, *Portland (Oregon), *Seattle, and *Los Angeles. More than 30,000 Sephardim, however, settled in New York City and provided the basis for organized Jewish communal life.

Following the pattern of their Ashkenazi brethren, they established mutual aid societies named after their native towns. Several attempts were made to unite the Sephardim. The first, encouraged by the kehillah of New York City, was the Federation of Oriental Jews, founded in 1912. All three language groups were represented, but it failed to receive the financial support of its constituent societies and disappeared within a few years. In 1924 the Spanish-speaking societies united to form the Sephardic Jewish Community of New York. The hub of its activities was its center in Harlem. With the decline of Sephardim in the area and the economic depression from 1929, the “Community” fell apart in 1933.

Between 1915 and 1952 mergers took place among the various mutual aid societies to form the most representative self-help organization, the Sephardic Jewish Brotherhood of America. It claims a membership of more than 3,000 families. The Central Sephardic Jewish Community of America, founded in 1941, tried to pattern itself after the old world Sephardi kehillah by appointing as its head a chief rabbi to coordinate the religious and educational activities of its constituent institutions. The Central Sephardic Jewish Community had its center in Harlem. It claimed a membership of more than 3,000 families. The organization was divided into several parts: the Central Sephardic Jewish Community of America, founded in 1941, tried to pattern itself after the old world Sephardi kehillah by appointing as its head a chief rabbi to coordinate the religious and educational activities of its constituent institutions. The Central Sephardic Jewish Community worked with Jewish national organi-
izations in aiding victims of the Holocaust and supporting projects on behalf of Sephardi students in Israel and in Arab countries. One beneficiary was the Sephardic Home for the Aged. The home has a central concern for all Sephardim in the New York area. It served the needs of the Sephardi aged and also as a focus for community-wide functions. A singular loss to the Sephardi community was the discontinuance of the Ladino press. Two publications, *La Americana* (1910–23) and *La Vara* (1922–49), served as a strong unifying force, at least for those who knew the language. No English periodical emerged to fill the role formerly served by this press.

In 1971 there were some 33 Sephardi synagogues situated in 15 U.S. cities loosely affiliated with each other either through the Union of Sephardic Congregations and/or the World Sephardi Federation. The larger congregations maintain *talmud torahs*, where an attempt is made to transmit Sephardi traditions and the Sephardi *musah*. Two day schools were sponsored by "Syrian" communities in Brooklyn, the Magen David Yeshivah and Ahí-Ezer. Sephardi children from Aleppo and Damascus received maximal Hebraic-religious education, which enabled them to pursue advanced Jewish studies. A concerted effort was made by Yeshiva University beginning in 1964 to train leadership through its Sephardic Studies Program. Future rabbis, teachers, and scholars were trained to meet the needs of the Sephardi community. Since the death of Hakham Solomon Gaon in 1994 and the resignation of Dr. Mitchel Serrels, the program has flourished and has little effect on the strengthening of Sephardi life in North America. The American Sephardi Federation was founded in 1976 by Prof. Daniel Elazar and strengthened in the 1980s and afterward by the New York-born philanthropist Leon Levy, who was of Turkish familial origin.

[Hyman Joseph Campeas / Yitzchak Kerem (2nd ed.)]

**In Erez Israel**

The emigration of the Jews from Spain that took place in the 15th and 16th centuries coincided with a relatively liberal Ottoman regime which allowed the Jewish refugees to settle in all parts of the empire, including Erez Israel. The Jewish population of the country consisted at the time of four distinct communities: the Ashkenazi, which then included other immigrants from European countries, e.g., from Italy; the Sephardi, i.e., refugees from Spain; the North African, known as the "Moghrabi"; the "Mustarabs" or "Moriscos," i.e., the autochthonous Jews who had never left the country. After the expulsion from Spain, the Sephardim quickly became the predominant element in the larger towns of the country, and from the 16th century they played a decisive role in transforming "Safed into the spiritual center of world Jewry, particularly by their leading scholars, religious poets, and mystics who settled there. They were able to produce their epoch-making works (e.g., Joseph Caro's *Shulhan Arukh*, Solomon Alkabaz's religious poetry, Moses Cordovero's and Hayyim Vital's mystic philosophy, etc.) while living and working in a relatively free and economically productive and self-supporting Jewish population, in contrast to Jerusalem and other towns in Erez Israel and in most Diaspora countries. In the same period, Don Joseph *Nasi and Dóna Gracia Mendes made their bold attempt at settling Jews in the reconstructed town of Tiberias and its neighborhood. The Sephardim also outgrew in numbers and influenced the other Jewish communities in Jerusalem, though the immigration of *Juda Hasid and the first waves of hasidic immigrants from Eastern Europe in the 18th century tended to change the balance. At first both primary communities, the Sephardi and the Ashkenazi, cooperated in sending emissaries to Diaspora countries for collecting funds and defending Jewish interests vis-à-vis the authorities. But with the introduction of the "capitations" for non-Ottoman residents in the 19th century, and the organization of the first separate *kolelim* which later merged into a "general committee" (*va'ad kelalet*) of all Ashkenazi groups, the dividing line between Sephardim and Ashkenazim became greatly stressed, particularly when the Sephardi chief rabbi in Jerusalem, bearing the title *rishon le-Zion*, was, from 1842, recognized officially as the Ḥakham bashi. This process, which culminated during the British Mandatory period in the establishment of a dual Ashkenazi-Sephardi chief rabbinate, caused all non-Ashkenazi "Oriental" communities to affiliate with the Sephardi rabbinical authorities, thus creating the semantic confusion around the term "Sephardim" in both Erez Israel and the Diaspora. In appointing Jews as officials, the British administration in Palestine often preferred members of old Sephardi and other non-Ashkenazi families, born in the country and speaking Arabic as well as Hebrew, to the "newly arrived" Zionist Ashkenazim. However, it did not succeed by this and other methods in politically dividing the Jewish population along the "ethnic" community line, and many Sephardi Jews, born in the country, held important positions in the *Va'ad Le'ummi* and all other *yishuv* bodies. The dual chief rabbinate, however, continued to exist under the State of Israel. Only in the Israeli army did a quick process of unification of religious services, including a unified prayer book (*musah ahid*, take place under the guidance of the army rabbinate. During the mass immigration to Israel of the 1950s and 1960s, the Oriental communities greatly increased, and through their high birthrate, tended to outnumber the Western, mostly Ashkenazi, element in the country. But only a minority of the new non-Ashkenazi immigrants – those from Bulgaria, Greece, Turkey, and some North Africans – are, strictly speaking, Sephardim, i.e., descendants of Spanish and Portuguese Jews whose vernacular was Ladino. Some attempts were made to exploit politically the fact that many of the Oriental Jews from Muslim and other Afro-Asian countries, like India, belong to the lower strata of society, often feel underprivileged, and can only gradually – with considerable difficulties – work their way up into the upper strata of Israeli society. But on the whole these attempts failed, mainly because of the general trend of the "merger of exiles" fostered by the organized efforts of the state in the schools, the army, settlement projects, etc. However, in the framework of preserving the vanishing "ethnic"
community culture, efforts were made by the Ben Zvi Institute as well as by specialists in the field, to record and publish Sephardi liturgy and songs, often under the auspices of commercial record companies like Hed Artzi and Adama in Israel, Tara in New York, Tecnosaga in Madrid, Spain, and the Jewish Music Research Center of the Hebrew University of Jerusalem at the National Library in Jerusalem. The performance of Sephardi folklore, such as the show Bustan Sefaradi by Yizhak Navon (1971) and Sephardi romanceros, enjoy much popularity with the Israel public. Ladino radio broadcasting in Jerusalem began in the late 1970s with the musical composer Yitzhak Levy, and was continued by Moshe Shaul, who also edits the Judeo-Spanish Latin-letter Sephardi periodical Aki Terushalayim, which places the emphasis on Judeo-Spanish revival. The Council of the Sephardi Community in Jerusalem in 1971 announced plans to establish a Center for the Study of Sephardi culture under the auspices of the Hebrew University, to be called Misgav Yerushalayim and to be located in the Old City. Since the 1980s, the institute has been housed on the Mount Scopus campus of the Hebrew University of Jerusalem. In the late 1990s, the Israeli government promulgated a law to establish national authorities for Yiddish and Ladino. The National Authority for Ladino Culture – established in Jerusalem and with branches in Tel Aviv, Beersheva, and Haifa – has a teacher training program, sponsors courses and scholarships for Ladino studies at Israeli universities, and organizes public seminars and weekend retreats. Ladino is available as an Israeli baccalaureate exam for those who wish to specialize in it, and it is taught at the high school level at the Amalia Religious Girls School in Jerusalem. In the 1990s, Avner Perez founded the Sefarad Institute for research into Ladino literature in Ma’aleh Adumim. Ladino language and literature university programs were started at Bar-Ilan University and Ben-Gurion University. Dr. Shmuel Refael started the discipline at Bar-Ilan University in the early 1990s, and the department was endowed by Naima and Yehoshua Salti of Istanbul. At Ben-Gurion University, Prof. Tamar Alexander chaired the Moshe David Gaon Department for Ladino Culture from 2003, assisted by the scholars Avner Perez and Eliezer Papo. Unfortunately, funding for the Eliasher Center for Sephardi Studies at the same university was cut severely in 2002 by the Israel Ministry of Education, and most of its courses were canceled.

1992: The Quincentennial Year of the Expulsion of the Jews from Spain

Celebrations, commemoration, remembrance, and public awareness. The 500th anniversary of the expulsion of the Jews from Spain was commemorated throughout the Sephardi world. In the United States, synagogues put Sephardi themes on their cultural agendas. The community of Indianapolis, for example, produced over 20 relevant events during 1992. Laurence Salzmann’s exhibition on Turkish Jewry entitled “Anyos Munchos y Buenos” traveled to dozens of cities in the United States and also in Europe. Other traveling exhibitions included “Mosaic: Jewish Life in Florida”; the Beth Hatefutsot (Diaspora Museum of Tel Aviv) exhibition “In the Footsteps of Columbus: Jews in America in 1654–1880”; “Turkish Jews: 500 Years of Harmony” organized by the Quincennial Foundation of Istanbul (qfi); and the Anti-Defamation League’s “Voyages to Freedom: 500 Years of Jewish Life in Latin America and the Caribbean.” At the Yeshiva University Museum in New York, the exhibition “The Sephardic Journey: 1492–1992” was displayed throughout most of the year. The Judeo-Spanish singing groups “Voice of the Turtle” and “Voices of Sepharad” had busy concert schedules in the USA and in Europe.

In addition, various academic conferences were held in the U.S. Arizona and Mexico were centers for activities highlighting the recent revelation of numerous crypto-Jews of Spanish-speaking origin among their population. The University of Tucson has taken an active interest in Sephardi studies and promoted Sephardi scholarship and guest lectures.

In England, Rabbi Abraham Levy of the Spanish and Portuguese Lauderdale Road Synagogue produced and sponsored numerous publications, lectures, and other cultural events. The Jewish community of Brussels and its local “Sephard ‘92” group were extremely active. In Thessaloniki, Greece, the Society for the Study of Greek Jewry and the local Jewish community organized numerous lectures. Large academic conferences were held in Istanbul and in Thessaloniki. Thessaloniki also hosted an international Judeo-Spanish song festival and an exhibition. France saw a memorial service at the Salonikan-founded Rue de St. Lazare synagogue and an academic conference, part of which was hosted in Geneva, Switzerland.

In Israel, the Shazar Center organized numerous international academic conferences and historical workshops on the Sephardi experience. The Sephardi Public Council of Jerusalem produced several cultural events, and the Committee of Sephardi and Oriental Communities in Jerusalem hosted several concerts. The Center for Spanish Jewish Studies of Lewinsky College in Ramat Aviv presented a lecture program, and the Museum of Tel Aviv University put on exhibits on the Jewish experience in Spain. Branches of the Turkish Immigrant Association organized evenings of Judeo-Spanish conversation and song.

Several Sephardi families in Israel organized reunions around the quincentennial year, including the Castel, Meyuhas, and Abravanel families. The Abravanel family sponsored a reunion and conference in New York City, while the Toledoños assembled in Spain.

The Public Council for the 500 Year Festivities was headed by former Israeli president Itzhak Navon, who hosted the Israeli Television series “Jerusalem in Spain.”

In Spain, the March 31, 1992, ceremony, where King Juan Carlos annulled the expulsion decree, attracted the attention of world Jewry and the media. Spain hosted numerous academic conferences, and Spanish presses published hundreds of scholarly books on Spanish and Sephardi Jewry.
The only major foundation created for the 1992 festivities, which produced results, was the Quincentennial Foundation of Istanbul. It organized two major academic conferences and a gala banquet attended by Israeli President Herzog, Turkish President Ozal, and Turkish Prime Minister Demirel, began restoration of the Ochrid Synagogue, sponsored a photo exhibition, a film, concerts, and planned an educational kit.

In Latin America, major conferences were held in Buenos Aires, Argentina, and in Rio de Janeiro and São Paulo, Brazil. SEPHARVAIM (Heb. ספריה ספריה, ספריה ספריה), one of the cities from which the king of Assyria brought settlers to Samaria, after the conquest of the Kingdom of Israel (1 Kings 17:24). Sepharvaim is also mentioned among the city-states which, as King Senacherib of Assyria boasts, were unable to hold out against the king of Assyria (1 Kings 18:34; 19:13 = Isa. 36:19; 37:38).

Two principal suggestions have been made for the identification of the city. Some identify it with Sippar, one of Babylon’s leading sacred cities, on the ground that it is mentioned together with Babylon and Cuthah (1 Kings 17:24), and indeed the annals of Senacherib tell of the deportation of inhabitants from both Sippar and Cuthah. The identification of Sippar with Sepharvaim is supported by the forms ספירה ספירה (1 Kings 17:31) and ספוֹרִים ספוֹרִים (10IsI 36:19; 37:13), (Heb. ספריה ספריה) being apparently a scribal error due to the similarity of the letters vav and yod. The name (Heb. ספריה ספריה) appears to be the dual form, indicating a twin-city, and in fact Sippar consisted of Si-ip-ar ša Šamaš and Si-ip-ar ša A-nu-ni-tum ("Sippar of the god Shamash" and "Sippar of the goddess Anunitum"). Others identify Sepharvaim with Sibraim (Ezek. 47:16), situated in Syria between Damascus and Hamath. This identification is based on the fact that in 11 Kings 18:34 Sepharvaim is mentioned together with Hamath and Arpad, and that the Peshitta of Ezekiel 47:16 reads Sepharvaim instead of Sibraim. The gods of Sepharvaim, ‘Adammelech and ‘Anammelech (11 Kings 17:31), were worshiped, according to the proponents of the first identification, in Sippar in Babylonia, and according to the proponents of the second, in Sibraim in Syria. It is difficult to decide definitely in favor of one rather than the other identification. The suggestion that the biblical passages are to be explained as referring to times at Sippar and at times to Sibraim is not very probable, since in four of the passages (1 Kings 18:34; 19:13; Isa. 36:10; 37:15) the three cities Hamath, Ivah (Avva), and Sepharvaim are named together, showing that the same Sepharvaim is meant in all of them, and it is difficult to suppose that a different one is intended in 1 Kings 17:31.

[Isaac Avishur]
SEPHIHA, HAIM VIDAL (1923– ), Judeo-Spanish linguist and activist. Sephiha was born in Brussels to a Sephardi family from Istanbul. During the German occupation of Belgium, he was arrested in 1943 and deported to Auschwitz in September. He survived the death camp, where his father perished. After liberation, he resumed his studies in natural sciences, graduating in 1948 and working as a chemical engineer; however, he eventually decided to study and defend the linguistic and cultural heritage of his community. As a student and assistant teacher of Hispanic linguistics at the Sorbonne in Paris, in 1967 he started to give lectures and workshops on Judeo-Spanish at the National Institute of Oriental Languages (INALCO). His understanding of the language is based on a clear distinction between its two fundamental modalities. Whereas he reserves the term “Ladino” for the old “liturgical language” in which the Sephardi Jews rendered sacred Hebrew texts into a “calqued” Judeo-Castilian, he describes the vernacular as a versatile “language of fusion” built up from different medieval Iberian dialects and integrating elements from Hebrew and the modern linguistic environment. In 1970, Sephiha presented his doctoral thesis, a comparative study of two 16th-century Ladino translations of Deuteronomy and, in 1979, he obtained a professor’s degree for his theoretical analysis of the Ladino language. His chair at the University of Paris-VIII, which he has held since 1981, was transformed three years later into an INALCO chair in Judeo-Spanish studies, the first university chair ever dedicated to this subject. Sephiha, who retired in 1991, was instrumental in securing academic acceptance and public support for the “agonizing language” he spoke and taught. Besides his scientific and popular publications, from 1972 he launched several calls for revival of the language and in 1979 founded the “Association Vidas Largas for the Defense and Promotion of the Judeo-Spanish Language and Culture,” which organizes educational work in Sephardi communities as well as the rescue of literary, musical, and architectural treasures. Judeo-Spanish has since been included among the recognized minority languages of France. In 2003, Sephiha inaugurated at the Auschwitz site a memorial in honor of the 160,000 Judeo-Spanish victims of the Holocaust.

[Carsten Wilke (2nd ed.)]

SEPPHORIS (Heb. *Zippori*), ancient city located in the heart of Lower Galilee (map ref. 176/239). The site is situated some 18 mi. (29 km.) from Tiberias to the east and the same distance from the Mediterranean to the west. It lies approximately 4 mi. (6 km.) to the northwest of Nazareth, rising ca. 1,000 ft. (300 m.) from the surrounding valleys: the Netofa Valley to the north and the Nazareth basin to the south. Arab residents of a village called Safuriyye occupied the site until the 1948 war and a moshav was founded there in 1949. The ancient city, consisting of a summit and lower city, underlies much of the medieval ruins, which were associated with the citadel on the summit, a museum of the National Parks Authority since 1995. The Citadel served as a small castle in Crusader times when the site was known as Le Sephorio; it was renovated in the mid-18th century by the Bedouin governor of Galilee and again in 1889 by the Turkish sultan, who added a second story; it served as a school until 1948.

The first mention of Sepphoris in a literary source occurs in Josephus in connection with the Hasmonean king Alexander *Yannai, who successfully repulsed the attack of Ptolemy Lathyros of Egypt (Ant., 13:338). The site subsequently became the administrative capital of the Galilee ca. 57 B.C.E. when Gabinius, Pompey’s legate to Syria, made it one of his five *synedria*, or councils (Ant., 14:91; War, 1:270). The city was taken by *Herod the Great in 37 B.C.E. (Ant., 17:271) and presumably served as his northern command post for the remainder of his reign. At the death of Herod in 4 B.C.E. a rebellion broke out at the site, the so-called War of Varus, which sought to remove Sepphoris from Herodian rule (War, 2:68; Ant., 17:289). The rebellion was supposedly crushed and the city burned, and many of its inhabitants were taken as slaves. Recent archaeological work at the site has not substantiated Josephus’ report on this event.

In the first century C.E., *Herod Antipas, who inherited the site as part of the tetrarchy of Galilee and Perea (Transjordan), fortified the city and made it the “ornament of all Galilee, and called in Autocratoris” (Ant., 18:27). The precise nature of Antipas’ fortification and building and renovation are still not adequately understood, even after considerable work at the site. The city enjoyed autonomous rule under Antipas and served as the capital of Galilee, before he moved it to Tiberias. The role of Sepphoris during the Great Revolt against Rome was pro-Roman, with many of the residents exhibiting “pacific sentiments” (War, 2:30–31); coins minted there under Emperor Nero (66–67 C.E.) refer to the city as Eirenopolis or “City of Peace.” After the revolt the city experienced great growth as a result of the many newcomers from the south, and it became the foremost city in Galilee. At the beginning of the reign of Antoninus Pius (138–61) the city became known as Dioecesarea in honor of Zeus and Casear, precisely the time when members of the Sixth Legion were stationed at nearby Legio. What happened at Sepphoris or nearby during the Second Revolt is unclear. Sepphoris reached its zenith as a Jewish seat of learning and cultural center during the reign of Bar-Kokhba (138–135), when the Sanhedrin was moved there and Rabbi *Judah ha-Nasi lived in the city. Under Rabbi Judah’s leadership, the Mishnah was edited and published there and Sepphoris remained a major seat of learning throughout the rabbinic period. Though it suffered greatly from the earthquake of 363 C.E., it was rebuilt soon after and by the sixth century
a bishop was head of a major Christian community there. By the Umayyad period the city was identified as Saffuriyya in written sources.

The first major archaeological work was undertaken at Sepphoris in 1931 under the direction of Leroy Waterman of the University of Michigan. His team identified the theater and what they believed to be a church on the western summit along with numerous domestic installations. Eric Meyers and James Strange surveyed the site in the 1970s with the view of excavating there. Meyers subsequently codirected the Duke-Hebrew University Excavations there with Ehud Netzer and Carol Meyers from 1985 to 1989 and Strange directing the South Florida Excavations during that time and into the 1990s. Meyers’ new team was reorganized in 1993 after the Hebrew University team went independent under the leadership of Zev Weiss. Another project headed by Z. Tsuk focused on the water system and was sponsored by Tel Aviv University and the National Parks Authority. Sepphoris became “Zippori National Park” in 1992. Major restoration work and numerous historic buildings and structures have since been incorporated into the National Park, including the Citadel Museum, the Dionysos Mansion, the Nile Mosaic Building, and the Synagogue with the zodiac mosaic.

Major discoveries that have illuminated the history of the city include the following: the theater, probably dated to the period after 70 C.E.; a series of private domiciles on the western summit that include more the 20 ritual baths that date to the Roman period; a fort on the western summit dated to the late Hellenistic period; the great Dionysos Villa or Mansion with peristyle courtyard and a mosaic with scenes from the life of Dionysos with Greek labels, dated to the third century C.E.; the lower city with its two great streets intersecting, the east-west decumanus and north-south cardo, dating from the early Roman period and lasting until the Byzantine period, flanked by colonnaded sidewalks and a series of shops and small houses; a Byzantine church in the lower city; the Nile mosaic building with exquisite mosaics dating to the Byzantine period; the Byzantine-period synagogue with a zodiac mosaic; and the incredible water system with aqueducts, dated to the end of the first century C.E. and operational until the Byzantine era. Lying outside the city and in the moshav Zippori are a series of tombs that have been accidentally discovered through the years and the great Crusader Church of St. Anne, which lies within the compound of the Franciscan property to the west of the Citadel.

The recovery of the material culture of Sepphoris from the Hellenistic to the medieval periods has led to an unprecedented reevaluation of the role of the city in the history of the Land of Israel and of Galilee in particular. Its rich heritage of mosaic art and building styles places it squarely in the mainstream of Greco-Roman culture and suggests that its incredible importance as a city of Jewish learning was not unrelated to the fact that by the time of Rabbi Judah’s presence there Jewish life was completely at home in the world of Hellenistic culture.

[Eric M. Meyers (2nd ed.)]

SEPTUAGINT, the oldest Greek translation of the Bible. The designation Septuagint, from the Latin septuaginta, “seventy,” is based on the legend contained in the apocryphal Letter of Aristaeus, according to which 72 elders of Israel, six from each tribe, translated the Law into Greek, in Alexandria, during the reign of Ptolemy I in Philadelphia (285–246 B.C.E.). On the basis of this legend it can be inferred that the Pentateuch was translated into Greek in Alexandria during the first half of the third century B.C.E.

The designation Septuagint was extended to the rest of the Bible and the noncanonical books that were translated into Greek during the following two centuries. For full details, see *Bible, Translations.

SEPÚLVEDA, town in central Spain, N.E. of Segovia. The Jewish community of Sepúlveda belonged to the bishopric of Segovia and became prosperous in the 13th century. In a fuero (“charter”) given by Fernando IV to the town of Sepúlveda in 1305, the Jews there were granted different urban privileges. These included the liberty of trading in the local market and the right to call witnesses from both sides in trials involving Jews and Christians. The Jews were also allowed to have a cemetery within the town boundaries, in exchange for a special tax on pepper. But it was stated in the town’s fuero that a Christian woman who nursed a Jewish (or Moorish) child should be flogged and driven out of the town. Jews were forbidden to buy meat for three days following Passover, Shavuot, and Christmas, with the exception of goat meat. In 1494, two years after the edict of expulsion from Spain, one Pedro Lainez returned to Sepúlveda, converted to Christianity, and consequently had his property restored.

[Ham Beinart]

SEQUEYRA, JOHN DE (1712–1759), early American physician. Sequeyra was born in London, scion of a Sephardi family noted for its physicians. He received his medical degree at the University of Leyden, Holland, in 1739 and migrated to Virginia about 1745, spending almost his entire life in Williamsburg. Appointed the first visiting physician to the insane asylum in that town (1773), Sequeyra later was elected to the hospital’s court of directors. In 1773 he was called in to treat
SERAIAH

(Heb. שֵׁרַיָּה, “yHWH is prince”).

(1) Son of Neriah, son of Mahseiah. Seraiah was from a family of high officials who served under “Zedekiah, king of Judah (596–586 B.C.E.). This family apparently had pro-Babylonian sympathies, and Seraiah acted as Zedekiah’s emissary to Babylon (Jer. 51:59). At the same time he also served as Jeremiah’s emissary, which indicates that he supported the prophet as did “Baruch, who was apparently his brother. His official title was “quartermaster” (Heb. sar menahah, Jer. 51:59), although the Septuagint and Theodotion describes him as “officer in charge of gifts” (Heb. sar minnahah or sar menahoth).

If the latter versions are correct, Seraiah son of Neriah is to be identified with the chief priest Seraiah who was exiled to Babylonia (Jer. 52:24).

(2) The chief priest in Jerusalem at the time of the fall of the city (11 Kings 25:18 = Jer. 52:24), who was put to death at Riblah by Nebuchadnezzar. He was an ancestor of Ezra (Ezra 7:1; 1 Esdras 8:1).

(3) A captain of the Judean forces who joined Gedaliah at Mizpah (11 Kings 25:23; Jer. 40:8), in the assurance that he would be treated well by the latter.

(4) An officer of King Jehoiakim who was sent by the king to arrest Jeremiah and Baruch (Jer. 36:26). The name Seraiah appears as the name of a woman in a papyrus from Elephantine (Cowley, Aramaic, 22:4, p. 67).

BIBLIOGRAPHY: S. Yeivin, in: Turbizz, 12 (1941), 260.

SERAPH

(Heb. סֶרַף, saraf), the term seraph, whose etymology is obscure, appears in the Bible in two distinct contexts. It appears in the singular and plural as the name of a species of serpent (Num. 21:6; Deut. 8:15; Isa. 14:29; 30:6). In Numbers 21 the Lord sends “seraph-snakes” to punish the complaining Israelites (when the people complain the Lord tells Moses to make a “seraph” and place it on a standard, to serve as a homeopathic apotropaic device, whereupon Moses makes a copper “serpent (snake, 21:9)). In Isaiah 14:29 and 30:6, the word saraf is qualified by the word me’afes, “flying,” so that it appears that the seraph-snake is a purely legendary species.

Seraphim in Isaiah 6:2, 6 must be distinguished from the foregoing. These are depicted as composite semidivine beings with three pairs of wings; they stand, fly, and proclaim God’s ineffable holiness before the divine throne. As guardians of a throne they recall the *cherubim in Ezekiel 1, although unlike the latter they do not serve as a divine chariot. Winged figures flank the throne depicted on the sarcophagus of Hiram of Tyre, and have been found on incense altars and ivories. A basalt relief from Tell Halaf shows a composite deity with three pairs of wings, holding a snake in each hand. This figure resembles the seraphim of Isaiah 6, although it might be an apotropaic like the seraph/copper serpent in Numbers 21 and archaeological sources. The apotropaic intercessor function typologically connects the first and second cases of its appearance.

[Michael Fishbane]

SERBIN, HYMAN (1914–1995), U.S. aerodynamicist. From 1937 he did research at the Institute for Advanced Studies at Princeton. He was chief aerodynamics engineer of the Fairchild Engine and Aircraft Corporation from 1940 to 1947, when he became professor of aeronautical engineering at Purdue University, Indiana. In 1955 he returned to industry, first as an assistant to the director of scientific research in the Convair division of General Dynamics Corporation and later with the Rand Corporation and Hughes Aircraft Company.

[Samuel Aaron Miller]

SERBU, IERONIM, originally Aron-Hertz Erich (1911–1972), Romanian author. Although Serbu published a collection of stories and sketches in 1940, he only attracted attention in 1955 with his novella Nunta în stepă (“Wedding on the Steppe”), on life in a Transnistria concentration camp. This was notable for its characterization and documentary value. In other works, such as Podul amintirilor (“Bridge of Memories”, 1963, 1967+), he dealt with Romania’s postwar social metamorphosis.

SEREK (Heb. כת, “set in order”). word appearing in several places in the Talmud (Nid. 67b, passim), with the meaning “example,” “habit,” or “rule.” It appears as almost a technical term in the “Qumran texts to denote the community’s “rule” of life or some aspect of it, and is used practically as the title (or part of the title) of some of the community documents. Thus the Manual of “Discipline is “[the book of the rule] of the community” ([sefer ser]ekh ha-yahad; 1QS 1:1), the rule of the congregation is “the rule for the whole congregation of Israel in the latter days” (ha-serekh le-khol adat Yisrael be-ahart ha-yamim; 1QS 1:1), the “War Scroll is (probably) “[the book of the rule]of war” (sefer serekh ha-milhamah). Both the noun and its cognate verb sarakh (“set in order”) are particularly common in the War Scroll in the sense of military dispositions and the like. The officers are anshei ha-serekh (1QM 7:1; 13:1). The use of the term in other texts may be due to the members of the community regarding themselves as continually engaged in a holy war, against spiritual enemies if not against the mortal sons of darkness.

“This is the rule (serekh) for the men of the community” (1QS 5:12); “this is the rule (serekh) for all the hosts of the congregation” (1QS 1:6); “this is the rule (serekh) for all the judges of the congregation” (CD 10:3); “this is the rule (serekh) for the session of the many” (1QS 6:8) – these are samples of the characteristic use of the word.
SERERO, family of Spanish scholars who settled in *Fez after the Expulsion, bringing their considerable library with them. There is no available information on the first generation of the Serero family in Morocco. Saul ben David “Serero (1575–1655) was the most prominent hakham of Fez in his day. He was a signatory to the takkanot of 1602. His interest in history resulted in a chronology of the events of his period, Divrei ha-Yamin (“Chronicles”), fragments of which are extant. He wrote Perek ha-Shi’urim and legal decisions which were published in Zekhut Avot (Pisa, 1812), Urim ve-Tummim, an index on the Shulhan Arukh, and sermons and a commentary on Proverbs, and a volume of sermons which reveals him as an original thinker and well versed in contemporary philosophy. Serero’s nephew, EMANUEL BEN MENAHEM (c. 1610–1680), was appointed dayyan during his uncle’s lifetime. He corresponded with R. Jacob “Sasportas. A number of his responsa were published in the works of Moroccan rabbis. His nephew, MENAHEM BEN DAVID (1628–1701), a fiery preacher, was rabbi in Fez. An outstanding halakhic authority, he was the recipient of numerous queries concerning the takkanot of the megorashim (expelees) and their customs.

His son JOSHUA (1670–c. 1740) was a scribe, preacher, and poet. He left a journal of reminiscences on the scribes of the *bet din of his time, and a number of his piyutim were among Jewish youth, many of whom he transported across the desert to Palestine.

On his return to Palestine, Sereni devoted himself to the preparation of groups of parachutists to drop behind enemy lines to join partisans and help rescue Jewish survivors (see “Haganah). Despite strong opposition, he insisted on being dropped into that part of Italy which was still under Nazi control. For some unknown reason, he landed in the German lines. He was immediately captured and sent from camp to camp until he was finally shot in *Dachau on Nov. 18, 1944. In 1951 his book Mokorot ha-Fashizm ha-Italki (“Sources of Italian Fascism”) was published. He also wrote *Arabs and Jews in *Palestine (1936) and Ha-Aviv ha-Kadosh (“The Holy Spring,” 1947). Kibbutz Nezer “Sereni was named after him, as was a cultural center in Givat Brenner.

His wife, ADA (b. 1905), shared most of his missions. In the process of searching for her husband, she became a central figure in the organization of “illegal” *immigration to Palestine through Italy. She succeeded in winning the cooperation of the postwar Italian authorities in the Jewish rescue operation in spite of strong British counterpressure. In the 1960s she organized and led the Associazione Italia-Ierusalem in Rome. She subsequently settled in Jerusalem. Ada Sereni was awarded the Israel Prize in 1995. Her book Sefnut le-lo Degel (“Ships without a Flag,” 1973) is about the “illegal” immigration to Palestine.

[CE]
published in the collection *Yismah Yisrael* (1931) and in *Shir Yedidut* (1927). His son Emanuel (c. 1705–1775), rabbi, poet, and author, wrote a collection of *piyyutim*, a number of which were published in Sephardi *mahzorim*, and a commentary on the *Haggadah*.

Mattathias Ben Menahem (1718–c. 1788), grandson of Joshua, was one of the five members of the *Fez bet din*. Some of his legal decisions were published in *Zekhut Avot* and in the works of Moroccan *hakhamim*. He was survived by seven learned sons: (1) Menahem (1744–1780), talmudist and *dayyan*, who wrote *Lekah Tov* when he was only 17. (2) Saul (1746–1807), rabbi in Fez, was a member of the *bet din* of R. Elijah ha-Sarfati. During the reign of al-Yazid he fled with him to Sefrou, serving as *dayyan* there. A number of his legal decisions were published in the responsa *Avnei Shayish* (1934–35) of Saul Joshua Abitbol. (3) Joshua (1748–1819), rabbi and *dayyan*, was a pietist and ascetic. Several of his legal decisions were published in the works of Moroccan rabbis. (4) Hayyim David (1750–1826), rabbi and *dayyan* who wrote novellae on the tractate Pesahim, letters and proverbs, and legal decisions, some of which were published in the works of Moroccan rabbis. (5) Judah (1755–1835), rabbi and *dayyan*, was a talmudist. (6) Jacob (1770–1851), rabbi and *dayyan*, was a pietist and kabbalist. A number of his legal decisions were published in *Shufrei de-Yaakov* (1910) of R. Jacob Berdugo. (7) Nahman, rabbi and pietist.

Jonathan ben Hayyim David (1775–1833), was *dayyan* in Fez. A poet, some of his poems are recited in Morocco. A number of his legal decisions were published in the works of Moroccan rabbis. His brother Mattathias (1806–1891), who was known as Mattityah ha-Kadosh (“the holy Mattathias”), was a rabbi and *dayyan* in Fez. His son Judah Benjamin (1834–1926), rabbi and *dayyan*, was a research scholar, copyist, grammarian, and expert in the linguistic style of Ibn Ezra. Some of his legal decisions were published in the works of his contemporaries. Joseph ben Raphael Joshua Zion (1843–1902), *dayyan*, was a pietist and kabbalist. When the Arabs conducted a pogrom in the mellah of Fez in 1912, they burned a number of houses, including his synagogue and its famous library, which was totally destroyed, together with his writings and legal decisions. His brother Mattathias (d. 1935) was appointed head of the *bet din* of Fez in 1929. His son Hayyim David (d. 1968) was appointed *dayyan* in Mogador, going from there to Fez, where he was *dayyan* until his death.

[Haim Bentov]

**Serero, Saul**

(1566–1655), Moroccan rabbi. Serero was born in *Fez*, where his family had taken up residence after the expulsion of the Jews from *Spain* in 1492. In 1602 he was appointed a member of the *maimad* of Fez, and in 1621 succeeded Samuel *Abendanan as head of the local *bet din*. He was also head of a yeshivah, where he had in his possession many manuscript works of the rabbis of Spain, inherited from his parents and grandparents. His reputation as a halakhist spread throughout Morocco, and one of the rabbis of Algiers in a responsa refers to him as “unique in his generation, his word was accepted everywhere as law; no contemporary rabbi could be compared to him.”

Most of Serero’s works have remained in manuscript, including a homiletical work, a commentary on Proverbs, and kabbalistic works. His most important work is *Urim ve-Tumim*, a veritable juridical encyclopedia in two parts, the first an alphabetical index of halakhic themes, the second a kind of biographical-bibliographical dictionary, and including a short treatise on weights and measures (*Perek ha-Shi’urim ve-ha-Middot*).

Fragments of a history of Fez, covering the period 1603–1651, have been translated and published by G. Vajda, *Un recueil de textes historiques judéo-marocains* (1951).

[Haim Zafrani]

**Serghi** (Marcoff), **Cella** (1907–1992), Romanian novelist. Serghi’s works, which often ran to several editions, include *Pînza de pâunjen* (“The Spider’s Web,” 1938), *Cîntecul Uziota* (“Song of the Plant,” 1951), and *Fetele lui Barotâ* (“Barotà’s Daughter,” 1958). *Cartea Mironiei* (1965, 1967), which deals with the wars and horrors of the years 1935–1945, contains a fine psychological study of a concentration camp survivor tormented by memories of his lost family.

**Seri, Dan Benaya** (1935– ), Hebrew writer. Seri was born in Jerusalem. He worked for many years as a civil servant for the Ministry of Agriculture. His first novel, *Ugiot ha-Melah shel Sava Tultana* (“Grandma Sultan’s Salty Biscuits”) appeared in 1980 (Italian translation 2004) and tells the story of a second marriage which is overshadowed by prejudices and omens, passions and heated dreams. Seri’s prose depicts the world of Sephardi Jews in Jerusalem, drawing on folkloric sources. His second novel, *Michael* (1993), set in a Bucharan-Jewish neighborhood in Jerusalem, recounts the mysterious pregnancy of middle-aged Mishael following the death of his barren wife. Old traditions and superstitions are interwoven in a prose-fabric full of fantasy and insight. Seri also published two collections of novellas. The first, *ZIPPOREL ZEL* (“Birds of Shade,” 1987) includes the story “Elef Neshotav shel Naftali Siman Tov,” which has been adapted to the screen. The second, *Dagim Metim Be-Yafo* (“Dead Fish in Jaffa,” 2003) tells, amongst others, of Aharon Polombo, a widowed tailor, who travels from Izmir in Turkey to Jaffa and on to Jerusalem in order to deliver some letters to a mysterious woman. The bizarre and grotesque characterize this novella as well as the second story in the volume, *Scudah Tunisait*. Individual stories have been translated into various languages, and further information is available at the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

SERING, MAX (1857–1939), German agricultural economist. Sering, who was born in Barby, taught in Bonn and, after 1889, in Berlin. He cooperated with Walter Rathenau in organizing Germany’s essential materials policy in World War I. In drafting the German Siedlungsgesetz (farmers’ settlement law) of 1919, his views prevailed over those of Franz Oppenheimer, whose emphasis was on agricultural producers’ cooperatives. Having opposed racial discrimination in German agricultural legislation after 1933, Sering was vilified by the Steuermer on account of his part-Jewish ancestry. One of the relatively few active German resisters of the Nazis, he transferred his research institute’s comprehensive library to the International Conference for Agrarian Science, thus protecting it from confiscation. A member of Pastor Niemoeller’s Confessional Church, he stood by his Jewish former students.

[Hanns G. Reissner]

SERKIN, PETER ADOLF (1947– ), pianist. Serkin’s rich musical heritage extends back several generations: his grandfather was violinist and composer Adolf Busch and his father was pianist Rudolf Serkin. Peter Serkin was born in New York and studied with his father and with Lee Luvisi and Mieczyslaw Horszowski at the Curtis Institute of Music (1958–64). His other teachers included Karl Ulrich Schnabel and the flautist Marcel Moyse, who exerted vital musical influence on him. In 1959 Serkin made his Marlboro Music Festival and New York City debuts. From then his performances with symphony orchestras, recital appearances, chamber music collaborations, and recordings were acclaimed worldwide. Serkin was noted for his passion, keyboard virtuosity, and individualistic approach. He acquired a distinguished reputation in both traditional and contemporary scores, and from the early 1970s played rock, jazz, and improvisations. In 1973 he formed the Tashi group with the clarinetist Richard Stoltzman, violinist Ida Kavidan, and cellist Fred Sherry. After leaving the group in 1980, he renewed his appearances as recitalist and soloist. In 1983 he became the first pianist to win the prize for outstanding artistic achievement awarded by the Accademia Musicale Chigiana in Siena, and also joined the faculty of Mannes College. He later took up teaching posts at the Juilliard School and Curtis Institute of Music and taught regularly at the Tanglewood Music Center. Among the important world premieres he performed are Lieberson’s First and Second Piano Concertos with the Boston Symphony Orchestra and works by Henze, Takemitsu, and Berio.

[Naama Ramot (2nd ed.)]

SERKIN, RUDOLF (1903–1991), pianist. Born in Eger, Bohemia, Serkin made his first public appearance at the age of 12. He began his concert career in Berlin in 1920, and made his American debut in Washington in 1933 with the violinist Adolf Busch, whose daughter he married, and with whom he had already formed a famous duo in Europe. In 1939 he became head of the pianoforte faculty at the Curtis Institute, Philadelphia. Serkin toured Europe, the United States, and the Orient, and was recognized as one of the master performers of classical repertoire in his generation. His son Peter Serkin (1947– ) was also a concert pianist.

SERL BAS JACOB BEN WOLF KRAZI (18th century), author of Tkhine imohos min Rosh Hodesh Elul (Tkhine of the Matriarchs from the New Moon of Elul). Serl was the wife of the rabbi and apothecary Mordecai ha-Cohen Rapporport, head of the rabbinical court of Novy Oleksiniec and author of Imrei Noam (Oleksiniec: 1767 or 68). Since it is known that Rapporport was the son-in-law of the famed Maggid (Preacher) of Dubno, Jacob ben Wolf Kranz (1740–1804), it seems likely that Serl’s father, named on the title page of her tkhine as “the famous Rabbi, our teacher Jacob Segan Levi of Dubno,” was the Maggid. The text of the first part of the tkhine also contains an authorial acrostic that reads: “Serl, daughter of the rabbi, the great luminary, his honor our teacher Rabbi Jacob.”

Tkhine imohos min [or: Jan] Rosh Hodesh Elul was published in several 18th century editions, in various recensions, and under slightly varying titles; among the earliest are Livov, 1783/4, and Frankfurt-an-der-Oder, 1789/90 (under the title Tefillas imohos, an altered text but clearly a variant of the original). There are also numerous undated editions, and, as is usual for Eastern European tkhines, the bibliographical history is difficult to establish. The text contain four sections: a tkhine on the theme of repentance for sins to be recited every day of the month of Elul; a tkhine to be recited on Rosh Ha-Shanah when the Torah scrolls are taken from the ark and the Thirteen Attributes are recited; the "tkhine of the Matriarchs for the shofar"; and an addendum containing the prayers for tashlikh and yizkor with Yiddish translation and interpretation.

There are several notable aspects of this text. The first section of the tkhine, in addition to its alphabetical acrostic, alternates between short Hebrew sentences, some of them biblical verses, and paragraphs in Yiddish that expand on their themes, demonstrating Serl’s knowledge of Hebrew. The material for the recitation of the Thirteen Attributes expands on the themes of the Torah and haftarah portions of Rosh Ha-Shanah. In addition, the Torah scrolls themselves
are asked to advocate for the worshiper in her quest for forgiveness and long life, as well as on behalf of redemption for the people of Israel. Finally, and most distinctively, the “ikhne of the Matriarchs for the shofar” draws on biblical and midrashic themes to characterize the four biblical matriarchs. Moreover, each mother of Israel is requested to act as an intercessor for the worshiper in a manner appropriate to her own life. For example, Rebecca, who had to leave her parents at an early age, is asked to protect the life and health of the worshiper’s parents.

[Chava Weissler (2nd ed.)]

**Serling, Rod** (1924–1975), U.S. writer and producer. Born Edward Rodman Serling in Syracuse, N.Y., he spent most of his childhood in Binghamton in upstate New York. After he graduated from high school in 1942, Serling enlisted with the U.S. Army’s 11th Airborne Division paratroopers, serving three years in the South Pacific. In 1946, he studied at Antioch College in Ohio, where he was active in the college’s radio station, writing, directing, and acting in several on-air productions. During his senior year at Antioch, Serling took second place in a CBS-sponsored script-writing contest. After graduating college in June 1950, Serling took a job as a script writer for WLW radio in Cincinnati, Ohio, and then one as a continuity writer for WKRK-TV. Before long Serling was selling freelance radio scripts, and in 1951 he sold a television script to *Lux Video Theatre*. By the beginning of 1955, he had sold 90 scripts to shows like *Kraft Television Theatre, Studio One*, and *General Electric Theater*, where his script for *Patterns* earned him an Emmy Award; NBC aired the production twice and United Artists adapted it for the screen. In April 1955, Serling signed a deal to write scripts for CBS, which featured the *Playhouse 90 premier Requiem for a Heavyweight* (1956), which earned him a second Emmy. Disenchanted with censors, Serling conceived a novel way to address social issues: science fiction; he conceived and produced an anthology TV series he called *The Twilight Zone* (1959–64) that featured Serling as host. He wrote 90 of *Twilight Zone’s* 151 episodes, and the show would go on to land three more Emmys for Serling (Serling won more Emmys for writing drama in his lifetime than any other writer). On *The Twilight Zone*, Serling was able to address such issues as civil rights, the Holocaust, lynchings in the South, and the incurant Vietnam War. In 1965, Serling was elected to a two-year term as head of the National Academy of Television Arts and Sciences, the first writer to be so honored. After the end of the series, Serling wrote features, including *Seven Days in May*, and supplied the famous ending for *Planet of the Apes* (1968). In 1970 he co-created the horror anthology series *Night Gallery* (1969–73). He spent the remaining years of his life teaching writing at Ithaca College in New York. Serling, a heavy smoker, had a heart attack in May 1975. After undergoing open-heart surgery, he died one month later. In 2001, a remake of one of Serling’s teleplays, *Storm in Summer* (2000), won a Daytime Emmy for outstanding writing – Serling defeated the other contestants despite having been dead for more than 25 years.

[Adam Wills (2nd ed.)]

**Sermonteta, Joseph Baruch** (1924–1992), historian. After a short stay in Palestine during World War II he pursued academic studies in humanities at the University of Rome. In 1953 Sermonteta settled in Jerusalem, where he directed the sections devoted to the history and philosophy of the Middle Ages and that of Italian literature in *Ha-Enziklopedyah ha-Ivrit* (1953–1965). He was the *Encyclopaedia Judaica* (first edition) departmental editor of Italian literature.

Appointed professor of Jewish Thought and of Italian–Jewish literature and languages (1962) at the Hebrew University, Sermonteta’s main academic fields of interest were the close relationship between Christian scholastic philosophy and the writings of Jewish intellectuals such as R. Hillel Ben Samuel of Verona, Judah Romano, Jacob Anatoli, and Moses of Salerno between the 13th and the 15th centuries, and Italian Jewish vernacular language, including Italian-Jewish vernacular translations of the Bible and liturgical texts in the vernacular. In both fields Sermonteta’s works were innovative and path-breaking. He was co-editor with Robert Bonfil of *Italia*, dedicated to the history, literature and thought of Italian Jews.

[Samuele Rocca (2nd ed.)]

**Sermons to Jews.** While at times zealous Christians sought the opportunity of personally propagating their faith among Jews, the first recorded instance of systematic conversionist sermons is apparently from France in the ninth century. Archbishop *Agobard of Lyons in his Epistola de baptizandis Hebraeis*, written between 816 and 825, indicates that on his instructions the clergy of Lyons went every Saturday to preach in the synagogues, attendance on the part of the Jews presumably being compulsory. This was probably not a unique or localized happening. With the foundation of the *Dominican* order (1216) the system was regularized. Conversionist sermons which the Jews had to attend are referred to in 1242 in a law of James I of Aragon, which received papal approval. After the Disputation of *Barcelona in 1263, the king himself actually delivered a conversionist harangue in the synagogue and later issued an order enjoining the Jews and Saracens to listen quietly to the addresses of the preaching friars who had come to convert them – though in 1268 he forbade the preachers to be escorted by more than ten persons. Pablo *Christianii* (d. 1274), who was then a leading anti-Jewish propagandist,
obtained permission to preach in the synagogues also from the king of France. It was however only in 1278 that the compulsory conversionist sermon received explicit papal authorization in the bull *Vineam sordor* of Pope *Nicholas III (1276–77)*; obedience to this was enjoined in England in the following year by Edward I. It was enforced only sporadically however, as for example in the intense anti-Jewish campaign conducted in Spain by the fiery Vicente *Ferrer* in the early years of the 15th century. In Sicily, at that time under Aragonese rule, Fra Matteo di Girgenti was appointed *Lettore degli ebrei* ("Reader [i.e., Preacher] to the Jews") in 1428.

With the anti-Jewish reaction which accompanied the Counter-Reformation, the institution of conversionist sermons was placed on a new basis. In a bull, *Vices elius nos* of Sept. 1, 1577, Pope *Gregory XIII* ordered the Jews of Rome and other places in the Papal States to send a certain quota of their number on specified occasions to one of the churches to hear a sermon which might open their eyes to the true faith. The same pope's bull, *Sancta mater ecclesia* of exactly seven years later, reverted to the subject and laid down more precise conditions. From then on, the institution was a regular abuse of Jewish life in the Papal States (including *Avignon* and the *Comtat Venaissin in France*) and in other parts of the Roman Catholic world as well. It was in Rome itself that the abuses were most extreme. Here 100 Jews and 50 Jewesses had to attend the designated church each week in order to listen to these addresses, generally delivered by an apostate from Judaism whose fee was paid by the Jewish community. Beadles armed with rods saw to it that they paid attention, and examined their ears to ensure that they were not plugged. Michel de Montaigne records that when he was in Rome in 1581 he heard a sermon delivered apparently by Andrea del Monte, who is known to have used language of such unmeasured violence that the Jews appealed to the papal Curia for protection. The sermons delivered in the Church of Santa Croce in Florence in 1583 by the apostate Vitalé de' Medici (formerly Jehiel da Pesaro) were published. At Ferrara, a special entrance was made from the ghetto to the Church of St. Crispino, where the sermons were delivered, so that the Jews would not be subject to insult when they passed through the street.

In Venice, the authorities forbade the introduction of the conversionist sermon, but it was allowed in the institution of Padua. In 1630 the emperor Ferdinand II instituted conversionist sermons in Vienna, in the auditorium of the university, 200 Jews including at least 40 adolescents having to attend on each occasion. In Prague, the Jesuits initiated conversionist sermons in the same year. Though elsewhere there was some relaxation of the system in the 18th century (in Mantua, for example, where it was abolished in 1699), the institution of the conversionist sermon continued in the Papal States, both in Italy and in France, down to the period of the French Revolution. In Italy it was renewed after the fall of Napoleon and the restoration of papal rule, to be abolished by Pope Pius IX in 1846 during the liberal period at the beginning of his pontificate. The well-known poem by Robert *Browning*, "Holy Cross Day," attempts to reflect the state of mind of the Jews on these occasions.

[Cecil Roth]

**SEROR**, family of Algerian origin. R. Solomon (16th–17th century) was the author of the second part of *Hut ha-Me-shullash* ("Triple Cord," in *Responsa Tashbaa*, Amsterdam, 1838). The brothers Joseph and Tobias, scholars and wealthy merchants, died in the epidemic which decimated the population of Algiers in 1625. R. Solomon ben Tobias (d. 1664) was chief rabbi of Algiers. R. Raphael Jedidiah Solomon ben Joshua ben Solomon (1681–1737), the most important member of the family, was born in Algiers, where he was later chief rabbi. He was an expert on the history of the community of Algiers and wrote some highly esteemed religious poems. As a result of his herbal treatments, he became widely known as a skilled physician. His life was marked by misfortunes. He was overcome by sickness, lost several of his children, ruined himself in commercial transactions on land and sea, and finally died in poverty. Seror left many works, his responses being published under the title *Peri Zaddik* ("Fruit of the Righteous," Leghorn, 1748). Among his disciples were R. Abraham Yafiel, Joseph Seror, and R. Judah "Ayash, who wrote a poem in his honor and had it printed at the beginning of his work *Beit Yehudah* ("House of Judah"). R. Joseph (d. 1755) was a talmudic scholar and *dayyan* in Algiers. He left many responsa, which were published in *Divrei David* ("Words of David") of R. David Mendola of Leghorn and *Beit Yehudah* of R. Judah Ayash.

[David Corcos]

**SEROUSSEI, ELÍAS** (1896–1983), leader of the Jewish community in Uruguay. Born in Alexandria, Egypt, he immigrated with his family to Uruguay in 1926. He took part in the founding of the Comunidad Israelita Sefaradí (Jewish Sephardi Community) and was its president for many years from 1932. Elias Seroussi was also president of the umbrella organization of Uruguayan Jews, Comité Central Israelita, from 1941 to 1951. He was part of the leadership of B’nai Brith, Circulo Social Sefaradi, and Comunidad Israelita del Uruguay. He immigrated to Israel in 1974.

His son Rafael Seroussi (born in Alexandria in 1923) was a Zionist leader in Uruguay and very active in public and social life in Israel. In Uruguay he was secretary of the founding commission of the Federación Juvenil Sionista (Zionist Youth Federation) established in 1944, and its second president (1946–47) and editor of its publication, *Alih*. Rafael Seroussi immigrated to Israel in July 1948 and fought in the War
of Independence. A chemist by profession, he participated in missions of Patwa (Professional and Technical Workers' Aliyah) to promote aliya among professionals in Latin America (1953–55). He was secretary of the Organización de Latinoamericanos en Israel (Organization of Latin Americans Olim in Israel) for 15 years and served as its president from 1973 to 1975. Rafael Seroussi was very active in organizations of mutual relations with Latin America, such as the Israel–Costa Rica Friendship League and the Israel–Latin America Chamber of Commerce.

[Efraim Zadoff (2nd ed.)]

SEROV, VALENTIN (1856–1911), Russian painter. Born in Moscow, the son of the composer Alexandre Serov and a Jewish mother, Serov was virtually adopted as a child by the great art patron Sava Mamontov after the death of his father. At Mamontov's Abramtsevo art colony he met the leading artists of the day, including Repin and Mark *Antokolski. He was then sent to study at the St. Petersburg Academy (1880–1885), where a fellow-pupil, Mikhail Vrubel, became a close friend; in turn Serov introduced Vrubel to Mamontov, who encouraged young artists to design for his theater. At the Academy, Serov also befriended the young Léon *Bakst, encouraging his interest in stage design. Serov also became a colleague of Diaghilev and Alexander Benois, and one of the original members of the “World of Art” movement, from which emerged the Ballets Russes. He was a major influence on Diaghilev's “World of Art” movement, which heralded almost all important modern tendencies in Russian art and theater. After a period in Italy, Serov returned to Russia to establish himself as one of the leading Russian artists, painting most of the leading personalities of his time, and in 1897 was appointed official portrait-painter to the czar. His drawing of Pavlova was used for the first poster of the Ballets Russes in 1909; for the season he designed the decor for his father's opera Judith presented by Diaghilev in Paris, with costumes by Bakst, and in 1911 he painted a curtain for the ballet Schéhérazade, designed by his friend Bakst. Serov's work is mainly in the Russian Museum, Leningrad, and the Tretjakov Gallery, Moscow, including portraits of Mamontov, Ida *Rubinstein, the Jewish painter Isaac *Levitan, and his masterpiece The Girl With Peaches (1888), a study of Mamontov's daughter Vera.

[Charles Samuel Spencer]

SERRAI (Serres), town in Macedonia, Greece, E.N.E. of Salonika. There was a Jewish community in Serrai in Byzantine times. There are scant references to Jews in Serres in the 12th and 14th centuries. After the Ottoman conquest of Istanbul in 1453, Jews were forcefully transferred to the capital in the framework of the sorgun, and there they formed Kahal Serron. Jews settled in Serres after the expulsions from Spain (1511), from Bavaria (1470) and from Spain (1492). Italian Jews were also found in Serrai in the 15th century. Expellees from Spain and Portugal came to Serres in the 16th century. Also former Portuguese anusim (Marranos) who had previously settled in Salonika relocated to Serrai for its lucrative commercial opportunities. The Judeo-Greek speaking Romanioi ruled the community at the beginning of the 16th century, but by the end of the century their presence was no longer felt. In the 16th century both a Sephardi and an Ashkenazi synagogue were in existence. The Jews lived in a special quarter in the old city. The community was strengthened in the 16th century by the
presence of Rabbi Joseph Taitazak, and afterward by the elder Rabbi Joseph Firman and his son, Rabbi Solomon ha-Serroni. When Firman left in the 1560s to serve in Salonika and elsewhere in the Greek Peninsula, Serrai deteriorated as a Torah center. In the 18th and 19th centuries, several noted rabbinical scholars lived in the town, among them: Hayyim Abraham Strumza, the author of Beit Avraham and Yerekh Avraham; Hayyim Abraham b. David, author of Tiferet Adam; Mordecai Aseo, author of Higgid Mordkehai; and Nissim Musei, author of Be'er Mayim Hayyim. During the time of Rabbi Strumza (late 18th–early 19th century), the old synagogue was destroyed and replaced by a newly built synagogue called Kehil Gadol, with rooms for a yeshiva, library, and guests. The ground floor contained a small Talmud Torah, and the sanctuary had 2,000 seats for those that came to pray, including an Ezrat Nashim, a woman’s section. On Yom Kippur during the Kol Nidre evening service, there was a tradition of an azkara, a memorial service, for all the communal leaders and rabbis since the 16th century. This tradition continued until the Bulgarians set the city ablaze in 1912.

Erez Israel emissaries, like Rabbi Moshe Halevi (Harma’i) Nazir and Yosef Cohen, visited the Serrai Jewish community from 1668 to 1684. Local Jews from Serrai also went to Erez Israel on pilgrimages. The messianic activities of David “Re-veni and Solomon “Molcho aroused much fervor in Serres. The members of the rabbinic Taitazak family supported the messianic movement and the study and dissemination of Kabbalah. Until the last third of the 19th century, the Hamon, Ovadia, and other families continued local traditions of forming special societies for encouraging the study of Kabbalah.

The Jews of Serrai dealt mostly in wholesale and retail trade: in tobacco, cotton, opium, wheat, barley, and manufactured goods. There were also artisans among them, such as blacksmiths and cobblers. In the 19th century, the Jews dealt mostly in banking and commerce.

The Jews who had moved to the suburbs of the city founded their own synagogue, called Midrash. This caused communal dissension, and Rabbi Raphael Asher Kovo of Salonika in 1873 decided that on the Sabbath and holidays the Jews could only pray at the old synagogue. Violence eventually erupted, and Joseph Salmo was murdered. Echoes of communal division remained for many years.

Until the mid-19th century, the youth of the community learned in a primitive traditional meldar (heder). In 1866 a modern Talmud Torah was formed and French was taught. In 1873 a new school was established where Hebrew, Turkish, and French were taught, and Yaakov Azaria of Salonika came from Salonika to be principal. In the early 1880s the school had to close due to financial constraints. In 1895, with help from the Alliance Israélite Universelle and Baron Hirsch, a school was established. Mercado Kovo was the principal from 1895–1901. In 1901 a mixed (coed) Alliance Israélite Universelle school was established with 150 students (103 boys and 47 girls). In 1909–1910 a new modern school that cost 40,000 Francs was built, but it burned down in 1913.

At the end of the 19th century, with the advent of modern education, several educated Jewish personalities emerged in Serrai. The last chief rabbi of Serrai was Samuel Raphael ben Haviv (1813–1887), author of Amar Shmuel. He was an important posek (halakhic decisor), orator, and poet. Another rabbi, Avraham Strumza, died in 1889. After his death, the community deteriorated spiritually.

At the end of the 19th century, the economic situation took a turn for the worse. The Salonikan-Istanbul railroad did not stop at Serrai, and the city was not on the principal trade routes as it once had been. Jews began migrating to Salonika, Kavalla, Zanthi, and Drama, and the community became poor. At the beginning of the 20th century, the Jewish community consisted of 50–60 affluent families of bankers, merchants, moneylenders, and insurance agents; 100 middle-class families which engaged primarily in petty trade; and 50 poor families which were dependent on financial assistance from the affluent.

During the Balkan Wars (1912–13), the Jewish population numbered approximately 1,300; when the Bulgarian army invaded the town, it burned down the main synagogue, the Jewish school, and 115 of 140 houses. The Jews themselves were saved only upon the intervention of Jews serving with the Bulgarian forces. Some of the Jews took refuge in Bulgaria, while others moved to Drama and Kavalla. When the Greeks reoccupied the town after the summer of 1913, the Jewish community was reorganized. The Greeks ruled until early 1916, and were replaced by the Bulgarians for two years.

The Balkan Wars and World War I led to the deterioration of the Jewish community of Serrai, and many of the Jews migrated to other parts of Greece, like Salonika, Drama, and Cavalla, and to Bulgaria. Most of the Jews who left Serrai did not return to the city, but Jewish refugees migrated there from elsewhere. The Jewish community slowly recovered and rebuilt itself. Some of the Jewish houses destroyed by the Bulgarians were rebuilt with the financial assistance of the American Jewish Joint Distribution Committee. Most of the local Jews found employment in the workshops of the Austro-Greek Tobacco Company, whose vice president was a local Jew, Joseph Faraggi.

In 1929 there were 90 Jewish families in the city. In 1932 the community numbered 600, with half coming from Salonika, Drama, and Xanthi to work in the tobacco industry. The Jews suffered greatly from the economic depression in the early 1930s. A new Jewish school was built, and by 1932 it had 200 students, 40 of whom were not Jewish, but Greek-Orthodox. With the arrival from Asia Minor of Greek-Orthodox refugees from 1922 onward, relations between the Jews and the Greek-Orthodox deteriorated.

In 1940, the community had a membership of 600. The Bulgarians pressured the Jewish community to collaborate with them against the Greeks, and wanted the Jews to sign statements attesting to the advantages of Bulgarian rule and its preference over Greek rule, but the Jews refused. In February 1942, the Bulgarians issued anti-Jewish regulations forbidding
Jews to work in commerce, and compelling Jews to designate their homes and businesses as Jewish-owned. In 1942, Jews began fleeing the city. In March 1943, around 475 Jews were deported by the Bulgarians for the Nazis to Treblinka via the Gorn Djamaya internment camp in Bulgaria. Bulgarians and Greek-Orthodox collaborators occupied the Jewish homes, stores, and workshops. Valuables were sent away on trains, and the rest of the personal property of the Jews was sold in a public auction. All those deported were gassed in Treblinka. Only three Jews were left in 1948. There were no Jews in Serrai in the 1960s. The Jewish school was used as a Greek school, and Jewish tombs can be found in the old Jewish cemetery or in the municipal museum.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

**SERRES,** village in the Hautes-Alpes department, S.E. France. The presence of Jews was confirmed there, as in the neighboring localities of Dauphiné (such as Aspres-sur-Buëch and Veynes), from at least 1315. The rapid growth of the community can be surmised from the increase in the taxes it paid: 100 gold sous in 1321, six livres in 1322, and 80 livres in 1324. Although 93 Jews of Veynes lost their lives in the “Black Death” persecutions in 1348, those of Serrès do not appear to have been molested. The epitaph of a certain R. Joseph, son of R. Nathan, was found to the west of the village, on a site where the ancient land registers place the Jewish cemetery. Jews were last mentioned in Serrès toward the close of the 15th century.

[Bernhard Blumenkranz]

**SERUSI,** family of diplomats in Tripolitania (“ Libya ) in the 17th, 18th, and 19th centuries. In 1683 Nissim negotiated between Tripolitania and France. In the second half of the 18th century Moses was an agent and an interpreter for the French. Abraham (1) was given temporary charge of the French consulate in Tripoli during Napoleon’s invasion of Egypt in 1799 and later efficiently served Yusuf Pasha, the bey of Tripoli. The Serusi family were also leaders of the Jewish community. Abraham (2) and Hai were among the signatories of the tax requirement for producers of a certain type of silk in 1848. David was vice consul of Italy in Mogador in about 1900.

**SERUYA,** Moorish family. The first known member was R. Isaac Seruya, a signatory in 1494 to the first takkanah of the Spanish expellees in “Fez. The Seruyas, who engaged in maritime trade, were established in *Sale-Rabat*. When the sultan Moulay Yazid seized power in 1790 and persecuted the Jews, they settled in Gibraltar. Solomon was a wealthy merchant as well as a pious scholar who contributed to the publication of Hebrew works, including R. Pethahiah Berdugo’s *Rosh Mashbir*; it was published in Leghorn in 1840 by Samuel Levy-Yuly, a former dayyan of Gibraltar. Jacob, a wealthy merchant, established himself in Rabat in 1839, where he was appointed consular agent of Great Britain, Spain, the United States, and Portugal. He returned to Gibraltar in 1847 after he had some disputes with the Moroccan government. Solomon (1926– ), was Gibraltar’s minister of ports and tourism (1959–64) and minister of economic development (1965–69).

[David Corcos]

**SERVANT OF THE LORD** (Heb. ‘èvek), the technical term used to designate the Servant mentioned explicitly or implicitly by Deutero-Isaiah. In 1892 B. Duhm first published his commentary on Isaiah in which he separated four Servant songs from the rest of Deutero-Isaiah and contended that they were not the work of that prophet. From that time both Jewish and Christian exegetes have proposed many candidates to bear the title of the “Servant of the Lord.” These interpretations may be divided into two basic categories: collective and individual. Collective interpretations have included collective Israel, ideal Israel, empirical Israel, pious remnant of Israel, prophets, priests, or a selective combination of the above. Individuals who have been suggested to have been the actual Servant or to have served as the prototype for the depiction of the Servant have ranged from Deutero-Isaiah, Trito-Isaiah, and Cyrus to Hezekiah, Jehoiachin, Josiah, Uzziah, Meshullam, Ezekiel, Sheshbazzar, Eleazar, Moses, Job, or an anonymous contemporary of Deutero-Isaiah. Most of these suggestions have no followers today. Other theories have suggested that the personality is corporate, messianic, or mythological. Christian tradition identified the Suffering Servant with Jesus. The pericopes of the Servant songs themselves, first identified as Isaiah 42:1–4; 49:1–6; 50:4–9; 52:13–53:12, are also subject to scholarly question, with many commentators adding verses to the first two sections and others including additional passages from Deutero-Isaiah as parts of songs. Particularly subject to debate are the questions whether the portrait of Servant is consistent throughout, whether or not the Servant described in chapter 53 died, and what was the actual mission or missions of the Servant.

[Shalom M. Paul]

**SERVI, FLAMINIO** (Ephraim; 1841–1904), Italian rabbi and publicist. Servi, born in Pitigliano, studied at the Collegio Rabinico and the University of Padua, serving as rabbi in
the northwestern communities of Monticelli, Mondovi, and from 1872 Casale Monferrato. In 1874 he founded the monthly *Il Vessillo Israelitico* as a successor to *Educatore Israelitico*; his son Ferruccio continued to edit it after his death until 1922. Servi favored the assimilation of Jews into Italian culture and society while remaining loyal to Jewish faith and observance. He was active in promoting a unified organization for Italian Jewry and in relief for the persecuted Jews of East Europe and North Africa. In addition to numerous articles in the Italian Jewish press dealing with the history of Italian Jewish communities and other subjects, he published *Gli Israeliti d’Europa nella civiltà* (1871).

**BIBLIOGRAPHY:** Milano, Bibliotheca, nos. 1417–30; Milano, Italia, 374; *Vessillo Israelitico*, 52 (1904), 49–58.

[Daniel Carpi]

**SERVI CAMERAE REGIS (Lat. “servants of the royal chamber”), definition of the status of the Jews in Christian Europe in the Middle Ages, first used in the 13th century.** The Kammerknechtschaft, as it was termed in German, was explained in the Holy Roman Empire (in effect Germany) as a consequence of the enslavement of the Jewish people to the Roman emperors Vespasian and Titus after their defeat in the war of 66–70 C.E.; other rulers inevitably claimed the same right. In fact, however, the term implied not only an inferiority of status but also royal and imperial protection. The status of the Jews was above that of the serfs, and theoretically they were subject only to royal authority. The ruler had the right to tax them for the benefit of his treasury (camera regis), but at the same time he had a duty to protect them when they were in danger from others. The so-called "Laws of Edward the Confessor" (England, 12th century) defined the status implied in the phrase in the clearest terms:

All Jews, wherever in the realm they are, must be under the king's liege protection and guardianship, nor can any of them put himself under the protection of any powerful person without the king's license, because the Jews themselves and all their chattels are the king's. If, therefore, anyone detain them or their money, the king may claim them, if he so desire and if he is able, as his own.

The phrase *servi cameræ regis* was not used after the Middle Ages, but the conception powerfully affected the status of the Jews down to modern times.

**SERVITUDES** (Heb. שיבודים, *shi’budim*). Generally a person is prohibited from using his land in such manner as to cause an interference with his neighbor’s quiet use or enjoyment of his own land. A man may therefore restrain his neighbor from such use and compel him to remove the cause of the disturbance. However, this right is not always available and the use of land in certain ways – even if disturbing to the neighbor – must sometimes be suffered by him (see “Nuisance”). A person may agree with his neighbor to refrain from a particular use of his land, injurious to the latter, even if permitted by law; or to use his land in a manner injurious to his neighbor, even if such use is not permitted by law. In such event a proprietary right over the land is respectively granted to and extracted from the adjoining landowners. This right, called a *shibud* in the codes, is comparable to an “easement” in English law and serves to encumber land in favor of an adjacent owner, without the land being in the latter’s possession.

Halakhic sources mention two categories of servitudes of this nature:

1. Use of land, which, without involving the use or employment of neighboring land, causes injury to the neighbor, such as the emanation of noise, smoke, noxious odors, moisture, and so on, to the adjacent land, or when the latter is made to vibrate, or when the crops thereon are damaged;

2. An act which involves an encroachment on and the use or enjoyment of neighboring land, such as erecting projecting brackets on which chattels can be hung, affixing beams onto a neighboring wall, diverting the flow of rainwater onto a neighboring courtyard, or placing a ladder on neighboring premises in order to reach one’s own roof (*Sma*, HM 153:16 and *Netivot ha-Mishpat*, Mishpat ha-Kohanim, *ibid.*). These servitudes are distinct in two ways: firstly the encumbered land is not in the possession of the rightholder, and secondly, they may be exploited only by the use of the adjoining land. Hence it may be said that the servitude is one of land to neighboring land. The right may be acquired for a specific period or for good.

The term *Shi’budim* also has a wider meaning including all rights in the property of another (*jura in re aliena)*. These include rights which are not specifically tied to the use of or encroachment on neighboring land and which may extend to both movable and immovable property, whether or not the rightholder is in possession of the encumbered property. Such *Shi’budim* are rights to use and enjoyment of the property itself and are a kind of limited form of ownership in the encumbered property, being a kind of *kinyan petor* and not a servitude only (usufruct; see “Ownership”). These property rights are governed by laws which are entirely different from those applicable to the above-mentioned servitudes (easements). Instances thereof are: the acquisition of “a tree for its fruit, a dwelling for its occupation, sheep for its wool, a dovecote for the doves that will hatch therein, a hive for the honey that will accumulate there, an animal for its young, a slave for his work” (*Maim.*, Yad, Mekhirah, 22:14; 23:2). These rights are a form of *kinyan petor* (usufruct), i.e., acquisition of the right to enjoy the use of the property itself (*Maim.*, *ibid.*, 23:1). After *kinyan petor*, the most important servitude of this class is the right of way over the servient land (*Bib* 99b), whether a private path or public road. It is considered a propriety right in the land and not an encumbrance (see Resp. Rashba, cited in
SESSA, KARL BORROMAEUS ALEXANDER

Sessa, Karl Borromaeus Alexander (1786–1813), Breslau physician and antisemitic author. His first dramatic effort, Unser Verkehr, a crude farce ridiculing post-emancipation Jewry, achieved instant and widespread success.

The play was first presented in 1813 and published in 1815 (Breslau). It portrays a shabby young Jewish peddler who entertains ambitions of developing his artistic talents and thus make his way into society. Through an error he finds brief acceptance by a ludicrous nouveau riche Jewish banking family. The play was widely performed in rural southern Germany (it was banned in Austria, Saxony, and Berlin) and inspired numerous imitations. Both the original work and its imitators expressed the resentment and opposition of the population to the emancipation and to the new breed of Jewish “upstarts,” which was also the excuse for the “Hep! Hep! disturbances in 1819.

SESSO, SALAMONE DA (c. 1465), Italian armorer, born at Sesso, northern Italy. He was baptized on entering the service of Ercole d’Este, duke of Ferrara, with whom he remained, and was thenceforth known as Ercole “dei Fideli.” Da Sesso also worked for the marquess of Mantua and Pope Julius II. He specialized in the manufacture of elaborate swords and daggers adorned with pagan scenes, classical symbols, and nude figures. His most famous weapon was executed for Cesare Borgia and is known as the “Queen of Swords.”

SETER, MORDECAI (Marc Starominsky; 1916–1994), Israeli composer. Seter was born in Novorossiysk (Russia) and immigrated to Ereẓ Israel in 1926. In 1932, he studied in Paris with Paul Dukas and Nadia Boulanger and graduated in 1937 from the Ecole Normale de Musique, returning to Ereẓ Israel the same year. In Tel Aviv he taught harmony, form, and counterpoint over the following five decades. In 1951, he joined the faculty of the Israel Conservatory (later renamed the Rubin Academy), Tel Aviv. In 1972 he became a full professor at Tel Aviv University and taught there until his retirement in 1985.

In 1937, composer Joachim Stutschewsky lent him a volume of *Idelsohn’s Thesaurus (Hebräisch-orientalischer Melodienschatz) (Sephardi Jewish tunes), which inspired him and became a source of melodies for his first acclaimed composition Sabbath Cantata (choir and orchestra, 1940). Idelsohn’s book and his own research into traditional Middle Eastern Jewish tunes, forming his collection Niggunim, served as a springboard to Seter’s first period of composition in the 1940s, including Motets (1940) and Festive Songs (1943–49).
Seter's second period, in the 1950s, focused on chamber music. His Ricercar (for violin, viola, cello, and string orchestra; string quartet version, 1953–56, both a triple fugue and a variation form) won the International Rostrum of Composers Prize (UNESCO, Paris, 1961). Ricercar was also staged as a ballet by the Batsheva Dance Company, the American Ballet Theatre, and the Ballet Rambert. In his third period, which began in the late 1950s, Seter turned to orchestral music. His first orchestral works were Sinfonietta (1957) and Variations (1960, Israel Philharmonic Orchestra commission).

His signature work, Midnight Vigil (1957–61), was written first as a small ballet, commissioned by choreographer Sarah "Levi-Tanai for her Inbal Dance Theater. It was based partly on Yemenite tunes portraying a kabbalistic vision of redemption in Zion. Its fourth version, a 31-minute radiophonic oratorio, won him (with the librettist Mordechai Tabib) the Prix Italia; and the fifth and final version, a 43-minute oratorio for soloist, three choirs and orchestra, brought him the Israel Prize. All versions of Tikkun Hazot, as most of Seter's orchestral works, were premiered by conductor Gary "Bertini, who was one of Seter's composition pupils in the late 1940s. In the early 1960s, American choreographer Martha Graham commissioned Seter to write two ballets; Judith and Part Real Part Dream (Fantasia Concertante). A third ballet, Jephthah's Daughter, was commissioned for the Batsheva Dance Company. His last major symphonic-choral work was Jerusalem (1966).

Following the national and international successes of the 1960s, Seter surprisingly began refusing any more commissions, reduced his contact with performers, rejected institutional positions and began to write introverted and original chamber music, both in terms of style and technique. From 1970 until his last work in 1987, he wrote approximately half of his oeuvre – mostly unknown works today: 46 paradigmatic late-style compositions, roughly half for the piano and half for small chamber ensembles. Most of these works are based on his own modes (comparable to both Stravinsky's series for small chamber ensembles and his own modes comparable to Stravinsky's series for small chamber ensembles) as most of Seter's orchestral works. His techniques and style attracted composers to study his work, especially his peers Partos and Boskovitch as well as composers of the second generation ("Sheriff, "Orgad, "Braun). His special status among the founders of Israeli music was symbolically cemented during the Israel Philharmonic Orchestra's millennium concert, programming Seter's Midnight Vigil along with Bach's B Minor Mass and Beethoven's Ninth.

[Ronit Seter (2nd ed.)]

**SETH** (Heb. סֵת, antediluvian patriarch, son of Adam and Eve. The Bible has preserved two different traditions regarding Seth. In one Seth is the third son of Adam and Eve, born to them after the murder of Abel (Gen. 4:25 (j))). His name is said to derive from the fact that God "provided" (shat) another son to replace Abel. In the genealogy of Adam, however, Cain and Abel are not mentioned, the implication being according to some exegetes that Seth was Adam's first son (53 (p); cf. 1 Chron. 1:1). This source also furnishes the information that Seth lived to the age of 912 years and that his eldest son was Enosh, who was born when Seth was 105 (Gen. 5:6–8).

**In the Aggadah**

Seth was born circumcised (Arn; Mid. Ps. 9:7), and he inherited the garments which God Himself had made for Adam (Num. R. 4:8). His nature is reflected in the fact that "the generations of man" end with Seth and his son, Enosh (Gen. 4:26). They were the last human beings to be created solely in the image of God; after their death centaurs began to appear (Gen. R. 23:6). Seth is also associated with the messianic era. The future generations of the righteous will be the descendants of Seth (Pārē 22), who will himself be one of the "seven shepherds" counseling the Messiah after the resurrection of the dead (cf. Micah 5:4; Suk. 52b).

**In Islam**

Seth (Arabic Shīth) is not mentioned in the "Koran, but he does appear in post-Koranic literature, where the meaning of the name is given as "a present from Allah" (cf. Gen. 4:25). All the survivors of the Flood are his descendants and as a result all the Arab genealogists trace the descent of mankind from him.

[Haïm Z. éw Hirschberg]

**SETI I** (Menma‘r-Seti; c. 1303–1290 B.C.E.), Egyptian pharaoh. The second ruler of his line, Seti may be regarded as the real founder of the Nineteenth Dynasty (c. 1304–1195 B.C.E.). Under his direction Egypt reasserted her control over Palestine, the Lebanon region, and southern Syria, which had been
lost in the chaotic years of the later Amarna period. The new Egyptian Asiatic empire which he founded, unlike the earlier one (which in fact was no more than a “sphere of influence”), was based upon the permanent military occupation of these regions. In addition to his many monuments in the north of Egypt, a small temple which he built near Timna in the Arabah was discovered in 1969 at the site erroneously believed to have been King Solomon’s Mines.

[Alan Richard Schulman]

**SETTLEMENT HOUSES.** Founded in Europe, North America, and Asia in response to the urban poverty that accompanied industrialization and immigration, the Settlement House movement originated with Toynbee Hall, in London’s East End in 1884. Distressed by working class conditions in urban slums, a group of college-educated men and women “settled” into a house among the poor. They hoped to bridge the gap between classes as they gathered data on the impact of poverty and experimented with progressive social programs.

The American Settlement House movement was begun by Stanton Coit, an adherent of the *Ethical Culture Movement*, who founded the Neighborhood Guild (later the University Settlement) on Manhattan’s Lower East Side in 1886. Three years later, Jane Addams founded Hull House in Chicago. Addams drew other women into the movement, and they formed a strong political network of female reformers who became involved with local, national, and international campaigns for public health and welfare. By 1910, over 400 U.S. Settlement Houses, funded by philanthropists, and often drawing on the Protestant social gospel of good works, offered medical and social welfare programs as well as education and recreation. The majority of American Settlements were staffed by educated women whose efforts lead to social welfare legislation and the professionalization of social work.

The Settlement House movement coincided with the mass emigration of East European Jews and Jews took active roles in all aspects of the Settlement movement, as donors, administrators, resident staff members, and clients. Lillian *Wald one of the few Jews in the early American Settlement movement, directed the Henry Street Settlement in Manhattan from 1893 to 1933. Her funding came largely from Jewish philanthropists, principally Jacob H. *Schiff, and her clientele was largely Jewish immigrants. However, Wald was criticized over the lack of Jewish content in her institutional offerings. In response to this perceived weakness, as well as in reaction to occasional Christian missionary work among Jewish immigrants, middle-class Jews in cities throughout the U.S. and Europe founded specifically Jewish Settlement Houses. In the U.S., these Settlements often grew out of Jewish women’s organizations, especially the “National Council for Jewish Women, which aimed to aid and “Americanize” working-class immigrant women and their children. Staff members set up playgrounds and kindergartens, offered classes in art and theater, and established domestic science training programs. Tensions based in differences in social class, political orientations, and religious practice often proved particularly poignant in these institutions, especially in debates between workers and clients on the use of Yiddish and support for Zionism.

The most prominent U.S. Jewish Settlement was the Educational Alliance, founded by Jewish philanthropists in Manhattan in 1889. The Alliance successfully addressed various social problems for those living in the tenements of Manhattan’s Lower East Side. While all Settlement Houses tried to “make Americans” out of immigrants, adhering largely to an Anglo-Protestant model, the Alliance tried to “make” American Jews, in line with the tenets of assimilated Reform Judaism. As first-generation East European immigrants came of age in the 1920s, they took leadership positions and changed the culture of Settlement Houses to be more accepting of Yiddish and of Jewish particularisms generally. Countless memoirs attest to early 20th-century Settlements providing Jewish immigrants with their first exposure to a world beyond their immigrant and Orthodox Jewish enclaves. These immigrants chose from the offerings of Settlement Houses and integrated into the American mainstream on their own terms. Serving as Settlement administrators and staff members, hundreds of Jews, especially Jewish women, gained practical and professional training and experience. Many went on to lead social welfare policy initiatives in private and public agencies.

By the 1920s, Settlements overall were in decline. In America, this was due to the reduction in immigration and the targeting of progressive social workers during the Red Scare. In addition, Jewish Settlement Houses contended with changing urban populations, as Jews moved increasingly beyond initial areas of settlement. Some Settlements moved with these populations and became community centers; others, like the Alliance, stayed to offer programs to a new population of (largely non-Jewish) urban dwellers.

[Marjorie N. Feld (2nd ed.)]

**SETUBAL**, port in S. central Portugal; third largest city of continental Portugal. During the reign of John I (1325–79), Setubal became an important crypto-Jewish center as a result of the activities of the so-called Messiah of Setubal, Luis *Dias. Although poor and uneducated, Dias won the devotion of numerous “Marranos and even Christians. Unlike those of the remote districts, Setubal’s Marrano community had become extinct by the 20th century (see *Portugal*). A
dozen Jewish families settled in Setubal after the liberal re-
alignment of 1910.

SE’UDAH (Heb. משכן מעם; “meal” or “banquet”; in Yiddish pronounced sudeh), a festive meal. Eating and drinking are considered as pious and sanctifying acts if their purpose is to keep physically fit and healthy and if the prescribed laws and customs are observed. Among these are the washing of hands before a meal at which bread is consumed (see *Abulution); pronouncing the appropriate benedictions over the different foods served at the meal; the recital of “Grace after Meals” (Deut. 8:10) or of a shorter benediction (berakah abaronah). The religious quality of a meal should be enhanced by being abstemious and avoiding gluttony, and especially by discoursing on the Torah at table. Persons engaging in discussion of Torah during the meal “are as though they had eaten of the table of God”; those who did not, “are as though they had eaten of sacrifices of the dead” (Avot 3:3). The Talmud describes in detail the various customs and good manners to be observed at meals, either when eating in private or in company. They include rules concerning the invitation and seating of guests, the mixing of the wine, the serving of the dishes, etc. (Ber. 7:1; 10c–d; Tosef., Ber 4–7; DER 6–9, DEZ 5).

Etiquette demanded that a glass of beverage should not be drunk in one draught (Bezah 25b); all food, especially *bread, be treated with reverence (Ber. 50b); a person refrain from talking while eating lest the food should go down the wrong way and cause him to suffocate (Ta’an. 5b). Proper chewing of food was advised for good health (Shab. 152a), and the custom of lengthening the dinner was regarded as leading to longevity (Ber. 54b). Eating was strictly to be done in the home, and a person eating in the street was compared to a dog (Kid. 40b).

Babylonian Jews followed the dining customs of the Persians, and wealthy Palestinian Jews those of the Romans. They, too, indulged in sumptuous and boisterous banquets (Philo, Cont. 5–7; Wisd. 2:7–9; et al.), causing rabbis in the Talmud to warn against gluttony (Hul. 84a; Avot 2:8, “more flesh, more worms”). They regarded the table as a substitute for the holy altar in the Temple (Ber. 54b–55a), and taught man that he could atone for his sins by inviting the poor to eat with him. As at the altar (Lev. 21:3), there must always be salt on the table (Isserles to Sh. Ar., O.167:5). The master of the house, who himself served the guests, was lauded for initiating the Patriarch Abraham who had himself waited on the three angels (Gen. 18:7–9) and Moses who had waited on the elders of the people (Mekh., Amalek, 3–end). The Talmud discusses whether the master of the house is permitted to renounce the honor otherwise due to him by serving his guests personally. The *nasi R. Gamaliel, at his son’s wedding, served R. Joshua and R. Eliezer; the latter refused to be served by a *nasi but R. Joshua, however, did not object, stating that R. Gamaliel followed in the footsteps of the Patriarch Abraham (Kid. 32b; Mekh. ibid.). According to the Talmud, breakfast should be eaten between the fourth and the sixth hour after sunrise (Pes. 12b). Two meals a day, one in the morning and one in the evening, were regarded as sufficient except on the Sabbath, when a third meal was eaten in honor of the day (see *Se’udah shelishi). The main meal was to include meat and should be eaten in the evening, as was counseled by Moses (Yoma 75b).

The Talmud distinguished between two categories of festive meals: (1) feasts of a nonreligious nature, *se’udah shel reshut, at which students and scholars are advised not to participate (Pes. 49a); and (2) *se’udah shel mitzvah, banquets held in connection with religious acts, such as weddings, circumcisions, etc., participation in which is regarded as a religious duty. To the latter category belong: (1) the three meals a person is obliged to eat every Sabbath (Shab. 117b) and at which it is customary to sing religious hymns (*zemirah). The third, taking place on Sabbath afternoon, called *se’udah shelishi, was invested with importance in *Kabbalism and *Hasidism (see Zohar, Ex. 88b); (2) *se’udat *melaveh malkah, the meal held after the departure of the Sabbath; (3) meals on the holidays and festivals (Sh. Ar., O.15 529:1); (4) the *Passover meal at the *seder (Mishnah, Pes. 10); (5) the *Purim dinner (Esth. 9:18; Sh. Ar., O. 1695:1–2); (6) *se’udah mafsekhet (Ber. 8b; Sh. Ar., O. 1604:1), the meal before the fast of the *Day of Atonement; (7) the Rosh Hodesh meal which originated in biblical times (1 Sam. 10:24), and was later observed in commemoration of the banquet arranged by the *Sanhedrin after they proclaimed the New Moon (R.H. 2:5; So. 19:9). It was a widespread custom until modern times (Sh. Ar., O.419); (8) the festive meal on *Simhat Torah, arranged by the "Bridegroom of the Torah" (hatan Torah; Isserles to Sh. Ar., O.669); (9) the festive banquet on the occasion of completing the study of a Talmud tractate; this occasion called *siyyum originated in the times of the Babylonian talmudic academies (Shab. 118b–119a; Isserles to Sh. Ar., YD 246:26); (10) the *se’udat siyyum of which the firstborn partakes on the morning of the eve of Passover. Participation at the *se’udah supersedes the firstborn fast. The banquet is sometimes called *se’udat bekhorot; (11) the festive banquet of the burial brotherhood (*hevrav kadishah) on *Adar the Seventh (or in some places on Lag *ba-Omer).

The following banquets at joyous family events are also regarded as *se’udah shel mitzvah and to participate at them is a meritorious act: (1) the *circumcision banquet (already mentioned in the Talmud (TJ, Hag. 21, 77b; also PR 29), and in the Shulhan Arukh (YD 265:12) as well as at the meals of the vigil ceremony after the birth of a boy and on Sabbath eve prior to his circumcision, called by different names: shavu’at ha-ben, sholem zokher, etc. (see *Childbirth Laws and Customs); (2) the meal at a *pidyon ha-ben, the ceremony of the redemption of the firstborn (Isserles to Sh. Ar., YD 305:10); (3) the festive meal on the occasion of a *bar mitzvah (Gen. R. 53:10); (4) betrothal and wedding meals (*se’udat erusin and *se’udat nissui or hillula; Ket. 8a; Ber. 31a) which in ancient times
SE'UDAH SHELISHIT

(name for the third meal eaten on the Sabbath. The eating of three meals on the Sabbath is considered by the rabbis as a positive commandment based on the repetition of the word "today" in Exodus 16:25: "Eat that [the manna] today, for today is a Sabbath unto the Lord; today ye shall not find it in the field" (Shab. 117b–118a). This commandment is also binding upon women (Sh. Ar., Ṣah 291:6). The se'udah shelishit is the only Sabbath meal at which "Kiddush is not recited (Tur. 291), although two loaves are still placed on the table (Sh. Ar., ibid.). This meal, eaten in the afternoon of the Sabbath day, must not commence prior to the time for the beginning of the Minhah prayer (Sh. Ar., Ṣah 291:2). Hasidim especially developed the custom of spending hours at the table listening to their rebbe, singing special hymns and wordless melodies. It became customary to chant zemirot and Psalm 23 at this meal.

SEVARAH, the legal logic employed by halakhic scholars in their reasoning. This logic is founded on observation of the characteristics of human beings as they are disclosed in their social relations with one another and on a study of the practical realities of daily life. Sevarah may serve both as a historical source of law—a source which factually and indirectly leads to the creation of a particular legal rule—and as a legal source of law—a source recognized by the particular legal system as a direct means for the acceptance of a legal rule into that system. (On the different sources of law, see *Mishpat Ivri.) Logic may also serve as a historical source in the functioning of the other legal sources of Jewish law. Thus, for instance, when a particular legal rule is created by means of the legal source of Midrash (see *Interpretation), the interpretative activity constitutes the direct creative source of that rule; however, the interpreter is guided along his interpretative path by logic and reasoning, which therefore form the historical-factual source of the rule. The same is true of rules created by means of legal sources of legislature, that is *takkanah, *ma'asah, and *minhag, where the rules are naturally created and fashioned as the outcome of certain needs as dictated by logic and practical exigencies. It is as a historical source in the aforementioned sense that sevarah is quoted as a basis for the study and understanding of the halakhah (see, e.g., Git. 6b; Shab. 63a; Suk. 29a, et al.). On the other hand, sevarah functions as a legal source whenever it serves as the direct source of a particular rule, that is whenever such rule is created by virtue of logic and reasoning alone, outside the framework of and without assistance from any other legal source such as Midrash, minhag, or ma'asah.

An important place is assigned to sevarah as the creative source of halakhic norms in all fields of the halakhah, whether in relation to the precepts between man and his Maker or the laws pertaining to relations between man and his fellow man in matters of ritual law or civil law. The high regard in which sevarah was held also finds expression in the manner of the laws originating from this legal source. Thus a law having its creative source in takkanah or minhag is numbered among the category of laws known as de-rabbanan (see *Mishpat Ivri), whereas a law having its direct source in sevarah is generally numbered among the category known as de-oraita (Chajes, in bibl., and see below). The honorable status thus lent a rule originating from sevarah is attributable to the fundamental principle which underlies the whole of the halakhic system, namely, that the Torah was given on the authority (al do'at) of the halakhic scholars (see *Authority, Rabbinical); hence every rule founded on the logical reasoning of the halakhic scholars originates, as it were, from the Torah itself, because the logic of the halakhic scholars corresponds with the logic embodied in the Torah.

Sevarah as the Creative Source of General Legal Principles

It is an important principle of Judaism that a person who is told to transgress or else suffer death should transgress rather than be killed (Sanh. 74a), since the laws of the Torah were given so that man should live by them and not die because of them (Yoma 83b; Yad, Yesodei ha-Torah 5:1). However, in three cases a person given the choice between transgression or death should choose the latter; idolatry, incest (including adultery), or murder (Sanh. 74a; Pes. 25a–b; et al.). As regards idolatry and incest the rule was established by way of biblical exegesis (Sanh. 74a), but with regard to murder the rule was derived logically, and not by way of exegesis, as follows: "The sevarah is… who shall say that your blood is redder? Perhaps the blood of the other is redder?" (Sanh. 74a); for "as far as the murderer is concerned, since in the end man is anyhow destined to die, why should it be permissible for him to transgress? Who knows that the Creator holds his life to be of greater worth than that of his fellow?" (Rashi, ad loc.). Thus the rule in regard
to the shedding of blood a person should choose death rather than transgression has its legal source in sevarah.

There are a considerable number of general legal principles operating in the field of both ritual and civil law which similarly originate from the legal source of sevarah. The rule that the burden of proof is on the claimant is derived from logic on the reasoning that just as the person who has a pain seeks out a doctor and recites his symptoms (and it is not the doctor who runs around to find out who is ill), so too the person who has a claim against another must first bring proof to substantiate his claim, and the defendant need not first prove that he is not liable on such claim (bk 46b). So too a woman's statement that she was married and became divorced – there being no witnesses to the fact that she was married – is believed as regards her becoming divorced, in terms of the rule pertaining to the laws of evidence that "the mouth which has rendered prohibited is the mouth which has rendered permissible"; this rule is derived from the logical reasoning that since she prohibited her own self (to others) she may also permit her own self (Ket. 253; Ket. 224; from this rule there was derived in amoraic times the rule of miggo; see *Pleas; *Evidence).

The two aforementioned rules are expressly stated as having their legal source in sevarah, and this also appears to be the case with reference to a number of further rules and principles, for instance as regards the principle of hazakah as a legal presumption – such as the presumption that a person is alive (Git. 33b), the presumption of legal competence (hezekat kasrut; bb 31b), the presumption of bodily fitness (Ket. 7:8), and numerous other kinds of presumptions. Logic is also the source of the rule regarding reliance on the majority, even when the majority is not a factual one (such as a majority of the judges hearing a particular case), but is based on surmise alone [Hul. 11a; the biblical passages cited there with regard to several kinds of majority and hazakah are in the nature of "asmakhah" ("mere allusion") alone; see also *Interpretation]. These presumptions have validity in all fields of the halakhah, in matters of the civil law as well as matters of ritual prohibitions and permissions, and even in matters which are de-oraita: "For matters learned by way of sevarah are of the same value as the actual statements of the Torah itself… since the power of observation deriving from experience is of precisely the same value to them [the halakhic scholars] as a matter learned through application of the exegetical middot" (see *Interpretation; Chajes, in bibl., 118–30).

**Sevarah in the Amoraic Period**

A substantial proportion of the laws and principles deriving from sevarah are attributable to an early period of the halakhah. From talmudic sources it is also possible to conclude that the use of sevarah as a legal source of the halakhah was particularly resorted to during amoraic times – just as the amoraim laid down rational rules with regard to the use of other legal sources and the modes of studying the halakhah (see *Takkanot; Asmakhah). Thus in regard to forbidden food and drink R. Johanan laid down that the taking of even half of the determined measure was also forbidden by the post-talmudic law – since one half-measure may combine with another half-measure to constitute a full measure, it follows that he will be eating that which is forbidden (Yoma 74a). The amoraim stated that in respect to various laws it may be said that they have their source either in a biblical passage or in sevarah, for instance as regards certain matters relating to the laws of evidence (Sanh. 30a), the laws of halizah (Yev. 35b) and in other fields (see, e.g., Shevu. 2ab and Tos. loc. cit.).

In other cases the amoraim searched for the legal source of a particular rule and came to the conclusion that such a rule had its origin in the legal source of sevarah. An interesting illustration of this is to be found in the discussions of the amoraim concerning the legal source of the rule that three years' possession of real property confers presumptive rights of ownership (i.e., upon a claim of lawful acquisition with subsequent loss of the title deed, but with possession for the said period without protest from the former owner; see "hazakah"). The amoraim confronted difficulties in attributing the source of the rule to Midrash (see *Interpretation) and to Kabbalah (see Mishpat Ivri) in turn, and then Rabba determined the legal source of the rule thus: "The first year a person guards his title deed and so he does the second and third years; thereafter he guards it no longer" (bb 28a–29a). That is to say, logic – which is founded on the observation of daily practical life – teaches that a person who purchases property takes care to guard his title deed for a period of three years as proof against any challenge to his right in such property; however, after three years have elapsed without any such challenge, he no longer sees need to guard the material evidence of his ownership since he is already sure that he is fully in possession of the property and does not contemplate the possibility that his right to it will any more be challenged. This sevarah was accepted as the legal source of the rule that three years' possession of property suffices to prove the possessor's acquisition thereof according to law, even when the latter cannot produce his title deed or any other proof (for additional substantiation of the rule, see *Hazakah).

**Sevarah continued to be a creative legal source in the post-talmudic period. However, the halakhic literary sources of this period, unlike those of the talmudic period, do not generally specially emphasize the fact that certain rules have their source in sevarah, as is generally done in the case of minhag, takkanah, and other legal sources. Hence painstaking research is required in order to distinguish the post-talmudic halakhic literary principles which originate from sevarah.**

[Menachem Elon]
SEVASTOPOL, city in Crimea, Ukraine. Jews lived there in the Greek period when the city was called Khersones. Shortly after its foundation in 1784, Jews began to settle in Sevastopol, many of them from Galicia. They engaged in commerce and crafts and some acted as purveyors to the local garrison. The community was severely struck by a plague which broke out in the town in 1825. The development of the community was brought to a sudden halt as a result of the government's decision in 1829 to prohibit residence in the town, which had become the chief Russian naval base on the Black Sea.

In 1842, even a temporary stay by Jews in Sevastopol was limited to one month. During the Crimean War (1854–56) many Jews took part in the defense of Sevastopol and about 500 fell in battle. A monument was erected to their memory in the city in 1864. From 1859 various categories of Jews (merchants registered in the guilds, with their servants and clerks, and artisans) were authorized to live in Sevastopol; there was also some alleviation in the attitude toward visits and temporary residence of Jews in the town. Thus the Jewish settlement was renewed during the second half of the 19th century, and in 1880 numbered 400. In 1874 a "house of prayer for soldiers" was opened in Sevastopol, and in 1884 the construction of a synagogue was completed. Jews began to play an important role in the foreign trade which passed through the port, especially grain commerce. By 1897 3,910 Jews lived in Sevastopol (7.4% of the total population), including about 70 families of "Krimchaks" (Jews from Crimea itself). About 830 Karaites were also living in the city. In 1907 the authorities again began to expel Jews from various parts of Sevastopol, and by 1910 their numbers had decreased to 3,655. With the revolution of 1917 and abolition of all the anti-Jewish restrictions, many more Jews settled in Sevastopol. By 1926 their numbers reached 5,204 (7%). In 1939 they numbered 5,988 (5.5% of the total population).

Holocaust and Contemporary Periods

Sevastopol was occupied by the Germans on July 12, 1941. They soon collected 4,200 Jews who remained in the city and from its environs, and they murdered them in ditches outside the town and in gas vans. A small synagogue and Jewish cemetery were maintained in the late 1960s.

nodatelstvu o yevreyakh" (1890); D. Polonski, "Istoricheskii ocherk sev-

astapolskoi yevreyskoi obschestiny" (1903).

[Yehuda Slutsky]

SEVENTY SHEPHERDS, VISION OF, the modern name of the treatise, also known as the "Dream-Visions," included in chapters 83–90 of the Ethiopic Book of "Enoch. Like the whole Book of Enoch, the treatise is extant in an Ethiopic translation from Greek, a fragment of which (Enoch 89:42–49) is preserved in a Vatican manuscript. The treatise dates from the beginnings of the Maccabean period and was known to the author of the Book of Jubilees (cf. 4:19). Chapters 83–84 contain Enoch's prophetic dream about the coming flood and form an introduction to a long dream-vision about the entire history of mankind from Adam to the eschatological salvation. This history appears to Enoch as an allegorical story, in which human actors are represented by animals. The allegory is mostly external and clumsy, but this is why its content can be easily revealed, making the treatise an important document in the Jewish conception of history and eschatology. The author hints at the common motif of the slaying of the prophets (89:51). At the end of the first commonwealth, because of its sins, God gave Israel into the hands of 70 shepherds, i.e., the angelic princes of the gentiles (the 70 nations); he told them how many of the sheep (Israel) they could allow to be destroyed, but they exceeded their orders and slew more than was required of them. This means that before the destruction of the First Temple, the Babylonian exile, and the loss of independence, God's people Israel, which had sinned, was handed over to the powers of the nations to live under the unrightful dominion of their guardian angels. In the last period of history, lambs are born to the white sheep (i.e., Israel) which are no longer blind as all the others before them had been; these are evidently the "Hashidim" of the Maccabean revolt. The sheep from which a great horn sprouts (Enoch 90:9) undoubtedly represents Judah Maccabee. The real history, known to the author, finishes with 90:13, and from there he describes what he thinks to be the imminent eschatological future. The great sword given to Israel for their last battle against the gentiles (90:19, 34) occurs also in the "Sibylline Oracles" (111, 673, 780–2) and in an apparently Jewish apocalypse included in Lactantius' Institutions. After the final victory God will judge the fallen angels together with the guardian angels of the nations and apostates (90:20–27). The eschatological happy end begins with a prophecy about the New Jerusalem. The old one will be removed and laid in the south of the land. In its place God will bring the New Jerusalem. The idea of the New Jerusalem is not yet connected with the destruction of the one already existing. The dispersed Jews will return and the righteous gentiles convert. Only at the very end of the eschatological drama (90:37–38) do two messianic persons appear: the first is evidently the Davidic Messiah; the description of the second one seems to allude to Deuteronomy 33:17 (the blessing of Joseph). Thus the work is possibly the oldest evidence for the idea of the Messiah son of Joseph. As this treatise was evidently composed in the midst of the wars of Judah Maccabe (d. 160 B.C.E.), and written some years after the Book of Daniel, it is one of the oldest Jewish apocalypses.

[David Flusser]
SEVER (Zilberman). ALEXANDRU (1921– ), Romanian novelist, author, and playwright. A publisher's editor during the years 1949–1958, he began writing plays such as Boieri şi țărani ("Boiers and Peasants," 1955), but was best known as a prose writer. His novels include Cezar Dragoman (1957), Ucierăe reruncilor ("The Massacre of the Innocents," 1966), and the technically original Cercul ("The Circle," 1968). Sever also published literary studies on Shakespeare and Melville (1964), Sinclair Lewis (1965), and Goethe and Eckerman (1966).

SEVERUS (sometimes called Serenus), pseudo-messiah (or in some sources the Messiah's forerunner) in Babylonia about 720 C.E. The cataclysmic series of Muslim victories in the seventh century, culminating in the great Arab siege of Constantinople (717–8), provided the climate for an upsurge of messianic expectation among the Jews. In several Byzantine (both Greek and Syriac) chronicles Severus is described as a Syrian Christian who converted to Judaism. According to these sources, he attracted a large following, mainly of Jews but including some Christians, and gathered their money and assets, allegedly in order to bring them to the Promised Land. The Muslim authorities put him to death during the reign of Hisham (724–43). Severus introduced ritual innovations contrary to talmudic but not to biblical law, such as permission to work on the second days of holidays, modifications of kashrut laws, and the abolition of the prevalent marriage and divorce laws. After his death his followers, unlike those of such previous pseudo-messiahs as ‘Abu ‘Isa al-Is-fahani (c. 680s) and the Jew of Pallugha (Pumbedita; 645), returned to the mainstream of Judaism, perhaps sending an inquiry to *Natronai Gaon (t). Severus was thought to have influenced Byzantine Jews and the risk of their affecting the loyalty of his other subjects may have been a reason for their persecution by Leo III. Because of the impression he made on Christians, Severus continued to be mentioned in Christian sources until the 14th century.

[Andrew Sharf]

SEVERUS, ALEXANDER (Marcus Aurelius Alexander Severus; 208), Roman emperor 222–35 C.E. Relations between the Severi and the Jews were notably favorable, and in this framework one “Severus, the son of Antoninus” mentioned in talmudic literature has been identified with Alexander Severus (Nid. 45a; Av. Zar. 10a; cf. S. Krauss, JE 1, 356). Although this identification is not altogether certain, it has also been suggested that the synagogue in Rome known as the “Synagogue of Severus” (דנסיאט קスピード; cf. Bereshit Rabbati, ed. Albeck, p. 209; Frey, Corpus, 1 (1936), 501, and p. lxxxi) is named after Alexander Severus. These proposals are supported primarily by the biography of Alexander Severus in the Scriptores Historiae Augustae, which states that among those images in the private chapel of Severus was also one of Abraham. Although written in the middle of the fourth century, the general impression in this work of a continuation of good relations between the emperor and the Jews is probably a definite one.

[Isaiah Gafni]

“SEVERUS, SEPTIMIUS (Lucius Septimius Severus), Roman emperor, 193–211 C.E. Among the rival claimants for the Roman throne whom Severus defeated in the Civil War of 193 was Pescennius Niger, who had been proclaimed emperor in Syria. In this struggle the Jews of Erez Israel sided with Severus. That they liked him also can be seen from an inscription of the year 197, written in Greek, which was found in Safed. The Samaritans, however, ranged themselves against Severus, and continued to fight until 197. As a punishment, after his victory, the town of Neapolis (Shechem) was deprived of its ius civitatis (Spartianus, Severus, 95). In 202 the emperor forbade, under the threat of heavy penalties, conversion to both Judaism and Christianity (ibid., 173; “Judaeos fieri sub grave poena vetuit. Idem etiam de Christianis sanxit”), but he was tolerant toward those who were Jewish by birth. The jurists Ulpiian and Modestinus report that Jews could be appointed to high public offices, but would be exempt from those formalities (Necessitates) which were contrary to their monotheistic faith (Corpus Iuris Civilis; Digesta 50/2, 3; 271–5). Although according to J. Juster this exemption was in force even before the time of Severus, S. Lieberman (in: Annaire Université Libre de Bruxelles 7) believed that both Christians and Samaritans could not have enjoyed such exemptions because of the oath that had to be taken on assuming public office. (S.W. Baron is more cautious in his conclusions.)

[Alfredo Mordeckai Rabello]

SEVILLE (Sp. Sevilla), leading city of Andalusia, S.W. *Spain. According to a tradition, the Jewish settlement in Seville was of very ancient date; it is related that Jews arrived there at the time of the destruction of the First Temple, and among the families were descendants of the House of David, including the *Abrabanel family. However, it is difficult to adduce evidence for the presence of Jews in this locality during the 11th to 10th centuries b.c.e., unless Seville, or another place within direct proximity of it, is identified with the *Tarshish mentioned in the Bible. There is no doubt that a Jewish settlement existed during the period of Visigothic rule in the peninsula. During
the seventh century C.E., *Isidore of Seville wrote anti-Jewish polemics there. When the city was conquered by the Muslims in 712 they formed a Jewish guard for its defense; these soldiers settled in the city and its surroundings.

Muslim Period
Under the *Umayyads, Seville prospered and became an important cultural center. The Jewish community of Seville was one of four major communities in Muslim Spain. *Saadia b. Joseph Gaon addressed Seville Jewry in the mid-twelfth century in his letter to the leading communities in Spain (Abraham ibn Daud, Sefer ha-Qabbalah, Book of Tradition, ed. by G. Cohen (1967), 79). The Jews engaged in commerce and medicine and had a virtual monopoly on the profession of *dyeing. Seville served as a refuge for Jews escaping from *Córdoba after the Berber conquest in 1012. Jewish opponents of *Samuel ha-Nagid in Granada fled to Seville, its major opponent. During the 11th century the Jewish population increased as a result of the anti-Jewish riots in *Granada, as well as a large influx of Jews from North Africa seeking economic improvement. Under the Abbasid dynasty (1023–91) prominent Jews served in various capacities at court. During the reign of al-Mu'tadid (1024–69) the wealthy scholar Isaac b. Baruch *Albahia served as court astrologer and head of the Jewish community. His son, the scholar Baruch b. Isaac Albahia, uncle of the historian Abraham *Ibn Daud, was born in Seville. Abraham b. Meir ibn Muhajir also served as vizier and head of the Jewish community under the Abbasid king. Important families included the Ibn al-Yatom, Ibn Kamneil, Ibn Mujahir, and the Abrabanel families. Under the Almoravids (11th century), Seville was a major cultural center. Abu Ayub Sulayman ibn Mu'allim of Seville served as court physician and Abu al-Hasan Abraham b. Meir ibn Kamneil as a diplomat under King Ali ibn Uusuf (1106–43). The poets Abu Sulayman ibn Mujahir and Abul al-Fath Eleazar ibn Azhar and the scholar Meir ibn Migash lived in Seville in the early 12th century. Seville Jewry suffered the same fate as the other Andalusian communities in the wake of the Almohad conquest and was entirely destroyed.

Location of the Jewish Quarter
Under Muslim rule the Jewish quarter was situated in the western part of the city, in the present parishes of Santa Magdalena and San Lorenzo, where the Cal and Cal Maior streets ("Community Street") are still to be found. This was probably the old Jewish quarter (judería vieja), which was then also the Moorish quarter. The al-Shawwâr Gate, known as the Juderia Gate during the Middle Ages and later as the Meat Gate (Puerta de la Carne), was situated within the boundaries of the quarter. The other Jewish quarter, established after the city was conquered by the Christians, extended from the Carmona Gate, through the San Esteban, Las Aguas, and de Abades streets, to the Cathedral, the Oil Street, and the Alcázar to the city wall. Ballesteros (see bibliography) may, however, have been correct in stating that from the Alcázar the boundary of the quarter passed through Matías Gago Street, Soledad, to San Nicolás and from there to Madre de Dios Street, St. Bartholomé Square, and Vidrio Street to Tintes Street, through the “Rose” alley. The main street of the Jewish quarter was the one that started in the Puerta de la Judería (today de la Carne) and ended at the gate that used to be in front of San Nicolás, in other words the streets that nowadays are called Santa María la Blanca and San José. The busiest part of the quarter was the square that is today called plaza de Santa María la Blanca. Important localities and streets in the Jewish quarter were the Cruces street and the streets of the Levies and Archeros, where the original doors of the synagogue (now Santa María la Blanca) were and are still preserved but not used. Santa María la Blanca had been a mosque before it was given by Alfonso X in 1252 to the Jews to use as synagogue together with other two mosques. In 1391 this synagogue was converted into the present church. In the Santa Cruz place there was a synagogue, also formerly a mosque, which was converted into a church in 1391. Before its destruction by the French in 1810, it occupied a large part of the Santa Cruz place. The third mosque that was turned into a synagogue used to be where San Bartolomé church stands. In Susona street, according to legend, lived Susona, who was connected with the plot of the Conversos against the Inquisition. At the time of the expulsion of the Jews of Andalusia in 1493 (see also below), the quarter was surrounded by a wall which ran as far as San Esteban. The inner wall had two gates. There were many synagogues in the quarter, including one erected by Samuel b. Meir ha-Levi *Abulafia of Toledo during the 14th century. The archdeacon of Eciá, Ferrant *Martínez (see also below), enumerated 23 synagogues in Seville during the second half of the 14th century, and related that he destroyed them. The origin of such a large number is unknown; he may have included the yeshivot in this number. Some of the synagogues were converted into churches: Santa María la Blanca is particularly well known. After the quarter ceased to exist, it was named “New Quarter” (Barrionuevo) but its remains may still be seen in the Santa Cruz quarter.

The Jewish cemetery of Seville was near the Puerta de la Carne, formerly de la Judería, in the Bujaira, where the Colegio de Potacoeli now stands. The Inquisition in Seville sat in Triana castle, after a brief period in the Dominican monastery of San Pablo.

After the Christian Reconquest
In 1248 Seville was captured by the armies of Ferdinand III (1217–52). The Jews of the city prepared a key for him on which was engraved in Hebrew: “the King of Kings will open, the King of the land shall come” (the key is preserved in the cathedral treasury). The Jewish quarter succeeded in obtaining the three mosques situated within its boundaries, which were converted into synagogues. In the distribution of properties which took place after the Christian conquest, and later during the reign of Alfonso X of Castile, many Jews obtained real estate in the form of houses, arable land, olive groves, and vineyards in the city and its outskirts. Those who received the
properties were obliged to settle in Seville and a royal decree stipulated that owners of property in the city would not benefit from any rights unless they lived there permanently. Among these Jews were Don Todros b. Joseph ha-Levi *Abulafia and his son Joseph, who at the time of his death bequeathed many properties to the city (1273); they were confiscated and presented to the local church. Immediately after its capture the Christians succeeded in converting Seville into an international commercial center. Its trade extended to the ports of Spain, Portugal, and North Africa, and many Jews took part in this commerce.

In 1254 Alfonso X inaugurated two annual fairs in Seville. The Jews who attended them or participated in them were granted freedom of trade and an exemption from taxes. In 1256 Alfonso nevertheless ordered each of the elders of the community, its leaders, and the Jews of Seville to pay 30 denarii to the head of the Church, a payment which had also been made by the Jews of Toledo. The Jews of the city also paid tithe and firstfruit taxes to the archbishop of Seville (as also did the Moors there). The rights of the Jews of Seville stipulated, among other articles, that lawsuits between Jews and Christians should be brought before the judges of the town, with the exception of suits pertaining to tax farming. There were also community regulations against adultery and marital offenses. Despite this, there were Jewish women who lived in concubinage with Christians (*barraganas) and enjoyed defined rights in the city. In Seville, Jewish women acted as mourners for Christians. In practice, the living conditions of the Jews of Seville did not differ from those of the other Jews of the kingdom, with the exception of rights granted to them on the strength of their residence in this border region.

The registers of the office of Sancho IV for 1293–94 show that the annual tax paid by the Jews of Seville amounted to 115,333 maravedis and five sólidos. The community of Seville appears to have numbered 200 families during that period, and it may be assumed that the overwhelming majority were wealthy. During the course of the 14th century, the community succeeded in consolidating itself and in attaining a fair cultural and economic level. The Jews of the community took part in the lease of municipal taxes in the city and the region under its jurisdiction, as well as in economic activities promoted by the government. During the 14th century Jewish physicians were employed as municipal officials—a situation not found, for instance, in Toledo. The physicians of the city were members of the Ibn Zimra family; they also engaged in various financial activities. In 1312 the community succeeded in obtaining the king’s permission to hang an “informer then active in Seville; R. *Asher b. Jehiel commended the community for this action. In 1342 King Alfonso XI requested Pope Clement VI to release the synagogue built in Seville by Joseph de Ecija so it could be employed for the purpose for which it was built. In advocating the Jews’ case the king stressed their economic and military utility in the war against the Muslims.

Activities of Ferrant Martinez
In 1378 the archdeacon of Ecija, Ferrant Martínez, began anti-Jewish agitation in Seville. He called for the destruction of the 23 beautiful synagogues of the Jews and the closure of their quarters so that they would not come into contact with the Christians. The Jews of the town complained about the hatred which he fomented and the prohibitions which he issued against the residence of Jews in the archbishopric of Seville. In 1382 John I ordered Martínez to cease his activities, but he pursued his campaign. The leaders of the community still complained to the crown about Martínez in 1388, while he claimed that he was acting with the approval of the archbishop of Seville to separate the Jews from the Christians. In 1390 Henry III ordered the archbishop of Seville to act against Martínez with firmness and restore to the Jews the synagogues which had been confiscated; the head of the Church of Seville was to bear the responsibility if the order was not carried out. Activities such as these were frequent occurrences in Spain as in other countries, when young and fanatical clergymen acted arbitrarily and upon their own initiative against the Jews, and presenting the government and Church with their violence as a *fait accompli.

Persecutions of 1391
On June 4, 1391, the anti-Jewish disorders which were later to sweep all the towns of the Crowns of Castile and Aragon broke out in Seville. The rioters in Seville, including soldiers and sailors who went by boat from one place to another inciting the population, teaching others from their experience. The community was almost totally destroyed: some of its members died as martyrs, a minority escaped; others converted and left the Jewish fold. The synagogues were turned into churches and the churches acquired substantial real estate in the form of land, charitable trusts, shops, workshops, and houses which had formerly belonged to Jews and the community. Henry III granted houses to his chief mayordomo, Juan Hurtado de Mendoza, and the chief justice, Diego López de Estúñiga, which had been the property of the community, and the synagogues to the city of Seville.

Decline of the Community
The remaining Jews of Seville were unable to recover from the persecutions of 1391 and their rehabilitation was extremely slow. In 1437 a number of Jews appealed to John II to regularize the matter of their residence in their quarters. In the Santa Cruz quarter the 75 houses in which Jews lived and worked were rented. In another quarter, near the Santa María la Blanca church (a former synagogue), there were 56 houses. A letter from Pope Nicholas V to the bishop-administrator of Seville records an exceptional action by the Jews of Seville in 1449 when a plague broke out there. After the example of the Christians, who organized a religious procession in the town, the Jews of Seville organized a procession during which they took out the Torah scrolls, scattered branches, and decorated the streets, thus imitating the custom and ritual of the Christians in their processions, as if to insinuate that God had not accepted the plea of the Christians.
Despite several expressions of sympathy on the part of Christian inhabitants, the situation of the community appears to have been serious. In 1474 the community paid an annual tax of only 2,500 maravedis, and this sum was reduced to 2,000 maravedis in 1482. On Dec. 8, 1476, the Jews were ordered to leave their quarter and move to two places; one of them was the Corral de Ferez, the other, the Alcázar Viejo. They were to cover the expenses of repairs to their new places of residence.

On Jan. 1, 1483, the crown acceded to the demand of the *Inquisition and an expulsion order was issued against all the Jews of Andalusia. A period of 30 days was given to the Jews to leave. The actual decree of expulsion is not extant but much information is available on the procedure of its execution. When the general decree of expulsion of the Jews from Spain was issued in March 1492, Seville was a port of embarkation for the exiles, most of whom left for North Africa.

At the beginning of the 20th century, Jewish settlement in Seville began again. Most of the Jewish settlers came from North Africa. In addition to these families, there were also refugees from Germany who arrived there during the early 1930s. The several dozen Jews in Seville were joined in the 1960s by Jewish arrivals from Morocco and Algeria.

**Conversos in Seville**

Little information is available on the history of the *Conversos in Seville during the first half of the 15th century. Until the expulsion and after it the Conversos in Seville were known for their adherence to Judaism and their loyalty to Jewish law. They maintained extremely close relations with their Jewish brothers, and anyone of whom it was said that he was a Converso of Seville, or that he had stayed there, was considered a Jew in every respect. After the attacks on the Conversos in Córdoba in 1473, many of them fled to Seville. The Conversos in Seville also gradually became aware of the danger which threatened them and large numbers left for North Africa and other places. Others organized guards in their quarter to protect their lives and even hired 300 equestrian knights and 5,000 infantrymen. When acts of hostility broke out against them they were unable to defend themselves, and with the Conversos of Córdoba they tried to establish themselves in *Gibraltar. During that period R. Judah ibn Verga conducted a campaign among them calling on them to return to Judaism and to leave the kingdom before it was too late.

When Ferdinand V and Queen Isabella visited Seville in 1477, the head of the San Pablo Dominician monastery in the city, Alonso de Hojeda, and others pointed out to the monarchs the religious situation in their city and requested the establishment of an Inquisition. The monarchs accepted their demand, and from there addressed themselves to Sixtus IV. In 1480, two years after the authorization was granted, Miguel de Murillo and Juan de San Martín were appointed inquisitors, but it was only on Jan. 1, 1481 that they began their merciless activities. As a first measure they ordered all the noblemen of the surroundings (among them some of the kingdom's highest ranking personalities such as Rodrigo Ponce de León) to deliver all fugitive Conversos to them. Documents of the Inquisition tribunal of Seville are not extant, but various state documents and chronicles of those days are filled with descriptions of the activities of the inquisitors and their proceedings against the Conversos. Large numbers of both wealthy and poor folk were arrested, imprisoned, tried, and burned at the stake. Among those tried were members of the Ibn Shoshan, Adoba, and Abulafia families. At first the Conversos sought to defend themselves and began to hoard weapons. A popular tradition relates that the daughter of Diego de Shoshan revealed the project to her Christian lover, who alerted the Inquisition, which struck a hard blow at the Conversos involved in this scheme. In August 1481, when a plague broke out in the city, many Conversos were authorized to leave it after they had deposited their money as a surety, but a large number of them did not redeem their surety and fled (among them the Hebrew printer Juan de Lucena) to North Africa, Portugal, and Italy. The Inquisition also followed the Conversos to the surrounding villages; wherever it arrived, numerous Conversos died as martyrs.

According to a cautious estimate, over 700 men and women were burned at the stake in Seville between 1481 and 1488, while over 5,000 were returned within the fold of the Church. At the end of 1484 a convention of the inquisitors of the kingdom was held in Seville in the presence of *Torquemada. It defined the procedure of the Inquisition and was thus the first conference for the study and improvement of working methods of the Inquisition. In Seville, the Conversos and travelers who arrived in the harbor were spied upon and the Inquisition searched every ship which entered or left. This situation continued until the abolition of the Inquisition during the 19th century.

[Haim Reinaart]

SEXUAL OFFENSES

SEX. Neither biblical nor talmudic Hebrew possesses a specific term for sex. While classical Jewish literature is replete with references to it, the subject is never treated separately and systematically. The most intimate and frank discussions on sex are featured frequently in the Talmud and have always been a natural part of religious education, unmarred by self-consciousness. Nevertheless, laws concerning forbidden relations should not be expounded in public (Hag. 2:1 and 11b), since “there is no guardian against unchasteness” (Ket. 13b). The Jewish attitude to sex, then, shows a certain apparent ambivalence or, more correctly, a balance between extremes. It insists on a stern discipline of moral restraints and yet avoids excessive prudery or asceticism. On the one hand, Judaism regards moderation and self-control in sex as the essence of “holiness” (Lev. 19:2, and commentaries), condemning unchaste conduct as among the most heinous offenses against God and society and branding as capital crimes such perversions as sodomy and pederasty (Lev. 20:13, 15–16) as well as adultery (ibid., 16) and incest (ibid., 11ff.). On the other hand, it rejects the notion of considering the sex instinct as intrinsically sinful or shameful. The sex drive should be sublimated rather than suppressed, for “were it not for the evil inclination, no man would build a home and marry” (Gen. R. 97). Indeed, to the rabbis, who frowned on “celibacy, it was this instinct which completed the creation of the world and caused God to pronounce His work as “very good” (Gen. R. ibid.).

Legislation on sex occupies considerable space in the codes of Jewish law, as do warnings against lewdness in thought, word, or deed in the moralist literature of Judaism. Building on the foundations of the pragmatic laws in the Torah and of the passionate denunciation of pagan licentiousness by the prophets, the rabbis erected a complex structure of regulations to govern every area of sex life. Particularly extensive are the rules of family “purity based on the prohibition of sexual relations with a menstruant woman (Lev. 20:18). Similarly elaborated are the laws on birth “control,” sterilization, and “abortion, as well as the ban on “prostitution (based on Deut. 23:18), and indeed on any sexual relations outside lawful wedlock (Maim., Yad, Ishut 1:1–4). To guard against illicit intimacies, any meetings in private between individuals of opposite sexes are also strictly prohibited (Sh. Ar., EH 22), just as the Bible forbids men or women to wear each other’s clothes (Deut. 22:5) to prevent levity and promiscuity (see commentaries). Many additional rabbinic rules seek to curb lewd thought and immodest conduct, even among spouses (Sh. Ar., EH 21–25).

Though far removed from the Freudian concept of sex as the ultimate key to normal and abnormal behavior in childhood as in mature life, the rabbis often asserted the predominance of the sex urge and the effort needed to control it. “Who is mighty? He who subdues his lust” (Avot 4:1), and “for most people there is nothing harder in the entire Torah than to abstain from sex and forbidden relations” (Maim. Yad, Issurei Bi’ah, 22:18) are typical statements. Characteristic, too, is the interpretation given to the rite of “circumcision, the “covenant” between God and Israel and the first law enjoined upon the first Jew, as symbolizing the primacy of hallowing the sex act by an operation “to weaken the organ of generation as far as possible, and thus cause man to be moderate” (Maim., Guide, 3:49).

[Immanuel Jakobovits]

“SEXTUS EMPIRICUS” (late second century c.e.), Greek physician and philosophical writer in whose works on Skepticism (extant) the Jewish abhorrence of pig’s flesh is mentioned (Pyrhonic Sketches 3:223).

SEXUAL OFFENSES. Although the technical term for sexual offenses in general is gillui arayot (lit. “the uncovering of nakedness”), the term is usually (though not always: cf. Ex. 20:23; Isa. 47:3, et al.) employed to denote carnal knowledge (Lev. 18:6–19). In the present context, however, the term “sexual offenses” includes offenses committed by prohibited sexual intercourse, offenses of unlawful sexual conduct short of intercourse, and related offenses presumably motivated by the sexual urge.

As well as acts of “adultery and “incest, the Bible also prohibits sodomy and homosexuality (18:22), denouncing such acts as “abhorrent” and making them capital offenses (20:13); having carnal relations with any beast is also a capital offense (18:23; 20:15–16). These offenses were punishable by stoning to death (Sanh. 7:4; Maim Yad, Issurei Bi’ah, 1:4), and the beast with which the offense had been committed was also destroyed (Lev. 20:15–16). A married girl (i.e., meirasah, her legal status after kiddushin, but before huppas; see “Marriage”) who was found not to have been a virgin (though claiming to be one upon her kiddushin) is liable to be stoned to death, “for she did a shameful thing in Israel” (Deut. 22:20–21). Both she and her seducer are thus punished if they had intercourse with each other by mutual consent (Deut. 22:23–24); but where
the girl did not consent her seducer alone is liable to execution (Deut. 22:25–27).

It is noteworthy that apart from this particular case and cases of adulterous or incestuous intercourse, rape as such is not a criminal offense in Jewish law: the rapist will merely be held liable to pay the girl’s father 50 shekels of silver by way of bride-price, “and she shall be his wife, because he has humbled her; and he may not put her away all his days” (Deut. 22:28–29). Under talmudic law, the rapist must also compensate the girl for the physical and psychological damage she sustained (Ket. 42a–43b). But if the girl refuses to marry him, he is not compelled to marry her (Ket. 39b). If a girl was raped by several men, she is given the choice of the one who is to marry her (71, Ket. 3:6, 27d; for further details see "Rape").

It is an offense to have intercourse with a woman, including one’s wife, “having her sickness,” i.e., *middah* during the period of her menstruation (Lev. 18:19 and 20:18). The penalty is *karet* (see *Divine Punishment*): “both of them shall be cut off from among their people” (ibid.). If they were warned beforehand and witnesses are available, they are liable to be flogged (Mak. 3:1).

It is an offense, punishable by flogging, to have sexual intercourse with a non-Jew, by way of purported or intended marriage (ibid., 12:1). For other sexual intercourse with a non-Jew (which is not criminal), flogging may be administered by way of rebuke and admonition (makkat mardut; ibid. 12:2). The biblical story of Phinehas (Num. 25:6–8) gave rise to the rule that where intercourse between Jew and an idolatress takes place in public, any person present may kill them (Sanh. 9:6; Yad, Issurei B'ah 12:4). Failing such summary execution, the offender is liable to divine punishment and to be flogged (ibid. 12:6).

Marrying a person born of an adulterous or incestuous union (see *Mamzer*) and having sexual intercourse with him or her is a criminal offense punishable by flogging (ibid. 15:2). Marrying a person whose testes are crushed or whose member is cut off (Deut. 23:2), and having (or attempting to have) sexual intercourse with him, is also punishable by flogging (Yad, Issurei B'ah 16:1) – although the offense was qualified so as to apply only where the infirmity had not existed from birth but was acquired later by human act or accident (ibid. 16:9; Yev. 75b). It is similarly an offense punishable by flogging to castrate a person by causing injury to his sexual organs (Shab. 110b) – an offense which was extended even to the castration of animals (Tosef., Mak. 5:6; Yad, Issurei B'ah 10); but does not apply to females (ibid.) nor to castrations that do not cause injury to sexual organs (ibid. 16:11).

Some particular offenses apply to *kohanim* (priests) only: e.g., a *Kohen* who marries a divorcee, a harlot (including a non-Jewish), or a woman born of a prohibited union with a priest (Lev. 21:7), and has sexual intercourse with her, is guilty of an offense and liable to be flogged (ibid. 17:2), and so is the woman partner (ibid. 17:5). The high priest who had sexual intercourse with a widow (Lev. 21:13–14) was also liable to be flogged (Yad, Issurei B'ah 17:3).

The only sexual offense short of intercourse is “approaching” (Lev. 18:6) any person with whom intercourse is prohibited under penalty of death (including divine punishment). Embracing and kissing such persons, and other such preocital activities, are offenses punishable by flogging (Yad, Issurei B'ah 21:1). But it is no offense – however reprehensible and “foolish” it may be in some cases – to embrace or kiss one's mother, daughter, sister, or aunt, or such other relatives who do not normally arouse the sexual urge (ibid. 21:6; see “Incest”). The prohibition against “cult prostitution” (Deut. 23:18) was interpreted as creating the offense of sexual intercourse with a harlot (cf. Lev. 19:29), both she and the man being liable to be flogged (Maim. Yad, Nährah Betulah, 2:17). But however much “prostitution may be condemned (cf. e.g., Jer. 3:1–3), it appears in biblical times to have been widespread (cf. Gen. 34:31; 38:15; Judg. 11:1; 16:1; Isa. 23:15–16; Prov. 7:9–22; et al.) and not punishable. In post-talmudic times, sexual licentiousness was punished as a matter of course (cf. e.g., Halakhot Pesukot min ha-Géonim, 94).

There are several prohibited acts which do not amount to punishable offenses, but which may render the perpetrator liable to flogging by way of admonition and rebuke: e.g., indecent gestures or suggestions to women with whom intercourse is prohibited (Yad, Issurei B'ah, 21:2); lesbian conduct among women (21:8); sexual intercourse with one's wife in public (21:14); being secluded with a woman with whom intercourse is prohibited – other than one's mother, daughter, or (menstruous) wife, and also except a woman married to another man (because, in the latter case, the flogging might bring her into disrepute; 22:3).

In the State of Israel, rape is punishable with up to 14 years’ imprisonment; when committed in the presence of several accessories to the crime, the punishment is up to 20 years’ imprisonment (Section 152, Criminal Code Ordinance, 1936, as amended in 1966). Constructive (statutory) rape (sexual intercourse with an infant girl) has been extended up to the girl’s age of 17. Proven acts of sodomy (homosexuality), buggery (carnal knowledge *per anum*), and bestiality (carnal knowledge of animals) are felonies. The largest group of sexual offenses comes under the heading of “indecent acts” – for which the penalty may increase in gravity if they are committed by force, or upon children, or in public. The law relating to procurement for purposes of prostitution and the keeping of brothels was restated and made considerably more severe in the Penal Law Amendment (Prostitution Offenses) Law, 5722 – 1962.

[Haim Hermann Cohn]

**In the State of Israel**

As of 1977, the law regulating sexual offenses is the Penal Law, 5737 – 1977 (hereinafter: “the Law”). In 2005, the basic penalty for rape was 16 years imprisonment and, under aggravated circumstances – such as rape of a minor or rape accompanied by threat to use a weapon – the penalty was 20 years imprisonment (Article 345 of the law). The prohibition on homosexual relations which had previously existed in Article 351(3) of the
law was repealed in 1988 (Penal Law (Amendment No. 22) 5748 – 1988, S.H. 62).

Rape in Marital Relations. Jewish law absolutely prohibits the wife’s rape by her husband. The Supreme Court (CA 353/62, El Fakir v. Attorney General, 18(4) PD 200; Judge Benjamin Halevi) criticized the position of English law, which at the time permitted the husband to force his wife to have sexual relations with him: “This outlook is not commensurate with human dignity and the dignity of marriage… A woman who agrees upon marriage to have sexual relations with her husband does not thereby agree to the use of force or the threats of severe physical maaniming of her body. A woman is not ‘like a prisoner taken by the sword’ with her husband, and is entitled to the freedom of her body just as her husband is” (page 219 of the decision).

In this statement Judge Halevi made reference to the Rambam’s statement, according to which: “A woman who has prevented her husband from having sexual intercourse is called rebellious, and she is to be asked why she has rebelled. If she says I find him repulsive and cannot have intercourse with him willingly, he is compelled to divorce her, because she is not like a captive who must have intercourse with someone she detests” (Yad., Ishut 14.8; regarding moredet, see *Husband and Wife*). It should be stressed that, in any case, according to Jewish law it is prohibited to have intercourse by coercion; even if the wife’s refusal is not justified, the wife may not be compelled to do so, although in this case she is liable to be considered “rebellious” or to lose the rights conferred to her by the marriage.

In the Cohen case (CA 94/80 Cohen v. the State of Israel, 35 (3) PD 281; Justice Bechor) the Court discussed the position of Jewish law on this matter in some detail. At the focus of the Cohen affair was the term “unlawful” in Article 345 of the law (as formulated at the time of the Cohen affair), which defines the act of rape as one who “has unlawful sexual intercourse with a female, against her will….” The accused claimed – and there was no factual dispute that he had had intercourse with his wife against her will – that the element of “unlawful” required under Article 345 did not exist, because according to Jewish law he had the right, as her husband, to have sexual relations with his wife; therefore, similar to English law, a husband who coerced his wife to have sexual relations with him does not thereby commit an offense of rape under the law, because the coercion of intercourse was “lawful.” Justice Bechor rejected the defendant’s argument, stating that under Jewish law the husband is prohibited from forcing his wife to have intercourse. He stressed that, according to the Torah, it is the husband’s duty toward his wife to have sexual relations with her (“her food, her raiment, and her conjugial rights, he shall not diminish”; Exod. 21:10), while there is no imperative in the Bible or Talmud imposing a parallel obligation on the wife. Her obligation, rather, stems from her commitment in the marital agreement, which imposes an obligation on her part to give herself to her husband (p. 288 of the verdict). Insofar as the source of the wife’s commitment is her undertak- ing at the time of her marriage, it is obvious that the wife did not agree that her husband would have sexual relations with her by rape, and has no such obligation (see: M. Elon “Maimad ha-ishah” (“Status of Woman”), 218 et seq.; N. Rakover “Yahasei Ishut bi-Khefiyyah,” 305). Justice Bechor further cited the statement in the Talmud: “Rabbi Bar Hama said in the name of Rav Assi: It is forbidden for a man to coerce his wife to a devar mitzvah [i.e., to have sexual relations]” (Eruvin 100b) as well as the statement of the Rabad of Posquières: “As it was stated in tractate Eruvin that a person who coerces his wife to a devar mitzvah is considered evil, because it has been said ‘Also, that the soul be without knowledge is not good and he that hatheth with his feet sinneth.’ (Prov. 19:2). Accordingly, rape is forbidden even with his wife; rather, if he needs to have that act [i.e., sexual intercourse] he should conciliate his wife and then have sexual relations with her” (Rabad, quoted in Tur, Oh 240 and in Tur, EH 25; pp. 288–89 of the verdict). Summarizing his verdict, Justice Bechor said:

The conclusion I have reached accords with the basic principle of the dignity of woman as a free person and not as a slave, who is subject to her owner’s good will in such a sensitive and delicate matter – principles which have, regrettably, not been realized in the legislation and adjudication of enlightened and advanced countries in the world. And it is not difficult to imagine how sad the fate of a woman can be in those countries, particularly in light of the fact that, according to the laws of the country or religion concerned, it is not easy and at times difficult or even impossible to arrive at the solution of divorce. It may be that this feeling is what brought about a certain alleviation in England, when it was decided that the wife’s duty to have sexual relations against her will and as a result of coercion does not apply if a situation of legal separation exists between the couple, even if they are not divorced. I might add that the Jewish people may be proud of the progressive and liberal approach of its heritage and halakhah with respect to such matters since ancient times (p. 291 of the Verdict; Maimad ha-lishah, ibid).

Rape that Ends in Consent. According to Jewish law, a married woman who has had sexual relations with a man who is not her husband is permanently forbidden to her husband; hence, her husband is obliged to divorce her. However, if the woman was raped by the other man, then the woman is not forbidden to her husband, unless he was a kohen (member of a hereditary priestly family; see *Marriage, Prohibited*). In a case in which the man initially forced himself upon the woman, but during the course of the act she came to consent, it is ruled that the woman is nevertheless not forbidden to her husband: “Rabba stated: Any woman, the outrage against whom began under compulsion, even though it terminated with her consent; and even if she [the raped woman] said, ‘Leave him be,’ and even if she states that, had he not attacked her, she would have hired him [to have relations with her], is permitted [to her husband]. What is the reason? She came to be overwhelmed by her passion [i.e., that during the course of the act her passion was aroused, so that even this passion that overcame her against her will is considered as rape]” (Ket. 51b; Yad., Ishut 24.19).
The Supreme Court (Cr. A. 115/00, Teib v. State of Israel 54 (3) PD 289. 308, (per Justice Yitzhak Englard) ruled in a case in which the defendant charged with rape argued that he had misunderstood the woman’s refusal to have sexual relations, because at the end of the act the woman had cooperated, and her physiological and sexual response to his acts had been positive. The Court determined that, similar to the case in Jewish law regarding “initial rape that ends in consent,” the woman’s response should not be regarded as constituting consent to sexual relations, and one could not say that in such a case the man could have formed the impression that the woman consented to his actions.

SEXUAL DEGRADATION. Section 348 of the law prohibits the perpetration of an indecent act, defined as “any act intended for sexual excitement arousal, gratification or degradation.” The Supreme Court discussed a case in which a robber ordered women whom he had robbed to remove all their clothes. The District Court convicted the defendant, in addition to the crime of robbery, with that of performing an indecent act. In an appeal before the Supreme Court, the defendant argued that he ought not to be convicted of the offense of an indecent act, because the purpose of ordering the women to remove their clothes was not to sexually abuse them, as required by this law, but in order to determine whether they were concealing money on their bodies; hence, it was incorrect to attribute criminal intent to him with respect to the offense of “sexual abasement.” The Supreme Court (Cr. A. 3728/04 Deviri v. The State of Israel, per Justice Eliakim Rubinstein) rejected the defendant’s argument and ruled that the defendant was well aware of the fact that the act of taking off their clothes would cause the women’s sexual degradation. In the matter of coercing nudity on a person as sexual degradation, the court referred to the story about Queen Vashti, of whom we are told (Esther 1:11) that King Ahasuerus commanded that she be brought wearing the royal crown “to show the peoples and the princes her beauty; for she was fair to look on.” The Midrash interpreted the command as a demand that she be brought to the banquet wearing only her royal crown, i.e., in the nude (See Megillah 12b, Ps. 73:20)” – meaning that very fact of coercing a person to be nude is a degradation (cf. Ma’amad ha-Ishah, 223–28).

SEYMOUR, DAVID (Chim; 1911–1956), U.S. photographer. Chim was born in Warsaw, where his father was a pioneer Hebrew and Yiddish publisher. He studied photography and the graphic arts at the Leipzig Academy. In 1931 he moved to Paris, where he shared a studio with Robert *Capa and Henri Cartier-Bresson, and became a free-lance press photographer. At the outbreak of the Spanish Civil War he went to Spain and at the end of the war covered the journey of 1,000 Spanish loyalist refugees to Mexico. At the outbreak of World War II, Chim went to the United States, where he joined the air force and served as a photo intelligence officer. In Paris he rejoined Capa and Cartier-Bresson and together they founded Magnum Photos, one of the foremost international photographic agencies. His first peace-time assignment was a picture story of UNESCO for which he photographed his moving studies of homeless children in war-torn Europe. He befriended children everywhere, helped to support them, and where possible, settled them in private homes. Chim frequently visited Israel and was killed while covering the Sinai Campaign of 1956.

SEYMOUR, JANE (Joyce Penelope Wilhelmina Frankenberg; 1951– ), actress. Born in Hayes, England, to a British father and a Dutch mother, she assumed the stage name of Jane Seymour at age 17, after King Henry VIII’s third wife. Her film career began in 1969 with an uncredited role in Oh! What a Lovely War. Her first major film role was as Lilian Stein, a Jewish woman seeking shelter from the Nazis, in the 1970 war drama The Only Way. Other feature films include Young Winston (1972); the James Bond movie Live and Let Die (1973); Sinbad and the Eye of the Tiger (1977); Somewhere in Time (1980); Lassiter (1984); and Wedding Crashers (2005).

Seymour appeared in numerous TV movies and series, most notably as Dr. Michaela Quinn in the TV series and movie Dr. Quinn, Medicine Woman (1993–2001), a role that earned her three Emmy nominations. She won a Best Supporting Actress Emmy for her performance in the TV miniseries Onassis (1988) and was nominated for Best Actress Emmys for the miniseries Captains and the Kings (1976) and War and Remembrance (1988).
In 1999 Seymour was named an Officer of the Order of the British Empire (OBE) by Britain’s Queen Elizabeth II. She has served as the official spokesperson for UNICEF and the international ambassador for Childhelp U.S.A. In 2005 she became a U.S. citizen.

Seymour was married to theater director Michael Attenborough (1971–73); after two other divorces, she married film director James Keach in 1993. She wrote several books, including Remarkable Changes (2003); Two at a Time: Having Twins (2001); and Jane Seymour’s Guide to Romantic Living (1986).

[Mark Beloff 2nd ed.]

**SEYSS-INQUART, ARTHUR** (1892–1946), Austrian Nazi lawyer who prior to the *Anschluss* was active in nationalist circles. He was appointed by the Austrian chancellor Kurt von Schuschnigg to the Council of State in the hope that he would mediate with the extreme Right. In 1938, because of German pressure on Austria, Seyss-Inquart was appointed minister of the interior in the Austrian cabinet, a function in which he executed the coup that led to the Austrian *Anschluss* to Germany that year. He then became chancellor of Austria, and later Reichsstatthalter (a high official whose task was to coordinate the activities of various ministries in occupied territories). In October 1939 he became deputy governor general of Poland, where he looked for territory for the Lublin Reservation. On May 19, 1940, he was appointed Reichskommissar for Holland, with the hope that he could copy his Austrian performance in Holland. He remained in this post until the German capitulation on May 5, 1945.

Seyss-Inquart was known for his devotion to National-Socialism and his blind obedience to Hitler. His antisemitism was less extreme than that of many other Nazi leaders, but this did not prevent him from efficiently carrying out the persecution of the Jews in Holland. Only occasionally was he more moderate, probably for political reasons. Still he took an active role in the deportation of Jews in Holland. He wanted to be the initiator of operations and not have outside parties infringing on his area of responsibility. However, he never entered into conflict with Hitler on any policy, so that Hitler, as a token of his esteem, designated Seyss-Inquart foreign minister in his will. Sentenced to death at the Nuremberg trials, Seyss-Inquart was executed by hanging.

[Joseph Michman (Meklman) / Michael Berenbaum 2nd ed.]

**SFARD, DAVID** (1905–1981), Yiddish writer and editor. Born in Trisk, Volhynia, he initially received a traditional Jewish education, then attended Hebrew-Polish schools (1919–26) and studied philosophy and participated in the literary circle of I.M. *Weissenberg in Warsaw* (1926–28). His first poetic collection, *Shtaplen* (“Steps,” 1929) appeared while he was studying in France (1928–31), where he wrote a doctoral dissertation on Hegel. In 1932 he returned to Warsaw and became actively involved in leftist Yiddish literary life, in 1933 becoming a member of the illegal Polish Communist Party. In 1939 he fled to Soviet-occupied territory. Repatriated to Poland in 1946, he occupied a prominent position in Jewish cultural life, especially as editor of the publishing venture Yidish-Bukh, which published more than 200 books. His own writings include the verse collections Lider (“Poems,” 1957), and Borvese Tirit (“Barefoot Steps,” 1966), literary criticism, short stories, and translations. In 1969 he immigrated to Israel.

[Sol Liptzin / Gennady Estralkh 2nd ed.]

**SFORNO, OBADIAH BEN JACOB** (c. 1470–c. 1550), Italian biblical commentator and physician. Born in Cesena, Sforno was especially attached to his brother Hananel, who for a time supported him financially. Nothing is known about his father. In Rome Obadiah studied philosophy, mathematics, philology, and, in particular, medicine, which profession he followed; there on Cardinal Grimani’s recommendation he taught Hebrew from 1498 to 1500 to the Christian humanist Johannes *Reuchlin*. He met David *Reuveni* when the latter was in Rome (1524). After staying in various cities, he finally settled at Bologna, where he played an active role in resuscitating a Hebrew printing house and in organizing the community. He established a *bet-midrash* which he conducted until his death. His renown was such that Italian rabbis addressed halakhic questions to him, and his decisions were quoted in the responsa of Meir *Katzenelbogen*, who referred to him in terms of great esteem (Resp. Maharam of Padua, nos. 48–49).

Obadiah’s reputation rests chiefly on his commentary on the Pentateuch, Song of Songs, and Ecclesiastes, which first appeared in Venice in 1567; on Psalms (Venice, 1586), on Job (Mishpat Zedek, Venice, 1589) and on Jonah, Habakkuk and Zechariah which were published in the Rabbinic Bible, Kehillot Moshe (Amsterdam, 1724–28). While generally limiting himself to the literal exegesis of the biblical text and at times going beyond this to give an exposition in keeping with the contemporary scientific outlook (e.g., on the Creation), he avoids mystical and kabbalistic interpretations. He pays comparatively little regard to philology, being on the whole satisfied to elucidate the contents of a passage without entering into a philological analysis. He does not give historical explanations or identify places except in rare instances, availing himself, however, of his medical knowledge in his exegesis, e.g., Genesis 43:27, and in explaining the reasons for the commandments.

In his commentary on the Songs of Songs and Ecclesiastes, as well as on the Pentateuch, he employs allegory, e.g., in expounding the reason for the injunction of the red *heifer*. Instead of dealing separately with individual difficulties in a
verse, he prefers to incorporate the solution in a brief running comment on the passage as a whole. He takes pains to emphasize the inner connection between different parts of a verse and to account for duplications in phraseology, e.g., Genesis 43:28. In many instances he deals with the motives that inspired acts of heroism. His explanation is at times extremely incisive, e.g., Genesis 39:39. While often quoting rabbinical statements in support of his views, he rarely makes use of historical aggadot.

He aimed at inculcating a love for mankind in general and not only for fellow Jews, the difference between them being quantitative and not qualitative (Ex. 19:5), and his commentaries contain frequent references to humanistic ideas. In line with this he quoted that “righteous gentiles are undoubtedly dear to Me” i.e., to God (loc. cit.), and the whole of mankind is Thine own treasure” (Deut. 33:3). At times, however, he introduces his views in a somewhat artificial manner, e.g., Numbers 23:22–24.

His commentary on the Pentateuch is prefaced by an introduction entitled Kavvanot ha-Torah (“The inner meaning of the Torah”), in which he deals with the structure of the Pentateuch and the reasons for its precepts, in particular for the sacrifices, on which he dwells at some length. His wide learning is reflected in his other literary productions. Thus he wrote a philosophical work Or Amnim (Bologna, 1537), in which he sought to refute the views of Aristotle, which are in conflict with the principles of Judaism, by employing the basic elements of the Greek philosopher’s own teachings. He translated the work into Latin, under the title Lumen Gentium, dedicating it to King Henry II of France (Bologna, 1548). He wrote a commentary on Avot (published in the Roman Mahzor, Bologna, 1540–41), as well as other unpublished works: a translation of Euclid’s eight books on his own subjects, some responsa, and smaller works on various subjects.

[Avie Goldberg]

His pentateuchal commentary was edited after his death by his brother Hananel, an eminent talmudist. Obadia ben Israel Sforno, Venetian talmudist, was the publisher of Yemin Adonai Romenah (Venice, c. 1600) by Menahem Azariah da *Fano, Solomon Shemaiah ben Nissim Sforno (d. 1617), rabbi of Asti and then of Venice, was the author of various works, largely unpublished; these include responsa, some of which were included by Jacob *Heilbronn in his Nahalat Yaakov (Padua, 1622), and commentaries to different biblical books. He edited Judah Halevi’s Kuzari with Judah Moscato’s commentary (Venice, 1594).

[Ariel Toaff]

SHAALBIM or SHAALABBIN (Heb. שלבלים, שלבלבim).

(1) Town in the territory of the tribe of Dan, together with Aijalon (Josh. 19:42). The place was inhabited by Amorites, who submitted to the tribe of Ephraim (Judg. 1:35). One of David’s “mighty men,” Eliahba the Shaalbonite, was born there (1 Sam. 23:2; 1 Chron. 11:33). Shaalbim was included with Beth-Shemesh in Solomon’s second administrative district (1 Kings 4:9). Jerome mentions a village called Selebi to the north of Emmaus (PL, vol. 25, p. 488).

Shaalbim is identified with the village of Salbit, northwest of the Aijalon Valley. This place was found deserted in the 19th century, but was later resettled by inhabitants of the nearby village of Beit (Baat) Duqqit. In 1948 it was occupied by the Israeli army whose soldiers discovered a mosaic-paved floor with an inscription in old Hebrew script. Excavations by the Hebrew University in 1949 revealed a Samaritan synagogue. The building is rectangular, approximately 50.5 x 26.4 ft. (15.40 x 8.05 m.) and oriented toward the northeast, in the direction of Mt. Gerizim. It contained the remains of two mosaic-paved floors, one above the other, approximately 5.9–11.5 in. (15–28 cm.) apart. The lower floor, the better preserved of the two, is decorated in black, red, and white and contains a rectangular panel 19.7 x 10.4 ft. (6 x 3.20 m.) with a rosette pattern in a crowstep border. In the center is a circle, 4.7 ft. (1.45 m.) in diameter, with a Greek inscription mentioning the eukterion (praying place). Below the inscription are two seven-branched candlesticks, and between them is an ornament which has been interpreted as a symbol of Mt. Gerizim. To the north of the panel and close to its border is an inscription in Samaritan script of Exodus 15:18; “The Lord will reign for ever and ever.” Another fragmentary Samaritan inscription was found south of the panel. The synagogue apparently dates to the fourth century C.E.; it was probably destroyed in the fifth or sixth century.

[Michael Avi-Yonah]

(2) In 1951 a kibbutz was established at Shaalbim. In 1970 there were 270 inhabitants. Affiliated with Po’alei Agudat Israel, it was founded as a “Nahal outpost by members of the Ezra movement together with Israel-born youth. Later, immigrants from English-speaking and other countries joined the settlement. Its population was 1,232 in 2004, including a hesder yeshivah and other educational facilities. Nearby was the religious rural settlement of Nof Ayalon with a population of 2,377.

[Efremi Orni]

SHAANAN, AVRAHAM (1919–1988), Hebrew writer and literary critic. Born in Galicia, Shaanan went to Palestine in 1935. Between 1953 and 1957 he was the London correspondent for the daily Davar, and subsequently he edited its weekly literary sup-
plement. He lectured in comparative literature at Tel Aviv University (1957–61) and was cultural attaché to the Israel Embassy in Paris from 1963 to 1966, and editor of the literary supplement of "Davar. His stories and articles first appeared in Gilyonot and then in other literary journals in Israel and abroad.

[Getzel Kressel]

SHAAREI SHEVU’OT (Heb. שערי שביעות, work on the laws
of oaths, consisting of 20 chapters). It is extensively quoted by the early posekim such as Meir of Rothenburg, as well as in the letter of Isaac b. Abba Mari and in the Mordekhai of Mordecai b. Hillel. The authorship of this work has been a subject of dispute among scholars. It has been attributed erroneously to Isaac b. Reuben Alfasi. It now appears, however, that Isaac b. Reuben merely wrote an edited translation from the Arabic of David b. Saadiyah’s Mishpetei Shevu’ot and added a short rhymed introduction giving his own name in acrostic. As a result the work was wrongly ascribed to him. As the work is usually published together with the Halakhot of Alfasi, it is often referred to as "the Shevrim (lit. “gates,” i.e., chapters) of R. Alfasi.”

SHA’AREI TIKVAH (Heb. שערי תקווה) urban community in Samaria. The town is located in western Samaria, on the western slopes of the Samarian mountains, northeast of Petah Tikva. It was established in 1983 and the first settlers arrived in 1985. The founders sought to create an urban community with a mixed religious and secular population. In 1990 Sha’arei Tikvah received municipal council status. In 2002 its population was 3,650. In the town’s vicinity are remains of the Second Temple period.

[Shaked Gilboa (2nd ed.)]

SHA’AR HA-AMAKIM (Heb. שער א马克ים; “Gateway of the Valleys”), kibbutz in northern Israel, on the ridge separating the Zebulun and Jezreel valleys, 1 mi. (2 km.) W. of Kiryat Tivon, affiliated with Kibbutz Arzi ha-Shomer ha-Za’ir. Sha’ar ha-Amakim was founded in 1935 by pioneers from Yugoslavia. In the 1936–39 Arab riots the settlement came under frequent attack in an attempt to dislodge it from its strategic position. In 1970 the kibbutz had 580 inhabitants, maintaining a stable population into the 21st century. It developed intensive, fully irrigated farming based on field crops, plantations, fishery, and dairy cattle. The kibbutz owned Chromagen Solar Energy Systems, a leader in the field.

[Effraim Orni / Shaked Gilboa (2nd ed.)]

SHA’AR HA-GOLAN (Heb. שער הגלן; "Gateway of the Golan"), kibbutz founded in 1937 on the northern bank of the Yarmuk river, central Jordan valley, Israel. Next to the kibbutz is an 8,000-year-old prehistoric settlement. It was first excavated by M. Stekelis in the years 1949–52. He uncovered remains of a previously unknown culture, which he named “Yarmukian Culture” after the nearby river. Pottery appears here for the first time in Israel, gives this cultural stage its name as Pottery Neolithic. In the years 1989–2004 Y. Gar-finkel conducted large-scale excavations and uncovered ca. 3,000 sq.m.

The new excavations clarify that Sha’ar ha-Golan is of outstanding importance for a number of reasons. Surveys and excavations have shown that it is some 20 hectares in area, making it one of the largest settlements of its period in the world. The excavations uncovered three large courtyard houses, ranging between 250 and 700 sq.m. in area. Monumental construction on this scale is unknown elsewhere in this period. The houses consist of a central courtyard with several small rooms around it. This is an architectural concept that still exists in traditional Mediterranean societies. The courtyard house makes its first appearance at Sha’ar ha-Golan, giving the site a special importance in architectural history. The houses were separated by streets that constitute evidence of advanced community planning. Three passageways were uncovered, including a central street about 3 m. wide, paved with pebbles set in mud, and a narrow winding alley 1 m. wide. These are the earliest streets discovered in Israel, and among the earliest streets built by man. A well, 4.26 m. deep, was dug into the water table. It is indicative of advanced hydrological knowledge and technological engineering. Exotic objects discovered in the excavations include sea shells from the Mediterranean, polished stone vessels made from alabaster (or marble), and blades made from obsidian (volcanic glass) from Turkey. These point to trade connections extending over 700 km.

About 300 art objects were found at Sha’ar ha-Golan, making it the main center of prehistoric art in Israel and one of the most important in the world. Among the outstanding art objects are figurines in human form made of fired clay or carved on pebbles. The overwhelming majority are female images, interpreted as representing a goddess. The clay figurines are extravagant in their detail, giving them a surrealis-
tic appearance, while the pebble figurines are minimalist and abstract in form. Because of the unique artistic quality of the figurines the Metropolitan Museum of New York and the Louvre Museum in Paris have mounted 10-year exhibits of selected objects. In Israel, figurines are exhibited at the Israel Museum in Jerusalem and in the local museum built in Kibbutz Sha'ar ha-Golan.

[Yosef Garfinkel (2nd ed.)]

The kibbutz is affiliated with Kibbutz Arzi Ha-Shomer ha-Za'ir. It was founded by pioneers from Czechoslovakia as a tower and stockade settlement and soon came under attack in the Arab riots. In the *War of Independence, the kibbutz lay exposed to attack and, on May 18, 1948, it became untenable as the invading Syrian Army, together with Iraqi and Jordanian contingents, took nearby Zemah and advanced on Deganya. The site was recaptured, however, together with the neighboring kibbutz Massadah, two days later. Both villages had been completely destroyed, and although they remained on the front line, the settlers immediately began reconstruction.

In the following two decades, and particularly in the period preceding the *Six-Day War (June 1967), the nearby Syrian and Jordanian positions repeatedly harassed the kibbutz. Although the capture of the Golan Heights in June 1967 removed the danger from the Syrian side, the kibbutz, situated on the Jordanian border as well, continued to suffer from frequent shelling. In 1970 Sha'ar ha-Golan had 590 inhabitants, dropping to 503 in 2002. In spite of its security problems, the kibbutz developed a model economy based on subtropical irrigated field crops, bananas, avocados, dates, beehives, poultry, and dairy cattle. It also had a plastics factory, a few stores and an affine to the nearby Zemah junction, and guest rooms.

[Exraim Orni / Shaked Gilboa (2nd ed.)]

SHA'AR HEFER-BEIT YIZHAK (Heb. שַּׁר הֶפֶּר–בֵּית يִזְחַּק; “Gateway to Hefer [plain]”), moshav in central Israel, E. of Netanyah, affiliated with Ha-Mo’ez Ahava and Beit Yitzhak settled by immigrants from Czechoslovakia founded in 1940; Sha'ar Hefer and Beit Yitzhak established by immigrants from Czechoslovakia in 1940; and Nirah, established in 1941 by middle-class immigrants from Czechoslovakia. At the beginning, each settlement was independent, but soon after their establishment, it was proposed to unite them. First Gan Hefer was united with Sha'ar Hefer. Later on, in the 1950s, Sha'ar Hefer merged with the adjacent moshav Nirah. In 1970 the combined Sha'ar Hefer had 350 inhabitants. In 1972, Sha'ar Hefer and Beit Yitzhak were united as a single settlement, Sha'ar Hefer-Beit Yizhak. The population of the united settlement was 1,560 inhabitants at the end of 2002, thanks to new housing and the absorption of newcomers. The moshav's economy was based on citrus groves, vegetables, milch cattle, and poultry. Beit Yizhak was known for its natural confiture factory.

[Exraim Orni / Shaked Gilboa (2nd ed.)]

SHA'ATNEZ (Heb. שָׁאַטְנֵז; Gr. κιβδηλος, “counterfeit”), cloth combining wool and linen. Leviticus 19:19 and Deuteronomy 22:11 prohibit the wearing of sha'atnez, in the former passage explained as beged kil'ayim, “cloth made from a mixture of two kinds of material,” in the latter passage explained as “wool and linen together.” While the meaning of the term is therefore clear, its etymology is obscure, modern speculation ranging from unlikely Hebrew combinations (e.g., s'arart-ânez supposedly meaning “[sheep's] hair-[flax] stalk”) to the no more likely Coptic (saht, “woven,” nudj, “false” [cf. the LXX]), and vulgar Arabic (shash, “black gauze,” âtmuz, “strong”) derivations. The word looks foreign.

The clothing of the priests was notably exempt from the prohibition of sha’atnez. Exodus 28:6, 8, 15, and 39:29 prescribe that various pieces be made of linen and colored wool interwoven (cf. Kil. 911: “Priests wear only wool and linen [i.e. sha’atnez] when they serve in the temple”). This suggests that the general prohibition was grounded on the taboo character of such a mixture, pertaining exclusively to the realm of the sacred (cf. Maimonides’ view, below).

The rabbis interpreted the word sha’atnez as being a compound standing for shuā (שמע; “each strand spun”); and mez (מע; “woven or twisted together”). The Torah’s prohibition against sha’atnez therefore only applies when a strand of wool and one of linen, each carded, spun, and twisted, have been joined together by weaving, sewing, or tying (Kil. 9:8). The rabbis, however, prohibited the wearing of wool and linen even when their threads are simply sewn, tied, or pasted together (Nd. 61b; Rashi to Hor. 114a). The prohibition was extended to include sitting on sha’atnez fabrics although the Torah originally only forbade the wearing of mixed garments (Ta'an. 27b). It is, however, permitted to utilize sha’atnez shrouds for a corpse (Nd. 61b).

In accordance with the general principle that a positive precept overrides a negative one, it is permitted to attach blue woolen zizit to a linen garment (Men. 40a). It was likewise permitted for priests to wear garments of mixed texture prescribed by the Torah when performing priestly service in the Sanctuary (Yoma 69a).

Although the prohibition is considered a prime example of a divine statute which has no rational explanation (תורתא), Jewish thinkers throughout the ages have attempted to rationalize its intent. Maimonides explained that the wearing of mixed garments was forbidden since heathen priests wore such garments (Guide of the Perplexed 3:37). Nahmanides suggested that the person mixing diverse kinds was guilty of displaying that he was improving upon the species created
by God (Commentary to Lev. 19:19) while S.R. Hirsch saw in this commandment a reminder to man that he must guard his assigned purpose and place in the world just as the species must be distinctly preserved (Commentary to Lev. 19:19, tr. by I. Levy (1958), 534f.).

Elaborate chemical and microscopic tests have been developed to check for the presence of sha'âtnetz in clothing. In many cities with large Jewish populations, shânatz laboratories have been established to check for sha’âtnetz in garments.

[Aaron Rothkoff]

SHABAD (S zabad), ZEMAH (1864–1935), physician, communal leader, and publicist, one of the heads of the Vilna community, known for his cultural and political activities. Born in Vilna, in 1881 Shabad moved with his family to Moscow, where he completed his studies in the faculty of medicine at Moscow University (1884–89). In 1894 Shabad settled in Vilna, devoting himself to work in a hospital, where he became a director and a well-known internist. For many years he was chairman of *Yekepo. Believing in the principle of "productivization" in Jewish occupations, he promoted the development of *ort, serving as its chairman until 1925. Shabad was distinguished for his manifold activities in the field of public health, as founder of the Vilna branch of *Oze, which was affiliated to the national organization of *TOZ. In this framework he devoted himself to the central organ of TOZ, Folksgezund, in which he published articles dealing with medical research, and formulated many medical terms in Yiddish.

During World War I he worked to save the Jewish masses in the battle areas from epidemics and hunger. In 1919–20 he served as president of the democratically elected community council, and between 1919 and 1927 was a member of the Vilna municipal council. Politically he was close to the Folkist Party (*Folkspartei) in Poland; he cultivated ideological and personal relations with S. *Dubnow before the Russian Revolution and also later when Dubnow left Russia. Following a disagreement with Noah *Prylucks, a split occurred in the party in 1926. Later Shabad, as head of the dissidents whose center was in Vilna, made contact with the *Minority Bloc led by Y. *Gruenbaum, and in 1928 was elected a member of the Polish Senate. There he fought manifestations of antisemitism and discrimination by the government. At the end of his life he became close to the neo-Territorialist (see *Territorialism) movement. Supporting Jewish cultural and national autonomy (see *Autonomism), and as one of the active members of the Central Yiddish School Organization (*CYSHO), he struggled for the rights of secular schools with Yiddish as their language of instruction. He was one of the founders of the *YIVO research institute which was established in Vilna.

[Moshe Landau]

SHABAZI, SHALEM (fl. 17th century), the greatest of Yemenite Jewish poets. Some 550 of his poems and hymns are extant, written in Hebrew, Aramaic, or Arabic. In all of them, his name appears in acrostic form either at the beginning of the stanzas or in the poem itself. No details are known regarding his life except what can be deduced from his poems. Living in a period of persecutions and messianic anticipations for Yemenite Jewry, Shabazi gave faithful poetic expression to the suffering and yearning of his generation, whose national poet he became. It seems that he wandered in poverty throughout *Yemen. Many legends describe him as a zadik and miracle worker; his tomb in *Taiz was considered holy and became a shrine where both Jews and Muslims prayed for relief from sickness and misery. His poetry deals primarily with the religious themes of exile and redemption, the Jewish people and God, wisdom and ethics, Torah, and the life to come. Many of his poems deal with the glorious past of the Jews in their own land, from which the author draws faith and hope for renewed greatness in the future. He wrote poems dedicated to the Sabbath and festivals, marriage, and circumcision. His ethical poems are outstanding for their teaching and gentle moralizing. *Kabbalah and mysticism based on the works of the kabbalists who preceded R. Isaac *Luria play an important role in his poetry. Academic and medieval scientific themes are also a frequent feature. His rare secular poems deal with discussions between concrete and abstract objects. His poems are not confined to any one theme, but combine several subjects in one and the same work. Their style, comparable to that of rabbinical literature, is prosaic and easy, making his poetry readily accessible to the masses. About half the poems in the Yemenite diwan, published in many editions, are by him. R. Halevi’s edition (1998) includes more than 200 liturgical poems attributed to Shabazi.

[Yehuda Ratzaby]

SHABBAT (Heb. Sabbath), first tractate in the Mishnah, Tosefta, and the two Talmuds of the order Moed, dealing in 24 chapters with the laws relating to Sabbath and its observance. The last four chapters are missing in the Jerusalem Talmud.
Chapter 1 deals with the problems of “domains” (rehuyyot, see "Reshit") and with questions concerning what may or may not be done on Friday before sunset. Chapter 2 deals with the kindling of the Sabbath lights. Chapters 3–4 are on keeping food warm or warming it up on the Sabbath. Chapter 5 concerns the injunction that one's domestic animals rest on the Sabbath. Chapter 6 discusses what one may carry as a part of one's apparel and includes an interesting discussion as to whether weapons are to be regarded as apparel. Chapter 7 is notable for its enumeration of the 39 principal categories of works forbidden on the Sabbath. It also discusses the sin-offering due for the inadvertent violation of the Sabbath and the minimal quantities which incur guilt. Chapter 8 continues the question of quantities, chapters 9–15 deal with the definitions of these various labors, and Chapter 16 discusses mainly the problems arising from conflagration. Chapters 17–18 deal with "mukzeh", chapter 19 with the problem of circumcision on the Sabbath, and chapters 20–24 with a great variety of questions relating to the Sabbath, such as bathing, casting lots, attending to the dead, and feeding cattle.

The following passages of the Babylonian Gemara deserve particular mention: the description of the origin of Hanukkah (21b); the discussion on whether the Books of Ezekiel, Ecclesiastes, and Proverbs should be considered canonical (13b, 30b); the humility and leniency of "Hillel in contrast to the stringency of "Shammai (29b–30a); differences in the attitude of the rabbis toward Rome and the story of Simeon; *Yohai hiding in a cave for 12 years (33b); and on the ministering angels (malakhei ha-sharet) accompanying the Jew from the synagogue to his home on the Sabbath eve (119b).

The Tosefta to this tractate is divided into 18 chapters. Chapters 6–7 refer to many interesting customs and superstitions, some of which are denounced as idolatrous.

The tractates Shabbat and Eruvin were originally one tractate. The last chapter of Eruvin belongs to Shabbat as does that of the Tosefta. The Mishnah of Shabbat derives from various sources and different layers can be detected. Most conspicuous is the combination of Mishnah collections. It contains some of the Mishnah of Meir, Judah, Yose, Simeon, and Eleazar. It contains matters that belong together but which are scattered in various places and also conflicting views both in different places and in one and the same Mishnah. Several of the mishnayot (111; 13:1–3, 6, 8; 14:3; et al.) are clearly of early date. Nevertheless the Mishnah of Shabbat in its present form is in the main from the version of Akiva's pupils. From the arrangement of the Tosefta it is clear that it had in front of it mishnaic sources different in arrangement and scope. The whole of the chapter dealing with "the customs of the Amorite" in the Tosefta chapters 6 and 7 (see above) is from the Mishnah of Yose. The talmudic tractate was translated into English by H. Freedman in the Soncino edition (1938).

### Shabbat Bereshit

*Shabbat Bereshit* (Heb. שבת בראשית; "the Sabbath of Genesis"), the first Sabbath after "Sukkot" on which the new annual cycle of the Torah reading begins in the synagogues, begins with the *Triennial Cycle*, the previous year having been completed on "Simhat Torah." Its name refers to the first word of the Bible "Bereshit" – "In the beginning." It is customary on this Sabbath to read the Torah reading the person who acted on Simhat Torah as *Hatan Bereshit* (see *Bridegrooms of the Law;* "Torah, Reading of"). The term "Shabbat Bereshit" in the above sense is fairly recent. In ancient sources this term refers to any Sabbath, as against other holidays which were also called "Sabbath." Similarly, the seventh year of *Shemitah* was called "Shabbat."

### Shabbat Ha-Gadol

*Shabbat Ha-Gadol* (Heb. שבת גדול; "the great Sabbath"), Sabbath preceding "Passover." The term *ha-Gadol* ("the great") derives, according to some opinions, from the declaration in the *haftarah* (Mal. 3:4,24) "Behold, I will send you Elijah the prophet before the coming of the great and terrible day of the Lord" (*ibid.*, 3:23). This *haftarah* was selected in accordance with the popular belief that the messianic redemption of Israel will occur in the same month as its deliverance from the Egyptian bondage (8:11a). Another opinion on the institution of the "great Sabbath" before Passover is that it was influenced by the Christian concept of the Saturday before Easter. In some ancient rabbinic sources the Sabbaths preceding Passover, Shavuot and Sukkot were also called *Shabbat ha-Gadol* (Elbogen, Gottesdienst, 551). On this Sabbath it is customary to read the greater part of the Passover *Haggadah* during the afternoon service. In traditional synagogues, the rabbis deliver a sermon devoted almost exclusively to the rites and the "dietary laws pertaining to Passover.

**Bibliography:** Eisenstein, Dinim, 401–2.

### Shabbetai Ben Meir Ha-Kohen

(1621–1662), Lithuanian rabbi, commentator on the Shulhan Arukh, and posek. He was also known as the Sha-Kh from the initials of the title of his book, *Siftei Kohen*. *Siftei Kohen* was born in Amstivov near Vilkaviskis. In his youth he studied under his father and later under *Joshua Hoeschel b. Joseph in Tykocin*, moving subsequently to the yeshivah of Cracow with his teacher. From there he proceeded to Lublin, where he studied also under *Naphtali b. Isaac ha-Kohen*. While still young he returned to Vilna, where he married the daughter of the wealthy Samson Wolf, a grandson of Moses "Isserles. Shabbetai's father-in-law provided for all his material needs and he was able to devote himself wholly to study. His renown soon spread among scholars and he was appointed *dayyan* in the *bet din* of *Moses* "Lima in Vilna. In Cracow in 1646, Shabbetai published his first work, *Siftei Kohen*, on the Shulhan Arukh, *Yoreh De'ah*. This work received the approbation of the greatest Polish and Lithuanian scholars and since 1674 has been published in most editions of the *Yoreh De'ah*. That same year also saw the publication of the commentary Turei Zahav to the *Yoreh De'ah* by *David b. Samuel ha-Levi*, who was already renowned and accepted as...
a posek. Shabbetai thereupon wrote criticisms to Turei Zahav entitled Nekuddot ha-Kesef. Although it was only published after the death of both Shabbetai and David ha-Levi (Frankfurt on the Oder, 1677), many of the criticisms reached the ears of David ha-Levi during his lifetime and he replied to them. These were published at the end of the commentary Turei Zahav with the title Daf Aharon (“Last Page”) and were read by Shabbetai, who replied in his Kanteres Aharon (“Last Addendum”), published at the end of Nekuddot ha-Kesef.

The halachic dispute between the views of David ha-Levi and Shabbetai, even after their deaths, was continued by other scholars. In most cases the rabbis of Poland and Lithuania ruled in accordance with Shabbetai, while those of Germany accepted the view of David ha-Levi. In contrast to many of the Polish scholars who preceded him and who criticized the author of the Shulhan Arukh, Joseph *Caro, Shabbetai attempted to justify him fully. In his commentary on the Yoreh De’ah, he attempts to explain and clarify Caro’s statements and to decide between Caro and the criticisms made by Moses Isserles. Shabbetai also wrote a commentary on the Hoshen Mishpat, which was published after his death with the text of the Shulhan Arukh (Amsterdam, 1663). In this work, too, he explains the rulings of Caro but does not refrain from criticizing them; nor did he hesitate to criticize his other predecessors where their ruling did not appeal to him, or where he thought they had erred in their halachic decisions. His rulings are based not only upon the principles of the Talmud and posekim but also upon logic and reason, although he did not abstain from the use of pilpul. His work is a classic of its kind and has been accepted to the present day as an authoritative reference work for halachic authorities.

During the persecutions suffered by Lithuanian Jewry in 1655 (a continuation of the massacres of 1648–49), Shabbetai was compelled to flee from Vilna to Lublin, but only three months later the rioters reached Lublin, and Shabbetai succeeded in escaping to Bohemia. He stayed first in Prague, and then for a time in Dresditz, Moravia, after which he was appointed rabbi of Holesov, where he died. Shabbetai, who had a polished, elegant, and facile style of writing, also had a historical sense. He portrayed the Chmielnicki persecutions of 1648–49 in his Megillat Eifah (Amsterdam, 1651), in which he described the events and the sufferings through which the Jews of Poland passed during that era. This work is an important historical document and has been translated into German and Russian. He also composed selihot (publ. in Amsterdam, 1651), in which he poured out his bitter complaints. He charged his children and grandchildren always to observe the takkanot of the Councils of the Lands and to appoint the 20th of Sivan as a day of fast, on which they should recite the kinot he compiled.

During the period he was rabbi in Holesov he became friendly with a Christian scholar. In the library of the academy in Leipzig there is a holograph of a Hebrew letter dated Feb. 3, 1660, which Shabbetai wrote “to him whom I love as myself, the philosopher magister Valentino Wiedreich.” Shabbetai informs him that he has sent him the book of Elijah Bahur and asks him to keep in touch with him (Bikkurei ha-Ittim, 10 [1829], 43–44).

His other works are: He-Arukh (Berlin, 1767), a commentary on the Arba’ah Turim, Yoreh De’ah of Jacob b. Asher; Tokfo Cohen (Frankfurt on the Oder, 1677), on the laws of possession and undecided laws (teiku); Gevurat Anashim (Dessau, 1697), on chapter 154 of the Shulhan Arukh, Even ha-Ezer, to which are appended ten responsa written by his father; and Poel Zedek (Jesenice, 1720), on the 613 commandments as enumerated by Maimonides, divided for the seven days of the week.

**SHABBETAI BEN ZEVI HIRSCHE OF RASZKOW** (?–1757?), widely respected Lurianic kabbalista, a colleague of R. *Israel b. Eliezer Baal Shem Tov (Besht), who possessed expert knowledge of kabbalistic writings. He composed a siddur (prayerbook), with kavvanot (theurgic meditations) according to Isaac *Luria (completed mid-1750s; published in Korets, 1797 (3 vols.); Lemberg, 1866 (1 vol.), repr. Jerusalem 1980, 2005). This siddur also contains eight contemplative practices from the Besht. In addition, it has contemplative instructions of an ecstatic devotional nature not attested to in other East European Lurianic siddurim. One important theurgic variant in the kavvanot of the Silent Prayer (*Amidah) found in no other Lurianic Siddur, except for those of the Jerusalem kabbalistic school of R. Shalom *Sharabi, may suggest contact between these two schools of Lurianic Kabbalah, perhaps through the agency of R. Gershon of Kutov, the brother-in-law of the Besht, who took up residence in Israel in 1746 and traveled back and forth in the mid-1750s. A manuscript of R. Shabbetai’s siddur was consulted by R. Asher Margolius when he prepared the Lurianic Kavvanot siddur used by the kloiz of Brody (Lvov, 1788, repr. Jerusalem 1980, 2005, fol. 3a–b). The Lemberg edition of the Raszkower siddur contains glosses from two prominent 19th-century hasidic kabbalists: R. Israel of Kozhnitz and R. Zevi of Zhitachov. In 1995, a manuscript facsimile of vol. 1 of the Raszkower siddur was published. Completed in 1760 by R. Abraham Samson of Raszkow, son of R. *Jacob Joseph of Polonnoye, the primary recorder of the teachings of the Besht, it contained one of the eight aforementioned teachings. The Korets, 1784–5 edition of the classic theurgic Lurianic work, Pri Eg Hayyim, was published from a manuscript with R. Shabbetai’s glosses. In addition, R. Shabbetai re-edited a Lurianic work entitled Seder Kelalut Tikkan ve-Aliyat ha-Olamot (Lvov, 1788; previously published in Sefer ha-Gilgulim, ed. R. David Gruenhaut; Frankfurt, 1864). Also
extant from his hand are five manuscripts of classic Lurianic works such as *Mevo ha-Shē'arim* and *Ez Ḥayyim*. He copied these between 1748 and 1756. The work copied in 1756 was incomplete and was finished by another scribe in 1759. Also, extant is an epistle discussing fine points of scribal law written by R. Gershon of Kutov, and copied in 1753 by R. Shabbetai at the behest of the Besht. It was later published in the rare Response, *Mishne Avraham* (Zhitomir, 1868).

**SHABBETAI ZEVI** (1626–1676), the central figure of Shabbateanism, the messianic movement named after him.

**Background of the Movement**

Shabbateanism was the largest and most momentous *messianic* movement in Jewish history subsequent to the destruction of the Temple and the *Bar Kokhba Revolt*. The factors giving rise to its extraordinarily widespread and deep-seated appeal are twofold. On the one hand there was the general condition of the Jewish people in exile, and the hopes for political and spiritual redemption fostered by Jewish religious tradition and given great emphasis in Jewish thought, which at all times could provide fertile soil for the blossoming of messianic movements aimed at ushering in redemption. On the other hand there were the specific conditions contributing to the impetus of the movement that began in 1665. Politically and socially, the position of the Jews in the various countries of the Diaspora was still basically the same and, with few exceptions, they pursued their specific way of life apart from the surrounding Christian or Muslim society, facing humiliation and persecution at every turn of political events and in constant awareness of their insecurity. The great wave of anti-Jewish persecution in Poland and Russia which set in with the *Chmielnicki massacres* in 1648 deeply affected Ashkenazi Jewry and had wide repercussions, especially through the large number of captives in many countries whose ransom led to lively agitation. Soon after this disaster came the Russian-Swedish War (1655) which also struck those areas of Polish Jewish settlement which had not been shattered by Chmielnicki’s attacks. Important as these factors undoubtedly were to the upsurge of messianic hopes in Polish Jewry, they are not sufficient to explain what actually happened, and no doubt local conditions prevailing in various parts of the Diaspora contributed their share. But the political and social events are only one part of the story.

The central and unifying factor behind the Shabbatean movement was of a religious nature, connected with the profound metamorphosis in the religious world of Judaism caused by the spiritual renewal centered in Safed in the 16th century. Its decisive feature was the rise of the *Kabbalah* to a dominant position in Jewish life and particularly in those circles which were receptive to new religious impulses and formed the most active sector of the Jewish communities. The new Kabbalah which went out from Safed, especially in its Lurianic forms, wedded striking concepts to messianic ideas. It could be characterized as messianism pervading mysticism, thus introducing a new element of tension into the older Kabbalah, which was of a much more contemplative nature. Lurianic Kabbalah proclaimed an intimate bond between the religious activity of the Jew as he performs the commandments of the law and *meditations* for prayer and the messianic message. All being has been in exile since the very beginning of creation and the task of restoring everything to its proper place has been given to the Jewish people, whose historic fate and destiny symbolize the state of the universe at large. The sparks of Divinity are dispersed everywhere, as are the sparks of the original soul of *Adam;* but they are held captive by the *kelippah*, the power of evil, and must be redeemed. This final redemption, however, cannot be achieved by one single messianic act, but will be effected through a long chain of activities that prepare the way. What the kabbalists called “restoration” (*tikkun*) implied both the process by which the shattered elements of the world would be restored to harmony – which is the essential task of the Jewish people – and the final result, the state of redemption announced by the appearance of the *Messiah*, who marks the last stage. Political liberation, and all that the national myth connected with it, were seen as no more than external symbols of a cosmic process which in fact takes place in the secret recesses of the universe. No conflict was foreseen between the traditional national and political content of the messianic idea and the new spiritual and mystical note which it acquired in Lurianic Kabbalah. Those susceptible to the kabbalistic theology of Judaism focused their activity on hastening the arrival of the “world of *tikkun*” by an ascetic life which, though in strict accordance with the demands of the law, was permeated with virtual messianism. This messianism, however, was not an abstract hope for a distant future: what made Lurianism a dynamic factor in Jewish history was its proclamation that almost the whole process of restoration had been completed and that the final redemption was just around the corner. Only the last stages had to be passed through and redemption would be at hand.

As they gained ascendancy and dominated religious life, ideas like these became a common catalyst for an acute precipitation of messianic fervor. In fact, Lurianic Kabbalah became a dominant factor only about 1630–40 and the ideology of the Shabbatean movement is closely connected with this development. That the movement had an overwhelming appeal to such different centers of the Diaspora as Yemen and Persia, Turkey and North Africa, Italy and the Ashkenazi communities can be explained only by the fact that the intense propaganda of Lurianism had created a climate favorable to the release of the messianic energies aroused by the victory of
the new Kabbalah. This is the reason why places like Amsterdam, Leghorn, and Salonika, where the Jews lived relatively free from oppression, nevertheless became crucibles of the movement and centers of Shabbatean activities.

**Shabbetai Zevi's Early Years and Personality**

The figure of the man who occupied the center of the movement is a most unexpected and surprising one. By now, his biography is one of the most completely documented of any Jew who played an important role in Jewish history. Shabbetai Zevi was born in Smyrna (Izmir) on the Ninth of Av, 1626 (unless the date was manipulated to conform with the tradition that the Messiah would be born on the anniversary of the destruction of the Temple). His father, Mordecai Zevi, came from the Peloponnesus (Patras?), probably from a family of Ashkenazi origin, and as a young man settled in Smyrna, where he first was a modest poultry merchant and later became an agent for Dutch and English traders. The great economic rise of Smyrna in those years made him wealthy and Shabbetai Zevi’s brothers, Elijah and Joseph, were actually wealthy merchants. Shabbetai Zevi received a traditional education. His adolescent years he also embarked on the study of Kabbalah, concentrating mainly on the *Zohar, Sefer ha-*Kanah, and *Sefer ha-Peli'ah*. Having acquired considerable proficiency in kabbalistic learning, he attracted other young contemporaries who studied with him.

Between 1642 and 1648 he lived in semi-seclusion. During this period he began to display a character that conforms largely to what handbooks of psychiatry describe as an extreme case of cyclothymia or manic-depressive psychosis. Periods of profound depression and melancholy alternated with spasms of maniacal exaltation and euphoria, separated by intervals of normality. These states, which are richly documented throughout his life, persisted until his death. Later they were described by his followers not in psychopathological but in theological terms as “illumination” and “fall” or “hiding of the face” (the state where God hides his face from him). His mental affliction brought to the fore an essential trait of his character: during his periods of illumination he felt impelled to commit acts which ran counter to religious law, later called *ma'asim zarim* (“strange or paradoxical actions”). Their content changed from time to time but a predilection for strange and bizarre rituals and sudden innovations pervaded them all. One thing was constant to these exalted states – his inclination to pronounce the Ineffable Name of God, the Tetragrammaton (see *God, Names of*). In the periods of melancholy, which were of uneven length, he retired from human contact into solitude to wrestle with the demonic powers by which he felt attacked and partly overwhelmed. The exact moment that this illness broke out is not known, but at the latest it took place in 1648 when the news of the Chmielnicki massacres reached Smyrna. Starting to utter the Name of God in public, he possibly also proclaimed himself the Messiah for the first time. Since by then he was known to be mentally afflicted nobody took this seriously and his behavior caused no more than a temporary commotion. It seems that his extravagances aroused more compassion than antagonism. Between 1646 and 1650 he contracted two marriages in Smyrna which, since they were not consummated, ended in divorce. In his home town he was considered partly a lunatic and partly a fool, but since he had a very pleasant appearance and was highly musical, endowed with a particularly fine voice, he made friends, though not adherents of his kabbalistic speculations. In these years he began to speak of a particular “mystery of the Godhead” which had been revealed to him through his spiritual struggles. He used to speak of the “God of his faith” with whom he felt a particularly intimate and close relation. It is not clear whether by this he meant only the Sefirah Tiferet (see *Kabbalah*), which he saw as the essential manifestation of God, or some supernal power which clothed itself in this Sefirah. At any rate, the term *Elohei Yisra'el* (“the God of Israel”) took on a special mystical meaning in his parlance. His compulsion to violate the law in his illuminated states, which were sometimes accompanied by imagining experiences of levitation, and his repeated claims to be the Messiah, finally led the rab-
bis, including his teacher Joseph Escapa, to intervene; around 1651–54 they banished him from Smyrna.

For several years Shabbetai Zevi wandered through Greece and Thrace, staying for a long time in Salonika, where he made many friends. But this stay also ended in disaster when, during one of his exalted states, he celebrated a ceremonial nuptial service under the canopy with the Torah, and committed other acts which were considered intolerable. Expelled by the rabbis, in 1658 he went to Constantinople, where he spent nine months. There he befriended the famous kabbalist David *Habillo (d. 1666), an emissary of the Jerusalem community. During this period he made a first attempt to rid himself of his demonic obsessions by means of practical Kabbalah. On the other hand, during one of his ecstatic periods he not only celebrated the three festivals of Passover, Shavuot, and Sukkot all in one week, behavior which was bound to arouse hostility, but went so far as to declare the abolition of the commandments and to pronounce a blasphemous benediction to “Him, who allows the forbidden.” Expelled once more he returned to Smyrna, where he stayed until 1662, keeping mostly to himself and going through a prolonged period of profound melancholy. In 1662 he decided to settle in Jerusalem and traveled there via Rhodes and Cairo, where he made many contacts. Throughout this period there is no trace of any messianic agitation around him, and his genial and dignified behavior during his normal state of mind and his rabbinic and kabbalistic scholarship made him a respected figure. By the end of 1662 he reached Jerusalem, staying there for about a year, wandering around the holy places and tombs of the saints of old. His parents died about this time (his mother perhaps even earlier). There seems to have been a great deal of talk about his strange character and attacks of offensive behavior, but this was counterbalanced by his ascetic tenor of life. In a sudden emergency, in the fall of 1663, he was sent to Egypt as an emissary for Jerusalem and performed his mission with some success. He stayed in Cairo until the spring of 1665, becoming closely connected with the circle around Raphael Joseph Chelebi, the head of Egyptian Jewry, who was in deep sympathy with ascetic and kabbalistic tendencies.

From time to time Shabbetai Zevi’s messianic fancies returned and it is probable that in one of these fits of illumination he decided to marry Sarah, an Ashkenazi girl of doubtful reputation who either had arrived by herself from Italy or was brought over on his initiative when he heard rumors about her from Italian visitors. She was an orphan of the 1648 massacres in Podolia and used to tell curious stories about herself and her upbringing by a Polish nobleman. After some years in Amsterdam she had gone to Italy, where she served with families and Jewish institutions in Mantua. Rumors that she was a woman of easy virtue preceded her and were current even later in the intimate circle of Shabbetai Zevi’s admirers. Possibly influenced by the example of the prophet Hosea who married a whore, Shabbetai Zevi married Sarah in Cairo on March 31, 1664. In the winter of 1664–65, however, being troubled about his violations of the law, he tried to exorcise his demons; thus (according to his own testimony in a reliable source) he asked God to take away from him all his abnormal states, and entered an extended period of stability.

The Beginning of the Shabbatean Movement
The peripeteia in Shabbetai Zevi’s life came with the news that a man of God had appeared in Gaza who disclosed to everyone the secret root of his soul and could give each person the particular formula for the tikkan that his soul needed. When the story of “Nathan of Gaza’s powers spread, Shabbetai Zevi “abandoned his mission and went to Gaza in order to find a tikkan and peace for his soul,” in the words of the first report that has been preserved about the beginnings of the movement. Around mid-April 1665 he arrived in Gaza to visit the physician of the soul; by then the latter had had (in February 1665) an ecstatic vision of Shabbetai Zevi as the Messiah, springing no doubt from the tales about him he had heard in Jerusalem, where Nathan had studied in 1663 under Jacob *Hagiz. These tales and the figure of the man whom the 20-year-old Nathan had often seen in the Jewish quarter of Jerusalem had impressed themselves on his mind and crystallized in his new vision when he took up the study of Kabbalah in Gaza. Instead of curing Shabbetai Zevi of his malady, Nathan tried to convince him that he was indeed the true Messiah. At first refusing to pay any heed to his importunities, Shabbetai Zevi nevertheless accompanied Nathan on a pilgrimage to some of the holy places in Jerusalem and Hebron, during which they discussed their visions and their validity. Nathan, an outstanding young rabbi, was the first man to confirm independently Shabbetai Zevi’s own messianic dreams and, moreover, to explain the peculiar rank and nature of the Messiah’s soul in the kabbalistic scheme of creation. They returned to Gaza in the beginning of Sivan (mid-May). According to one story, they were celebrating the night of Shavuot in Nathan’s house along with a group of rabbis, when Nathan fell into a trance and announced Shabbetai Zevi’s high rank before the assembly; according to another version, this happened in the absence of Shabbetai Zevi, who had one of his attacks of melancholy and stayed away. About this time, Nathan produced an apocryphal text attributed to one Abraham he-Hasid, a contemporary of the famous Judah he-Hasid, who as it were prophesied the appearance of Shabbetai Zevi and foretold his early life in apocalyptic terms, proclaiming him the redeemer of Israel. When, some days after Shavuot, Shabbetai Zevi entered another period of illumination, he had absorbed all these new events and, now sure of himself and of Nathan’s prophetic gifts, returned to his former messianic claims with renewed strength. On the 17th of Sivan (May 31, 1665), in Gaza, he proclaimed himself as the Messiah and swept with him the whole community, including its rabbi, Jacob *Najara, grandson of the celebrated poet, Israel *Najara. Some weeks of frenzied excitement followed. Riding around on horseback in majestic state Shabbetai Zevi summoned a group of his followers, appointing them as apostles or representatives of the Twelve Tribes of Israel.
The messianic news spread like wildfire to other communities in Palestine, but encountered strong opposition from some outstanding rabbis of Jerusalem, including Abraham *Amigo, Jacob *Ḥaẓiz, Nathan's teacher, Samuel *Garmison (Germizan), and Jacob *Zemah, the famous kabbalist, who spoke out against Shabbetai Zevi. Having been denounced to the qadi of Jerusalem, he traveled to the city in a large company and succeeded in setting the mind of the qadi at rest. What exactly happened in Jerusalem in June 1665 is not clear. In kingly fashion Shabbetai Zevi circled Jerusalem seven times on horseback, winning over some of the rabbis like Samuel *Primo, Mattathias *Bloch, Israel *Benjamin, and Moses *Galante (the fact of the latter's adherence to Shabbetai Zevi was later suppressed). His conflict with the majority of the rabbis came to a head and they banished him from the town, but, after informing the rabbis of Constantinople of what happened, they apparently took no other active steps against the messianic propaganda, refraining from answering the many letters that were addressed to them about the events and maintaining an enigmatic silence throughout the following year.

Nathan, on the other hand, who now appeared as the prophet and standard-bearer of Shabbetai Zevi, and the group around him were very active. He proclaimed the need for a mass movement of repentance to facilitate the transition to the coming redemption, a step which was sure to win many hearts and could scarcely be opposed by the rabbinic authorities. People from the surrounding countries flocked to him to receive individual penance or wrote to him asking to reveal to them the root of their soul and tell them how to "restore it." Excessive fasts and other ascetic exercises became the order of the day, but Nathan proclaimed the abolition of the fast of the 17th of Tammuz which instead was celebrated as a day of joy in Gaza and Hebron. Letters went out, first to Egypt and the circle of Raphael Joseph, telling of the wondrous deeds of the prophet and the Messiah. One of the striking new features in these letters was the announcement that neither the prophet nor the Messiah was obliged to give proof of his mission by performing miracles, but that Israel should believe in Shabbetai Zevi's mission without any external proof. The actual history of the subsequent mass movement is characterized by the intrinsic contradiction between this demand for pure faith as a redeeming value and the overwhelming wave of legends and reports of miracles which swept the Diaspora. The first reports that reached Europe were, curiously enough, not about Shabbetai Zevi, but about the appearance of the lost Ten Tribes of Israel, who were said to be marching under the command of a prophetic and saintly man of God about whom all sorts of miraculous stories were told. According to some versions they were conquering Mecca, according to others assembling in the Sahara Desert, and in a third version marching into Persia. Rumors of this kind, coming from Morocco, reached Holland, England, and Germany in the summer of 1665, without giving any indication of what actually had happened in Gaza or naming Shabbetai Zevi or making any mention of the appearance of a Messiah. By contrast, there was a great deal of commotion in the Oriental Jewish communities, which had more direct communication with Palestine. In September 1665, fortified by a new revelation, Nathan addressed a long letter to Raphael Joseph, announcing in the first part the changes which had taken place in the hidden worlds with the arrival of redemption and explaining what these changes entailed for the practice of kabbalistic devo-
tions. The kavanot ("meditations") of Isaac *Luria were no longer valid because the inner structure of the universe had changed and no holy sparks were left under the domination of the powers of evil, the kelippot. The time of redemption had come, and even though some might oppose it they could not prevent it and would do harm only to themselves. Shabbetai Zevi had the power to justify the greatest sinner, even Jesus, and "whoever entertains any doubts about him, though he may be the most righteous man in the world, he [Shabbetai Zevi] may punish him with great afflictions." In the second part of the letter Nathan predicts or rather outlines the course of events from the present moment until complete redemption is achieved. Shabbetai Zevi would take the crown from the Turkish king, without war, and make the sultan his servant. After four or five years he would proceed to the River Sambatyon to bring back the lost tribes and to marry Rebecca, the 13-year-old daughter of the resuscitated Moses. During this period he would put the Turkish sultan in charge, but the latter would rebel against him in his absence. This would be the period of the "birth pangs of redemption," a time of great tribulation from which only those dwelling in Gaza would be exempt. The whole tenor of this part of the letter is legendary and mythical. Between the present time and the start of the actual messianic events there would be an interval of one year and several months which should be used for doing penance all over the Jewish world. For this purpose Nathan composed liturgies, one set for the general public and another set for the initiate, comprising kavanot and mystical prayers for the ex-
tended fasts prescribed by him. These were sent out to Europe and other places along with the first long announcements regarding the advent of the Messiah in the fall of 1665.

Shabbetai Zevi in Smyrna and Constantinople
The first reports about Shabbetai Zevi reached Europe early in October 1665, and in the following two months detailed accounts, deeply imbued with legendary material, arrived in Italy, Holland, Germany, and Poland. Why all the corre-
spondents from Gaza, Jerusalem, and Egypt who became so eloquent from September 1665 onward kept silent during the three months after the events in Gaza is still unexplained. There is also a considerable gap between the events in Eu-
rope after the news finally came through and what happened in those months to Shabbetai Zevi himself. When he left Jerusalem under a cloud, probably before the fast of the 17th of Tammuz, he proceeded through Safed to Aleppo, where he arrived on the 8th of Av (July 26, 1665) and left on August 12. Although his fame had preceded him, he refused to appear publicly as the Messiah, but talked to several people in private,
including Solomon *Laniado and other members of the rabbinic court who became his enthusiastic supporters. Similarly, when he arrived in Smyrna a short time before Rosh Ha-Sha-
nah (beginning of September 1665) he kept to himself for a long time, staying with his brother Elijah. In the meantime, a great commotion flared up in Aleppo where, in October and November, the first phenomena of Shabbatean prophesying appeared. Not only unlettered people, men and women, were swept up in the excitement, but also rabbis and scholars, such as Moses Galante from Jerusalem who had come as an emis-
sary and was caught up in the general turmoil, also following Shabbetai Zevi to Smyrna and Constantinople. From Aleppo there is the first testimony, outside Palestine, about a general revivalist atmosphere in which there were reports of appear-
ances of the prophet Elijah and a common fund was set up to maintain the poor and those who would be affected by the widespread halt in commercial activities.

Although Shabbetai Zevi's arrival in Smyrna was pre-
ceded by all kinds of letters and rumors which were bound to have precipitated much tension and many expectations, nothing spectacular happened for almost three months. The rabbis of Smyrna had received a letter from the rabbinate of Constantinople about Shabbetai Zevi's excommunication in Jerusalem, yet no action was taken against him. It was only when his state of ecstasy returned, in early December, and he became feverishly active in his own way, starting a wild com-
motion and performing many of his "strange acts," that the community was thrown into an uproar and the intensity and public character of the proceedings assured them the widest possible echo. There were not only several thousands of Jews but also a considerable merchant colony of English, Dutch, and Italian traders whose reports to their European friends sup-
plemented the news that now began to stream out of Smyrna from Jewish sources. Although Shabbetai Zevi was in con-
tinuous correspondence with Nathan, he now acted on his own. The stormy events that followed are fully documented in many sources.

Shabbetai Zevi used to recite the morning prayers in one of the synagogues "with a very agreeable voice that greatly pleased those who heard him"; he gave alms very liberally; rose at midnight to perform ritual immersions in the sea; and there was nothing bizarre about his ascetic behavior. But on one of the first days of Hánukkah he appeared "in royal appa-
rel" in the synagogue and created a great sensation by his ecstatic singing. About the same time a delegation arrived from Aleppo – Moses Galante and Daniel Pinto and two lay-
men – who had first made a visit to the prophet in Gaza and now wished to greet him officially as the Messiah of Israel. During Hanukkah week, Shabbetai Zevi "began to do things
that seemed strange: he pronounced the Ineffable Name, ate [forbidden] fats, and did other things against the Lord and His Law, even pressing others to do likewise," behavior characteris-
tic of his states of illumination. The infectious presence of be-
lievers spurred him on to more radical manifestations. A deep cleft became evident between the majority of "believers" and a minority of "infidels," and ma'ălimim and koferim became the fixed terms for those who adhered to faith in Shabbetai Zevi and those who opposed him. Nathan's epistle to Raphael Joseph was widely distributed and contributed to the growing dissent. To a large extent the common people joined the camp of the believers without inhibitions or theological mis-
givings; the glad tidings conquered their hearts, and the fas-
cination of Shabbetai Zevi's personality, with its strange mix-
ture of solemn dignity and unrestrained license, contributed its share. Hundreds of people, largely drawn from the poorer elements of the community, accompanied him wherever he went. But from the beginning many burghers, wealthy mer-
chants, and brokers joined the movement, as well as rabbinic scholars, including some of his former fellow students.

The three members of the rabbinic court who were still opposed to Shabbetai Zevi deliberated the wisdom of opening proceedings against him. Proclaiming public prayers in reaction, Shabbetai Zevi once more indulged his taste for majestic pomp and behaved with great audacity. On Friday, December 11, the crowd tried to storm the house of Hayyim Peña, one of the leading "infidels," and on the following day matters came to a head. After beginning to recite the morn-
ing prayers in one of the synagogues, Shabbetai Zevi broke off and, accompanied by a large crowd, proceeded to the locked doors of the Portuguese congregation, the headquarters of his opponents. Taking up an ax, he started to smash the doors, whereupon his opponents opened them and let him in. An astonishing scene followed. Shabbetai Zevi read the portion of the Torah not from the customary scroll but from a printed copy; ignoring the priests and levites present, he called up to the reading of the Law his brothers and many other men and women, distributing kingdom to them and demanding that all of them pronounce the Ineffable Name in their blessings. In a furious speech against the unbelieving rabbis, he compared them to the unclean animals mentioned in the Bible. He pro-
claimed that the Messiah b. Joseph, who according to aggadic tradition must precede the advent of the son of David, was a certain Abraham Zalman, who had died a martyr's death in 1648, and recited the prayer for the dead in his honor. Then he went up to the ark, took a holy scroll in his arms, and sang an ancient Castilian love song about "Meliselda, the emperor's daughter"; into this song, known as his favorite throughout his life, he read many kabbalistic mysteries. After explaining them to the congregation, he ceremonially proclaimed himself the "anointed of the God of Jacob," the redeemer of Israel, fix-
ing the date of redemption for the 15th of Sivan 5426 (June 18, 1666). This was in conformity with a date announced by Na-
than in one of his more optimistic moods, when he considered the possibility of an earlier advent than originally predicted. Shabbetai Zevi announced that in a short time he would seize the crown of "the great Turk." When Hayyim "Benveniste, one of the dissenting rabbis present, asked him for proof of
his mission, he flew into a rage and excommunicated him, at the same time calling on some of those present to testify to their faith by uttering the Ineffable Name. The dramatic scene amounted to a public messianic announcement and the substitution of a messianic Judaism for the traditional and imperfect one. There is reliable testimony that, besides other innovations in the law, he promised the women that he would set them free from the curse of Eve. Immediately after this Sabbath he dispatched one of his rabbinical followers to Constantinople to make preparations for his arrival.

In the wave of excitement Benveniste's doubts were carried away and on the following day he joined the camp of the believers. A smoldering conflict between him and one of the other members of the court, Aaron *Lapapa, may have played some part in his conversion. At any rate, on the 5th of Tevet (December 23) Shabbetai Zevi engineered the expulsion of Lapapa from his office and the appointment of Benveniste as the sole chief rabbi of Smyrna. Summoned before the qadi once more to explain his behavior, Shabbetai Zevi again succeeded in reassuring him. In the next few days all the believers were asked to come and kiss the hand of the messianic king; most of the community did so, including some “infidels” who were afraid of the mounting terrorism of the believers. Immediately after this regal ceremony, Shabbetai Zevi decreed the abolition of the fast of the Tenth of Tevet. When this act aroused the opposition of some of the rabbis, the angry crowd wanted to attack them. Solomon *Algazi, a great scholar and famous kabbalist who persisted in his opposition, was forced to flee to Magnesia and his house was plundered. Lapapa hid in the house of one of his colleagues. On the following Sabbath the name of the Turkish sultan was struck out from the prayer for the ruler and a formal prayer for Shabbetai Zevi as the messianic king of Israel was instituted, a custom later followed by many communities throughout the Diaspora. Instead of his actual name, the practice began at this time of calling him by the appellation amirah, an abbreviation of Adoneinu Malkenu yarum hodo (“our Lord and King, may his majesty be exalted”) and an allusion to the term emir. The new term was widely used in Shabbatean literature up to the beginning of the 19th century.

A festive atmosphere of joy and enthusiasm marked the succeeding days. Many people from other Turkish communities arrived and joined the movement, among them Abraham *Yakhini, a famous preacher and kabbalist in Constantinople, who had known Shabbetai Zevi since 1658 and now became one of his most active propagandists. In a fit of mass hysteria, people from all classes of society started to prophesy about Shabbetai Zevi. Men, women, and children fell into a trance, declaring acknowledgments of Shabbetai Zevi as Messiah and biblical passages of a messianic nature. When their senses returned, they remembered nothing. About 150 “prophets” arose in Smyrna, among them Shabbetai Zevi’s wife and the daughters of some of the “infidels.” Some had visions of Shabbetai Zevi’s crown or saw him sitting on the throne, but most of them produced a mere jumble of phrases and quotations from the Bible and the prayer book, repeated over and over again. Trade and commerce came to a standstill; dancing and festive processions alternated with the penitential exercises prescribed by Nathan. Psalm 21, which had been given a Shabbatean interpretation in Gaza, was recited at each of the three daily services, a custom which spread to many other communities. As well as distributing the kingdoms of the earth among the faithful, Shabbetai Zevi appointed counterparts of the ancient Israelite kings from David to Zerubbabel and several of these obtained handwritten patents from the Messiah. The appointees were his main supporters in Smyrna but included some of his devotees from Palestine, Egypt, Aleppo, Constantinople, and Bursa (Brussa). Many other messianic dignitaries were appointed. After this, his last activity in Smyrna, Shabbetai Zevi sailed to Constantinople on Dec. 30, 1665, accompanied by some of his “kings.” His behavior during this period was as consistent as his unstable mind would allow: he was sure of his calling and believed that some supernatural intervention would bring his messianic mission to fruition. In the meantime the Turkish authorities in the capital had been aroused by the alarming reports. The news from Gaza and Smyrna had already divided the community and the waves of excitement rose high. Letters from places through which Shabbetai Zevi had passed combined factual reports with increasingly fanciful stories and raised the messianic fever to an even higher pitch. Even before his arrival a prophet arose in Constantinople, Moses Serviel or Suriel, a young rabbi from Bursa who, unlike the other “prophets,” revealed Shabbatean mysteries in the language of the Zohar and was credited with a particular charisma. The Messiah’s arrival was considerably delayed by extremely stormy weather and in the meantime the atmosphere in the capital became critical. Some of the heads of the community seem to have warned the government, which had already taken steps to arrest Shabbetai Zevi in Smyrna, where the order arrived too late, or on his arrival in Constantinople. The non-Jewish population was caught up in the excitement and satirical songs about the Messiah were sung in the streets, while the Jewish masses, certain that many miracles would take place immediately after his arrival, showed a marked pride before the gentiles.

The policy pursued by the grand vizier, Ahmed Köprülü (Kuprili), one of Turkey’s ablest statesmen, is remarkable for its restraint. Revolts were frequent in Turkey and the rebels were generally speedily put to death. That this was not the immediate consequence of Shabbetai Zevi’s arrest after interception by boat in the Sea of Marmara on Feb. 6, 1666, did much to strengthen the belief of the faithful. Amid great commotion, he was brought ashore in chains on Monday, February 8. By this time the disruption of normal life and commerce had reached a peak. One or two days after his arrest, Shabbetai Zevi was brought before the divan, presided over by Köprülü. Since the Turkish archives from this period were destroyed by fire, no official Turkish documents about the movement and the proceedings in this case have survived, and reports from Jewish and Christian sources in Constantinople are conflict-
ing. It is true, however, that the vizier showed surprising leniency and patience, to which Shabbetai Zevi’s undoubted charm and the fascination of his personality may have contributed. He may have wanted to avoid making a martyr of a Messiah who, after all, had not taken up arms against the sultan and had simply proclaimed an unrealistic mystical takeover of the crown. Shabbetai Zevi was put in prison, at first in a “dark dungeon” but later in fairly comfortable quarters, and the high official responsible for the police and the prison, possibly after accepting substantial bribes, permitted him to receive visits from his followers. It was said that he could have obtained his release by a very large bribe which his followers were prepared to pay, but that he refused, thereby greatly enhancing his reputation. He was still self-confident. During this period, he had returned to a normal state, led an ascetic life, preached repentance and claimed no special privileges. The rabbis of the capital who visited him in prison found a dignified scholar who bore his sufferings with an air of nobility, rather than a sinner who set himself above the Law and tradition. The rabbis were divided among themselves, some of the outstanding ones, among them Abraham Al-Nakawa, taking his side. A new set of miracles was reported in the letters written during those months from Constantinople, proving that the enthusiasm continued unabated. When the sultan and the vizier left for the war on Crete, the order was given to transfer Shabbetai Zevi to the fortress of Gallipoli, where important political prisoners were detained, on the European side of the Dardanelles. The transfer was made on April 19, the day before Passover. Once more in the grip of a state of illumination, Shabbetai Zevi sacrificed a Passover lamb and roasted it with its fat, inducing his companions to eat this forbidden food and blessing it with the now customary blessing of “He who permits the forbidden.” By means of bribes, the believers soon converted his detention into honorable confinement, and the fortress became known as Migdal Oz (“tower of strength”), with reference to Proverbs 18:10.

The Movement in the Diaspora

The letters arriving in all parts of the Diaspora from Palestine, Egypt, and Aleppo in October and November 1665, and later from Smyrna and Constantinople, produced a tremendous excitement, and the similarity of the reactions everywhere indicates that the causes of the response went far beyond local factors. Messianic fervor took hold of communities that had no immediate experience of persecution and bloodshed as well as those which had. Social and religious factors were no doubt inextricably combined in the outbreak. Poverty and persecution bred Utopian hopes, but the situation of the Jewish people as a whole provided the relevant background. Although the Lurianic doctrine of tikkun and redemption expressed a social situation too, its real content was essentially religious. It is this interlocking of the various elements in the historical makeup of the Shabbatean movement which accounts for its dynamics and explosive content. Later the movement was presented in a different light in a strenuous attempt to minimize the part played by the upper strata of Jewish society and the spiritual leaders, and to ascribe the vehemence of the outbreak to the blind enthusiasm of the rabble and the poor, but this is not borne out by contemporary evidence. The response showed none of the uniformity based on class conditions. Many of the rich took a leading part in spreading the messianic propaganda, although there was no lack of those who, as the saying went at the time, “were more interested in great profits than in great prophets.”

Five factors contributed to the overwhelming success of the messianic awakening:

(1) The messianic call came from the Holy Land, from the center that stood for pure spirituality at its most intense. A message from there would be received in Persia, Kurdistan, or Yemen with a respect which it could scarcely command had it arrived from Poland or Italy. The tremendous prestige of the new Kabbalah which emanated from Safed also played a part.

(2) The renewal of prophecy with the conspicuous figure of Nathan, the brilliant scholar and severe ascetic turned prophet, helped to obscure the more dubious facets of Shabbetai Zevi’s personality which, indeed, played little or no role in the consciousness of the mass of the believers.

(3) The efficacy of traditional and popular apocalyptic beliefs, whose elements were not relinquished but reinterpreted, played its part. The old eschatological visions were retained but many new elements were absorbed. The conception of the future was, throughout 1666, thoroughly conservative. At the same time, however, the propaganda was also addressed to a widespread group of kabbalists, to whom it presented a system of ambiguous symbols. Nathan’s symbolism satisfied his readers by its traditional terminology, and the apparent continuity enabled the new elements to exist, undetected, under cover of the older kabbalism.

(4) The prophet’s call to repentance played a decisive role, appealing to the noblest longings in every Jewish heart. Who, even among the movement’s opponents, could condemn the one demand which the prophet and the Messiah made in public?

(5) There was, as yet, no differentiation between the various elements taking part in the movement. Conservative minds, responding to their sense of unbroken continuity, saw in it the promise of fulfillment of traditional expectations. At the same time the message of redemption appealed to the utopianists who longed for a new age and would shed no tears for the passing of the old order. The national character of the movement obscured these contrasts in the emotional makeup of its participants.

Since the main mass outbreaks of the movement occurred in places far removed from the scene of Shabbetai Zevi’s own activities, and Nathan the prophet never actually left Palestine, during the heyday of the events people were dependent on letters and other means of communication which presented a wild mixture of fact and fancy, the latter no less appealing to emotion and the imagination than the former.
To a large measure the movement developed out of its own momentum, adapting new features to older traditions and conceptions. There is nothing surprising in the similarity of the phenomena in places far distant; they correspond both to the basic similarity of the Jewish situation and the traditional response to it, and to the uniformity of the propaganda that came from the believers in Turkey. Of some importance in Europe were many reports from Christian sources, which of course depended mostly on Jewish informants but added exaggerations and distortions of their own. The many broadsheets and pamphlets that appeared during 1666 in English, Dutch, German, and Italian were avidly read by the Jews and often taken as independent sources confirming their own news. A secondary factor was the sympathy shown to the movement by millenarian circles in England, Holland, and Germany, since it seemed to confirm the belief widespread in these groups that Christ's second coming would occur in 1666. Peter Serrarius in Amsterdam, one of the leading millenarians, did much to spread Shabbatean propaganda to his many Christian correspondents. There are, however, no grounds for the assumption that the outbreak of the movement itself was due to the influence of Christian millenarian merchants on Shabbetai Zevi during his years in Smyrna.

While the majority of the people in those communities of which we have firsthand knowledge, and in those influenced by them, joined in the general enthusiasm, led everywhere by a group of devoted and determined believers, there were also many instances of bitter quarrels and differences with the “infidels.” A mounting wave of messianic terrorism threatened those who spoke derisively of Shabbetai Zevi and refused to take part in the general excitement. A number of influential rabbis, who in their hearts were skeptical about the whole upheaval (like Samuel Aboab in Venice), were careful not to antagonize their communities, and cases of open rabbinical opposition were somewhat rare. Such stubborn adversaries were Joseph ha-Levi, the preacher of the community at Leghorn, and Jacob Sasportas, who had no official position at the time, and was staying in Hamburg as a refugee from the plague in London. A highly articulate and learned letter writer, he maintained a vivid correspondence with friends and acquaintances, and even with people unknown to him, to inquire about the truth of the events and to voice carefully worded opposition to the believers, though using words of strong condemnation to those who shared his opinion. Later (in 1669) he assembled (and heavily edited) large parts of this correspondence in Žižat Novel Ževi.

Repentance alternating with public manifestations of joy and enthusiasm was the order of the day, and detailed reports from many parts of the Diaspora describe the excessive lengths to which the penitents went. Fasts and repeated ritual baths, mortifications which were frequently of an extreme character, and lavish almsgiving were practiced everywhere. Many people fasted for the whole week; those who could not manage this fasted for two or three consecutive days every week and women and children at least every Monday and Thursday.

“The ritual bath was so crowded that it was almost impossible to enter there.” The daily devotions for day and night arranged by Nathan were recited, and many editions of them were published in Amsterdam, Frankfurt, Prague, Mantua, and Constantinople. At night people would lie down naked in the snow for half an hour and scourge themselves with thorns and nettles. Commerce came to a standstill everywhere. Many sold their houses and property to provide themselves with money for the journey to the Holy Land, while others made no such preparations, being convinced that they would be transported on clouds. More realistic wealthy believers made arrangements for renting ships to transport the poor to Palestine. Reports from small towns and hamlets in Germany prove that the messianic revival was not limited to the larger centers. From many places delegations left to visit Shabbetai Zevi, bearing parchments signed by the leaders of the community which acknowledged him as the Messiah and king of Israel. A new era was inaugurated: letters and even some published books were dated from “the first year of the renewal of the prophecy and the kingdom.” Preachers exhorted the people to restore all ill-gotten gains, but no cases where this was actually done are on record. People waited avidly for letters from the Holy Land, Smyrna, and Constantinople which were often read in public, giving rise to great excitement and frequently to violent discussions. There were hardly any differences in the reactions of Ashkenazi, Sephardi, Italian, and Oriental Jewry, and in congregations composed largely of former Marranos – such as the “Portuguese” communities of Amsterdam, Hamburg, and Salonika – the messianic fervor was particularly strong. In North Africa, where the movement struck deep roots, a former Marrano, the physician Abraham Miguel Cardozo in Tripoli, became one of the most active protagonists. Other active supporters were the rabbis of Morocco, many of whom were well acquainted with Elisha Hayyim b. Jacob Ashkenazi, the father of Nathan the prophet, through his visits to their country as an emissary of Jerusalem. Poems in honor of Shabbetai Zevi and Nathan were composed in Yemen, Kurdistan, Constantinople, Salonika, Venice, Ancona, Amsterdam, and many other places, but at the same time one of the outstanding opponents of the movement in Italy, the poet Jacob Frances, in Mantua, with the help of his brother Immanuel, composed a passionate set of verses denouncing the movement, its heroes, and followers (Ževi Muddah). But these were lone voices in the wilderness; that the Italian communities were generally enraptured is vividly revealed in the notebook of a Jew from Casale who traveled throughout northern Italy at the end of 1665 and the early months of 1666, reflecting in his spontaneous descriptions the atmosphere prevailing there (Zion, 10 (1945), 55–56). Moses Zacuto, the most esteemed kabbalist of Italy, gave somewhat reluctant support to the movement. Some Jews who had settled in the Holy Land sent glowing reports about the awakening to their contemporaries in the Diaspora, but it can be said in general that everyone wrote to everyone else. Even the wife of a poor wretch from Hamburg who lay in prison in Oslo faithfully reported to him in Yiddish on the
late Shabbetai Zevi's arrest in Gallipoli in no way diminished the enthusiasm; on the contrary, the fact that he was not executed and seemingly held in an honorable state only tended to confirm his mission. Samuel Primo, whom Shabbetai Zevi employed as his secretary (scribe), was a past master of the majestic and bombastic phrase and his letters conveyed an aura of imperial grandeur. Shabbetai Zevi signed these pronouncements as the "firstborn son of God," "your father Israel," "the bridegroom of the Torah," and other high-flown titles; even when he started signing some of his letters "I am the Lord your God Shabbetai Zevi" only a few of the believers seem to have been shocked. Moses Galante later claimed to have left him because of this. No reliable account of Shabbetai Zevi's conduct during the first period of his arrest in Gallipoli has been preserved, but there are indications that he had frequent periods of melancholy. When he entered an elevated state of illumination once more, people flocked to him in great numbers and the prison, with the help of bribes, was converted into a kind of royal court. The "king," who made no bones about his messianic claims, impressed his visitors deeply. An official letter from the rabbis of Constantinople to the rabbinate of Jerusalem, asking them to set up a commission of inquiry consisting of four representatives from Jerusalem, Safed, and Hebron, remained unanswered. When in March 1666 the rabbis of Venice asked for an opinion of the Constantinople rabbinate, they were given a positive answer disguised as a commercial communication about the quality of the goat skins "which Rabbi Israel of Jerusalem has bought." They wrote: "We looked into the matter and examined the merchandise of Rabbi Israel, for his goods are displayed here under our very eyes. We have come to the conclusion that they are very valuable... but we must wait until the day of the great fair comes." Hundreds of prophets arose in the capital and the excitement reached fever pitch. As the fasts of the 17th of Tammuz and the Ninth of Av approached, Shabbetai Zevi's euphoria mounted; he not only proclaimed the abolition of the fasts but instituted new festivals in their stead. The 17th of Tammuz became the "day of the revival of Shabbetai Zevi's spirit" and, indulging in prescribing in minute detail the liturgy to be recited on this occasion, he turned the Ninth of Av into the festival of his birthday. In Turkey, where the news was quickly spread, almost everybody followed his instructions and the day was celebrated as a high holiday. A delegation from Poland, among whose members were the son and son-in-law of R. David ha-Levi of Lvov, the greatest rabbinic authority of his country, visited him during the week following the 17th of Tammuz and found him in an ecstatic frame of mind. His dignity and majestic deportment conquered their hearts.

Many pilgrims believed the Messiah's imprisonment to be no more than a symbolic, outward show, a belief supported by a kabbalistic tract by Nathan, "A disquisition about the dragons," written during the summer of 1666. In it Shabbetai Zevi's particular psychology was explained in terms of a metaphysical biography of the Messiah's soul and its struggles with the demonic powers from the time of creation until his earthly incarnation. These struggles left their mark on him and explain the alternations between the times when he is held a prisoner by the kelippot and his periods of illumination, when the supernal light shines upon him. Even in faraway Yemen, where the excitement ran high, the details of Shabbetai Zevi's biography (based on a mixture of fact and legend) were expounded in a kabbalistic fashion by the anonymous author of an apocalypse, "The valley of vision," written late in 1666. As early as July the delegates from Poland were handed, under Shabbetai Zevi's signature, a kabbalistic tract explaining the events of his life as founded on deep mysteries. Even in Palestine and Egypt, where the letters abolishing the fast of the Ninth of Av could not have been received in time, the initiative for the abolition was taken by Nathan of Gaza and his followers, among whom Mattathias Bloch was very active in Egypt. Nathan himself planned more than once to meet Shabbetai Zevi but actually never left Gaza. There was a minority of "infidels" in Egypt too, including some outstanding Palestinian rabbis who had settled there, but in the face of the general enthusiasm they behaved very cautiously. In Algiers and Morocco the movement encountered no serious opposition on the part of the rabbis and leaders of the community.

Shabbetai Zevi's Apostasy

The movement reached its climax in July and August 1666 when everyone waited expectantly for great events to unfold. The turning point came in an unforeseen way. A Polish kabbalist, "Nehemiah ha-Kohen from Lvov or its vicinity, came to see Shabbetai Zevi, apparently on behalf of some Polish communities. Arriving on September 3 or 4, he spent two or three days with him. The reports about their meeting are conflicting and in part clearly legendary. According to one source, Nehemiah argued less on kabbalistic grounds than as a spokesman of popular apocalyptic tradition, which he interpreted in strictly literal fashion. He failed to see any correspondence between Shabbetai Zevi's activities and the predictions of older aggadic writings on the Messiah. Dissatisfied by kabbalistic
reinterprets, he stressed the absence of a visible Messiah. Other sources maintain that the argument was about Nehemiah's own role since he himself claimed to be the Messiah b. Joseph, an assertion rejected by his host. Whatever the fact, the acrimonious debate ended in disaster. Nehemiah suddenly declared, in the presence of the Turkish guards, his willingness to adopt Islam. He was taken to Adrianople, where he denounced Shabbetai Zevi for fomenting sedition. No doubt the Jewish masses blamed Nehemiah for subsequent events, and even after his later return to Judaism in Poland he was persecuted for the rest of his life for having surrendered the Messiah to the Turks. However, it is quite possible that Nehemiah's action was simply a pretext and that the Turkish authorities had by then become alarmed by the events taking place in their country. There are indications of several complaints about Shabbetai Zevi, including charges of immoral behavior. The bustle and exuberance at Gallipoli came to an end, when on September 12 or 13, messengers arrived from Adrianople, and took the prisoner there on September 15.

On the following day he was brought before the divan, in the presence of the sultan, who watched the proceedings from a latticed alcove. Once more, the accounts of what happened at the court are contradictory. The believers reported that he was in one of his low melancholic states, and, behaving with utter passivity, allowed events to take their course. They depicted his apostasy as an act imposed on him, in which he took no part at all. The facts were certainly different although he may well have been in one of his low states at the time. He was examined by the court or privy council and denied – as he had done before under similar circumstances – ever having made messianic claims. According to some he even made a long speech about this. Finally he was given the choice between being put to death immediately or converting to Islam. According to one source, Kasim Pasha, one of the highest officials and a little later the brother-in-law of the sultan, conducted the decisive talk, "so handling him that he was glad to turn Turk." But all other sources agree that this role was played by the sultan's physician, Mustapha Hayatizadé, an apostate Jew. He convinced Shabbetai Zevi to accept the court's offer, which apparently had been decided upon before he himself was brought in. The physician acted mainly as an interpreter, Shabbetai Zevi's Turkish being rather poor at the time. Sultan Mehmed IV, a deeply religious man, was likely to sympathize with the possibility that such an outstanding Jewish personality might induce many of his followers to take the same step, and the council's action was certainly also influenced by tactical considerations. Agreeing to apostatize and put on the turban, Shabbetai Zevi assumed the name Aziz Mehmed Effendi. Being considered an important convert, he was granted the honorary title of Kapitâ Bashi ("keeper of the palace gates"). A royal pension of 150 piasters per day was added to the appointment. Several of the believers who had accompanied him followed him into apostasy, as did his wife when she was brought from Gallipoli some time later. The date of the conversion, Sept. 15, 1666, is confirmed by many sources. Shabbetai Zevi's state of mind after his apostasy was one of deep dejection, as evidenced by a letter written one week later to his brother Elijah.

After the Apostasy Until Shabbetai Zevi's Death

The apostasy produced a profound shock, paralyzing leaders and followers alike. In wide circles it was simply not believed and it took some time until the truth was accepted. The waves of excitement had been high, but deeper feelings were involved: for many believers the experience of the messianic revival had taken on the dimensions of a new spiritual reality. The tremendous upheaval of a whole year had led them to equate their emotional experience with an outward reality which seemed to confirm it. Now they were faced with a cruel dilemma: to admit that their belief had been wholly in vain and that their redeemer was an imposter, or to cling to their belief and inner experience in the face of outward hostile reality and look for an explanation and justification of what had happened. That many accepted the second alternative and refused to give in proves the depth of the movement. Because of this, the movement did not come to an abrupt end with the apostasy, an act which in all other circumstances would have terminated it automatically. Who could have dreamed of a Messiah who would forsake his allegiance to Judaism? On the other hand, the rabbis and communal leaders, particularly in Turkey, acted with great circumspection. Their policy was to hush up the whole affair, to calm the excitement by pretending that little had actually happened, and to restore Jewish life to the "normal" state of exile, for which the best method was to ignore the whole course of events and to let time and oblivion heal the wound. This policy was widely followed in other countries. If it were asked how a whole nation could have been allowed to nourish such high hopes only to be deceived at the end, no discussion of God's inscrutable counsels could be allowed. There was also the apprehension, particularly in Turkey, that the authorities might proceed against the Jewish leaders who had permitted the preparations for a messianic revolt, and it appears that the Turkish authorities desisted from taking such a step only after considerable vacillation. In Italy, the pages in the Jewish community records which bore witness to the events were removed and destroyed on the order of the rabbis. Official silence also descended on the literature published in Hebrew for many years. Only dim echoes of lawsuits connected with it and other hints at the movement of repentance appeared here and there.

The facts, however, were different. Again, Nathan of Gaza played a decisive role although it remains an open question whether the initiative for a "theological" explanation of the apostasy was taken by him or by Shabbetai Zevi after he had recovered from his stupor. When Nathan received the news from Shabbetai Zevi's circle in early November 1666 he immediately announced that it was all a deep mystery which would resolve itself in due time. He left Gaza with a large entourage in order to arrange a meeting with Shabbetai Zevi, who by then
had received instruction in the religion of Islam. The rabbis of Constantinople, most of whom had given up their belief, took steps to prevent this. Traveling first to Smyrna, where a considerable group of believers persisted in their faith, Nathan stayed there during March and April; although very reserved in all his relations with outsiders, he began to defend the apostasy and Shabbetai Zevi’s continued messianic mission to the believers. The central point of his argument was that the apostasy was in reality the fulfillment of a mission to lift up the holy sparks which were dispersed even among the gentiles and concentrated now in Islam. Whereas the task of the Jewish people had been to restore the sparks of their own souls in the process of tikkun according to the demands of the Torah, there were sparks which only the Messiah himself could redeem, and for this he had to go down into the realm of the kelippah, outwardly to submit to its domination but actually to perform the last and most difficult part of his mission by conquering the kelippah from within. In doing this he was acting like a spy sent into the enemy camp. Nathan linked this exposition with his earlier metaphysical explanation of the biography of Shabbetai Zevi as a struggle with the realm of evil, to which his “strange actions” bore witness even in his earthly life. The apostasy was nothing but the most extreme case of such strange actions. He had to take upon himself the shame of being called a traitor to his own people as the last step before revealing himself in all his glory on the historical scene. By placing the paradox of an apostate Messiah, a tragic but still legitimate redeemer, at the center of the new, developing Shabbatean theology, Nathan laid the foundation for the ideology of the believers for the next 100 years. He, and many others after him, searched the Bible, Talmud, Midrash, and kabbalistic literature for references to this basic paradox and came up with a rich harvest of daring, audacious, and often outright heretical reinterpretations of the older sacred texts. Once the basic paradox was admitted, everything seemed to fall in line. All the objectionable acts of the biblical heroes, strange tales of the aggadah (aggadat shel dofi), and enigmatic passages of the Zohar—even seeming to point, in typological exegesis, to the scandalous behavior of the Messiah. With Shabbetai Zevi’s acquiescence, these ideas were taken up by the heads of the believers and given wide circulation. The rabbis forbade discussion of these heretical ideas, which would be refuted by their very paradoxicality. In the meantime they simply ignored them.

During 1667–68 the excitement slowly ebbed. When Nathan tried to see Shabbetai Zevi in Adrianople, he was met in Ipsala by a delegation of rabbis who forced him to sign a promise that he would give up his design (May 31, 1667). In spite of this he visited Shabbetai Zevi and continued to visit him from time to time and to proclaim him as the true Messiah, announcing several dates for the expected final revelation. On Shabbetai Zevi’s orders he went to Rome for the performance of a secret magic ritual destined to hasten the fall of the representative of Christendom. His appearance in Venice on Passover 1668 created a great sensation. The rabbis published a pamphlet summing up the interrogations in Ipsala and Venice, and claiming that Nathan had denounced his errors. Nathan repudiated all these declarations and was obviously supported by a considerable number of believers. He completed his mission in Rome and returned to the Balkans, where he spent the rest of his life, alternating between Adrianople, Sofia, Kastoria, and Salonika, all places with a strong Shabbatean following.

Shabbetai Zevi himself lived in Adrianople and sometimes in Constantinople until 1672, succeeding in being allowed to lead a double life, performing the duties of a Muslim but also observing large parts of Jewish ritual. The Turks expected him to act as a missionary, but the 200 heads of families whom he drew to Islam were all secret believers whom he admonished to remain together as a group of secret fighters against the kelippah. Periods of illumination and depression continued to alternate, and during the sometimes lengthy periods of illumination he acted in the same manner as before: he instituted new festivals, confirmed his mystical mission, and persuaded people to follow him into Islam, which by then was called “the Torah of grace,” in contradistinction to Judaism, “the Torah of truth.” Several reports about his libertinism during “illuminations” seem well founded. In one of these periods, in April 1671, he divorced his wife, but took her back when the illumination left him although he had already made arrangements for another marriage. A Hebrew chronicle by one of his visitors describes in detail his extraordinary behavior. Revelations by celestial agents, of which some accounts have been preserved, were frequent in his circle. Primo, Yakhini, and Nathan frequently visited him but were never asked to embrace Islam, and they were accepted by the believers in Turkey as his legitimate spokesmen. Although they were still very strong in the Balkans and Asiatic Turkey, the Shabbateans were gradually driven underground but were not actually excommunicated. The borderline between the apostates and those who remained Jews sometimes became blurred although the latter were generally noted for their extremely pious and ascetic way of life. Shabbetai Zevi himself, who enjoyed the sultan’s favor, formed connections with some Muslim mystics among the Dervish orders. Letters between his group and the believers in North Africa, Italy, and other places spread the new theology and helped to create an increasingly sectarian spirit. After a denunciation of his double-faced behavior and sexual license by some Jews and Muslims, supported by a large bribe, Shabbetai Zevi was arrested in Constantinople in August 1672. The grand vizier wavered between executing or deporting him, but finally decided to exile him, in January 1673, to Dulcigno in Albania, which the Shabbateans called Alkum after Proverbs 30:31. Although allowed relative freedom, he disappeared from public view, but some of his main supporters continued their pilgrimages, apparently disguised as Muslims. In 1674 his wife, Sarah, died and he married Esther (in other sources called Jochebed), the daughter of Joseph Filosof, a respected rabbi of Salonika and one of his chief supporters. From time to time during “illuminations,” he still
envisioned his return to his former state and considered that the final redemption was near.

During the last ten years of his life, especially in Adrianople, he used to reveal to the elect – frequently before he demanded their submission to “mystical apostasy” – his special version of the “mystery of the Godhead.” According to this the “God of Israel” was not the first cause or Ein-Sof, but “a second cause, dwelling within the Sefirah Tiferet,” that is to say manifesting itself through this Sefirah without being identical with it. The two main points of this doctrine, which was of crucial importance in the later development of Shabbateanism, were:

1. The distinction between the first cause and the God of Israel, implying – and this thesis was upheld in different versions by the radicals in the movement – that the first cause has no providence over creation, which is exercised only by the God of Israel who came into being only after the act of zimzum: this doctrine aroused particular revulsion in the Orthodox camp and was considered highly dangerous and heretical.

2. The distinctly Gnostic character of the division, though with the difference that the religious evaluation of the two elements in this dualism is reversed: the second-century Gnostics thought of the hidden God as the true God, considering the “God of the Jews” as an inferior and even detestable being. Shabbetai Zevi, Nathan, and Cardozo, however, turned the order of values upside down: the God of Israel, although emanated from the first cause, was the true God of religion, whereas the first cause was essentially irrelevant from the religious point of view. Some time before his death Shabbetai Zevi dictated a longer version of this doctrine to one of his disciples, Israel Hazzan of Kastoria, who wrote long homilies on some psalms reflecting the state of mind of the circle closest to Shabbetai Zevi and the gradual construction of a heretical and sectarian doctrine.

The Shabbatean Kabbalah

As Shabbetai Zevi himself was not a systematic thinker and spoke mainly in hints and metaphors, Nathan of Gaza must be considered the main creator of a rather elaborate system which combined a new version of Lurianic Kabbalah with original ideas about the position of the Messiah in this new order. His ideas gained wide currency and their influence can be detected in many seemingly orthodox kabbalistic tracts in the next two generations.

Nathan accepts the Lurianic doctrine of zimzum (see “Kabbalah”) but adds a new, even deeper layer to his conception of the Godhead. From the beginning there are in Ein-Sof two kinds of light or aspects – which could even be called “attributes” in Spinoza’s sense – the “thoughtful light” and the “thoughtless light.” The first comprises all that is focused on the purpose of creation. But in the infinite wealth of Ein-Sof there are forces or principles which are not aimed at creation and whose sole purpose is to remain what they are and stay where they are. They are “thoughtless” in the sense that they are devoid of any idea directed to creation. The act of zimzum, which occurred in order to bring about a cosmos, took place only within the “thoughtful light.” By this act the possibility was created for the thoughtful light to realize its thought, to project it into the primordial space, the tehiru, and there to erect the structures of creation. But when this light withdrew, there remained in the tehiru the thoughtless light, which had taken no part in creation and, by its very nature, resisted all creative change. In the dialectics of creation, it therefore became a positively hostile and destructive power. What is called the power of evil, the kelippah, is in the last resort rooted in this noncreative light in God himself. The duality of form and matter takes on a new aspect: both are grounded in Ein-Sof. The thoughtless light is not evil in itself but takes on this aspect because it is opposed to the existence of anything but Ein-Sof and therefore is set on destroying the structures produced by the thoughtful light. The tehiru which is filled with the thoughtless light, mingled with some residue of the thoughtful light which remained even after zimzum, is called golem, the formless primordial matter. The whole process of creation proceeds therefore through a dialectic between the two lights; in other words, through a dialectic rooted in the very being of Ein-Sof.

When, after zimzum, the thoughtful light was streaming back in a straight line (kav ha-yosher) into the tehiru, starting there processes which are very similar to those described in Lurianic Kabbalah, it penetrated only the upper half of the pri-
mordial space, as it were overwhelming the thoughtless light and transforming it, thereby building the world of its original thought. But it did not reach the lower half of the tehiru, described as "the deep of the great abyss." All the statements of Lurianic ontology and the doctrine of cosmic restoration or tikkan which Israel must achieve through the strength of the Torah relate to the upper part of the tehiru only. The lower part persists in its unreconstructed and formless condition until the advent of the Messiah, who alone can perfect it, bringing about its penetration and transformation by the thoughtful light. In fact, the thoughtless lights, too, build structures of their own – the demonic worlds of the kelippot whose sole intent is to destroy what the thoughtful light has wrought. These forces are called the "serpents dwelling in the great abyss." The satanic powers, called in the Zohar sitra ahra ("the other side"), are none other than the other side of Ein-Sof itself insofar as, by its very resistance, it became involved in the process of creation itself. Nathan developed a novel theory about processes which took place in the tehiru even before the ray from Ein-Sof penetrated there, being brought about by the interaction between the residue of the thoughtful light and the forces of the golem. They produced modes of being connected with the first configurations of the letters which were to form the Torah and the cosmic script. Only at a later stage, after the straight line shone forth and penetrated the tehiru, were these first structures, called the work of primeval creation (ma'aseh bereshit), transformed into the more substantial structures (ma'aseh merkavah). All the Lurianic processes connected with the breaking of the vessels and the tikkan were now adapted to the dialectics of the two lights.

In this conception of creation the figure of the Messiah plays a central role from the outset. Since zimzum the soul of the Messiah had been submerged in the lower half of the tehiru; that is, since the beginning of time it stayed in the realm of the kelippot, being one of those sparks of the thoughtful light that had remained in the tehiru or perhaps having been snagged in some way by the kelippot. This soul, invaded by the influx of the thoughtless light and in bondage to its domination, has been struggling since the beginning of the world amid indescribable suffering to free itself and set out on its great task: to open up the lower part of the tehiru to the penetration of the thoughtful light and to bring redemption and tikkan to the kelippot. With their final transformation a utopian equilibrium and unity would be produced between the two aspects of Ein-Sof. The "straight line" cannot go forth into the abyss before the Messiah has succeeded in escaping from the domination of the kelippot. He is essentially different from all those souls which play their part in the processes of tikkan. In fact, he was never under the authority of the Torah, which is the mystical instrument used by the power of the thoughtful light and the souls connected with it. He represents something utterly new, an authority which is not subject to the laws binding in the state of cosmic and historic exile. He cannot be measured by common concepts of good and evil and must act according to his own law, which may become the utopian law of a world redeemed. Both his prehistory and his special task explain his behavior after he had freed himself from the prison of the kelippah.

This doctrine enabled Nathan to defend each and every "strange act" of the Messiah, including his apostasy and his antinomian outbreaks. He is the mystical counterpart of the red heifer (Num. 19): he purifies the unclean but in the process becomes as it were impure himself. He is the "holy serpent" which subdues the serpents of the abyss, the numerical value of the Hebrew word mashiah being equal to that of nahash. In a way, every soul is composed of the two lights and by its nature bound predominantly to the thoughtless light which aims at destruction, and the struggle between the two lights is repeated over and over again in every soul. But the holy souls are helped by the law of the Torah, whereas the Messiah is left completely to his own devices. These ideas were developed in the new heretic Kabbalah in great detail and in different versions, disclosing an uncanny sense for formulating paradoxical tenets of belief. They responded precisely to the particular situation of those who believed in the mission of an apostate Messiah, and the considerable dialectical force with which they were presented did not fail to impress susceptible minds. The combination of mythological images and dialectical argument added to the attraction exercised by Nathan's writings.

**The Shabbatean Movement, 1680–1700**

Outside the circles of the believers Shabbetai Zevi's death went unnoticed by the Jewish world. Among the believers it produced much soul-searching; some of his followers seem to have left the camp immediately after his death. Even his brother Elijah, who had joined him in Adrianople and had converted to Islam, returned to Smyrna and Judaism. The activities of the Shabbatean groups were mainly centered in three countries, Turkey, Italy, and Poland (particularly Lithuania), where vigorous leaders and various prophets and claimants to the succession to Shabbetai Zevi appeared. Though there were many believers in other parts of the Diaspora, such as Kurdistan and Morocco, these three centers were the most important. The largest groups in Turkey were in Salonika, Smyrna, and Constantinople but in most of the Balkan communities Shabbateanism survived and not infrequently members of the rabbinical courts were secret adherents. In Constantinople, their head was Abraham Yakhini, who died in 1682. A group of rabbis and kabbalists encouraged the more unlettered believers in Smyrna, although the Orthodox regained control there as in most places. From 1674 to 1680 Cardozo occupied the leading place among the Shabbateans in Smyrna after he had been forced to leave Tripoli around 1673, and later also Tunis and Leghorn. In Smyrna he found many followers, the most important of whom were the young rabbi Elijah b. Solomon Abraham ha-Kohen Ittamari (d. 1727), who became one of the most prolific writers and moral preachers of the next two generations and never seems to have abandoned his basic convictions, and the cantor Daniel b. Israel
During these years Cardozo began a prolific literary output, composing numerous lesser and larger books and tracts in which he expounded his own brand of Shabbatean theology. Beginning with Boker Avraham (1672), he propagated the theory that there is a difference of principle between the first cause, which is the God of the philosophers and the pagans, and the God of Israel who revealed himself to the Patriarchs and to the people of Israel. The confusion between the two is Israel’s main failure in the era of exile. The people were particularly misled by the philosophers of Judaism, Saadiah Gaon, Maimonides, and all the others. Only the teachers of the Talmud and the kabbalists had kept the flame of the true religion secretly burning. With the approach of redemption, a few elect souls would grasp the true meaning of Israel’s belief, that is to say, revelation as against philosophy, and the Messiah (as prophesied by a midrashic saying) would reach the knowledge of the true God, Shabbetai Zevi’s “mystery of the Godhead,” by his own rational efforts. In the meantime, this paradoxical view could be supported by a true interpretation of traditional texts even though the blind rabbis thought it heresy. Cardozo made no use of the novel ideas of Nathan’s Kabbalah but constructed a system of his own which had considerable dialectical power. In most of his writings he avoided the question of Shabbetai Zevi’s mission, though he defended it in several epistles written at different periods of his life. For a considerable number of years, at least, he saw himself as the Messiah, Joseph who, as revealer of the true faith and sufferer of persecution by the rabbis, must precede the final advent of Shabbetai Zevi, after which all the paradoxes of Shabbatean belief would be resolved. Between 1680 and 1697 Cardozo lived in Constantinople, Rodosto, and Adrianople, not only arousing much controversy by his teachings but also causing great unrest through his prophecies about the imminent messianic end, especially in 1682. He was finally forced to leave these parts and spent the last years of his life mainly in Candia (Crete), Chios, and, after vainly trying to settle in Jerusalem, in Egypt. The outstanding supporter of strict adherence to rabbinic tradition in practice as long as Shabbetai Zevi had not yet returned, he consistently battled against antinomian tendencies, although he too foresaw a complete change in the manifestation of the Torah and its practice in the time of redemption. Cardozo’s influence was second only to Nathan; his writings were copied in many countries and he maintained close relations with Shabbatean leaders everywhere. Many of his polemics were directed against Samuel Primo on the one hand, and the radical Shabbateans of Salonika on the other. Primo (d. 1708), who later became chief rabbi of Adrianople, opposed any outward Shabbatean activity and disclosed his steadfast belief and heretical ideas only in secret conclaves.

In Salonika the situation was different. The number of believers was still quite large and the family of Shabbetai Zevi’s last wife, led by her father, Joseph Filosof, and her brother Jacob Querido, displayed their convictions quite openly. Nathan had important followers among the rabbis, including some highly respected preachers and even halakhic authorities. The continuing state of turmoil, especially after Nathan’s death, produced a fresh wave of excitement and new revelations. Visions of Shabbetai Zevi were very common in many circles of the believers but here, in 1683, they led to the mass apostasy of about 300 families who considered it their duty to follow in the Messiah’s footsteps, in contradistinction to those Shabbateans who maintained, like Cardozo, that it was of the essence of the Messiah that his acts could not be imitated or followed by anyone else. Along with the first apostates among Shabbetai Zevi’s contemporaries, the new group, led by Filosof and Solomon Florentin, formed the sect of the *Doenmeh, voluntary Marranos, who professed and practiced Islam in public but adhered to a mixture of traditional and heretical Judaism in secret. Marrying only among themselves, they were soon identified as a separate group by both Turks and Jews and developed along their own lines, forming three subsect. A certain amount of *antinomianism was common to all their groups, but this tendency was given preeminence by the subsect under the leadership of Baruchiah Russo (Osman Baba) who, in the first years of the 18th century, created another schism by teaching that the new spiritual or messiastic Torah (Torah de-Azilut) entailed a complete reversal of values, symbolized by the change of the 36 prohibitions of the Torah called keritot (meaning punishable by uprooting the soul and annihilating it) into positive commands. This included all the prohibited sexual unions and incest. It seems that this group also developed the doctrine of the divinity of Shabbetai Zevi and later of Baruchiah himself, who died in 1721. This doctrine of incarnation was later wrongly ascribed to all Shabbateans and created much confusion in the reports about them. Baruchiah’s group became the most radical wing of the Shabbatean underground. Most of the believers, however, did not follow the example of the Doenmeh and stayed within the Jewish fold, even in Salonika, where they disappeared only after a considerable time. Several well known rabbis of Salonika and Smyrna in the 18th century such as Joseph b. David, Abraham Miranda, and Meir Bikayam, were still in secret sympathy with Shabbatean teachings and beliefs. Scholars who studied with Nathan or his pupils in Salonika, like Solomon Ayllon and Elijah Moajon, who later became rabbis of important communities such as Amsterdam, London, and Ancona, spread the teachings of the moderate wing of Shabbateanism which adhered to Judaism and even tended to excessive pietism. Between 1680 and 1740 a considerable number of the emissaries from Palestine, especially from Hebron and Safed, were “tainted” with Shabbateanism and apparently also served as links between the various groups of believers in the Diaspora.

The second center existed in Italy, first in Leghorn, where Moses Pinheiro, Meir Rofe, Samuel de Paz, and Judah Sharaf (at the end of his life) were active, and later in Modena. Abraham Rovigo in Modena was passionately devoted to Shab-
Shabbetai Zevi

Shabbetai Zevi was a charismatic messianic claimant who attracted a large following during the 17th century. His life and activities had a profound impact on the Shabbatean movement, which was characterized by a distinct piety and had a widespread influence in Ashkenazi Jewry, as well as among the Sephardim in Italy and the Balkans. Shabbetai Zevi was born in 1626 in Salonica, and his life story is marked by a series of events and claims that have been the subject of much debate and speculation.

Shabbetai Zevi's rise to prominence began in 1665, when he claimed to have experienced a divine rebirth in a period of great upheaval. This claim was later supported by the Shabbatean movement, which had a significant influence on the religious and social landscape of the time. Shabbetai Zevi's teachings and the movement that grew out of his leadership were characterized by a strong emphasis on piety, a devotion to the study of religious texts, and a rejection of traditional religious practices. This new approach to faith and study was particularly appealing to those who sought a more direct and personal connection with divinity.

Shabbetai Zevi's influence extended beyond his own time and place, and his legacy continues to be a subject of study and reflection. The Shabbatean movement, which spread from Ashkenaz to Sepharad and beyond, demonstrated the power of charismatic leadership and the capacity of religious movements to adapt and evolve in response to changing circumstances. The story of Shabbetai Zevi and the Shabbatean movement remains a significant aspect of Jewish history, offering insights into the dynamics of religious change and the enduring appeal of messianic hopes.

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
probably Shabbateans, who indulged in extreme ascetism and prepared to emigrate to Palestine, there to await Shabbetai Zevi’s second manifestation. Groups of them passed through many communities in Poland and Germany, arousing great enthusiasm. Although they never declared themselves openly as Shabbateans, little doubt remains on this score. Several rabbis in large communities who were aware of the true character of these Hasidim unsuccessfully tried to stop the propaganda. At the end of 1698, a council of the Shabbatean leaders of the Hasidim was held in Mikulov (Nikolsburg; Moravia) and was also attended by Heshel Zoref.

Shabbateanism in the 18th Century and Its Disintegration

The aliyah of the Hasidim to Jerusalem in 1700 represented a peak of Shabbatean activity and expectations, and in the great disappointment of its failure, as after the earlier failure of Shabbetai Zevi, several followers embraced Christianity or Islam. Judah Hasid died almost immediately after his arrival in Jerusalem in October 1700, and conditions in Jerusalem shattered the movement. Dissension broke out between the moderates, some of whom seem to have buried their Shabbatean convictions altogether, and the more radical elements led by Malakh. He and his faction were expelled but even the moderates could not maintain their foothold in the Holy Land and most of them returned to Germany, Austria, or Poland. One influential Shabbatean who remained was Jacob *Wilna, a kabbalist of great renown. Many believers had proclaimed 1706 as the year of Shabbetai Zevi’s return and the disappointment weakened a movement that had lost its active drive. It was driven completely underground, a process hastened by the spreading rumors of the extremist antinomian and nihilist teachings of Baruchiah. Increasingly, although wrongly, Shabbateans were identified with this extreme wing whose followers were not satisfied with mystical theories and visionary experience, but drew consequences in their personal adherence to the Law. Malakh went to Salonika, then spread the gospel of secret antinomianism in Podolia, where he found fertile ground especially in the smaller communities. There is insufficient information regarding other parts of Europe to allow a clear differentiation between the various factions in the underground movement. It is obvious, however, that the antinomian slogan propagated by the radical wing that “the nullification of the Torah was its true fulfillment,” and that, like the grain that dies in the earth, the deeds of man must become in some way “rotten” in order to bring forth the fruit of redemption, had a strong emotional appeal even to some talmudists and kabbalists, though, essentially, it represented an antirabbinic revolt in Judaism. That it alarmed the rabbinic authorities, who considered the children of these sectarians as bastards and therefore no longer admissible to the fold, was only logical. On the other hand, there is evidence that not a few of the most influential moral preachers and authors of moral literature of a radical ascetic bent were secret Shabbateans of the moderate and Hasidic wing. Many of the most influential “musar-books” of this period belong to this category, such as Shevet Musar by Elijah Kohen Ittami (1712), Tohorat ha-Kodesh by an anonymous author writing in the first decade of the century (1717), and Shem Téakov by Jacob Segal of Zlatova (1716). Some kabbalists who also wrote moral tracts in Yiddish belonged to this camp, such as Zevi Hirsh b. Jerahmeel Chotsh, and Jehiel Michael Epstein.

Shabbatean propaganda thus polarized around two different centers. The moderates who conformed to traditional practice and even overdid it could produce a literature which, avoiding an open declaration of their messianic faith, reached a wide public unaware of the convictions of the authors. Not a few homiletical, moral, kabbalistic, and liturgical books were published whose authors hinted in devious ways at their secret belief. The radicals, who became particularly active between 1715 and 1725 after Baruchiah had been proclaimed as“I’ai Sehor” and an incarnation of the Shabbatean version of the “God of Israel,” had to be more careful. They worked through emissaries from Salonika and Podolia and circulated manuscripts and letters expounding their “new Kabbalah.” The circles in Poland known as Ha’sidim before the advent of Israel Baal Shem Tov, which practiced extreme forms of ascetic piety, contained a strong element of Shabbateanism, especially in Podolia. In Moravia Judah b. Jacob, commonly called Loebel “Prosnitz, caused considerable upheaval after his “awakening” as a Shabbatean prophet, traveling through the communities of Moravia and Silesia and finding many followers, some of whom persisted even after his fraudulent “magical” practices were unmasked and he was put under a ban (1703–06). Meir Eisenstadt who, like a number of other outstanding rabbis, had been in sympathy with the movement and was then officiating at Prosnitz left him and turned against him; but Prosnitz remained the seat of a sizable Shabbatean group throughout the 18th century. A little later, 1708–25, another center of Shabbateanism crystallized in Mannheim, where some members of Judah Hasid’s society, including his son-in-law “Isaiah Hasid from Zbarazh, found refuge in the newly established bet ha-midrash. About the same time Elijah Taragon, one of Cardozo’s pupils, made an unsuccessful attempt to publish his master’s Boker Avraham in Amsterdam (1712).

While all these developments took place mainly in a twilight atmosphere or underground and received little general attention, a great public scandal broke out when another Shabbatean illuminate, this time a very learned one, succeeded in publishing the only large text of Shabbatean theology printed in the 18th century. Nehemiah Hyya “Hayon from Sarajevo had been educated in Jerusalem, served as a rabbi in his home town, and was in contact with the sectarians in Salonika and with Cardozo’s circle before he returned to Ere Izrael. There he composed a highly elaborate double commentary on Raza di-Meheimanu, Shabbetai Zevi’s last exposition of the mystery of the Godhead, which Hayon now claimed to have received from an angel or, on other occasions, to have found in a copy of the Zohar. Forced to leave Ere Izrael because of his Shabbatean activities, he stayed for several years in Turkey, where he made enemies and friends alike and, about 1710,
arrived in Venice, either on his own initiative or as an emissary. With the support of some secret sympathizers, but in general posing as an orthodox kabbalist, he succeeded in obtaining the approbation of rabbinical authorities to publish his three books: Razza di-Yhuda (Venice, 1711), Oz le-Elohim (Berlin, 1713) and Divrei Nehemyah (ibid., 1713). Of these Oz le-Elohim was the main work, containing his aforementioned commentaries on Shabbetai Zevi's text, whose title he changed to Meheimanuta de-Kholla. Amid polemics against Cordozo, he expounded his own version of the doctrine regarding the "three bonds of faith," the Shabbatean trinity of Ein-Sof, the God of Israel, and the Shekhinah. He carefully avoided linking this in any way with Shabbetai Zevi, whose name is never mentioned in any of these books, although Divrei Nehemyah contains an extremely ambiguous hymnic attacking and at the same time defending those who apostatized for the sake of the God of Israel, that is the Doenmeh. It was only when he came to Amsterdam at the end of 1713, where he enjoyed the protection of Solomon Ayllon, himself a former secret adherent of Shabbateanism, that the heretical character of his books and especially of Oz le-Elohim was recognized by Zevi Hirsch *Ashkenazi, the rabbi of the Ashkenazi community in Amsterdam. In the ensuing violent quarrel between the Amsterdam Sephardi and Ashkenazi rabbis, which produced a lively polemical literature, Shabbatean theology was for the first time discussed in public, being attacked by rabbis like David *Nieto, Joseph *Ergas, and Moses *Hagiz, and a host of other participants in the fight against the heresy. Hayon vigorously defended his "kabbalistic" doctrine, stoutly but vainly denying its Shabbatean character. About 120 letters concerning this controversy were published in various sources. Several rabbis who were suspected of secret Shabbateanism refused to join in the bans pronounced against Hayon who, by the end of 1715, was forced to leave Europe. In his attempt at vindication by the rabbis of Turkey he received only halfhearted support.

When he returned to Europe in 1725, his arrival coincided with another Shabbatean scandal and brought his efforts to naught. This latter upheaval was connected with the increasing propaganda of the extremist followers of Baruchiah who had gained a strong foothold in Podolia, Moravia, and especially in the yeshivah of Prague, where the young and already famous Jonathan *Eybeschuetz was widely considered their most important supporter. From 1724 onward several manuscripts were circulated from Prague which contained kabbalistic explanations couched in ambiguous and obscure language but whose gist was a defense of the doctrine of the "God of Israel," its indwelling in Tiferet, and its intimate connection with the Messiah, without explicitly mentioning, however, his character as a divine incarnation. The testimony pointing to Eybeschuetz as the author, particularly of the kabbalistic but doubtless heretical manuscript Va-Avo ha-Yom el ha-Ayin, is overwhelming. When this and many other Shabbatean writings from Baruchiah's sect were discovered, in Frankfurt in 1725, among the luggage of Moses Meir of Kamenka (Kaminka), a Shabbatean emissary to Mannheim from Podolia, a great scandal ensued. A whole network of propaganda and connections between the several groups was uncovered, but Eybeschuetz' considerable reputation as a genius in rabbinic learning prevented action against him, particularly as he placed himself at the head of those who publicly condemned Shabbetai Zevi and its sectarians in a proclamation of excommunication dated Sept. 16, 1725. In many other Polish, German, and Austrian communities similar proclamations were published in print, also demanding that all who heard them should denounce secret Shabbateans to the rabbinical authorities. The atmosphere of persecution which then prevailed led the remaining Shabbateans to go completely underground for the next 30 years, especially in Poland.

After these events the figure of Jonathan Eybeschuetz remained in twilight, and indeed he poses a difficult psychological problem if (as may be evidenced through a study of the pertinent texts and documents) he must in fact be considered the author of the aforementioned manuscript. When, after his glorious career as a great teacher, preacher, and rabbinic authority in Prague, Metz, and Hamburg, it was discovered in 1751 that a considerable number of amulets he had given in Metz and Hamburg/Altona were in fact of a Shabbatean character, another great uproar followed, engulfing many people in Germany, Austria, and Poland in a heated controversy. His main opponent was Jacob *Emden, the son of Hayon's foe in Amsterdam and an indefatigable fighter against all surviving Shabbatean groups and personalities. His many polemical writings published between 1752 and 1769 often widely overshot their mark, as in the case of Moses Hayyim *Luzzatto, but they contain much valuable information about Shabbateanism in the 18th century. Eybeschuetz' defense of the amulets was particularly weak and largely self-defeating. He argued that the text of the amulets consisted only of mystical Holy Names which had their root in kabbalistic books and could not be deciphered as a continuous text. Comparison of the amulets, however, proves the contrary. The cryptograms used differed from one item to the other, but they always contained an assertion of the messianic mission of Shabbetai Zevi and a reference to Shabbatean views on the "God of Israel."

The secret Shabbateans in central Europe saw Eybeschuetz as their most prominent figure, whereas the orthodox were deeply shocked by the possibility that an outstanding representative of rabbinic and kabbalistic spirituality might have leanings toward heretical ideas. Many of them refused to entertain such a possibility and stood by him. The confusion even in the camp of orthodox kabbalists was considerable and they, too, were divided. The issue under discussion was greatly complicated by personal and irrelevant factors, but the conflict demonstrated how deeply rooted were apprehensions regarding the entrenchment of the Shabbateans in many communities. This is also borne out by numerous testimonies from many sources recorded between 1708 and 1750, even before the controversy between Eybeschuetz and Emden took place. Nathan of Gaza's writings were still studied not only in Turkey, but in Morocco, Italy, and among the
Ashkenazim. Several authors describe the method of Shabbatian propaganda among those who had only a modest talmudic learning or none at all but were drawn to the study of aggadah which the sectarians knew how to use and explain along their own lines. This method of attracting people and then slowly initiating them into the tenets of the sectarians was persistently used for over more than 80 years in Poland, Moravia, Bohemia, and Germany. Much ambiguity was permitted by the widespread heretical principle that the true believer must not appear to be what he really was and that dissimulation was legitimate in a period where redemption had taken place in the secret heart of the world but not yet in the realm of nature and history. People were allowed to deny their true belief in public in order to conceal their conservation of the “holy faith.” This went so far that a work presenting a summary of Shabbatean theology, like Jacob Koppel Lifshitz’ “Gates of Paradise,” written in the early years of the 18th century in Volynia, was preceded by a preface vehemently denouncing the Shabbatean heresy! This double-faced behavior came to be seen as a characteristic trait of the sectarians who, from the beginning of the 18th century, became known in Yiddish as Shebsel or Shabsazviniks, with the connotation of “hypocrites.” There is full proof that a fair number of men of great talmudic learning, and even officiating rabbis, joined these groups and found it possible to live in a state of high tension between outward orthodoxy and inward antinomianism that perforce destroyed the unity of their Jewish identity. In places like Prague a number of highly respected families formed a nucleus of secret believers, and there is evidence that in some places influential Court Jews protected the sectarians or belonged to them. Many of the Moravian Shabbateans held positions of economic power. There is also evidence about the secret rituals performed in these groups, especially in Podolia, where the followers of Baruchiah were concentrated in places such as Buchach, Busk, Gliniany, Gorodenka, Zolkiew, Nadvornaya, Podgaisy (Podhajce), Rogatin (Rohatyn), and Satanov. The eating of forbidden fat (helev) or severe transgressions of sexual prohibitions were considered as initiation rites. Kabbalists and Baalei Shem (see Baal Shem) from Podhajce who became known in Germany and England between 1748 and 1780, such as Samuel Jacob Hayyim “Falk, the “Baal Shem of London,” and Moses David Podheizer, a close associate of Eybeschuetz in Hamburg, came from these circles.

The heated controversy about the revelations of Moses Hayyim Luzzatto in Padua, which began in 1727, and the messianic tendencies of his group engaged much attention in the following ten years. Although even in their secret writings Luzzatto, Moses David *Valle, and their companions repudiated the claims of Shabbetai Zevi and his followers, they were without doubt deeply influenced by some of the paradoxical teachings of Shabbatean Kabbalah, especially those concerning the metaphysical prehistory of the Messiah’s soul in the realm of the kelippot. Luzzatto formulated these ideas in a manner which removed the obviously heretical elements but still reflected, even in his polemics against the Shabbateans, much of their spiritual universe. He even tried to find a place for Shabbetai Zevi, though not a messianic one, in his scheme of things. The idea of an apostate Messiah was utterly unacceptable to him as were the antinomian consequences drawn by the Doenmeh and their sympathizers, but his claims to heavenly inspiration and novel kabbalistic revelations, coming as they did immediately after the excommunication of the sectarians in 1725 and 1726, aroused grave apprehensions in Italy and some places in Germany that had special experiences with Shabbateanism. Similarly, a generation later the first antagonists of latter-day Polish Hasidism suspected it to be nothing but a new branch of Shabbateanism. In both cases the suspicions were wrong but they had some foundation in the teaching and behavior of the newcomers. More complicated is the case of the voluminous work Hendat Yamim, first published in Smyrna in 1731 and later several times in Zolkiew and twice in Italy. This anonymous work described in detail Jewish life and ritual from the point of view of Lurianic Kabbalah but was permeated with the spirit of strictly ascetic Shabbateanism as it was promoted in Jerusalem and Smyrna by kabbalists like Jacob Wilna and Meir Bikayam. Adopting several Shabbatean innovations, it included even hymns written by Nathan of Gaza and a whole ritual for the eve of the new moon whose Shabbatean character is obvious. Though feigning an earlier origin, it was probably composed between 1710 and 1730, allegedly in Jerusalem but probably somewhere else. Its very attractive style and rich content secured it a wide public, and in Turkey it was accepted as a classic, a position it maintained. However, not long after its publication in Podolia in 1742, the work was denounced by Jacob Emden as composed by Nathan of Gaza (wrongly) and propagating Shabbatean views (rightly). This opposition notwithstanding, it was still frequently quoted but withdrawn from public circulation in Poland and Germany.

Independently of the Eybeschuetz affair, a momentous explosion of Shabbateanism in its last stage occurred in 1756 in Podolia with the appearance of Jacob Frank (1726–91) as the new leader of the extremist wing. Imbued with the main ideas of Baruchiah’s sectarians in Salonika, he returned to his native milieu after spending many years mainly during his childhood and adolescence in Turkey. He was already then reputed as a new leader, prophet, and reincarnation of Shabbetai Zevi. (For details of the movement he instigated see Jacob Frank and the Frankists.) In the stormy years between 1756 and 1760 a large part of Frank’s followers converted to Catholicism, constituting a kind of Doenmeh in Poland, only in Catholic disguise. These events and especially the willingness of the Frankists to serve the interests of the Catholic clergy by publicly defending the blood libel in the disputation at Lvov (1759) deeply stirred and aroused the Jewish community in Poland and had wide repercussions even outside Poland. The majority of the Shabbateans, even of Frank’s own sectarians, did not follow him into the Church and groups of Frankists remained within the Jewish fold in Poland, Hungary, Moravia, Bohemia, and Germany. Frank’s main contribution was threefold.
(1) He divested Shabbateanism of its kabbalistic theology and the abstruse metaphysical speculations and terms in which it was clothed, substituting instead a much more popular and colorful version, couched in mythological images. The unknown and as yet inaccessible “Good God,” the “Big Brother” (also called “He Who stands before God”), and the matron or virgin or plain “she” – an amalgam of the Shekhinah and the Virgin Mary – constitute the Frankist trinity. Frank saw Shabbetai Zevi, Baruchiah, and finally himself as emissaries and somehow incarnations of the “Big Brother,” whose mission would be completed by the appearance of an incarnation of the feminine element of this trinity. Frank’s tendency to throw away the “old books” contrasted sharply with the continuous predilection of his followers to study them, especially those who remained Jews.

(2) His version of Shabbateanism took on an unabashedly nihilistic character. Under the “burden of silence” the true believer, who has God in his secret heart, should go through all religions, rites, and established orders without accepting any and indeed annihilating all from within and thereby establishing true freedom. Organized religion is only a cloak to be put on and be thrown away on the way to the “sacred knowledge,” the gnosis of the place where all traditional values are destroyed in the stream of “life.”

(3) He propagated this nihilistic religion as the “way to Esau” or “Edom,” encouraging assimilation without really believing in it, hoping for a miraculous revival of a messianic and nihilistic Judaism through the birth pangs of a universal upheaval. This conception opened the way to an amalgamation between this last stage of Shabbatean messianism and mysticism on the one hand and contemporary enlightenment and secular and anticlerical tendencies on the other. Freemasonry, liberalism, and even Jacobinism could be seen as equally valuable means to such final ends. It is small wonder that wherever such groups existed the Jewish communities fought them vehemently even though only rather vague rumors of Frank’s secret teachings reached them.

Frankists in central Europe joined forces with the older Shabbatean groups, including the admirers of Eybeschuetz, and some of Eybeschuetz’ own sons and grandchildren joined the Frankist camp. In the 1760s there was still active Shabbatean propaganda in the yeshivot of Altona and Pressburg. An emissary, Aaron b. Moses *Teomim from Gorodenka, propagated Shabbateanism in northern and southern Germany and, in 1767, tried to enlist the help of Christian sympathizers, claiming to have set out on his mission on behalf of the Polish prince Radziwill, a well-known protector of the Frankists. The Jewish and apostate Frankists remained in close touch, particularly through their meetings at Frank’s “court” in Brno and later in Offenbach. Although they were deeply impressed by Frank’s sayings and epistles, their own activities never equaled the ferocity of his subservient and nihilistic visions. During the first decades of the 19th century Shabbateanism disintegrated even as a loosely organized sect and, apart from those who reverted to traditional Judaism, disappeared into the camp of Jewish liberalism and, in many cases, indifference. The sectarian groups of the Doenemeh in Turkey and the Catholic Frankists in Poland, especially in Warsaw, survived much longer. While those in Warsaw broke up probably after 1860, to this day there are some still extant in Turkey.

SHABTAI, YAACOV (1934–1981), Israeli writer. Despite his untimely demise, Shabtai had established himself as a master of several genres: sketches, plays, poems, stories, and novels. Even though only one of his novels was completed, with another not finally edited, it is in the field of the Hebrew novel that Shabtai made his most significant contribution to Israeli literature. He combined a bleak, realistic outlook with a humor unusual on the Israeli literary landscape, bringing a touch of Yiddish irony and fluency to the archetypically local scene. From the outset, in his first volume of short stories, Ha-Dod Peretz Mamri (1972), he imprinted this scene with an elegiac tone, mourning the loss of a vanishing world embodied in the death of the narrator’s grandfather. It is not just an individual who is passing, but a generation, and, with that generation, a way of life and an earlier, now departed civilization.

His most remarkable and permanent work is the completed novel, Zikhron Devarim (1977; Past Continuous, 1985). It is primarily a portrait of three individuals, three middle-aged Israeli men whose lives in Tel Aviv over a nine-month period, are presented in the context of two events in the “life” of one of them. The two events which frame the narrative are the death of Goldman’s father, which sets the scene, with the tragic and hilarious funeral, and then Goldman’s own demise, precisely nine months later. This time frame, as noted by one of the other characters, Caesar, precisely fits the period of gestation. And it remains as an ironic comment that the time required for the creation of a life is signaled here by two points of life’s closure. The innovation, for the Hebrew novel, lies in the manner of its telling. The whole is presented as a single paragraph. Although the narrative is broken up into separate sentences, there is no separation into chapters. Its single sequence, as it were, to be read in one breath, clearly an impossible demand made upon the reader by a work of 280 pages. The English translation dispenses with this typological requirement.

This work is a roman fleuve, although in this particular rendering of the genre, all is compressed in one volume. Here the consciousness of the three heroes, presented through the objective, omniscient eye of a third person narrator, is passed from one to the other over the period described. But there is a seemingly seamless shift in place, time, and person that allows the reorientation of the narrative. Although we are presented with an ongoing narrative, that sequence also comprises flashbacks and memories, as well as projections forward. Thus there is a comprehensive portrait here of the human frame, albeit offered through a specific lens. The three characters also constitute a microcosm of attitudes, as well as a society in miniature. Goldman, through his father’s and his own death, acts as an anchor. Clearly, he cannot comment on the latter event, so Caesar, who cannot believe that good things can come to an end, acts as a necessary foil. The third character, Yisrael,
the youngest of the three, is a rather undefined figure, living in the shadow of the other two, and taking his posture from them. Caesar charges around, blustering, protesting, womanizing, gourmandizing. Goldman experiments with philosophies and interpretations of life. Yisrael, quietly and rather ill-natured, observes from the sidelines.

Here, there is no single hero. But there is a force that shapes their lives, as well as the pulse of the society that encases it. That force is the movement of time. In the second novel, which was later edited by the author's widow together with the critic Dan Miron and published posthumously under the title *Sof Davar* (1984; *Past Perfect*, 1987), a different stance and literary technique are adopted. The single paragraph technique is abandoned, and instead we have a narrative in four parts with a single hero. But each section adopts a different standpoint, culminating in the whole which explicitly surrenders any presumption of naturalism. An omniscient narrator comments on the central character, Meir, who is on the way to death, and beyond (“*sof davar,*” a quotation from Ecclesiastes, means “the end of the matter”).

The prominent element in Shabtai's work is the tragic sense of life, and its impending end. However, this is presented with a vibrant and original brio. Shabtai's plays include: *The Life of Caligula* (1975); *The Chosen* (1976); *Don Juan and His Friend Shipel* (1978); *The Spotted Tiger* (1985); *Crowned Head and Other Plays* (1995); and *Eating* (1999).

[Leon I. Yudkin (2nd ed.)]

**SHACHAR, ARIE** (1935–2006), Israeli geographer specializing in urban geography and planning. Shachar was born in Haifa. He attended The Hebrew University of Jerusalem, receiving his Ph.D. in 1965 and joining the Department of Geography there (professor from 1979). He was visiting professor in the School of Architecture and Urban Planning of the University of California several times (1970, 1976, 1980, 1982, 1986, and 1988). In 1980–83 he was head of the department of geography at The Hebrew University and in 1982–97 he was chairman of the National Committee of Geography in the Israel Education Ministry. He also served as a planning consultant in Panama and Ecuador as well as to the UN and in, 1972–92 was chairman of the General Program Committee of Hebrew University in charge of planning the new Mt. Scopus Campus. Shachar was chief editor of the *City and Region* journal and chairman of the editorial board of *The Atlas of Israel* (1985–95), as well as a member of the international board of the *Progress in Planning* journal (1994–97). He also wrote dozens of articles and reports. In 1999 he was awarded the Israel Prize in geography.

[Shaked Gilboa (2nd ed.)]

**SHADKHAN** (Heb. שדוקין), marriage broker or matchmaker. In return for a financial consideration, the *shadkhon* arranges and assists a union between two people, taking into consideration not only the compatibility of the couple but also the suitability of their families. Although the Bible does not describe in detail how marriages were arranged, Genesis 24:1–67 tells how Abraham’s servant chose a wife, Rebekah, for Isaac. The story implies that the servant had the authority to use his discretion in making the choice. However, Isaac's son, Jacob, chose his own wife. During the talmudic period marriages were arranged by the heads of the two families, with no broker involved (Shab. 150a). Sometimes, however, marriages were arranged by the couples themselves (Kid. 13a). Arranged marriages were considered so essential that “Rab punished any man… who betrothed a woman without previous *shidukhin*” since he regarded this as licentious behavior (Kid. 12b).

The term *shadkhon* in its present meaning first appears in rabbinic literature in the 13th century. “Mordecai (b. Hillel) discusses whether the broker should receive his fee even if the marriage does not take place (Bava Batra 172a). In Austria the *shadkhon* was not paid until after the marriage had taken place, while in the Rhenish countries he was paid as soon as the parties reached an understanding (Responsa Meir of Rothenburg, ed. Prague no. 498; A. Berliner, *Aus dem Leben der deutschen Juden im Mittelalter* (1900, 43)).

The *shadkhon* was entitled to a higher fee than that awarded to the business *sarsur* or broker. The latter was only given one-half to one per cent of the business transactions he negotiated while the *shadkhon* received two per cent of the dowry involved. When the contracting parties lived more than ten miles apart, the marriage broker received three per cent of the dowry for his efforts (S. Buber, *Anshei Shem* 1 (1895), 25).

The matchmaking profession was originally highly esteemed, and famous rabbis such as Jacob *Moellin and Jacob Margolioth earned their livelihoods from this occupation. A 17th-century writer cautioned matchmakers, “When you are arranging a marriage between two parties, never exaggerate, and always tell the truth.” He added that “in earlier times, none but scholars were *shadkhonim*” (idem, in: *JQR* 3 (1891), 480). Rabbis and scholars were the natural go-between in the Middle Ages when fathers were anxious to obtain learned and pious sons-in-law.

In time, the traditional integrity of the marriage broker began to decline. A principal reason was the fact that men with unstable backgrounds and occupations were tempted into the profession’s uncertain undertakings. The peculiar persuasive and social talents required for this profession stimulated the development of a unique type of personality. Generally, the *shadkhon* could be relied upon to be a perpetual chatterbox, lively, good-natured, and even impudent. Amid the raillery and guilelessness, however, an element of maliciousness could be detected. A classic type in Jewish folklore and fiction, the *shadkhon* is portrayed in all the bright plumage of his loquaciousness. His genius for euphemistically glossing over the physical and character defects of his clients is legend.

SHADMOT DEVORAH (Heb._swap, names for Dorothy (d. 1988; Devorah), wife of James de ‘Rothschild.

Efraim Orni / Shaked Gilboa (2nd ed.)]

SHADRACH, MESHACH, ABED-NEGO (Heb. שְׂדָרָךְ, מֶשָּׁחָךְ, עֲבֶדָנֵגוֹ, three young men of aristocratic Judahite stock whose Hebrew names were respectively Hananiah (‘The Lord was gracious’), Mishael (perhaps ‘Who is what God is?’), and Azariah (‘The Lord helped’). Together with Daniel they were taken into the Babylonian court of Nebuchadnezzar because of their handsome appearance, wisdom, and ability to learn. In accordance with known practice they were assigned Babylonian names and taught the language and literature of the Chaldeans (probably Akkadian). Refusing to be defiled by eating pagan food, the youths providentially thronged on a diet of grains and greatly surpassed the wisdom of all the king’s magicians (Dan. 1). They quickly rose in rank, Daniel attaining the position in the ‘King’s Gate’ and the other three being put in charge of the “administration” of the province of Babylon (Dan. 2:49). The three refused to worship the pagan image erected by Nebuchadnezzar, were cast into a fiery furnace, and miraculously emerged alive. Nebuchadnezzar acknowledged the greatness of their God and confirmed their rule in Babylon (Dan. 3). “The Three Children” thus became a paradigm of faithfulness to God (cf. 1 Macc. 2:53).

Bezalel Porton]

In the ancient Greek and Latin versions of Daniel there is an addition inserted between 3:23 and 3:24. This addition consists of 68 verses and may have been composed in either Hebrew or Aramaic. In the Apocrypha it appears as “The Prayer of Azariah and The Song of the Three Young Men.” It is possible that Hananiah-Shadrach (Gr. Sedrach) is the Sedrach to whom the Christian *Apocalypse of Sedrach* was attributed (M.R. James, *Apocrypha Anecdota* (1891), 127–37).

The Hebrew names of the three companions are quite common in the period of the Second Temple and occur both in biblical and post-biblical sources. There is no certain etymology for the Babylonian names Shadrach and Meshach but it has been suggested that Abed-Nego is a variation of Abed-Nebo (“Servant of Nab”).

[Michael E. Stone]

SHAFFER, SIR PETER (1926— ), English playwright. Born in Liverpool, Shaffer was educated at Cambridge, where he edited the university magazine *Granta*. He became a music and theater critic and wrote several plays for broadcasting but made his name with the stage play *Five-Finger Exercise* (1958). On the surface a conventional domestic comedy, this study of a middle-class English family vying for the affections of a young German tutor dealt with relationships which other playwrights of the time either ignored or evaded. In 1962 Shaffer scored another success with *The Private Ear and the Public Eye*, two one-act studies of the gap between reality and appearance, in which the apparently conventional situation was again treated in psychological depth. His later plays are more ambitious: *The Royal Hunt of the Sun* (1964), a spectacular chronicle play, depicts the incursion of Cortez into the Peru of the Incas; *Black Comedy* (1965) attempted to extend the currently fashionable “sick joke” into a full-length theatrical performance.

Philip D. Hobsbaum]

Shaffer achieved an outstanding success with his *Equus* which was first performed on Broadway in 1974. A psychological thriller about a boy who blinded six horses, based upon an actual incident which occurred in England in 1972, Shaffer worked on it for over two years. In it, he delves into the sexual and other motivations for this outrage which are revealed in long dialogues between the boy and a psychiatrist. His play *Amadeus* (1979), about the alleged murder of Mozart by Antonio Salieri, was made into a famous film (1984) which won the Academy Award for Best Picture. He was knighted in 2000. His twin brother, ANTHONY SHAFFER (1926–2001), was educated at Cambridge and became a barrister. He was also a noted playwright, especially of mysteries. He was the author of the long-running *Sleuth* (1970), made into a film in 1977, *Frenzy* (1973), one of Alfred Hitchcock’s last films, and dramatizations of several of Agatha Christie’s works. The two brothers sometimes collaborated, using the pseudonym “Peter Anthony.”

SHAG (Zwebner), ABRAHAM (1801–1876), Hungarian rabbi. Shag was born in Galgóc and studied under Moses Sofer. He first served as rabbi in the small town of Czeszté and then in Kobelsdorf, one of the “seven communities” in Hungary. He was distinguished both for his keen intellect and his firm and upright character. He was a member of the Jewish Congress of 1869. He left behind many works, but only his *Ohel Avraham* (1881) responsa, and his *Deraosh ha-Rosh* (1904) have been published. Shag was one of the rabbis in Hungary who raised his voice against the communal schism.
and published a proclamation on the subject in Ha-Maggid (1868). His followers did not like it and it was largely ignored. In 1873 Shag immigrated to Ereẓ Israel, undoubtedly influenced by his teacher Moses Sofer. In 1846, when the Toleranz tax was abolished, he justified its original imposition on the grounds that unlike other settlers whose intention it was to become permanent citizens and enjoy citizens’ rights, the Jew regards himself only as a temporary resident, since he is enjoined by his religion to await the coming of the Messiah, and hence should pay for his stay in the country. Moreover, the paying of the tax indicates the depth of his faith and his expectation of the imminent advent of the Messiah and it is fitting that he should pay for the right of residence.

[Naftali Ben-Menahem]

**SHAHAL (Fatal), MOSHE** (1934– ). Israeli politician and attorney, member of the Seventh to Fourteenth Knessets. Born in Baghdad, Shahal grew up in a traditional middle class family and attended an English school. At the age of 12 he first read Karl Marx’s *Capital*, which greatly influenced his way of thinking. In 1950 he immigrated to Israel with his family, which lived at first in transit camps (ma’arat) in Beit Lid and Ashkelon. He settled in Haifa in the late 1950s. As a member of the ruling *Mapai*, Shahal was involved in efforts to quell the Wadi Salib riots, organized by militants of Oriental origin against the background of claims of discrimination that broke out in July 1959. Shahal was a member of the Haifa Labor Council in 1959–71, and a member of its secretariat in 1964–71. He was a member of the Haifa Municipal Council in 1965–69.

In 1964 he studied economics, sociology, and political science at Haifa University, and then continued his studies for a law degree at Tel Aviv University, which he received in 1969. In 1970 he became a partner in the Ben-Israel & Shahal law firm, in which he remained until 1983, then joining the Solomon & Lifshitz firm where he remained for a year.

Shahal entered the Seventh Knesset in 1971, and soon turned into an expert on the Knesset Rules of Procedure. He became a member of numerous Knesset Committees, but was especially active in the Constitution, Law and Justice Committee, and the Finance Committee. In 1974–76, during the term of the Eighth Knesset, he served as chairman of the Israeli Consumers Council, and was a member of the Knesset delegation to the Council of Europe. In the Ninth and Tenth Knessets he was chairman of the Alignment parliamentary group, and a member of the Knesset delegation to the Inter-Parliamentary Union. In the Tenth Knesset he served as deputy speaker.

Shahal was one of the chief negotiators of the coalition agreement between the *Israel Labor Party* and the *Likud* in 1984, which culminated in the establishment of a National Unity Government based on parity and with rotation in the premiership. He was then one of the initiators of the Arrange-

ments Law that accompanied the Economic Stabilization Plan of 1985, which was designed to save the Israeli economy from a catastrophe. In the National Unity Governments of 1984–90 Shahal served as minister of energy and infrastructure, playing an active role in numerous ministerial committees, as he was to continue to do in future governments of which he was a member. In 1987 he met with the Iraqi ambassador in Washington in an effort to open a channel of communication with Iraq. In 1988–90 Shahal acted as liaison minister between the government and the Knesset. After Peres failed to form a government following Labor’s departure from the National Unity Government in March 1990, he joined the Zadok, Stricks, Shahal & Co. law firm in Tel Aviv, but left the partnership after the Labor electoral victory in the elections to the Thirteenth Knesset. In the beginning of 1992, before the elections, Shahal considered contesting the Labor leadership, but finally decided not to participate in the contest that was won by Yitzhak *Rabin*. In the government formed by Rabin after the elections, Shahal was first appointed minister of communications, but then returned to the ministry of energy and infrastructure, and also served as minister of police. In 1994 he once again became the liaison minister between the government and the Knesset. Shahal was a member of the ministerial teams that dealt both with the Palestinian and the Syrian issues. Though he was never considered a dove, he was known for his pragmatic approach. Already in 1995 he raised the idea that Israel should defend itself against Palestinian terrorist attacks by constructing a fence between itself and the territories handed over to the Palestinians. In the field of energy he supported cooperation with Israel’s neighbors – especially Egypt and Jordan. In the government formed by Shimmon*Peres after Rabin’s assassination in November 1995 he was appointed minister of internal security.

In the course of the Fourteenth Knesset Shahal participated in a meeting with the Follow-Up Committee of Israeli Arabs, to discuss ways of saving the peace process following the Likud victory in the elections to the Fourteenth Knesset. He resigned from the Knesset in March 1998, and opened his own law firm in Tel Aviv but continued to play an active role in the Israel Labor Party. One of the subjects he continued to deal with in his professional capacity as an attorney was the Israeli energy market, which he had helped to reshape as minister of energy and infrastructure.

[Susan Hattis Rolef (2nd ed.])

**SHAHAM, GIL** (1971– ). Israeli violinist born in the U.S. In 1973 he moved with his parents to Israel, where at the age of seven he studied with Samuel Bernstein at the Rubin Academy. While studying with Haim Taub, he made his orchestral debut with the Jerusalem Symphony Orchestra (1981). The following year he played with the Israel Philharmonic under Mehta and began his studies with Dorothy DeLay and Jens Ellerman at Aspen. In 1982, after taking first prize in Israel’s Claremont Competition, Shatham became a scholarship student at Juilliard, where he worked with DeLay and Hyo Kang. In 1989 he...
began his studies at Columbia University, New York. His subsequent solo career brought him engagements with the New York Philharmonic Orchestra, the Philadelphia Orchestra, the Berlin Philharmonic Orchestra and the Frankfurt RSO, among others. In 1989 he caused a sensation when he replaced *Perlman playing the Bruch and Sibelius concertos at the Royal Festival Hall, London. In 1990 he made his London recital debut at Wigmore Hall. A further highlight in his career was his debut recital at Carnegie Hall, New York, in 1992. Shaham performs regularly with leading orchestras and conductors throughout Europe, Japan, and the U.S. as well as in recitals and ensemble appearances on the great concert stages and at the most prestigious festivals. He has appeared with the IPO in many concerts in Israel and abroad. He is noted for his mature musicianship, mesmerizing technique, and rich, colorful tone. He also has the intellect and dramatic flair to transcend routine interpretations. His wide repertoire includes recordings of works by Mendelssohn, Tchaikovsky, Korngold, Prokofiev, Vivaldi, Bartok, and Arvo Pärt. Among his awards are the Avery Fisher Career Grant (1990) and Premio Internazionale of the Accademia Chigiana in Siena (1992).

**SHAHAM, NATHAN** (1925– ), Hebrew writer, son of Eliezer "Steinman and brother of writer David Shaḥam. Born in Tel Aviv, Shaham served in the *Palmach* and on the southern front during the *War of Independence* and later joined kibbutz Bet Alfa. He began publishing in 1944 and wrote fiction, plays, and stories for children. Shaham served as Israel’s cultural attaché in New York (1977–80) and was vice chairman of the Israel Broadcasting Authority and chief editor of Sifriat Polaim Publishing House. Many of his works, written in a traditional realistic style, were fueled by an unmistakable ideological concern, dealing with crucial issues of Israeli life, such as war, kibbutz life, immigration and, not least, disillusionment. His early novel *Even al Pi ha-Be’er* (1956) presents the committed pioneer, Eliyahu Weisman. Young, engaged Palmaḥ members are depicted in *Dagan ve-Ofetet* (1948), *Ha-Elim Azelim* (1949), and *Tamid Anahnu* (1952). *Shikkan Vatikim* (1958) deals with the norms and life-style of the kibbutz while *Hokhmah ha-Miskhen* (1960) describes the immigration of the Polish, previously Communist Jews to Palestine. The world of the German-Jewish immigrants, the so-called Yekkes, is depicted in *Guf Rishon Rabbin* (1968), whereas the themes of Europe prevail in *Halohk va-Shov* (1972). Other works include the plays *Hem Yaggi’s Mahar* (1949); *Kera Li Siomka* (1950); and *Yohanann bar Hamo* (1952), and novels such as *Egem el Agmo* (1981; *Bone to the Bone*, 1993), *Sidrah* (1992), and *Lev Tel Aviv* (1996). No doubt one of Shaham’s finest works is the novel *Revi’iyat Rosendorf* (1987; *The Rosendorf Quartet*, 1991; German, 1990), the portrait of four members of a string quartet in pre-state Israel. Only one of them, Fried-}

...

[Anat Feinberg (2nd ed.)]

**SHAHAR, SHULAMIT** (1928– ), historian specializing in the Middle Ages. Shahar's work is considered groundbreaking. Her studies on women, children, and the aged – social groups that had not been studied before in the medieval period – became milestones in the study of social history. Shahar was born in Latvia and immigrated to Palestine in 1933. In 1965 she received her B.A. degree in history and English literature and in 1961 she received an M.A. degree in general and Jewish history from the Hebrew University of Jerusalem. In 1965 she received her Ph.D. from the Sorbonne. In 1967 she began to work in the history department of Tel Aviv University and in 1990 she was made professor. In 1986–89 she was head of the department. In 1990–93 she was head of general studies at Tel Aviv University. She was also a visiting professor at Cambridge and Oxford Universities. Shahar wrote many articles and books, including *The Fourth Estate* (1983), *Childhood in the Middle Ages* (1990), *Growing Old in the Middle Ages* (1997), and *Women in a Medieval Heretical Sect* (2000). In 2003 she was awarded the Israel Prize in history.

**SHAHARIT** (Heb. דוד, “dawn prayer”), the daily morning service and the most elaborate of the three prescribed daily prayers. Its institution is traditionally attributed to the patriarch Abraham (on the basis of Gen. 19:27), and the rabbis later made its recitation obligatory to replace the daily morning sacrifice (Tamid) performed in the Temple (Ber. 26b).

*Shaharit* consists of the following components: (1) *Morning Benedictions;* (2) *Peseukei de-zimra;* (3) reading of the *Shema* and its benedictions; (4) *Amidah;* (5) *Tahanun,* on days when it is recited; (6) *Torah* reading, on mornings when it is required; (7) *Ashrei,* Psalm 20 and a collection of biblical quotations; (8) *Aleinu le-Shabbat.* There are no basic variations in the text of the prayers recited each morning with the exception of the text of the *Amidah,* additions to the *peseukei de-zimra* on Sabbaths and festivals, and the addition of *Hallel* on festivals and the *New Moon.* In some rites, *piyyutim* are also inserted during the morning prayers on certain Sabbaths and festivals. In most Israeli cities, the priestly blessing is recited each morning in the framework of the *Amidah.*

The time for the morning service is governed by the laws which determine the period for the recitation of the *Shema* and the *Amidah.* The start of the period in which the *Shema* should be recited begins with daylight and concludes after a quarter of the day has passed (Ber. 1:2; Sh. Ar., Ḫ. 58:1). The time for reciting the *Amidah* begins with sunrise and ends after a third of the day has passed (Ber. 4:1; Sh. Ar., Ḫ. 89:1; and see *Day and Night*). Extremely pious people (vatikin) were therefore careful to begin their prayers with daylight so they could complete the recitation of the *Shema* by sunrise and recite the *Amidah* immediately afterward (Ber. 26a). If the morning prayers are delayed past their proper time for recitation, they may still be said until midday (Ber. 4:1; Sh. Ar., Ḫ. 89:1).

If, by accident, the morning *Amidah* was not recited, an extra *Amidah* is added to the *Minhah* service.

During daily morning services, the *tallit* and *tefillin* are worn for the duration of the prayers. On Sabbaths and festivals, only the *tallit* is worn. On the Ninth of *Av,* it is customary according to many rites to wear neither *tallit* nor *tefillin* for *Shaharit,* but to wear them for the *Minhah* prayers. Once the blessing preceding the *peseukei de-zimra,* *Barukh she-Amar,* is recited, the supplicants are forbidden to speak or to interrupt the prayers until the conclusion of the *Amidah* (Sh. Ar., Ḫ. 51:4).

SHĀHIN, Judeo-Persian poet. Though a few short fragments of Judeo-Persian poems were found in the Cairo "Genizah, Shāhin is regarded the first and greatest Judeo-Persian poet who flourished during the 14th century. Most probably Shāhin, meaning "falcon, " is the pen name of the poet that appears in many places in his poetic productions; his real name and personal life are unknown. Scholars who briefly mentioned Shāhin's works claimed that he was from "Shiraz, but internal evidence shows beyond any doubt that he was not from Shiraz or any place in the southern or central parts of Iran. He may have belonged to the Greater "Khorāsān, probably the city of Merv. Shāhin is as great to the Persian Jews as the composer of Shah-Nāmeh, Firdowsi, is to the Iranians.

Shāhin's first poetic work is a paraphrase of the four last books of the Pentateuch which has to do with the life and deeds of Moses and the children of Israel, hence it was named "Musā-Nāmeh" by Simon Ḥakham of Bukhara and Wilhelm Bacher of Budapest (see bibl.) who showed interest in the works of Shāhin. The poet himself titled this work Sharḥ-i Torah ("Exegesis of the Torah"). It is indeed a rather free interpretation which makes use of Midrashim and even Muslim sources. Musā-Nāmeh, which contains about ten thousand verses, was completed in 1327 C.E.

Shāhin's second poetic work is Tafsir Megillat Ester ("Interpretation of the Book of Esther"), which is known to scholars by the name of Ardashir-Nāmeh. Ardashir (ruled 465–425 B.C.E.), according to Shāhin, is Ashauerus, though most scholars consider Xerxes (in Persian Khshāyār, ruled 486–465 B.C.E.) to be the king who married Esther. Ardashir-Nāmeh consists of three separate but interwoven stories: (1) that of the Book of Esther; (2) a love story related to the Shiruyeh, the son of Vashti, and a Chinese princess, Mahzād; (3) a brief narration of the life and deeds of Cyrus the Great, mostly based on the Book of Ezra, hence this part is sometimes known as Ezrā-Nāmeh. Here Shāhin talks about Cyrus the son of Esther the Queen, a belief held also by some Muslim historians such as Tabari. The depiction of nature, hunting, and battle is superb. Ardashir-Nāmeh contains about six thousand verses and was completed in 1333 C.E.

Shāhin's third poetic work is a paraphrased versification of the first book of the Pentateuch, the Book of Genesis, which was named by the poet Sharḥ-i Torah, Sefer Bereshit, and by scholars Bereshit-Nāmeh. The major part of this work narrates the story of Joseph and Potiphar's wife, hence it is also known as "Yosef va Zolakhā." Bereshit-Nāmeh makes extensive use of Midrashim and especially Muslim sources known as Qisṣā al-Anbiyā' (the stories of the prophets). As the poet's last work, it displays maturity of mind, great erudition, and profound knowledge of the Persian language with all its rhetorical devices. Bereshit-Nāmeh, which contains about ten thousand verses, was completed in 1359 C.E.

Simon Ḥakham published all of Shāhin's works in Jerusalem.

[Amnon Netzer (2nd ed.)]
SHAHOR

[Alfred Werner]

SHAHOR (Czerny, Schwartz), family of pioneers in Hebrew printing in Central Europe. ḤAYYIM joined the first printing group in *Prague (see *Kohen family) in or before 1514. After 1522, when the group disbanded, he joined Meir Michtam in issuing two works of prayer, in 1525 and 1526. During most of 1526 he evidently prepared almost all the woodcut illustrations for the Passover Haggadah of Gershom Kohen. Some have doubted that Shahor made almost all the woodcuts for the Haggadah as he is not mentioned in the colophon; however, four illustrations contain a small letter shin and it was the practice of non-Jewish woodcut artists to mark their work with their initials. Moreover, one of the four represents King David, and David was also his father's name. The shin similarly appears near a lion in the Haggadah's third full border (ornamenting the verse shefokh hamatekhah); Shahor could have considered the lion a suitable "family crest," for it is a royal symbol, and his father's personal name was synonymous with royalty in ancient Israel and in Jewish tradition. Furthermore, in his Pentateuch of Augsburg (1533) the first page of every book is ornamented with two small figures: one, a crab, is probably a zodiacal sign of his birth month; the other, a lion, was evidently retained as a "family crest." To adorn the opening page of his Pentateuch of Ichenhausen (1544), he copied onto a new woodcut the complete third border of Gershom Kohen's Haggadah with the lion (Kohen retained and reused the original), and he used it again for the opening page of his seder selihot of Heddernheim, 1545. It might be noted, too, that in the 1518 Pentateuch of Prague's pioneer printers, Shahor is listed second (after Gershom Kohen) in the colophon to part 1 (end of Exodus), which part contains two full borders; in the colophon to part 2, which has no new woodcut ornamentation, he is listed last. This indicates that he made those two borders as well.

In April 1527 a royal privilege made Gershom Kohen the sole Hebrew printer in Bohemia and Shahor had to leave Prague. Taking with him a good amount of type and equipment, he became an itinerant printer, comparable only to Gershom *Soncino (although his output was much smaller). About 1529 he settled in Oels, Silesia (near Breslau), where he printed a Pentateuch with a partner. A storm destroyed the printing shop, however, and Shahor left Silesia. In 1531 he reached Augsburg, a center of humanism, where he apparently used the press of August Wind, a Christian printer who issued some Hebrew texts for the clergy. Until 1540 he produced nine works of quality (including a modest but handsome Passover Haggadah in 1534), evidently helped by his son *Isaac and son-in-law Joseph b. Yakar, who were listed in the colophon of their edition of Jacob b. Asher's Turim (1540). In this period (1531–40) Shahor traveled about, too, in an attempt to sell his stock. Conditions worsened, though, and in the final years in Augsburg the family could not issue its planned volumes. At his request the influential apostate Paulus Emilius went to Ferrara, Italy, in 1541–42 to explore possibilities for the Shahor family to settle there, but nothing came of it. In 1543 the family moved to Ichenhausen, Bavaria, where it issued a prayer book with Judeo-German translation as well as a Pentateuch. Political unrest and local war made them move on, however, to Heddernheim, near Frankfurt on the Main, where they resumed printing in 1545.

Evidently, though, the family finally concluded that there was little hope for a stable future in Germany, for it soon left for *Lublin, perhaps by 1547. An official permit for printing could not be obtained until 1550, by which time Shahor had died and his son-in-law Joseph b. Yakar had left to try his luck in Italy. With *Giustiniani he produced a Pentateuch in Venice (1548), but then rejoined the family. Until 1554 he and Ḥayyim's son Isaac Shahor ran the press jointly, producing a notable Polish mahzor in 1550. By 1557 Shahor had died, leaving a small son; his brother-in-law might also have died, as his name no longer appears in the press's output. The family craft was carried on by Kalonymus b. Mordecai Jaffe, the husband of Ḥayyim Shahor's granddaughter (i.e., Joseph b. Yakar's son-in-law), together with two partners, one of whom may have been an elder son of Ḥayyim Shahor's son Isaac. The family's printing privilege of 1550 was renewed in 1559, and under Kalonymos and his sons the press continued in Lublin for many years.

[Charles Wengrov]

SHAKED, GERSHON (1929–2006), one of the most prominent scholars and the foremost historian of Modern Hebrew narrative fiction in the second half of the 20th century. His research and criticism have touched on nearly every author and literary phenomenon in modern Hebrew literature from the 1850s onward, in monographs on individual authors and studies of literary schools. Although he has devoted most of his work to Hebrew fiction, Shaked has also made significant contributions to the study of modern Hebrew drama and poetry and of Jewish literature by central European authors writing in German (Kafka, Joseph Roth, Stefan Zweig) and by American-Jewish authors (such as Saul Bellow and Philip Roth). Shaked's significant influence as a scholar of culture and literature can be discerned from concepts and terms he coined and which have become an integral part of Hebrew critical discourse, such as: "The New Wave" (the name he gave to the group of authors also known as "The State Generation": Amos *Oz, Aharon *Appelfeld, Yehuda *Amichai, A.B. *Yehoshua, Amalia *Kahan-Carmon); "Genre" and "Anti-Genre" (following Y.H. *Brenner's critical writing); the terms "naïve literature" and "ironic literature" (which he used to delineate two different directions in early 20th century literature, representing conflicting world views and poetic); "Homo-Economicus" (a characterization that marked Mendele's poetry); and "a literature against all odds" and " there is no other
place" (phrases that stem from Brenner’s oeuvre, reflecting Shaked’s ideological stance which affirms Zionism despite its errors and flaws).

Shaked was born in Vienna as Gerhard Mandel. In 1939, following the "Anschluss" and the imprisonment and release of his father from Buchenwald, he was sent to Palestine, later to be joined by his parents. Shaked was educated at an Israeli boarding school and later graduated from the Herzliya Gymnasium. After his military service, he studied Hebrew literature, the Bible, and history at the Hebrew University. In 1964 he earned his Ph.D. with a thesis about Hebrew historical drama during the period of “Revival” (1880–1948).

He went on to study in Switzerland and in 1959 began teaching at the Hebrew University of Jerusalem, where he eventually became professor and chair of the department of Hebrew literature and taught until his retirement. Shaked was guest professor at various universities worldwide and was awarded the Bialik Prize (1986) and the Israel Prize (1993).

In the opening remarks to his early book Bein Zehok le-Dema (1965), Shaked questions the critical tradition that evaluated Mendele by the degree of accuracy of his description of reality. Shaked asks: “What has the account of reality got to do with the force of a creative literary heritage?” Later on, under the influence of the so-called “Reception Theory,” he wrote social historical essays on Israeli culture. In Sif’rat Az, Katun ve-Akshav (1993), he focuses on the “relationships between the different social models and literature.” In Gal Ḥadash ba-Sif’rat ha-İvrit he wrote: “The underlying assumption is that literature mirrors culture (note: culture – not reality!), and cultural self-awareness is one of the important contributions literary criticism can make.” Shaked labored on the refinement of such self-awareness throughout his long career.

Shaked’s early work was influenced by Anglo-American “New Criticism,” but he never adopted its teachings completely. In his remarks to Omanut ha-Sippur shel Agnon (1976), Shaked admits: “I have tried to learn from different researchers; but I have not practiced theories and have not leaned on doctrines. The author and his work have stood at the center of my study (…). It is no secret that of all the various approaches the one closest to me is that which positions ‘the craft of narrative fiction’ itself at the center of the critical or interpretive discussion.”

Shaked identified himself as a skeptical New Critic and structuralist, but in 1971 he moved in the opposite direction in his book Im Tishkah El Pa’am. The book’s title is a phrase borrowed from Bernard Malamud: “Nathan, she said, if you ever forgot you are a Jew, a Goy will remind you.” In his study of Jewish American literature, Shaked’s underlying assumption is that Jews writing in different languages and different literatures share a common ground. This inter-Jewish relation may be characterized through mentality, themes, and motifs.

Before embarking on his monumental five-volume history of Hebrew narrative prose, Shaked had already formed the conviction that sociology, ethnicity, and personal biography or identity must be an integral part of literary debate.

Shaked’s Gal Ḥadash ba-Sipporet ha-İvrit (1970) turned out to be the book which canonized Yehoshua, Oz, Applefeld, and Kahana-Carmon. Years later, Shaked re-formulated his observation, as the assumptions which underlined his early study of Gal Ḥadash now seemed inaccurate to him: “The premises that the literature of the New Wave distanced itself from collective social questions and focused on individual issues was wrong. This generation was involved from the outset in collective questions, but expressed its concern for the collective in ways different from those of the previous generation.”

Early in his brilliant career Shaked began to think about a monumental history of modern Hebrew narrative fiction. A retrospective scrutiny of his writings reveals the seeds Shaked had sown in preparation for this project and the ways in which he prepared himself for it.

The preliminary process included two slim volumes: Al Arba‘a Sippurim (1963) and Al Sheloshah Maḥazot (1968). In these textbooks, Shaked introduced the tools of close readings of drama and fiction. These tools allowed Shaked to practice one of the convictions he adopted from his teacher Emile Stieger, a conviction he later tried to pass on to his own students: “you must grasp that which grabs us” about a literary text. Shaked established the historiosophical grounds for his work in two other early works: Bein Zehok le-Dema and Ha-Maḥazez ha-İvri bi-Tekufat ha-Tehiyyah. With regard to the first, the question may arise, why did Shaked choose to focus on Mendele in his early scholarly work? One of the answers, according to Shaked’s own testimony, is Mendele’s central position in the Hebrew canon that compelled the young scholar to stage a “new internal debate” between previous generations of scholars and himself. That new internal debate, with Mendele acting as mediator, is a fundamental aspect of Shaked’s historio-literary research. Shaked crowned Mendele (that is, Sholem Yankev “Abramovitch, or "Mendele Mokher Seferim") the founder of modern Hebrew literature. His late book, Mendele, Lefanav ve-Aharav (2005), goes back to Mendele, recapitulating Mendele’s revolutionary influence on Hebrew literature in a re-reading of Sefer ha-Kalaganim and in relation to Smolenskin, Charles Dickens, Agnon, Bashevis Singer, and others.

According to Shaked, Mendele is the leading figure of a new position marked by the disillusionment and disappointment with the universalist premises of the Haskalah on the one hand and a recognition of the dramatic rise of a national-Jewish movement on the other hand.

In the first volume of Ha-Sipporet ha-İvrit, Shaked notes that there are some who consider the pogroms of 1881 as the turning point in Hebrew literature. According to him, the social, thematic, and artistic changes in the “book and bookmakers market” took place only in the 1890s, with Mendele focusing primarily on Hebrew, instead of mostly Yiddish writing. This tradition paved the way for the dominance of the “literature of revival,” or – in Shaked’s terminology – “the Zionist master-plot” (also: “the Zionist master narrative”).

The second principle emerging from Shaked’s internal debate with previous scholars concerns the innovation he
recognized in Mendele’s conception of humankind. Prior to Mendele, Haskalah authors saw people first and foremost as idea-centered beings. A person was homo sapiens, or rather homo ideologicus. Other characteristics including primal needs such as sex, physical security, and emotional connection were ignored. Mendele reversed the order, as did Shaked. The conceptual human was of little interest to him. Instead, he considered the economical being, homo economicus, and the sexual being in their corporeal physical as well as psychological aspects.

The reciprocal ties between ideological, biological, physical, sociological, and psychological components in the balance that Mendele created are valuable to Shaked for mainly two reasons. First, because he is unwilling to ignore the ideological level yet prefers works which challenge it, armed with irony. Shaked has always praised authors who burst hot ideological balloons and ridicule ideological characters. Correspondingly, Shaked has been critical of authors who “conform,” those who serve as a voice for dominant ideological stands. Second, Shaked has a distinct preference for the comical mode, according to Northrop Frye: the comical in its various shadings is consistently based – especially in Mendele’s writing – on a ”lowering” depiction and on observing people from their stomachs and below.

Bein Zehok le-Dena marks the point of departure for a great historical research. Ha-Maḥazeh ha-Ivri ha-Histori bi-Tekufat ha-Tehiyah heralds some of the compositional characteristics of Shaked’s monumental project of Hebrew narrative prose. Like the five-volume Ha-Sipporet ha-Ivrit (1880–1980), this book focuses on a genre or a master-genre. In the drama project the time frame is explicit: the period of “revival.” In the book on narrative fiction the limits are not as clear cut, but rather implied. The fiction studied here frames one hundred years of Zionism. The most essential common denominator of these two projects is their teleological goal. In both, the author views the past in order to better understand it but also in order to understand the present. In his introduction to Ha-Maḥazeh ha-Ivri, Shaked distinguishes between an “archaeological” method that does not import the past into the present and a “current events” method that touches the past as “material the playwright-interpreter interprets without reviving the material itself.” It seems that already in this early work Shaked found his golden mean between the historical and the historiosophical. This path served him in many of his research projects and reached its peak in the history of modern Hebrew narrative fiction. The closer Shaked comes to his own time, the more he takes on the role of historical interpreter alongside that of a literary historian. His discussions of the Sinai war, the Lavon affair, and the Eichmann trial in the fifth volume illustrate this. Shaked’s biography has developed into a crucial interpretative tool as well, as can be seen in the chapter on Ruth “Almog in the fifth volume.

There are distinct differences between the early Ha-Maḥazeh ha-Ivri and the late Ha-Sipporet ha-Ivrit which need to be mentioned. In the early book, Shaked studies the work of several dramatists without attempting to group his portraits into a comprehensive dramatic story. As he says in the introduction to the book, it “follows the history of topics, structures, characterization and dialogue, and attempts to paint a synoptic picture of different angles” – not an evolving developmental structure that would proceed as a plot of a story or a play might. In his comprehensive history of modern Hebrew narrative fiction on the other hand, Shaked created a compositional structure that is committed to analytical “objective” categories; at the same time it adheres to an internal plot and rationale. In other words, in this book Shaked appears as researcher and dramatist. Indeed, this monumental study is a vast performance that includes dozens of main characters and hundreds of marginal ones, attempting not only to delineate them as they were, but also as who they might have been. For this purpose Shaked constructs plots and counter-plots which are motivated by ideological, socio-historical, and psychological tensions, and by purely artistic tensions as well.

Literary research is the heart of Shaked’s work, but he has not detached himself from contemporary literature. He has closely followed the literature written in the last fifty years, reviewing individual works and tracing wider literary trends and directions which he marked, named, characterized in great detail, and evaluated according to clear aesthetic and thematic criteria. In the 1950s he was a part of the “Likrat” group (together with Nathan “Zach, Benjamin “Harshav, Aryeh “Sivan, Moshe “Dor, and others), that introduced a poetics and cultural agenda.

Shaked stood by the cradle of the “New Wave” authors, read some of their works in manuscript, and encouraged the poetic direction their works took. In his numerous literary reviews he repeatedly demanded “literary realization” of the authors, that is, a full and detailed depiction of social and human situations.

In 2001 Shaked published his first novel, Mehagerim, a story of immigration based on his own experience. The book was translated into German (2006). His influence on Israeli fiction made its way into various fictionalized portraits that authors such as R. Almog and A.B. Yehoshua painted of him in their prose.

“SHAKESPEARE, WILLIAM (1564–1616), English playwright and poet. The Merchant of Venice (1596) has been claimed as the play in which Shakespeare found himself “in the fullest sense.” As with other major comedies of his so-called second period, the main emphasis was to have been on
the romantic plot. It is, however, Shylock and the bond story, originally intended as a comic subplot, which has proved to be the actual focus of interest down to the present day. Bassanio requests that his friend Antonio, a merchant, provide him with money for his expedition to Belmont. In order to raise the necessary sum, Antonio takes a loan from the Jewish usurer, Shylock. The latter, instead of demanding interest, suggests a “merry bond,” according to which, if Antonio should default, Shylock would be entitled to a pound of flesh nearest to Antonio’s heart. Not only does Antonio default but, when the day of payment comes, Shylock’s daughter Jessica is found to have eloped with Lorenzo, a friend of Antonio, taking with her a large part of her father’s money. Embittered by this double blow – “My ducats and my daughter!” – Shylock demands the “penalty and forfeit” of the bond from Antonio. However, Portia, the Lady of Belmont, disguised as a lawyer, saves the situation, pointing out that the bond does not entitle Shylock to a single drop of blood. Antonio’s life is saved, and Shylock himself becomes liable to the confiscation of his whole estate through having sought the life of a citizen of Venice. This penalty is “mercifully” reduced to half, but only on condition that he embraces Christianity.

The mainstream view is that Shylock is the type of the monstrous, bloodthirsty usurer of medieval legend. Gobbo, his comic servant, tells us that his master is “the very devil incarnate,” and later, when Shylock appears, one of the characters remarks that the devil “comes in the likeness of a Jew.” From time to time Shylock is “demythologized,” especially in his famous speech, beginning “I am a Jew. Hath not a Jew eyes? Hath not a Jew hands, organs, dimensions, senses, affections, passions?” Many modern critics believe that Shakespeare’s depiction of Shylock is much more ambiguous than was previously held, and must be contrasted with the two-dimensional portrayals of Jews in English drama up to that time. Shylock is seen as marking a stage in Shakespeare’s evolution as a writer. The Merchant of Venice was probably written three or four years after Richard III, with its unquestionably evil protagonist, and paved the way for the more ambiguous depictions in Shakespeare’s later works. Much about The Merchant of Venice poses as yet unanswerable questions: how and where did Shakespeare meet any Jews, since they were legally barred from living in England? Did he visit Venice, which the play describes with the apparent knowledge of an eyewitness? From what source did the name “Shylock,” unknown in Jewish usage, derive?

It is generally believed that the trial and execution in 1594 of Queen Elizabeth’s “Marrano physician, Rodrigo Lopez, suggested some features of the Shylock story. This episode provoked a good deal of antisemitic feeling in England at the time.

In England, Edmund Kean’s portrayal of Shylock in 1814 was notable for its tragic intensity, while Sir Henry Irving in 1879 acted the part in a radically idealized form, muting the evil qualities of Shylock. The play has often been translated into Hebrew and has been performed in Israel several times.

The Merchant of Venice, and Shakespeare’s views of Jews, have attracted a wide range of comment and analysis, which have certainly not diminished in recent years. Recent studies of these topics include Martin D. Yaffe, Shylock and the Jewish Question (1997), and James Shapiro, Shakespeare and the Jews (1997). For better or worse, Shylock probably remains the most famous depiction of a Jew in English literature.

In Hebrew

Since there is as yet no great dramatic literature in Modern Hebrew literature, there can be no significant discussion of Shakespeare’s impact upon it. Scattered traces of Shakespeare’s influence, usually through German translations, can be found in the poetry of the Haskalah. Joseph “Ha-Efrati’s play about King Saul, Melukhath Sha’ul (Vienna, 1794), shows, in structure and imagery, that its author must have read Macbeth, Hamlet, and King Lear. In Melizat Yeshurun (Vienna, 1816), an analysis of the forms of biblical poetry, Solomon Levisohn quotes some lines from Henry IV, Part II, in his own rich, though very inaccurate, prose rendering. The tone, and sometimes the same words, of Lady Macbeth’s soliloquy (“Come you spirits that tend on mortal thoughts” etc.) are reproduced in Ya’el’s monologue in Micah Joseph “Lebensohn’s epic poem, Yā’el ve-Sisera, written about the middle of the 19th century.

The first translations of Shakespeare into Hebrew, Othello (1874) and Romeo and Juliet (1878), were by Isaac Edward Salkinson, and remained unsurpassed for at least two generations. Salkinson’s translations were done at the insistence of Perez Smolenskin, the Hebrew novelist and essayist, then editor of the monthly Ha-Shahar, published in Vienna. In his foreword to Salkinson’s translation of Othello, Smolenskin wrote: “Shakespeare’s plays in the Holy Tongue! If all Israel had known and loved the language of their forefathers, and if all those who understand and love Hebrew could comprehend what great prize the translator of these plays has brought into the treasure-house of our language, then indeed would the day on which the first play by Shakespeare appeared in Hebrew become a victory celebration!” Salkinson rendered Shakespeare into strong, lucid, biblical Hebrew writing in free verse of 13 to 16–17 syllables) which did justice to the poetry and dramatic power of the original. Salkinson’s isolated achievement appears the greater when set against the background of the florid, padded, imprecise Hebrew style prevailing in Hebrew letters at the time.

In his introduction to Romeo and Juliet, Salkinson identified the vulgar speech of the uneducated and the clever, facetious, sometimes multilingual, prattle of the well-born, as the major pitfalls which faced him as a translator. To this day, these remain among the major difficulties in translating Shakespeare into Hebrew. In the two decades that followed the publication of Salkinson’s work, only three translations appeared: L. Barb’s very weak rendering of Macbeth (1883), done from Schiller’s free and at times distorted German translation; Z. Elkind’s translation of The Taming of the Shrew (1893), and S.L. “Gor-
